subject is virtually absent from his *Poetics*.³⁴ The Peripatetic ‘school’, in particular, devoted considerable energy to biographical data, but the topic as such was widespread. From a modern point of view, the prevalent method is not entirely satisfactory, in that critics often seemed to be content with mining an author’s works for ‘personal data’. This method was rooted in the conviction that there was an immediate correspondence between an author’s work and his life. A manly person wrote manly poetry, an effeminate person wrote effeminate poetry, etc.³⁵ According to this principle, an author’s works allowed readers to reconstruct his life.³⁶ This kind of activity had a penchant for the same type of anecdotal evidence with which ancient biographies are rife.³⁷ It did not necessarily help that critics regularly failed to differentiate between *narrative voices in a text, in that a character’s views were uncritically taken for the author’s. It is also worth noting that biographical criticism primarily worked in one direction. The works were used as evidence for an author’s life, but there was little effort to find biographical data which was independent of the works and could then be used to help illuminate them.

Book

As several entries (*Museum and library, *plagiarism) make clear, there is some justification in regarding the book(roll) and thus the written word as symbols for the dividing line that separated the Hellenistic era from the past. This statement also applies to poetry itself. Poets of the early and classical periods with their emphasis on (feigned) orality are unlikely to picture themselves as receiving Apollo’s inspiration with a writing tablet on their knees (Callim. fr. 1.21–2 Pfeiffer).³⁸ There is, however, a certain risk of exaggerating the ‘bookishness’ of the Hellenistic period. Literature largely remained an aural form of art (**enargeia*). Not least because the format of a bookroll was not suitable to quick reference, authors and critics alike kept relying on their memories, which in many cases must have been formidable (cf. the anecdote reported

34 That *On Poets* discussed biographical topics is undisputed (e.g. fr. 76 Rose = 65 Janko, on the life of Homer). The question whether it contained substantially more (Janko [2011] 317–539) falls outside the scope of this chapter.

35 The clearest expression of the principle is perhaps Aristoph. *Thesm.* 148–152, but it also underlies, e.g., Arist. *Poet.* 1448b24–27, 1449a2–6. Cf. Russell [1995] 162–164.

36 Whether all the biographers believed this reconstruction to be authentic is another question. Cf. e.g. the criticism expressed in Satyrus’ *Life of Euripides* (F 6 fr. 39 col. XVIII = Schorn 2004: 108–109, for the interpretation 48).

37 Lefkowitz [2012²].

38 Note, however, that Callimachus too resorts to the motif of feigned orality (Harder [2004] 79, with reference to *Hymns* 5 and 6).

in *plagiarism). They had been trained from an early age onwards. A standard school exercise was to memorise and perform large chunks of poetry.³⁹

Canons

The principle of singling out a particular group of authors because of their exceptional quality is operative in the *Frogs* already. Whether or not this was Aristophanes' 'invention', Aeschylus, Sophocles and Euripides are given the status as 'classical' Greek tragedians that they occupy to this day. Likewise, Aristotle and his entourage attributed the same status as 'classics' to the epic poets Homer and Hesiod. In the case of Homer, this also meant that the *Iliad* and the *Odyssey* were severed from the poems of the epic cycle, which before had mostly been considered to be his too (questions of *authenticity). The Alexandrian critics continued this process of canonisation. First, they probably increased the number of 'classic' epic poets to four or five. Second, they selected an exceptionally large group of nine lyric poets: Pindar, Bacchylides, Sappho, Anacreon, Stesichorus, Simonides, Ibycus, Alcaeus and Alcman. It is interesting to note that they did not incorporate contemporary authors into their canons (Quint. *Inst.* 10.1.54). Old Comedy presents a blurrier picture. A triad Eupolis, Cratinus and Aristophanes can be found in Horace (*Sat.* 1.4.1 = Eupolis test. 23 Kassel-Austin) and later, but Pfeiffer ([1968] 204) has argued that 'Eratosthenes and Aristophanes (sc. of Byzantium) regarded Pherecrates, for instance, as its equal'. The selection process was subsequently extended to *prose, as seen in the canon of the 'Ten Attic Orators' (led by their champion Demosthenes). The relevance of this process can also be deduced from the fact that none of Aristarchus' numerous *commentaries dealt with an author who was not 'canonical'.⁴⁰ The close correspondence with the writing of *literary history is particularly clear in the well-known chapter from Quintilian (*Inst.* 10.1), which is expressly built on Alexandrian canons. A different but not entirely unrelated selection process resulted in the compilation of the first literary anthologies.⁴¹

Censorship

Plato has a good chance of being the most vigorous and best-known advocate of censorship because he notoriously banned all poetry from his ideal state

39 Cameron [1995] 65, Criboire [2001] 166, 213, also index s.v. memory.

40 Pfeiffer [1968] 208.

41 On canonisation in Alexandria see Pfeiffer [1968] 203–208, Easterling [2012⁴] with bibl., on its history as a critical concept Asper [1998] 869–882, with bibl.; on anthologies Cameron [1993].

(*Resp.* books 2–3, 10). He thus continued the ethically motivated objections that Xenophanes of Colophon had raised against the anthropomorphism and alleged immorality of Homer's gods (21 B 11–12, 15 D-K). Heraclitus went a step further and suggested that Homer and Archilochus be clubbed and expelled from poetic contests (22 B 42 D-K). A century or so before him, the tyrant of Sicyon, Cleisthenes, had banned the performance of the Homeric epics for political reasons (Hdt. 5.67.1). When Protagoras faced charges of atheism, his books were collected from their owners and burnt in the agora (80 A 1 D-K). Ptolemy II (later called Philadelphus), though known as a book collector, apparently did not like being attacked by them. When Sotades criticised Ptolemy's marriage to his sister Arsinoe in graphic terms, he was, depending on the source, either drowned (Hegesander ap. Ath. 14.62of) or incarcerated for a long time (Plut. *Quomodo adul.* 11a). On the other hand, censorship was never implemented in a systematic way nor does it seem to have played an important role in criticism. When some anonymous scholars (refuted by others: sch. Ar. *Pax* 778, with Holwerda's note) 'athetised' the notorious story of Ares' and Aphrodite's adultery (*Od.* 8.266–369), it must be kept in mind that the disputed lines remained in the text (questions of *authenticity). Nor is there evidence that school texts were purged *ad usum Delphini*. One may compare Plutarch (*Quomodo adul.* 14f–15a), who preferred a good preparation of young readers over censorship.⁴²

Characterisation

Chapter 6 of Aristotle's *Poetics* defines six qualitative parts of tragedy, the first and most fundamental being *plot. Second comes characterisation (*êthos*) because the recommended **mimêsis* is that of an action, which requires agents. The four other parts, thought, diction (*style), lyric poetry and spectacle, receive conspicuously less attention in the *Poetics* than plot and characterisation. Additional importance comes from the fact that, for Aristotle, the characters (*i.e.* their speeches) ought to reveal a moral choice (*prohairesis*) and display dispositions. In addition to bringing out the fundamental relevance of character, Aristotle also determined which type of character should appear in which *genre. Characters in serious genres such as tragedy or epic should be serious themselves and better than the audience, characters in comedy should be worse than the audience ('better' and 'worse' primarily in terms of social class). Next Aristotle (*Poet.* ch. 15) singled out four criteria of persuasive char-

42 On censorship in antiquity see Hornblower [2012⁴] with bibl., on the history of the concept Weller [2009] 1486–1500, with bibl.

acterisation: goodness, *appropriateness, likeness (*i.e.* comparability with the audience, which tied in with his notion that tragic characters should not be much better and comic characters not much worse than the audience), *consistency. This fundamental treatment put the topic 'characterisation' on the agenda of criticism once and for all. Given that much Hellenistic criticism was practically oriented, it is not surprising that Aristotle's four criteria left the most conspicuous mark.⁴³ Critics frequently addressed questions such as 'is Agamemnon's utterance or action in this particular scene appropriate to such a character?' or 'is Achilles' character consistent throughout the *Iliad*?⁴⁴ Moreover, they could comment on the fact that an utterance was spoken 'in character' (*en êthei*, which sometimes means 'ironically'). Their notes also reflected a general interest in psychology (cf. Aristotle *Rh.* book 2, chapters 2–11) when the behaviour of characters was declared typical of men or women in such circumstances (cf. lifelike *realism). On the other hand, Hellenistic critics also produced small vignettes of specific characters. In doing so, they explored the characters' individuality and subjectivity, two notions which are often strikingly absent from ancient discussions, esp. the *Poetics* due to its equation of character with moral choice.⁴⁵

Chronology

In spite of pre-Hellenistic efforts to get to grips with chronological questions (for literary topics see esp. Glaucus of Rhegium frs. 1–3 Lanata), the subject was put on a scientific footing by Eratosthenes of Cyrene. Since he developed a comprehensive chronology (built on the reckoning by Olympiads, which proved to be very influential), it also included literary subjects (*e.g.* the dates of authors and their works: *biographical criticism, *plot summary), although this cannot have been his main goal. The chronology designed by Apollodorus of Athens later superseded Eratosthenes', on which it was built.⁴⁶

43 An exception is Philodemus (*Poëm.* 4, cols. 106–112 Janko), who attacked the Aristotelian concept of character(isation) in general. Whether his target here is Aristotle himself or his school is disputed (most recently Janko [2011] 220–221, with bibl.).

44 Appropriateness *e.g.* sch. A *Il.* 1.133–134 *Ariston.*; consistency: Nünlist [2009a] 249–250, with n. 42.

45 On Aristotle's concept of character see Halliwell [1986] esp. ch. 5, for practical examples Schironi [2009b] 290–297, Nünlist [2009a] 246–256, with bibl. in n. 29, also index *s.vv.* character, characterisation.

46 Pfeiffer [1968] 163–164, 255; for Eratosthenes of Cyrene and Apollodorus of Athens see also Montana in this volume.

Clarity (saphêneia)

Clarity (or lucidity) is arguably the most important virtue of *style for Aristotle (*Rh.* 1404b1–2, cf. *Poet.* 1458a18–19). Through the systematisation of his pupil Theophrastus (virtues of *style), it had an enormous and lasting influence on *rhetoric, including rhetorical criticism. Moreover, a poetological image such as the ‘pure and undefiled water from the holy spring’ (Callim. *Hymn.* 2.111–112) is likely to address the quality of lucidity too. In any case, Callimachus sharply criticised Antimachus’ *Lyde* for its lack thereof (fr. 398 Pfeiffer). If clarity was considered a virtue, it was only to be expected that obscurity (the ‘trademark’ of the philosopher Heraclitus) would be considered a vice.⁴⁷ The clarity of the text played a role in criticism at a more elementary level too. The insertion of lectional signs (not just breathings and accents but also punctuation, division of speakers and different *metres, etc.) made the text more user-friendly. When discussing the pros and cons, for example, of different punctuations, critics regularly preferred the one that made the text ‘clearer’ (*saphesteron*).⁴⁸

Classifications

The attempt to carve up the entire body of texts by means of classifications is a recurrent phenomenon of literary criticism. Arguably the most common and influential of them was the distinction between poetry and *prose. The decisive criterion was *metre, in spite of the objections raised by Aristotle (*Poet.* 1447b13–23), who himself (1448a19–24) reformulated Plato’s differentiation between (a) pure narrative, (b) a mixture of narrative and speech (as in Homer) and (c) pure speech (as in tragedy and comedy).⁴⁹ The model as such had a considerable echo, but a problem was to find actual examples of (a) pure narrative. Consequently, the classification sometimes had two positions only.⁵⁰ The bipartite model also had the advantage of squaring nicely with the other

47 Heraclitus 22 A 1a, 3a, 4, B 10 D-K; obscurity to be avoided: e.g. sch. A *Il.* 14.169a *Ariston*.

48 In this form the *saphesteron* argument (sch. A *Il.* 6.68–69 *Nic.*, etc.) is typical of Nicanor (second cent. AD), but the idea is considerably older. Cf. Aristotle’s general discussion of punctuation, the specific example being Heraclitus (*Rh.* 1407b11–18 = Heraclitus 22 A 4 D-K). On the history of clarity as a critical concept see Asmuth [2003] 814–874, with bibl., on obscurity Walde (*et al.*) [2003] 358–383, with bibl., for practical examples see Meijering [1987] 224–225, Nünlist [2009a] index s.v. clarity.

49 Halliwell [2009] has recently argued that Plato did not actually introduce such a tripartite model in *Republic* 392c–398b, but he agrees that this is how it was understood by subsequent critics from Aristotle onwards.

50 Nünlist [2009a] 94–102, with bibl. in n. 2, add Janko [1984] 128–130, Halliwell [2009], other classifications [2009a] 109–115.

classification that Aristotle himself had used in the same context: *genre. A rather different bipartition was the distinction between form and content, usually said to originate with Plato (*formalism). It was taken up, for instance, by the 'Stoic' (Aristo of Chios?) who differentiated between 'thought' (*dianoia*) and 'composition' (*sunthesis*). Perhaps this was a reaction against Neoptolemus of Parion and his tripartite model *poiêsis-poiêma-poiêtês*, the details of which are not yet fully understood.⁵¹ See also *music.

Coherence

An axiom of the *Poetics* is the organic *unity of the *plot. Aristotle thus sharpened the awareness of the fact that the individual parts of a literary text ought to form a coherent body. The exact details of such an analysis were left for others to develop (cf. *formalism). One result was a collection of terms and concepts that allowed critics to examine and describe the narrative coherence of a literary text. They show more than superficial similarity to the findings of modern narratology (e.g. *proanaphônêsis* ≈ foreshadowing or prolepsis).⁵² Aristotle also stipulated that the individual elements of the *plot should not follow each other more or less randomly but according to the principle of 'cause and effect' (*plausibility). This is reflected in the countless notes that explain how a particular scene motivates another. According to Aristotle, the coherence of a tragedy ought to be more rigid, whereas epic poems, given their greater size, are allowed to incorporate more 'episodic' material (*Poet.* 1459b28–31). A similar distinction recurs in the comments which judge the coherence of a literary text depending on its *genre. More surprising is perhaps the point that the coherence could stretch over multiple texts. Aristarchus' conviction that the *Iliad* and *Odyssey* were the product of a single author induced him, among other things, to detect a narrative coherence that linked the two epics together.⁵³

51 The models of Neoptolemus and 'Aristo' are both known via Philodemus, who rejects them (*Poëm.* book 5, cols. 13–20 Mangoni). For a (speculative) explanation of Neoptolemus' model see Gutzwiller [2010] 342–346.

52 For *proanaphônêsis* see Nünlist [2009a] 34–42, with bibl. in nn. 36 and 38. On narratological questions in general see Nünlist [2009b].

53 Nünlist [2009a] 33–34, for more practical examples see index s.vv. (narrative) coherence, motivation.

Commentary, Running (hupomnêma)

The earliest attestation of the word *hupomnêma* in this sense refers to Euphronius' running commentary on Aristophanes' *Wealth*.⁵⁴ But the real champion of this format was without doubt Aristarchus, who was responsible for an enormous body of learned commentaries, even though the figure given by Suidas, 800, is probably not to be taken at face value. The commentary occupied a separate bookroll; hence the use of the *critical signs in the margin of the text. In the light of Aristarchus' towering position in Alexandrian scholarship, the commentary is rightly regarded as one of the two preferred and therefore representative forms of exegesis (the other being the *monograph). With regard to contents, the commentary was not so very different from its modern counterpart and discussed essentially the same type of questions. They also share the same pros and cons. On the one hand, the running commentary can shed light on an unlimited variety of aspects and therefore pay close attention to individual passages without thereby losing the possibility of treating the entire text. It thus proves to be an invaluable source for the concepts of Alexandrian criticism. On the other, this (as it has been called) 'morselisation' of the text entails the risk that the critic and thus the reader might at times lose the larger picture out of sight. Aristarchus was not unaware of this risk. He tried to reduce it by writing notes that addressed the relevant question in a comprehensive way (preferably upon its first occurrence, with cross-references in the remainder of the commentary: see Montana in this volume). Moreover, his notes on, for example, narrative *coherence show that he kept in mind the text's overarching structure. With the exception of a few papyrus finds (including the abridgment of Aristarchus' commentary on Herodotus, that is, a *prose author), the original commentaries have been lost and must be reconstructed in a laborious and difficult process from the fragments transmitted in the scholia of the medieval manuscripts.⁵⁵

Comparison

To compare one author (or text) with another is likely to be an activity in which readers of all times naturally engage. The first extant example of some length and depth is the *agôn* between 'Aeschylus' and 'Euripides' in the sec-

54 Pfeiffer [1968] 161; on commentaries see also 29, 175, 250, 276–277, and on Aristarchus' specifically 212–225. On the history of the *hupomnêma* in general see Eichele [1998] 122–128, with bibl. and Dubischar in this volume.

55 Brief summary of the reconstruction process in Dickey [2007] 19, and in this volume. For glossaries of ancient grammatical terminology see Dickey [2007] 219–265, for literary criticism Nünlist [2009a] 368–386.

ond half of Aristophanes' *Frogs*. It prepared the ground for all subsequent comparisons between two or more authors (Alcidamas, *Contest of Homer and Hesiod*;⁵⁶ Dionysius of Halicarnassus, *passim*; Dio Chrysostom, *Philoctetes' Bow*; Plutarch, *Comparison of Aristophanes and Menander*, etc.). In addition to these large-scale comparisons, there were countless smaller observations and notes that compared authors in every conceivable respect. Aristarchus specifically differentiated between Homer and the *neôteroi* (lit. 'younger'), that is, all the authors who postdated him (*anachronism).⁵⁷

Conciseness (suntomia)

Conciseness was considered one of the virtues of *style. Often said to be 'Stoic', the concept is actually found already in Isocrates (*Artium Scriptores* BXXIV 34 = Quint. *Inst.* 4.2.31), where it formed a triad together with *clarity and *persuasiveness. The ability to express something succinctly was a source of praise from critics. Conversely, if they perceived unnecessary verbosity or bombast, critics could reprimand the author, declare the incriminated line(s) superfluous (*perissos*), etc.⁵⁸ One might compare Callimachus' 'slender Muse' (fr. 1.23–24 Pfeiffer).

Consistency

One of Aristotle's four criteria of convincing *characterisation was consistency (*Poet.* 1454a26–28), which was taken up by Hellenistic critics. A character ought to act and speak in a consistent way throughout the entire play or epic poem. The idea was not so much that characterisation must be done with utmost rigour (*sense of proportion). Rather the various actions of a character must be compatible with each other so as to provide a consistent and coherent picture. Unwanted were utterances or actions that were patently 'out of character'.⁵⁹ The principle of consistency clearly resembles that of narrative *coherence, a prerequisite of the *unity of the *plot. It was thus only natural

56 The form of the *Contest* that has reached posterity is an amalgam. Its core, later expanded by Hellenistic material, is generally agreed to go back to Alcidamas, who in turn may depend on precursors (O'Sullivan [1992] esp. ch. 3). On literary contests in general see Neumann [1992] 261–285, Paulsen [2002], each with bibl.

57 On the history of comparison as a critical concept see Kneepkens [1994] 293–299, with bibl.

58 On the history of conciseness as a critical concept see Kallendorf [1994a] 53–60, with bibl., for practical examples Meijering [1987] 147–148, Nünlist [2009a] index s.v. conciseness.

59 Examples of praise and critique are given in Nünlist [2009a] 249–252, with bibl. in nn. 39, 43, 47.

for critics to search for consistency when they analysed the *style or subject-matter of individual texts and authors and to criticise its absence.

Contradiction

Thorough *analysis or downright *reading against the grain could also bring to light that a passage contradicted another or was in conflict with an extratextual fact (*e.g.* Aristotle, *Poet.* 1461b15–18, cf. also 1455a22–26). If the observed contradiction or inconsistency turned out to be real, critics entertained, among other things, the possibility of a textual corruption (questions of *authenticity). It is, however, remarkable how often they argued that a contradiction was not real but apparent only (*problems and solutions).⁶⁰

Critical Signs

The Hellenistic scholars put critical signs in the margins of their texts. Several signs referred to questions of textual criticism but not all: Aristophanes of Byzantium developed an elaborate method of marking metrical units (*metre). Aristarchus used the *diplê* (>) to mark passages that were noteworthy and therefore discussed in the *commentary. These discussions regularly addressed questions of literary criticism.⁶¹

Custom (ethos)

The systematic and comprehensive *analysis of an author's *oeuvre* allowed critics to identify features, literary techniques etc. that this particular author customarily made use of.⁶² This type of research regularly included the question whether or not there were exceptions (see also *contradiction). An answer in the negative could lead to editorial interventions (questions of *authenticity).

Educative Function

With the exception of comparatively few critics (*e.g.* Eratosthenes, for whose provocative denial see *emotions), there was widespread consensus among readers and critics alike (formulated with different degrees of explicitness) that one of poetry's primary functions was to educate the reader. This general statement can be underpinned with observations of a more practical kind.

60 Schironi [2009b] 288–290, Nünlist [2009a] index s.v. inconsistency.

61 On the various critical signs see most recently Schironi [2012b] with bibl. For an up-to-date collection and discussion of the papyrological evidence see McNamee [2007]. See also Montana in this volume.

62 An example is the Homeric habit to place *gar* ('for') in the first sentence too (sch. A *Il.* 2.284a *Ariston.* = fr. 173 Matthaïos).

Poetry in general and Homer in particular were of the highest importance in school throughout antiquity.⁶³ Homer was not only regarded as the ‘first discoverer’ (*prôtos heuretês*) of countless things but also the source of all wisdom.⁶⁴ Exegetical literature is rife with observations of the type the author ‘educates (*paideuei*)’ or ‘instructs (*didaskei*) that . . .’ followed by a description of the specific teaching.⁶⁵ This could apply to every conceivable aspect of the world at large and includes questions that are unlikely to have been on Homer’s mind. As time went on, this towering position of a comparatively old text created multiple problems. Homer’s archaic language became increasingly difficult to understand (enshrined by the well-known fragment of Aristophanes, 233 Kassel-Austin). In light of the scientific progress made by subsequent generations, some of his notions appeared to be inaccurate (*contradiction). Arguably the most serious problem was ethical. The alleged immorality of several Homeric passages, especially the frivolousness of his gods, made him appear unsuitable for educative purposes (*censorship). It is no coincidence that an elaborate defence of poetry against ethically motivated critique posed as a manual *How the young man should study poetry* (Plutarch). Even though the harsh critique of Plato and others caused a great stir, its practical impact was rather limited. Homer’s position as *the* author read in school was never seriously challenged in antiquity. Nor was the widespread conviction that literature had an educative function.⁶⁶

Emotions

(Early) Greek poetry regularly described the emotional impact it expected to have on the audience (*e.g.* *Od.* 13.1–2). But this very emotive power was among the most important objections raised by Plato against poetry (*Resp.* 602c–607a). Aristotle, in turn, regarded the generation of emotions as a fundamental principle of tragedy and thus art in general. In this he was preceded by Gorgias.⁶⁷ Aristotle’s much-discussed definition of tragedy (*Poet.* 1449b24–28) circles around, specifically, pity (*eleos*) and fear (*phobos*). These emotions are also the means by which tragedy produces the type of *pleasure (*hêdonê*) that is conform to its nature (1453b10–13), as does epic (1459a18–21). Furthermore, good literature generates wonder (*to thaumaston*, 1452a4) and amazement (*ekplêxis*, 1455a17). The latter might even help the author veil a passage that

63 Cribiore [2001]; see also *book.

64 Hillgruber [1994] 5–35.

65 Sluiter [1999] esp. 176–179.

66 On Greek education see Thomas [2012⁴] with bibl.

67 82 B 23 D-K, cf. *Dissoi Logoi* 90, 3,10 D-K, also 2.28.

otherwise would not stand up to scrutiny (1460b24–26; *plausibility). The preceding description concentrates on Aristotle because Hellenistic critics generally agreed with him that the generation of emotions was fundamental to literature. Probably the most extreme in this respect was Eratosthenes (fr. I A 20 Berger), who declared that poetry did not aim at ‘instruction’ (*didaskalia*, *educative function) but ‘entertainment’ (*psuchagôgia*, lit. ‘leading of souls’, which had found no favour with Plato, *Phdr.* 261a). Chances are this was meant as a deliberate provocation.⁶⁸ Be that as it may, the generation of emotions was a standard topic in criticism. Obviously, the individual critic could shift the balance at will or discuss other emotions than Aristotle had done. Of these, one is perhaps worth singling out because it became popular again in the course of the twentieth century: suspense. It is interesting to note, though probably no more than coincidence, that one relevant term has the same etymology as suspense (gr. *anartan* ≈ lat. *suspendere*).⁶⁹

Emulation

The imitation or emulation of the great masters of poetry such as Homer can be seen at work throughout the entire history of Greek literature. Theoretical statements, however, are not so easy to come by. They were written with a view to the practical needs of an orator (*e.g.* Isoc. 2.41) and/or they postdate the Hellenistic period (*e.g.* Horace and Ps.-Longinus).⁷⁰ Neither qualification must be decisive. Rhetoric and literary criticism often went hand in hand; criticism of the Roman period regularly reflected Hellenistic views (leaving aside that Horace urges the Romans to study the Greek models). The following paradox is nevertheless worth pointing out. The same period which, by means of the *canonisation process, was largely responsible for the concept of ‘classical’ literature appears to have been reluctant to express the view that the same ‘classical’ authors ought to be studied and emulated with particular attention. Was the point too obvious to be made? Emulation did of course not mean

68 Pfeiffer [1968] 166.

69 On the generation of emotions as a critical concept see Wisse (*et al.*) [1992] 218–253, Wöhrle [2001] 1498–1501, on *psuchagogia* Stauffer [2005] 406–415, Halliwell [2011], each with bibl.; for practical examples Nünlist [2009a] 135–156, with bibl. in n. 2; on *anartan* 143.

70 Cf. Hor. *Ars P.* 268–269, Ps.-Long. *Subl.* 13.2; a possible exception is Phld. *Poëm.* 5, cols. 33–34 Mangoni.

slavish adherence but a productive and original handling of the great models (literary *tradition).⁷¹

Enargeia

Literature is primarily an aural type of art (*e.g.* Pl. *Resp.* 603b7–8; *euphonist theory). This holds particularly true for the members of a society who were accustomed to read aloud or have literature read to them.⁷² But it was equally customary to compare literature with *visual forms of art. Such comparisons implicitly underlay the numerous comments that highlight the visual quality of (aural) literature. Arguably the most important term here was *enargeia*, usually rendered in English with ‘vividness’, which, however, fails to express its decidedly visual quality (better captured, for instance, by German *Anschaulichkeit*). A passage had *enargeia* when the wording was so gripping that the readers could ‘see’ (*visualisation) what was actually reaching them through their ears. According to Plutarch (*De glor. Ath.* 347a), Thucydides tried hard to turn his readers (*i.e.* hearers) into spectators. In Aristotle’s words (*Rh.* 1411b24–26), the author put (by means of *metaphor) before the reader’s eyes things which thus had ‘activity’. By being brought before the reader’s eyes, these things, actions etc. achieved actuality. The Greek word for ‘actuality’ is *energeia*. Even though Aristotle did not say it in so many words, in a sense he established an immediate connection between *enargeia* and *energeia*. This was bound to lead to trouble. The regular confusion of the two terms in our manuscripts often makes it difficult to decide which of them is actually at stake. Another point of contact is less problematic. The same passage could be singled out for its *clarity or *enargeia*. Likewise, praise for *enargeia* could be uttered when the relevant scene seemed so real as if it were taken from ‘real life’ (lifelike *realism).⁷³

Ethics

See *appropriateness, *censorship, *educative function, *emotion, *fiction, poetic *licence, *mimêsis, *multiple meanings.

71 On originality within a traditional setting see Brink [1971] 208–209. Ancient critics would have been surprised by the modern craze about artistic originality. On the history of emulation as a critical concept see Bauer [1992] 141–187, Conte-Most (2012^{4b}), each with bibl.

72 The ongoing controversy around the beginnings of silent reading does not alter the fact that to read aloud was in any case the rule (*e.g.* Johnson [2010]).

73 On the history of *enargeia* as a critical concept see Kemmann [1996] 33–47, with bibl., for practical examples Nünlist [2009a] 194–198, with bibl. in n. 4.

Etymology

An interest in the etymology of words and, in particular, names was pervasive among the Greeks. Homer and other poets subtly ‘etymologised’ in their texts, for instance, when Hector’s name was derived from the verb *echein* (‘to hold’, *Il.* 5.472–473), which made him the ‘holder’ of the city of Troy. Similar explanations could be found in philosophical and historical literature of the sixth and fifth centuries, until the topic was examined with unprecedented zeal in Plato’s *Cratylus*.⁷⁴ Criticism of the Hellenistic and later periods, too, regularly argued on the basis of etymological considerations. There was a widespread consensus that etymology promised to lead to deeper insights into the word or name under consideration. The principles that governed the practical application of etymology were less rigid than in modern scholarship, where it has become a branch of historical linguistics with its regular sound shifts, etc. A recurrent characteristic is apt to illustrate the difference: some critics (Plato included: *e.g.* *Cra.* 405a–406a) saw no difficulty in offering multiple etymologies which for them were not mutually exclusive. This did not mean, however, that an etymology could not be rejected by others as false (*e.g.* sch. *A Il.* 1.105a *Ariston.*). In any case, etymology was a commonly practised reading strategy, which justifies its inclusion here.⁷⁵

Euphonist Theory

Poets in general and the composers of oral poetry in particular must always have been aware of its sound effects. In *prose one might compare the widespread avoidance of hiatus. Lasus of Hermione (fr. 704 Page) is known to have written an entire poem without the letter *sigma*, no doubt because he did not like its sound. Democritus (68 B 18a/b D-K) apparently wrote on euphony. The *etymological explanations of Plato’s *Cratylus* explained several sound shifts as being due to euphony.⁷⁶ The ground was thus prepared for the striking novelty of the so-called euphonists, whose theories must be wrestled primarily from Philodemus’ works (see introduction above). Taking as their starting-point the ‘Platonic’ distinction between form and content (*formalism), the euphonists felt that it unfairly favoured the content of literature. They therefore attempted to shift the balance. In so doing their main focus was on the phonetic side of form specifically, which, among other things, made the ear an important judge of poetic excellence. Some euphonists even went so far as to argue that sound was actually more important than content. It is difficult to say

74 Pfeiffer [1968] 4, 12, 40, 61–2, see also Novokhatko in this volume.

75 On ancient etymology see the papers collected in Nifadopoulos [2003a].

76 Pfeiffer [1968] 64.

whether euphonist theory, especially in its extreme form, was shared by many outside their own circles (leaving aside the fact that they by no means agreed among themselves). At any rate, Philodemus thought it important enough to devote books 1 and 2 of *On Poems* to an elaborate description and rejection, in which he insisted on the unity of form and content. Pieces of euphonist theory popped up here and there. Aristarchus, for example, rejected Zenodotus' text in *Iliad* 6.34 with explicit reference to the phonetic effect (sch. A *Il.* 6.34 *Ariston.*). Moreover, a substantial part of *On Composition* by Dionysius of Halicarnassus provided a minute analysis of individual sounds. He also continued using the euphonists' testing method known as 'transposition (of words)' (*metathesis*; *word order). All in all, one may conclude that, in its extreme form, euphonist theory remained on the margins of literary criticism. But the general topic 'sound effects' as such was far from being ignored by critics.⁷⁷

Fiction

The word 'fiction' is Latin (*fingere*). When Xenophanes criticised the poets, he spoke of their 'fabrications' (*plasmata*, 21 B 1.22 D-K = 1.22 West). His objections were ethically motivated. Since all the Greeks without exception learned from Homer (B 10, *educative function), it was unacceptable that he told stories which were both morally objectionable and untrue. In his fundamental critique of *mimetic art Plato developed this idea further, in that he held poetry against the criterion of (philosophical) truth or reality. The result was strictly negative: poetry was a 'lie' (*pseudos*) and thus to be banned (*censorship). In his defence, Aristotle not only argued against Plato that poetry must be measured by its own standards (poetic *licence), he also made the much-quoted point that 'Homer has taught the other poets how one must lie' (*pseudê legein*, *Poet.* 1460a18–19). Aristotle, however, did not mean to say that *pseudos* was simply to be equated with poetry *tout court*. As the context of the quotation reveals, the point was that a clever juxtaposition of 'true' and 'untrue' passages allowed poets to get away with the latter. Eratosthenes, for his part, in rejecting the widespread view that literature had an educative function (*emotions) allowed poets 'to resort to fiction' (*plattein*) whenever it helped them achieve their goal (fr. I A 19 Berger). He also exposed the excessive literal-mindedness of those readers who tried to map Odysseus' wanderings and cheekily told them that they would succeed as soon as they found the cobbler who stitched

77 The point of reference for euphonist theory is Janko [2000], [2011]. His contention [2011] 229, however, that 'euphonic analysis had become at least as important' (sc. as the 'Aristotelian' type of analysis) seems to me an exaggeration. On the history of euphony as a critical concept see Umbach (*et al.*) [1996] 10–22, with bibl.

together Aeolus' bag of winds (fr. 1 A 16 Berger). The notion that Odysseus' wanderings take place in fictional space, though rejected by Polybius (34.2.4–4.8), Strabo (1.2.15) and others, found the approval of no lesser critic than Aristarchus.⁷⁸

Figure of Speech (schêma)

The term *schêma* (in the sense 'figure of speech'), which was to play a crucial role in *rhetoric, does not occur in Aristotle's *Rhetoric*. Its first attestation seems to be in Theophrastus (fr. 691 Fortenbaugh), who regarded it as one of the three factors that contributed to a *style that was *solemn and grand, the other two factors being selection (*eklogê*) of words and their harmonious arrangement (*harmonia*). The various rhetorical handbooks took great pains to define what a *schêma* was and to distinguish it from the other term for 'figure' (*tropos*), each with their respective examples. Taken together, the result is a confusing wealth of definitions and examples which is not free from overlaps and contradictions. A particular difficulty arises from the fact that in actual practice *schêma* and *tropos* were often used indiscriminately. The term *schêma*, in particular, could refer to virtually any type of wording or expression that was somehow exceptional (that is, differed from natural language) and thus noteworthy (e.g. sch. A Il. 2.278a Ariston., on a *constructio ad sensum*).⁷⁹

Formalism

Plato is often credited with the differentiation between form and content in poetry (e.g. *Resp.* 601b2–4, with Murray's note). As for Aristotle, the view that in his *Poetics* he 'expounds a strictly formalist notion of unity as independent of poetic meaning' is better rejected.⁸⁰ It is, however, true that the *Poetics* paved the way for formalist approaches, which were further developed and refined by subsequent critics (narrative *coherence, *narrative voice, *plot). Aristotle himself built on a generic distinction that he had found in Plato (*classification).

78 Lehrs [1882³] 241–245. On the history of fiction as a critical concept see Zinsmaier [1996] 342–347, with bibl., for practical examples Nünlist [2009a] 174–184.

79 On the history of figures of speech as a critical concept see Nape [1996] 289–342, with bibl., on the terminological confusion Schrader [1904].

80 Halliwell [1989] 156, with ref. to 1451a30–32. This is not the place to discuss the question whether there actually are formalist analyses that operate 'independent of poetic meaning'.

Formulaic Language

No reader of Homer will miss the regular repetition of lines. The Alexandrian critics consistently marked them in their texts (*critical signs). Since this repetition clashed with the principle of *variety, which was particularly strong in aesthetics of the Hellenistic period, critics cast doubts on the *authenticity of repeated lines. Contrary to a widespread modern view, however, they made no attempt to eliminate them systematically.⁸¹ In particular cases, for instance when the messenger verbatim repeated the original instruction, the repetition was even explicitly defended by critics.⁸² It is true, though, that formulaic repetition was generally regarded as typical of the inferior poets of the epic cycle (e.g. sch. A *Il.* 9.222a *Ariston.*, cf. Callim. *Epigr.* 28 Pfeiffer; *canons). As Parry [1971] 120–124 himself acknowledged, Aristarchus essentially recognised the nature of generic epithets. He also described two fundamental principles of Homer's type scenes: the individual components can be expanded or shortened, but their sequence must not be altered (for an example see **Realien*). In spite of these forays into what is now considered the territory of oral poetry, critics seem to have taken it for granted that Homer had written his epics.⁸³ In Aristarchus' case, this is at least worth mentioning because he insisted that Homer's characters did not write (*anachronism).

Genre

An interest in and the identification of literary genres clearly predate the Hellenistic period. A good example is the list of genres in Plato (*Leg.* 700b), not least because it gave prominence to lyric genres, a topic that Aristotle rarely touched upon in his *Poetics*, which focused on defining and describing epic and drama.⁸⁴ Callimachus' **Pinakes* were arranged by genre. And so were the editions that the Alexandrians produced (literary *heritage), for instance, the edition of Pindar's works in seventeen books, which displayed ten lyric sub-genres, as arranged by Aristophanes of Byzantium. Overall there were multiple, mostly formal criteria for the assignment to a particular genre: mode of performance (e.g. acting vs. narrating), *metre and *music, occasion,

81 Lührs [1992]; see also *sense of proportion.

82 Nünlist [2009a] 312–314, on type scenes in general 307–315, on epithets 299–306, with bibl. in n. 6, add Matthaios [1999] 238–239.

83 It is, however, remarkable that Josephus, who was the first to raise the possibility of an oral origin, did so in his treatise against the Homeric scholar Apion (12.1).

84 The concept 'genre' as such is of course fundamental to the *Poetics*. Janko [2011] 237–238 has recently argued that Philodemus *On Poems* 4 is an attack on Aristotle's concept of genre.

pragmatic function, etc. (Conte-Most [2012^{4a}]). Inevitably, scholars sometimes disagreed: was Bacchylides' *Cassandra* (fr. **23 Maehler, with the sch. printed on p. 120) a paean (Callimachus) or a dithyramb (Aristarchus)? Many genres also created expectations in terms of register (*solemnity), *characterisation or narrative *coherence, which were thus addressed in the respective comments. Aristotle's *Poetics* introduced the concept that one genre had grown out of another (*literary history). Overall poetic genres received more attention than *prose genres. An important exception was the distinction between forensic, epideictic and deliberative oratory.⁸⁵

Heritage, Literary

The express goal of the *Museum and library was to create a treasure-house of the entire literary (and scientific) heritage that fulfilled certain quality standards.⁸⁶ It was thus necessary (a) to collect and/or copy all the relevant works, (b) to get or produce the best possible text for each (questions of *authenticity), (c) to make them accessible, literally, by means of catalogues and other means of support (**Pinakes*), (d) figuratively, by writing exegetical works such as *commentaries, *monographs or glossaries. The latter two had already been in existence in pre-Hellenistic times, but the new emphasis on user-friendliness can be deduced, among other things, from the forward-looking invention to arrange glossaries in *alphabetical order. The same holds true for the *critical signs.

Historical Perspective

Imagery

See *metaphor, *simile.

Influence (of Hellenistic Literary Criticism)

Three general areas can be identified which show traces of influence by literary-critical ideas of the Hellenistic period. The first two are self-evident: (a) Hellenistic poetry, especially that of *scholar-poets such as Callimachus or Apollonius of Rhodes; (b) literary criticism in Latin (*e.g.* Horace's *Ars Poetica*) and in Roman times (*e.g.* Dionysius of Halicarnassus). Less to be expected is perhaps (c) the recognition that poets like Vergil were familiar with the

85 On the history of genre as a critical concept see Komfort-Hein – Knoblauch [1996] 528–564, Conte-Most [2012^{4a}], each with bibl.; also Brink [1971] 160–163.

86 Pfeiffer [1968] *passim*; see also Montana in this volume.

Alexandrian exegesis of Homer in quite some detail.⁸⁷ These are the immediate areas of influence. In addition, influential texts such as Horace's *Ars Poetica* helped channel Hellenistic ideas through the (largely Greekless) Middle Ages, until Greek studies were renewed in the Renaissance, which handed them down to the modern era.

Inspiration

Hesiod's meeting with the Muses on Mt. Helicon (*Theog.* 22–34) is the earliest known example in a long row of *Dichterweihen*. Theorising about divine inspiration (also evident in the concept of the poet as seer, prophet, etc.) seems to have begun with Democritus (68 B 17–18, 21, 112 D-K) and Plato (*Phdr.* 245a, *Ion*). They both regarded poetic inspiration as a form of 'divine possession' (*enthousiasmos*) or 'madness' (*mania*). For Plato this was an ambivalent thing because it was incompatible with true understanding. The poet might be proficient in the 'art' (*technê*) of writing poetry but he could not succeed without this 'madness'. This last point was to become the basis for the age-long opposition between *ars* and *ingenium* (e.g. Hor. *Ars P.* 409–411, Ps.-Long. *Subl.* 2, who both argued for a fruitful combination of the two). Democritus saw things differently. Not only did 'divine possession' lead to results that were 'extremely beautiful' (*kala karta*, B 18), he also praised Homer because 'being endowed with a nature open to divine influence he built a fair structure of all kinds of words' (B 21). The *ars-ingenium* controversy could also take the form of the question whether a poet should drink wine or water.⁸⁸

Intent, Authorial

There was a widespread, if largely implicit, consensus among critics that there was such a thing as authorial intent and that it was the reader's task to try to grasp it. Ancient criticism was unaffected by the discussion around the 'intentional fallacy' which arose in the middle of the twentieth century. Even critics who advocated a form of *reading against the grain or between the lines (*multiple meanings) essentially subscribed to the idea of authorial intent. This 'additional meaning' was there because the author put it there. The concept of authorial intent was particularly strong in rhetorical criticism, which saw the author in complete and conscious control of his material. This also

87 Schlunk [1974], Schmit-Neuerburg [1999].

88 Cameron [1995] 363–366, with bibl., who, however, rejects the view that Callimachus was part of this discussion. On the history of inspiration as a critical concept see Kositzke [1998] 423–433, with bibl., on *enthousiasmos* Kositzke [1994] 1185–1197, with bibl., on *ars-ingenium* Neumann [2003] 139–171, with bibl.

holds true for Aristotle's *Rhetoric*, which makes it even more remarkable that in his *Poetics* the notion of authorial intent is hardly ever called into play.⁸⁹

Interpretation, textimmanente

The notion that each author was his own best interpreter with the consequence that interpretation should be *textimmanente* is likely to be Aristarchus' best-known tenet (usually in form of the phrase 'to elucidate Homer from Homer').⁹⁰ It is, however, important to keep in mind what Aristarchus' point was. A fundamental concern of his was to avoid the various forms of *anachronism that threatened an appropriate interpretation. In order to do so, it was best to analyse first and above all how the relevant text itself dealt with the question under consideration. This approach enabled the critic, for example, to establish the meaning of a word in the Homeric epics (as opposed to later authors and/or Hellenistic usage), to differentiate between variants of a myth (*mythology), to reconstruct the specifically Homeric *Weltbild*, etc. Aristarchus, however, did not advocate the view that the critic must completely ignore other relevant data (*sense of proportion). First, his form of *textimmanente* interpretation entailed a great deal of *comparison with other sources (primarily, but not exclusively, texts, see *mythology): Homer's *custom was regularly set off against that of other authors. Second, Aristarchus was not opposed to using other data, especially when Homer himself did not present an unambiguous picture. For instance, he uses Hesiod as a 'witness' (*martus*) for the physical shape of the Molione (sch. A *Il.* 23.638–642 *Ariston.*). The same poet is quoted as an authority on Ascrea in order to reject Zenodotus' text (sch. A *Il.* 2.507a *Ariston.*). Others notes support the point made with references to Stesichorus (sch. A *Il.* 5.31d *Ariston.*) or Euripides (sch. A *Il.* 2.353a *Ariston.*). Likewise, the explanation of certain **Realien* (e.g. geography) was impossible without recourse to other sources. Finally, the flexibility of Aristarchus' approach also transpired from the fact that he admitted exceptions, especially in the form of things that occurred only once (*hapax legomena*, which was not an exclusively lexicographic category).

89 On the history of authorial intent as a critical concept see Bernecker [1998] 451–459, with bibl.

90 The bibliography on the subject (see Montanari [19970] 285–286, with bibl. in n. 20) is primarily concerned with the question whether or not the phrase *Homêron ex Homêrou saphênizein* represents Aristarchus' own wording. The point of the present entry is argued at greater length in Nünlist [forthc.].

Licence, Poetic

In his *Poetics*, Aristotle defended poetry against the fundamental objections raised by Plato against all forms of art (**mimêsis*), among other things, 'by holding that the content and meaning of mimetic works cannot justifiably be tested against any fixed criterion of truth or reality' (Halliwell [1989] 153) but must be measured by its own standards (1460b8–15). He thus made a claim on a large scale that on a smaller scale came to be known as 'poetic licence'. The main points, though not the term, were expounded already by Isocrates (*Euag.* 9–10): unlike a historian or an orator, a poet was free to choose at will both linguistic means and subject-matter, including fictional or even fantastic story elements. The term poetic licence as such was regularly used in a defensive manner, in order to reject objections raised by other critics. Aristarchus, for instance, repeatedly defended Homer against the 'internal *contradictions' that quibblers had found. In addition, he and others granted poets a fair dose of *fiction.⁹¹

Literary Dependence

The careful *analysis and *comparison of literary texts could also lead to the insight that a passage directly depended on another (cf. already Glaucus of Rhegium fr. 7 Lanata). Aristarchus' *commentaries regularly identified such cases. For instance, Hesiod's story about Pandora's box (*pithos*) depended on the Iliadic passage where Achilles speaks about Zeus' jars (*pithoi*), which contain good and bad lots.⁹² Likewise, Pindar's unusual metaphor 'white breast' (*mastos*, of a hill, *P.* 4.8) was a productive adaptation of Homer's 'udder of the soil' (*outhar arourês*, *Il.* 9.114).⁹³ The second example shows that scholars also commented on the specific relationship between the two passages: quotation, imitation, adaptation, *allusion, parody, etc.

Literary History

In chapters 4 to 5 of his *Poetics*, Aristotle gave a description of how tragedy and comedy had grown from other *genres and thus reached their perfect form. The whole account is deeply rooted in his teleological philosophy (cf. *unity). This is one reason why it proves so difficult to match it with actual literary history (Halliwell [1986] chs. 3 and 9), leaving aside that, according to

91 On the history of (poetic) licence as a critical concept see Schmude [2001a] 253–258, with bibl., for practical examples see Nünlist [2009a] 174–184, with bibl. in n. 1.

92 Sch. *A Il.* 24.527–528a *Ariston.* with respect to Hesiod *Works and Days* 84–104; Aristarchus' comment is triggered by the number of jars (Lehrs [1882³] 189).

93 Sch. *Pind. Pyth.* 4.14.

Aristotle himself, the origins of comedy are obscure (1449a38–b1). Elsewhere, however, (for instance, in the compilation of ‘didascalical’ information on dramatic poets: *plot summary) Aristotle showed more concern for a subject that the members of his school treated against a decidedly *biographical backdrop. In Alexandria, Callimachus’ **Pinakes* can perhaps count as a prototype of literary history. More generally, the typically Greek search for the *prôtos heuretês* (‘first discoverer’) was also applied, for instance, to genres and their ‘inventors’. And it was equally common to describe the subsequent history as a chain of ‘teachers’ and ‘pupils’. Aristophanes had already planted the seeds of literary history in his *Frogs*: the importance of the tragic chorus gradually decreased in the course of the fifth century; tragedy as a whole was no longer what it used to be; the new dithyramb scandalised everybody (obviously the sighs of a *laudator temporis acti*). Periodisations such as Old, Middle and New Comedy were the practical consequence.⁹⁴

Metaphor

It is no exaggeration to say that, to this day, metaphor has been a pet child of literary criticism and the central *figure of speech.⁹⁵ Aristotle set the point when he declared *metaphora* (and ‘foreign/strange words’, *glôttai*) typical of poetic diction (*Poet.* 1458a21–23) and the only thing you could not learn from others (1459a6–7). Two points must, however, be borne in mind. First, Aristotle’s term *metaphora* is roughly equivalent to ‘figurative language’ and in any case encompasses more than ‘metaphor’ does. Second, Aristotle did not advocate the view that metaphors were exclusive to poetry. Everybody uses them (*Rh.* 1404b34–35). He also put forward a fourfold definition of metaphor (*Poet.* 1457b6–9) as a ‘transfer’ (*epiphora*) (a) from genus (*genos*) to species (*eidos*), (b) from species to genus, (c) from species to species, (d) by analogy, each with examples. Moreover, he demonstrated that metaphors filled gaps in the vocabulary, when there was no proper term yet for a particular phenomenon (1457b25–32). He thus described the figure called *katachrêsis*. The term is not attested in his extant writings, but Cicero (*Orat.* 27.94) expressly refers it to him. In any case, the term is common among Hellenistic scholars, who also took up his fourfold definition, though the first two positions were thought to be part of metonymy (or synecdoche), not metaphor. Another fourfold model, built on the four possible combinations of ‘animate’ (*empsychos*) and ‘inani-

94 On the Hellenistic origins see Nesselrath [1990], summary on pp. 186–187.

95 On the history of metaphor as a critical concept see Eggs [2001] 1099–1183, with bibl., who, in particular, rejects (1103) the common view that Aristotle subscribed to the idea of substitution (e.g. Silk [2003] 118).

mate' (*apsuchos*), is found in Trypho (237.1–3 West), who must be indebted to Aristotle (*Rh.* 1411b31–1412a3).⁹⁶

Metre

In spite of Aristotle's objections (*Poet.* 1447b13–23), metre remained the decisive factor for the differentiation between poetry and *prose (*classifications). The specific metre also helped answer the question to which *genre a poem belonged. This applied in particular to lyric poetry (broadly understood) with its wealth of subgenres (hymns, paeans, dithyrambs, maiden songs, encomia, dirges, victory odes, etc.). This division also determined the editorial practice, in that the Alexandrian editions of lyric poets were organised by metre, as were Callimachus' **Pinakes*. Furthermore, metre also helped differentiate the various parts within a genre (*e.g.* choral odes and 'speech' in drama). The champion of metrical studies was Aristophanes of Byzantium, who marked the ends of the metrical *cola* of lyric poetry with *critical signs. The separation of these *cola*, however, long believed to be his invention, apparently predates him, as the Lille papyrus of Stesichorus indicates (3rd c. BC, = fr. 222b PMGF). Aristophanes' work on the triadic structure of 'choral' odes also helped him recognise the principle of metrical responsion between the corresponding parts, which had an immediate impact on textual criticism.⁹⁷ Aristarchus observed the rule that nowadays is called 'Hermann's Bridge'.⁹⁸ In addition to developing an elaborate taxonomy, critics also discussed metrical anomalies (*e.g.* 'mousetailed' hexameters), collected examples of lines that were comparatively rare (*e.g.* purely spondaic hexameters) or otherwise remarkable (*e.g.* three-word hexameters).⁹⁹

Mimêsis

Plato and Aristotle agreed that the essence of art was *mimêsis*, though the term did not denote exactly the same thing. For Plato it was a form of 'imitation' and he therefore rejected it (*censorship). The carpenter imitated the 'ideal form' of the table, while the artist imitated what was already an imitation, which removed him even further from the 'ideal form'. Moreover, Plato did not like the

96 This hypothesis (Lausberg [2008⁴] 286) gains support from the fact that essentially the same model is found in Aristarchus' *commentaries (cf. esp. sch. *A Il.* 11.574a *Ariston*.) and thus existed before Trypho.

97 Pfeiffer [1968] 185–188.

98 Pfeiffer [1968] 229.

99 On the history of metre as a critical concept see Schmude [2001b] 1223–1232, with bibl., on metrically remarkable lines Richardson [1980] 286–287.

kind of ‘impersonation’ that a character’s speech (in epic or drama) required. Aristotle, on the other hand, declared that *mimêsis* (in the sense of ‘representation’) was part of human nature. Both the act of representing, which was related to learning and understanding, and to watch such representations were an inborn source of *pleasure for human beings (*Poet.* ch. 4). In subsequent criticism the Platonic notion of *mimêsis* prevailed (though not necessarily his sanctions). For instance, the equation *mimêsis* = impersonation = speech recurred in such a way that *mimêsis* (and cognates) could designate ‘speech’ (as opposed to narrator-text). The notion that art imitated nature remained a *topos* of art theory until the end of the nineteenth century. In Hellenistic literary criticism it can be observed, for instance, when authors are praised for the lifelike *realism of their depictions, that is, the imitation is considered particularly successful (see also the demand that characters should essentially be comparable to the audience: *characterisation).¹⁰⁰ For a different extension of the term see *Emulation.

Monograph (sungramma)

The monograph was the other preferred format of Hellenistic criticism (cf. *commentary).¹⁰¹ To treat a particular subject in the form of a monograph had a long tradition which reached back into the early days of Greek prose. As regards the primary subject of this chapter, the modern reader faces the source problem described in the introductory section above. The Hellenistic critics are known to have written countless monographs on various topics (*nick-names), including literary criticism. Apollonius of Rhodes, for instance, wrote a treatise *On Archilochus*, a comparatively early example of the *peri*-literature.¹⁰² None of these monographs, however, has been transmitted in its entirety. The treatises that are still extant either predate or, more often, postdate the Hellenistic period.¹⁰³ In addition to reflections in these later sources, the content of the Hellenistic treatises themselves must be reconstructed on the basis

100 On the history of *mimêsis* as a critical concept see Eusterschulte-Guthknecht [2001] 1232–1327, with bibl., Halliwell [2002].

101 Pfeiffer [1968] *passim*.

102 See Dubischar in this volume.

103 Pre-Hellenistic: *e.g.* Aristotle, Anaximenes of Lampsacus; post-Hellenistic: Dionysius of Halicarnassus, Horace, Ps.-Longinus, Heraclitus (the allegorist), Cornutus, etc. The only possible exception is *On Style (peri hermeneias)*, mistakenly attributed to Demetrius of Phaleron in a tenth-century manuscript. But its date remains elusive (for a good summary of the principal questions see Innes [1995] 312–321).

of the mere title and/or fragments, usually small in number. This source problem seriously limits the quantity and reliability of the results.

Multiple Meanings

The term ‘underlying meaning’ (*huponoia*) is indicative of the recognition that, in addition to the literal meaning on the surface of the text, there was a second level of meaning, for instance, an implied message.¹⁰⁴ Arguably the most important application of the term *huponoia* was in allegorical interpretation.¹⁰⁵ Said to have begun in the sixth century BC by Theagenes of Rhegium (8 A 2 D-K), allegorical interpretation was one of the forms of defence that the ethically motivated attacks on poetry triggered (*educative function). As its proponents argued, it was the underlying second meaning of a text that really mattered. The search for the *huponoia* was explicitly rejected as a suitable reading strategy by Plato (*Resp.* 378d, cf. *Plut. Quomodo adul.* 19e) and did not engage Aristotle’s sympathy. The oldest extant example of some length is the Derveni papyrus, which preserves substantial fragments of an allegorical commentary on an Orphic theogony.¹⁰⁶ Regarding the Hellenistic period specifically, the prevalent view among modern scholars is that there was a sharp contrast between Alexandria on the one hand and Pergamon on the other: Aristarchus strongly objected to a method that was practised by his Pergamene ‘rival’ Crates of Mallos. The picture may not be as clear-cut as that.¹⁰⁷ In any case, Alexandrian criticism paid little tribute to allegorical interpretation. The following questions, however, are more difficult to answer and thus the subject of ongoing scholarly debates: How important or widespread was allegorical interpretation during the Hellenistic period (sc. outside of Alexandria)? How narrow was its connection to Stoicism? Should it actually be regarded as a form of literary criticism?¹⁰⁸ Another type of multiple meanings was recognised in what today would be called ‘dramatic irony’: the text had a second meaning,

104 The earliest attestation of ‘underlying meaning’ probably is Xenophon *Symp.* 3.6; for ‘implied message’ see Aristarchus in sch. *Pind. Isthm.* 7.23a.

105 On the history of allegorical interpretation see Freytag [1992] 330–393, Konstan [2005], Trapp [2012⁴], each with bibl.

106 For text and commentary see Tsantsanoglou-Parassoglou-Kouremenos [2006], Betegh [2004]; on literary criticism specifically Henry [1986].

107 Aristarchus’ alleged ‘anti-allegorism’ hinges on a single witness (sch. *D. Il.* 5.385) which is open to a much broader interpretation (Nünlist [2011]). Besides, Crates practised a very peculiar and idiosyncratic form of ‘allegorical’ interpretation (Porter [1992]).

108 These questions are too complex to be discussed in a short overview. For the divergent views see e.g. Russell [1981] = [1995] 95–96, Long [1992], Porter [1992], Dawson [1992], Struck [2004], Konstan [2005] xiii–xxvii, Gutzwiller [2010] 354–359, Nünlist [2011].

which undermined the first and was understood by the audience but not the relevant character(s).¹⁰⁹

Museum (mouseion) and Library

The concept of a library as such was not new, but the idea to collect *all* the books that were worth having was (literary *heritage). In addition, the Ptolemies wisely decided to pay qualified specialists to do the work. This combination of efforts enabled or, one might even say, was the precondition for the cultural heyday that the name 'Alexandria' now stands for. Thus the Museum in general and the *book(roll) as its most prominent 'medium' in particular have become emblems of the subject under consideration. Given the notorious unreliability of figures in medieval manuscripts, it is impossible to gauge the library's holdings with confidence. In practical terms, the organisation of the library appears to have been influenced by Peripatetics.¹¹⁰

Music

A substantial portion of Greek poetry was not only accompanied by musical instruments but either sung or chanted, with words and music forming a unity. In the course of the fourth century, however, this unity was jeopardised when some critics started focusing on the language alone, while Aristoxenus developed musicology as a discipline. Separation and specialisation may or may not be responsible for the relative neglect of music among Hellenistic critics, who would have been in a position to save this part of their *heritage too. And although scholars like Aristophanes of Byzantium carefully studied the intricate rules of *metre and his successor Apollonius (called the 'Classifier', *eido-graphos*) assigned lyric poems to different 'musical classes' (*classification), music itself did not enter the mainstream of scholarly activity and was consequently lost for ever.¹¹¹

Mythology

Given that the subject-matter of much Greek poetry had its roots in the literary *tradition, critics took a natural interest in mythology, which for them was at the same time a form of 'early history'. The interpretation of individual passages regularly required an explanation of the mythological 'facts' (who is who? etc.). Starting no later than with Ps.-Plato's *Minos* (318d–e), it became

109 Nünlist [2009a] 234–235, with bibl. in n. 32.

110 Pfeiffer [1968] 96–102, Fraser [1972] 305–335, Blum [1977], MacLeod [2004²], El-Abbadi-Fathallah [2008], Stephens [2010] 54–56, and Montana in this volume.

111 Pfeiffer [1968] 181–184, Barker [2012⁴] with bibl.

customary to distinguish between variants. Did the relevant author follow the known version of the myth or did he take a different approach? (Aristotle expressed the rule that the fundamentals of a myth, for instance, Orestes' matricide, must not be altered: *Poet.* 1453b22–25.) How exactly did this version differ from others? Which other author(s) had dealt with this particular topic (*plot summaries)? In accordance with his general preference for *text-immanente* *interpretation, Aristarchus advocated the view that each text should be looked at separately. He therefore took exception to the method of filling apparent 'gaps' by means of other texts, nor was it acceptable to harmonise them.¹¹² Interestingly, his comparison of mythical variants included the depiction in visual arts (sch. *A Il.* 10.265a *Ariston.*, on Odysseus' felt cap), which was to become a standard feature of modern handbooks such as Roscher or *LIMC*. The rationalisation of myth (found *e.g.* in Herodotus and advocated by Palaephatus) seems to have had a limited influence on the notes that are of a demonstrably Hellenistic age. On the other hand, this era is responsible for the first mythographical handbooks that aimed for comprehensiveness (*e.g.* the so-called *Mythographus Homericus*).¹¹³

Narrative Voice

Due to their careful *analysis critics also identified instances of internal *contradiction. Some of them could be shown to be apparent only. One possible 'solution' (*problems and solutions), attested from Aristotle onwards (fr. 146 Rose, *Poet.* 1461a7–8), was that the divergent passages were not spoken by the same agent and therefore not real contradictions. The agents could either be two different characters or a character and the narrator. The distinction between narrator-text and speech could already be found in Plato (*classification), who took exception to the impersonation that speech required (**mimêsis*). Aristarchus recognised that there was more to the distinction between the voice of the narrator and that of his characters. On the one hand, this distinction helped him differentiate between their respective *Weltbild* (*anachronism). On the other, he detected differences of *style and narrative technique between narrator-text and speech. What is more, the pointed references to the comments which the Homeric narrator expressed 'from outside in his own voice' (*e.g.* sch. *A Il.* 10.240 *Ariston.*) show Aristarchus' awareness of the general scarcity of such narratorial comments in the Homeric epics. He thus paved the

112 For both see Nünlist [2011] 108.

way for the Jamesian notion of 'showing vs. telling', the essence of which can be found in Ps.-Demetrius *On Style* 288.¹¹⁴

Nickname

Ancient biographers were fond of anecdotes (*biographical criticism). One result of this activity was that the biographical tradition reported nicknames for several scholars too (on Zoilus see *polemics). The polymath Eratosthenes was called *bêta* ('number two') because he was an expert in numerous fields but the real champion in none. Another nickname, 'pentathlete', gave expression to the same idea. Given the large number of books that Didymus allegedly wrote, he must have had 'brazen guts' (*chalkenteros*). In fact he wrote so many that he could not remember them all and was thus a *bibliolathas* (lit. 'book-forgetter'). Nicanor's efforts to punctuate (gr. *stizein*) texts earned him the nickname *stigmatias*, which was the word for a slave who had run away and therefore been tattooed (also *stizein*).¹¹⁵ Ancient nicknames did not aim for fairness either.

Performance

Like their modern successors ancient critics tried to reconstruct the conditions under which the texts were performed.¹¹⁶ This type of criticism was particularly prominent in commentaries on dramatic texts. As is well known, Aristotle attributed comparatively little importance to questions of stagecraft (*Poet.* 1450b16–20) and analysed the plays mostly from the point of view of a reader. His Hellenistic successors paid more attention to this topic and recognised the need to reconstruct the stage action in order to understand the text. They thus deduced many 'stage directions' from the bare bones of the text. Less expected from a modern perspective is the frequency with which critics argued how a particular utterance must be delivered (angrily, ironically, pleadingly, etc.). For such instructions included non-dramatic genres and were therefore meant for the reader (on the ancient habit of reading aloud see **enargeia*; on the importance of the phonetic quality see **euphonist* theory; contrast the loss of **music*). The importance that the Hellenistic critics attributed to accentuation

114 Nünlist [2009a] 116–134, with bibl. in n. 2.

115 Pfeiffer [1968] 170 on Eratosthenes, 275 on Didymus; for Nicanor see Eust. *Il.* 20.12 (= vol. 1.33.13–14 van der Valk).

116 Aristarchus is thus responsible for two age-long debates, in that he argued that some athletic victories were celebrated immediately by an impromptu song (sch. Pind. *Nem.* 3.1c) and that the chorus of *Frogs* was split in two halves (sch. Ar. *Ran.* 354a, b, 372c). For these and other examples see Nünlist [2009a] 338–365, with bibl. in n. 2.

and punctuation must be seen in the same light. Far from being a merely 'technical' concern of the editor or textual critic, proper accentuation and punctuation made it actually possible to read out the text in a meaningful way. This was the first step towards a proper understanding of the relevant text.¹¹⁷

Persuasiveness (pithanotês)

It is hardly a coincidence that the first two books of Aristotle's *Rhetoric*, which formed its backbone, dealt with the *pisteis* ('means of persuasion') that an orator had at his disposal, since persuasion went to the very heart of *rhetoric. Whether in court or in politics, it was essential to get the jury or the voters on one's side; hence the continued emphasis on persuasion in rhetoric. For literary critics, too, it mattered whether or not the text under consideration succeeded in persuading the reader. The respective notes often went hand in hand with questions of *plausibility or probability. Since critics did not abhor the idea of *polemics, their notes could also comment on the question whether or not the views of their colleagues were persuasive.¹¹⁸

Pinakes ('Tables')

The literary *heritage stored up in the library of Alexandria (*Museum and library) also needed to be organised in a meaningful way. By compiling his *Pinakes* Callimachus set a trend. He divided the entire body of Greek literature into several classes (*classification), some of which coincided with established literary *genres such as epic, tragedy or comedy. Some categories (esp. lyric) contained several sub-genres. Within each unit the sequence of authors was *alphabetical. Each entry contained some biographical information, for which Callimachus probably drew on Peripatetic sources (*biographical criticism). Next there was a list of the author's works, perhaps in alphabetical order too. It identified cases of doubtful *authenticity and marked works that were no longer extant. Quotation of the opening line (*incipit*) served as a welcome means to identify individual texts, not least when they had no title (esp. lyric poems) or one that was not necessarily authentic. The total length of an author's work also gave an estimate of its cost (scribes were paid per line). This brief description is enough to show that, in spite of the similarities, the *Pinakes* should not be reduced to a mere library catalogue. Callimachus' interest in *literary history can further be documented with another *Pinax* in which he listed the dramatic poets in chronological order and from the beginning. The *Pinakes*

117 Johnson-Parker [2009], Johnson [2010].

proved to be an important source and a model for future research. They were later supplemented by Aristophanes of Byzantium (fr. 368–369 Slater).¹¹⁹

Plagiarism

A concern for, anachronistically speaking, copyright issues can be traced back to, for instance, Theognis of Megara and his ‘seal’ (19–23). It is nevertheless appropriate to say that the foundation of the *Museum increased the awareness of such issues and at the same time made it possible to investigate them more thoroughly than before (*analysis, *comparison). It is therefore conceivable that Aristophanes of Byzantium (fr. 376 Slater) introduced a novelty when he compiled a whole list of passages that Menander had ‘borrowed’ from others. A thematically related anecdote (test. 17 Slater) shows that the ancients’ stupendous memory still played an important role. It is, however, revealing that Aristophanes not only caught the ‘contestants in a public literary competition’ but also ‘proved their plagiarism afterwards by unrolling innumerable volumes in the library’ (Pfeiffer [1968] 191). Unless the anecdote projects current (*i.e.* Augustan) practice back into the past, it vividly illustrates how the Museum had changed the world.¹²⁰

Plausibility (or Probability)

In chapter 9 of the *Poetics* Aristotle determined that the subject-matter of poetry (as opposed to that of historiography) were ‘the kinds of things that might occur (*hoia an genoito*) and are possible (*dunata*) in terms of probability or necessity (*kata to eikos ê to anankaion*)’ (1451a37–38). The reason was, as *Problems* 917b15 made clear, that improbability would foreclose *pleasure. Aristotle thus sanctioned the principle of probability or plausibility (cf. *persuasiveness), which also determined how the individual parts of the *plot were to be strung together (narrative *coherence). Aristotle’s well-known formula codified an idea that underlay ‘programmatic’ passages in early Greek poetry (*e.g.* *Od.* 19.203, *Hes. Theog.* 27). The concept was readily taken up by Hellenistic critics, whose *commentaries frequently discussed the plausibility of the passage under consideration. The fact that this was repeatedly done in negative terms is most likely owed to the nature of the genre, in that irregularities (real or apparent) tend to catch the critic’s eye first (*contradiction, *problem and

119 Pfeiffer [1968] 127–134, Blum [1977] *passim*, summary: 231; on the English translation see n. 33. See also Montana in this volume.

120 On the history of plagiarism as a critical concept see Ackermann [2003] 1223–1230), Silk [2012⁴], each with bibl.

solution). This should not conceal the underlying agreement among critics that literature ought to conform to the relevant principle, which it usually did.¹²¹

Pleasure (hêdonê)

According to Aristotle, both to produce art and to watch works of art is a natural source of pleasure (**mimêsis*). The creation of aesthetic pleasure (and other *emotions) was thus seen as an essential goal of literature, which was achieved, among other things, by the *unity and *plausibility of the *plot, by proper *characterisation, etc. Each *genre generated its specific type of pleasure (*Poet.* 1453a35–36). While there was almost universal consensus among critics that literature rightfully generated pleasure, the claim that this was its primary or even sole purpose was made much less frequently (on Eratosthenes see *emotions). The mixture, enshrined in Horace's pair *prodesse* and *delectare* (*Ars P.* 333), is more representative of the ancient outlook (cf. **L'art pour l'art*).¹²²

Plot

Put on the throne by Aristotle (*Poet.* esp. chs. 6–13), plot has been one of the most durable and influential concepts of criticism—ancient and modern. As the first and decisive qualitative part of tragedy (cf. *characterisation), plot (*muthos* or *sustasis tôn pragmatôn*, 'construction of events') is the *condicio sine qua non* of the *Poetics*, because it is the most important criterion whether or not a work of art (exemplified by tragedy) reaches its goal. One might even say that plot is its goal (1450a22–23). The main characteristics of a good plot are: (a) organic *unity: all parts fit together and form a self-contained whole, no part needs to be added, none can be transposed or removed; (b) good size: neither too small nor too big; (c) motivation or narrative *coherence: the individual parts do not follow each other randomly but according to probability or necessity (*plausibility), that is, they observe the principle of cause and effect; (d) the solution to a tragic conflict should come from the plot itself and not 'from outside' (e.g. by means of a *deus ex machina*). The foundation was thus laid. Rather than discussing Aristotle's fairly theoretical model as such, subsequent criticism concentrated on developing the interpretative 'tools' that

121 On the history of plausibility etc. as critical concepts see Mainberger [1996] 993–1000, Steudel-Günther [2003] 1282–1285, van Zantwijk [2009] 1285–1340, each with bibl., for practical examples Schironi [2009b] 283–288), Nünlist [2009a] index s.v. plausibility.

122 On the history of pleasure as a critical concept see Wöhrle [1994] 521–523, with bibl.

enabled them to conduct an analysis of actual plots and their respective characteristics (narrative *coherence, *formalism).¹²³

Plot Summary (hupothesis)

The Peripatetic Dicaearchus and Aristophanes of Byzantium are known to have written plot summaries.¹²⁴ In the latter case they preceded the text of the respective tragedy or comedy. Those summaries that are still extant also inform the reader whether the same subject was treated by the other dramatists (cf. *mythology), mention the location of the play's action (*e.g.* Thebes), the identity of the chorus and the first speaker. This is followed by so-called 'didascalical' information (date of the first performance, the producer, titles of the other plays produced on the same occasion, the names of the competitors, the result of the competition) and rounded off by a critical judgment. Whether these extant summaries are a reliable basis for the reconstruction of Aristophanes' original summaries is the subject of an ongoing scholarly debate, as is their exact relationship to Callimachus' **Pinakes*.¹²⁵

Poetics, Theory of

Only Aristotle's treatise and Horace's poem expressly declare themselves to be 'poetics', neither of which is of a Hellenistic date, though Horace is known to have incorporated much Hellenistic material. To focus on these texts alone would plainly be absurd. There are plenty of other texts that are relevant to the subject of this chapter. What is more, whether or not a critic wrote his own poetics or made regular and explicit reference to one hardly matters. A case in point is Pfeiffer's well-known denial that 'Aristarchus followed the principles of a theory of poetics' [1968] 231. Pfeiffer's own examples, which can easily be added to, show that his scepticism is unfounded. Aristarchus no doubt had—to adapt Ax' felicitous phrase—a *Poetik im Kopf*, leaving aside the hermeneutical question whether a text can actually be read without recourse to some theory of poetics. And every critic who wrote on literary subjects automatically (if often unexpressedly) took sides in the debate about *ars* and *ingenium* (*inspiration).¹²⁶

123 On the *Poetics* see Halliwell [1986], for practical examples Nünlist [2009a] 23–68, with bibl.

124 See Novokhatko and Montana in this volume.

125 Pfeiffer [1968] 190, 192–195, citing older bibl., Budé [1977], Slater [1986] x, also 172 on fr. 434, Brown [1987], van Rossum-Steenbeek [1998] 32–33.

126 On the history of theories of poetics see Till (*et al.*) [2003] 1304–1393, with bibl. According to the original phrase, Aristarchus had a "*Grammatik im Kopf*" (Ax [2000] 107).

Polemics

The tone of literary criticism could be sharp. A possible target of such polemics was the author under consideration (cf. *censorship), as in the case of Zoilus, who earned himself the *nickname *Homêromastix* (lit. 'Homer-whip'). More often, however, scholars criticised each other with the familiar range of terms that are apt to describe intellectual shortcomings. Aristarchus created a particular *critical sign in order to mark the passages where he disagreed with Zenodotus.¹²⁷

Problems and Solutions

The mutual cross-examinations of 'Aeschylus' and 'Euripides' in Aristophanes' *Frogs* in a way adumbrated an interpretative method that was to become very popular, the first clear attestations being Aristotle's *Homeric Problems* (fr. 142–179 Rose) and the well-known chapter 25 in the *Poetics*: a particular 'problem' (*zêtêma*; cf. *contradiction) was pithily formulated, often in the form of a question ('why is it that . . .?'), whereupon one or several 'solutions' (*luseis*) were offered ('because . . .'). The latter were divided into several types (*anachronism, *narrative voice), some of which, needless to say, reached well beyond the domain of literary criticism. Now and then, the format so to speak gained a life of its own in that the alleged 'problem' did not really have a toehold in the text under discussion but was primarily intended as an excuse for an elaborate 'solution'.¹²⁸

Prose

The differentiation between poetry and prose played an important role, with *metre being the distinctive criterion (*e.g.* Gorgias 82 B 11.9 D-K), to which Aristotle objected in vain (*Poet.* 1447b13–23). Prose was usually considered poetry's younger and less illustrious sibling. The relevant accounts assumed that prose developed from poetry and came thus after it. Put in *stylistic terms, poetry 'stepped down from its chariot' (*e.g.* Strab. 1.2.6, cf. *sublimity). As one Greek term for prose, *pezos logos*, indicates with perfect candour, prose walks on foot. While it is true that Hellenistic critics devoted more energy to poetry, prose authors were by no means ignored. Callimachus' **Pinakes* included prose *genres, Aristarchus wrote a commentary on Herodotus.¹²⁹ Studies with a

127 On the history of polemics as a critical concept see Stauffer [2003] 1403–1414, with bibl.

128 Gudeman [1927c], Pfeiffer [1968] 69–70, Nünlist [2009a] 11–12. See also Dubischar in this volume.

129 An abridgment has been preserved on papyrus (P. Amh. II 12); see also Didymus' commentary on Demosthenes (Gibson [2002]).

rhetorical focus, in particular, were bound to include oratory, even if many of their examples came from poetry. Dionysius of Halicarnassus (*Preface* 4) claimed to be the first to describe the characteristics of specific orators and prose authors, but this cannot mean that they had not been studied at all.¹³⁰

Reader-Response Theory

Ancient literary criticism (just like pre-twentieth century criticism in general) primarily focused on the production side of literature, but the reception side was not completely ignored. In addition to the various *emotions that literature created with the reader, critics also discussed the cooperation of the reader and thus adumbrated aspects of modern reader-response theory. Theophrastus (fr. 696 Fortenbaugh) recommended 'that one ought not to elaborate everything in detail, but leave some things for the listener, too, to perceive and infer for himself; for when he perceives what you have left out, he not only is a listener but also becomes your witness, and in addition more favourably disposed. For he thinks himself perceptive, because you have provided him with the occasion to exercise perception'. Aristarchus applied the insight of a rhetorical manual to the interpretation of literary texts and defended their 'gaps' as a regular feature, which was thus perfectly acceptable. Authors made things clear not only 'explicitly' (*rhêtôs*) but also 'tacitly' (*kata to siôpômenon*). The reader was required to 'understand' (*hupakouein*) and thus supplement the points that were not expressly stated. In other words, at least some critics regarded the reader as an active participant in the process of making meaning.¹³¹

Reading Against the Grain

The general consensus on the importance of *authorial intent determined that the prevalent reading strategy was to retrieve it by means of systematic *analysis and close *reading. But in his treatise *How the young man should study poetry* Plutarch urged readers to pay close attention to possible *contradictions in a text, to speak up in the form of interjections or the like (26b), in short, to be a resisting reader (28d).¹³² A somewhat malicious form of the same strategy could already be found in Aristophanes' *Frogs*. The numerous questions and interjections sometimes blatantly fail to do justice to the passage under consideration. Stripped of the comic exaggeration, what is left is a form of reading against the grain. Likewise, some *problems (and solutions) are so

130 On the history of prose as a critical concept see Weissenberger [2005] 321–348, with bibl.

131 On the history of reader response theory see Semsch [2005] 1363–1374, with bibl., for practical examples Nünlist [2009a] 157–173, with bibl. in n. 1.

132 Konstan [2004].

peculiar or even far-fetched that they are hardly compatible with the search for the author's intention.

Reading, Close

Extensive reading (*analysis) went hand in hand with close reading. The *commentaries, in particular, amply document critics' attempts to analyse the text with microscopic accuracy, 'wrestle' sense from difficult or obscure passages, discover particular subtleties, etc. Aristarchus expressly recommended: 'one must look intently at the particular circumstances' of the passage under consideration (*eis tēn enestōsan peristasin atenisteon*, sch. A *Il.* 14.84a *Ariston.*). No wonder he was hailed for his ability to 'divine' (*manteuesthai*) the poems' meaning (Panaetius fr. 93 van Straaten = Ath. 634c). Extensive and close reading also meant repeated reading, which only a truly great piece of art made a rewarding experience (Hor. *Ars P.* 364–365, Ps.-Long. *Sub.* 7.3).¹³³

Realien

A general interest in antiquarian matters could already be found in the sophistic movement (Hippias of Elis) and in the works of Aristotle.¹³⁴ The writing of running *commentaries required Hellenistic critics to deal with all kinds of questions that the text under discussion posed. These included *Realien*, which were thus regularly commented on. In connection with his concern for possible *anachronism, Aristarchus made a great effort to reconstruct the 'living conditions' of the heroic age as accurately as possible because this was the *condicio sine qua non* for a proper understanding of the text. The explanation, for instance, that the Homeric shield was carried by means of a strap slung around the shoulder (and not by means of a handle, as in later times) loses its apparent insignificance as soon as one realises that it determines the correct sequence of Homer's type scene 'arming' (*formulaic language). Aristarchus' comment (sch. A *Il.* 3.334–335a *Ariston.*, with *test.*) was meant to refute Zenodotus, who had altered the sequence. The discussion of much scientific detail (geography, astronomy, medicine, zoology, etc.) should also be read against the backdrop of literature's *educative function.

Realism, Lifelike

Alcidamas perceived a direct relationship between literature and 'real life' when he referred to the *Odyssey* as a 'beautiful mirror of human life' (quoted by Aristotle *Rh.* 1406b11–14). A similar correspondence, though not necessarily

133 On the history of close reading as a critical concept see Boone [1994] 257–259, with bibl.

134 Pfeiffer [1968] 51, 79–84.

one of exact identity, is the basis of the theories of art which circled around the concept of **mimêsis* (cf. e.g. Aristotle's recommendation that *characterisation should fulfil the criterion of likeness, that is, general comparability of characters and readers/spectators). A correspondence between art and life also contributed to the latter's *plausibility. Comparable to Alcidamas' point, a theory (probably of Peripatetic origin) saw comedy as 'imitation of life'. It was the springboard for Aristophanes' of Byzantium famous question whether Menander's comedies imitated real life or *vice versa*.¹³⁵ The praise for lifelike realism was, however, not bestowed on comedy alone (cf. **enargeia*). A related topic was the question what enabled an author to present scenes that were so gripping. One possible answer was that he must have been present himself (i.e. autopsy). Other critics, however, saw that it was enough to give the impression that he had been there himself (i.e. imagination, see *visualisation).¹³⁶

Rhetoric

As mentioned in the introduction to this chapter, there was a considerable overlap between rhetoric and literary criticism, in that the latter often had a decidedly rhetorical outlook. The main difference was that rhetoric primarily aimed at producing texts and literary criticism at interpreting them. One might also say that the two subjects fertilised each other. Rhetorical handbooks often illustrated the respective *figure of speech, literary device, etc. with examples taken from poetry (most often Homer) and thus in turn influenced criticism.¹³⁷ How this might work in practice can be documented, for instance, with the famous line that foreshadows Patroclus' death in the *Iliad* (11.603). In his handbook Trypho (111 203 Spengel) first defined *proanaphônêsis* ('prolepsis, foreshadowing') and then quoted the Iliadic passage as an example. Aristarchus' relevant note had used exactly the same term (sch. A *Il.* 11.604b *Ariston.*; for another example see *style). More complex rhetorical notions such as *stasis* theory equally recurred in criticism.¹³⁸ The Patroclus example also demonstrates that, although rhetorical analysis might *a priori* be assumed to have a particular affinity to speech, it was unhesitatingly applied to the narrative parts too.¹³⁹

135 Pfeiffer [1968] 190–191.

136 On the history of realism as a critical concept see Lampart [2005] 621–640, with bibl., for practical examples Nünlist [2009a] index s.v. realism.

137 Classen [1994], [1995].

139 On the history of rhetoric see Kalivoda (*et al.*) [2005] 1423–1740, with bibl.

Scholar-Poet

The first part, in particular, of the period and subject under consideration is characterised by the number of *hommes de lettres* who made their mark both as scholars and poets.¹⁴⁰ With Antimachus of Colophon as their precursor, Philitas of Cos, Simias of Rhodes, Alexander Aetolus, Lycophron, Callimachus and Apollonius of Rhodes are among the names that come to mind.¹⁴¹ Given that they were all active and, in some cases (*e.g.* Callimachus), immensely prolific scholars, it is no surprise that their poetry, too, displays intimate knowledge of the questions that were discussed or even debated in scholarly circles (*influence). Arguably, the so-called 'Alexandrian footnote' owed its existence to this fusion of scholarship and poetry (cf. Callim. fr. 612 Pfeiffer).

Sense of Proportion

Several entries above (*ambiguity, questions of *authenticity, *consistency, *formulaic language, *textimmanente* *interpretation) make it clear that the systematic and comprehensive *analysis whose goal was to uncover rules, recurrent patterns (*custom) and the like did not automatically turn the critics into pedants. All in all, their principal methods were applied with some flexibility and a healthy sense of proportion.¹⁴²

Simile (parabolé)

Recognised as a distinctive feature of Homer's poetic style, the simile received much attention. Hellenistic critics identified the different parts (comparable to Fränkel's *Wie-Stück* and *So-Stück*) and debated whether the individual simile had a single or multiple points of comparison. Moreover, they produced a wealth of interpretations in which they pointed out the simile's aptness, *appropriateness, **enargeia*, *variety, etc. Not least they saw that the world of the similes was different from that of the heroes (*anachronism) and thus allowed a glimpse into Homer's own world. The latter was by comparison more domestic and 'humble', both conceptually and lexically (cf. *solemnity).¹⁴³

140 See Novokhatko and Montana in this volume.

141 Pfeiffer [1968] 88–104, 123–151, who, however, exaggerates their anti-Aristotelian agenda.

142 Contrast West [2002] 45, who speaks of 'an air of pedantry in the concentration on textual *minutiae*'.

143 On the history of simile as a critical concept see Heiningner [1996] 1000–1009, with bibl., for practical examples Nünlist [2009a] index s.v. simile, esp. 282–298, with bibl. in n. 17.

Solemnity (*semnotês*)

A text such as Aristophanes' *Frogs* is indicative of a keen awareness that individual poets or genres made use of different registers. Aeschylus, for example, 'built the towering structures of solemn words' (*Ran.* 1004). This topic had deeper implications and should not be limited to a notion primarily of style, though style was an important part of it (*e.g.* Arist. *Poet.* 1458a18–22). Given the general popularity of dichotomies, the relevant views were regularly expressed in the form of a vertically oriented opposition of pairs: 'high' vs. 'low', 'grand' vs. 'plain' (cf. the theory of the three *styles), 'solemn' (*semnos*) vs. 'base' (*tapeinos*) or 'mean' (*eutelês*). These opposing pairs could thus be exemplified accordingly: poetry vs. *prose, tragedy vs. comedy, etc. In a similar vein critics regularly discussed the question in what way a specific text displayed (or not) the register that was typical of this particular *genre, author, etc. (cf. *simile). Solemnity (*semnotês*) represented as seen the 'high' side and the corresponding genres. It can therefore be aligned with similar concepts such as 'elevation/sublimity' (*hupsos*), which was later to receive its authoritative treatment in the well-known monograph falsely attributed to Longinus.¹⁴⁴

Style

Neither in the *Poetics* nor the *Rhetoric* did Aristotle put particular emphasis on the importance of style as such. Both treatises, however, contained relevant sections (*Poet.* chapters 20–22 [on diction, the fourth qualitative part of tragedy: *characterisation], *Rh.* book 3 [originally a separate work?], chapters 1–12) which proved to be very influential. The latter text, in particular, treated stylistic questions in the framework of composition, a topic *rhetorical treatises had a great deal to say about (*e.g.* Ps.-Demetrius or Dionysius of Halicarnassus). Rhetorical handbooks also tried to systematise, define and illustrate with examples the confusingly rich repertoire of *figures of speech, literary devices, etc. Most examples came from 'classical' poetry. The corresponding remarks in literary criticism displayed noticeable similarities (both conceptually and terminologically). For instance, the repetition of the half-line 'though his (Achilles') hands are like flame' in *Iliad* 20.371–372 was a standard example of *epanalêpsis* or *epanaphora* in rhetorical handbooks and treated accordingly in Aristarchus' commentary.¹⁴⁵ Apart from dealing with individual stylistic qualities of a text (*clarity, *conciseness, *solemnity, etc.), an important branch of

144 On the history of solemnity and sublimity as critical concepts see Kallendorf (*et al.*) [1994] 1357–1389, with bibl.

145 Rhetoric: see the *test.* collected by Hajdú on Ps.-Herodian *fig.* 39; Aristarchus: sch. A *Il.* 20.372b *Ariston.* (cf. the *test.* collected by Erbse on 5.734–736).

rhetoric developed several *classifications of style, for instance, the theory of the three styles (grand, middle, plain). Here again it was not uncommon to illustrate them with Homeric characters (Odysseus, Nestor, Menelaus) instead of orators (Demosthenes, Isocrates, Lysias).¹⁴⁶ Similarly, rhetoricians put together authoritative lists of virtues of *style. Moreover, critics like Aristarchus also developed a sense for the individual style of a particular author.¹⁴⁷

Style, Virtues of

Taking up the ideas of his teacher Aristotle, Theophrastus (fr. 684 Fortenbaugh, with comm.) codified a system which consisted of four virtues of style: (grammatical) correctness, *clarity, *appropriateness and ornamentation. This and comparable lists (which included, *e.g.*, *conciseness) proved to have a lasting impact on *rhetoric, which in turn influenced literary critics. The latter were less concerned about developing a canonical system as such, but the individual virtues frequently recur in their analyses of style. Not surprisingly, rhetoric also identified faults of style (*e.g.* the frigid, the affected, the arid and the coarse in Ps.-Demetrius' otherwise unorthodox theory of four styles), which were equally taken up by literary critics.¹⁴⁸

Sublimity

See *solemnity.

Synaesthesia

The entry on **enargeia* demonstrates that it was very common to describe literature, which was aural, in terms of visual qualities. A notion comparable to the modern metaphor 'taste' can be found in an undatable note (sch. Ar. *Plut.* 515b) which argues that a line in Aristophanes' last play *Wealth* 'already smells (*ozei*) of Middle Comedy' (*literary history). Even closer is the suggestive comparison between reading and tasting food that opens Plutarch's treatise *How the young man should study poetry* (14d–f).¹⁴⁹

147 Pfeiffer [1968] 220. On the history of style as a critical concept see Sowinski [2007] 1393–1419, Mayer (*et al.*) [2009] 1–83, each with bibl., on the three styles Spang [1994] 921–972, with bibl., for practical examples Nünlist [2009a] index *s.v.* style, esp. ch. 9, with bibl.

148 On the history of virtues of style as a critical concept see Hamsch [2009] 1143–1164, with bibl.

149 On the history of synaesthesia as a critical concept see Ribicki – Fröhlich [2009] 344–349, with bibl.

Tradition, Literary

An important indicator whether an author had taken the subject-matter of his text from tradition (*hê paradedomenê historia*, lit. ‘the handed-down story’) or invented it himself were the names of the characters. Names known from mythology (typical of epic and tragedy) pointed to tradition, unknown names (typical of comedy) to invention (cf. Arist. *Poet.* 1451b11–25). Like many other scholars Aristarchus had a strong interest in the names and genealogies of the characters. This allowed him to give a differentiated description of Homer’s technique in these matters. While Homer took the names of his main characters from tradition, he could also be shown to be a ‘giver of names’ (*onomatothetikos*), with the clear implication that the respective characters were a Homeric invention.¹⁵⁰ The implicit premise of this distinction must be that there was a tradition (*i.e.* texts) before Homer. Support for this interpretation comes from Aristarchus’ notes that either presuppose prior knowledge among the audience (*e.g.* sch. A *Il.* 14.434a *Ariston.*) or argue that Homer’s characterisation ‘hinted at’ the traditional depiction (here of Odysseus: sch. A *Il.* 11.430b *Ariston.*). Another point of interest among critics was the question whether or not an author followed the traditional version of a particular myth (*mythology).

Unity

The comparison of a literary text with a living organism had already been made by Plato (*Phdr.* 264c6–9), but it was Aristotle who in his *Poetics* (esp. chapters 7–8) developed it into the fundamental concept that a work of art ought to possess unity. The fact that the unity was that of a living organism was crucial because it tied in with Aristotle’s teleological philosophy. According to this worldview, tragedy, Aristotle’s example for the best possible work of literary art, grew until it reached its perfection as shown by its organism-like unity, size, proportions, balance, etc. This also meant that tragedy could produce the *pleasure that was conform to its nature. The most important factor whether a literary text fulfilled the necessary conditions was the unity of its *plot. As is well known, the influential doctrine of the three unities (action, time, room) was not developed until Aristotle’s *Poetics* was rediscovered in early modern times. Only the first of them has truly ancient origins. It recurred, for instance, in the *Ars Poetica* of Horace (1–41), who probably took his cue from Neoptolemus of Parion. In practical criticism, the concept was put to use, for

150 For *onomatothetikos* see *e.g.* sch. A *Il.* 5.60a *Ariston.*; cf. Nünlist [2009a] 243–244, with bibl. in n. 20.

example, when critics addressed the question whether or not a particular passage contributed to the text's narrative *coherence.¹⁵¹

Variety (poikilia)

Variety or, put negatively, avoidance of monotony was one of the most common and popular concepts of literary criticism. Critics almost universally recognised it as a virtue when an author broke away from uniform patterns which might have exhausted the reader. A potential problem was that a stylistic principle which was essentially Hellenistic could clash with texts that conformed to other aesthetic standards, esp. the formulaic lines and other repetitions in Homer. It should, however, be emphasised that the Alexandrian critics accepted Homeric repetitions to a higher degree than is sometimes recognised (*formulaic language). Needless to say, critics found plenty of opportunities where they could praise his variety too.¹⁵²

Visual Arts, Comparison of Poetry with

The early Greek poets themselves implicitly made the comparison by means of their poetological imagery, which also contained a hint of competitive rivalry (e.g. Pind. *Nem.* 5.1–5). Simonides (test. 101 Poltera, 47b Campbell) famously called painting poetry that is silent and poetry painting that is speaking. The comparison then played a particularly important role both in Plato's trenchant critique in the *Republic* and in Aristotle's defence in the *Poetics* because the two philosophers agreed that **mimêsis* was essential to all types of art. In criticism the comparison was made use of in order to praise the text under discussion for its visual quality (**enargeia*). Probably the best-known example of the comparison in criticism is Horace's winged word *ut pictura poesis* (*Ars P.* 361, with Brink's note). The equally well-known anecdote (e.g. Polyb. 30.10.6) that Phidias' magnificent statue of Zeus in Olympia was triggered by the *Iliad* also posited close ties between literary and visual arts. That the Hellenistic period, in particular, reflected on this relationship can be deduced, among other things, from the fact that the *scholar-poets tried their hand on *carmina figurata* (axe, egg, wings, syrinx, etc.), that is, attempted to combine the two types

151 On unity in ancient criticism see Heath [1989], on Horace specifically Brink [1971] 75–85.

152 On the history of variety as a critical concept see Celentano [1996] 1525–1527, Fekadu [2009] 1006–1012, each with bibl., for practical examples Nünlist [2009a] index s.v. variety, esp. 198–202, with bibl. in n. 16.

of art.¹⁵³ What is more, chances are that Aristarchus thought about the fundamental difference between linear and non-linear forms of art, that is, between poetry and, say, painting.¹⁵⁴ For his interest in visual arts see also *mythology.¹⁵⁵

Visualisation

The concept of visualisation obtained both to the author and reader. First the author: for Aristotle, thinking resulted in generating mental images (*phantasiai*), a process which he also called 'to put before one's eyes' (*pro ommatôn tithesthai*, *Mem.* 1, cf. *De an.* 3.3). This type of visualisation was expressly recommended in the *Poetics* (1455a22–26) because it allowed authors not only to avoid *contradictions, but also enabled them to observe the principle of *appropriateness. Given that poetry and rhetoric both intended to have their audiences feel *emotions, each author aimed to transfer his mental images to the audience because they enabled the generation of emotions.¹⁵⁶ All three aspects, the visualisation of the author, that of the reader and their interrelation, were regularly discussed in Hellenistic criticism. As to the reader's side specifically, this included the observation that an aural sensation could be turned into an image (cf. **enargeia*).¹⁵⁷

Word Order

The most extensive analysis of word order is the treatise *On Composition* by Dionysius of Halicarnassus. A recurrent argumentative pattern of this treatise is 'transposition' (*metathesis*): Dionysius illustrates the different effects in that he changes the original word order and juxtaposes the two versions. For the modern reader the exact implications of these arguments can at times be difficult to follow. The same testing method (for which see also Ps.-Demetr. *Eloc.*, e.g. 28, 48, 184–185) could already be found in *euphonist theory, which used it in order to explore the various sound-effects. More generally, as native speakers ancient readers and critics alike could not help noticing when a literary text departed from the natural word order. (Cf. Aristotle's point that the iambic

153 On the *carmina figurata* see most recently Luz [2010]. The term *technopaignia* is not ancient (Pfeiffer [1968] 90 n. 2).

154 Sch. pap. *Il.* 2.788 (p. 169 Erbse), with Lundon [2002a]. Needless to say, a similar idea is the subject of Lessing's *Laokoon* (1766).

155 On the history of comparing poetry with visual arts see Asmuth (*et al.*) [1994] 10–30, with bibl., Jacob [2009] 997–1006, with bibl., for practical examples Nünlist [2009a] 195 with n. 3.

156 Meijering [1987] 19–20, with reference to *Rhetoric* 1382a21–22, 1385b13–16.

157 On the history of visualisation/imagination as a critical concept see Beil [2003] 927–943, with bibl.

trimeter came closest to natural speech: *Poet.* 1449a24–28.) Thus *hyperbaton* (first used in this sense by Plato *Prt.* 343e) became a standard *figure of speech in rhetorical handbooks.¹⁵⁸ A related notion underlay the inconspicuous but frequent notes that explained the relevant passage by restoring the natural word order.¹⁵⁹

158 Interestingly, Homeric ‘tmesis’ was also considered a form of *hyperbaton* (e.g. Apol. *Dysc. Synt.* *GG* II/2, 447.1–7).

159 On word order see de Jonge [2008] ch. 5 and index *s.v.*

SECTION 3.2

Grammar

• •

Description of the Constituent Elements of the (Greek) Language

Pierre Swiggers and Alfons Wouters

- 1 *Introduction: Parts of Grammar and Parts of Language*
- 2 *Plato: The 'Art of Grammar' and the 'Parts of Speaking'*
- 3 *Aristotle and the 'Parts of Diction'*
- 4 *The Stoics: Word Classes and Logical Contents*
- 5 *The Alexandrian Philological School: Grammatical Codification at the Service of Text Explanation*
- 6 *The Constitution and Evolution of Ancient Greek Grammar: Methodological and Epistemological Issues*

1 Introduction: Parts of Grammar and Parts of Language

Any treatment of the organization of grammar in (Greek, and also Latin) Antiquity is faced with the problem of defining its object. Whereas in our modern(ist) view of grammar, we automatically associate the organization of grammar with the division of grammar books or grammatical descriptions in general, such a view is untenable with respect to the ancient study of language, for a variety of reasons:

- (a) first, the (systematic) study of language in Antiquity is hardly restricted to grammar books, and the latter are attested only from a time when the study of language was already a few centuries old;
- (b) second, the concept of 'grammar' (and the contents to be found in grammar books) in Antiquity went through an important evolution (and was not given the same content) in the Greek and in the Roman world, and the content of the ancient concept is far from being coextensive with our modern view of grammar;
- (c) third, whereas present-day linguists make a clear-cut distinction between (theory of) grammar and (theory of) language, it would be anachronistic to project such a distinction back onto Antiquity; as a matter of fact, the approach of language in Antiquity is characterized by the constant

interplay (or, perhaps, confusion) between the organization of language and the organization of its study, hence the intertwining of language and grammar, and of their respective 'parts'. To this intertwining one should add the interplay between categories of thought and categories of language (cf. Benveniste [1958]; Vuillemin [1967]; Lapini in this volume).

It is especially the last reason which has important implications for the present survey: in speaking of 'the parts of grammar' in Greek Antiquity, we cannot limit ourselves to the study of the organization of grammar books, but we have to analyze the ideas of scholars about the 'parts of language', not only from the period preceding the autonomization process of grammar studies, but also from the times when grammar books were already available: discussion of the structure of language is often found in philosophical and rhetorical investigations, *i.e.* in a philosophical or rhetorical context, but this does not detract from their relevance for a study of ancient conceptions on the 'parts of grammar'. We will therefore discuss also views on units and parts of grammar formulated in non-grammatical works, prior but also subsequent to the autonomization of grammar as a discipline.

2 Plato: The 'Art of Grammar' and the 'Parts of Speaking'

In Plato's *Sophist*, the investigation concerns 'being' and the moods of being, and the issue of being vs. non-being reaches a crucial stage at the moment of establishing the multiplicity of predication, and the communality of the γένη (*genera*), *i.e.* the sharing of properties of a higher order which rank above the distinction between (sub)species. At this point, the Eleatic Stranger establishes a comparison with language units: letters / sounds (γράμματα) show combinations and restrictions on combinations. And the Eleatic Stranger points to the fact that in order to know which combinations are possible and which are excluded, it is necessary to dispose of an 'art' or technical knowledge which allows one to have adequate insight into this issue. The art in question is, as Theaetetus states, the art of grammar.

Soph. 253a¹

ΞΕ Ὅτε δὴ τὰ μὲν ἐθέλει τοῦτο δρᾶν, τὰ δ'οὐ, σχεδὸν οἷον τὰ γράμματα πεπονητότ' ἂν εἴη. Καὶ γὰρ ἐκείνων τὰ μὲν ἀναρμοστέϊ που πρὸς ἄλληλα, τὰ δὲ συναρμόττει.

1 For the passages quoted from the *Sophist* we use (and at times, adapt) the English translation of Fowler [1987 = 1921].

ΘΕΑΙ Πῶς δ' οὐ;

ΞΕ Τὰ δέ γε φωνήεντα διαφερόντως τῶν ἄλλων οἶον δεσμός διὰ πάντων κεχώρηκεν, ὥστε ἄνευ τινὸς αὐτῶν ἀδύνατον ἀρμόττειν καὶ τῶν ἄλλων ἕτερον ἑτέρῳ.

ΘΕΑΙ Καὶ μάλα γε.

ΞΕ Πᾶς οὖν οἶδεν ὅποια ὅποιοις δυνατὰ κοινωνεῖν, ἢ τέχνης δεῖ τῷ μέλλοντι ὄραν ἱκανῶς αὐτά;

ΘΕΑΙ Τέχνης.

ΞΕ Ποίας;

ΘΕΑΙ Τῆς γραμματικῆς.

Str. Now since some things will commingle and others will not, they are in much the same condition as the letters of the alphabet; for some of these do not fit each other, and others do.

Theaet. Of course.

Str. And the vowels, to a greater extent than the others, run through them all as a bond, so that without one of the vowels the other vowels cannot be joined one to another.

Theaet. Certainly.

Str. Now does everybody know which letters can join with which others? Or does he who is to join them properly, have need of art?

Theaet. He has need of art.

Str. Which art?

Theaet. The art of grammar.

Further on, the investigation on the predication of τὸ ὄν and τὸ μὴ ὄν leads Plato to develop the notion of “otherness” (θάτερον), which has to be conceived as a *relative* concept (viz. ‘other than’). Sentential predication crucially hinges on the concept of otherness: it can only be *significant* when it says something about something else, and it is only possible by a combination of forms which are not identical. A predication, as an utterance taken at its surface value, can be either true or false: in the first case, it is true speech (λόγος), in the second case, it is false opinion (δόξα). The explanation of how this distinction—one of logical or epistemic ‘otherness’—is possible, lies in the fact of multiple communality: speech and opinion can enter in communion (κοινωνεῖν) with τὸ ὄν and also with τὸ μὴ ὄν. The philosophical inquiry concerning the possibility of truth and falsehood brings Plato to discuss, via the dialogue’s protagonists Theaetetus and the Eleatic Stranger, the structure of language at the level of the utterance. At the outset, it is noted that this inquiry is parallel to that concerning the level of the γράμματα (*Soph.* 261d). The analysis of the structure of the utterance yields as its result the decomposition of sentential predications

into two distinct *genera* of vocal signs (δηλώματα or σημεῖα): *naming-signs* and *saying* (so-and-so)-signs. Plato's terms are, respectively, ὀνόματα and ῥήματα, and while it may seem convenient to translate them as 'nouns / names' and 'verbs', it is clear that the terms designate *constituents* of the sentence, or propositional terms, and not word classes as such (cf. Swiggers [1984]). This is clear from the fact that Plato is not interested in their morphosyntactic behaviour and their paradigmatic shapes, but only in their function within a (true / false) sentence and their mutual combination, which he labels (πρώτη) συμπλοκή, *i.e.* '(first / primordial) link / bond'.

Soph. 261e–262c

ΞΕ Ἔστι γὰρ ἡμῖν που τῶν τῆ φωνῆ περι τὴν οὐσίαν δηλωμάτων διττὸν γένος.

ΘΕΑΙ Πῶς;

ΞΕ Τὸ μὲν ὀνόματα, τὸ δὲ ῥήματα κληθέν.

ΘΕΑΙ Εἰπέ ἐκάτερον.

ΞΕ Τὸ μὲν ἐπὶ ταῖς πράξεσιν τὸ ὄν δήλωμα ῥήμά που λέγομεν.

ΘΕΑΙ Ναί.

ΞΕ Τὸ δὲ γ' ἐπ' αὐτοῖς τοῖς ἐκεῖνα πράττουσι σημεῖον τῆς φωνῆς ἐπιτεθὲν ὄνομα.

ΘΕΑΙ Κομιδῆ μὲν οὖν.

ΞΕ Οὐκοῦν ἐξ ὀνομάτων μὲν μόνων συνεχῶς λεγομένων οὐκ ἔστι ποτὲ λόγος, οὐδ' αὖ ῥημάτων χωρὶς ὀνομάτων λεχθέντων.

[...]

ΞΕ Οἶον “βαδίζει” “τρέχει” “καθεύδει”, καὶ τᾶλλα ὅσα πράξεις σημαίνει ῥήματα, καὶ πάντα τις ἐφεξῆς αὐτ' εἴπη, λόγον οὐδὲν τι μάλλον ἀπεργάζεται.

ΘΕΑΙ Πῶς γάρ;

ΞΕ Οὐκοῦν καὶ πάλιν ὅταν λέγῃται “λέων” “ἔλαφος” “ἵππος”, ὅσα τε ὀνόματα τῶν τὰς πράξεις αὐτῶν πραττόντων ὀνομάσθη, καὶ κατὰ ταύτην δὴ τὴν συνέχειαν οὐδεὶς πω συνέστη λόγος. οὐδεμίαν γὰρ οὔτε οὕτως οὔτ' ἐκείνως πράξιν οὐδ' ἀπραξίαν οὐδὲ οὐσίαν ὄντος οὐδὲ μὴ ὄντος δηλοῖ τὰ φωνηθέντα, πρὶν ἂν τις τοῖς ὀνόμασι τὰ ῥήματα κεράσῃ. Τότε δ' ἤρμωσέν τε καὶ λόγος ἐγένετο εὐθύς ἢ πρώτη συμπλοκή, σχεδὸν τῶν λόγων ὁ πρώτος τε καὶ σμικρότατος.

ΘΕΑΙ Πῶς ἄρ' ὧδε λέγεις;

ΞΕ Ὅταν εἴπη τις “ἄνθρωπος μανθάνει”, λόγον εἶναι φῆς τοῦτον ἐλάχιστόν τε καὶ πρώτον;

Str. For we have two kinds of vocal indications of being.

Theaet. How so?

Str. One is called nouns, the other verbs.

Theaet. Define each of them.

Str. The indication which relates to action we may call a verb.

Theaet. Yes.

Str. And the vocal sign applied to those who perform the action in question we call a noun.

Theaet. Exactly.

Str. Hence discourse is never composed just of nouns alone spoken in succession, nor of verbs spoken without nouns.

Theaet. I do not understand that.

Str. I see; you evidently had something else in mind when you assented just now; for what I wished to say was just this, that verbs and nouns do not make discourse if spoken successively in this way.

Theaet. In what way?

Str. For instance, 'walks', 'runs', 'sleeps' and the other verbs which denote actions, even if you utter all there are of them in succession, do not make discourse for that reason.

Theaet. No, of course not.

Str. And again, when 'lion', 'stag', 'horse' and all other names of those who perform these actions are uttered, such a succession of words does not yet make discourse; for in neither case do the words uttered indicate action or inaction or existence of anything that exists or does not exist, until the verbs are mingled with the nouns; then the words fit, and their first combination is a sentence, about the first and shortest form of discourse.

Theaet. What do you mean by that?

Str. When one says 'a man learns', you agree that this is the least and first of sentences, do you not?

Although Plato's approach of language structure is fully subservient to a philosophical project, his remarks on the structure of language are important in that:

- (a) they imply a distinction between two levels of patterning in language, viz. that of the letters / sounds and that of the constituents of speech (λόγος) or utterance. Interestingly, the organization of *both* levels is governed by the principle of possible and impossible combinations;
- (b) they involve a terminology for all the (minimal) parts of both levels of patterning: viz. γράμματα and λόγος, the latter with its two essential types of 'signs', ὀνόματα and ῥήματα.

While these distinctions are insufficient for an adequate account of the grammatical structure of a language, they define a frame, from the lowest formal

units (letters / sounds) to the largest semantically informed combination of such units into what can count as a statement about the real world (or about a fictitious world). It was this frame that served as reference grid to be completed and “filled in” by later generations of scholars interested in the analysis of language.

3 Aristotle and the ‘Parts of Diction’

Aristotle offers an outline of a theory of linguistic expression in the opening section of his *Peri Hermeneias*, but without elaborating an analytical account of its organization. For his views on the structure (or build-up) of language we have to turn to his *Poetics*. It is in chapters XX–XXII, on which there has been a long-standing discussion regarding issues of authenticity,² that we find a discussion of λέξις, i.e. ‘diction’ or ‘expression in / through language’. The content of the term λέξις is defined by Aristotle in chapter VI of the *Poetics*:³

τέταρτον δὲ τῶν μὲν λόγων ἢ λέξις. Λέγω δέ, ὡσπερ πρότερον εἴρηται, λέξιν εἶναι τὴν διὰ τῆς ὀνομασίας ἐρμηνείαν, ὃ καὶ ἐπὶ τῶν ἐμμέτρων καὶ ἐπὶ τῶν λόγων ἔχει τὴν αὐτὴν δύναμιν.

Diction is the fourth [of the literary elements]. By diction I mean, as we said earlier, communication by means of language, which has the same potential in the case of both verse and [prose] speech.

In chapter XX of the *Poetics* Aristotle turns to the ‘parts’ of the λέξις, by which one must understand not discrete, fully separate ‘parts’, but organic components of a complex whole.

Τῆς δὲ λέξεως ἀπάσης τὰ δ’ ἐστὶ τὰ μέρη, στοιχείον συλλαβῆ σύνδεσμος ὄνομα ῥήμα ἄρθρον πτώσις λόγος (*Poetics* XX, 1, 1456b20–21).⁴

2 See Swiggers – Wouters [2002b] 101, for an overview of the literature.

3 We quote—occasionally with some slight modifications—the English translation of Janko [1987].

4 The order of the parts of diction in this list does not correspond with the order in which they are treated in detail further on. Hence Janko [1987] xxv (Notes on the text) proposed to change the text here and to read σύνδεσμος ἄρθρον ὄνομα ῥήμα. See, however, Laspia [1997] 106–115 who argues that Aristotle ranged also the copula (exemplified by φημί) under the ἄρθρον and concludes (p. 115) that the order in the initial list (with the ἄρθρον immediately

The parts of diction in its entirety are as follows: (i) the element [*i.e.* letter], (ii) the syllable, (iii) the ‘conjunction’, (iv) the name [*i.e.* noun or adjective], (v) the verb, (vi) the ‘joint’, (vii) the ‘case’, (viii) the utterance.

The list reflects the organization of language in terms of increasingly complex structures, yielding a “bottom-up” approach which starts from the letter and terminates with the λόγος.

We can note here that Aristotle’s description of grammatical structures, as we find it in his *Poetics*, reflects the initial stages of Greek (and, generally speaking, Western) grammar, and more specifically of phonetic and morphological description. This is evident from *two characteristics*:

- (a) the list of (the properly said) ‘parts of speech’ is still a very reduced one (we find only ὄνομα, ῥήμα, σύνδεσμος and ἄρθρον);
- (b) Aristotle has no specific term for the ‘word’ as a lexical-grammatical unit (or better, type of unit), nor for the grammatical notion of ‘word class’ (part-of-speech).

A basic notion which recurs throughout all the definitions of the μέρη τῆς λέξεως is that of φωνή (“sound” or “sound-stretch”).⁵ This notion is an axiomatic concept in Aristotle’s theory, and is thus left without definition here. Aristotle distinguishes between sounds that are intelligible, and which (in the case of such intelligible sounds produced by human subjects) can be written down in a notation system, and sounds that are unintelligible, like noises. He reserves the term στοιχείον for units representing indivisible segments of intelligible sounds (*Poet.* xx, 2).

As an acoustic and articulatory phenomenon, the φωνή is classified in terms of its simplicity or composition; it can be audible on itself—in which case it is a vowel—or audible in combination with a preceding or following vowel, as is the case of the semivowels and the mutes (*Poet.* xx, 3).

This classification—based on the audible nature of sounds taken in isolation (and pronounced as letters of the alphabet!)—should properly be called a classification of στοιχεῖα; it is supplemented with an articulatory classification of their phonetic realization in terms of degree of aperture, of place of articulation, of (non-)aspiration, of length, and of pitch.

after the elements which it demarcates, *viz.* the name and the verb), is the correct one. In our opinion, the term ἄρθρον could indeed include, in Aristotle’s view, propositional “joints” of the type φημί; we would, however, not define such joints as a “copula”.

5 On the concept of φωνή in Greek Antiquity, see Ax [1986].

Ταῦτα δὲ διαφέρει σχήμασιν τε τοῦ στόματος καὶ τόποις καὶ δασύτητι καὶ ψιλότητι καὶ μήκει καὶ βραχύτητι ἔτι δὲ ὀξύτητι καὶ βαρύτητι καὶ τῷ μέσῳ (*Poet.* XX, 4, 1456b31–33).

They differ according to the forms of the mouth, the places [in the mouth where they are produced], aspiration, non-aspiration, length, shortness, and also high, low or intermediate pitch.

The notion of φωνή appears again in the definition of the “high-level” units that constitute the build-up of language, but it should be noted that it occurs with two different functions: in the case of the syllable, the φωνή appears both as a segmental element in its composition, and as the general term for what could be called “the formal aspect of a linguistic unit”.⁶ In the definition of the remaining μέρη τῆς λέξεως, viz. the σύνδεσμος (or “combiner”), the ἄρθρον (or “joint”), the name (ὄνομα), the verb (ῥήμα), the case (πτῶσις), and the phrase (λόγος or λέξις), the concept φωνή only appears with the latter function (and always in correlation with the concept of meaningfulness / meaningfulness). This implies that in Aristotle’s use of the term φωνή, there is either a reference to the phonic composition of a particular linguistic segment, or a reference to linguistic units as signs (composed of a formal and semantic aspect); cf. Weber [1989] 391–393.

The units above the syllable level comprise parts of speech, syntactic relationships (viz. case) and syntactic-semantic combinations: σύνδεσμος, ἄρθρον, ὄνομα, ῥήμα, πτῶσις, λόγος.

The first four are differentiated in terms of (lexical) meaning—the name (ὄνομα) and the verb being φωναὶ συνθεταὶ σημαντικά (composite significant sounds), and the σύνδεσμος and the ἄρθρον being φωναὶ ἄσημοι (non-significant sounds)—, and then in terms of a secondary feature. In the case of the σύνδεσμος vs. the ἄρθρον, the secondary feature is the possibility of constituting a phrase (or syntagm) vs. the property of marking off a phrase or a subsyntagm. The latter characteristic is proper to the ἄρθρον, an element which is thus identified by its “demarcating” function:

6 Hence the twofold use of the term φωνή in the definition of the syllable: συλλαβὴ δὲ ἐστὶν φωνὴ ἄσημος συνθετὴ ἐξ ἀφώνου καὶ φωνῆν ἔχοντος (*Poet.* XX, 5, 1456b34–36): “A syllable is a non-significant *sound* (= sound segment) composed of a consonant and [an element] which has *sound* (= sonority)”.

- (a) σύνδεσμος δέ ἐστὶν φωνὴ ἄσημος ἢ οὔτε κωλύει οὔτε ποιεῖ φωνὴν μίαν σημαντικὴν ἐκ πλειόνων φωνῶν πεφυκυῖαν⁷ συντίθεσθαι καὶ ἐπὶ τῶν ἄκρων καὶ ἐπὶ τοῦ μέσου ἢν μὴ ἀρμόττει ἐν ἀρχῇ λόγου τιθέναι καθ' αὐτόν,⁸ οἷον μὲν ἦτοι δέ.

ἢ

φωνὴ ἄσημος ἢ ἐκ πλειόνων μὲν φωνῶν μιᾶς σημαντικῶν δὲ ποιεῖν πέφυκεν μίαν σημαντικὴν φωνήν (*Poet.* XX, 6, 1456b38–1457a6).

A ‘combiner’ is a non-significant sound which neither precludes, nor brings about, the production of a single significant sound that by nature is composed of several sounds [*i.e.* an uttered sequence], and which can be used at either end and in the middle, but which it is not appropriate to place at the beginning of an utterance on its own, *e.g.* οἷον μὲν ἦτοι δέ.

or [it is]

a non-significant sound which by nature produces, as a result of [uniting together] several sounds that are significant, a single significant sound.

- (b) ἄρθρον δ' ἐστὶ φωνὴ ἄσημος ἢ λόγου ἀρχὴν ἢ τέλος ἢ διορισμὸν δηλοῖ. οἷον τὸ α.μ.φ.ι καὶ τὸ π.ε.ρ.ι⁹ καὶ τὰ ἄλλα.

ἢ

φωνὴ ἄσημος ἢ οὔτε κωλύει οὔτε ποιεῖ φωνὴν μίαν σημαντικὴν ἐκ πλειόνων φωνῶν πεφυκυῖα τίθεσθαι καὶ ἐπὶ τῶν ἄκρων καὶ ἐπὶ τοῦ μέσου (*Poet.* XX, 7, 1457a6–10).

A ‘joint’ is a non-significant sound which marks the beginning [of an utterance], the end or the break, such as ἀμφί, περί and the rest,

or [it is]

a non-significant sound which neither precludes nor brings about the [production] of a single significant sound out of several sounds, and whose nature it is to be put at either end as well as in the middle.

7 We adopt the reading of Rosén [1990] 113. Kassel [1965] reads πεφυκυῖα.

8 For this reading, see Dupont-Roc – Lallot [1980] 323 and Laspia [1997] 85. Kassel [1965] reads αὐτήν (referring to ἀρχή).

9 Kassel [1965] prints τὸ ἀμφί καὶ τὸ περί. We keep here the readings of ms. A (cod. Parisinus 1741; saec. 10th/11th). Laspia [1997] 94 assumes that already the copyist of the “hyperachetype” did no longer understand the examples for the term ἄρθρον which in his days indicated the article only.

This highly problematic passage¹⁰ contains two consecutive definitions of the σύνδεσμος and two definitions of the ἄρθρον. We will briefly comment on the text.

(1) The first definition of the σύνδεσμος is a combined definition, the first part of which defines the nature of the σύνδεσμος in a negative way, whereas the second part refers, in positive and negative terms, to positional characteristics. The second definition of the σύνδεσμος is a definition in terms of “efficient causality”, with reference to (lexical) semiotic properties (the σύνδεσμος produces by combination a meaningful φωνή). The first definition of the ἄρθρον is mainly a positional one (cast in positive terms), whereas the second one is, again, a combined definition. These double definitions of σύνδεσμος and ἄρθρον should not be seen as alternative definitions: they should be read as descriptions of two concrete manifestations of the linguistic operators σύνδεσμος and ἄρθρον. The σύνδεσμος, for instance, has a ‘coordinative’ aspect (which the first definition captures) and a ‘binding’ aspect (cf. the second definition). And whereas the first definition of the ἄρθρον singles out its ‘delineating’ function, the second definition stresses its status in terms of constitutive and positional characteristics.

(2) In Antiquity it was already pointed out that nowhere else Aristotle does mention the ἄρθρον as an autonomous part of speech: ancient writers such as Dionysius of Halicarnassus (*Comp.* 2) and Quintilian (*Inst.* I 4, 18) objected that Aristotle recognized only three “parts of speech”, viz. ὄνομα, ῥήμα and σύνδεσμος. This objection is not a valid one: the μέρη τῆς λέξεως dealt with by Aristotle in his *Poetics* should not be equated with the μέρη τοῦ λόγου of the later grammatical tradition.¹¹ In his *Poetics*, Aristotle is not offering a systematic treatment of word classes, but offers us a list of definitions of elements constitutive of the λέξις.

(3) In the enumeration of the μέρη τῆς λέξεως at the beginning of ch. xx (*Poet.* 1456b20–21), the ἄρθρον is inserted between ῥήμα and πτώσις, and is separated from the σύνδεσμος. A possible explanation for this order may be that Aristotle first listed non-significant sounds with a purely relational function (σύνδεσμοι), then composite significant sounds (nouns and verbs), followed by the units through which they function in discourse, viz. ἄρθρα and πτώσεις, and then the larger resulting unit, viz. λόγος.

Although Aristotle’s ‘merology’ is not one of parts of speech¹² (or word classes—as grammatical-semantic ‘typisations’), we should ask ourselves in

10 See Swiggers – Wouters [2002b] 107–112.

11 See also Schenkeveld [1994] 271–272 and Ildefonse [1997] 103–105.

12 This is also clear from the fact that λόγος itself is considered to be a μέρος τῆς λέξεως.

what way the *μέρη τῆς λέξεως* correlate with (various) word classes (or subgroups of word classes). Because the text provides only for two of the four definitions a few (relatively certain)¹³ examples—*μέν, δέ, ἦτοι* for *σύνδεσμος* (first definition), *περί* for *ἄρθρον* (first definition)—it is not clear which word categories Aristotle had exactly in mind for each group. We can conjecture that the first definition of *σύνδεσμος* would cover the connective (including disjunctive) particles, the second definition of *σύνδεσμος* the (plain) conjunctions, both grouping then the conjunctions and (trans)phrasal particles. The *ἄρθρον*, in its two definitions, would then cover articles, relative pronouns, prepositions (and postpositions), and expletive adverbials or particles, as well as (trans)phrasal joints such as *φημί*.

The two *φωναί συνθεταί σημαντικαί* on the level of separate words are the *ὄνομα* ('noun') and the *ῥῆμα* ('verb').

ὄνομα δέ ἐστὶ φωνή συνθετὴ σημαντικὴ ἄνευ χρόνου ἢς μέρος οὐδέν ἐστι καθ' αὐτὸ σημαντικόν· ἐν γὰρ τοῖς διπλοῖς οὐ χρώμεθα ὡς καὶ αὐτὸ καθ' αὐτὸ σημαῖνον, οἷον ἐν τῷ Θεόδωρος τὸ δωρος οὐ σημαίνει (*Poet.* XX, 8, 1457a10–14).

A name [*i.e.* noun or adjective] is a composite significant sound without [an indication of] time, no part of which is significant in itself. For in double names we do not use [any part] as being significant in and of itself: *e.g.* in 'Theodore' [*i.e.* "gift of god"] *dore* is not significant.

ῥῆμα δέ φωνή συνθετὴ σημαντικὴ μετὰ χρόνου ἢς οὐδέν μέρος σημαίνει καθ' αὐτό, ὡσπερ καὶ ἐπὶ τῶν ὀνομάτων (*Poet.* XX, 9, 1457a14–16).

A verb is a composite significant sound with [an indication of] time, no part of which is significant in itself, just as in the case of names.

The noun and the verb are defined as having an *undivided* meaning,¹⁴ and they are differentiated by a single secondary semantic feature, *viz.* reference to time, which is proper to the verb (*Poet.* XX, 9).

The concept of *καθ' αὐτὸ σημαίνειν* (or *καθ' αὐτὸ σημαντικόν*) is used for the reference (or indication) expressed by words or their components; it should

13 From the text-critical point of view.

14 This is what Aristotle understands by *φωνή συνθετὴ σημαντικὴ* [...] ἢς μέρος οὐδέν ἐστι καθ' αὐτὸ σημαντικόν.

not be confused with lexical meaning as carried by a (meaningful) part of a compound word.¹⁵

Aristotle then proceeds to what he calls *πτῶσις*, a concept which is *not* defined (a) in terms of a *φωνή*, endowed with or deprived of meaning, and (b) as indicating a primary category. As a matter of fact, the term *πτῶσις* is used for identifying grammatical values attached to one of the two *μέρη τῆς λέξεως* which have a “compound” phonemic shape (*φωνή συνθετή*) and which have meaning, viz. the noun and the verb.

πτῶσις δ' ἐστὶν ὀνόματος ἢ ῥήματος ἢ μὲν κατὰ τὸ τούτου ἢ τούτῳ σημαίνον καὶ ὅσα τοιαῦτα, ἢ δὲ κατὰ τὸ ἐνὶ ἢ πολλοῖς, οἷον ἄνθρωποι ἢ ἄνθρωπος, ἢ δὲ κατὰ τὰ ὑποκριτικά, οἷον κατ' ἐρώτησιν ἐπίταξιν· τὸ γὰρ ἐβάδισεν ἢ βιάδιζε πτῶσις ῥήματος κατὰ ταῦτα τὰ εἶδη ἐστίν (*Poet.* XX, 10, 1457a18–23).

An inflection of a name or verb is either (a) the inflection according to the [part] that signifies ‘of him’, ‘for him’, etc., or (b) that according to the [part] that signifies ‘one’ or ‘many’, e.g. ‘person’ or ‘persons’, or (c) that according to the delivery, e.g. according to [whether it is] a question or an order; for ‘did he walk?’ or ‘walk’ is an inflection of the verb according to these kinds.

Three sorts of *πτῶσις* are illustrated here:

- (a) syntactic dependency-relationships, marked by cases on nouns;
- (b) semantic-referential determination of lexical terms (Aristotle illustrates this sort of *πτῶσις* only with the example of singular vs. plural in nouns; it may be that he regarded this as the principal instance of semantic-referential determination, and that he thought of number in the verb as following from the [nominal or pronominal] subject number, implicit or overtly expressed);¹⁶
- (c) modality-imposition on the bare content of a verb (or of a proposition, since it is not clear from this text whether Aristotle thought of modalities

15 The latter aspect is at stake in Aristotle’s discussion of simple and compound nouns: compound nouns can consist of parts which all have (lexical) meanings (*Poet.* XXI, 1–4). It should be noted that this passage in fact implies an analysis into units corresponding to what we would call ‘morphemes’, although Aristotle has no formal discovery procedure for segmenting a string into morphemes.

16 For a detailed discussion, see D’Avino [1975–1976].

as being “cases” of the unmarked indicative forms, or of the noetic content contained in the entire expression).

The final level considered to be a ‘part’ of the λέξις is the λόγος, a term which can be translated as ‘phrase’, in its most general sense (*i.e.* stretch consisting of combined meaningful units), but which could perhaps also be understood as ‘discursive expression’ or even ‘utterance’.¹⁷

λόγος δὲ φωνῆ συνθετὴ σημαντικὴ ἢς ἔνια μέρη καθ’ αὐτὰ σημαίνει τι (οὐ γὰρ ἅπας λόγος ἐκ ῥημάτων καὶ ὀνομάτων σύγκριται, οἷον ὁ τοῦ ἀνθρώπου ὀρισμός, ἀλλ’ ἐνδέχεται ἄνευ ῥημάτων εἶναι λόγον, μέρος μέντοι αἰεί τι σημαῖνον ἕξει) οἷον ἐν τῷ βαδίζει Κλέων ὁ Κλέων (*Poet.* XX 11–12, 1457a23–28).

An utterance is a composite significant sound, some parts of which signify something in themselves. For not every utterance is composed of verbs and names, *e.g.* the definition of a human being, but there can be an utterance without verbs. However, an utterance will always have a part that signifies something [in itself], *e.g.* ‘Cleon’ in ‘Cleon walks’.

The λόγος is a φωνῆ συνθετὴ σημαντικὴ, a meaningful phonemic stretch obtained by combination; its uniquely defining characteristic is not the extension of the combination¹⁸ (extension of the combination is the defining characteristic of the meaningless complex, *viz.* the syllable), but the fact that—contrary to the noun and the verb—it has a ‘divided meaning’, which means that the compounding parts will have meaning by themselves. This ‘meaning-compositionality’ is typical for all the instances of what Aristotle calls λόγος.

17 Ax [1993] 29 proposes to translate the term, in its widest extension, as “text”. This is certainly in conformity with Aristotle’s view (according to which the entire text of the *Iliad* could be called a λόγος).

18 As Aristotle points out, the combination can be a verbless phrase (as is the case of nominal definitions), a noun-verb combination (*i.e.* a minimal sentence), or even a (very long) text. Aristotle observes that the unit ‘phrase’ can thus have a twofold semantic-propositional status: it can either express one concept, or it can state a complex state-of-affairs (and its changes through time). εἰς δὲ ἔστι λόγος διχῶς, ἢ γὰρ ὁ ἐν σημαίνων, ἢ ὁ ἐκ πλείονων συνδέσμων, οἷον ἢ Ἰλιάς μὲν συνδέσμων εἰς, ὁ δὲ τοῦ ἀνθρώπου τῷ ἐν σημαίνειν (*Poet.* XX, 13, 1457a28–30). “An utterance can be single in two ways, either (a) by signifying one thing, or (b) by a conjunction of several things. *E.g.* the *Iliad* is one by a conjunction [of many things], but the definition of a human being is one by signifying one thing” (Janko [1987] 28).

The foregoing analysis of chapter XX of Aristotle's *Poetics* allows us to draw the following conclusions:

- (a) Aristotle distinguished eight 'parts' (μέρη) of the λέξις, ranging from the most elementary unit (στοιχείον) to the largest meaningful whole (λόγος). The 'parts' in between are combinations of letters, and integrating parts of the λόγος; they correspond to meaningful or plainly functional word classes or their formal parts (e.g. syllables) or marks affecting them in order to function within the λόγος.
- (b) More importantly, Aristotle in his analysis of the μέρη τῆς λέξεως proceeded by applying a number of distinctions:
 - (1) the distinction between indivisible sounds and compound sounds (some instances of πτώσις do not even involve segmental sounds);
 - (2) the distinction between units without meaning and units with meaning;
 - (3) the distinction between word status and non-word status;
 - (4) the distinction between phrase-formative and phrase-demarkating (opposing the σύνδεσμος to the ἄρθρον);
 - (5) the distinction between divided meaning (λόγος) and undivided meaning (in ὄνομα and ῥῆμα);
 - (6) the distinction between time-reference and its absence.

4 The Stoics: Word Classes and Logical Contents

Grammatical studies were part of the Stoics' attempts to account for the structure of utterances in Greek (cf. Frede [1978], [1987b]). The Stoics took up Aristotle's heritage and continued his reflections on types of sentences (declarative utterances, problematic statements and fallacies, commands, prayers, etc.), and on grammatical categories.¹⁹ However, grammar was always subordinated to logic (or dialectics) in their view, and the general approach of grammar was a semiotic-logical one: in dialectics, a study is made of how linguistic expressions signify logical contents.

Our information on the Stoic contribution to grammar is to a large extent secondary: apart from fragmentary testimonies (in the form of quotations), we have at our disposal—at least for the development of Stoic *philosophy*—the doxographical account of Diogenes Laertius (cf. Mansfeld [1986]) and the polemically cast description of Sextus Empiricus. But in spite of the lack of

¹⁹ Cf. Montana, Pagani, Lallot, and Lapini in this volume.

extensive and authentic source materials, it is clear that the Stoics made an important contribution to grammatical studies.

This especially holds for Chrysippus (ca. 280–207 BC), who wrote extensively on various topics of grammar and semantics. Judging from the list of writings attributed to him by Diogenes Laertius (VII, 189–202), we can distinguish three main areas of grammatical research or, better, of research touching upon issues relevant for the grammarian, such as:

- (a) types of sentences: Chrysippus seems to have written on affirmative, negative, indefinite, disjunctive, hypothetical and consequential judgements, and also on types of sentences not corresponding to the status of *axiômata* (simple judgements): imperatives, questions and queries, answers to questions;
- (b) predicates and classes: these writings (D. L. VII, 192–200) concern topics relating to types of predicates, like classification into *genera* and *species*, the status of contrary terms and other topics;
- (c) words and word classes: Chrysippus not only dealt with the origin of words (in a more historical vein), but also with the distinction into word types, and with grammatical characteristics of words. With regard to the issue of word classes, it should be stressed that the Stoics were not primarily interested in framing a theory of word classes. Their central aim was to construe a conceptually based theory of meaning, *i.e.* a theory of how linguistic expressions signify reality-based concepts. Stoic theory of meaning operated with three entities: the utterance, the λεκτόν (Latin equivalent: *dicibile* “sayable”) and the objects. But these entities come into play only at the level of the proposition: the proposition consists of the combination of a predicate (predicates signify things incorporeal) and of a subject term (either an appellative noun or a proper name). The subject term is corporeal (signifying an entity in the world), and is therefore subject to case-inflection; just like objects are affected in the real world, their expressive counterparts in language are affected by grammatical cases. Apart from the category of case, the Stoics were also strongly interested in the category of tense, since this expresses the relationship between our utterances and temporal stages of states-of-affairs in the real world.

Given the lack of direct source materials, we cannot say anything definite about the Stoics’ view on the organization of grammar. Following Diogenes Laertius’ account (book VII, more particularly in the sections devoted to Zeno), it seems that the view of grammar held by the Stoics included (at least) three main divisions:

- (a) a division dealing with the phonetic dimension of language;
- (b) a division dealing with words and word types;
- (c) a division dealing with utterances and the (basic) structure of sentences.

In addition, the Stoics seem to have dealt with stylistic aspects, with phraseology, and with the distinction between prose and poetry.

In the field of the analysis of sounds—which the Stoics seem to have studied as part of a larger investigation of (the elements occurring in) nature²⁰—a number of Stoic philosophers are said by Diogenes Laertius to have made a contribution to this field: Archedemus (who seems to have written a treatise *Περὶ φωνῆς*), Antipater, and Chrysippus (who apparently dealt with sounds in his *Φυσικά*). Human voice was defined by the Stoics in terms of “articulation” produced by a body; hence voice is also corporeal. At the level of the sounds occurring in language—more precisely, in the Greek language—the Stoics established 24 units or elements (*στοιχεῖα*). To the Stoics we owe the clear distinction not only between spoken and written language—writing being the symbolization of meaningful sound(s)—, but also the distinction between (a) the minimal unit of language / speech, viz. *στοιχείον*; (b) its written representation, by a letter (*χαρακτήρ*); (c) its name (*ὄνομα*). The Stoics also classified sounds (as represented by letters) into types. Diogenes Laertius mentions the distinction between “vowels” (*φωνήεντα*), viz. α, ε, η, ι, ο, υ, ω, and “mutes” (*ἄφωνα*), consisting of the six plosive sounds β, γ, δ, κ, π, τ. Although Diogenes Laertius does not mention any other subdivision, we may assume that the Stoics also distinguished further subclasses for the remaining 11 sounds (including a liquid, a sibilant and a vibrant, nasals, aspirates and affricate sounds). The Stoics introduced the view of multiple layering in language, as distinct from sound production on itself: first, there is the layer of sounds as belonging to a language—here we enter into the distinction between *φωνή* and *λέξις*—; second, there is the level of a verbal expression that has meaning on its own, e.g. in the form of a word uttered in its quotation form (the nominative singular case for nouns); third, there is the layer of ‘saying something’, i.e. of making a statement about states of affairs. The latter are defined in terms of “contents that happen to occur”. We can reconstruct the (early) Stoic view of

20 This can be inferred from the general definition of *phoné* as quoted (and attributed to Diogenes of Babylon) by Diogenes Laertius (VII, 55): ἔστι δὲ φωνὴ ἀήρ πεπληγμένος ἢ τὸ ἴδιον αἰσθητὸν ἀκοῆς, ὡς φησι Διογένης ὁ Βαβυλωνίος ἐν τῇ Περὶ φωνῆς τέχνῃ. “Now voice is a percussion of the air or the proper object of the sense of hearing, as Diogenes the Babylonian says in his handbook *On Voice*”. We quote—occasionally with some slight modifications—the English translation of Hicks [1991=1931].

the layered organization of language from Diogenes Laertius' account given in his report on Zeno, Diogenes of Babylon, Chrysippus and Antipater:

Ζῶου μὲν ἐστὶ φωνὴ ἀήρ ὑπὸ ὀρμῆς πεπληγμένος, ἀνθρώπου δ' ἔστιν ἔναρθρος καὶ ἀπὸ διανοίας ἐκπεμπομένη [...]

Λέξις δὲ ἐστὶν, ὡς φησι Διογένης, φωνὴ ἐγγράμματος, οἷον Ἡμέρα. Λόγος δὲ ἐστὶ φωνὴ σημαντικὴ ἀπὸ διανοίας ἐκπεμπομένη, οἷον Ἡμέρα ἐστὶ. [...]

Διαφέρει δὲ φωνὴ καὶ λέξις, ὅτι φωνὴ μὲν καὶ ὁ ἦχος ἐστὶ, λέξις δὲ τὸ ἔναρθρον μόνον. Λέξις δὲ λόγου διαφέρει, ὅτι λόγος αἰεὶ σημαντικὸς ἐστὶ, λέξις δὲ καὶ ἄσημος, ὡς ἡ βλίτυρι, λόγος δὲ οὐδαμῶς. Διαφέρει δὲ καὶ τὸ λέγειν τοῦ προφέρεσθαι. Προφέρονται μὲν γὰρ αἱ φωναί, λέγεται δὲ τὰ πράγματα, ἃ δὴ καὶ λεκτὰ τυγχάνει. (D. L. VII, 55–57).

While the voice or cry of an animal is just (a percussion of) air brought about by natural impulse, man's voice is articulate and comes forth from the mind/intellect. [...].

Reduced to writing, what was voice, becomes a verbal expression, as 'day', so says Diogenes. A statement or proposition is speech that issues from the mind and signifies something, as 'it is day' [...].

There is this difference between voice and speech that, while voice may include just noise, speech is always articulate. Speech again differs from a sentence or statement, because the latter always signifies something, whereas a spoken word, as for example βλίτυρι,²¹ may be unintelligible—which a sentence never is. And speaking (in sentences) is more than just uttering, since [in speaking] sounds are uttered, and things are spoken of, which instantiate thought contents.²²

As to word classes, this field of study was dealt with by the Stoics in the general frame of semantic (and semantico-logical) contents expressed by linguistic forms. The boundaries between what we today call morphology and syntax are thus blurred, since the focus of interest for the Stoics was the λεκτόν ("verbal expression", or, better, "sayable content"). An overall distinction was made between complete and incomplete λεκτά; the former can be sentences or autonomously standing nouns or proper names (in the nominative singular form), the latter are predicates of which one or more 'places' have to be filled in (*e.g.* 'sleeps' requiring a subject term; 'sees' requiring a subject and an

21 This sequence became in later centuries one of the classical examples for a 'meaningless word'. Cf. Kotzia [1994].

22 Hicks translates this last sentence as: "And to frame a sentence is more than just utterance, for while vocal sounds are uttered, things are meant, that is, matters of discourse".

object term). The Stoics elaborated the basis for a logical syntax, grounded in the notion of λεκτόν (and its predicative content), and although we lack information on the details of their views concerning the structure of propositions, we can at least assert that

- (a) they viewed propositions as a (complex) predicate;
- (b) they identified semantically autonomous and non-autonomous constituents within a proposition;
- (c) they studied morphosyntactic phenomena (such as case²³ and tense-marking) as an integral part of their logico-syntactical investigations.

Also, the Stoics—in line with Aristotle's analysis of types of speech acts (cf. *Peri Hermeneias* / *Poetics*)—went beyond a merely logical analysis of language: they recognized, next to judgements, other types of sentences (or phrases):²⁴ interrogations, inquiries (which require a linguistically articulated answer), and imperatives, adjuratives, optatives, and vocatives. These distinctions belong primarily to the domain of rhetoric (and, secondarily, to that of grammar), but the Stoics do not seem to have undertaken a properly linguistic analysis of sentence types: judging from Diogenes Laertius' account they approached these sentences rather from a semiotic-discursive point of view, defining, e.g., an imperative as a signal conveying a command, and the vocative as an expression marking the fact that you address yourself to the interlocutor:

Προστακτικὸν δὲ ἐστὶ πρᾶγμα ὃ λέγοντες προτάσσομεν, οἷον “σὺ μὲν βιάδιζε τὰς ἐπ’ Ἰνάχου ῥόας”.

An imperative is something which conveys a command, e.g., ‘Go thou to the waters of Inachus’.

<Προσαγορευτικὸν> δὲ ἐστὶ πρᾶγμα ὃ εἰ λέγοι τις, προσαγορεύοι ἄν, οἷον “Ἀτρεΐδῃ κύδιστε, ἄναξ ἀνδρῶν Ἀγάμεμνον”.

23 Cases were analyzed by the Stoics in terms of their relationship with predicative contents; see D. L. (VII, 64–65).

24 The Stoics made a distinction between a signified content which is a judgement (ἄξιωμα), and a signified content which is an object (πρᾶγμα). Judgements always have a truth value; objects exist (or cease to exist). Interrogations and inquiries are always about judgement-contents (but they are neither true nor false); the other types of sentences can be about judgements or about objects.

A vocative utterance is something the use of which implies that you are addressing someone, for instance: 'Most glorious son of Atreus, Agamemnon, lord of men.' (D. L. VII, 67)

In their analysis of *axiōmata*, the Stoics proceeded as logicians, although some of their conclusions are syntactically relevant: *e.g.*, the distinction between simple (ἀπλᾶ) and not simple (οὐχ ἀπλᾶ) propositions, and the recognition of the function of negation and double negation, as well as the positing of the general structure of predication, *viz.* a noun / a noun phrase in the nominative case [a demonstrative syntagm; or indefinite syntagm] and a (verbal) predicate. Also, the Stoics identified the distinctive function of conjunctions such as εἰ, ἐπεὶ, ἤτοι, etc. But their analysis of the function of these conjunctions is a logical one, as can be seen from the following example:

Διεzeugμένον δέ ἐστιν ὃ ὑπὸ τοῦ ἤτοι διαzeugτικῶς συνδέσμου διέzeugται, οἷον ἤτοι ἡμέρα ἐστὶν ἢ νύξ ἐστὶν. Ἐπαγγέλλεται δ' ὁ σύνδεσμος οὗτος τὸ ἕτερον τῶν ἀξιωματῶν ψεῦδος εἶναι.

A disjunctive (proposition) is one constituted by the disjunctive conjunction ἤτοι, as in 'Either it is day or it is night'. This conjunction announces that one or other of the (alternative) propositions is false. (D. L. VII, 72)

Between the domain of the *stoicheia* and that of the *axiōmata* lies the domain of the word. The Stoics probably used λέξις as the general term for 'word', in line with Aristotle's terminology. Although it is not clear whether the Stoics took much interest in the classification of word classes, they are mentioned by Diogenes Laertius for having made the distinction between proper name and common noun, as separate parts of speech. Also, the Stoic author Antipater framed the term μεσότης for an additional word class, most likely the adverb. Diogenes Laertius' account can be found in his chapter on Zeno, although he is reporting here on the doctrines of later Stoics:

Τοῦ δὲ λόγου ἐστὶ μέρη πέντε, ὡς φησι Διογένης τ' ἐν τῷ Περὶ φωνῆς καὶ Χρῦσιππος, ὄνομα, προσηγορία, ῥῆμα, σύνδεσμος, ἄρθρον. Ὁ δ' Ἀντίπατρος καὶ τὴν μεσότητα τίθησιν ἐν τοῖς Περὶ λέξεως καὶ τῶν λεγομένων.

There are, as stated by Diogenes in his treatise *Peri phonês*, and by Chrysippus, five parts of speech: proper name, common noun, verb, conjunction, article. Antipater in his *On words and their meaning* adds the *mesotês*. (D. L. VII, 57)

The splitting up of the former *onoma*-class into two word classes, viz. proper name and (appellative) noun is fully understandable within the philosophical perspective of the Stoics: proper names are names of individual entities, not named on the basis of a shared quality, whereas appellative nouns refer to classes that are instantiated by objects sharing a common quality. Proper names cannot be defined as to their content, whereas common nouns can be defined in terms of a noetic content.

The division of the class of nouns into proper names and common nouns is not only based on epistemological and logical grounds (with proper names functioning as the normal instantiation of the subject term of an existential proposition, and with common nouns corresponding to general [nominal] predicates); there certainly was also a cultural (and literary) background to it: proper names referred to individual heroes of the epic and dramatic literary texts of the past, as well as to key figures in Greek history. Although the cultural justification for the distinction does not appear from Diogenes Laertius' account, we may assume it played a role, given the Stoic interest in literary style and in rhetorics (Diogenes Laertius mentions "Rhetoric" as one of the six divisions of philosophical doctrine according to Cleanthes; cf. VII, 41).

The three remaining parts of speech distinguished by both Diogenes of Babylon and Chrysippus (cf. D. L. VII, 57), viz. verb, conjunction (σύνδεσμος) and article (ἄρθρον) were already present in Aristotle's classification, but—contrary to the problematic text of Aristotle's *Poetics* (cf. *supra*)—the class of the 'articles' seems to have been narrowly defined by the Stoics;²⁵ according to Diogenes Laertius' account, it comprised the (definite) article, although one may suspect that the relative pronoun (as a "postponed" article) was also included under the ἄρθρον. The σύνδεσμος was defined by the Stoics as a linking element between parts of a proposition, and given the Stoic interest in complex propositions, one is justified to assume that elements linking one element to another were also included under the σύνδεσμος class. As a matter of fact, the term σύνδεσμος was used by the Stoics for referring to the conjunction εἰ in conditional sentences, if Diogenes Laertius' account can be read as a quotation or summary from Chrysippus and / or Diogenes of Babylon:

25 As shown by Matthaios [1999] 614 ss., [2002f], the prepositions were first subsumed under the ἄρθρα (as reported also by Priscian, *G.L.* III, 501.10), but starting with Chrysippus the ἄρθρον class was narrowed down, and the prepositions were assigned to the σύνδεσμος class, an evolution for which Apollonius Dyscolus (*G.G.* II, 1, 214) provides evidence. Cf. Matthaios [1999] 616, [2002f] and Sluiter [1990] 117, [1997a] 234. This evolution took place between Chrysippus and the period of activity of Posidonius of Apameia (ca. 135–51 BC).

Τῶν δ' οὐχ ἀπλῶν ἀξιωματῶν συνημμένον μὲν ἔστιν, ὡς ὁ Χρύσιππος ἐν ταῖς Διαλεκτικαῖς φησι καὶ Διογένης ἐν τῇ Διαλεκτικῇ τέχνῃ, τὸ συνημμένον διὰ τοῦ 'εἰ' συναπτικοῦ συνδέσμου.

Of propositions that are not simple the hypothetical, according to Chrysippus in his *Dialectics* and Diogenes in his *Art of Dialectic*, is one that is formed by means of the conditional conjunction 'if'. (D. L. VII, 71)

The five parts of speech recognized by Diogenes of Babylon and Chrysippus are defined as follows in Diogenes Laertius' summary:

- (a) the προσηγορία: the part of speech signifying a common quality (μέρος λόγου σημαῖνον κοινὴν ποιότητα);
- (b) the ὄνομα: the part of speech expressing an individual quality (μέρος λόγου δηλοῦν ἰδίαν ποιότητα);
- (c) the ῥῆμα: the part of speech signifying a non-compound predicate / expressing something that can be joined to one or more (persons / subjects) (μέρος λόγου σημαῖνον ἀσύνθετον κατηγορημα / σημαῖνόν τι συντακτὸν περί τινος ἢ τινῶν);
- (d) the σύνδεσμος: the (indeclinable) part of speech that binds together the (other) parts of speech / of the utterance (μέρος λόγου ἄπτωτον, συνδουὺν τὰ μέρη τοῦ λόγου);
- (e) the ἄρθρον: the (declinable) "element" of speech that distinguishes the genders and numbers of the nouns / names. Diogenes Laertius uses ὄνομα, but this seems to be a loose designation here for ὀνόματα and (especially) προσηγορίαι (στοιχείον λόγου πτωτικόν, διορίζον τὰ γένη τῶν ὀνομάτων καὶ τοὺς ἀριθμούς).

Probably the most interesting aspect of Diogenes Laertius' account is the fact that he mentions the subsequent extension of the early Stoics' repertory of five parts of speech with a sixth class: the μεσότης ("mean / intermediate"), a term which Diogenes (VII, 57) attributes to the later Stoic philosopher Antipater of Tarsos (ca. 150 BC).

ὁ δ' Ἀντίπατρος καὶ τὴν μεσότητα τίθησιν ἐν τοῖς Περὶ λέξεως καὶ τῶν λεγομένων.

To these Antipater in his *On words and their meanings* adds the μεσότης.

This sixth part of speech was probably the 'adverb' and the designation μεσότης may refer to the fact that, in terms of inflectional characteristics, the

adverb occupies a mid-field position between the (normal) declinable parts of speech—sharing the degrees of comparison with the adjectival *προσηγορία*—and the indeclinable parts of speech. Another, more sophisticated explanation of the term *μεσότης* would be that the (later) Stoics considered the adverbs as standing midway between elements with a lexical content (categorematic units) and elements with a grammatical content (syncategorematic units). While it may be that *μεσότης* included only a subset of what we consider (today) as ‘adverbs’, there is no evidence for this in Diogenes Laertius’ text. Also, it is unclear whether Antipater’s innovation was accepted by the mainstream of Stoic linguistic-philosophical thought.²⁶ It should be noted, finally, that another term for ‘adverb’ transmitted by the Graeco-Latin grammatical tradition is *πανδέκτης*, which may well be a secondary, derivative designation. We find this term attested in Charisius’ account of the parts of speech system:

[...] cum adverbium Stoici [...] *pandecten* vocent, Nam omnia in se capit quasi collata per saturam concessa sibi rerum varia potestate (Barwick [1964] 252.28–31).

[...] because the Stoics [...] call the adverb *pandectes*, ‘all-receiver’. For it receives all things, as if they are collected without distinction, because it has been granted power over all sorts of things (transl. Schenkeveld [2004] 95).

5 The Alexandrian Philological School: Grammatical Codification at the Service of Text Explanation

In the third century BC the Ptolemaic dynasty founded a philological school in Alexandria, which became the most prominent centre of learning in the Greek world.²⁷ The school was linked to the famous library which had been founded by Ptolemy I. It is in Alexandria that a corporation of scholars (philologists),

26 Priscian’s account (in *G.L.* II, 54. 8–13) might reflect the later canonical Stoic position, reverting to five word classes. Priscian explicitly mentions: “nec etiam adverbium nominibus vel verbis connumerabant et quasi adjectiva verborum ea nominabant”; the latter addition might constitute another explanation for Antipater’s term *μεσότης*: the adverbs would be a class intermediate between noun and verb. For this interpretation, see Schreiner (1954: 82).

27 Alexandria became a centre of learning in all fields of knowledge: mathematics, astronomy, philosophy, geography, and textual philology (see Montana in this volume). In fact, the ancient notion of ‘philologist’ is a very comprehensive one: it refers to a ‘scholar’, or ‘learned man’ in general. See in this volume, the chapter on ‘Definitions of Grammar’.

involved in the edition and commentary of classical texts, contributed to the autonomization of grammar, which loosened its ties with philosophy and rhetorics, and developed into a descriptive science dealing with the language of the great literary texts of the past.

The first Alexandrian philologists who contributed to grammatical terminology and to the elaboration and the codification of grammatical doctrine were Aristophanes of Byzantium (ca. 255–180 BC) and his disciples Callistratos and Comanos (both active in the first half of the second cent. BC).²⁸ These scholars were responsible for extending the inventory of word classes.

- (a) Aristophanes of Byzantium may have been the first to posit the preposition as a separate word class, as can be concluded from Apollonius Dyscolus' treatise on syntax (*G.G.* II 2, 443.8–10):

Διὰ τοῦτο οὐδ' οἱ περὶ τὸν Ἀριστοφάνη ἠξίωσαν βαρύνειν τὰ μόρια κατὰ τὴν Αἰολίδα διάλεκτον, ἵνα μὴ τὸ ἴδιον τῆς προθέσεως ἀποστήσωσιν, λέγω τὴν ἀναστροφὴν.

This is also why Aristophanes refused to draw-back-the-accent (*barunein*) of prepositions in the Aeolic dialect [where all words otherwise have a recessive accent, much like Latin], so as not to lose the special feature of prepositions, liability to anastrophe (transl. [and comment] Householder [1981]).

- (b) Somewhere between Aristophanes and Comanos, the class of pronouns was set apart, and received its designation *ἀντωνυμία*, indicating its close relation with the *ὄνομα*:

Ἐκφεύγοντάς φασι τὸ Αἰολικὸν τοὺς περὶ Κομανὸν ἀντωνομασίας καλεῖν, εἶγε τὸ μὲν ὄνομα οὐ κοινόν, τὸ δὲ ὄνομα (*Apol. Dysc. Pron.*, *G.G.* II 1, 4.18–19).

They say that Comanus and his disciples called [the pronouns] *ἀντωνομασῖαι*, because the general Greek term [for 'noun'] is *ὄνομα*, and not *ὄνομα*.

- (c) One must reckon with the possibility that already in the period of Callistratos and Comanos the participle was recognized as a separate part of speech and was then the object of a closer study (cf. Matthaios [1999] 425 and Swiggers-Wouters [2007]).

²⁸ See Montana in this volume.

The immediately subsequent generation of Alexandrian scholarship is represented by Aristarchus of Samothrace (ca. 215–145 BC).²⁹ Although Aristarchus did not leave us an outline of his grammatical doctrine, careful study of the fragments transmitted from his philological writings (cf. Matthaïos [1999]) has amply demonstrated the existence of a well articulated grammatical concept in Aristarchus' mind (cf. Ax [1982], [1991]). More specifically we are indebted to Aristarchus (a) for the first attestation of the term *μετοχή* ('part-taker') as the appropriate designation for the word class of the participle, and (b) for the definitive establishment—at least in grammatical-philological circles—of the 'adverb' as a separate word class (cf. Matthaïos [1999] 520–521). The term used by Aristarchus as a designation of the adverb was *μεσότης*; it was replaced by *ἐπίρρημα* in the later Alexandrian tradition.³⁰

Matthaïos' careful study [1999] allows us to establish with certainty that the extension of the (five) parts-of-speech system of the Stoa with four new classes, viz. the preposition, the pronoun, the adverb and the participle was accomplished by the time of Aristarchus.

Aristarchus' pupil, Dionysius Thrax, is credited with having composed the oldest grammatical manual in Greek Antiquity.³¹ The work has survived in medieval manuscripts under the title *Technê grammatikê*. There is a long-standing controversy concerning the authenticity, the dating and the extension of the originally preserved sections of the *Tekhnê*,³² but most of these issues are irrelevant for our analysis in the present context. There is general consensus about the authenticity of paragraphs 1–5. What can be affirmed with certainty are the following points:

- (a) within the philological tradition of the Alexandrian school, a grammatical manual was written by a pupil of Aristarchus, viz. Dionysius Thrax;
- (b) this manual codified and systematized, in the form of a short handbook (for schooling and for consultation), grammatical concepts and grammatical terminology elaborated by generations of Alexandrian philologists, and already constituting a body of grammatical knowledge at the time of Aristarchus;

29 See Montana in this volume.

30 On the terms *μεσότης* and *ἐπίρρημα*, see Matthaïos [1999] 520–521; 559; the first uncontroversial attestation of the term *ἐπίρρημα* should be attributed to Trypho in the first century BC (cf. Matthaïos [2002f] 166).

31 Cf. Valente (section 11) and Wouters-Swiggers in this volume.

32 For a sample of opposing views, see Law – Sluiter [1995]. Cf. also the recent surveys of the discussion by Matthaïos [2009a], Callipo [2011] 28–34, and Pagani [2010b] 393–409, [2011] 30–37.

- (c) the manual was intended to help the φιλόλογος³³ with putting grammatical concepts and terms, of daily use in philological practice, into a comprehensive frame, containing short, but useful definitions and offering a brief exemplification;
- (d) the manual of Dionysius stands at the beginning of a tradition characterized by the presence of an “art of grammar”, *i.e.* of a grammar as a descriptive object cast in an expository format. It is this format that we will focus on in the following.

The *Technê* is articulated not in terms of combination, nor in terms of concatenation, but in terms of *divisions*.³⁴ Divisions are the structuring principle of the grammar:

- (a) at the macro-level, the grammatical analysis deals, successively, with the following divisions within language structure:
 - prosodic signs / punctuation marks
 - segmental elements (*stoicheia*)
 - syllables
 - parts of speech
- (b) at the micro-level, the analysis proceeds either by enumerating extant types instantiating a higher-level division, or by enumerating categories, which in their turn are then analyzed into their various realizations.

33 This is clear from the opening lines of the *Technê* which are in any case authentic. Grammar is defined and divided into six parts, which are a perfect summary of the activity of the (ancient) philologist studying and commenting Greek literary texts (see the contribution “Definitions of grammar”). The Greek text reads as follows: Γραμματική ἐστὶν ἐμπειρία τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσιν ὡς ἐπὶ τὸ πολὺ λεγομένων. Μέρη δὲ αὐτῆς ἐστὶν ἕξ· πρῶτον ἀνάγνωσις ἐντριβῆς κατὰ προσωδίαν, δεύτερον ἐξηγήσις κατὰ τοὺς ἐνυπάρχοντας ποιητικούς τρόπους, τρίτον γλωσσῶν τε καὶ ἱστοριῶν πρόχειρος ἀπόδοσις, τέταρτον ἐτυμολογίας εὔρεσις, πέμπτον ἀναλογίας ἐκλογισμὸς, ἕκτον κρίσις ποιημάτων, ὃ δὴ κάλλιστόν ἐστι πάντων τῶν ἐν τῇ τέχνῃ (G.G. 1 1, 5–6.10). “Grammar is the empirical knowledge of the expressions commonly used among poets and prose-writers. Its parts are six [in number]: first, the skillful reading in conformity with the prosody; second, the exegesis of the occurring poetic phrases; third, the straightforward account of rare words and *realia*; fourth, the discovery of the etymology; fifth, the establishing of analogical patterning; and sixth, the judgement on poems, which is the finest part of all those [contained] in the art [of grammar]”. See the most recent comment on this definition by Callipo [2011] 91–99.

34 The technique of ‘division’ has its roots in Plato’s method of διαίρεσις, which basically operated on the basis of *dichotomies*; this method was also used by Aristotle (*An. post.* II, 13, 96b, 15–97b, 23; *Top.* VI, 5, 6). The Stoics refined the terminological apparatus (adding the terms ἀντιδιαίρεσις and ὑποδιαίρεσις) and they opposed conceptual analysis to division of objects or substances.

The overall organization of the grammar format can be schematized as follows:

(I) PHONETIC-GRAPHETIC PART

- accents (τόνοι): three types, viz. *acutus*, *gravis*, and *circumflexus*
- punctuation marks: three types, viz. end point, middle point, subscript point
- “elements”: 24 letters (and their values)
 - categories:
 - vowels (α, ε, η, ι, ο, υ, ω)
 - diphthongs (αι, αυ, ει, ευ, οι, ου)
 - consonants
 - hemiphona* (ζ, ξ, ψ, λ, μ, ν, ρ, σ)
 - aphona* (β, γ, δ, κ, π, τ, θ, φ, χ)
 - syllables (types: short, long, common)³⁵

(II) MORPHOSYNTACTIC PART: the μέρη τοῦ λόγου

listing of eight parts of speech

separate treatment of each part of speech in terms of characterizing categories (“accidents”, παρεπόμενα) and their realizations

- (a) noun
 - accidents*: gender; species; figure; number; case
- (b) verb
 - accidents*: mood; diathesis; species; figure; number; person; tense; [the conjugation class]³⁶
- (c) participle
 - accidents*: gender; species; figure; number; case; diathesis; tense; [the conjugation class]
- (d) article
 - accidents*: gender; number; case
- (e) pronoun
 - accidents*: person; gender; number; case; figure; species
- (f) preposition
 - accidents*: ∅ (there is only listing of monosyllabic and bisyllabic prepositions)

35 The *Technê* (§§ 8–10 = G.G. I 1, 17–20) specifies under which conditions each of these three syllable types occurs. Common syllables are syllables that can be treated as long or short by the poets.

36 This accident is, in fact, a differential characteristic *within* the verb class.

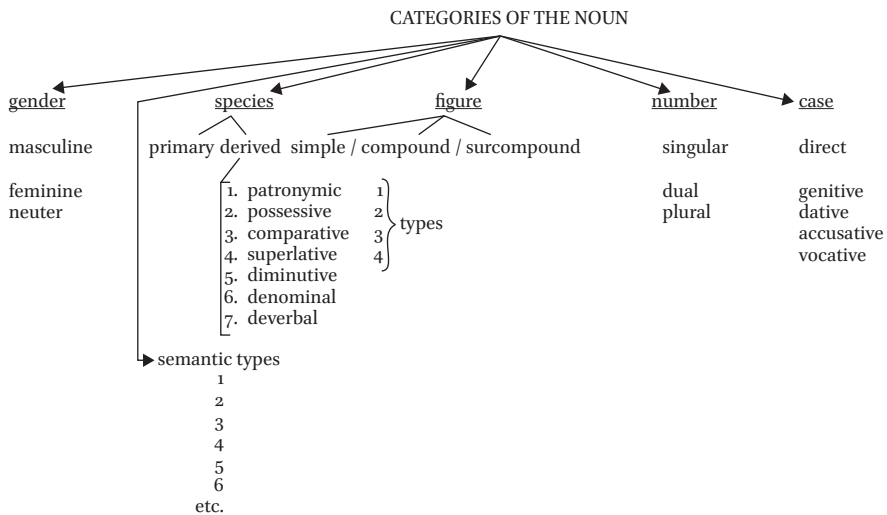

(g) adverb

accidents: figure; (semantic) species

(h) conjunction

accidents: \emptyset (listing of different semantic-syntactic types).

The different accidents receive further specification in terms of their realization; *e.g.* number can be realized as singular, plural or dual; gender as masculine, feminine or neuter. This results in a hierarchical top-bottom account, proceeding from the word class and its definition, the latter containing the relevant accidents, which are then specified separately. The hierarchical structure³⁷ can be represented as follows, taking the noun as an example:

How are the various word classes defined? In Dionysius' *Technê* the definition of each word class starts with assigning it to an overarching concept—either 'word' (λέξις) or 'part of speech' (μέρος λόγου)—, and then defines its nature by summing up its essential formal and semantic properties. This results in a string of minimal definitions for the eight parts of speech posited in the *Technê*.

37 In Swiggers – Wouters [2011b] we have discussed in detail the mnemonic and didactic virtues of this 'staircase-like' model of grammatical description.

(1) For the noun:

Ὄνομά ἐστι μέρος λόγου πτωτικόν, σῶμα ἢ πρᾶγμα σημαίνον, σῶμα μὲν οἶον λίθος, πρᾶγμα δὲ οἶον παιδεία, κοινῶς τε καὶ ἰδίως λεγόμενον, κοινῶς μὲν οἶον ἄνθρωπος ἵππος, ἰδίως δὲ οἶον Σωκράτης.—Παρέπεται δὲ τῷ ὀνόματι πέντε. γένη, εἶδη, σχήματα, ἀριθμοί, πτώσεις (§ 12).

A noun is a part of speech, with case-inflection, signifying a (concrete) substance or a(n abstract) thing—a (concrete) substance like ‘stone’, a(n abstract) thing like ‘education’—, taken in a common or particular sense—in a common sense, *e.g.*, ‘man’, ‘horse’, in a particular sense, *e.g.*, ‘Socrates.’—There are five accidents of the noun: genders, species, figures, numbers, cases.

(2) For the verb:

Ῥῆμά ἐστι λέξις ἄπτωτος, ἐπιδεκτικὴ χρόνων τε καὶ προσώπων καὶ ἀριθμῶν, ἐνέργειαν ἢ πάθος παριστάσα. Παρέπεται δὲ τῷ ῥήματι ὀκτώ, ἐγκλίσεις, διαθέσεις, εἶδη, σχήματα, ἀριθμοί, πρόσωπα, χρόνοι, συζυγίαι (§ 13).

A verb is a word without cases, accepting tenses, persons, and numbers, and signifying an activity or an undergoing. There are eight accidents of the verb: moods, diatheses, species, figures, numbers, persons, tenses, conjugation classes.

(3) For the participle:

Μετοχή ἐστι λέξις μετέχουσα τῆς τῶν ῥημάτων καὶ τῆς τῶν ὀνομάτων ἰδιότητος. Παρέπεται δὲ αὐτῇ ταῦτ᾽ ἅ καὶ τῷ ὀνόματι καὶ τῷ ῥήματι δίχα προσώπων τε καὶ ἐγκλίσεων (§ 15).

A participle is a word sharing the characteristics of both the verbs and the nouns. It has the same accidents as the noun and the verbs, except for persons and moods.

(4) For the article:

Ἄρθρον ἐστὶ μέρος λόγου πτωτικόν, προτασσόμενον καὶ ὑποτασσόμενον τῆς κλίσεως τῶν ὀνομάτων. καὶ ἔστι προτακτικόν μὲν ὁ, ὑποτακτικόν δὲ ὅς. Παρέπεται δὲ αὐτῷ τρία: γένη, ἀριθμοί, πτώσεις (§ 16).

An article is a part of speech with case-inflections, which precedes or follows the inflection of the nouns. There is the prepositive *ho* ['the'], and the postpositive *hós* ['that, which']. It has three accidents: genders, numbers, cases.

(5) For the pronoun:

Ἄντωνυμία ἐστὶ λέξις ἀντὶ ὀνόματος παραλαμβανομένη, προσώπων ὠρισμένων δηλωτική. Παρέπεται δὲ τῇ ἀντωνυμίᾳ ἕξ· πρόσωπα, γένη, ἀριθμοί, πτώσεις, σχήματα, εἶδη (§ 17).

A pronoun is a word used instead of a noun, and indicating definite persons. The pronoun has six accidents: persons, genders, numbers, cases, figures, species.

(6) For the preposition:

Πρόθεσις ἐστὶ λέξις προτιθεμένη πάντων τῶν τοῦ λόγου μερῶν ἔν τε συνθέσει καὶ συντάξει (§ 18).

A preposition is a word which is placed before all the parts of speech, in compounding and in construction.

(7) For the adverb:

Ἐπίρρημά ἐστὶ μέρος λόγου ἄκλιτον, κατὰ ῥήματος λεγόμενον ἢ ἐπιλεγόμενον ῥήματι. Τῶν δὲ ἐπίρρημάτων τὰ μὲν ἐστὶν ἀπλά, τὰ δὲ σύνθετα· ἀπλά μὲν ὡς πάλαι, σύνθετα δὲ ὡς πρόπαλαι (§ 19).

An adverb is an uninflected part of speech, used with respect to a verb or added to a verb. Of the adverbs some are simple, others are compound; simple, like *pálai* ['long ago'], compound, like *própalai* ['very long ago'].

(8) For the conjunction:

Σύνδεσμός ἐστὶ λέξις συνδέουσα διάνοιαν μετὰ τάξεως καὶ τὸ τῆς ἐρμηνείας κεχηγὸς δηλοῦσα. Τῶν δὲ συνδέσμων οἱ μὲν εἰσι συμπλεκτικοί, οἱ δὲ διαζευκτικοί, οἱ δὲ συναπτικοί, οἱ δὲ παρασυναπτικοί, οἱ δὲ αἰτιολογικοί, οἱ δὲ ἀπορρηματικοί, οἱ δὲ συλλογιστικοί, οἱ δὲ παραπληρωματικοί (§ 20).

A conjunction is a word linking together the thought, with order, and showing the void of the expression. Of the conjunctions some are copulative, others disjunctive, others synapctic, others parasynapctic, others causal, others dubitative, others syllogistic, others expletive.

The *Technê* of Dionysius Thrax provided subsequent generations with a grammatical codification which included

- (a) a definition of grammar and of its subdivisions;
- (b) a general frame of organization for grammatical description, and for the teaching of grammar;
- (c) a basic set of grammatical terms;
- (d) the (essential) list of word classes and their accidents.

As we have expounded elsewhere in more detail (cf. Swiggers-Wouters [2011b]), manuals for the study of grammar in Antiquity are characterized by (i) uniformity and recursiveness, (ii) preoccupation with clear (technical) terminology (or metalanguage), and (iii) illustration of classes and categories through succinct exemplification. The *Technê* of Dionysius illustrates quite appropriately these three fundamental properties.

In the core part of grammar, viz. the part dealing with the parts of speech, we find a didactically useful “layering”, which allows teachers to proceed from word classes to categories (accidents) and to the various realizations of each category. The presentation of the various parts of speech in a grammatical manual thus came to assume the following format:

- (1) definition of each separate part of speech
- (2) identification of its characteristics (= accidents)
- (3) specification of the realizations of the accidents (and, whenever applicable, further subspecification).

This format is exemplified by the *Technê* and by the other Greek and Latin manuals of grammar in Antiquity; we deal here with a general format allowing for a number of variations (depending upon individual grammarians / grammar teachers, as well as upon the specific needs of the public aimed at).³⁸ Such variations occur, *e.g.*, with respect to the number and order of the accidents, the amount and specific nature of the examples given, the possible

38 See Valente (section II) in this volume.

inclusion of further information concerning particular issues (from a descriptive or a didactic point of view).³⁹

These facts testify to an important new stage reached in the history of ancient grammar, viz. its institutionalization as a discipline within ancient education and, more particularly, its “manualization” or codification of contents into manuals for instruction.

In order not to engage into a discussion concerning the dating of Dionysius’ *Technê* (cf. *supra*) and concerning the complex issue of influences and dependencies between texts, we will limit ourselves to highlight three points.

(1) The first point to be stressed is the existence of a large quantity of grammar manuals preserved partially on papyrus, which cover a period of four to five centuries. The following list may serve as sufficient proof for the long continuity of didactic instruments used in teaching (the rudiments of) grammar:

Grammatical papyri of the 1st–2nd century AD

- (1) *Pap. Yale* 1.25 (= Wouters 1979, no. 1)
- (2) *Pap. Brooklyn inv.* 47.218.36 (= Wouters 1979, no. 8)
- (3) *Pap. Heid. Siegmann* 197 (= Wouters 1979, no. 6)
- (4) *Pap. Oxy. ined.* [offering a detailed treatment of the noun]
- (5) *Pap. Oxy. ined.* [dealing with the adverb, the preposition and the noun]
- (6) *Pap. Oxy. ined.* [discussing the noun]

Grammatical papyri of the 2nd century AD

- (7) *Pap. S.I. inv.* 503 (= Wouters 1979, no. 7)

(2) The second point is that in the overall structure of the manuals we can discern recurring patterns (cf. Wouters [1979] 42–43); typologically speaking, we find two main types or patterns, which in fact exploit, in a different way, the “layered” organization frame referred to above:

Type I: Definition of the part of speech + enumeration of features or subdivisions, and possible discussion of these.

Specific subtype: Discussion of the features or subdivisions (of one particular part of speech)

Type II: Enumeration of realizations of accidents (of one or several parts of speech) with exemplification, and possible definition of the realizations of the grammatical categories.

Interestingly, these two types show that in the teaching of grammar two opposed paths could be followed (and, in actual practice, both were used in order to drill beginning students): either starting from the general and moving to the particular, or proceeding from the particular and climbing up to the general. The latter directionality was of course the one taken in dealing with concrete items found in texts (cf. the procedure of ‘parsing’, which reaches back to the ancient exercise of *partitiones*).

(3) The third important point to be stressed is that these grammatical manuals are the (fragmentarily) preserved top of an iceberg, viz. of a much more extensive body of (practical) grammatical writings, which are known to us in the form of exercises, paradigm lists, conjugation exercises (not to mention more elementary didactic texts) which have been conserved to a very limited extent. This, again, shows that grammar was a subject for (systematic) instruction, and was, as such, exposed to variation and adaptation, in accordance with

diverging interests (both of the teacher and respective schooling traditions) and needs (of the public), and with changing social, political and linguistic contents.

Notwithstanding this, the papyrological documentation focusing on the “doctrinal” presentation of grammar—*i.e.* those texts that can be considered τέχλαι or part of a τέχλη—not only confirms the centrality of the “morphological” component, providing only some room for grapho-phonetic information and excluding almost completely any systematic information, but it also shows a remarkable continuity with the contents and terminology of the Alexandrian grammar of the second and first century BC. This is clear from the following facts:

- (a) the conservation of the general organization frame in terms of word classes, their categories and the respective realizations of the latter;
- (b) the adoption of a bipartition between the parts of speech that show inflection and the parts of speech that are non-inflected (*viz.* the preposition, the adverb and the conjunction);
- (c) the continuation of the discussion concerning the reduction or non-reduction of common noun and proper name to a single word class ‘noun’.⁴¹

The latter fact should be kept in mind before making too hastily a statement about the dating and authenticity of Dionysius’ *Technê*, as if this text (transmitted by textual testimonies that are, in any event, very late with regard to the presumed original text) were an invariably transmitted “codification of Alexandrian grammatical knowledge”. As a matter of fact, we still find in the fourth-century *P. Amh.* 2.21 a discussion⁴² concerning the well-foundedness of distinguishing nine or eight parts of speech (depending upon the treatment of ὄνομα and προσηγορία as separate parts of speech or not).

Morphology was the central part of ancient Greek grammars, almost to the point of exclusivity. While it is true that—given its importance for the rudiments of Greek instruction—grapho-phonetic information was included in (most of) the τέχλαι, this part was briefly dealt with and was in fact not linked with the analysis of the structure of the Greek language, but with the (correct) pronunciation and reciting of literary texts. As to syntax, it was not treated

41 See also Swiggers – Wouters [2014a].

42 Cf. Wouters [1979] 188–197, n. 14, ll. 13–16: μέρη τοῦ λόγου ἐστὶν κατὰ μὲν τενας [I. τινὰς] θ, / κατὰ] δὲ τὴν συμπεφωνημένην ἀκριβῆ (I. ἀκριβῆ) π[αράδοσιν] / η. “According to some the parts of speech are nine in number [...] but according to the generally accepted and correct tradition, there are eight parts”.

as a distinct section in grammatical manuals (cf. Donnet [1967b]; Swiggers-Wouters [2003b]), but syntactic problems (and concepts) may pop up on occasion. Significantly, the highly original and insightful treatise on syntax⁴³ written by Apollonius Dyscolus in the second century AD, was never integrated within the grammatical manuals of the ancient Greek tradition. It should also be stressed that Apollonius' syntax (next to which we have his detailed studies on parts of speech such as the pronoun, the conjunction and the adverb)⁴⁴ cannot be considered a manual of syntax:⁴⁵ it is a problem-oriented discussion of syntactic issues, as they can be found in literary texts, but not an exposition on the principles of Greek syntax.⁴⁶ Both the style and the terminology of Apollonius made his work hardly useful for grammatical instruction. In fact, school practice proceeded in syntactic matters in a very empirical, "casuistic" way: the school book *Brit. Mus. Add. MS. 37533* (third cent. AD),⁴⁷ one of the rare texts that contain "syntactic" information from a didactic context, testifies to a very narrow-minded conception of syntax (provided there was some kind of conceptualization!) in that its focus is on inflection-bound combinations, such as cases governed by (types) of verbs, moods governed by conjunctions. Word order, if treated at all, was never systematically dealt with; in fact, its study seems to have been left to stylistics and rhetorics.

6 The Constitution and Evolution of Ancient Greek Grammar: Methodological and Epistemological Issues

Grammar constituted itself as an autonomous discipline in Greek Antiquity, and became a cornerstone of Western civilization. The autonomization process, which took place over several centuries, consisted in the separation of grammar from philosophy and rhetorics (cf. Swiggers-Wouters [1997b]), and in the definition of a proper object and a specific methodological and terminological status of the discipline of grammar. In the preceding section we have

43 Edited by Uhlig, in *G.G.* II, 2 [1910]. Translations by Householder [1981], Bécarea Botas [1987] and Lallot [1997].

44 Apollonius' works on these parts of speech, dealing with their morphological and syntactic characteristics, have been edited by Schneider, in *G.G.* II, 1 [1878–1902].

45 For this to be the case, it would have been necessary for Apollonius to have a clear view of sentence-constituency (something which he lacks), and to have a grasp of (basic) syntactic "functions" (for divergent opinions on this, see Bécarea Botas [1987] 36 ff. vs. Lallot [1997] I 62–73).

46 See Lallot in this volume.

47 Edited by Kenyon [1909].

outlined the contents of the discipline in its more or less systematized form, as it was elaborated by the Alexandrian grammarians. This outline has to be supplemented with the discussion of a number of theoretically important issues.

The first issue to be raised is that of the evolutionary course of grammar in Greek Antiquity. The above given outline, focusing on the contents of grammar, has left aside the intricate question of the enduring relationship between grammar and other disciplines, such as philosophy and rhetorics.⁴⁸ The development of the parts-of-speech system, the core part of ancient Greek grammar, may give the impression of a rectilinear, irreversible evolution. In fact, this has been for a long time the prevailing view (cherished by various authors, independently of the opinion they held regarding the authenticity of the *Techné* of Dionysius Thrax). This view can be summarized, following the important overviews by Robins [1966], [1986] into a rectilinear sequence in which the system of word classes developed from a binary one to one involving eight parts of speech:

<i>First stage</i> (Plato):	ὄνομα, ῥήμα
<i>Second stage</i> (Aristotle):	ὄνομα, ῥήμα, σύνδεσμος
<i>Third stage</i> (first generation of Stoics):	ὄνομα, ῥήμα, σύνδεσμος, ἄρθρον
<i>Fourth stage</i> (second generation of Stoics):	ὄνομα, προσηγορία, ῥήμα, σύνδεσμος, ἄρθρον
<i>Fifth stage</i> (third generation of Stoics):	ὄνομα, προσηγορία, ῥήμα, μεσότης, σύνδεσμος, ἄρθρον
<i>Sixth stage</i> (the <i>Techné</i>):	ὄνομα, ῥήμα, μετοχή, ἄρθρον, ἀντωνυμία, πρόθεσις, ἐπίρρημα, σύνδεσμος

Tracing such a sequence would be, however, oversimplifying the actual history of the parts-of-speech history. On the one hand, the above sketched sequence ignores the essential role played by philosophical discussions (of different backgrounds: Aristotelian, Stoic or even Platonic) in the development of grammar during the last centuries BC and the first centuries AD; on the other hand, as shown already above (cf. the discussion of the grammatical information provided by the papyrological documentation), even after having received systematization and codification by the first generations of Alexandrian scholars, the development of grammatical doctrine was characterized by variation in contents and terminology.

48 See Lapini and De Jonge in this volume.

Recent work (*e.g.* Ax [1993]; Schenkeveld [1994]; Matthaios [1999], [2002f]) has demonstrated the intertwining of various philosophical orientations in the grammatical views held by Alexandrian grammarians, from Aristarch, over Dionysius Thrax and Tyrannio, to Trypho and Apollonius Dyscolus. In this “renewed” view, based on a close philological study of grammatical manuals and treatises, of the fragmentary texts and of the papyrological material, one has to recognize different layers of philosophical influence, by various generations of Stoic philosophers or grammarians influenced by Stoic views, but also by followers of Aristotelian or even Platonic doctrines. It thus appears that the establishing of a parts-of-speech system was a dynamic and dialectic process, characterized by the interplay between a grammatical-philological approach to language structure and various philosophical approaches to language (as an instrument for expressing meaningful contents). In the light of this—and also in view of the doctrinal non-uniformity in the grammatical papyri (*cf. supra*)—it is a matter of secondary interest to ascertain who⁴⁹ precisely has to be credited with (the fixation of) the eight-parts-of-speech system which we, in retrospect, tend to attribute to Greek Antiquity.

Along the same lines, one should also integrate within this more dynamic and complex evolutionary scheme of the system of parts of speech, the interpenetration of grammar and rhetoric.⁵⁰ This interpenetration goes back to Aristotle, whose rhetorical and poetical works contain a more important contribution to the doctrine of the parts of speech than his philosophical works. Later, an even more important role was played by Dionysius of Halicarnassus, who not only provided a “doxographical” report on the history of the word classes (*cf. infra*), but who also developed original views in the field of grammar (*cf.* Schenkeveld [1983]; De Jonge [2008]), although it would be far-fetched to credit Dionysius of Halicarnassus with a “system of (nine) word classes”,⁵¹ let alone a theory of grammar. De Jonge [2008] 145 has accurately defined Dionysius’ status:

In my view, it would be more correct to avoid ascribing any “system” of word classes to Dionysius in the first place. The fact that his classifications in some instances fit into a system of nine and in other instances into a system of five or six word classes (without *ἀντωνυμία* and *πρόθεσις*) does not mean that he is actually using two different grammatical

49 Already testimonies from Antiquity attribute to different authors—Aristarchus, Dionysius Thrax or Trypho—the paternity of the eight-parts-of-speech system.

50 It is likely that the type of *τέχνη ῥητορικὴ*, represented for ex. by Anaximenes of Lampsacus (ca. 380–320 BC), served as a model for the grammatical manual. *Cf.* Fuhrmann [1960].

51 *Cf.* De Jonge [2008] 144–145, against Schenkeveld [1983].

systems. Dionysius is not a grammarian, and he only uses grammatical theories inasmuch as they can help him to clarify his own rhetorical ideas. His rhetorical instructions do not demand that he adopt a specific grammatical ‘system’ of word classes. Therefore, instead of assuming that Dionysius uses a system of nine parts of speech, which he sometimes mixes up with a system of five *μέρη λόγου*, it would be better to accept that Dionysius is not so much interested in the exact number of word classes: he is not concerned with grammatical systems, but with the composition of texts [...]. In fact, Dionysius himself makes explicitly clear that the exact number of *μόρια λόγου* is not important for his purpose, and that he does not support any grammatical ‘system’ at all.

Nevertheless, although Dionysius of Halicarnassus does not intervene nor take a stand in grammatical debates, he appears to be a very interesting figure in the (history of) transmission of grammatical ideas. On the one hand, he can serve as a nice illustration of the intertwining of grammar, philosophy⁵² and rhetorics, even at a period when grammar was already seen and practiced as an autonomous discipline, and, interestingly, we find in Dionysius traces of Stoic and Peripatetic influence (perhaps through a number of grammatical-philosophical sources). On the other hand, Dionysius of Halicarnassus is an extremely interesting witness for the history of grammatical terminology: apart from his use of the pair *ὄνομα* and *προσηγορία*, which he distinguishes in conformity with the Stoic doctrine, he often resorts to Stoic-based terminology (*e.g.* in his discussion of moods and articles, and in his use of the term *συμβεβηκότα*), and he also offers the earliest attestations of grammatical terms such as *ἔγκλισις*. But Dionysius’ view on language is, after all, that of an analyst of style, not of a grammarian; he assumes from his reader sufficient grammatical knowledge and background in order to study the composition of a literary text, which is a matter of putting, in the most fitting and elegant way, a certain type of content into a stylized form.

With Dionysius of Halicarnassus we also touch upon another important feature of the history of grammatical doctrines, which we will deal with here in concluding. The evolutionary course of the parts-of-speech system was itself

52 As such, the case of Dionysius confirms the observations made above with respect to the interplay between grammatical-philological studies and philosophical approaches. Cf. De Jonge [2008] 165, with reference to Matthaios [2002f]): “After Aristarchus, the Alexandrian scholars were deeply influenced by Stoic theories. This Stoic influence resulted in a number of grammatical works that must have combined Alexandrian and Stoic ideas on language. Most of these works are lost, but the few extant fragments of Dionysius Thrax and Tyrannion show that they adopted Stoic views in their classification of the word classes”.

the object of a ‘history’ (as retrospective account). This history ‘of the second degree’ took the form of doxographical accounts (cf. Swiggers-Wouters [2010]), concerning the history, constitution and development of the word classes in Greek (and later, Latin) grammaticography. For the Greek-speaking (or Greek-writing world)⁵³ we can mention two types of doxographical texts (cf. sets A and B in the list below): the first set is that of “full” doxographies, *i.e.* texts intended as an overview of the development of grammatical conceptions (on the parts of speech) and as a brief discussion of the methodological problems involved; the second set comprises doxographical statements relating either to specific topics in the treatment of the parts of speech or to problems involved in the analysis of a particular word class

(A) *Full doxographies*

- 1) Dionysius of Halicarnassus, *Comp.* 2, 1–4 (+ summary in *Dem.* 48, 1) [c. 30–10 BC]
- 2) Heliodorus, *Schol. Dion. T.* 356.7–357.26 [8th–9th cent. AD]
- 3) Heliodorus, *Schol. Dion. T.* 515.19–521.3 [8th–9th cent. AD]

(B) *Doxographical statements* (in Greek school papyri [4, 5], in Greek grammars [6])

- 4) *P. Heid. Siegmann* 198 (Wouters [1979] n. 12, ll. 2–3) [3rd cent. AD]
- 5) *P. Amh.* 2.21 (Wouters [1979] n. 14, ll. 13–17) [4th cent. AD]
- 6) Dionysius Thrax, *Technê Grammatikê* (G.G. I 1, 23.1–3) [2nd–1st cent. BC (?)]

This is not the place to go into a detailed study of the doxographical texts (most of them are in Latin, but they cover the macro-evolution of the parts-of-speech system in Antiquity). Here we want to stress their important (meta-)historical function, *viz.* as retrospective statements on the emergence and development of grammatical doctrines (in the head of the doxographical writer), and their methodological interest. All doxographical texts deal with “division” into parts of speech, or with the rejection of a particular division proposed by some ancient scholars; they all reflect a strategy of *μερισμός*, division (of the sentence / of language structure) into basic components. Differences notwithstanding—*e.g.*, a more or less detailed discussion of the respective divisions into word classes; the amount of argumentation found concerning

53 For a full overview and study of Greek and Latin doxographical texts, see Swiggers – Wouters [2010], [2011a].

positions adopted—these texts concord in providing us with a condensed account of doctrines concerning the division into parts of speech, and concerning issues of debate among grammarians. They are thus an important testimony, and constitute some kind of ‘encapsulated memory’ of the complex, and fascinating, history of a cornerstone of ancient (and present-day) grammatical instruction and education (cf. Kramer [2005]): the system of parts of speech.⁵⁴

54 For brief overviews of the history of the word-class system, of the concepts of ‘word’ and ‘sentence’, and of the two basic components of the sentence, viz. noun and verb, see Swiggers – Wouters [2009a], [2009b], [2014a], [2014b], [2014c].

1 Introduction

The study of language in classical antiquity—the ‘technical’ part of the extended range of knowledge and scholarship embodied by the expression *γραμματική* (sc. *τέχνη*, grammar)¹—can be divided into two major fields of investigation: the doctrine describing the constitutive elements of the language

* English translation by Rachel Barritt Costa. I am very grateful to Albio C. Cassio for helpful comments on a draft of this chapter.

1 Pagani [2011] 17–21, with bibliography.

(letter, syllable, word, part of speech), and that of language correctness,² designated by the term ἑλληνισμός³ (and the corresponding term *Latinitas* in the Roman world). Language correctness dealt partly with determining the correctness of individual words, from the point of view of spelling, prosody (vowel quantity, presence or absence of aspiration, position and nature of the accents),⁴ phonetics, inflection, dialect differences, derivation and meaning (change in word meaning over time and cases of paronymy),⁵ and partly also with word combinations. Therefore it intrinsically concerned the establishment of rules.

In the most ancient phases, this topic became interlinked with philosophical reflections, such as the debate on the ‘correctness’ of names (ὀρθοέπεια) and the related problem of whether language exists by nature (φύσει) or by convention (θέσει or νόμῳ); it also overlapped with concepts belonging to the field of rhetoric, for instance the doctrine of virtues and vices of style (ἀρεταί and κακία τῆς λέξεως). The two major defects of language were identified as residing in βαρβαρισμός (barbarism) and σολοικισμός (solecism). Barbarism was defined as a mistake involving a single word, while solecism was a mistake in word combination and thus occurred on the syntactic level,⁶ although originally the two terms were apparently used without this distinction.⁷ Such defects were the object of specific treatises (as in the case of Περὶ σολοικισμοῦ καὶ βαρβαρισμοῦ by Ps.-Herodian) and were often cited in the definitions of *Hellenismos* as mistakes not to be made in correct modes of speech. Consider the two examples given below:⁸

ἑλληνισμός ἐστι τὸ καθ’ Ἑλληνας διαλέγεσθαι, τουτέστι τὸ ἀσολοικίστως καὶ ἀβαρβαριστῶς διαλέγεσθαι (*Etym. Magn.* 331.37–39).

Hellenismos consists in speaking in the manner of the Greeks, namely without committing solecisms and barbarisms.

2 Ax [1982] 97; Ax [1991] 277–278; Matthaios [1999], 15–16; see also Barwick [1922] 227ff.; Siebenborn [1976] 32ff. Cf. in this volume (Part 3.2) Valente and Swiggers-Wouters.

3 See Casevitz [1991]; Irmischer [1993] for formation and meanings of the term.

4 On these two aspects see the more detailed treatments by Valente and Probert, respectively, in this volume.

5 Blank [1998] 204.

6 See e.g. Quint. *Inst.* 1.5.6; 1.5.16; Apol. *Dysc. Synt.* 3.8; Sext. *Emp. Math.* 1.210; D. L. 7.59.7–9 (who quotes Stoic positions). Further examples in Blank [1998] 232–234 and Hyman [2003]. See also Lallot [1997] II 158–159, 161.

7 See e.g. Arist. *Soph. el.* 3.165b 20–21; Blank [1998] 232–233.

8 Blank [1998] 206.

ἔστι δὲ ἑλληνισμὸς λέξεις ὑγιῆς καὶ ἀδιάστροφος λόγου μερῶν πλοκὴ κατάλληλος κατὰ τὴν παρ' ἑκάστοις ὑγιῆ καὶ γνησίαν διάλεκτον· λέξεις μὲν οὖν ὑγιῆς κατὰ τὴν πρὸς τὸν βαρβαρισμὸν ἀντίθεσιν, λόγου δὲ μερῶν πλοκὴ κατὰ τὴν πρὸς τὸν σολοικισμὸν (*Sch. Lond. Dion. T. in GG I/111 446.12–15*).

Hellenismos is the correct mode of speaking and proper construction of the parts of speech, appropriate according to the true and correct language of each person: thus speech is said to be correct in antithesis to barbarism, while correct construction of the parts of speech stands in antithesis to solecism.

In certain cases, the incorrect form or construction could be justified, for example if this was due to the typical characteristics of a particular dialect or author. Such cases were described as *σχήματα* (*schemata*), which was another subject frequently addressed in monographic treatises like the works *Περὶ σχημάτων* by Alexander Numenius, Lesbonax and Ps.-Herodian.

The criteria determining whether a construction should be accepted as correct Greek or rejected as a barbarism or solecism vary slightly among the different sources. There was probably a lively debate about these criteria, enquiring into what their merits were, their proper order of application and their mutual interaction.⁹ In general, the main features were held to consist of analogy—a procedure of comparison, with varying degrees of refinement, between an uncertain language form and one ‘similar’ to the latter, used as a reference model—as well as usage, literary tradition, and also etymology and dialect considerations.¹⁰

In a diachronic perspective, delineating the concept of ‘language correctness’ in classical antiquity means considering the question of language study in general, starting from the intersections with philosophy—above all Aristotle and his school and the Stoics—and with philological-erudite research in the Hellenistic period, and continuing up to the first theorizations from the 1st c. BC onwards, and thence to the great systematic codifications of Apollonius Dyscolus and Aelius Herodian (2nd c. AD) and beyond. From at least the 1st c. BC onwards, the Greek model was transplanted into the Roman world, where the concept of *Latinitas*, modelled on *Hellenismos*, was applied to the Latin language in a wealth of specialist treatises.¹¹

9 Desbordes [1991] 41; Blank [1998] 204.

10 On the criteria of *Hellenismos*, see below § 6. Cf. Barwick [1922] 213ff.; Fehling [1956] 250–254; Siebenborn [1976] 56–158.

11 For an overview see Desbordes [1991]; Baratin [1994]; Uhl [1998] 21–40.

Modern scholarship has assumed contrasting positions on several aspects of this topic, mainly due to the difficulty of interpreting the extant data, which, particularly for the most ancient phase, have often been preserved in fragmentary and indirect form, sometimes by sources that present the issues with a polemical thrust (the most evident case is the work *Against the mathematicians* by Sextus Empiricus, 2nd–3rd c.). Thus the contentious arguments may have distorted some aspects of the doctrines discussed. Another well-known example is the debate on the (presumed?) controversy between those who defended analogy as a rule for determination of language correctness (analogists), and the supporters of usage—anomalous and not governable by rules—as the one and only criterion of *Hellenismos* (anomalists). This controversy is explicitly testified in Varro's *De lingua Latina* (books 8–10), but assessment of its true impact in ancient language studies varies widely (see below § 6.1.2).

2 The Concept of Language Correctness in Philosophy and Rhetoric

In the Greek world, the roots of general attention to language phenomena and, more specifically, to language correctness issues can be traced back to the philosophical tradition.¹² Documents from as early as the Presocratics reveal debate on the ‘correctness’ of names (ὀρθοέπεια, ὀρθότης ὀνομάτων), *i.e.* on the correspondence—or lack of correspondence—between the form of a word and the reality it designates, and on the question of whether language exists by nature (φύσει) or by convention (θέσει or νόμῳ). More specifically, the φύσις / θέσις antithesis acts on two levels of the debate: 1) in the doctrine on the origin of language, and 2) in the doctrine on the attribution of names to things in present-day language.¹³ In point 1, the idea (above all Epicurean) that language acquisition was originally a natural process and had only later been regulated by man (φύσει, “by nature”) stood in opposition to the theory that language had been instituted by a single individual or a group—the ὀνοματουργός (“he who creates names”) or οἱ πρῶτοι τὰ ὀνόματα τιθέμενοι (“those who were the first to establish the names”) in Plato's *Cratylus*¹⁴—(θέσει, “by convention”). In point 2, debate focused on whether there existed a causal relation of correspondence

12 For this phase of ancient grammar, see Schmitter [1991a] 57–272; Hennigfeld [1994] 4–124; Blank [2000] 400–404; Schmitter [2000], with additional bibliography; Law [2003] 13–51; de Jonge-van Ophuijsen [2010]. A documented overview, albeit dated, is in Gudeman [1912a] 1781–1791.

13 See Dahlmann [1928] 8; Fehling [1965] 218–229; Siebenborn [1976] 22–24; Coseriu [1996].

14 Pl. *Cr.* 389a–401b.

between the denomination and the object denominated (φύσει), or whether the link was purely arbitrary and casual (θέσει).

The problem of the relation between language and reality can already be perceived, albeit not completely formalized (at least judging from the fragmentary documentation) in Heraclitus of Ephesus (6th–5th c.),¹⁵ Parmenides of Elea (6th–5th c.),¹⁶ Anaxagoras of Clazomenae (6th–5th c.)¹⁷ and Empedocles of Acragas (5th c.).¹⁸ A more extensive discussion can be recognized in the fragments of Democritus of Abdera (5th–4th c.), who is said to have composed a work on orthoepia, possibly restricted to correct language use in Homer.¹⁹ It seems likely that in Democritus' conception, language was not preordained by nature but dominated by chance, as evinced by numerous observations²⁰ and, above all, by the fragment on the discrepancy between ὀνόματα (“names”) and πράγματα (“facts”).²¹

Interest in the nature of language became explicit and intense with the cultural movement known as Sophistic,²² between the 5th and 4th c. BC. In this field a position decidedly in favor of the conventionalism of language, both diachronically and synchronically, was adopted by Protagoras of Abdera (5th c.), who not only appears in the eponymic Platonic dialogue (*Prt.* 322a) as a supporter of the conception that language is an invention of man, but is also known to have identified cases of discrepancy between the grammatical category to which a word formally belonged, and the reality of the object or situation designated by the word.²³

Another significant exponent among the Sophists is Prodicus of Ceus (5th–4th c.), universally known as the inventor of synonymics. He undertook the task of fine-tuning a method for differentiation of synonyms (test. 84 A 16 and 17 D.-K.), an art widespread among the Sophists. This presumably consisted in comparison and contrast among (near-)synonyms and in illustrating the

23 Cf. Fehling [1965] 212–217. Examples include test. 80 A 28 D.-K. (cf. C 3, a parodic imitation of Protagoras' doctrine composed by Aristophanes *Nub.* 662ff.: Pfeiffer [1968] 38; Siebenborn [1976] 15) and A 29 D.-K.

specific meanings of each of the different usages, in order to reach the “correct use of words” (ὀνομάτων ὀρθότης, test. 84 A 16 D.-K.).²⁴ However, whether the theoretical background underlying this practice was an aspiration towards an—artificial—construction of a better language (on the presupposition of the conventional nature of language) or an awareness that the fine nuances differentiating presumed synonyms reflected differences in the situations described by the individual terms (conception of language ‘by nature’) remains unclear.²⁵

The concept of ὀρθότης ὀνομάτων in the sense of the correctness of the relation between word form and the reality designated by a given word lies at the basis of Plato’s (428/427–348/347) dialogue *Cratylus*,²⁶ where the two theories ‘by nature’ and ‘by convention’ espoused by the two speakers Cratylus and Hermogenes are both shown to be unsatisfactory as they are incapable of distinguishing ‘true’ from ‘false’ denominations, *i.e.* those that are ‘adequate’ vs. ‘inadequate’ in portraying reality. Plato concludes that knowledge of the true nature of things cannot be acquired through observation of their names, but rather through observation of the things themselves. Examination of the possible correspondence between the form of a name and the reality denominated is performed mainly in a lengthy etymological section (397a–437d), where words are traced back to presumed original forms, which are themselves then decomposed into their minimal elements (στοιχεῖα).

Reflections on language correctness also influenced studies on rhetoric, the field with the earliest known annotation on ‘ἐλλήνιζειν’ in the technical sense, inquiring into what it is and how it may be achieved. The annotation is owed to Aristotle (384–322), who defined good Greek as “a principle of style” (ἀρχὴ τῆς λέξεως) and held it to depend on compliance with five rules: 1) correct utilization of connecting particles; 2) use of specific rather than generic terms; 3) rejection of ambiguous terms; d) proper distinction between the genders of words (with a reference to the precedent represented in this field by Protagoras); 5) concord in number (*Rh.* 3.1407a 19ff.).²⁷ Of these, only points 1, 4 and 5 involve the grammatical level,²⁸ while the other two are more closely concerned with σαφήνεια (“clarity”) of style. On the specific issue of language correctness, ἐλλήνιζειν was discussed by Aristotle in the treatise *On Sophistical*

26 The bibliography is vast. Some recent overviews are in Baxter [1992]; Schmitter [2000] 360–363; Riley [2005]; Aronadio [2011].

27 See Siebenborn [1976] 24–25; Schenkeveld [1994] 281; Blank [1998] 204; Ax [2006a] 229.

28 These issues were to be addressed, later, in works like Ps.-Herodian’s *De soloecismo et barbarismo*.

refutations, at the end of an extended investigation into cases of solecism which mainly involved lack of concord. Here the phenomenon of solecism was explained as “barbarism of expression” (τῆ λέξει βαρβαρίζειν, *Soph. el.* 165b 20–21) and was presented as the opposite of ἑλληνίζειν (*Soph. el.* 182a 14).

In contrast, ἑλληνισμός was maintained carefully separate from σαφήνεια by Theophrastus of Eresus (371–287), to whom we owe a proper rhetorical theory of *virtutes dicendi*:²⁹ according to the testimony of Cicero, Theophrastus argued that style should be characterized by 1) language purity, 2) clarity and simplicity, 3) appropriateness, 4) ornamentation.³⁰ The first characteristic of good style, expressed by Cicero as “*purus . . . et Latinus*”, most likely corresponded to the concept of ἑλληνισμός in the Greek original (*fr.* 684 Fortenbaugh).³¹

The intersections between rhetoric and philosophy in relation to the question of language correctness continued with the Stoics, who took up again and adapted the ideas of Theophrastus and, more generally, of the Peripatus.³² In their elaborate system, the area of knowledge reserved to dialectics and rhetoric included the formal aspects of language, studied in relation to grammatical concepts such as phonetics or the doctrine of the parts of speech, but also covering reflection on the ἀρεταί and the κακίαι λόγου (“virtues and vices of speech”).

We know from Diogenes Laertius (7.59) that the doctrine of Diogenes of Babylon (ca. 230–150) set out five virtues of speech (brevity being added to the four of Theophrastus), the first of which was *Hellenismos*, and two vices, barbarism and solecism, which had by then become fixed in the canonical distinction between the morphological-phonetic level for barbarisms, and the syntactic level for solecisms. Diogenes Laertius testifies to precise definitions applying to each of these concepts:

ἀρεταί δὲ λόγου εἰσὶ πέντε, ἑλληνισμός, σαφήνεια, συντομία, πρέπον, κατασκευή. ἑλληνισμός μὲν οὖν ἐστὶ φράσις ἀδιὰπτωτος ἐν τῇ τεχνικῇ καὶ μὴ εἰκαίᾳ συνηθείᾳ. [. . .] ὁ δὲ βαρβαρισμός ἐκ τῶν κακιῶν λέξις ἐστὶ παρὰ τὸ ἔθος τῶν εὐδοκίμουτων Ἑλλήνων, σολοικισμός δὲ ἐστὶ λόγος ἀκαταλλήλως συντεταγμένος. (Diogenes of Babylon *ap. D.L.* 7.59 = *SVF* 3.24).

29 See Stroux [1912]; Siebenborn [1976] 24; Schmitt [1982] 462; Innes [1985] 256; Blank [1998] 208.

30 See Nünlist in this volume.

31 Siebenborn [1976] 24. See also Stroux [1912] 9ff.

32 The canonical reference work for the Stoics' linguistic studies is Schmidt [1839]. See also Steinthal [1890–1891²] I 271ff.; Pohlenz [1939] and, more recently, Frede [1978]; Sluiter [2000b], with bibliography. On Peripatetic influences, see Ax [1993].

The virtues of speech are five in number: *Hellenismos*, clarity, brevity, appropriateness, ornamentation. And *Hellenismos* is an expression free from mistakes, according to expert and non ordinary usage; [...] while among the defects, barbarism is an expression contrary to the custom of Greeks of good repute, and solecism is speech put together incongruously without proper agreement.

Thus in the earliest known definition of *Hellenismos* attention focused on a “correct manner of expressing oneself”, correctness being assessed by linguistic usage (συνήθεια): not, however, mere ordinary correctness, but “expert” (τεχνική) usage, that of well-educated and socially esteemed Greeks, as can be inferred from the appraisal of barbarism.³³

The tool of etymology, already employed by Plato to reconstruct the original meaning of words, appears to have enjoyed great acclaim in Stoic philosophy.³⁴ The actual name of this procedure is not attested prior to Chrysippus of Soli (281/277–208/204), for whom writings entitled Ἐτυμολογικά (*svf* 2.16.38) are known. The Stoics were convinced that words incorporated within their form a descriptive meaning of the reality they indicated: knowledge of this reality could be acquired by reducing every name to its primitive sounds (πρῶται φωναί). Numerous Stoic etymologies have come down to us, clearly within the frame of philosophical rather than linguistic reflection *stricto sensu*, and revealing, like most ancient etymologies, a somewhat unbridled inventiveness in the phonetic modifications required for the transition from a word in its presumed original state to its known form.³⁵

We also apparently owe to the Stoics the concept of ‘anomaly’, which would play a major role in the subsequent investigation into language correctness (see below § 6.1.2). Thus Chrysippus is said to have devoted a specific work to ‘anomaly’,³⁶ although the meaning attributed to this term was not identical with later practice: for the philosopher, as can be inferred from Varro (*Ling.* 9.1), it probably indicated the discrepancy between the form and meaning of

33 Siebenborn [1976] 25–27; Dalimier [1991] 21; Schenkeveld [1994] 281–282; Blank [1998] 204, 208; Vassilaki [2007] 1124.

34 See Sluiter [1990] 12–13, 18–21; Allen [2005].

35 Cf. *svf* 2.884, 2.886, 2.895 for Chrysippus’ celebrated discussion on the meaning of ἔγῶ (“I”).

36 Entitled Περὶ ἀνωμαλίας *iv libri* (“Four books on anomaly”) according to Varro (*Ling.* 9.1); Περὶ τῆς κατὰ τὰς λέξεις ἀνωμαλίας πρὸς Δίωνα δ’ (“Four books on anomaly in expressions, addressed to Dion”) according to Diogenes Laertius (7.192).

words, the incongruence between signifier and signified highlighted earlier by Protagoras.³⁷

3 The Concept of Language Correctness in Hellenistic Scholarship

From a certain point onwards, in the Hellenistic period, grammatical reflection associated with the philological-erudite tradition developed alongside philosophically oriented language studies, resulting in fertile interaction among these branches of study. According to Sextus Empiricus (*Math.* 1.44), grammar in its fullest meaning had been worked out by Aristophanes of Byzantium (ca. 265/57-190-80), Aristarchus of Samothrace (ca. 215-144) and Crates of Mallus (a probably slightly younger contemporary of Aristarchus), the reference figures of early Hellenistic scholarship.³⁸ Assessment of the linguistic interests of the ancient philologists is a debated issue in modern research. Their primary occupation was emendation, exegesis and study of literary texts, and their attention to grammatical questions arose precisely from this activity, in which grammar effectively constituted a practical application. This contiguity with philology has at times led critics to downplay the linguistic interests of these figures, but it appears reasonable to assume that rather than being conceived as separate and contrasting, the two spheres of study enjoyed a close and fruitful mutual relation.³⁹

3.1 *Aristophanes of Byzantium*

The surviving fragments of the work of Aristophanes of Byzantium⁴⁰ suggest that he was concerned with some aspects of language correctness.⁴¹ Firstly, he perceived the existence of recurrent patterns in noun and verb inflection, which he associated with the fundamental principle of regularity known as ‘analogy’, later also extensively employed by Aristarchus. That Aristophanes was aware of regularity in declension can be inferred from the explanation he proposed for the origin of the heteroclitic dative γερώντοισι (*fr.* 25 Slater), which

37 Lersch [1838-1841] I 51; Siebenborn [1976] 98-100; Frede [1978] 73ff.; Ramelli-Lucchetta [2004] 190ff.

38 See Montana in this volume.

39 See Pagani [2011] for a broader discussion of the problem and the related bibliography.

40 Gathered together in Nauck [1848a] and, more recently, in Slater [1986].

41 See Nauck [1848a] 264-271; Steinthal [1890-1891²] II 73-77, 151 n. (cf. II 181 n.); Pfeiffer [1968] 202-203; Callanan [1987]; Ax [1990]; Schenkeveld [1990] 290-298; Ax [1991] 277-282.

reveals his conviction that nominatives of the same type are declined in the same manner: he maintained that the Aeolians mistook the genitive γέρωντος (from γέρων, “old”) for an -ο declension nominative and, as a result, that they constructed the wrong dative plural γερόντοις.⁴² He also had knowledge of accent shift in declension, as documented in the fragment conserved by *sch. Hdn. Il.* 15.606b (p. 187 Sl.),⁴³ which discusses the accent in the dative plural τάρφρῃσιν in relation to the inflectional pattern to which the word belongs: if the dative comes from the noun τάρφος (“woodland”), the stress is on the antepenultimate syllable (τάρφρῃσιν), the parallel form being βέλος (“javelin”), while if it belongs to the declension of the adjective ταρφύς (“dense”), it is accented on the penultimate syllable, as it happens in the analogical term of comparison, the adjective δξύς (“sharp”) (see below).⁴⁴ More generally, the view that Aristophanes formulated descriptive rules on the prosody of groups of words which conformed to specific prerequisites, such as comparatives ending in -ων (*fr.* 347 Sl.), remains on the level of hypothesis.⁴⁵ As regards verb inflection, we know that Aristophanes must have addressed the issue of use of the dual in Homer, because in numerous cases he established the text with a dual rather than the plural if the passage referred to two persons or objects (*sch. Did. Il.* 6.121 [p. 178 Sl.]; 8.290c [p. 179 Sl.]; etc.).⁴⁶ He also examined irregular verb forms, as emerges from two notes traceable to his collection of *Lexeis* in which examples displaying the same phenomenon are arranged in groups, suggesting a theoretical framework for verb inflection. Thus *fr.* 19 Sl. shows that Aristophanes recorded the use of the -σαν ending for some imperfects, explaining it as a Chalcidian element, and *fr.* 28 Sl. testifies that the imperative forms ἀπόστα and κατάβα were mentioned alongside the respective ‘regular’ forms ἀπόστηθι and κατὰβηθι.⁴⁷

Additionally, he is recognized as using the criterion of analogy,⁴⁸ although it is not possible to support the hypothesis, devoid of documentary source,

42 Callanan [1987] 57–61.

43 This passage involves a textual problem, as Erbse [1960] 401–402 proposed the conjecture Ἀρίσταρχος instead of the transmitted Ἀριστοφάνης. However, the reading of the manuscripts is retained by Nauck [1848a], Slater [1986] and Callanan [1987].

44 Callanan [1987] 26–31.

45 Callanan [1987] 31–32. Callanan’s faith in the possibility of attributing to Aristophanes the formulation of a rule for certain groups of words should be attenuated, both on the basis of *fr.* 347—where statement of the rule clearly goes back to Aelius Herodian, who constitutes the source—and also of *fr.* 346 Sl., where the formulation is even vaguer.

46 Callanan [1987] 53–56 (56 n. 22 for the complete list of passages).

47 Callanan [1987] 62–64.

48 Steintal [1890–1891²] II 73–77; Pfeiffer [1968] 202–203; Callanan [1987] 107–122.

that he devoted a specific work to these topics, entitled *Περὶ ἀναλογίας* (“On analogy”).⁴⁹ The above cited *sch.* Hdn. *Il.* 15.606b shows the establishment of fairly detailed proportional relations designed to determine the correct prosody of one of the elements involved (τάρφεισιν : τάρφος = βέλεισιν : βέλος and ταρφέεισιν : ταρφύς = δξέεισιν : δξύς).⁵⁰ Furthermore, the analogical method was not applied indiscriminately to any word: only words respecting certain conditions could be correctly invoked in an analogical relation. According to a disputed testimony of Charisius (149.26ff. Barwick), closely paralleled in the so-called *Donatiani Fragmentum* (*GL VI* 276.5ff.), Aristophanes listed similarity in gender, case, ending, number of syllables and accent (*fr.* 375 Sl.) as constituting the conditions of analogy.⁵¹ In the view of Varro, one particular case addressed by Aristophanes was that of ‘perfect’ analogies, where the words being compared also had related meanings (*fr.* 373 Sl.). On the other hand, the tendency to invoke the semantic aspect in analogical relations seems to have been common among the earliest Alexandrians.⁵² Finally, there is evidence that he used analogy for a prescriptive intervention concerning the language of his day: the relevant passage is Varro *Ling.* 9.12 (*fr.* 374 Sl.), which states that Aristophanes sometimes tried to introduce linguistic innovations (*i.e.* improvements) based on analogy, against the old usage. Despite some textual difficulties, the general meaning of the fragment is accepted as certain.⁵³ This not only calls into question the image of Aristophanes as a neutral, descriptive and never prescriptive,⁵⁴ observer of language phenomena, but it also presupposes an awareness of the diachronic evolution of language, as further suggested by the section of the *Lexeis* devoted to “Words suspected of not having been said by the ancients” (*Περὶ τῶν ὑποπτευομένων μὴ εἰρήσθαι τοῖς παλαιοῖς, fr.* 1–36 Sl.).⁵⁵

49 The hypothesis goes back to Nauck [1848a] 264–271. For objections to this, see Steinthal [1890–1891²] II 151 n. (cf. II 181 n.); Pfeiffer [1968] 202–203; Callanan [1987] 107; Ax [1990] 12; Ax [1991] 282.

50 See above, n. 43 for the possible textual problems raised by the passage.

51 On the problems raised by scholars concerning this evidence, see below § 6.1.1.

52 Siebenborn [1976] 81–83.

53 The passage, not mentioned at all by Callanan [1987], was pointed out by Ax [1990]: “[...] *artifices egregii non reprehendundi, quod consuetudinem... superiorum non sunt secuti, Aristophanes improbandus, qui potius in quibusdam veritatem [cod. Basiliensis et editio princeps pro ‘veteritatem’] quam consuetudinem secutus?*”. See esp. pp. 7–11 for discussion of the textual difficulties (presenting a parallel with Cic. *Orat.* 155–162) and cf. also Ax [1991] 277–282.

54 Thus Callanan [1987] 103–106 and *passim*.

55 Pfeiffer [1968] 197–200; cf. Ax [1990] 14–15; *contra* Callanan [1987] 75–82.

Another tool utilized—albeit somewhat rarely—by Aristophanes to determine the language correctness of a term is etymology,⁵⁶ to confirm a form or a spelling in comparison with other competing variants, but also to explain rare or obsolete expressions, mainly Homeric.⁵⁷ However, he is unlikely to have formulated rules of etymological derivation.⁵⁸

3.2 *Aristarchus of Samothrace*

The most striking divergences among modern scholars' assessment of the contribution of the earliest philologists to grammatical studies (see above § 3) concern Aristarchus of Samothrace. This is due mainly to difficulty in handling the extant material, which not only is relatively abundant but also lacks, to date, an overall edition of the fragments.⁵⁹ Nevertheless, based on the present state of knowledge, it seems undeniable that although Aristarchus did not have a fully-fledged doctrine of inflection and did not devise a genuine theory of *κανόνες* ("rules"), he did know and utilize the principle of analogy to establish the correct form of a term, in relation to orthography, inflection or prosody.⁶⁰ According to the sources, he added further criteria to those established by Aristophanes of Byzantium for application of the analogical method: prohibition on setting simple words in a relation of analogy with compounds (Char. 149.26ff. B.) and, as appears from three passages of Varro (*Ling.* 8.68, 9.43, 9.91), identity of ending not only in the nominative but also in the vocative.⁶¹

The restrictions proposed by Siebenborn⁶² seem unfounded, both as regards Aristarchus' manner of utilizing analogy (mere comparison of one term with

56 Callanan [1987] 97–102. Cf. Nauck [1848a] 268–269; Pfeiffer [1968] 201 and n. 4, 260; Slater [1986] 19.

57 See Callanan [1987] 97–102 for the examples.

58 In contrast to Reitzenstein's proposal [1897] 184. The passage from Varro (*fr.* 372 Sl.) more likely refers to inflection rather than derivation of one word from another. Slater [1986] 138; Callanan [1987] 97–98; cf. Schenkeveld [1990] 297–298 and Blank [2008] 54ff. for the problem of the meaning of *declinatio* in Varro.

59 On partial collections, an important breakthrough has been achieved by Matthaios [1999], with collection and study of all the fragments concerning the doctrine of parts of speech.

60 Erbse [1980]; Ax [1982]; Ax [1991]; Schenkeveld [1994] 283–287; Matthaios [1999] 28–32. Cf. already Ribbach [1883]. Decidedly more reductive positions are found in Steinthal [1890–1891²] II 112–113; Siebenborn [1976] 30–31, 68–78; Frede [1977] 76. On prosody and orthography, see in this volume (Part 3.2) respectively Probert and Valente.

61 Siebenborn [1976] 81; Blank [1998] xxxvii.

62 Siebenborn [1976] 70ff.

another rather than establishing detailed analogical proportions)⁶³ and the function attributed to analogy (heuristic method adopted mainly in choice of the correct prosody of a word rather than in examining inflection). On the first point, we at least have a few examples documenting Aristarchus' recourse to detailed proportional relations: *e.g. fr.* 92A Matthaios, where the accent pattern of *πείρων* is justified by a parallel with *κείρων*: “as ἔκειρε [he cut] *κείρων* [cutting], so also ἔπειρε [he crossed] *πείρων* [crossing]”). However, it has been rightly pointed out⁶⁴ that the formula ‘as *x*, so also *y*’ should not necessarily indicate a comparison between words linked by a formal relation of analogy: it could also suggest that word *x* presents a characteristic which is *the same as* that of word *y*. Thus some of Aristarchus' presumed two-member analogies could simply be mere examples, free from the formal constraints of analogy. This would explain the apparent violation of the criterion of equal number of syllables in cases like *φωριαμῶν-κιβωτῶν* (*sch. Hdn. Il.* 24.228a) or *φυλακούς-φρουρούς* (*sch. Hdn. Il.* 24.566d¹).⁶⁵ On the second point, Siebenborn's claim that Aristarchus used analogy chiefly, if not solely, to establish the prosody of a word is attenuated if a twofold bias is corrected. Firstly, Siebenborn makes exclusive use of scholiastic material dating back to Aelius Herodian, whereas the evidence from other scholars, such as Aristonicus and Didymus, suggests a different perspective, documenting various instances of analogy used to determine a declined form,⁶⁶ as compared to Siebenborn's single example⁶⁷ (*sch. Hdn. Il.* 5.299b). Secondly, the fact of considering prosody and inflectional characteristics as two separate aspects seems somewhat forced: they may indeed interact, as in *fr.* 52 Matth., where determination of the accent pattern of the form *ψευδέσει* is argued to depend on whether it belongs to the declension of the adjective *ψευδής* (“mendacious”) or the noun *ψεύδος* (“a lie”). That Aristarchus was aware of inflectional considerations can also be inferred from his observations on the nature of the adverb, which is characterized by absence of inflectional forms, application without distinction either to plurals or singulars, and absence of gender (*fr.* 136 Matth.).⁶⁸ Some features of Homer's language were explained by Aristarchus as *σχήματα*, that is, peculiarities which diverged from ordinary

63 Thus already Steinthal [1890–1891²] II 103.

64 Callanan [1987] 116; Matthaios [1999] 30.

65 Siebenborn [1976] 77 saw in these “eine Lockerung der Rigorosität”.

66 *E.g. fr.* 48, 51 Matth.; *sch. Did. Il.* 18.100d¹. For further examples, see Erbse [1980] 238 n. 4.

67 Siebenborn [1976] 71 and n. 2.

68 Ax [1982] 107; Matthaios [1999] 524–525.

forms and widespread usage, a kind of ‘poetic licence’:⁶⁹ for instance, the use of a passive instead of an active verb form, a nominative in place of a genitive for a noun, a simple case instead of a prepositional construction, an adjective instead of an adverb and so on.⁷⁰

Homer’s language was also invoked as a standard of correctness to be applied to Greek in general,⁷¹ because in Homer “everything concerning *Hellenismos* is perfect” (*fr.* 125 Matth.).⁷² Accordingly, in addition to considerations of syntactic tolerability and inflectional analogy, Aristarchus rejected the compound forms of the third person plural reflexive pronoun, which he regarded as incorrect, in favor of the periphrastic forms.⁷³ Some centuries later, Sextus Empiricus (*Math.* 1.202ff.) would reflect ironically on such a criterion, in open opposition to the position adopted by Aristarchus’ pupil, Ptolemy Pindarion (see below § 4), and would ridicule the curiosities that might be said if Homer’s language were taken as a standard of *Hellenismos*.⁷⁴

In Aristarchus’ doctrine, the criterion of analogy apparently interacted not only with Homeric *auctoritas* but also with contemporary language usage, as emerges from the evidence of Varro (*Ling.* 9.1), who held that Aristarchus exercised the rules of similarity in derivation “within the limits allowed by usage” (*quoad patiatur consuetudo*).⁷⁵ This assessment may include some Aristarchean interventions on the Homeric text that were later judged—by Aelius Herodian or other grammarians—as “contrary to analogy” (*παράλογως, παρὰ τὴν ἀναλογίαν*).⁷⁶

69 According to the definition of *Sch. Lond.* D.T. in *GG* 1/III 456.23–26, *σχήματα* were “errors committed deliberately by an author as an artistic flourish or for the delight of using an uncommon form”.

70 Cf. the collection of *Fragmenta schematologiae Aristarcheae* by Friedländer [1853] 1–35 (who wrote “... explicare conabor, quibus finibus circumscriptam esse poeticam licentiam quibusque proprietatibus Homeri sermonem a stabilito recentiorum usu differre statuerit grammaticus nobilissimus”); Erbse [1980] 242–243, with examples; Ax [1991] 284; Blank [1998] 230–231; Matthaios [1999] 382ff.

71 On literary use as a criterion of *Hellenismos*, see below § 6.3. In particular, on use of Homer as a linguistic model, see Pontani [2011c].

72 Siebenborn [1976] 31; Ax [1982] 105; Blank [1998] 228.

73 *Fr.* 125 Matthaios. For a discussion on this point, cf. Wackernagel [1876 = 1979] 55; Siebenborn [1976] 30–31; Ax [1982] 105–106; Lallot [1997] 11 146; Matthaios [1999] 479–480; Pagani [2010a] 117–122. The importance of this passage is minimized by Schenkeveld [1994] 286.

74 Siebenborn [1976] 97; Montanari [1995b] 45–49; Blank [1998] 225–232; Boatti [2000] 87–95.

75 Cf. Siebenborn [1976] 30–31; Ax [1982] 109.

76 Examples in Erbse [1980] 241. Cf. also Ax [1991] 287.

Finally, Aristarchus' utilization of etymology for determination of the correct spelling and prosody of a term is recognized, as in the case of *θίς* ("beach") and *ῥίς* ("nose"), which were to be written—in his opinion—with the diphthong *-ει-* and not with *-ι-* since they derived respectively from *θείνεσθαι* ("to strike", "to beat") or *θέειν* ("to run") and from *ῥεῖν* ("to flow") (Hdn. *Orth.* in *GG III/II* 431.1–11 = *EGud.* 30.48–57 Sturz).⁷⁷

Thus in his observations on language Aristarchus did not merely pursue descriptive objectives but also sought to establish rules.⁷⁸ On his involvement and position in the debate between anomalists and analogists, see below § 6.1.2.

3.3 *Crates of Mallus*

Less detailed information is available on Crates of Mallus, traditionally presented as a 'rival' of Aristarchus as regards the method of textual criticism and exegesis, and the attitude to language.⁷⁹ Today this contrast is generally toned down,⁸⁰ although undeniable differences in approach are detectable.

With regard to language issues, the figure of Crates is involved, together with Aristarchus, in the opaque dispute between anomaly and analogy, on which see below § 6.1.2. Besides the Varronian passage that depicts the controversy (*Ling.* 9.1: *fr.* 104 Broggiato; cf. Gell. 2.25.1: *fr.* 105 Brogg., which derives from Varro),⁸¹ two further pieces of evidence are available, again from Varro, seeming to set Crates in opposition to the position of Aristarchus. According to the more traditional vision, Crates did not base the determination of *Hellenismos* on the search for presumed inflectional regularities, because he judged inflection to be dominated by exceptions and anomalies that rendered the analogical method inapplicable. Rather, Crates is seen as attributing greater importance to contemporary language usage (which, however, was a concept not alien to the Aristarchean approach: see above § 3.2).⁸² Thus a reconstruction of Crates' theories on language was proposed in the mid twentieth century by H. J. Mette, starting from a very extended concept of 'fragment':⁸³ utilizing far

77 Siebenborn [1976] 30–31; Schenkeveld [1994] 289. Further examples in Ribbach [1883] 8–9 and Siebenborn [1976] 29.

78 Ax [1991] 287–288.

79 On linguistic aspects, cf. *e.g.* Steinthal [1890–1891²] II 121–126.

80 Cf. Broggiato [2001 = 2006] xxxv–xxxvi and Montana in this volume.

81 Fehling [1956] 223ff., 266; Broggiato [2001 = 2006] 267.

82 Cf. Fehling [1956] 268–269; Pinborg [1975] 109–110, 112; Schenkeveld [1994] 286.

83 Mette [1952], esp. 9–11 and 31–45 for *Hellenismos*. Observations on the nature of this work can be found in Broggiato [2001 = 2006] xiii–xiv.

greater parts of Varro and Sextus Empiricus than those definitely ascribable to Crates, Mette credited Crates with formulating the expression παρατήρησις τῆς συνηθείας (“observation of linguistic usage”) and traced the methodological foundation of Crates’ linguistic theories to the empirical medical school.⁸⁴ But the terminological considerations underlying both hypotheses have proven to be far from decisive.⁸⁵

In the two Varronian fragments—besides that which alludes to the ‘dispute’—where Crates and Aristarchus are presented as holding opposite views, it is said, firstly (*fr.* 102 Brogg.), that the Pergamene erudite wondered why the names of the letters of the alphabet, unlike all other nouns, were not declined, in contrast with the predictions of the rules of analogy, to which the Aristarcheans answered that the names of the letters were not subject to declension because of their Phoenician origin (thus they were not Greek).⁸⁶ Furthermore (*fr.* 103 Brogg.) Varro asserts that Aristarchus opposed Crates on the possibility of considering three proper names which, although having identical endings in the nominative, differed in the vocative, as being analogous.⁸⁷ These passages thus appear to reflect a debate on the criteria and limits of application of analogy.⁸⁸ Interpreted in the perspective of the ‘controversy’ mentioned in the third Varronian passage, the argument would appear to support the above-described traditional opinion. But it is worth considering the proposal by D. Blank, who suggests that Varro or his sources may have cited both Crates and Aristarchus as *representatives of analogy* in a typical argument from disagreement, using the divergence between the two great grammarians on the application of analogy to discredit the entire analogical method.⁸⁹

Recourse to etymology is fairly extensive in the Cratetean fragments,⁹⁰ but it aims mainly at solving problems involving interpretation of the Homeric text.⁹¹

84 Mette [1952] 31–48. The parallel between medicine and grammar is studied extensively by Siebenborn [1976] 116–135.

85 Broggiato [2001 = 2006] xxxvii–xxxviii with references to the previous bibliography. Cf. also Siebenborn [1976] 118ff.; Blank [1982] 1–5; Blank [1994] 153–155.

86 Ax [1991] 292; Blank [1998] xxxvi; Broggiato [2001 = 2006] 265–266; Blank [2005] 225–228.

87 Cf. Fehling [1957] 94; Ax [1991] 292 (who speaks of “Vokativthese”); Blank [1998] xxxvii; Broggiato [2001 = 2006] 266; Blank [2005] 228–233.

88 Broggiato [2001 = 2006] xxxv–xxxvi.

89 Blank [1998] xxxiv–xl; Blank [2005], who goes so far as to hypothesize that the opposition between the two saw Crates defending analogy more strenuously than Aristarchus (pp. 227–228, 232, 238).

90 See Broggiato [2001 = 2006] 329, s.v. “etimologia”.

91 Broggiato [2001 = 2006] lxiii, with observations also on the concomitance of etymological explanations with allegorical interpretations (*fr.* 3, 21, 130 Brogg.); Blank [2005] 222.

Moreover, it focuses predominantly on the semantic aspect, although attention to prosody and orthography is not absent.

4 Theoretical Reflections and Treatises on *Hellenismos*

Starting from the period between the 2nd and 1st c. BC, the issue of language correctness became the object of theoretical speculations, partly within the systematization of the branch of knowledge termed *grammatike*, but also supplying material for definitions, abstract and general considerations, or monographic studies. On the first point, two elements employed as criteria of *Hellenismos*, analogy and etymology, are cited as “parts of grammar” in the celebrated definition of Dionysius Thrax⁹² (170–90 approx.), a pupil of Aristarchus⁹³ who at times seems to have applied the analogical method to exegesis of the Homeric text even more stringently than his master.⁹⁴ Moreover Dionysius’ interest in orthographic problems emerges from the grammatical treatise preserved in the *scriptio inferior* of the palimpsest *Lipsiensis gr. 2* (*olim Tischendorfianus* II) and identified by K. Alpers as the commentary by Oros on the *Orthography* of Herodian,⁹⁵ where the name of Dionysius appears in a list of grammarians who dealt with orthography (22^v ll. 18–26). As a general expression, *Hellenismos* appears in the systematic description of the *grammatike* of Asclepiades of Myrlea (2nd–1st c. BC), an erudite of Pergamene orientation whose work *Περὶ γραμματικῆς* was probably utilized by Sextus Empiricus far more extensively than merely in the three points that explicitly cite Asclepiades (*Math.* 1.47–48; 1.72–74; 1.252–253).⁹⁶ Asclepiades devoted the part of the *γραμματικὴ* defined as “technical” to study of “letters, parts of speech, orthography, *Hellenismos* and related aspects”⁹⁷ (*Sext. Emp. Math.* 1.92, 1.252). His mention, alongside *Hellenismos*, of one of the issues actually addressed in *Hellenismos*, namely orthography, shows he awarded it particular importance, and this fits well with the above-mentioned testimony of the *palimps. Lipsiensis gr. 2*, where Asclepiades can be recognized among the grammarians

92 Cf. Swiggers-Wouters in this volume (Part 2).

93 On the disputed issue of attribution of the *Techne grammatike* to Dionysius, see Pagani [2011] 30–37 and the bibliography cited therein.

94 *Frr.* 4–7 Linke.

95 See Ascheri [2005], with bibliography.

96 Cf. Pagani [2007a] 31–34, with bibliography.

97 Siebenborn [1976] 32–33; Schenkeveld [1994] 287–288.

listed as having orthographic interests (the name is in lacuna, but the integration, based on the ethnic designation, is traditionally considered certain).

Another pupil of Aristarchus, Ptolemy Pindarion (2nd c. BC), reformulated the theoretical bases of analogy in response to the criticism that it was pointless frippery necessarily appealing to *συνήθεια* (“linguistic usage”) for examples establishing regularity and rules. Pindarion neutralized this objection by arguing that the usage underlying analogy was not the fickle parlance of the speech community but rather the codified language of the Homeric poems, which was guaranteed by the primacy and antiquity of such works (Sext. Emp. *Math.* 1.202ff.: *fr.* 12 Boatti). Thus Pindarion’s reformulation, far from representing a compromise,⁹⁸ reasserted the validity of analogy by capitalizing on the idea, present in Aristarchus, that Homeric language constituted a reference point for *Hellenismos*. Furthermore, that Pindarion had rigorously analogistic leanings is also indicated not only by other fragments but also by the epithet *ἀναλογητικός* (“analogist”) assigned to him by Apollonius Dyscolus (*Conj.* 241.13 Schneider: *fr.* *14 B.), unless this refers to the homonymous grammarian of Ascalon (see below).⁹⁹

Among Aristarchus’ followers, Dionysius of Sidon (second half of 2nd c. BC) was noted by Varro (*Ling.* 10.10) as having recognized the incredible number of seventy-one conditions of analogy (or forty-seven, if limited to conditions on nouns, but see below § 6.1.1 for the exorbitance of these numbers). The same passage of Varro also cites Parmeniscus (2nd–1st c.), for whom the Homeric scholia conserve fragments on prosodic topics, and Aristocles (second half of 1st c. BC), who possibly composed a work *Περὶ διαλέκτων* (“On dialects”) and is the putative author of a couple of fragments of prosodic nature and a definition of analogy, described by Varro as obscure, albeit without citation (*Ling.* 10.74–75). According to Varro, Parmeniscus established eight conditions of analogy, Aristocles fourteen. Varro criticized Aristocles’ definition of analogy, but also that of Aristeas (1st c. BC?), an erudite for whom a fragment on prosody can be mentioned, and that of Aristodemus (1st c. BC), identifiable with the grammarian and rhetor of Nisa.¹⁰⁰

From the 1st c. BC onwards, evidence has survived of treatises on, or on parts of, *Hellenismos*, such as orthography,¹⁰¹ or on criteria for determining

98 Thus, among others, Lersch [1838–1841] I 75; Steinthal [1890–1891²] II 154; discussion of the problem in Montanari [1995b] and Boatti [2000] 93–95, with further bibliography.

99 Cf. Boatti [2000] 96–103 and Pontani [2011c] 93 n. 21, who argues in favor of attributing the epithet to Pindarion.

100 On the above-mentioned grammarians, see the *LGGA*, s.vv.

101 Schneider [1999].

Hellenismos, like analogy. For the period between the 1st c. BC and the 1st AD, Strabo (14.2.28) spoke of τέχνηαι περὶ ἑλληνισμοῦ (“handbooks on *Hellenismos*”) as if this were a known and widespread subject.¹⁰² However, little information on the content of such works can be obtained. The available documentation suggests they addressed such issues as the correct meaning of words, prosody, choice among phonetic-orthographic variants, use of etymological and dialectal considerations, as well as the pursuit of linguistic regularities on the basis of analogical reasoning, whereas no reference attests that these works also dealt with syntax.¹⁰³

The most ancient monograph known to have focused on *Hellenismos* is that of Philoxenus of Alexandria (1st c. BC), of which only two small fragments survive (*frr.* 288 and 289 Theodoridis, cf. *test.* 1), both pertaining to correct word meaning obtainable through recourse to etymology.¹⁰⁴ An etymological approach is also traceable in fragments of what was probably Philoxenus’ main work, Περὶ μονοσυλλαβῶν ῥημάτων (“On monosyllabic verbs”; *test.* 1, *frr.* 1–*215 Th.), founded on the theory that the Greek lexicon ultimately derived from a core of monosyllabic verb roots.¹⁰⁵ The same holds for Περὶ ἀναδιπλασιασμοῦ (“On reduplication”, *test.* 1, *frr.* 219–*284 Th.), where terms were said to have derived from their original roots through syllabic reduplication, and for Περὶ παραγῶγων (“On derivatives”, *frr.* 330 Th.) and Ἐπιματικόν (“On the verb”, *frr.* 354–400 Th.). Additionally, Philoxenus investigated dialects, as testified by works on Ionic dialect (*test.* 1, *frr.* 290–*310 Th.), Roman (*frr.* 311–*329 Th.)—Latin being seen as a derivation from Aeolic¹⁰⁶—, Syracusan (*test.* 1 Th.), Laconian (*test.* 1 Th.). Finally, he did not disregard prosody, as shown by Περὶ προσωδιῶν (“On prosodies”), apparently with reference to the Homeric text (*frr.* 407–411 Th.).¹⁰⁷

A treatise on *Hellenismos* is also attested for Tryphon of Alexandria, an erudite who made a decisive contribution to the development of grammatical thought in the second half of the 1st c. BC,¹⁰⁸ and was considered an authority worthy of frequent mention in the monumental systematization of grammar

102 Cf. Barwick [1922] 182.

103 Schenkeveld [1994] 290; see also below.

104 Cf. Reitzenstein [1897] 382; Siebenborn [1976] 36, 48.

105 For an analysis of the etymological system applied by Philoxenus, see Lallot [1991b] and cf. below § 6.4.

106 This origin of Latin was also defended by Tyrannion and Apion. Cf. Gabba [1963]; Haas, [1977], 176–177; Schöpsdau [1992]; Cassio [2007]. Note that ‘Aeolic’ must have the meaning of ‘East Aeolic’ for these grammarians: Cassio [2007].

107 An overview is in Theodoridis [1976] 8–14 and Razzetti [2003d] with bibliography.

108 Von Velsen [1853]; Wendel [1939d]; Siebenborn [1976] 48–49, 150–151, 161–163; Ippolito [2008].

by Apollonius Dyscolus. Of Tryphon's massive production, only a hundred or so fragments remain, together with some monographs transmitted directly, whose authenticity is doubtful. As with Philoxenus, the fragments attributed to his *Περὶ ἑλληνισμοῦ* (*fr.* 105–108 von Velsen), probably comprising at least five books, contain observations on correct word meaning, this time based on dialectal considerations.¹⁰⁹ The idea that Tryphon integrated his observations on syntax (*fr.* 22, 24–26, 33, 38, 41, 49, 52, 54, 56, 70 V.) into this work has no documentary foundation, although the relevance of such questions to a work on language correctness can justifiably be invoked.¹¹⁰ Individual dialects were investigated in numerous works, including one identifying pleonastic phenomena (insertion of a syllable or consonant within a word) in Aeolic (*i.e.* East Aeolic).¹¹¹ Various works on analogy are also reported:¹¹² *Περὶ τῆς ἐν μονοσυλλάβοις ἀναλογίας* (“On analogy in monosyllables”); *Περὶ τῆς ἐν κλίσεσιν ἀναλογίας* (“On analogy in declension”), of which *Περὶ τῆς ἐν εὐθείᾳ ἀναλογίας* (“On analogy in the nominative case”) perhaps formed part,¹¹³ and *Περὶ ῥημάτων ἀναλογίας βαρυτόνων* (“On the analogy of baritone verbs”, those with unaccented final syllable). Prosodic issues were addressed in *Περὶ ἀρχαίας ἀναγνώσεως* (“On the ancient reading”, *fr.* 94–104 V.), and *Περὶ Ἀττικῆς προσωδίας* (“On Attic prosody”, *fr.* 7–19 V.), which likewise reveal interest in dialect issues. An important theorization on orthography and its criteria was probably contained in *Περὶ ὀρθογραφίας καὶ τῶν αὐτῇ ζητουμένων* (“On orthography and the aspects it involves”, *fr.* 82 V.).¹¹⁴

Περὶ ἑλληνισμοῦ by Seleucus of Alexandria (nicknamed Homericus) dates from the early imperial age. It comprised at least five books, but only two certain fragments survive, both transmitted by Athenaeus: in the first (*fr.* 69 Müller), Seleucus is mentioned, together with Crates of Mallus (*fr.* 111 Brogg.), regarding a line of the comic poet Aristophanes (*Eq.* 631), where the form *σίναπυ* (“mustard”) appears. Whether the subsequent passage is also attributable to Seleucus is uncertain: it explains that no Attic author ever said *σίναπυ*, that the form used by Aristophanes was *νᾶπυ*, and that both terms can be justified

109 Von Velsen [1853] 71–75; Siebenborn [1976] 36, 48–49.

110 Matthaios [2003] 99, 120 and n. 76.

111 Siebenborn [1976] 150–151. P. Bouriant 8 = Wouters [1979] n° 25 contains the remnants of a treatise *Περὶ Αἰολίδος* with quotations from Sappho and Alcaeus, which has hypothetically been traced back to Tryphon: bibliography and discussion in Wouters [1979] 293–297.

112 Von Velsen [1853] 22–23; Wackernagel [1876] 30–32. According to Siebenborn [1976] 33 n. 7 the titles indicated by the *Suda* lexicon (τ 1115) on analogy could refer to *Περὶ ἑλληνισμοῦ*.

113 Von Velsen [1853] 23.

114 Siebenborn [1976] 161–163; Valente in this volume (Part 3.2).

by an etymological examination.¹¹⁵ The second fragment (*fr.* 70 M.) preserves a debate on interaspiration,¹¹⁶ concerning the prosody of ταῶς (“peacock”), a question that was apparently greatly debated in antiquity (cf. *e.g.* Tryphon *fr.* 5 V.¹¹⁷): according to Seleucus, the Attic prosody of this word, with rough breathing and circumflex accent on the final syllable, was “against all rules” (παρὰ λόγως) and “unmotivated” (ἀλόγως).

A work Περὶ ἑλληνισμοῦ ἤτοι ὀρθοεπίας (“On *Hellenismos* or language correctness”), in 15 books, is attributed by the *Suda* lexicon (π 3038) to Ptolemy of Ascalon, a grammarian of the Aristarchean school whose chronology can plausibly be placed in the first imperial age.¹¹⁸ No part of this treatise survives,¹¹⁹ but we have a few fragments of a prosodic work devoted to Homer (Προσῳδία Ὀμηρικὴ, *Sud.* π 3038), which addressed questions of accent, breathing, quantity, word division, orthography and punctuation¹²⁰ and probably represented an important reference point for the work of Aelius Herodianus. Ptolemy also composed a monograph on meaning differences between similar expressions (Περὶ διαφορᾶς λέξεως),¹²¹ a topic not unknown in reflections on *Hellenismos*, as seen above. Overall, in the surviving fragments of Ptolemy there emerges intense and rigorous use of analogy:¹²² thus he could well deserve the epithet ἀναλογητικός (“analogue”) attributed by Apollonius Dyscolus (*Conj.* 241.13 Schneider) to a Ptolemy¹²³ who, however, could conceivably be Ptolemy Pindarion (see above).

A certain Didymus Claudius is credited by the *Suda* (δ 874) with two monographs on analogy, possibly attributable, according to a suggestion by M. Schmidt, to Didymus of Alexandria, nicknamed Chalcenterus (1st c. BC–1st c. AD).¹²⁴ These works were entitled Περὶ τῶν ἡμαρτημένων παρὰ τὴν ἀναλογία Ἰουκυδίδη (“On the mistakes made by Thucydides against analogy”), of which

115 Thus Müller [1891] 49; Siebenborn [1976] 49 and n. 5, who, however, misunderstands the meaning of the passage from Athenaeus. On Seleucus see also Razzetti [2002b]. On linguistic Atticism see below § 5.3.

116 On this phenomenon according to the ancient grammarians, see Lehrs [1882³] 300–325; Ribbach [1883] 9–10 and, more recently, Schironi [2004] 507–510.

117 Further examples in von Velsen [1853] 9.

119 Baege [1882] 11–12.

120 Baege [1882] 9–11.

121 Baege [1882] 15–21, with the indispensable updates by Palmieri [1984].

122 Numerous examples in Baege [1882] 27–30.

123 Baege [1882] 30–31; Boatti [2000] 101–103.

124 Schmidt [1854] 345–349.

nothing has survived, and *Περὶ τῆς παρὰ Ῥωμαίοις ἀναλογίας* (“On analogy among the Romans”). Fragments of the latter are known from Priscian, who attests the author’s tendency to draw comparisons with Greek in explaining Latin grammatical and syntactic phenomena.

A link between *Hellenismos* and Atticism seems to appear in Minucius Pacatus Irenaeus (1st c. AD), who widely studied Attic dialect and usage in connection with *Hellenismos* and can be regarded a kind of forerunner of linguistic Atticism.¹²⁵ The *Suda* ascribes to him the works *Ἀττικά ὀνόματα* (“Attic names”), *Περὶ Ἀττικῆς συνηθείας τῆς ἐν λέξει καὶ προσῳδίᾳ κατὰ στοιχείου* (“On Attic usage in expression and prosody, in alphabetical order”), *Περὶ ἀττικισμοῦ* (“On Attic style”), *Περὶ ἰδιωμάτων τῆς Ἀττικῆς καὶ τῆς Δωριδος διαλέκτου* (“On peculiarities of Attic and Dorian dialects”) (*Sud.* εἰ 190 and π 29); furthermore the *Etymologicum Gudianum* (317.16 De Stefani) designates him as ὁ Ἀττικιστής (“Atticist”). His fragments are evidence of a chiefly descriptive approach and set Irenaeus far from the strictly prescriptive purism of the Atticists of 2nd–3rd c. AD. Such an attitude perhaps can be seen *in nuce* in his monograph dedicated to the dialect of Alexandria (*Περὶ τῆς Ἀλεξανδρέων διαλέκτου*, “On the dialect of the Alexandrians”), in seven books and ordered alphabetically. The tradition has handed down two different ‘subtitles’ for this book: ἡ περὶ ἑλληνισμοῦ in *Sud.* π 29 and ὅτι ἔστιν ἐκ τῆς Ἀτθίδος in *Sud.* εἰ 190. The title of Irenaeus’ treatise thus would have been respectively “On the dialect of the Alexandrians, or on *Hellenismos*” or “On the dialect of the Alexandrians, showing that it comes from Attic”. From the first option some critics have concluded that in Irenaeus the word ἑλληνισμός meant everyday Greek spoken in Alexandria;¹²⁶ nevertheless the overall context suggests, rather, that Irenaeus’ work aimed at demonstrating the origin of Alexandrian dialect from Attic by comparing the two, and that this issue was an element of language correctness.¹²⁷ The few surviving fragments traceable to this monograph (*frr.* 1–3 and perhaps 5, 9, 12, 15 Haupt)¹²⁸ indicate it chiefly addressed issues concerning phonetic-orthographic variants,¹²⁹ based on etymological and analogical considerations. That even Irenaeus considered *Hellenismos* to represent correct Greek can likewise be inferred from another work testified by the *Suda* (εἰ 190), entitled *Κανόνες ἑλληνισμοῦ* (“Rules of *Hellenismos*”), in one book only. Nothing of this

125 Reitzenstein [1897] 382–387. On Irenaeus see also Regali [2007b].

126 Cf. e.g. Thumb [1901] 4 n. 3; Canfora [1987] 83, 112.

127 Reitzenstein [1897] 383.

128 That *frr.* 5, 9, 12 and 15 are to be attributed to this work and not to the *Περὶ Ἀττικῆς συνηθείας* was argued by Reitzenstein [1897] 383.

129 Cf. also Siebenborn [1976] 47.

survives, but it apparently had a strongly theoretical approach: Reitzenstein proposed comparing its content with later codifications of the rules of *Hellenismos* and orthography (see below § 5.3).¹³⁰

In the same years, similar reflections arose in the Latin grammatical tradition:¹³¹ indeed, most of the above cited authors were also active in Rome. We know of a *De sermone Latino* (“On Latin speech”), with an analogist approach, by Marcus Antonius Gniphō (1st c. BC), a *De proportione* (“On analogy”) by Staberius Eros (1st c. BC), the important *De analogia* (“On analogy”), in two books, by Caius Iulius Caesar (1st c. BC), the *De lingua Latina* (“On Latin language”) by Varro (1st c. BC), a writer cited several times above for his information on the history of Greek grammatical thought, the *De latinitate* (“On *Latinitas*”) by Pansa (1st c. BC / 1st c. AD) and, later, by Flavius Caper (2nd c. AD),¹³² a *De dubio sermone* (“On doubtful speech”), in eight books, by Pliny the Elder (1st c. AD);¹³³ to these can be added the chapter of the *Institutio oratoria* by Marcus Fabius Quintilian (1st c. AD) devoted to *Latinitas* (1.6).¹³⁴

The grammarians’ formulation of rules for determining correct Greek was not without its critics, above all empirically oriented criticisms, questioning the aim, validity and usefulness of this approach.¹³⁵ One example is the section Πρὸς γραμματικούς (“Against the grammarians”) within the work Πρὸς μαθηματικούς (“Against the mathematicians”) by Sextus Empiricus¹³⁶ (uncertain datation, between 2nd and 3rd c. AD),¹³⁷ already mentioned several times. In his demolition of the claimed *techne* of grammarians, the concept of *Hellenismos* was a major target of his criticism, occupying §§ 176–247. To this should be added the discussion on how to establish the gender of a noun in § 153 (orthography occupies §§ 169–175). *Hellenismos*, portrayed in his argument as the culminating element of the ‘technical’ part of grammar, was to be distinguished into two types: one separate from common usage, regulated exclusively by grammatical analogy and consequently castigated as useless, and one based on the usage of all Greeks and obtained through assimilation and observation in conversation. Sextus aims to highlight the absurdities produced by applying grammatical analogy—cf. the example of Ptolemy Pindarion,

above—and reaches the conclusion that since common usage is replete with anomaly, the rules of analogy should be abandoned in favor of attention to the forms of common usage (§ 240). He likewise rejects the view that the criterion for speaking good Greek rests on etymology, employed by grammarians to determine not only correct spelling but also correct word meaning.¹³⁸ Sextus' report is clearly polemical and presents an extreme picture of the grammarians, who, as we have seen, by no means made exclusive recourse to analogy at the expense of usage as a criterion of *Hellenismos*.

5 Systematization of Language in the 2nd c. AD and Beyond

5.1 *Apollonius Dyscolus*

From the 2nd c. AD onwards, reflection on *Hellenismos* became part of broader theorizations on the overall language system. The activity of the most influential grammatical thinker of Greek antiquity, Apollonius Dyscolus (first half of the century) and his son Aelius Herodian (era of Marcus Aurelius) dates from this period.¹³⁹

Apollonius is the first author of whom we have treatises on linguistic topics not transmitted fragmentarily by the indirect tradition, but surviving entire (or almost).¹⁴⁰ His *Περὶ συντάξεως* ("Syntax"), in four books, the last of which lacunose, is regarded as his masterpiece: it studied the combination of parts of speech in creating a sentence, an aspect to which grammarians had previously devoted no specific attention.¹⁴¹ Another three treatises concern pronouns (*Περὶ ἀντωνυμίας*), adverbs (*Περὶ ἐπιρρημάτων*) and conjunctions (*Περὶ συνδέσμων*). Additionally, he composed works on orthography, dialects, prosody, and the parts of speech overall and individually, of which the titles and some fragments survive.¹⁴² Underlying Apollonius' entire system is the question of language correctness, and his general approach to language has rightly

138 Sextus does not explicitly say how etymology was used in determination of *Hellenismos*: Schenkeveld [1994] 289.

139 See Matthaios in this volume.

140 The main recent reference points on Apollonius are: Blank [1982]; Sluiter [1990]; Kemp [1991] 316–331; Blank [1993]; Blank [1994]; Lallot [1997]; Blank [2000]; Dalimier [2001]; Brandenburg [2005], all with further references. A constantly updated bibliography is on the Internet website edited by A. Schmidhauser (<http://schmidhauser.us/apollonius/>).

141 Kemp [1991]; Blank [1993] 713; Schenkeveld [1994] 293–298; Matthaios [2003]; Lambert [2011].

142 See the list of *Sud.* α 3422. Cf. Schneider [1910] vii–x; Blank [1993] 712–713; Kemp [1991] 318; Blank [2000] 414.

been described as the highest manifestation of ancient “analogical grammar”.¹⁴³ This definition refers to his conviction that grammar is governed by general and rational rules and that apparent violations can be explained as the result of regular and reconstructable corruptions.¹⁴⁴ The idea that both lexical and syntactic phenomena observable in usage derive from original forms that have undergone changes (*πάθη*) reveals links to etymology, and more specifically to the system of ‘pathology’ applied by grammarians in analyzing dialectal characteristics and morphology.¹⁴⁵ Corruption was held to affect only the formal aspect, not language content. This distinction, which goes back to Stoic logic, is also reflected in the organization of the material of Apollonius’ three ‘minor’ treatises.¹⁴⁶ His main aim, it appears, was to explain irregular forms by their derivation from regular forms rather than seeking to modify either common usage or poetic texts.¹⁴⁷ In Apollonius the evidence of reason was not in conflict with observation of language use. He thus stood in marked opposition to empiricist orientations, and he sought to obtain theoretical understanding of the language system through rational presuppositions. In the absence of such understanding, purely practical knowledge of language would have been unable to state what is or is not correct (*Synt.* 1.60).

This search for regularity in irregularity is governed, in Apollonius’ conception, by various heuristic methods, such as the theory that the most frequent phenomenon acts as the rule for less frequent forms, which derive from the former by corruption,¹⁴⁸ or that certain forms are absent in language—either to avoid confusion with other homonymous forms or by pure chance—even if their existence is predictable by analogy.¹⁴⁹

Apollonius’ rationalist vision involves every level of the language system, from letters to syllables to words to sentences, each of which is subject to similar types of corruptions (*πάθη*). It is therefore hardly surprising that Apollonius explicitly presents syntax in parallel with orthography (*Synt.* 1.8): just as orthography examines problems concerning correct spelling of words, so

143 Cf. Blank [1993]; Blank [2000].

syntax has to do with debated or debatable syntactic constructions.¹⁵⁰ More specifically, syntax pertains to the intelligibles which arise from words and studies their combinations designed to constitute a sentence with complete meaning (*Synt.* 1.2). But proper combinations are possible only if the intelligibles inherent in the words that combine to form a sentence are mutually ‘congruent’ (*κατάλληλα*): one cannot combine a personal pronoun conveying the meaning of second person with a verb form presupposing a first person.¹⁵¹

An example from the *Syntax* is emblematic not only in portraying Apollonius’ attitude towards language irregularities, but also the criteria he adopted to address such issues. The opening section of book 3, on syntactic regularity and irregularity (*καταλληλότης* and *ἀκαταλληλότης* or *ἀκατάλληλον*, respectively),¹⁵² discusses the case of a neuter plural subject governing a singular verb. After demonstrating the irregularity of this construction, Apollonius explains why it is nevertheless accepted and not banished from use (3.50–53). He starts by noting that if a masculine or feminine plural subject were combined with a singular verb, the irregularity of the construction would be immediately obvious, whereas this is not the case if the subject is neuter. Why? One may first suggest it is an instance of poetic license, as occurs in Pindar (the so-called *Πινδαρικών σχήμα*), but this does not clarify why the irregularity of a neuter plural subject constructed with a singular verb passes unnoticed. Evidently, it is the gender of the subject that makes the difference, although the reason is unclear, since verbs do not distinguish genders and thus should not require different constructions if combined with subjects of different genders (3.51). However, verbs are sensitive to number and should appear in the plural when the subject is plural (3.52). Apollonius concludes with an explanation resting on homophony between neuter nominative and accusative plural: the sentence *γράφει τὰ παιδιά* (“the children write”), with neuter plural subject and singular verb, does not sound strange, and although it is more normal for *τὰ παιδιά* to represent the object of the verb (“he draws the children”), the expression can also have the role of subject without any strikingly obvious syntactic irregularity (3.53). What thus emerges is that Apollonius clearly identifies the construction under discussion as *ἀκατάλληλον* (“irregular”), but he merely

150 Based on this comparison, D. Blank felt it was hardly surprising that the *Syntaxis* does not offer a systematic treatment of all possible constructions for each part of speech, treating only specific problems relating to doubtful constructions (Blank [1982] 7–10, with bibliography; Blank [1993] 720; Schenkeveld [1994] 293; Blank [2000] 415).

151 See Frede [1977] 353ff.; Blank [1982] chapters 3 and 4; Blank [1993] 724ff.; Blank [2000] 415, with additional bibliography.

152 On these concepts, see Blank [1982] 27–28; Blank [1993] 724–725.

recognizes that it has entered into common usage and proposes an explanation for this development, yet without branding it as incorrect. Usage becomes the reference point in Apollonius' approach, and is studied with the rational tool of analogy. Finally, as can be inferred from the reference to the Πινδαρικὸν σχῆμα, the literary tradition was a further element considered in Apollonius' system.¹⁵³

In this context, he too awarded major importance to Homer's poetry, from which he took the overwhelming proportion of his examples.¹⁵⁴ But unlike previous grammarians and his son Aelius Herodian (see below § 5.2), Apollonius did not seek solutions to textual or linguistic aspects of the Homeric poems: rather, he used them to support grammatical rules.¹⁵⁵ He made use of poetic syntax to explain prose constructions (*Synt.* 3.166),¹⁵⁶ or to invoke syntactic rules found in prose to demonstrate that poetic syntax was a corruption of these rules (*Synt.* 1.57):¹⁵⁷ accordingly, Apollonius often explained unusual or aberrant Homeric forms in relation to poetic license (cf. *Synt.* 1.62), thereby absolving Homer of suspected solecism. Moreover, he sometimes defined typically Homeric forms as "more ancient" (ἀρχαϊκώτερα), revealing his awareness of diachronic development of language (*Pron.* 44.11–13; *Synt.* 2.90).¹⁵⁸

Apollonius' great theoretical construction thus reconciles everyday language usage with that of Homer and, more generally, of literature, and with analogy seen as rational explanation of language phenomena.

5.2 *Aelius Herodian*

An important contribution to reflections on language correctness also comes from Apollonius' son, Aelius Herodian (era of Marcus Aurelius), whose activity probably first concerned prosody, namely study of the correct pronunciation of words. Herodian composed a monumental treatise entitled *Καθολικὴ προσωδία* ("General prosody"), containing a systematic presentation, with rigorous rules addressing above all accent patterns (books 1–19) but also quantity and breathing (book 20) and equipped with a sort of appendix on word accent within the sentence. Herodian, it appears, had at least one predecessor in this field, Heraclides of Miletus (1st/2nd c. AD), of whose *Καθολικὴ προσωδία* roughly

157 Erbse [1960] 360–361; Blank [1993] 718; Viljamaa [1995] 176; Lallot [1997] II 38–39.

158 Pontani [2011c] 101; Lallot [2011] 247–248.

sixty fragments survive.¹⁵⁹ The systematic comprehensiveness of Herodian's enterprise undoubtedly distinguished it from any other similar work, supplied as it was with accent rules for about 60.000 Greek words (*GG* III/I 7.18–19). This colossal collection is known mainly thanks to two epitomes: one falsely attributed to Arcadius and one entitled 'Ιωάννου γραμματικῶν Ἀλεξανδρέως Τονικὰ παραγγέλματα ("Precepts on accent by the Alexandrian grammarian John"), both present in numerous manuscripts.¹⁶⁰ The treatment defined various rules indicating the accent pattern characteristic of different word categories, identified through peculiarities such as ending, syllable number, gender, etc. (see below). Such rules were based either on "the commonly recognized language" or "the criterion of the analogical rule" (*GG* III/I 5.3–4). Here is an example:

Τὰ εἰς δῶν δισύλλαβα ὀξύνεται καὶ βαρύνεται· βαρύνεται μὲν, ὅσα ἐστὶν διὰ τοῦ ντ κλινόμενα καὶ φύλαττοντα τὸ ὦ κατὰ τὴν γενικὴν, χωρὶς τῶν συνημιπτόντων πόλει οἶον κῶδων, Φαίδων, . . . ὀξύνεται δὲ τὰ διὰ τοῦ ο μόνον κλινόμενα οἶον Μυγδῶν, . . . (*GG* III/I 24.15–25.3).

Disyllables ending in -δων have either oxytone or baritone accent: oxytones are those declined with -ντ- and preserving the -ω- in the genitive—except those coinciding with a city—like κῶδων ("rattle"), Φαίδων... whereas oxytones are those declined only with -ο- like Μυγδῶν,...

Herodian also composed works on prosody in specific sectors, such as "Attic prosody" ('Αττικὴ προσωδία), of which exiguous fragments remain (*GG* III/II 20–21),¹⁶¹ "Prosody of the *Iliad*" ('Ιλιακὴ προσωδία: *GG* III/II 22–128) and "Prosody of the *Odyssey*" ('Οδυσσειακὴ προσωδία: *GG* III/II 129–165), of which more extensive fragments are found in the respective scholiographic *corpora*. The latter two treatises addressed prosodic difficulties in the Homeric

159 The title is attested in two passages only: Apoll. Dysc. *Synt.* 4.10 (*fr.* 1 Cohn) and Ammon. *Diff.* 336 Nickau (*fr.* 4 C.). It appears from the latter that the work probably comprised more than one book.

160 It should be borne in mind that the content of A. Lentz's edition in the *Grammatici Graeci* series is, similarly to that of Herodian's other works, an erudite attempt to reconstruct the grammarian's thought rather than a genuine critical edition. It includes integration of parts of other works of Herodian himself and even of other authors such as Stephanus of Byzantium, Theodosius, Choeroboscus etc. (Lentz [1867–1870]). For an overview of the problems posed by this method, cf. Dyck [1993a]. In addition to the above-mentioned epitomes, there are another two that preserve portions of books 5–7 (ms. Vindob. Hist. gr. 10: Hunger [1967a]) and of book 5, respectively (P.Ant. II 67: Wouters [1979] 216–224).

161 Additionally, Hunger [1967a] 14–15; cf. Dyck [1993a] 786.

poems, dealing especially with explanation and discussion of choices made by Aristarchus of Samothrace and other previous grammarians. These were then evaluated by relating the issues in question to the corresponding ‘canon’.¹⁶² The difference in Herodian’s approach to the Homeric text emerges clearly from an example in *Sch. Il.* 15.365 (cf. *GG* III/II 95.24–32) on whether the epithet of Apollo ἦιε was or was not aspirated: Aristarchus maintained it was, since he derived it etymologically from ἔσις (“send out”, from the verb ἦμι), as in shooting darts, while Crates of Mallus considered it unaspirated, linking it to the word ἴσις (“recovery”). The latter argument was endorsed by Herodian, but on completely different grounds, maintaining that “*eta* before a vowel is always unaspirated”. Thus the specific case was assessed through comparison with the appropriate general rule and governed accordingly.¹⁶³

The same principles underlie Herodian’s approach in other fields of language study, starting from the doctrine on nominal inflection, on which he composed *Περὶ κλίσεως ὀνομάτων* (“On noun inflection”, *GG* III/II 634–777).¹⁶⁴ We have knowledge of what Herodian considered to be the rules for grouping words together as ‘similar’ and consequently subject to the same type of declension:¹⁶⁵ gender, type (appellatives or genuine nouns), form (simple or compound nouns), number, accent, case, ending, penultimate syllable, duration (prosodic quantity), syllabic quantity, often also consonant clusters (specifically, the consonant with which the ending was combined): for greater detail, see below § 6.1.1.

A theorization of the functioning of this system is found in Herodian’s only integrally surviving treatise, *Περὶ μονήρους λέξεως* (“On lexical singularity”),¹⁶⁶ which explains that the mass of words of a language can be subdivided into groups on the basis of some similarity (ὁμοιότης) among their members (*GG* III/II 908.3). The grouping criteria are listed more succinctly and with some discrepancies compared to those mentioned in *Περὶ κλίσεως ὀνομάτων*: in addition to the ending, syllable number, accent and penultimate syllable, the antepenult is also mentioned (*GG* III/II 908.4–7). However, some words are

162 Herodian’s approach to the Homeric text, as compared to that of Apollonius, is studied by Erbse [1960] 311–370, esp. 363; cf. Siebenborn [1976] 77; Dyck [1993a] 784.

163 Cf. Broggiato [2003] 67–69; Schironi [2003] 75–77; Blank [2005] 222.

164 Lentz’s reconstruction is based mainly on Choeroboscus’ scholia to the *Canones* of Theodosius and on the material presented by Cramer [1835–1837] IV 333–338. To this one can add at least the epitomes contained in ms. Vindob. gr. 293 and in P.Flor. inv. 3005 (Wouters [1979] 231–236): cf. Dyck [1993a] 789.

165 Cf. Siebenborn [1976] 73.

166 The most recent discussion on the content of this work is in Sluiter [2011], with bibliography. Cf. also Siebenborn [1976] 84, 90, 108 and Dyck [1993a] 790–791.

refractory to any attempted systematization, as they cannot be aggregated with any group, each one forming an individual group: these are the ‘singular’ words (μονήρεις).¹⁶⁷ Far from being rare or *hapax* terms, these are ordinary and normal words, well attested in common usage and/or literature, which however do not conform to any rule: they constitute their own rule.

κρίσις δὲ ἔστω τῆς προκειμένης λέξεως μονήρους ἢ πολλῆ χρήσις παρὰ τοῖς παλαιοῖς καὶ ἢ συνήθεια ἔσθ’ ὅτε ὁμοίως τοῖς παλαιοῖς Ἑλλησιν ἐπισταμένην χρῆσιν. (*GG* III/II 910.6–8).

Let this criterion of lexical singularity be frequent use among the ancients and everyday usage, which sometimes represents a usage comparable to that of the ancient Greeks.

Therefore usage is invoked not as a language correctness criterion but to determine which words can constitute a single-element class rather than representing sporadic and eccentric phenomena. Singularity is presented by Herodian not so much as an exception to a rule but as something subject to a rule (κανών) obeyed by no other word. He does not view such phenomena as errors, nor does he castigate their utilization. Rather, he devises an exhaustive system of rules based on analogy whereby even words which—apparently—constitute exceptions can be fitted within the framework. Particularly striking is the image of analogy which “with its art, holds together, as in a network, the variegated voice of the language of man” (*GG* III/II 909.20–21).

Additional aspects of language correctness explored by Herodian include orthography, where he achieved a decisive systematization (see the contribution by Valente [Part 3.2]), and the description of language change, to which he devoted a treatise Περὶ παθῶν (“On linguistic changes”).¹⁶⁸ The system of ‘pathology’ concerned the phonological and morphological changes (πάθη) words had undergone through evolution from their presumed original form to the known and commonly used form. Here too, Herodian’s arguments were

167 This concept was already used by Varro (*Ling.* 10.82; cf. 9.53): see Fehling [1957] 67 and Sluiter [2011] 294.

168 Lentz’s distinction between this work (*GG* III/II 166–388) and a Ἑπόμνημα τῶν περὶ παθῶν Διδύμου (“Commentary of Didymus’ *On linguistic changes*”: *GG* III/II 389) has long been regarded as artificial. Furthermore, the insertion of numerous fragments of varied and sometimes uncertain provenance, and even of authors other than Herodian, together with an ordering of the material not matching that of the original, make it particularly difficult to deal with the content of this treatise (cf. Dyck [1993a] 786–788, with bibliography).

dependent on the analogical method, and the behavior of certain terms was quoted for comparison, in order to justify the behavior of others regarded as 'analogous'. Despite the ecdotic problems affecting the fragments of this work (see n. 168), an examination of the vocabulary Herodian used for describing word modifications suggests his system was more complex than the traditional four-part system of addition, deletion, permutation and substitution.¹⁶⁹

A work on solecism and barbarism, the two main defects of diction, is attributed to Herodian, but it is spurious (see below § 5.3), as occurs for many other works.¹⁷⁰

5.3 *Linguistic Atticism*

The period between the 2nd and 3rd c. AD saw the greatest flourishing of a phenomenon that exerted notable influence on the concept of language correctness: grammatical and linguistic Atticism (Ἀττικισμός).¹⁷¹ Its roots lay much earlier, when, in the 1st c. BC, Dionysius of Halicarnassus launched the fashion of imitating the style of the authors of classical Athens, a city enjoying renown and prestige. With the advent of the Second Sophistic movement, especially from the 2nd c. AD onwards, stylistic Atticism merged with linguistic Atticism. The latter was characterized by rejection of the *koine*¹⁷²—a standard language of the post-classical age deriving from an evolution of Attic stripped of salient Attic features and comingled with elements from other dialects, mainly Ionian—but also by a purism based on the quest for grammatical forms and syntactic constructions occurring in classical Attic authors, seen as the only guarantee of correct expression. For the social and political *élites*, compliance with this linguistic and rhetorical model became an element of self-identification and distinction.¹⁷³

Studies on Attic dialect are documented considerably before the 2nd c. AD for authors including Ister the Callimachean, Eratosthenes, Aristophanes of Byzantium, Philemon of Athens, perhaps Crates of Mallus.¹⁷⁴ However, they display no trace of the rigorously rule-based approach of the Atticistic movement,

169 On the system known as “*quadripertita ratio*” see Ax [1987]; for a study on Herodian's system, see Nifadopoulos [2003b] and [2005].

173 On the socio-political aspects of Atticism and the relation between the rise of this tendency and the spread of Latin, see Swain [1996] 33–42, with previous bibliography.

174 Cf. Broggiato [2001 = 2006] xlii–xlvi.

in which the literary tradition, already applied as a criterion for determining good Greek, underwent a drastic and targeted restriction to a specific list of canonized Attic authors. Which names deserved to be included was a crucial aspect, and precise information is given by one of the most intransigent Atticists, Phrynichus Arabius, whose models were Aristophanes, Cratinus and Eupolis, and also Plato, Thucydides and Demosthenes (114 and 286 Fischer). But while Phrynichus strongly rejected any other name, broader selections are not unknown, as in Julius Pollux and the so-called *Antiatticist*.

The main works in this context were the lexica, *i.e.* word collections, where the Attic terms were often presented in opposition to their—supposedly incorrect—non Attic counterparts. Such works were prescriptively oriented and endeavored to systematize and categorize an undoubtedly rather complex linguistic situation. Examples include the collections of Aelius Dionysius, Pausanias, Phrynichus, Julius Pollux, Moeris, Philemon, Ps.-Herodian's *Philetaeros*, the so-called *Antiatticist* and, much later (5th c.), Oros of Alexandria.¹⁷⁵ The *Antiatticist* (2nd c.) was a lexicon which, compared to Phrynichus' canon allowed a far greater range of authors as models of language purity, such as Simonides, Sappho, Pindar, and also Aristotle and Theophrastus (hence the modern title *Antiatticist*).¹⁷⁶ In the work of Moeris, probably composed in the 3rd c., in addition to contrast between the uses “of Greeks” versus “Attics” (the latter sometimes indicated as “the ancients”) a third element occasionally appeared: “common” use, plausibly the language of the less educated.¹⁷⁷

Given this framework where the literary tradition was crucial for achieving language purity, the exclusion of Homer may seem surprising.¹⁷⁸ One would have expected Homer to belong to a canon of model authors, based on his authoritativeness, his impact on Greek culture and education, and his temporal primacy. In the Hellenistic era, Homeric usage had been invoked as the reference point for language correctness (see above §§ 3.2 and 4); in the 2nd c. AD Telephus of Pergamum, a grammarian focusing on language study and Attic authors, argued in a specific monograph “that only Homer among the ancients expressed himself in correct Greek” (“Οτι μόνος Ὁμηρος τῶν ἀρχαίων

ἐλληνίζει). To this can be added a problematic passage from *De soloecismo et barbarismo* by Ps.-Herodian (311.5–10 Nauck), which—allowing for the numerous textual difficulties and conceivably late redaction date,¹⁷⁹—asserts that for some “*Hellenismos* is the poet (*sc.* Homer)” (see below § 6.3). The Atticists reacted either by relegating Homer to the array of non canonical literary figures, as did Phrynichus, or treating him as a proto-Attic author, as Moeris contended.¹⁸⁰ On the other hand several grammarians, starting with Aristarchus and his pupils Dionysius Thrax and Ptolemy Pindarion, believed, partly for linguistic reasons, that Homer was an Athenian.¹⁸¹

One aspect worth underlining is the distorted perspective this approach placed on earlier or non Atticist grammatical material. Within the Atticist horizon, such labels as Ἀττικὸς were synonymous with “linguistically correct”, whereas for erudites who did not closely embrace this tendency, Attic was one among many dialects and identifying an expression as Attic implied no claim that it was correct. Correspondingly, many Atticist authors misunderstood the position of non Atticists (like Herodian), assuming that even in their works every reference to Attic dialect should signify an assessment of language correctness.¹⁸²

5.4 *Later Authors*¹⁸³

Subsequently, the earlier ideas on *Hellenismos* underwent a systematization aimed at building a comprehensive framework of rules, often for educational purposes, capable of governing any and all occurrences.

In the 4th–5th c., a collection of rules on noun and verb inflection, entitled *Κανόνες εἰσαγωγικοί περὶ κλίσεως ὀνομάτων καὶ ῥημάτων* (“Basic rules for inflection of nouns and verbs”) was composed by Theodosius of Alexandria.¹⁸⁴ It drew on the grammatical system of the *Techne grammatike* attributed to Dionysius Thrax, also building on explicitly cited acquisitions of Apollonius Dyscolus and Aelius Herodian. That the *Canons* were founded on a more ancient doctrine is in agreement with their interesting (albeit problematic)

link-up to the content of inflectional tables preserved in papyri from before the 4th c.¹⁸⁵

The work of Theodosius comprises two sections, which contain lists of noun declensions and verb paradigms respectively, where, in pursuit of exhaustiveness, every theoretically possible form is represented even if never attested. A discussion on accent patterns in noun inflection (Περὶ τῶν ἐν ταῖς πτώσεσι τόνων, “On accents in the cases”) accompanies the part on nouns. Theodosius’ procedure started from a base form, the nominative singular for nouns and first person singular indicative for verbs, describing the subsequent forms through variations, additions or suppressions.

The *Canons* exerted noteworthy influence in Greek linguistic doctrine, constituting right up to the Renaissance the main source for handbooks on grammar, thanks especially to the commentary by George Choeroboscus (see below). Attribution to Theodosius of the treatise on prosody (Περὶ προσωδιῶν) added as supplement to the pseudo-Dionysian *Techne* remains conjectural,¹⁸⁶ as does authorship of an epitome of Herodian’s *General prosody* attributed to Theodosius in some manuscripts.¹⁸⁷

We do, however, have a work of the latter type entitled *Τονικά παραγγέλματα* (“Precepts on the accent”), by John Philoponus of Alexandria¹⁸⁸ (6th c.), who also composed a treatise on homonymous (or homophonous) words distinguishable only by their accent,¹⁸⁹ and a study on dialects (Περὶ διαλέκτων)¹⁹⁰ that represented one of the sources of Gregory of Corinth (see below).

A significant contribution to this field was made by George Choeroboscus (8th–9th c.), with a commentary on Theodosius’ *Canons* (see above).¹⁹¹ Designed for teaching purposes, it exceeded in importance the work it examined. Choeroboscus additionally wrote an exegetic work on the earlier mentioned Περὶ προσωδιῶν which acted as a supplement to the *Techne* attributed to Dionysius Thrax, and a work on orthography.

Among later Byzantine authors, Michael Syncellus (8th–9th c.) wrote a handbook of grammar specifically devoted to syntax of the parts of speech (Μέθοδος περὶ τῆς τοῦ λόγου συντάξεως, “Treatise on discourse structure”).¹⁹²

The same topic was addressed, again with a teacher's approach and style, by Gregory of Corinth (12th–13th c.) in his *Περὶ συντάξεως λόγου ἥτοι περὶ τοῦ μὴ σολοικίζειν* ("On discourse syntax, or on not making syntactic mistakes").¹⁹³ His production further included a study on dialects (*Περὶ διαλέκτων*),¹⁹⁴ which drew on the works of Tryphon (see above § 4) and John Philoponus on this topic.

6 The Criteria of *Hellenismos*

It is far from easy to present a synchronic account of the criteria used in the ancient world to determine language correctness, because they vary (as noted above § 1) depending on the source and were probably the object of extensive debate; furthermore, their use undoubtedly changed over time. In this chapter, observations on the rules of *Hellenismos* are outlined in the 'historical' description (see above §§ 2–5): they will now be explored individually, in order to acquire an overall and systematic view.

6.1 *Analogy*

One crucial criterion was analogy,¹⁹⁵ taken not only as the mechanism capable, with a greater or lesser degree of refinement, of deriving information on the correct form of a word (from the prosodic, orthographic or inflectional perspective) through comparison with another regarded as 'similar', but also as the more general principle of rational regularity thought to preside over the general language system.

In the Greek world, the concept of 'analogy' originated in mathematical and geometric studies, where it indicated a proportion between magnitudes or terms.¹⁹⁶ Regarding its application to grammar, the Greek sources attest to over a dozen definitions—mainly of late date—and a further twenty or so are documented by the Latin tradition.¹⁹⁷ Indeed, the form of Varro's reference to the definitions of analogy provided by the grammarians Aristeas, Aristodemus and Aristocles (*Ling.* 10.74–75, see above § 4) may suggest he was quoting the beginning of a list, alphabetically ordered, conceivably much longer in the

original source.¹⁹⁸ Despite this multiplicity and the inevitable differences in formulation, there is considerable agreement in the content of these attestations: they view linguistic analogy as “the associating of similar terms” (ἡ τῶν ὁμοίων παράθεσις, *Sch. Marc. Dion. T. in GG I/III 309.9–11*; similar expressions are found in *Sext. Emp. Math.* 199, 202 and 236 and in several other passages of the scholia to the *Techne grammatike*), from which the corresponding rules can be stated (*Sch. Lond. Dion. T. in GG I/III 454.16 passim*).¹⁹⁹ A special case concerns the definition of analogy attributed to the Greeks by the so-called *Donatiani Fragmentum* (*GL VI 275.16ff.*; cf. *Char. 149.21ff. B.*), which initially speaks of “combination of corresponding proportions” (σμπλοκή λόγων ἀκολουθῶν), but then states that in linguistics, analogy is the “combination of corresponding proportions, in inflection of the parts of the expression” (σμπλοκή λόγων ἀκολουθῶν ἐν κλίσει μερῶν λέξεως), thus explicitly linking analogy to inflectional doctrine.²⁰⁰ The far from few definitions of analogy documented in the Latin world—Quintilian, Charisius and various authors who, according to Fehling, all depend on Varro—seem to add nothing new:²⁰¹ analogy is described either as “comparison of similar terms” (*e.g. comparatio similitum* in Pompeius [*GL V 197.22–23*]) or as regularity in inflection (*e.g. similitum similis declinatio*, “similar inflection of similar terms”, *ibid.* and elsewhere).²⁰² The functioning of the tool of analogy is explained rather clearly by Quintilian:

eius [sc. analogiae] haec vis est, ut id quod dubium est ad aliquid simile de quo non quaeritur referat, et incerta certis probet.

Its strength [*sc. of analogy*] lies in relating something doubtful to something similar but not open to doubt; thus demonstrating the uncertain by the certain. (Quint. *Inst.* 1.6.4).

Concretely, this heuristic tool based on associating similar terms had various realizations. It could involve a simple comparison among two members if the doubt concerned prosody, morphology or grammar, taking as model another word classified as ‘analogous’ according to specific criteria (see below) and free from any doubtful aspect; the accidents of the original term are then defined

on the basis of the model.²⁰³ Another, more sophisticated, procedure intervenes when inflected or derived terms are involved: it consists in building a four-fold proportion involving the base forms of two ‘analogous’ words and the respective inflected or derived forms. If one of these is unknown or problematic, it is determined via its homologue.²⁰⁴ Varro offers numerous examples, with a lengthy treatment in book 10. Finally, in a procedure requiring greater abstraction and generalization, each term is traced back, via its formal characteristics, to the general rule (κωνών) it belongs to, from which its morphological, prosodic or grammatical accidents are then derived.²⁰⁵ This approach was systematized by Aelius Herodian (see above § 5.2) and then crystallized in Theodosius’ *Canons* (see above § 5.4). The suggestion that this reflects diachronic evolution of the doctrine of inflection, divided into three stages,²⁰⁶ is viewed skeptically among scholars.²⁰⁷

6.1.1 The Conditions of Analogy

Establishment of an analogical relationship among words—with the ensuing consequences for determination of their linguistic accidents—was not based on generic similarity, but was admitted only when they had precise characteristics in common. However, the list of such characteristics varied notably in Greek and Latin antiquity.²⁰⁸ One element they tacitly shared was that ancient grammarians appeared to focus mainly on noun declensions when discussing the conditions of analogy.²⁰⁹

A problematic testimony by Charisius (149.26ff. B.), paralleled by the so-called *Donatiani Fragmentum* (GL VI 276.5ff.),²¹⁰ describes the conditions of analogy identified by Aristophanes of Byzantium and Aristarchus of Samothrace (see above §§ 3.1 and 3.2). For Aristophanes they comprised: coinciding gender, case, ending, number of syllables and accent. Aristarchus added the prohibition on comparing simple words with compounds, and imposed

greater restrictions on the ending, with identity required both in the nominative and vocative (Varro *Ling.* 8.68; 9.43; 9.91).²¹¹

A general overview of the situation between the 2nd and 1st c. BC can be gleaned from Varro's passage on *genera similitudinis* (*Ling.* 10.9–10), although he may mistakenly have grouped together unrelated aspects. Varro contends that for Dionysius of Sidon the conditions of analogy numbered seventy-one if all possible distinctions were taken together, but only forty-seven if attention was limited to words having case, namely nouns. Aristocles is said to have established fourteen conditions, Parmeniscus eight (see above § 4), other scholars various different counts. Dionysius' number of seventy-one (or forty-seven) conditions appears excessive, suggesting that Varro was referring not to conditions of analogy but to *κλόνες* identified through analogy, *i.e.* groups of words sharing certain characteristics and inflectional rules.²¹² Moreover, Varro's statement regarding Aristocles could suggest he was identifying fourteen classes of nouns, distinguished by their final syllable, rather than fourteen conditions of analogy.²¹³ On the other hand the number proposed by Parmeniscus does correspond to the subsequent canonical count of analogy conditions.

This number recurs in Caesar (*fr.* 11 Funaioli), where the conditions regard nouns and are subdivided into those concerning accidents and those related to syllable characteristics. Six are classified among accidents: *qualitas* (taken as difference between noun and appellative), *comparatio* (alluding to degrees of comparison characteristic of the adjective), *genus* ("gender"), *numerus* ("number"), *figura* ("distinction between simple and compound words"), *casus* ("case"); additionally, there is *exitus syllabarum* ("ending") and *paenultimarum ratio* ("letters and quantity of the penultimate syllable").²¹⁴

Varro's position on the conditions of analogy may well have reflected the number eight, but the passage in question (*Ling.* 10.21–26) is affected by lacuna at the end of § 23, making interpretation of an already rather ambiguous text somewhat uncertain.²¹⁵ Varro mentions, firstly, four conditions: *genus* ("gender"), *species* (distinction between noun and adjective, normally indicated by *qualitas*), *casus* ("case"), *exitus* ("ending") (*Ling.* 10.21); there follows a disquisition on the doctrine of inflection, totally unrelated to the problems of analogy conditions (*Ling.* 10.22–23), and interrupted by the lacuna. The text then

resumes midway through a new list of conditions, which refers to number (§ 24) and cites *figura* (here indicating possible modifications at the beginning, end or in the middle of a word, affecting the verb rather than the noun, § 25) with the related criterion “*sunt animadvertendae ... etiam quae proxumae sunt neque moventur*” (that is to say, “the syllables surrounding the modified element should also be considered”, § 26). The lacuna eliminates the introduction to the second sequence, possibly obscuring the reasons why Varro presented two separate lists; it may also have obliterated the eighth condition. Equally unclear is the reason behind Varro’s modification in the criterion of the *figura*, resulting in a duplicate of *exitus*, at least for nouns, which show modifications only in the final part.²¹⁶

Some have argued²¹⁷ that Varro drew on a source common to Caesar and Aelius Herodian. Herodian provided a list and discussion of criteria for grouping nouns into classes when determining the rules for inflection, in a work entitled Περὶ κλίσεως ὀνομάτων (“On noun inflection”).²¹⁸

τὸ ὅμοιον ἐν τοῖς ὀνόμασιν ἢ γένει ἢ εἴδει ἢ σχήματι ἢ ἀριθμῶ ἢ τόνῳ ἢ πτώσει ἢ καταλήξει, ἐν παρατελεύτῳ συλλαβῇ· ἐν χρόνῳ, ἐν ποσότητι συλλαβῆς, πολλακίς δὲ καὶ ἐν ἐπιπλοκῇ συμφώνου· εἰ δὲ παρὰ ταῦτά τι γένοιτο, ἀνόμοιος ἢ κλίσις γίνεται.

Similarity among nouns concerns gender, type, form, number, accent, case, ending, penultimate syllable, duration, syllable quantity, often also the consonant cluster. If something is in contrast with these criteria, the declension is not similar (GG III/II 634.6–9 = *Anecd. Ox.* IV 333.6ff. Cramer).

What exactly is meant by the various expressions—not all equally perspicacious—is clarified by Herodian with examples (GG III/II 634.9–24). “Gender” (γένος) refers to a noun’s characteristic as masculine or feminine; “type” (εἶδος) alludes to the difference between appellatives and nouns; “form” (σχῆμα) distinguishes between simple and compound nouns; “number” (ἀριθμός) designates singular and plural; “accent” (τόνος) indicates whether a

216 Fehling [1957] 74–75, who explains: “Aber auch hier hat Varro es nicht lassen können, durch eigene Variationen und Erweiterung das in seiner Quelle Vorgefundene zu verändern, und wiederum führt jede Veränderung zu Unstimmigkeiten und Fehlern” (p. 74). Cf. Siebenborn [1976] 74.

217 Fehling [1957] 75; cf. Fehling [1956] 246–247.

218 Cf. Fehling [1956] 246–247 n. 2; Siebenborn [1976] 73.

noun is baritone or oxytone. “Case” (πτῶσις) refers to the inflectional forms of the noun; “ending” (κατάληξις) concerns word termination; “duration” (χρόνος) indicates whether the final / penultimate syllable is short or long; “syllable quantity” (ποσότης συλλαβῆς) pertains to the number of syllables of a noun during its declension; “consonant combination” (ἐπιπλοκή συμφώνου) indicates the consonant the ending combines with. Thus enumerated, these conditions amount to eleven, but some of the criteria mentioned towards the end of the list clearly do not constitute independent conditions but special cases of already mentioned conditions. One hypothesis is to consider all elements introduced by the preposition ἐν as subcategories of the condition mentioned just before, κατάληξις (“ending”),²¹⁹ giving a total of seven conditions. Another interpretation would see the last three (χρόνος, “prosodic quantity”, ποσότης συλλαβῆς, “syllable quantity”, ἐπιπλοκή συμφώνου, “consonant combination”) as special cases linked to the penultimate syllable (παρατέλευτος συλλαβή), the latter taken extensively as “everything that precedes the ending”, thereby reinstating the traditional count of eight conditions.²²⁰ A further alternative reduces only the criteria χρόνος (“prosodic quantity”) and ἐπιπλοκή συμφώνου (“consonant combination”) to subcategories of the parameter κατάληξις (“ending”).²²¹ Finally, the criteria underlying the analogical method in inflection are presented by Herodian far more concisely and with some discrepancies compared to the above picture in his work Περὶ μονήρους λέξεως (“On lexical singularity”). Here, in addition to the ending, syllable number and accent, mention is made not only of the penult but also the antepenult (GG III/II 908.4–7).

Later, in Theodosius’ systematization (see above § 5.4), the main criteria considered are accent, syllable number, distinction between proper name and appellative, distinction between simple and compound words, condition of the penult, membership of only one or of several genders. Also acknowledged are the question of whether nouns are contracted, and distinctions pertaining to the typology of the twenty-four classes of semantically based nouns listed in the *Techne grammatike* attributed to Dionysius Thrax.²²² Interestingly, this is not the only case where nouns sharing inflectional rules are grouped together by content-based criteria (cf. Quint. *Inst.* 1.6.13; Char. 117.20ff. B.; 128.17ff. B.),²²³ and there is evidence that the early Alexandrian philologists, particularly Aristophanes, did consider the semantic aspect of terms assessed in an

analogical relationship, and favored establishment of so-called ‘perfect’ analogies where words are comparable both in form and meaning.

6.1.2 The Analogy/Anomaly Controversy

An ancient tradition holds that in the Greek world a veritable controversy raged between supporters of analogy (*ἀναλογία*) as the correctness criterion for inflection and word derivation (embodied by the figure of Aristarchus of Samothrace) versus those who recognized language irregularity (*ἀνωμαλία*) as the leading principle and thus invoked usage (*συνήθεια*) to determine *Hellenismos* (represented by Crates of Mallus). The only source providing evidence of this wrangle is Varro, as the parallel passage of Aulus Gellius (2.25.1), by its author’s explicit admission, was taken from Varro himself, while although Sextus Empiricus’ *Against the grammarians* debates the validity of the analogical method, it makes no mention of a dispute between analogists and anomalists.²²⁴ A fuller picture is obtained from books 8–10 of Varro’s *De lingua Latina*, which present the theory of *declinatio verborum* (including inflection, derivation and composition) according to the rhetorical model of ‘*disputare in utramque partem*’, whereby arguments against analogy are presented first (book 8), followed by those in favor (book 9).²²⁵ There are two key passages:²²⁶ in *Ling.* 8.93, Varro presents the issue anonymously, merely stating that “on this topic Greeks and Latins wrote many books” (*de eo Graeci Latinique libros fecerunt multos*); in *Ling.* 9.1–2 the protagonists of the dispute are explicitly identified as Aristarchus and Crates, arguing that the latter misunderstood both Chrysippus’ concept of analogy—to which Crates referred—and Aristarchus’ view of analogy—which Crates contested. Effectively, the Stoic philosopher saw anomaly as the discrepancy between the form and meaning of a name²²⁷ (see above § 2), whereas Aristarchus by no means excluded respect for *consuetudo* (“usage”) in applying analogy. In both cases Varro proposed to reconcile the two ‘factions’ by considering analogy as valid only for inflection and anomaly only for derivation.

224 Siebenborn [1976] 2–3; cf. De Marco [1957]; Broggiato [2001 = 2006] xxxviii.

225 Ax [1995].

226 Several additional passages, likewise relevant to the theme, were cited above §§ 3.2 and 3.3 and still others are found in Ax [1991] 291.

227 According to Siebenborn [1976] 97–102, even anomaly understood in this sense (and not as inflectional irregularity) is not unconnected with an opposition to the ‘Alexandrian’ analogy, since the latter tended to be applied, at least at the beginning, to terms similar not only by virtue of formal but also semantic considerations. Besides, it is not clear from Varro’s passage exactly what Crates’ position was (cf. Blank [1998] xxxv and n. 84; Blank [2005] 236–237).

The true historical dimension of this ‘contest’ is still debated.²²⁸ Originally regarded as a protracted phenomenon of central importance in ancient linguistic reflection,²²⁹ less extensive evaluations of its chronology and scope were subsequently given,²³⁰ to the point, with D. Fehling, of casting doubt on its very existence, at least as portrayed by Varro.²³¹ Since then, Varro’s reliability has been partly rehabilitated, but many scholars remain markedly skeptical.²³² Furthermore, as suggested earlier, the positions of Aristarchus and Crates may reflect debate on the criteria and limits of application of analogy rather than two opposing conceptions of language (see above § 3.3).

6.2 Usage

Common usage (*συνήθεια*),²³³ taken in a schematic and manichean vision of ancient tradition as a criterion antithetical to the analogical method, was nevertheless employed together and in interaction with the latter.²³⁴ One of the criticisms of the analogical method lay precisely in its recourse to usage for examples in devising its rules. The polemical conclusion of Sextus Empiricus was that analogy thus became a pointless artifice, to be abandoned in favor of observing speakers’ common usage (see above § 4). Grammarians, however, or some grammarians, reconciled the two methods by combining them together. Such was apparently the approach of Aristarchus of Samothrace, who—according to Varro (*Ling.* 9.1)—applied the rules of analogy “within the limits allowed by common usage”. Predominant attention to observing usage (*παρατήρησις τῆς συνηθείας*) for determination of correct Greek is traditionally attributed to Crates of Mallus, but this may have formed part of reflection on applicability of the analogical method without necessarily involving its rejection (see above §§ 3.3 and 6.1.2). The value of usage in assessing *Hellenismos*

228 The bibliography on the topic has become very extensive: here mention is made only of the main contributions, to which the reader is referred for in-depth information and further references.

229 Lersch [1838–1841].

230 Steinthal [1890–1891²]; Colson [1919]; Barwick [1922].

231 Fehling [1956–1957]; cf. the interpretation of Ax [1991] 293–294.

232 Collart [1963] 129ff.; Pinborg [1975] 106–112; Blank [1982] 1–4; Taylor [1987] 6–8; Schenkeveld [1990] 293; Ax [1991] 294–295; Blank [1994] 149–158; Schenkeveld [1994], with caution; Ax [1996] 117–118.

233 According to Versteegh [1987] 260–264, who recognizes a situation of diglossia in the Greek world, as also in the Latin and Arabic world, this term was used by grammarians to indicate the standard use, on an elevated level, of the language of their time and not the colloquial usage of the common people.

234 Siebenborn [1976] 53–55, 90–92.

would appear to have been central among Stoic philosophers, especially Diogenes of Babylon, who regarded “expert and non ordinary usage” as a watchdog for error-free expression, and anything in contrast with the “(language) customs of Greeks of good repute” as a signal of error (see above § 2).

A synthesis between usage, as a reference point in language analysis, and analogy, seen as a rational tool where phenomena observed in use can be studied and understood, was offered by Apollonius Dyscolus. He believed language was governed by general and systematic rules: accordingly, violations observed in speakers’ general practice resulted from regular and reconstructable corruptions, and should not be expelled from usage (see above § 5.1). A conciliation between the two criteria is also found in Aelius Herodian, who not only rightly considered them as joint points for prosodic determination (*GG* 111/1 5.3–4), but combined them in a theoretical foundation of the treatment of exceptions (μονήρεις λέξεις, “singular expressions”) (see above § 5.2).

In linguistic reflection within the Latin world, the usage criterion was designated by the term *consuetudo*.²³⁵ Varro spoke of *consuetudo* as something “evolving” (*in motu, Ling.* 9.17), and identified three species: one belonging to the ancients, now forsaken, one contemporary and one characteristic of poets (*Ling.* 10.73). *Consuetudo* can thus be taken as “the particular, occasional, and idiosyncratic ways in which speakers make use of their language”.²³⁶ Believing that both individuals and people in general should correct their usage if it was incorrect (*mala consuetudo, Ling.* 9.6; cf. 9.11), Varro distinguished between correct use (*recta consuetudo*), which included analogy and should be followed, and distorted use (*depravata consuetudo*), to be avoided like any other bad example (*Ling.* 9.18). This line of reasoning probably had a parallel in Caesar’s distinction of usage defined as *consuetudo vitiosa et corrupta* (“improper and corrupt usage”) versus *pura et incorrupta* (“pure and flawless usage”) (*Cic. Brut.* 261).²³⁷ The field where *consuetudo* reigned supreme as the criterion of correctness was, according to Varro, the *declinatio voluntaria*, i.e. word derivation (*Ling.* 10.15), but its predominance was recognized more generally in the Latin world in contexts where regularity was harder to discern, like inflection of monosyllables or Greek loan words or certain parts of verb inflection.²³⁸ In other fields, irregularities were destined to disappear through improvements introduced by scholars in the name of coherence and uniformity guaranteed by analogy. A typical case is the integration of defective forms, achieved by

235 Siebenborn [1976] 96–97, 109–116.

236 Taylor [1975] 50.

237 Siebenborn [1976] 112.

238 Siebenborn [1976] 109–111.

analogy even if not attested by usage.²³⁹ A position basically more favorable to *consueduto* is found among orators, as compared to grammarians.²⁴⁰ Thus Cicero was polemical towards forms recommended by grammarians and Atticists on the basis of analogy or etymology: instead, he endorsed the forms of *consuetudo*, which please the ear, unlike certain analogical constructions (*Orat.* 155–162). Quintilian likewise seems to have placed trust in *consuetudo*, calling it “the most trustworthy educator of speech” (*certissima loquendi magistra*, *Inst.* 1.6.3), basically equating it to analogy. In Quintilian’s view, analogy was not grounded in reason but in examples and therefore was produced by nothing other than usage; it should therefore not be considered as law but rather as observation of language (*Inst.* 1.6.16).

6.3 *Literary Usage and Tradition*

One criterion that interacted with common usage was that of the literary tradition,²⁴¹ designated in various ways by grammarians over time: παράδοσις—though in philology this term denoted the overall textual tradition—, ἱστορία, or χρῆσις, which means “usage”, although the latter, sometimes associated with phrases like παρὰ τοῖς παλαιοῖς (“among the ancients”) or τῶν παλαιῶν (“of the ancients”), seems to refer specifically to literary use, as suggested both by the passage from Herodian *GG* III/II 910.6–8 and by numerous examples from the *Etymologici*.²⁴² A general statement in the *Etymologicum Magnum* (792.1–10, s.v. φῆσις) asserts that ἱστορία, taken as “evidence from ancient and scholarly men”, was invoked when it was impossible to determine the correctness of an expression by other criteria. This explains why the criterion in question was generally mentioned last in the lists.²⁴³ However, the most ancient phase shows little sign of this awareness.

When grammarians appealed to literary use to establish correct Greek, the reference author enjoying pride of position was Homer, in line with his centrality in Greek culture and education.²⁴⁴ This was already the case in Aristarchus of Samothrace, who claimed that in Homer “the aspects concerning language

239 Examples from Scipio, Antonius Gniphio, Caesar and Varro in Siebenborn [1976] 111–115.

240 Siebenborn [1976] 116.

241 On the complex relations between the two parameters, cf. Siebenborn [1976] 27–31, 85–89; Sluiter [1990] 60–61; Viljamaa [1995]; Pontani [2011c] 99.

242 Siebenborn [1976] 85–91.

243 Siebenborn [1976] 90–91.

244 Naturally, mentions of other authors are not lacking: thus Tryphon (see above § 4), in seeking to determine the meaning of certain words, included not only the authority of Homer but also Pindar (*fr.* 105 V.) and Xenophon (*fr.* 106 V.): cf. Siebenborn [1976] 89. On Homer as the reference point of *Hellenismos*, cf. Pontani [2011c].

correctness are perfectly accomplished” (*fr.* 125 Matthaïos, see above § 3.2). Apparent oddities in Homer’s language compared to common usage were justified by the grammarian as “poetic licenses” (σχήματα). Similarly, Aristarchus’ pupil Ptolemy Pindarion challenged empirically-oriented criticisms against analogy, objecting that the “use accepted by everyone” on which analogy was founded was that of Homer’s poetry. But this argument, according to Sextus Empiricus, who handed down and criticized Pindarion’s position, did not solve the problem of whether the reference point for correct Greek should be usage or analogy: rather, it further complicated the problem by introducing the additional parameter of Homeric usage. Moreover, it involved the risk of ridiculous modes of expression, by reproducing peculiarities of Homeric language fallen into disuse (*Math.* 1.205ff.).²⁴⁵ The idea that Pindarion genuinely intended to promote Homeric usage in everyday life is undoubtedly an excess due to the provocative tone of Sextus’ argument,²⁴⁶ which, on the other hand, is emblematic of the overlapping and possible conflicts among the criteria of *Hellenismos* (see above § 4).

A position akin to Pindarion’s also emerges from a problematic passage of Ps.-Herodian’s *De soloecismo et barbarismo*.

ἔνιοι μὲν λέγουσιν ἑλληνισμὸν εἶναι τὸν ποιητὴν, ἔνιοι δὲ τὴν κοινὴν διάλεκτον, ἥτις ἐγένετο συνελθόντων τῶν Ἑλλήνων εἰς Ἴλιον, ἄλλοι δὲ τὴν ἐτυμολογίαν . . .

Some say that *Hellenismos* is the Poet, others that it is the ‘common language’ which arose when the Greeks gathered at Troy, still others etymology (311.5–10 Nauck).

The statement that “*Hellenismos* is the Poet” seems to allude to the predominance of Homeric authority as the criterion of good Greek, presumably without implying adoption of Homeric language in everyday usage.²⁴⁷ However, the text of the manuscripts has raised doubts among scholars. J. F. Boissonade conjectured τὴν ποιητικὴν (*sc.* τέχνην) (“the art of poetry”), instead of τὸν ποιητὴν, while A. Nauck proposed, albeit doubtfully, the alternative τὴν ποιητῶν (“the [language?] of the poets”).²⁴⁸ In both cases the criterion of literary authority appears to be invoked generically, without explicit reference to Homer. Likewise interesting is the idea that *Hellenismos* resided in the common language of the

Achaean heroes at Troy. That the Greek warriors all spoke the same language, unlike the case of their enemies on Trojan territory, is repeatedly underlined in the scholia. This concept lies on a different plane in comparison to the view, itself widespread in antiquity, that Homer as a poet combined different varieties of Greek into a common language.²⁴⁹ However, there is some suspicion that the redaction of the paragraph in question, which is not present in manuscript evidence from before the beginning of the 15th c., is of a late date²⁵⁰ (see above § 5.3).

General reference to literary usage and to Homer in particular also clearly emerges in the work of Apollonius Dyscolus,²⁵¹ who, having no interest in solving textual or linguistic problems in works of the ancients, used the latter, especially the Homeric poems, as a source of examples to support grammatical rules. The predominance of Homer is evident in Apollonius' repartee to a grammarian of the Augustan age called Habron, who supported a linguistic position by quoting examples from Plato diverging from Homeric usage: but, according to Apollonius, "the existence of a use in Plato is no more trustworthy than its absence in Homer" (*Pron.* 72.15–19). Furthermore, following the path indicated by Aristarchus, Apollonius reacted to the objection against the adoption of Homer as a model of *Hellenismos* by justifying the unusual forms or constructions in Homer's language either as poetic license (*σχημα*) or due to their antiquity (see above § 5.1).

A phenomenon in which, between the 2nd and 3rd c. AD, the literary tradition played a crucial role was linguistic Atticism, whereby the idea of language correctness was equated, *tout-court*, with adoption of a literary model. Here the reference point consisted of a canon covering a certain number of classical Attic authors, of which numerous versions existed; it sometimes included Homer as an example of a proto-Attic author (see above § 5.3).

The corresponding Latin criterion was identified as *auctoritas*,²⁵² with the most ancient description dating back to Varro (*fr.* 268 Funaioli). Analogously to the Greek sphere, *auctoritas* was understood as the final rule of language correctness, to be invoked when all others failed. Varro reasoned that this was because *auctoritas* derived from nothing other than an opinion founded on a reading of the ancient writers, who, challenged to justify their language choices,

were unable to provide an answer.²⁵³ The type of reference authors—only prose writers or also poets—and the period they belonged to constituted aspects on which Latin grammarians assumed different positions. Quintilian (*Inst.* 1.6.2) regarded the criterion of *auctoritas* as founded exclusively on orators and historiographers, ruling out poets because the latter, for metrical reasons, could resort to special forms or constructions; other scholars also countenanced poets as models of *auctoritas*, assigning an important role to Virgil (*e.g.* *Char. Gramm.*, *passim*). Decisions concerning model authors may also have been influenced by the various scholastic canons accepted in different periods.²⁵⁴ In particular, the issue of whether the authors considered should be ancient or recent interacted with the problem involving the relation between the criteria of *auctoritas* and *vetustas*, which Quintilian (*Inst.* 1.6.1) mentioned together. Conceivably, the two principles were to be interpreted in parallel with the way a grammarian such as Caper indicated the classical authors (*auctores*) and the preclassical poets (*veteres*), respectively.²⁵⁵ However, the fact that Quintilian mentioned Cato alongside more recent authors, in the paragraph on *auctoritas* (*Inst.* 1.6.42)—rather than on *vetustas*—casts doubt on this explanation. The treatment given by Quintilian himself suggests that *vetustas* more probably had the aim of guaranteeing occasional utilization of archaic words, recommended to orators to embellish and dignify their speeches, as compared to the normal principle of *consuetudo*, in which avoidance of such forms would have been advised (*Inst.* 1.6.39–41 and 8.3.24–30).²⁵⁶

6.4 *Etymology (and Dialect)*

Searching for the origin of a term to understand its true meaning was a characteristic of early philosophical reflections on language correctness and on the natural or conventional status of language.²⁵⁷ This tendency was in agreement with the remote practice of poets, from Homer onwards, whereby nouns, especially proper nouns, were considered significant and were explained through etymological procedures.²⁵⁸ Thus the investigation, central to Plato's *Cratylus*, on the correspondence between the form of a name and the reality it indicated was founded on an etymological study that traced words back to their primitive—or presumed primitive—constituent elements (397a–437d) (see

above § 2).²⁵⁹ In ancient practice, this reconstructive procedure frequently implied distortions of the signifier, often quite unrestrained, due to suppression, addition, transformation or movement of phonetic elements. This typological pattern of changes, known as ‘*quadripertita ratio*’,²⁶⁰ is widespread in rhetoric and ancient grammar, although it does not exhaust all the possibilities of complex systems like that of Aelius Herodian (see above § 5.2 and below). *Insouciance* as regards the alterations presupposed in etymological reconstruction, alongside a predominant interest in the philosophical value of such a practice, is found in the Stoics, who made massive use of etymology in the conviction that each word concealed within itself the meaning of the reality it indicated, which could be uncovered by reduction to the original sounds (πρώται φωναί)²⁶¹ (see above § 2).

For grammarians of the Hellenistic age, etymology was mainly applied to solve exegetic or textual problems of the Homeric poems, and was invoked both to explain rare or antiquated words and also to legitimate a spelling, form or prosody versus other alternatives in the literary texts commented upon. This was the case for Aristophanes of Byzantium, Aristarchus of Samothrace, who displays an uncommon quest for precision in the phonetic alterations implied by etymological reconstruction,²⁶² and Crates of Mallus, whose etymological analyses show predominant attention to the semantic aspect²⁶³ (see above §§ 3.1, 3.2, 3.3).

The considerable importance awarded to etymology in the *grammatike* of the Hellenistic age emerges from its mention by Dionysius Thrax as the fourth part of grammar (Sext. Emp. *Math.* 1.250, cf. *Techne* § 1; see above § 4); moreover, etymological investigation, sometimes associated with attention to dialect phenomena, appears as a constant in subsequent reflections on *Hellenismos*. This characteristic is observed in the only two known fragments of Περὶ ἑλληνισμοῦ by Philoxenus of Alexandria, who had also attempted a global etymological overview in his work *On monosyllabic verbs*. Here he traced words back—with the familiar *nonchalance* in distortion of the signifier—to a restricted number of monothematic verbs. These can be interpreted as conventional forms used by the grammarian to represent what we would call a

root syllable recognizable in the words of a given etymological group, symbolizing a semantheme common to the family.²⁶⁴ Attention to etymology and/or to dialect peculiarities clearly also emerges, in relation to *Hellenismos*, in the fragments of later grammarians, such as Tryphon of Alexandria, Seleucus of Alexandria, Minucius Pacatus Irenaeus (see above § 4).

More generally, the criterion of etymological research underlies the system of pathology that forms the basis of the entire linguistic mechanism conceived by Apollonius Dyscolus (see above § 5.1). A comprehensive theorization of the functioning of pathology, which must have constituted the foundation for subsequent etymological practice, was given by Aelius Herodian, who composed a treatise *Περὶ παθῶν* (“On language changes”) analyzing possible word modifications, probably starting from a more complex framework than the traditional ‘*quadripertita ratio*’ (see above § 5.2).

The same categories of pathology also came into play in the study of dialects, which was widely practiced in ancient Greek grammar, with particular focus on the specificity of a form in the various dialects.²⁶⁵ A grammarian like Tryphon, attentive to dialect varieties, devoted an entire treatise to investigating a specific *πάθος*, pleonasm, in a specific dialect, Aeolic. The relation of reflection on dialects to etymology was not limited to use of the same mechanisms: dialectology was considered useful to etymology since a particular dialect form was sometimes held to facilitate recognition of the origin of a word (*Sch. Lond. Dion. T. in GG I/III 470.18–20*). Furthermore, from a certain time onwards, dialect considerations became a veritable criterion of orthographic correctness of the standard common language (*koine*), as “the dialects ... reveal the correct spelling because of their modifications” (*Sch. Lond. Dion. T. in GG I/III 470.22–24*).²⁶⁶

The criterion of etymology, taken together with analogy as a tool of the technical part of grammar, was lambasted by Sextus Empiricus (*Math. 1.241–247*), who polemically declared that it had no *raison d'être* because it was superfluous when it agreed with common usage, and should be ignored when in conflict with the latter, exactly as occurs for analogy. Furthermore, Sextus launched an attack based on infinite regression: if one aims to demonstrate that a word is good Greek because the word it derives from is likewise good Greek, then it will be necessary to trace the etymological derivations back neverendingly: the etymological sequence could be interrupted only on encountering a term

264 Lallot [1991b].

265 Versteegh [1987], esp. 256ff.

demonstrably correct by virtue of a criterion other than etymology, and this reveals the pointlessness of etymology itself (see above § 4).

In the Latin world, etymology played a fundamental role in the work of Varro. In his vision, etymology, together with inflection and syntax, constitutes the first of the three aspects characterizing language (*Ling.* 8.1); it also appears massively in his other works, especially those of antiquarian interest (*Antiquitates humanae* and *Antiquitates divinae*, “Human antiquities” and “Divine antiquities”, *De agri cultura*, “On agriculture”). Varro’s etymological method is described mainly in books 5 and 6 of *De lingua Latina*,²⁶⁷ where he states that names were imposed on things following observation of the nature of reality, in order to make it manifest (*Ling.* 8.27). Accordingly, he believed there existed a close relation between words and the entity they designated, thus attributing a cognitive value to the etymological process, although he was aware of its limits. He acknowledged that the field of etymology is partly obscure because not every coined word (*impositio verborum*) has survived, some of the surviving terms have undergone distortions, some of the original forms are not Latin, and many words have undergone meaning change over time (*Ling.* 5.3). Furthermore, changes are not predictable and do not follow pre-established rules (only in some cases of derivation, like the creation of abstract nouns, can one appeal to an analogical proportion); therefore the ultimate origin of a word cannot always be determined. Even so, tracing back just a portion of the path that led to the formation of a term can be useful, allowing establishment of links between words and thus, in Varro’s framework, between the kinds of reality denominated by the terms. Such an achievement, in turn, increases knowledge on such aspects of reality. This accounts for the presence of etymology in Varronian works of antiquarian character: if some aspects of reality have been lost or forgotten, information concerning them can still be obtained by etymological examination of the name that identified them.

Considerations on etymology are also found in Quintilian, who explicitly associated them with analogy as a ‘rational’ criterion for language study (*Inst.* 1.6.1). Etymology could be adopted either to give a correct definition of a term, as this tool was useful to clarify the term’s meaning (*Inst.* 1.6.29), or, sometimes, to distinguish correct from ‘barbarous’ forms (*Inst.* 1.6.30), in which case etymology may become the handmaiden of *consuetudo* (see above § 6.2). But overall, Quintilian’s attitude to etymological investigation was somewhat skeptical (*Inst.* 1.6.32–38):²⁶⁸ he argued that scholars studying such phenomena went to great lengths to determine the true form of a word, with a variety

267 On the status of etymology in Varro’s thought, see above all Blank [2008].

268 Siebenborn [1976] 140, 146.

of methods, yet without achieving anything more than “the most hideous absurdities”.²⁶⁹ He thus held a decidedly disenchanting attitude, which, however, was destined to be superseded in later centuries when the Late-Antique and Byzantine world experienced a flourishing of studies and anthologies of an etymological nature.

7 Conclusions

We have outlined a chronologically vast and multifaceted field, which explored innumerable strands of enquiry according to the type of approach and the end pursued. The figures populating this universe are philosophers who sought answers to the nature and status of language, rhetors who investigated the vices and virtues of expression, philologists who scrutinized literary texts, and scholars who studied linguistic phenomena *stricto sensu*. Since the various figures involved in reflections on *Hellenismos* varied widely in their aims and methods, it is difficult to draw all-embracing conclusions. Nevertheless, some crucial nodes of the question can be highlighted. Perhaps the most important is the conflict between a very general and generalizing theoretical background, based on the search for unifying principles, versus recognition and treatment of individual linguistic facts. Abstractly speaking, *Hellenismos* should, in an all-embracing perspective, cover poetry as well as prose, the common language of the *koine* as well as the various dialects. For the Alexandrian erudites, however, it was in Homer that “everything concerning *Hellenismos* is perfect” (Aristarchus, see § 3.2). Accordingly, Homer became the underlying model for all possible rationalistically oriented examination of language (Ptolemy Pindarion, see § 4), whereas a philosopher like Diogenes of Babylon elected “expert and non ordinary usage” as his reference framework, stigmatizing “anything in contrast with the (language) customs of Greeks of good repute” as a negative example to be avoided (see above § 2). In this case, the rule to be observed was a *συνήθεια* embodied by an elevated *koine*, the standardized language fixed since the Hellenistic age as a means of communication of the institutions and the educated classes.

Another aspect that can clearly be perceived is the problem the authors faced in reconciling the different criteria that played a role in determining *Hellenismos*: how should usage, basically taken as elevated Hellenistic prose, be harmonized with the literary—primarily poetic—tradition? And with the strict deductions springing from application of the analogical method?

269 Transl. Butler [1963–1968].

In what cases should one or the other parameter be made to prevail? This dilemma was an easy butt of empirically inspired polemics against the quest for *Hellenismos* (Sextus Empiricus, see § 4): why appeal to criteria such as analogy and etymology when, demonstrably, the reference point of both of these was usage, and why invoke the literary authority if this results in forms or constructions so distant from usage as to appear ridiculous? The art of combining the different aspects without grotesque distortions was a tribute to the grammarian's intelligence. It was successfully achieved, perhaps, by the brilliant intellect of Apollonius Dyscolus, who devised a system which, while solidly grounded in rational knowledge of language and its rules (explicitly rejecting a purely practical approach: *Synt.* 1.60), admitted—albeit, not without painstaking reconstructions—irregular forms that had been accepted into general usage; at the same time he assumed a constructive and far from uncritical attitude towards the *auctoritas* of Homer and the literary tradition (see above § 5.1). Furthermore, the coexistence of rules and exceptions—of what can be explained rationally according to the rules, alongside what is right because “that’s the way it’s used”—is a quandary that inevitably confounds the approach to any language system. Here we have endeavored to show the kind of answers offered in this regard by the classical world.

1 Introduction: σύν-ταξις

1.1 *Syntax and Grammar*

Is syntax a part of grammar? Answers to this question, which might at first seem irrelevant, vary noticeably across the ages. Take the definition of grammar in Knowles' dictionary [2006]:

the whole system and structure of a language or of languages in general, usually taken as consisting of syntax and morphology (including inflections) and sometimes also phonology and semantics.

In this modern definition, syntax is clearly conceived as an integral part of grammar—it is even the first named, while phonology does not benefit from the same treatment.

Conversely, in the *Techne*, σύνταξις is absent from the enumeration of the six parts of grammar and does not appear elsewhere in the manual. If we consider two intermediary testimonies, we will see that the *Port-Royal Grammar*¹ includes a short chapter (24) entitled “On syntax, or the construction of words together”, while the *Greek Grammar* of Schwyzer-Debrunner is divided into two heavy volumes respectively entitled, 1. *Allgemeiner Teil, Lautlehre, Wortbildung, Flexion*, and 2. *Syntax und syntaktische Stilistik*.

This brief survey clearly shows that syntax, at first separate from γραμματική, makes a modest entrance into the latter notion (with Port-Royal), and is then installed with a dignity equal to that of phonetics and morphology (Schwyzer-Debrunner), before assuming the primary place (along with morphology but not phonetics) in a contemporary dictionary.²

¹ *I.e.* Arnould-Lancelot [1660].

² It is interesting to observe how matters have evolved in the Greek tradition. Babiniotis [1998] gives an initial definition of the γραμματική: “(in the traditional view) the study of the language from the point of view of its sounds, words (parts of speech, inflections) and etymology (by opposition to the study of the syntax and lexicon)”, then he adds another: “the ensemble of rules whose observance guarantees the good formation of words and phrases (morphology-syntax)”. The coexistence of the two definitions highlights the tension, in the Greek domain, between Alexandrian tradition and modern reorganisation. In practical terms, until very recently, the names of Greek works devoted to the language, both learned and for classroom use, faithfully reflect the ‘traditional view’: ‘Γραμματική’ treats sounds, letters, morphology, while ‘Συντακτικό’ treats syntax. (The *Λεξικό της κοινής νεοελληνικής*, dictionary of the Triantafyllidis Institute [1998], *s.v.* γραμματική, roughly reflects the same point of view as Babiniotis. The article juxtaposes without commentary three definitions: 1. a system of rules which describe the phonological, morphological and syntactic structure of a language;

1.2 *Apollonius Dyscolus, Obligatory Reference*

Whatever the organisation of the disciplinary field in which it was situated, syntax was not unknown among the Alexandrian grammarians. Our understanding of Alexandrian syntax, without direct access to more varied sources, rests essentially on our reading of the *Περὶ συντάξεως*—hereafter *Syntax* or *Synt.*—of Apollonius Dyscolus (2nd c. AD). It is to this work, then, that we refer almost exclusively in the present chapter.³ We may well regret this limitation to a single source, but, beyond the fact that it is imposed on us by the state of the documentation, we shall find good reasons to console ourselves. First, Apollonius frequently gives the opinions of his predecessors in order to discuss them, and second, he was recognised by the Latin and Byzantine traditions as the indisputable master on the subject of syntax⁴—we cannot seriously doubt that the source available to us is the best and most representative possible source.

Let us turn, then, to the Alexandrian master.

1.3 *The Programme of the Syntax*

In the first lines of the *Syntax*, Apollonius thus announces his programme:

In our previous lessons, we studied the doctrine of the word-forms (...). The study which now follows will treat the *syntaxis* of these forms, organised congruently into complete sentences; my intention, carefully considered, is to discuss the subject in depth, since this is absolutely necessary for the explanation of poetic texts. (*Synt.* I 1, 1.1)

Ἐν ταῖς προεκδοθείσαις ἡμῖν σχολαῖς ἢ περὶ τὰς φωνὰς παράδοσις (...) κατείλεκται ἢ δὲ νῦν ῥηθησομένη ἔκδοσις περιέξει τὴν ἐκ τούτων γινομένην

2. the discipline which treats the phonology, morphology and derivation of a language, also the corresponding manual; 3. a work which presents the rules describing the phonological, morphological and syntactic structure of a language. It is pleasant to state that this last definition is illustrated by an example: *The Neohellenic Grammar of M. Triantafillidis*—a work which does not include syntax!).

3. We will of course occasionally refer to what the author's other works tell us about syntax: the treatise *On Conjunctions* (*Περὶ συνδέσμων*), valuable for the syntax of complex phrases, the treatises *On the Pronoun* (*Περὶ ἀντωνυμίας*) and *On Adverbs* (*Περὶ ἐπιρρημάτων*), certain theoretical parts of which complete the content of the *Syntax*.

4. Priscian repeatedly calls Apollonius the greatest (*summus, maximus*) Greek grammarian; cf. *IG III 24.6: Graecorum doctissimi... et maxime Apollonius, cuius auctoritatem in omnibus sequendam putavi*. "the most learned of the Greeks..., and above all Apollonius, whose authority I have thought should be followed in all matters".

σύνταξιν εἰς καταλληλότητα τοῦ αὐτοτελοῦς λόγου, ἦν πάνυ προήρημαι, ἀναγκαιοτάτην οὔσαν πρὸς ἐξήγησιν τῶν ποιημάτων, μετὰ πάσης ἀκριβείας ἐκθέσθαι.

We may take two points from this preliminary text:

1. The object of syntactic study is the ‘complete sentence’ (αὐτοτελής λόγος) considered as a congruent (cf. καταλληλότης) arrangement (σύνταξις) of forms (φωναί). The reference to ‘preceding lessons’ gives us to understand that the ‘forms’ in question are none other than the eight μέρη λόγου ‘parts of the sentence’ to which Apollonius has devoted separate treatises. Thus, syntax appears closely united to the grammatical classification of words (μερισμός), which the *Techne* reveals to be a central task of γραμματική. It might be further said that syntax is the exact *synthetic* counterpart of the *analytical* procedure of grammar (in the strict sense).⁵
2. The deeper study of syntax is “absolutely necessary for the explanation of poetic texts”. Such an assertion, in a programmatic introduction, draws our attention to the strict overlap in ancient grammatical practice between ‘technical’⁶ grammar and philology:⁷ it was in response to their daily challenges as editors of past texts, and especially of poetic texts, that such great philologists as Aristophanes of Byzantium, Aristarchus, Dionysius Thrax and their rivals had to elaborate their τέχναι of reference. Apollonius explicitly situates his *Syntax* within this disciplinary setting: its aim is to help with the rigorous establishment and correct

5 This symmetrical relation between grammar and syntax clearly emerges from the passage of the *Techne* (chapter 11) where we find definitions of ‘word’ (λέξις, a term freely varied with μέρος λόγου in the *Techne*) and sentence (λόγος): Λέξις ἐστὶ μέρος ἐλάχιστον τοῦ κατὰ σύνταξιν λόγου. Λόγος δὲ ἐστὶ πεζῆς λέξεως σύνθεσις διάνοια αὐτοτελή δηλοῦσα “A word is the smallest part of a properly constructed sentence (κατὰ σύνταξιν, lit. ‘according to the [correct] arrangement’). A sentence is a combination (σύνθεσις, lit. ‘put together’) of words in prose conveying a meaning which is complete in itself” (Kemp’s translation). We will return later to the coexistence, in this double definition, of σύνταξις and σύνθεσις.

6 This epithet designates the systematic part of the grammatical discipline, which is recorded in the works, called τέχναι, composed by the τεχνικοί. These works, which aim at the methodical description of the constituent elements of (what we call) the *language*, are distinguished from another category of grammatical works, those devoted to the study of *texts* (typically, the ὑπομνήματα of Aristarchus). For definitions of *Techne grammatike* and typology of grammatical treatises see, respectively, Swiggers-Wouters (section 11) and Valente (section 11) in this volume.

7 See Montana, Swiggers-Wouters (section 11), and Pagani in this volume.

interpretation of the great texts of the Greek literary heritage.⁸ One is struck, in reading the work, by the importance it accords to the discussion of literary citations, the great majority of which are Homeric.⁹

1.4 Σύνθεσις / σύνταξις λόγου

The word σύνταξις, which gives its name to Apollonius' treatise, and which survives as a borrowing in modern languages, is found once in competition with σύνθεσις. In chapter 11 of the *Techne* (see n. 5), σύνταξις and σύνθεσις seem to coexist in free variation. The scholia on this passage are at a loss. Sometimes they condemn an improper usage of σύνθεσις, which they say should be applied only to the composition of nouns, the correct term for the juxtaposition of words being παράθεσις (*Sch. Dion. T.* 355.24). Elsewhere they construct an (*ad hoc?*) opposition between two terms, where σύνταξις refers "only to the agreement of parts of speech" while σύνθεσις refers to the structure of thought: σύνθεσις τῶν λέξεων ἢ διάνοια (*ibid.*, 214.9). It is more probable that the two definitions which match λέξις (part of λόγος) and λόγος (formed from λέξεις), perhaps inherited from distinct sources, both retain the traces of a former synonymy, which later usage eliminated in principle by specifying σύνθεσις in the sense of nominal composition. Despite this, a variation in the use of the two terms has persisted—see, in Apollonius himself, *Synt.* III 14, 280.3, *Conj.* 214.7, 221.19. We recall also that Dionysius of Halicarnassus' treatise on stylistic composition is entitled *Περὶ συνθέσεως ὀνομάτων*.

Σύνταξις etymologically includes the idea of *order* or *rank* (τάξις), specified by the associative prefix συν-, a little redundant in this case, which adds the sense that the order governs the arrangement of a whole. Apollonius did not invent the word. As an action-noun derived from the verb συντάττω "put in order together" (*LSJ*), σύνταξις is well attested in the classical era in various senses (military, political, literary, etc.), all related by the common seme of "ordered arrangement"—the formation of an army, institutional structure of a régime, organisation of the constituent parts of a text, and so on. The Stoic philosopher Chrysippus had written a treatise in four books entitled *Περὶ συντάξεως τῶν λεγομένων*, without any doubt devoted to the logical analysis of propositions. A similar use of σύνταξις in a linguistic sense prepared the word for its

8 This rooting of grammar in philology doubtless explains a good part of why Alexandrian grammar was exclusively a grammar of *Greek*. The questions to be resolved were posed by Greek texts, and the scholars who attempted to answer them, even if they were polyglot in Hellenistic and Roman Alexandria, never dreamed of leaving the strictly Hellenic field which defined their corpus.

9 See Pagani in this volume.

entry into the technical vocabulary of the grammarians. In adopting it many centuries later—centuries which were particularly fruitful in the domain of grammar—and in making it the title of his treatise, Apollonius charged the word ‘syntax’ with precise grammatical connotations which remained so strictly attached to it that it could cross the centuries without being obscured by Latin adaptations¹⁰ or other modern forms. It is certain that, for Apollonius, the seme of ‘order’ carried by τάξις helped to justify the adoption of the composite σύνταξις: in his view, order had a particular relevance to everything concerning language and its description (metalanguage). To construct a sentence or compose a grammar did not involve accumulating or heaping up, but lining up, arranging and ordering.

2 Congruence (καταλληλότης)

Every arrangement presupposes a principle. The principle which governs syntactic arrangement is called καταλληλότης, that is, “mutual” (-αλληλο-) “agreement” (κατ-), or “congruence”. This word and others of the same family—the adjective κατάλληλος “congruent” and its antonym ἀκατάλληλος “incongruent”, the derived adverb (ἀ)καταλλήλως “(in)congruently”, the noun ἀκαταλληλότης or ἀκαταλληλία “incongruence”—are attested 107 times in the surviving works of Apollonius, and it is telling that, with only six exceptions, all of these instances are found in the *Syntax*. Congruence is a fundamentally semantic notion: if, as is said at the outset of the *Syntax* (p. 3.1), ἐκ τῆς καταλληλότητος τῶν νοητῶν ὁ αὐτοτελής λόγος “the complete utterance comes from the congruence of mental objects”, then it is rather things of the realm of thought (νοητά) that should be arranged in a congruent manner. What are these νοητά? Of what nature is the congruence to which they should be subject?

2.1 Conjoined Signifieds (παρυφιστάμενα νοητά)

Apollonius does not define the νοητά. More problematically, apart from its three occurrences in *Synt.* 1.2, this substantivised participle of the verb νοεῖν is completely absent from the grammarian’s surviving works. We therefore have

10 *De constructione sive ordinatione* is the title given by Priscian to Books XVII and XVIII of his *Grammatical Institutions*, in which he treats a great part of the material of the *Περὶ συντάξεως* of Apollonius. The more faithful Latin calque of σύνταξις would have been *coordinatio*, but one does not find this word among the Latin grammarians; the introduction of *coordination* into French grammatical vocabulary, notably in the syntagm *conjonction de coordination*, is very late (1888).

no choice but to find out what it means for ourselves. Many modern interpreters have understood it as an altered form of the Stoic λεκτά or “expressibles”.¹¹ Although plausible in itself, this connection is only of limited help to us, since it does not explain why Apollonius might have substituted the one word for the other, abandoning the Stoic usage of a technical term of dialectics which has no place in grammar.¹² On the other hand, Apollonius himself somewhat clarifies the term νοητόν by inserting it, a little later, into the syntagm τὸ ἐξ ἑκάστης λέξεως παρυφιστάμενον νοητόν “the νοητόν which is the signified conjoined to each word” (*Synt.* I 2, 2.10). What is he talking about?

Without any possible doubt, he is referring to the lexical signification of words constructed to form an intelligible utterance. But also, at a more abstract level, to the categorial signifieds attached to the “parts of the sentence” *such as they are*. The partition of the λόγος effectively produces lexical entities which are differentiated functionally and predisposed to play a certain role in syntactic construction. Thus it is because two words are a noun and a verb that they can combine to form a complete proposition: ἄνθρωπος ἔπεσεν “(a) man fell”. Again, it is because ὅς is a postpositive article (*i.e.*, a relative pronoun) that it can connect a noun to a secondary verb which follows it: ἦλθεν γραμματικός ὅς διελέξατο, “a grammarian has arrived **who** has argued” (*Synt.* I 143); it is because παρά is a preposition that it can precede a noun, either in juxtaposition: παρά νόμον, “against (the) law”, or in composition, παράνομος, “illegal” (*Synt.* IV 13), and so on. No congruence is possible if we are unaware of the functional predispositions of the parts of the sentence—for instance, if we put a prepositive article in place of the postpositive: *ἦλθεν γραμματικός ὁ διελέξατο, “* a grammarian has arrived **the** has argued”.

But this is not all: the “signifieds conjoined” (παρυφιστάμενα) to words include also the grammatical significations linked to the ‘accidents’ (παρεπόμενα) of the parts of the sentence, and notably those which are inflected. The inflecting form indicates number, case and gender for the constituents of the nominal group (noun, participle, article, pronoun), and person, number, tense, mood and diathesis for the verb (and partially for the participle). Bearing these

11 Cf. Frede [1987a] 354f.: “In translation, Apollonius would say: corresponding to each word there is an element in the *lekton*; in putting the words together we put the elements of the *lekton* together, *i.e.*, construct a *lekton*. Whether we get a syntactically proper sentence depends on whether the *lekton* we construct satisfies the syntax of the *lekta*.”

12 Λεκτόν is absent from the *Syntax*. Apollonius uses it sometimes in his other surviving treatises, always in the same kind of context: when he underlines that a phonetic accident (typically, aphaeresis of an initial vowel, for instance in κείνος for ἐκείνος) affects only the form (φωνή) of a word, never its sense (λεκτόν).

significations, the inflected forms when constructed together must obey the rules of what we would call ‘co-occurrence’. Although the distinction is not made by Apollonius, it may be a question of the rules concerning either, to use the terms of Port-Royal (Arnauld-Lancelot [1660] chap. 24), the syntax of *convenance* (agreement in case and number between an adjective and the noun which it determines, or in person and number between a verb and its nominative term (subject); restriction in the usage of adverbs of time depending on the verbal tense;¹³ etc.) or the syntax of *régime* (distribution of the oblique cases assigned to verbal or nominal determination; governance of prepositions, etc.). The “fundamental cause of incongruence” (συνεκτικωτάτη αἰτία τοῦ ἀκαταλλήλου), Apollonius tells us (*Synt.* III 13, 279.5), lies in the incorrect combination of inflected forms.

2.2 *Solecism*

This incorrect combination is called “solecism” (σολοικισμός).¹⁴ The verbs σολοικίζω and βαρβαρίζω have been known since Herodotus (III 57, IV 117), where they mean “to speak (Greek) badly”. In Aristotle σολοικισμός and βαρβαρισμός also denote vices of language, the former an abuse of rare words (*Poet.* 1458a26), the latter an incorrect, “barbarous” utterance (*Soph. el.* 165b20). It is apparently with the Stoics that the two words formed a contrasted couple (cf. D. L. VII 59), later adopted by the grammarians. Barbarism is when a lexical form deviates from good usage, solecism when a proposition is constructed in an incongruent manner: λόγος ἀκαταλλήλως συντεταγμένος (Diog. Bab. *ap.* D. L., *l.c.*), the Stoic formula faithfully reflected in Apollonius (*Synt.* I 8, 7.12): τῶν στοιχείων τοῦ λόγου ἀκαταλλήλως συνελθόντων.

Reflection on the solecism leads Apollonius to observations of the greatest importance for syntactic theory. The one concerns the limits of syntax, the other the limits of incongruence.

2.2.1 Error of Syntax and Error of Deixis

The Alexandrian grammarians debated the following problem: does one commit a solecism when, upon being struck by a woman, one declares, “He has struck me”? Apollonius’ response to this question is neat and categorical (*Synt.* III 10): by contrast to “*She have struck me”, which is an obvious solecism (a mismatch in number between the verb and the subject), “He has struck me”

13 In this last case, the congruence is established between verbal inflection and adverbial lexemes.

14 Cf. Pagani in this volume.

is an utterance which is irreproachable in itself. The choice of a masculine deictic to refer to a feminine being has nothing to do with the domain of syntax:

Incongruence and congruence lie not in the referents, but in the construction of words which must adapt their form to the necessities of correction (275.6)

οὐ (...) ἐν τοῖς ὑποκειμένοις τὸ ἀκατάλληλον ἐστὶν ἢ κατάλληλον, ἐν δὲ τῇ συντάξει τῶν λέξεων, αἷς παρέπεται τὸ μεταποιεῖσθαι εἰς τὸ δέον.

The inflectional adaptation (μεταποιεῖσθαι) of words in construction is therefore the keyword of congruence. On this point, Apollonius is inflexible. Thus, the famous rule in our grammars, τὰ ζῶα τρέχει, literally “the animals runs”, meaning that in Greek a neuter plural subject takes a singular verb, seemed to him an utter outrage; all he can say about it is that here the solecism is masked by the lack of morphological differentiation between nominative and accusative in the neuter case, which makes γράφει τὰ παιδιά (“draws” + “the children”) a correct construction if we interpret it as “<(s)he> draws the children” (which is possible in Greek) (*Synt.* III 50–53).¹⁵

2.2.2 A Limit of Incongruence: “Formal Coincidence” (συνέμπτωσης)

There is, however, one case where the demands of congruence must be relaxed: when, due to a deficiency of the morphology, the perfect mutual adaptation of the words is made impossible. Examples of this are numerous;¹⁶ one will suffice to illustrate the principle. One of the functions of the pronoun is to distinguish the three grammatical persons. But it happens that, for the first person plural, Greek can use the reflexive ἑαυτοῦς which is formally in the third person, literally, “themselves”: ἑαυτοὺς ὑβρίσαμεν lit. “we insulted themselves”, meaning “we insulted ourselves”. Apollonius (*Synt.* III 23, 290.5) writes:

15 Hardly convincing in itself, this explanation loses all relevance when the verb is intransitive and so forbids any interpretation of the neutral form as a complement of the object: τρέχει τὰ παιδιά = “(s)he runs the children”. Thierfelder [1935] n. 23 reproaches Apollonius for wanting at all costs to explain “a construction which is completely irrational in the eyes of a scholar ignorant of comparative grammar”. One imagines that Apollonius, ignorant of comparative grammar, could ask the modern grammarians, who are familiar with it, if it is fully satisfying to explain a disconcerting common turn *solely* by comparative diachrony.

16 Apollonius studies a long series of them, *Synt.* III 22–34.

the usage would be wrong if there existed an *ἔμαυτούς [1st pers.] to reveal the mistake in grammatical person. Such a proof being impossible, the construction of ἑαυτούς applied to persons [other than the 3rd] is irreproachable.

ὄπερ ἦν ἂν ἐν κακίᾳ, εἰ διηλέγγετο ὑπὸ τοῦ ἔμαυτούς ὡς παρὰ τὸ πρόσωπον ἡμαρτημένον. ἀνεξέλεγκτον οὖν καθεστῶς ἀδεεστέραν τὴν σύνταξιν κατὰ τῶν προσώπων ἐποιήσατο.

The example presented here, regarding which a modern would doubtless speak of ‘neutralisation’, is described by Apollonius in terms of συνέμπτωσις, literally “coincidence”, the theoretical plurality of the forms of a paradigm being reduced to one which, because of this fact, becomes legitimately multifunctional: if *ἔμαυτούς existed, it would ‘betray’ ἑαυτούς ὑβρίσαμεν as incongruent. In its absence, congruence is saved, and the incongruence is only apparent.

In picking out the phenomenon of “coincidence”, the grammarian avails himself of a powerful instrument for revealing that propositions which at first glance seem incorrect are in fact well-formed. Rigorously described and wisely used, this instrument would appear a major weapon in the arsenal of Alexandrian syntax.

3 The Scheme of Functions

The object of syntax is, as we have seen, the study of the λόγος (understood as an assemblage of words to form a complete sense) αὐτοτελής (literally “that which is its own end”, or in other words, that which has no place for any suspense, that which is ‘fastened’—the metaphor of closure often designating syntactic completeness, for instance at *Synt.* I 14, 16.13, on the minimal form of noun (subject) + verb: πᾶς λόγος ἄνευ τούτων οὐ συγκλείεται “without these (two constituents) no λόγος is fastened”). Thus described, the λόγος corresponds rather well to what we call a *sentence*, “A series of words in connected speech or writing, forming the grammatically complete expression of a single thought” (*OED*). Hence the translation chosen here of μέρος λόγου as “part of the sentence”, rather than “part of speech”, the traditional calque of the Latin *pars orationis*.

We have seen above that the parts of the sentence are not a raw material, but rather that each is associated with what we labelled earlier ‘functional pre-disposition’. We must now attempt to define how the Alexandrian grammarian

envisages the ‘functions’ which permit the λόγος-sentence to be formed.¹⁷ It is easy to present the production of a sentence like the playing a game of construction, the game pieces being the parts of the sentence.¹⁸

3.1 *Noun and Verb: Natural Harmony*

The description of the kernel at the base of a sentence goes back to Plato in the *Sophist* (262c), who designates it as (λόγος) πρῶτος τε καὶ σμικρότατος “the first and minimal (sentence)”: a noun in the nominative followed by a verb in the third person, the noun and verb being of the same number: ἄνθρωπος περιπατεῖ “(a) man walks”. The association of the noun (subject), ὄνομα, and the verb (predicate), ῥήμα, is somehow founded in nature on the relations of agent-action (πράττων-πράξις, Plato) or substance-accident (οὐσία-συμβεβηκός, Aristotle): the minimal phrase of (NOMINAL) SUBJECT + (VERBAL) PREDICATE reflects in its own quasi-iconic way the extralinguistic situation in which a substantial entity is affected by a quality, or engaged in an action, which is ‘accidental’. The natural harmony between the noun (subject) and the verb is manifested by the remarkable absence of any conjunctive link between them in an expression:

there is between the noun and the verb a natural harmony which does not involve conjunction (...); just as, in effect, form and matter are linked to each other without conjunction, so the noun has a natural harmony with the verb (*Sch. Dion. T.*, 515, 36)

(τὸ ὄνομα καὶ ῥήμα φυσικὴν τινα ἀρμονίαν ἔχει μὴ δεομένην συνδέσεως (...). ὡς περ γὰρ πρὸς ἀλλήλα ἔστι συνημμένα τὸ τε εἶδος καὶ ἡ ὕλη χωρὶς συνδέσεως, οὕτω τὸ ὄνομα μετὰ τοῦ ῥήματος φυσικὴν τινα ἀρμονίαν ἔχει).

Given this ontologically primary and ‘natural’ link, the entire syntax of a sentence is described as the result of a process of enrichment by accretion, in which all other parts of speech find their usage and justification.

17 The term ‘function’ is used here as a handy and familiar generic word for the modern reader. But we must point out that no single term corresponds to it in the Alexandrian metalanguage.

18 This metaphor is not at all anachronistic: ancient grammarians happily compared the sentence to a material artefact—notably to a ship, in which they distinguished the “parts” properly called (the hull, the rudder, the tackle) from the joining materials (pitch, oakum, nails): likewise the sentence includes parts properly called and conjunctive elements (*Sch. Dion. T.*, 515, 21).

3.2 *Accompaniment and Replacement*

For Apollonius, the first division of functions which appears in the process of enrichment is that between *accompaniment* and *replacement*:

Since all the other parts of the sentence depend on the construction of the verb and the noun (...), we must examine the usage of each, whether it is to accompany or replace them, or both, as for instance, pronouns can replace nouns and accompany them, or again, participles can replace verbs and accompany them, and so likewise for the others parts of the sentence. (*Synt.* I 36, 33.9)

Ἐπεὶ οὖν τὰ ὑπόλοιπα τῶν μερῶν τοῦ λόγου ἀνάγεται πρὸς τὴν τοῦ ῥήματος καὶ τοῦ ὀνόματος σύνταξιν (...), δεόν διαλαβεῖν περὶ ἐκάστου τοῦ τε συμπαραλαμβανομένου καὶ τοῦ ἀνθυπαγομένου ἢ καὶ συμπαραλαμβανομένου, ὡς αἱ ἀντωνυμῖαι ἀντὶ τῶν ὀνομάτων καὶ μετὰ τῶν ὀνομάτων, καὶ ἔτι αἱ μετοχαὶ ἀντὶ τῶν ῥημάτων καὶ μετὰ τῶν ῥημάτων, καὶ ἐπὶ τῶν ἐξῆς μερῶν τοῦ λόγου.

- In the domain of the noun,
 - The function of accompaniment is fulfilled by the article above all. More specifically, the article indicates that the noun which it accompanies refers to something already known (προϋφεστῶσαν γνῶσιν, 41.12); this is its anaphoric value shared by the prepositive article: ὁ ἄνθρωπος “the man (already known)” and the ‘postpositive’ article (for us the ‘relative pronoun’), ὁ ἄνθρωπος ὃς ἦλθεν “the man **who** has come”.
 - As its name indicates, the *pro-noun* (ἀντ-ωνυμία) has the function of replacing the noun: “Dionysius came. *He / this one* spoke”. But some of the Greek pronouns (demonstratives, possessives) can also be used as determinants of the noun, and so with an accompanying function: “A grammarian came. *This* grammarian spoke”.
- In the domain of the verb,
 - The function of accompaniment belongs naturally to the *ad-verb* (ἐπίρρημα), which is to the verb what the adjective is to the substantive: a term added (ἐπι-) to the verb (ῥήμα), a more fundamental (θεματικώτερον) constituent than it, and whose presence it presupposes, since a phrase like “Dionysius wrote well” can be reduced to “Dionysius wrote” but not to “*Dionysius well”.¹⁹ Its position in the hierarchy subordinate to the verb is a defining feature of the adverb, and can be expressed in other terms: the

19 *Synt.* I 27, 27.6: τὸ ἐπίρρημα δυνάμει ἐστὶ ῥήματος ἐπιθετικῆς σύνταξης, “the adverb is potentially an adjective constructed with a verb”, cf. *Adv.* 120.19–122.27. The presence of

adverb predicates (*κατηγορεῖ*, *Adv.* 120.19) the forms of the verb, that is, brings a complement to the main verbal predicate.

- The function of replacement is fulfilled by the *participle* (*μετοχή*), a form with nominal inflection constructed on a verbal root, which puts its noun-like morphosyntax in the service of verbal expression. If Agamemnon fought (*ἐπολέμησεν*), and then vanquished (*ἐνίκησεν*), a syntactic rule forbids juxtaposing the two verbs in asyndeton **Ἀγαμέμνων ἐπολέμησεν ἐνίκησεν* “*Agamemnon fought vanquished”, but the participle, by replacing the first verb, solves the difficulty: *Ἀγαμέμνων πολεμήσας ἐνίκησεν* “Agamemnon, **having fought**, vanquished”,²⁰ for nothing prevents the juxtaposition of two declined words in asyndeton: *ὁ ξανθὸς Μενέλαος ἐπολέμησεν* “the blond Menelaus fought”.²¹ We can also see that, although it came about to replace the verb, the participle, thanks to its nominal inflection, acquired the ability to accompany the noun (*Ἀγαμέμνων πολεμήσας*) and the verb (*πολεμήσας ἐνίκησεν*) simultaneously; this latter capacity of the participle is indicated succinctly in *Synt.* I 36, cited earlier: “the participles can replace the verbs and accompany them”.
- Without limitation of domain, the *preposition* (*πρόθεσις*) is a pre-posed accompaniment. Its particularity, intrinsic to its status as a part of the sentence, resides in its double syntactic ability: employed as an autonomous word in juxtaposition (*παράθεσις*), or fused to the word which follows in composition (*σύνθεσις*). The function of accompaniment is thus diversified by sharing it out between syntax properly speaking (juxtaposition of autonomous words) and word-formation (composition).

At the last count, all these parts of the sentence appear subject, in their syntactic employment, to a small number of distributive principles: the noun and the verb are naturally predisposed to associate with each other to form the

σύνταξις in the description of the adverbial function highlights the great relevance of the syntactic criterion when trying to identify the adverb.

20 The example is taken from *Sch.* Dion. T., 415.27. On the service rendered by the participle, see also *Synt.* I 136–137.

21 This last example highlights in passing that there is, among the nouns, a sub-class which has the purpose of accompanying other nouns and that, therefore, while Alexandrian grammar did not isolate the adjective to make it an autonomous part of the sentence, it nonetheless recognised a difference in function between two kinds of noun, later called substantive and adjective noun. It is only because *ξανθός* is of the second kind that it can be juxtaposed with *Μενέλαος*, which is of the first. It will be noted that ‘substantive’, as a designation of a kind of noun, is foreign to Alexandrian grammar, and it is only for convenience that we here use this anachronistic term.

predicative kernel of the sentence; the participle and the pronoun serve the function of replacement; and the article, adverb and preposition function as accompaniments. All, that is, except one: the conjunction stands alone, its specific function being not to assemble words into sentences, but to join sentences together (*Synt.* I 14, 17.5).

3.3 *Transposition (μετάληψις)*

The functional scheme just presented may give the impression of a somewhat mechanistic analysis of syntactic functioning: one place for each word (part of the sentence), one word for each place—the taxonomy (μερισμός) conditions the syntax. But a corrective to this mechanism is manifested when the syntax dislodges the μερισμός, that is, when one word changes its class as a result of its construction. A typical case is that of the article deprived of the noun which it normally accompanies, for instance *Il.* I 12 ὁ γὰρ ἦλθε θοὰς ἐπὶ νῆας Ἀχαιῶν “he [lit. ‘the’] came to the swift ships of the Achaeans”, where, according to Apollonius (*Synt.* II 31), the ellipsis of the name Χρύσης from the base phrase ὁ γὰρ Χρύσης ἦλθε . . . (lit. “the Chryses came . . .”) has caused a transposition (μετάληψις) of the article into a pronoun. At § 33 of the same book, Apollonius enumerates other cases of “parts of the sentence which, abandoning the construction which is proper to them (μετατεθέντα τῆς ἰδίας συντάξεως) to assume the [functions] proper to another, receive the appellation of the latter”: nouns (adjectives or appellatives) becoming adverbs—κάλλιστα “very well”, ἰδίᾳ “in private”, κύκλῳ “around in a circle”—participles becoming nouns—εἰμαρμένη “destiny”—etc. The transposition thus introduces an element of fluidity into the syntactic mechanism.

3.4 *Syntactic Relations*

The syntactic aptitudes just mentioned evidently do not suffice to describe how words are arranged into sentences: we still have to specify *which relations* hold words in construction. It is striking that at the level of elaboration of syntactic reflection observed in Apollonius, the vocabulary for relations between words in construction is excessive and imprecise. The *Syntax* gives us the impression that the formation of a sentence occurs by *accretion*—one word, then another, and so on immediately being added to those which are already present in the basic minimal utterance. Instructive in this regard is the exercise which Apollonius conducts (*Synt.* I 14) on the sentence ὁ αὐτὸς ἄνθρωπος ὀλισθήσας σήμερον κατέπεσεν, lit. “the same man, having slipped today, fell down”, devised especially so that all the parts of the sentence (in Greek) are represented once each. The exercise consists in deconstructing the sentence piece by piece to highlight that nothing is indispensable to it except the minimal NOUN + VERB

kernel ἄνθρωπος ἔπεσεν, lit. “(a) man fell”, which constitutes by itself a finite sentence. The exercise is certainly artificial and is given as such, but it suggests the idea that the natural construction of a sentence follows the reverse path: that, onto the base of a minimal predicative utterance, one ‘adds’ other parts of the sentence, depending on the sense to be expressed. Thus the noun ἄνθρωπος “man” is enriched with the anaphoric article ὁ “the” if the man being spoken of is already known. The verb employed by Apollonius here is προσλαμβάνει—the noun “takes additionally” an article. This verb, understood literally, simply indicates that there is also, beside the noun, an extra word; it is interesting to note that προσλαμβάνω is also used frequently to mean that a word is augmented by a letter, a simple phonetic addition affecting only the signifier. The verb, then, describes the occurrence of a supplementary segment in a chain, without naming the specific relation it entertains with the pre-existing segment which “takes it additionally”.

The corollary of this *additive* conception of syntax is that the immediate proximity of two words implies a relation between them—that the first “goes with” / “has a bearing on” / “is connected to”²² the second. We find a striking example of this in *Synt.* III 72, where Apollonius treats as ADVERB + INFLECTED PRONOUN “constructions” the sequences εἶθε ὑμεῖς / ὑμᾶς / ὑμῶν “ah! if you (nomin./ acc./ gen.)” in εἶθε ὑμεῖς ἀκούοιτε “if you would only listen!”, εἶθε ὑμᾶς θεάσαιτο “if he would only look at you!”, εἶθε ὑμῶν ἀκούοι “if he would only listen to you!”. Such an analysis is not isolated;²³ it doubtless betrays a rather naive first interpretation of syntax as a concatenation of words side by side. But it also occurs to Apollonius to dispel an illusion, in showing that effective relationships can be established at a distance; thus, in *Synt.* I 100–104, he shows with great rigour that, in the sequence ὁ ἐμὸς πατήρ, lit. “the my father”, the article ὁ “the”, contrary to Habron’s claim, is attached not to the first-person pronoun ἐμ- present in the possessive ἐμός which it immediately precedes, but to the noun πατήρ—a crucial demonstration to confirm the general rule that pronouns do not enter into σύνταξις with an article placed before them (I 95–97). From this it is clear that, for Apollonius, the syntactic and syntagmatic levels remain distinct.

22 Rather unspecific notions expressed by various verbs and little or not at all differentiated from a semantic perspective cf. Lallot [1997] I, 67.

23 The plan of Book IV of the *Syntax* is another example. The list of possible sequences PRÉPOSITION + such or such parts of the sentence shows clearly that, by “construction”, one must understand here the material contiguity of the preposition with the word that follows, even if it is an article (IV 54), without asking if any kinds of rapport other than contiguity might be established between two contiguous words, and, if so, of what nature.

The fundamental constituents of the minimal phrase *NOUN + VERB* can therefore be enriched with various determinations by the addition of supplementary words (articles, adverbs, prepositions) or suppletives (participles and pronouns). But what about the minimal phrase itself: how is its relational structure described? Perhaps surprisingly for a tradition which produced the conceptual and terminological *subject-predicate* couple (Aristotle's ὑποκείμενον-κατηγορούμενον),²⁴ the relation of a noun subject to a verb predicate is not designated by any specific terminology. Apollonius describes a sentence like ἄνθρωπος περιπατεῖ, "(a) man walks", as the construction of a noun in the direct case (πτῶσις εὐθεῖα, the usual designation of the nominative) with a verb in a relation of σύννοδος. The word σύννοδος is attested only in the *Syntax*, where it appears 12 times (plus three times in its verbal derivative συνοδεύω); it is also applied to the relation of the article to the noun (116.7), of the particle ᾧ to the vocative which follows it (66.7), and of the accusative to the transitive verb which requires it (121.1), to the junction of the two elements in a compound (450.10; cf. 447.1 and 482.8), or even to the lack of distinction between genders in the morphology of the noun (35.13). It is therefore a rather unspecific term which, like many others compounded in συν-, means that the words "go together". Meanwhile, in the privileged phrase σύννοδος τοῦ ῥήματος (40.17; 213.4; 451.7; 472.5, 8 and 9), the unremarkable σύννοδος seems to acquire a precise meaning: here it designates the agreement in person and number (between a verb and its subject) founded on the co-reference between nominal and verbal person, characteristic of the minimal phrasal kernel. It is worth citing here the passage of the *Syntax* where Apollonius explains the fact that, in the canonical list of the parts of the sentence, the pronoun does not immediately follow the noun,

despite the fact that the pronoun is substituted for the noun so that, in being connected to the verb in turn, it holds the sentence together. An illuminating explanation would be that the pronouns were invented to agree with the verbs. (I 19, 20.3)

εἶγε κατὰ ἀμοιβὴν τοῦ ὀνόματος πάλιν σὺν τῷ ῥήματι συνέχει τὸν λόγον. Περὶ οὗ ἂν προφανῆς ἀπόδειξις γένοιτο ἥδε, ὡς ἔνεκα τῆς τῶν ῥημάτων συνοδου ἐπειροήθησαν αἱ ἀντωνυμῖαι.

This is an allusion to the account given in *Synt.* II 40–44 of the origin of the pronouns, invented to replace nouns incapable of entering into σύννοδος with

24 Cf. Arist. *Cat.* 3, 1b9–15.

verb-forms in the first and second persons. The τῶν ῥημάτων σύνοδος ‘σύνοδος of the verbs’ thus designates here the specific agreement between subject and verb, in which the nominative form, associated with the verb in the same person (σὺν τῷ ῥήματι), holds a λόγος together (συνέχει τὸν λόγον), that is, generates a sentence.

Is this to say that Apollonius fully apprehended and rigorously outlined the positions of the subject and predicate? Another passage provides the answer to that question. Reasoning upon classroom examples, the grammarian asks himself, When are the names of the letters accompanied or not by the article? It should be said immediately that, according to a modern analysis, the absence of the article in τοῦτο α ἔστί “this is (an) alpha” and its presence in τὸ α δίχρονόν ἐστι “the alpha admits of two quantities” are explained by the fact that “alpha” is a predicate in the first sentence and the subject in the second. What does Apollonius tell us?

The letters in both the direct case and the accusative can be employed either without or with the article.

- 1) Without the article, when we say τοῦτο α ἔστί, τοῦτο β ἔστί “this is (an) alpha, that is (a) beta”, with the direct case understood, as when we say τοῦτο ἄνθρωπός ἐστι “this is (a) man (nomin.)”, τοῦτο ἵππος ἐστί “that is (a) horse (nomin.)”. This we learn also from the agreement of the verb, which goes with the direct case. Now the accusative: τοῦτο α προσαγορεύει ὁ διδάσκαλος, τοῦτο β “the teacher calls this ‘alpha’, that ‘beta’”. Here the transitivity of the verb applies to τοῦτο β “that ‘beta’” and the letter is conceived in the accusative, as if we should say: τοῦτον τὸν χαρακτήρα σημαίνει ὁ διδάσκαλος “the teacher is indicating this letter (acc.)”.
- 2) With the article. When we say τὸ α δίχρονόν ἐστι “the alpha admits of two quantities”, τὸ α τελικόν ἐστι θηλυκῶν, καὶ οὐδετέρων “the alpha is a final letter of feminines and neuters”, and, in the accusative: τὸ α ἀπήλειψεν ὁ παῖς “the child rubbed out the alpha”, this corresponds to τὸν χαρακτήρα ἀπήλειψε “he rubbed out the letter (acc.)”. (*Synt.* I 46)

Τὰ τοίνυν στοιχεῖα ἐν εὐθείᾳ καὶ αἰτιατικῇ ἤτοι χωρὶς ἄρθρου λέγεται ἢ σὺν ἄρθρω. καὶ χωρὶς μὲν ἄρθρου, ἡνίκα φαμέν οὕτω, τοῦτο α ἔστί, τοῦτο β ἔστί, νῦν εὐθείας νοουμένης, ὡς εἰ καὶ τις φαίη τοῦτο ἄνθρωπός ἐστι, τοῦτο ἵππος ἐστί. διδάσκει καὶ ἡ τοῦ ῥήματος σύνοδος, συντεινούσα ἐπὶ τὴν εὐθείαν. κατὰ δὲ αἰτιατικὴν, τοῦτο α προσαγορεύει ὁ διδάσκαλος, τοῦτο β, πάλιν ἐκ τῆς μεταβάσεως τοῦ ῥήματος συντεινούσης ἐπὶ τὸ τοῦτο β καὶ τοῦ στοιχείου νοουμένου κατ’ αἰτιατικὴν, ὡς εἰ καὶ οὕτως ἀποφαινοίμεθα, τοῦτον τὸν

χαρακτήρα σημαίνει ὁ διδάσκαλος. σὺν δὲ ἄρθρω, ὅτε οὕτω φαμέν, τὸ α δίχρονόν ἐστι, τὸ α τελικόν ἐστι θηλυκῶν, καὶ οὐδετέρων, καὶ ἔτι κατ' αἰτιατικὴν, τὸ α ἀπῆλειπεν ὁ παῖς, ὡς εἰ καὶ τὸν χαρακτήρα ἀπῆλειψε.

I commented on this in Lallot [1997] II, p. 33: “It is particularly clear throughout this passage that Apollonius is reasoning exclusively in terms of *case*, and never of *function*. Neither in τοῦτο ἄνθρωπος, nor later in τοῦτο α . . . , τοῦτο β, is he careful to distinguish between a subject or complement term (τοῦτο) and a predicate term (ἄνθρωπος, α, β): all that interests him is the fact that the co-referent terms are in the same case. The comparison he proposes between τοῦτο β (object + attribute of the object) and τοῦτον τὸν χαρακτήρα (nominal object group) is particularly convincing in this regard; for another discussion of the syntactic problem posed by sequences of two accusatives (object + attribute), see III 177. From these examples may be grasped the specific technical limitations—fully evidenced by Donnet [1967b]—which characterise a theory of construction content to observe the syntagmatic assemblages of *forms* (inflected or not), without taking into account their syntactic *functions*.”

That said, Apollonius is not content to describe the usages of the letters with and without the article: in *Synt.* I 48, he explains *why* these things are as they are. When the teacher says τοῦτο α ἐστίν, he is revealing to the child what an alpha is, an object not yet known to him, and thus one which cannot be designated by a syntagm with an article (*‘the alpha’*). But when he says, with the article, τὸ α τελικόν ἐστι θηλυκῶν τε καὶ οὐδετέρων “the alpha is a final letter in feminines and neuters”, he is teaching the student something about the alpha already known—the anaphoric article is therefore in its correct place. This explanation is exactly right: even if the matter is not expressed in the general and abstract terms we might prefer, nonetheless, via the schoolroom scenario demanded by the choice of examples, Apollonius well delineates the distinction between the attributive statement where “alpha” is a predicate and the statement in which it is subject to a new predication. This is a reason, then, to refine our negative judgements which deny to Apollonius any sensitivity as to function: instead we must learn to perceive, behind formulations still weakly theorised, the fundamental justness of his intuitions.

4 The Syntactic Domains

Considering the *Περὶ συντάξεως* as it has survived, how might we represent Apollonius’ descriptive procedure—its set of problems and its structure? In other words, is there a ‘system’ of syntax in it? The question, already posed

by Ludwig Lange [1852], admits no single answer perfectly satisfying in all details: Apollonian discourse sometimes follows a winding path. Nevertheless we can find, in its syntagmatics, a major articulation between the traditional domains—the noun and the verb. The first is treated in the first two books of the *Syntax*, which are devoted respectively to the (definite) article, as the accompaniment of a noun, and to the pronoun, as its replacement. The domain of the verb is examined in Book III. Which questions does Apollonius ask in these three books? And what answers does he give?

4.1 *The Domain of the Noun: Article and Pronoun*

We have already mentioned the set of problems at the basis of Book I: what use does the article serve? And when is it added to the noun? The answer to the first question is clear: the noun takes an article when its referent is determined by prior knowledge, whatever the source of this knowledge—immediately prior context (the most common case: ‘the man’ = the one mentioned; ‘the others’ = the totality of the set complementary to the one mentioned; cf. the justification of the presence of an article before the partitive genitive (I 58); acquired knowledge (cf. *supra*: ‘the alpha’ = the object of an earlier lesson; ‘the tyrannicide’, a unique historical person), cultural convention (‘the Poet’ = above all, Homer), etc. This value of the article, anaphoric in the broader sense, has certain corollaries: if I should say *ὁ δοῦλός μου*, lit. “the slave of me”, the person listening to me, even if he knows nothing already, will understand that I’m speaking of the only slave that I have, since the regular usage of the anaphoric article tells him that there might be no hesitation as to the identity of this referent, and this certain identification necessarily implies that the slave is unique. Conversely, *δοῦλός μου*, lit. “(a) slave of me”, without anaphoric article in Greek, implies that the slave I’m speaking of may not be the only one. We see by this example that, even more than its anaphoric movement (towards the already-known), what characterises the article semiotically is the *perfect determination* of the referent of the articulated noun. This is true to such an extent that, paradoxically, the article can indicate an anaphora ‘by anticipation’ (*προληπτικώτερον πρόσωπον ἀναφέρειν*, I 44), and thus by opposition to the already-known. The example is that of a juridical prescription like *ὁ τυραννοκτονήσας τιμάσθω* “let the tyrannicide be honoured”, that is to say, any possible tyrannicide in the future; it must be admitted here that, although the anaphora operates on a virtual level, it identifies perfectly, by its future act, whoever will be *the* tyrannicide.

We can observe a remarkable variety of contextual anaphora in the operation of the *postpositive* article, our ‘relative pronoun’, in modern Greek *ἀναφορική αντωνυμία*. Etymologically different from the prepositive (a fact unknown to

the ancients), the postpositive formally resembles it in the nominative case—*ὃς* compared to *ὁ* (masc. sg.), *ἥ* compared to *ἡ* (fem. sg.), *οἱ αἱ* compared to *οἱ αἱ* (masc./fem. pl.)—and, in certain usages (Homer, Herodotus) certain forms of the latter adopt the function of the former. No more was needed for the relative to be designated as an ‘article’, and this designation indeed does justice to its function, since it is articulated to a noun whose anaphora it assures. Its particular syntax (the construction with a new verb which it introduces, now in a new clause), is described with great precision by Apollonius (I 142–157), who breaks it down into two constituents—a conjunction (which explains the appearance of the new phrase) and an anaphoric pronoun (which accounts for the anaphora)—*παρεγένετο ὁ γραμματικὸς ὃς διελέξατο* “there came the grammarian **who** argued” = *γραμματικὸς παρεγένετο καὶ οὗτος διελέξατο* “a grammarian came **and he** argued”.

The underlying presence of a pronoun in the postpositive article is one index of the functional proximity of article and pronoun. There are others. Thus the pronoun (studied in Book II of the *Syntax*)²⁵ not only replaces a noun, but a noun *accompanied by the article* (I 25; II 30); we have also seen that the article, without the noun, is transposed into a pronoun. What, then, is a pronoun? Without attempting a complete definition here, we will underline one of its genetic characteristics at the syntactic level. Taking the tri-personal verb paradigm *περιπατῶ—περιπατεῖς—περιπατεῖ* “I-walk—you-walk—(s)he-walks”, it is stated that a noun-verb phrase like *Δίων περιπατεῖ* “Dion walks” has no equivalent in the first two persons. According to Apollonius, this is because the noun is of the third person and is therefore excluded from construction with the first and second persons of the verb, *περιπατῶ—περιπατεῖς*: the pronouns *ἐγώ* and *σύ* were invented to replace it in this context. Once the category of the pronoun had been created for the first two persons under a syntactic constraint, the conditions of its use (*i.e.*, the necessary presence of the referent) implied as a semiotic corollary that every pronoun is deictic: in this capacity, the pronominal category was extended to the third person, where the pronoun could be anaphoric²⁶ (*Synt.* II 8)—a property that brings it closer to the article.

Although pronominal syntax is not differentiated from nominal syntax (*Synt.* II 29), it is in the semiotic domain that the originality of the pronoun is affirmed. On the one hand, thanks to the deictic anchoring specific to it, the pronoun assures its reference the greatest possible determination—even

25 We also make use of Apollonius' treatise *Περὶ ἀντωνυμίας* (GG II 1, 3–116).

26 In theory, anaphora and deixis are strictly separate, the first being of a mnemonic nature, the second visual. Nonetheless, Apollonius connects them by describing anaphora as a “deixis of the mind”, *δειξις τοῦ νοῦ* (*Synt.* II 12).

more than the proper name, which is vulnerable to homonymy (I 121). The power of the pronoun is diminished, however, when the person it designates is absent; this is the case, for instance, in a letter, where the referents of *I* and *you* are identifiable only by anaphoric recourse to the proper names appearing in the initial address “Dionysius to Tryphon, greetings!” (II 11). On the other hand, thanks to its characteristic double inflection, both tonic and atonic, the pronoun allows us to distinguish ‘absolute’ reference—*ἔπαισέ με* “he struck me”—from contrastive (*ἀντιδιαστολή*) reference—*ἐμὲ αὐτὸν ἔπαισε* “it’s me that he struck”. Pronominal syntax also permits the expression of reflexivity, when the agent and patient of a process are conflated. Classical Greek uses composite pronouns (*ἐμ-/σε-/ἐ-αυτόν*) for this, although Homeric Greek lacks such forms. An examination of Homeric passages involving reflexive constructions prompts Apollonius to deny the existence of any specifically reflexive form in the poet; the technical study of this question (which has been difficult and controversial since antiquity) provides a nice example of the close overlap between philological procedure (the interpretation of written forms, problems of accentuation) and syntactic analysis (see *Synt.* II 91–102). Apollonius again highlights an interesting function of the pronoun, in its anaphoric form: that of introducing some form of connectedness into a story. He gives the example of *Il.* 13. 1 and 3:

Ζεὺς δ' ἐπεὶ οὖν Τρώας τε καὶ Ἕκτορα νηυσὶ πέλασσαν, (...)
... αὐτὸς δὲ πάλιν τρέπεν ὄσσε φαεινῶ... (*Synt.* II 8)

When Zeus let the Trojans and Hector approach the ships, (...) **he** turned away (from them) his shining eyes...

Apollonius observes that

if someone should replace (v. 3) αὐτὸς “he” by Ζεὺς, the two sentences about Zeus would no longer be connected, but this would mark the beginning of a new sentence. One can say as much of all the pronouns used in this way, for it is certainly possible to put nouns in place of anaphorics, but then one modifies the utterance. (*Synt.* II 11, 135.6)

εἰ γὰρ τις ἀντὶ τοῦ αὐτὸς δὲ πάλιν τρέπεν ὄσσε φαεινῶ ἀντιθῆ τὸ Ζεὺς, οὐ συνάξει τοὺς δύο λόγους κατὰ τοῦ Διός, ὡς ἀρχὴν δὲ λόγου ποιήσεται. ὁ αὐτὸς δὲ λόγος ἐπὶ ἀπασῶν τῶν οὕτως παραλαμβανόμενων· παρὸν γὰρ ἀντὶ τῶν ἀναφορικῶν τὰ ὀνόματα θέσθαι καὶ τὰ τοῦ λόγου ἀλλοιωῖσαι.

Here the grammarian goes beyond the topic of simple intraphrasal congruence to concern himself with what we would call ‘text grammar’.

4.2 *The Domain of the Verb*

4.2.1 The Programme

The verb, identified since Plato as one of the two pillars of the sentence, is also the part of the sentence with the richest and most diverse morphology. As a result, Apollonius builds his programme of study of verb constructions (*Synt.* III 54, 319.3) on the various verbal categories (or “accidents”) as distinguished by their *morphology*:

We must now speak, from a general point of view, of the construction of verbs, which, as it is very diverse, deserves detailed treatment. Here are the points of construction we must explain:

- 1) the moods (ἐγκλίσεις) which affect (the verb);
- 2) the tenses (χρόνοι) which form the subdivisions of the moods;
- 3) the diathesis (διάθεσις), which also affects (the verb), active or passive, as well as the middle diathesis, which is situated between the two, without being reducible to either;
- 4) the persons (πρόσωπα) attached (to the verb), whether they are represented completely, partially or not at all;
- 5) the question of whether all (the verbs) are compatible with the two diatheses, active and passive;
- 6) which are (the verbs) to be attached to oblique cases, and if the choice of case is indifferent or obeys a strict distribution.

There are still other problems of construction, more specific than those I have just enumerated: we will solve these as they appear.

A vast programme, which Apollonius treats in three main parts: 1) moods, tenses and persons (III 55–146), 2) diatheses (III 147–157), and 3) construction of cases with verbs (III 158–190). What is striking in this study, when we examine it in detail, is the extent to which morphological analysis and its subdivisions impact upon the syntactic reflection and condition its conduct. Hence, the long section devoted to the infinitive, with which Apollonius chooses to begin the study of moods (III 55–87), includes detailed discussions aiming to demonstrate that both the infinitive and the impersonals δεῖ and χρή are verbs, and not adverbs. These preoccupations reflect a state of grammatical thought in which the criteria for assigning words to parts of the sentence are still flexible, and decisions about μερισμός remain controversial: should one class the infinitive, δεῖ and χρή with the adverbs because they lack inflection, without

being either prepositions or conjunctions? It is within the framework of these taxonomic problems that Apollonius will develop his argument, which is partly syntactic,²⁷ allowing him to establish his position and reach a decision.

4.2.2 The Infinitive, ‘The Most General’ Mood; Compositionality

Because the infinitive lacks grammatical person and may accept an article (τὸ φιλολογεῖν, lit. “the to study”), Apollonius calls it the “name of the act” (ὄνομα πράγματος, *Adv.* 129.17), or again “the most general mood” (γενικωτάτη ἔγκλισις, *Synt.* III 59, 324.10) of the verb. It is therefore a verb, one which conveys nothing more (that is what its name means: ἀπαρέμφατον) than the name of an act and which, in this capacity, is found as the semantic complement of modal verbs (*to want, to wish, to order...*) which, by themselves, are “as if empty” (ὡσπερὶ κενά, *Synt.* III 58, 324.2). This analysis leads Apollonius to semantically break down the Greek verb moods (indicative, optative, imperative) into a modal operator (of assertion/wish/injunction) followed by an infinitive: περιπατῶ ‘I walk’ = ὠρισάμην περιπατεῖν “I claim to walk” / περιπατοῦμι “may I walk” = ηὐξάμην περιπατεῖν “I wish to walk” / περιπάτει “walk!” = προσέταξα περιπατεῖν “I order [X] to walk” (*Synt.* III 61, 327.9). These semic analyses reveal the most general phenomenon of compositionality (the applications of which are manifold) of several words revealed to be analysable into developed formulas, which could be seen as their underlying syntax: Ἐκτορίδης = “Ἐκτορος υἱός, γοργότερος = μᾶλλον γοργός, etc. (*ibid.*, 327, 1).

Book III of the *Syntax* shows that, for Apollonius, compositionality in the domain of the verb is a syntactic question of the first rank. Having listed the accidents of the verb—eight according to the *Techne*: mood, diathesis, type, figure, number, person, tense, conjugation—he asks, How are they combined among themselves? The global inflectional paradigm of a Greek verb—for instance τύπτω, as it appears in Supplement IV to the *Techne* (GG I 1, 125–132)—shows that not all of the theoretically possible combinations of tense, mood, diathesis and person are realised in practice. Apollonius examines the matter methodically and, as always, devotes himself to giving a rational explanation. The principal problems that he meets are the following:

- Whereas the indicative offers a rich paradigm of temporal and personal forms, it must be noted that the three other finite moods—optative (*Synt.* III 98–100), imperative (101–102) and subjunctive²⁸ (137–139)—are not present

27 Morphology also plays a part: the invocation of the augmented forms ἔδει and ἐχρήν is a strong argument in favour of the verbal status of δεῖ and χρή (*Synt.* III 73).

28 The subjunctive is not a mood like the others: it consists in the product constructed (σύνταξις) by a conjunction (especially ἐάν or ἵνα) with indicative forms, which next

in all the tenses attested for the indicative, while the imperative (103–115) does not exist for all persons. Why? The responses are here of a pragmatic nature: wishes and commands are not easily compatible with the past, and commands can only be addressed to a second person—hence the temporal defectiveness of the optative, and the temporal and personal defectiveness of the imperative. But that is only a first, rough approximation of the answer. In the domain of tense, the morphology contains optative and imperative forms constructed on the temporal stems of the perfect and aorist, stems which, in the indicative, refer to the past. Apollonius admits, then, that there are orders and wishes in the past (*παρωχημένον*), but in paraphrasing these forms, he highlights their perfective (*συντέλεια*) aspectual component; thus his description of the paradoxical combinations MOOD + TENSE leads him to the category of aspect, although still imperfectly and without naming it.

- Another paradox is offered by injunctions in the first and third persons: *φεύγωμεν* “let us flee”, *ἀλλ’ ἄγ’ ἐγὼν . . . ἐξείπω* “Well! let me say . . .” (*Il.* 9.60), *λεγέτω* “let him say”. This last form, which in Greek is morphologically an imperative, is as it were reduced to the norm by Apollonius, for whom it combines two persons, a third and a second, the latter inherent in the imperative:

Forms like *λεγέτω*, then, convey a command to be carried out by persons who are not present, and necessarily a second person must take his turn as a relayer of the command, since, as we have said, a command without a second person is impossible (III 115, 369.2, Householder’s translation)

Τὸ δὴ οὖν *λεγέτω* καὶ πάντα τὰ τοιαῦτα σημαίνει ἀπόντων προσώπων πρόσταξιν, ἀναγκαίως δευτέρου προσώπου ἐναλλασσομένως παραλαμβανομένου εἰς μετάδοσιν τῆς προστάξεως, ἐπεὶ πάλιν ἢ πρόσταξις ἐκτὸς δευτέρου προσώπου ἀσύστατος ἐστίν.

As for a first-person like *ἐξείπω*, which is morphologically not an imperative, and where no latent second person might be found, Apollonius invents a distinct modality for it, which he calls the “suggestive” (*ὑποθετικόν*).²⁹ The suggestive mood, limited to the first person and expressing suggestions that one

undergo morphological modification. In the formation of the subjunctive, morphology and syntax are inextricably linked (*Synt.* III 132–135).

- 29 According to the modern description, forms of the type *ἐξείπω*, *φεύγωμεν* are subjunctives (with a hortative force). This analysis is not possible for the ancient grammarian, for whom the subjunctive is, as its name indicates, a subordinate (*ὑποτακτική*) mood, including in its form a conjunction (cf. previous note).

makes to oneself, stands in complementary distribution with the imperative, itself limited to the second person (III 111). In the plural (φεύγωμεν), the analysis of the suggestive mood, associated with the description of the first person plural as grouping the first singular with the second or third (*Synt.* III 38), gives rise to a subtle psychological interpretation of the injunction: by using the first plural “we”, the enjoining person associates himself with the addressee and so avoids the aggressiveness of the imperative mood. Thus, when Sthenelus (*Il.* 5.249) says to Diomedes ἀλλ’ ἄγε δὴ χαζώμεθ’ ἐφ’ ἵππων “come on, let us retreat on our chariots”, it is

so as to avoid acting as a superior person and giving an order by saying “retreat!” (*Synt.* III 109, 363.2)

ἵνα μὴ ἐν τῷ ὑπερέχοντι προσώπῳ προστάξῃ ἐν τῷ χάζου.

The grouping (σύλληψις) of persons in the first person plural is a *sui generis* case of compositionality, internal to the same accident, that of person.

4.2.3 Diatheses

The verbal category of diathesis is not an invention of the grammarians. It is tempting to follow Benveniste’s suggestion ([1966a] 67 f.) that this category underpins the three Aristotelian categories of ποιεῖν “to make” (ACTIVE), πάσχειν “to suffer” (PASSIVE), κεῖσθαι “to be in a position” (MIDDLE). Among the Stoics (D. L. VII 64–65), it forms the basis of the classification of the predicates into “direct” (ὀρθά, ex. ἀκούει, ὀρᾷ, διαλέγεται), “reversed” (ὑπτία, ex. ἀκούομαι, ὀρώμαι), “neuter” (οὐδέτερα, ex. φρονεῖ, περιπατεῖ), “reflexive” (lit. “anti-passive” ἀντιπεπονθότα, ex. κείρεται “he shaves (himself)”). It will be noted that, even if Greek morphology has a certain place in this classification (ἀκούει / ἀκούομαι), it is not the basis of it (διαλέγεται!), as the descriptions recorded by Diogenes confirm: the direct predicates are those which are “constructed with an oblique case”, the reversed “with the passive particle”,³⁰ the neuters “with neither of the two”, and the reflexives are those which “being reversed, are active”. Except the reflexive, all these descriptions are syntactic. We will not be surprised, then, that Apollonius, whose debt to the Stoa nobody doubts, devotes a section of his *Syntax* to diatheses.

30 “Passive particle” (παθητικὸν μόριον) must designate the preposition ὑπό which introduces the complement of agent. Hicks’ translation in the Loeb volume (*Diogenes Laertius* II, p. 175), “those construed with *the passive voice*”, is certainly to be rejected.

The term itself, ‘diathesis’, merits some consideration. For Aristotle (*Cat.*, e.g. 8b35), διάθεσις is the substantive corresponding to the middle intransitive verb δικάειμαι “to be in a state”. The word thus designates a state, a disposition (corporal posture, intellectual or moral dispositions, etc.). But disposition, Aristotle also tells us (*Cat.* 6b2), is relative; thus “knowledge is knowledge of something or someone, and position is the position of something or someone (ἡ ἐπιστήμη τινὸς ἐπιστήμη καὶ ἡ θέσις τινὸς θέσις)”. To put it another way, disposition is a qualified relation³¹ involving one or more terms: knowledge is the knowledge of someone about something, position is that of a body in position. Although this may seem a truism, it is in fact of capital importance for understanding the grammatical category of diathesis. It appears in effect that, for Apollonius, διάθεσις désignates³² the semantic content of the verb, insofar as it establishes the relation between the participants of the signified process, called “persons” (πρόσωπα).³³ Whereas in the *Categories*, we find beside διάθεσις only the middle stative verb δικάειμαι, and never the active transitive διατίθημι “to dispose”, for Apollonius this verb, attested in both the active and the passive, is a key term of verbal syntax. For the grammarian, every verb form possesses, in correlation to its semantic content, a diathetic schema which organises the dispositions of the ‘persons’ involved in the signified process—in other words, the syntax of the nouns (or pronouns) designating the actants. The base couple is here that of the persons respectively disposed and disposing (τὸ διατεθὲν καὶ διατιθὲν πρόσωπον, *Synt.* II 141, 237.4, cf. II 70, 177.15, *Pron.* 45.19, etc.), corresponding referentially to the patient and the agent of a transitive process. This binary schema allows Apollonius to describe the active transitive construction (ἐγὼ σε ἔδειρα “I thrashed you”) and its symmetrical passive (σὺ ἐδάρης ὑπ’ ἐμοῦ “You were thrashed by me”), as well as the particular cases represented by 1) the reflexive construction, where the two ‘persons’ become one (fastened transitivity: ἐμαυτὸν ἔπαισα / ὑπ’ ἐμαυτοῦ ἐπλήγην “I struck myself” / “I was struck by myself”) (*Synt.* III 141), and 2) the intransitive construction which produces a complete sentence without any second actant (περιπατεῖ Τρύφων “Trypho walks”) (*Synt.* III 155). The diathesis is at the same time that of the verb—whether active or passive in form (διάθεσις ἐνεργητική / παθητική)—, that of the “disposing / disposed persons” (διατιθὲν / διατεθὲν πρόσωπον), and that

31 It is a subdivision of quality (*Cat.* 8b27).

32 On the complex polysemy of διάθεσις, see Lambert [1978].

33 Originally “face”, “mask / stage character”, in a grammatical context πρόσωπον can designate, sometimes in a rather poorly differentiated way, both an actant (eventually inanimate) of a process and the ‘grammatical person’ (first, second or third, by reference to their roles in conversation).

of the active / passive construction (σύνταξις ἐνεργητική / παθητική, e.g. *Synt.* III 30, 296.6). The active transitive construction with two actants is described in two passages of the *Syntax*, in similar terms, worth citing here:

I 137, 112.8 : the oblique cases are connected with the direct cases by the intermediary of a verb whose diathesis, originating in the direct case associated with it, passes to the oblique.

αἱ πλάγια συντάσσονται ταῖς εὐθείαις μεταξύ πίπτοντος ῥήματος, οὗ τὰ τῆς διαθέσεως ἐπὶ τὴν πλαγίαν μέτεισιν ἐκ τῆς συνούσης εὐθείας.

II 29, 148. 3: as for the oblique cases, they form the end of a construction which begins with the direct cases, the intermediary verbs indicating the diathesis of each.

αἱ γὰρ μὴν πλάγια τὴν ἐκ τῶν εὐθειῶν σύνταξιν ἀναδέχονται, τῶν μεταξύ πιπτόντων ῥημάτων ἐνδεικνυμένων τὴν ἐκάστης διάθεσιν.

The syntactic schema here described is the following: two case-marked actants are related to one another by an ‘intermediary’ verb (cf. μεταξύ πίπτοντος ῥήματος) which is a sort of conveyor of diathesis between the originating actant, in a direct case, and the receiving actant (cf. ἀναδέχονται), in an oblique case. Between the verb and the direct case, we discover, expressed here by the verb σύνειμι (cf. συνούσης εὐθείας), the privileged relation of σύνδοδος τοῦ ῥήματος signalled earlier (§ 3.4). An active transitive sentence, for instance Δίῳν τύπτει Διονύσιον, “Dion strikes Dionysius”, thus reflects in a quasi-iconic way a scenario of action, oriented dynamically between an active protagonist (Dion who strikes) and a passive protagonist (Dionysius who receives the blows); between the two is the process with its source in the first, crossing over to be applied to the second (cf. ἐπὶ τὴν πλαγίαν μέτεισιν). The verb in the active voice thus shows that it shares the diathesis of the actant in the direct case (σύνδοδος). The passive sentence *Dionysius is struck by Dion*, in which the Stoics saw a “reversed” (ὑπίτιον) predicate, presents the same scenario inverted (as if seen in a mirror), but with the same syntactic cohesion: the verb in the passive diathesis still shares the diathesis of the actant in the direct case, in this instance the man who receives the blows.

There is little to say about the middle (μέση) diathesis. Its name signifies that it occupies an intermediary position between the active and the passive. But what does this mean? It should be noted that Alexandrian grammar for-

mulated nothing very illuminating here. By contrast to the active-passive couple, very neatly sketched as we have just seen, the middle is seen essentially as an anomaly, involving a discord between voice and diathesis. As long as we remain within the active-passive opposition, the active and passive constructions bring into play, among other things, a decisive difference in the morphology of the verb between an active voice in $-\omega/\mu\iota$ and a passive voice in $-\mu\alpha\iota$,³⁴ which form parallel and specialised paradigms, each expressing only one of the two diatheses. But Greek possesses forms which do not conform to this bi-univocal relation between voice and diathesis—active or passive forms with double diathesis (διέφθορα “I destroyed / I am destroyed”, βιάζομαι “I violate / I am violated”), passive forms with an active force (μάχομαι σοι “I fight you”, ποιοῦμαι = ποιῶ, ἐγραψάμην = ἔγραψα), etc. The invention of a ‘middle’ diathesis serves essentially to solve this kind of systemic anomaly as best it can. Curiously, one remarkable value of the middle diathesis is not mentioned by Apollonius: this is the *reflexive* force of middles like κείρομαι “I shave (myself)” (vs. κείρω “I shave (someone else)”). However, this value is addressed by the Stoics, who call it an “anti-passive (ἀντιπεπονητός) predicate” and describe it by saying that “he who shaves himself includes himself”, ἐμπεριέχει ἑαυτὸν ὁ κειρόμενος,³⁵ D. L. VII 65. Apollonius mentions the reflexive (ἀντανεκλώμενον)—or “auto-passive”, αὐτοπαθές—only with regards to the compound pronoun of the series ἐμαυτοῦ “myself”, specialised in the analytical expression of reflexivity (*Synt.* II 141, 237.4).

As for the ‘neutral’ predicate of the Stoics, it is found exactly in the “intransitive” construction of verbs (τὸ ἀδιαβίβαστον τοῦ ῥήματος, *Synt.* III 164, 411.9) of the type πλουτῶ “I am rich” and περιπατῶ “I walk”, which do not need an oblique case to furnish a complete sentence.

34 A conventional designation, by the endings of the 1st sing. of the present indicative, above all a paradigm which evidently presents a great variety of other forms. What is important here is that the morphological analysis of the ancients (and largely also that of the moderns) assigns on principle one diathesis and one alone to a given personal ending: thus, for the 1st sing., an ending in $-\alpha$ (ἔτυψα, τέτυφα) is as a rule active, a form in $-\mu\eta\gamma$, $-(\theta)\eta\gamma$ (ἐτυψάμην, ἐτύφθην, ἔδάρην) as a rule passive.

35 There is a great temptation to compare this Stoic formula to that of Benveniste ([1966b] 172): in the middle diathesis, “(the subject) lies within the process of which it is the agent”. That said, the Alexandrian grammarians, unlike Benveniste, did not see in the middle an ‘internal diathesis’ opposed to the active ‘external diathesis’; they say nothing about pairs like νόμους τιθέναι “to establish the laws”—νόμους τίθεσθαι “to give oneself laws” and admit without qualms that the middle says nothing more than the active.

4.2.4 Syntax of the Cases

Diathesis, as the disposition of the actants relative to the verbal process, is inseparable from the syntax of the cases: we have seen that, among the Stoics, the case constructions furnish the very definition of the direct, reversed and neutral predicates. Apollonius retains this fundamental intuition, and elaborates on it in more detail.

Before dealing with the properly syntactic cases, we must say something about the *vocative*. Among the Stoics (D. L. VII 67), it appears as the characteristic—and unique—constituent of the speech act they call προσαγορευτικὸν πρᾶγμα, the address, exemplified by the Homeric address (*Il.* 9.96) Ἄτρεΐδῃ κύδιστε, ἄναξ ἀνδρῶν Ἀγάμεμνον “Most glorious son of Atreus, Agamemnon, lord of men”. The vocative is not construed, it signals only that the speaker is addressing the bearer of the name in this case. Apollonius, who insists that nouns are in the third person, describes the vocative as the case which “converts third persons into second, by the apostrophe it directs towards the person which has received the name” (ἐπιστρέφει τὴν ἐκ τῶν τρίτων προσώπων θέσιν εἰς τὸ δεύτερον διὰ τὴν ἐξ αὐτῆς γινομένην ἀντιληψιν τοῦ ἀναδεξαμένου προσώπου τὸ ὄνομα, *Synt.* II 43, 157.2). Beyond this function of pragmatic converter, no more is said about the vocative.

The other cases—direct (εὐθεία), accusative (αἰτιατική), genitive (γενική) and dative (δοτική)—are all concerned with verbal diathesis, and particularly with the transitive diathesis which, in the most fundamental dichotomy, contrasts the direct case to the group of the three others, called “oblique” (πλάγιοι). The direct and the oblique cases, as we have seen, share out the reference to agent and patient in the transitive scenario of the sentence, with an inversion of functions when the verb is passive. In the active, the characteristic case of the patient is the accusative, indicating a total passivity: in Δίῳ τύπτει Διονύσιον “Dion strikes Dionysius”, Dionysius receives blows without giving them. In the passive, although the change of verbal diathesis permits the direct case to be that of the patient, Διονύσιος τύπτεται, the conversion does not extend to allowing the accusative to designate the agent, *Διονύσιος τύπτεται Δίῳνα “*Dionysius is struck Dion”. Instead, the preposition ὑπό (the “passive particle” of the Stoics) is used together with the genitive. Διονύσιος τύπτεται ὑπὸ Δίῳνος “Dionysius is struck by Dion”. Apollonius gives this construction as canonical (*Synt.* III 159) but does not comment on it. We may simply state that it confirms the introduction of the genitive into the syntax of verbal diathesis: perhaps it is evident to the grammarian that this case, whose name suggests the idea of an origin—notably familial (cf. γένος and the alternative name of the genitive, πῶσις πατρική “paternal case”, Dion. T. 31.7)—finds its natural place in the

designation of the agent. A simple supposition.³⁶ However, in its use as an oblique case opposite the direct case in the active transitive schema, the genitive will be given an interpretation that takes agentivity into account.

In fact, it is the group of the three oblique cases that Apollonius describes in terms of diathetic gradation. Indeed, depending on the verbs, the second actant can appear in the accusative, genitive or dative, *e.g.* Δίων τύπτει Διονύσιον / ἀκούει Διονυσίου / μάχεται Διονυσίῳ “Dion strikes / listens to / fights with Dionysius (acc./gen./dat.)”. For Apollonius, the choice of oblique case is not at all arbitrary. In the accusative sentence, the activity is entirely with the direct case, the passivity with the oblique (and equally, *mutatis mutandis*, in the corresponding passive sentence). On the other hand, in the sentence with ἀκούει (and the other verbs of perception), it works differently:

The senses receive influences from without, so that a sound which penetrates the ear affects also our entire body—even against our will: the noises of saws or thunder are hardly sounds that the ear accepts willingly! As we have said, the construction in the genitive gets close to passivity, but we are not dealing with a construction with ὑπό [by], since an activity also exists which results from the diathesis. The sense of touch involves an action, and a passive counter-diathesis upon contact with hot, cold or other [objects]. It is the same for the senses of smell and taste . . . (*Synt.* III 170, 417.3)

Αἱ μὲν οὖν ἐκ τῶν αἰσθήσεων διαθέσεις πείσιν ἀναλαμβάνουσι τὴν ἀπὸ τῶν ἔξωθεν, εἶγε καὶ ἀκουσίως ἐπεισιούσα τῇ ἀκοῇ ἢ φωνῇ προσδιατίθησι τὸ ὅλον σῶμα· οἷ τε γὰρ τῶν πριόνων ἦχοι καὶ αἱ βρονταὶ οὐχ ὑπεχομένην ἔχουσι τὴν ἀκοὴν τῇ φωνῇ. τοῦ μέντοι πάθους ἐγγίζει ἢ κατὰ γενικὴν σύνταξιν, καθὼς εἶπομεν· οὐ μέντοι μετὰ τῆς ὑπὸ τὰ τῆς συντάξεως γίνεται, καθὼς καὶ ἐνέργεια σύνεστιν ἢ γενομένη ἐκ τῆς διαθέσεως, ἐπεὶ τὸ ἄπτεσθαι μετ’ ἐνεργείας καὶ ἀντιδιατίθεται διὰ τῆς τῶν θερμῶν ἐπαφῆς ἢ ψυχρῶν ἢ ἄλλων τῶν τοιούτων. οὕτως ἔχει τὸ ὀσφραίνεσθαι, τὸ γεύεσθαι . . .

As in the passive turn with ὑπό, but less decisively, the genitive characterises an actant which participates in the active mood and thus introduces into the

36 In the Greek tradition we catch a glimpse of speculations where the presence of the genitive with ὑπό in the passive construction is invoked to establish a proximity between the genitive and the direct case, and so to explain its place immediately after the direct case in the canonical list of cases (*Sch. Dion. T.* 548.37).

transitive scenario a “counter-diathesis” (ἀντιδιάθεσις) which in turn affects the actant in the direct case with a certain measure of passivity. However, the diathetic distribution is not conceived as symmetrical: the dominant activity is with the direct case. It is here that we encounter the dative:

The verbs which refer to a symmetrical diathesis, that is, to the equal activity of two persons directed towards each other, take the dative. This is the case with μάχομαί σοι “I fight with you” (*Synt.* III 185, 427.9)

τὰ ἐξ ἴσης διαθέσεως ἀναγόμενα, τουτέστι τὰ ἐν δυσὶ προσώποις τὴν αὐτὴν ἔχοντα ἐνέργειαν κατ’ ἀλλήλων, ἐν δοτικῇ καταγίνεται, ὡς ἔχει τὸ μάχομαί σοι.

But why the dative? Apollonius asks himself. He responds thus:

because the passive diathesis has already been assigned to the genitive. Thus, the construction of these verbs will have to give up the two cases [sc. accusative and genitive] and admit only the dative—which is ready [to express] the reciprocity of the diatheses (*Synt.* III 186, 428.13)

ὅτι καὶ ἡ γενικὴ ἐμερίζετο εἰς παθητικὴν διάθεσιν. ἀποστήσεται ἄρα ἀμφοτέρων τῶν πτώσεων ἢ τοιαύτη σύνταξις, καὶ οὐκ ἄλλην ἐπιδέξεται ἢ μόνην τὴν δοτικὴν, ἐξ ἧς καὶ εὐέφικτον τὸ ἀντιπεριποιούμενον τῶν διαθέσεων.

Here we note the two kinds of reasons invoked by Apollonius. The first, which is somewhat surprising to us, is that to express symmetrical diathesis we have no choice but to settle for the last available case in the system; syntax is conceived as the customer of a morphological shop whose limited resources must content its clientele! But its wares are well made, and this is the second reason: the dative is precisely the case of rendering service to another (περιποίησης, cf. *Synt.* III 177–178), and so it may easily (εὐέφικτον) be used to express the reciprocity (ἀντιπεριποίησης) characteristic of symmetrical diathesis.

Armed with this interpretive schema (which not only explains to him the entirety of case syntax, but is intended to account for the case of the second actant in the transitive scenario), Apollonius examines a great variety of verbs whose constructions fit it more or less well. This gives him the opportunity to reveal fine nuances in the semantic content of the verb, for example in distinguishing the diathesis of two verbs “to love”, manifested in their construction: φιλεῖν + accusative designates an active love with no implication of reciprocity, while ἐρᾶν + genitive implies that the lover is the object of a counter-diathesis from the loved one (*Synt.* III 172). Among the verbs of perception, the original-

ity of verbs of sight, construed with the accusative, is linked to a singularity of sight with respect to the other senses:

By contrast (to the other senses), the diathesis of the verb “to see” is highly active and has a stronger transitivity, as witnessed by the verse (*Il.* 23.477):

... and your eyes do not throw forth from your head a very piercing glance.

Our sight is not easily affected by counter-sensations from without, for we can shut out this supplementary diathesis by closing the eyes. (*Synt.* III 171)

“Ἡ γέ μὴν ἐκ τοῦ ὀράν διαθέσις ἐνεργεστάτη ἐστὶν καὶ ἐπὶ πλεόν διαβιβαζομένη, ὡς κάκεινο μαρτυρεῖ, ὡς οὐ τέ τοι ὀξύτατον κεφαλῆς ἐκδέρκετον ὅσσε (Ψ 477). οὐδὲ γὰρ εἰς τὸ ἀντιπαθεῖν ὑπὸ τῶν ἕξωθεν εὐδιάθετος, ἐπεὶ τὸ προσδιατιθὲν εἴργεται ὑπὸ τῆς καταμύσεως τῶν ὀφθαλμῶν.

As this last example clearly illustrates, Apollonian syntax was part of a global explanatory procedure, where Homeric philology and physical theories of vision came together. Indeed, the grammarian does not see language as an abstract system: its schemas (especially syntactic) always exist more or less in a mimetic relation to the objects and scenarios that it describes.

4.3 *Uninflected Words*

Of the eight parts of the sentence distinguished by the Alexandrians, three are invariant (*ἀκλιτα*, “not inflected”): the preposition, the adverb and the conjunction. This negative morphological particularity, noteworthy in an inflected language, does not imply any syntactic affinity between the three classes. At most they have in common that the rules of congruence governing them are never rules of morphological agreement. Position (*τάξις*) and sense (*ἔννοια*) are, on the other hand, major variables here.

4.3.1 The Adverb (*ἐπίρρημα*)

Close to the (adjective) noun, from which it is often derived, the adverb is distinguished by its invariance. We saw earlier that its function, as its name *ἐπίρρημα* indicates, is to accompany the verb in order to give it a semantic complement. The Alexandrian grammarians gave no attention to the adjectival (*‘very grand’*) and adverbial (*‘very simply’*) usages of certain adverbs, although these were very common in their language (*λίαν μέγας, λίαν ἀπλῶς*).

As far as the ad-verbal function, it posed a problem of *μερισμός* for invariant words employed in a non-verbal context. Although the case of adverbs like *yes*, *no*, which form utterances by themselves only in a response, could be easily resolved by positing the ellipsis of the verb of the original question (Γράφεις;—Ναί [γράφω] “Are you writing—Yes [I am writing]”), the problem was more delicate with exclamations such as *ouch!*, *alas!*, which some denied to be adverbs,³⁷ and for which Apollonius claims an adverbial status. His argument, expounded in *Adv.* 121.19, consists in saying that exclamations (ἐπιφωνήματα) are uttered under the effect of an emotion which is something like a “verbal disposition”, διάθεσις ῥηματική; thus, potentially (δυνάμει), when I cry out *ouch!*, my cry is an adverb which predicates the implicit *I am in pain*.

In this example can be seen a borderline case of the extension of syntax. It is no coincidence that it is encountered in the domain of adverbial syntax: the adverb is, and has been since antiquity, effectively recognised as a catch-all class (cf. the Stoic epithet πανδέκτης applied to this class), intended to gather up any uninflected word that could not be classified as a preposition or conjunction (to this end, see the reasoning of Apollonius, *Synt.* I 85, 73.4; also III 69). The result is that adverbs include not only *καλῶς* “well”, *πολλάκις* “often”, *οἴκοι* “at home”, *τότε* “then”, *τάχα* “perhaps”, etc., commonly in constructions with verbs, but also, in addition to the aforementioned interjections, we find among the adverbs: *μά/νῆ* + accusative in oaths (*μά τὸν Δία* “no, by Zeus”); *ἕως*, *ὄτε*, *ὥσπερ*, etc., which introduce temporal or comparative clauses; and the likes of *πλευστήον* “we must set sail”, which is a verbal predicate of obligation. Unsurprisingly, some have insisted that *χρή* and *δεῖ* should be admitted into this company (cf. *supra* 4.2.1).

4.3.2 The Preposition (πρόθεσις)

In Alexandrian grammar, no part of the sentence is better defined than the preposition. It is defined in purely syntactic terms as “a word which is placed before [προ-τιθεμένη] all parts of the sentence, both in composition and in construction (ἔν τε συνθέσει καὶ συντάξει)” (Dion. T. 70.2); this allows the grammarian to outline a closed set of eighteen prepositions, to which the surviving part of Book IV of the *Syntax* is devoted. The analysis, which directly follows the definition just mentioned, essentially applies to the formal modalities of the combination of the prepositions with the various parts of the sentence (including with each other): the principal question is that of the division between composition (σύνθεσις) and juxtaposition (παράθεσις). A second question is that of the anastrophe of certain disyllabic prepositions—of, paradoxically,

37 They are found, among the Latin grammarians, in a separate class, that of the *interiectio*.

their *post*-position to the word to which they are juxtaposed (e.g. Ἰθάκην κατά, lit. “Ithaca in”, instead of the usual κατ’ Ἰθάκην “in Ithaca”). It is remarkable that the treatment of these questions—one or two words? the normal order violated—does not in practice allow any room for reflection on the function of prepositions, nor on the variations in their value with respect to the governed cases. This is rather surprising if we recall the beginning of Book I, in the *prolegomena* to syntax:

There are words which, like consonants . . . cannot be pronounced by themselves—this is the case with prepositions, articles, and conjunctions. In effect, words of this kind only ever *consignify*: thus we say, in the genitive, δι’ Ἀπολλωνίου [by Apollonius], which supposes that Apollonius is aware, but, in the accusative, δι’ Ἀπολλώνιον [because of Apollonius], which means that Apollonius is the cause. (*Synt.* I 12, 13.8)

αἱ δὲ ὡσπερὶ σύμφωνα (. . .) οὐ δυνάμεναι κατ’ ἰδίαν ῥηταὶ εἶναι, καθάπερ ἐπὶ τῶν προθέσεων, τῶν ἄρθρων, τῶν συνδέσμων· τὰ γὰρ τοιαῦτα τῶν μορίων αἰετὸ συσσημαίνει, εἴγε ἐν γενικῇ μὲν λέγομεν δι’ Ἀπολλωνίου, ὡσεὶ γινώσκοντος Ἀπολλωνίου, κατὰ δὲ τὴν αἰτιατικὴν πτώσει δι’ Ἀπολλώνιον, ὡς ἂν αὐτοῦ αἰτίου ὄντος.

Similarly, in the *Adverbs* (182.21), Apollonius declares straightforwardly:

the preposition takes a particular meaning when it is juxtaposed to each of the cases

ἐκάστη πτώσει κατὰ παράθεσιν προσιοῦσα ἢ πρόθεσις ἴδιον ἔχει σημαίνόμενον.

Incidentally, again, at the start of the *Conjunctions* (214.4), he recalls that the Stoic Posidonius addressed the semantic difference between ἐπιδοῦναι “to give” freely, to “offer” and ἀποδοῦναι “to give back, return”, or between ἀπαιτεῖν “to demand back” and προσαιτεῖν “to beg”—a difference that Apollonius does not dream of being in doubt, as shown by his own expression (*Synt.* IV 15, 448.5): τὸ ἐκ τῶν προθέσεων συνδηλούμενον “lit. the *condesignatum* of the prepositions” which is associated with the relational value of the verb (ἢ ἐκ τοῦ ῥήματος παραφισταμένη σχέσις).

It should be noted that neither the semantic value of prepositions, nor the phenomenon of consignification, hold Apollonius’ attention when he devotes a book of his *Syntax* to the construction of prepositions. Instead, this book offers a methodical and detailed examination of questions about cutting the

word-chain, or word-order, with the relevant rules of accentuation: two accents on *παρὰ νόμον* “against the law”, one on *παράνομος* “illegal”, final accent on *κατ(ὰ)* in *κατ(ὰ) Ἰθάκην*, initial accent on the anastrophe *Ἰθάκην κάτα*. Although it is not stated anywhere, we suspect that Apollonius’ entire procedure in *Syntax* IV may well have originated in a graphical problem: in texts in *scriptio continua*, how should the prepositions be accentuated to help the reader parse them properly? This is certainly a very unusual problematic in syntax—but it is inscribed perfectly within the initial project of the *Syntax*: to study constructions in all their detail (*μετὰ πάσης ἀκριβείας*), as required by the philological imperative of explaining poetic texts (*Synt.* I 1, 2.1). If we base our opinion on what Apollonius writes under the heading of “the syntax of prepositions”, we must duly record that Alexandrian *σύνταξις* is, like *γραμματική*, a discipline of writing, of which the rules of accentuation constitute an integral part.

4.3.3 The Conjunction and the Complex Sentence

As the final part of the sentence in the canonical Alexandrian list, the conjunction bears a name—*σύνδεσμος*, lit. “con-nector”—immediately revealing it as a tool which is syntactic above all. In this capacity, it merits particular attention here.

Historically, according to our best witnesses,³⁸ the *σύνδεσμος* is the only part of speech which Aristotle recognised in addition to the noun and the verb, to which it is opposed insofar as it is a *φωνῆ ἄσημος* (*Poet.* 1456b35), a form deprived of lexical meaning. A precise notion cannot be deduced from the (double) definition in the *Poetics* (*loc. cit.*), but we may perceive that the *σύνδεσμοι* were for Aristotle the little words of connection like *μέν*, *δέ* (*Rh.* III 5, 1407a20) and *καί* (*ibid.*, 6, 1407b38), whose function is to unify the plurality in an expression; by contrast, *ἀσύνδετον*, absence of *σύνδεσμος*) produces a pluralising effect (*ὁ σύνδεσμος ἔν ποιεῖ τὰ πολλά, ὥστε ἐάν ἐξαιρεθῆ, δῆλον ὅτι τούναντίον ἔσται τὸ ἐν πολλά, ibid.* 12, 1413b33). The examples given by Aristotle show the *σύνδεσμοι* as assembling propositional limbs into extended wholes. Of these original ideas, the grammar somewhat tautologically retains the notion that the conjunction is “a word holding the thought together” (*λέξις συνδέουσα διάνοιαν*, *Dion. T.* 86.3).

Functionally, the conjunction, in the narrower sense of an interpropositional junctor that the grammarians give it, seems to play a role which is *marginal* to the basic *λόγος αὐτοτελής*. This is what Apollonius underlines, *Synt.* I 14, 17.4: in the example sentence *ὁ αὐτὸς ἄνθρωπος ὀλισθήσας σήμερον κατέπεσεν*, to which he adds the following comment: “all the parts of the sentence are

38 Quint., *Inst.* I IV 18; Dion. Hal., *Comp.* II 1.

present, except *the conjunction, whose addition summons another sentence*” (ἔγκλειται τὰ μέρη τοῦ λόγου παρὰ τὸν σύνδεσμον, ἐπεὶ προστεθεὶς ἕτερον λόγον ἀπαιτήσῃ). For Apollonius the conjunction is therefore a sentential junctor which, when introduced, ‘opens’ the sentence to which it has been added up to another sentence—the simple sentence thus giving way to a complex one.

This understanding of the conjunction gave rise to an important elaboration by the Stoic logicians. Paradoxically, even if they seem to have given only a weak and tautological definition of the σύνδεσμος, as “an undeclined part of the sentence which binds parts of the sentence together” (D. L. VII 58), their theory of ‘non-simple statements’ (ἀξιώματα οὐχ ἀπλᾶ) accords great value to the cardinal syntactico-logical rôle of the conjunctions. We may briefly here recall that, according to Diogenes Laertius (VII 71–75), Chrysippus, followed by Diogenes of Babylon, distinguished seven kinds of non-simple statements, all defined by the use of a specific conjunction joining two simple statements. The “connected” (συνημμένον) statement used the connective conjunction (συναπτικός σύνδεσμος) εἰ—εἰ ἡμέρα ἐστὶ, φῶς ἐστὶ, “if it is daytime, there is light”; the “subconnected” (παρασυνημμένον) statement used the subconnective conjunction (παρασυναπτικός σ.) ἐπεὶ—ἐπεὶ ἡμέρα ἐστὶ, φῶς ἐστὶ, “since it is daytime, there is light”; and so on for the other statements—non-simple copulative (‘*p* and *q*’, συμπεπλεγμένον, συμπλεκτικός σ.), disjunctive (‘*p* or *q*’, διεζευγμένον, διαζευκτικός σ.), causal (‘because *p*, *q*’, αἰτιώδης), and clarificatory of the major or the minor (‘rather *p* than *q*’ or the reverse, διασαφοῦν τὸ μᾶλλον / ἥττον), each being put together by its own conjunction. It is on this base of Stoic logic that the Alexandrians built their grammatical doctrine of the complex sentence.³⁹

What, then, is the syntactic problematic of the Alexandrians on the subject of conjunctions? To answer this question, without a methodical and complete discussion by Apollonius on the subject,⁴⁰ we will be forced to glean information here and there, that is, in the relevant passages of the transmitted works of Apollonius (completed by Priscian *IG*, XVI 1, p. 93.13), to which we should add those of the scholia on the *Techne*, the puzzle-pieces of which we are trying to fit back together.

39 The repeated mention of the Stoics (οἱ Στωϊκοί, οἱ ἀπὸ τῆς Στοᾶς) at the start of the Apollonian treatise *On Conjunctions* reveals an Apollonius who, even though he criticises them, has and recognises a considerable debt to the logicians of the Stoa.

40 His treatise *On Conjunctions* survives only in a seriously mutilated form. The *Syntax* makes only sporadic reference to conjunctions (the end of Book IV, which may have dealt with conjunctive constructions, is missing).

The exploration of this corpus leads to a list of 17 classes of conjunctions. To the 7 classes discussed by Diogenes Laertius (which must represent the original Stoic kernel), Apollonius adds:

- conjunctions which appear, in a refined analysis, as variants of those cited by Diogenes:⁴¹ beside the connective (εἰ “if”), the adjunctive (ἐπιζευκτικός: ἔάν “if”, premorpheme of the subjunctive); beside the disjunctive (ἢ exclusive “or”), the subdisjunctive (παραδιαζευκτικός: ἤτοι / ἢ non-exclusive “or”);
- new conjunctions: the final (ἀποτελεστικός: ἵνα), the oppositive (ἐναντιωματικός: ἔμπης), the suspensive or conditional (ἀναιρετικός / δυνητικός: ἄν), the syllogistic (συλλογιστικός = conclusive, ἐπιφορικός among the Stoics: ἄρα), the confirmatory ((δια)βεβαιωτικός: ὅτι), the dubitative (διαπορητικός or ἀπορηματικός: ἄρα, μῶν), the group of expletives (παραπληρωματικοί).

The list of the seventeen classes appears neither logically ordered—we can find no commentary which justifies its order—nor subdivisible into specified sections—and in particular, no distinction is made between coordination and subordination. As far as the total number of conjunctions, there is no consensus among the grammarians, although the mention of dissent (*Sch.* Dion. T. 440.15) indicates at least that a calculation would be legitimate. The inventory of the conjunctions, then, occupies a middle place between the strictly-closed inventory of the 18 prepositions and the open inventory of adverbs.

We have seen that the function of σύνδεσμος was for Aristotle to ‘unify the many’ (ἐν ποιεῖν τὰ πολλά). This idea is revived by Apollonius, *Synt.* I 10, where the conjunctive function is put in parallel with the composition of nouns, which unifies two words into one:

we read as single words πασιμέλουσα (*Od.* 12.70) and κηρессиφορήτους (*Il.* 8.527). In sentences, likewise, conjunctions can unify two or more—see for instance the compound sentences formed of connected, subconnected or coupled [propositions]; and conversely, the omission of the conjunctions breaks sentences up. For instance:

ἦρομεν, ὡς ἐκέλευες, ἀνά δρυμά, φαίδιμ’ Ὀδυσσεύ·
εὔρομεν ἐν βήσσησι τετυγμένα δώματα καλά (*Od.* 10.251–252)

41 In this inventory only the most typical conjunction is indicated as an example of each class.

we crossed the woods, as you ordered, glorious Odysseus;
in a glen we found a well-built palace.

It would have been necessary to use the copulative “and”: “**and** in a glen we found”.

ὕφ' ἐν μέρος λόγου ἀνέγνωμεν τὸ πασιμέλουσα (μ 70) καὶ κηρессиφορήτους (θ 527). Ἄλλὰ κὰν τοῖς λόγοις οἱ παρεπόμενοι σύνδεσμοι ἔσθ' ὅτε ἐνοῦσι δύο λόγους ἢ καὶ πλείους, καθάπερ οἱ συνδεόμενοι λόγοι ἐκ συνημμένων ἢ παρασυνημμένων ἢ καὶ ἔτι συμπεπλεγμένων. ἢ πάλιν ἀποστάντες διάλυσιν τῶν λόγων ποιοῦνται, ὡς ἔχει τὸ ἤρομεν, ὡς ἐκέλευες, ἀνά δρυμὰ, φαίδιμ' Ὀδυσσεῦ· εὔρομεν ἐν βήσσησι τετυγμένα δώματα καλά (κ 251–2). ἔδει γὰρ συμπλέξαι τῷ καί· καὶ εὔρομεν ἐν βήσσησι.

This passage is instructive in many ways. First of all, it highlights a profound difference, both revealed and hidden by the parallelism μέρος λόγου vs. λόγος, between the unification of words by composition and the unification of sentences by conjunction: the former is effected by a simple joining of constituents (the status of the composite sentence being finalised by the reduction in accent, *Synt.* IV 1, 434.6), the latter requires (cf. ἔδει) the presence of a conjunctive word. Here Apollonius reproaches Homer for having erred: by contrast with rhetoric, which can sometimes justify asyndeton (Ps.-Demetr. *Eloc.* 268–9), syntax reveals itself to be intolerant about linking sentences together.⁴² With this question of asyndeton, we brush against the relation between syntax and rhetoric, both of proximity and of differentiation.

Conjunctions, like articles and prepositions (cf. *Synt.* I 12, cited above § 4.3.2), are consignifying words. In this case, Apollonius specifies the modalities of consignification, thus:

As for the conjunctions, they have their own connotations depending on the order or sequence of the sentences. ἦτοι, then, may sometimes be understood as copulative—for instance in:

ἦτοι ὁ γ' ὡς εἰπὼν κατ' ἄρ' ἔζητο (*Il.* 1.68)

42 The scholia on the *Iliad* witness the vigilant attention of the Alexandrian philologists to asyndeton. Meanwhile, rather than censuring the Poet like Apollonius, the scholiast often finds justifications for asyndetic expressions: the insertion of a maxim (e.g. A 216–8.8 Erbse), the language of a ruler (ἀρχοντικός λόγος, e.g. B 8c.3), the effect of anger (e.g. Γ 53a.1), etc.

on the one hand, he, having spoken, sat down,
where it has the force of μέν, whence the inevitable δέ, its counterpart, in
what follows:

τοῖσι δ' ἀνέστη (*Il.* 1.68, immediately following)

on the other hand, arose among them . . .,
Elsewhere, ἦτοι may be disjunctive, for instance:

ἦτοι νέος ἐστὶν ἢ παλαιός

be he *either* young *or* old; (cf. *Il.* 14.108) (*Synt.* I 12, 14.4)

οἱ τε σύνδεσμοι πρὸς τὰς τῶν λόγων τάξεις ἢ ἀκολουθίας τὰς ἰδίας δυνάμεις
παρεμφαίνουσιν, ὅτε συμπλεκτικῶς μὲν ἀκούεται ὁ ἦτοι ὃ γ' ὡς εἰπῶν κατ' ἄρ'
ἔζετο (*A* 68). ἐν ἴσῃ γὰρ δυνάμει τοῦ μὲν παρείληπται, δι' ὃ καὶ κατὰ τὴν ἐξῆς
συμπλοκὴν ἀναγκαίως ὁ δέ ἐπηνέχθη ἐν τῷ τοῖσι δ' ἀνέστη (*A* 68), ὅτε δὲ
διαζευκτικῶς, ἦτοι νέος ἐστὶν ἢ παλαιός.

Consignification, exemplified here by the disemic conjunction ἦτοι, consists in a suspension of ambiguity by correlation with another conjunction, the second specifying the value of the first. There are many examples of conjunctive consignification, one of the most remarkable being that of the verbal modality, which is affected by the conjunctive context. Given two indicative assertions *p* and *q*, their assertive modality will be suspended in the 'connective' (conditional) proposition *if p, then q*, or the disjunctive *either p or q* (*Synt.* III 124). We see here how the conjunctions, whether connective or disjunctive, introduce alongside (παρεμφαίνουσιν) the verb form the connotation (παρέμφασις, *Nebendeutung*) attached to them. We can go farther: in the case of the subjunctive, even the name of the mood, ὑποτακτική, literally 'subordinative', far from indicating a particular modality like the others (indicative, imperative, optative), merely reflects the fact that it only ever appears after a conjunction (*Synt.* III 125).⁴³

In the foregoing quotation, the expression πρὸς τὰς τῶν λόγων τάξεις ἢ ἀκολουθίας, here translated literally as "in connection with the order or sequence of the sentences", alludes to another essential parameter of conjunctive

43 One consequence of this statement is that the subjunctive appears as a mood with a premorpheme, and that the conjunctive character of the premorpheme was eventually forgotten: *Synt.* III 57.

constructions: the relevance or not of the order in which the simple conjoined sentences appear (the terms *τάξις* and *ἀκολουθία* seem to denote the same reality from two different angles, the first connoting the order of the words, the second a more semantic aspect of consequence, cf. *Sch. Dion. T.* 102.27). The order is irrelevant for *p and q* and *p or q*, but not for *p if q*. These considerations, although derived from treatises on formal logic (and repeated in certain grammatical scholia, e.g. *Sch. Dion. T.* 103.15), sometimes conflict with philological data: Apollonius, doubtlessly following many others, finds fault with the *hysteron proteron* of Homer, as in *Od.* 12.134 *τάς μὲν ἄρα θρέψασά τε τεκοῦσά τε* “having thus raised them and brought them into the world”, condemning any inversion of two verbs. This is one example among others of the inevitable tension between logical norms and philological realities.

One singularity, in the eyes of modern scholars who are otherwise largely in debt to the Alexandrians on the subject of conjunctions, lies in the fact that what we would call temporal (e.g. *ὅτε* “when”) and comparative (e.g. *ὥσπερ* “as”) conjunctions are not classed as conjunctions. It seems strange to us that *p when q* or *p as q* should not be described as conjoined propositions under the same heading as *p because q*. One cause of this situation is certainly that the grammarians did not find the schemes *p when q*, *p as q* in the Stoic list of non-simple utterances. Moreover, the fact that *ὅτε q* or *ὥσπερ q* can be exchanged for adverbs of time or manner like *τότε* or *καλῶς* most likely inclined them to give an adverbial status to invariant words like *ὅτε* and *ὥσπερ* themselves. But whatever the reason, that is what they did, notwithstanding the (in our eyes decisive) fact that the function of adverbs is that of the proposition and not that of the connector. By this example it may be seen that the Alexandrian analysis of complex sentences occurred within a framework of thought materially different from that imposed upon our own grammar; the abstract concept of propositional subordination, in particular, did not exist for the Alexandrian grammarians.⁴⁴ Instead, semantic data carried for them a weight which appears to us unjustified. A single example may be given here, inverse and complementary to the foregoing—words like *ἐνεκα*, *χάριν*, constructed with a nominal genitive in the sense of “because of”, are classed with the conjunctions for the simple reason that their semantic field relates to causation, that is, to an idea which uses conjunctive expressions (the *ἀξιῶμα αἰτιῶδες* of the Stoics). Equally, to our surprise but nonetheless for the same reasons, the propositional

44 Another consequence of this conception of syntax is the absence of individual status, for Apollonius, of the constructions that we call completive, whether they are conjunctives (*ὅτι*) or infinitives; on this point, see Lallot [1996], [1999] and Ildelfonse [2000], [2004].

construction *διά* + accusative, with the sense of “because of” is designated as a “conjunctive construction” (συνδεσμική σύνταξις, *Synt.* IV 30, 461.1).

5 Syntax between Logic and Philology

5.1 Παράδοσις

Whatever one might think of these kinds of oddities—which happen to be rather infrequent—our impression of the Apollonian procedure is that of a constant rationalising effort, of a desire to *explain* the constructions he comes across. It is even a sort of *leitmotif* of the *Syntax* that the mere accumulation and exhibition of examples (παράθεσις) offers no benefit to syntactic theory (λόγος). This is not to say, however, that Apollonius constructs, or even has any intention of constructing, a formal and abstract system. As has already been suggested, his goal of *τεχνικός* is part of his broader project, which he never dreams of denying, to account for as much as possible of the empirical data,⁴⁵ that is, the corpus of the Greek literary inheritance, which he calls the *παράδοσις*. This *παράδοσις*, diversified over time (diachronic changes, imperfections in copying) and over space (variations in dialect), is multiple and variegated—and the grammarian must both respect and master it. Again drawing a parallel between syntax and morphology, Apollonius writes:

There are competing forms among which tradition does not distinguish [the correct from the incorrect]. [...] It seems that here the coherence of the theory will allow us to rule out bad forms. The same will be true for the following examination [*sc.* of the study of syntax]: in the event of doubt, the application of the theory, taken together with a consideration of natural data, will allow us to eliminate incorrect constructions. (*Synt.* I 61, 51.12)

Ἦδη μέντοι καί τινα τῶν κατὰ παράδοσιν οὐ διεσταλμένην ἔχει τὴν προφορὰν, (...) καὶ φαίνεται ὅτι ἢ τοῦ λόγου συνέχεια τὸ ἐν κακίᾳ εἰρημένον παρατρέψει τοιοῦτον οὖν πάλιν τι παρακολουθήσει καὶ ἐπὶ τῆς προκειμένης τηρήσεως· ἀμφιβαλλομένων γάρ τινων τὰ τοῦ λόγου ἐγγεγνόμενα μετὰ τίνος φυσικῆς παρακολουθήσεως ἀποστήσει τὸ οὐ δέον τῆς συντάξεως.

45 See Pagani in this volume.

In this passage, with its neatly normative focus (the correction of texts, διόρθωσις, is one of the enduring tasks of the Alexandrian grammarian),⁴⁶ the keywords are λόγος and παράδοσις. The latter, “tradition”, should be understood in the double sense of a manuscript transmission of texts *and* the tradition of grammatical teaching itself, with its scholarly benefits, but also its uncertainties, its polemics, its contradictions. At any given moment in history, the concrete product of this παράδοσις is typically the group formed by the available manuscripts of a literary oeuvre (for instance, the Homeric poems), together with the grammatical writings which refer to them—exegetical commentaries and technical treatises produced by earlier γραμματικοί and τεχνικοί. Since antiquity this group has offered the professional grammarian, for any given text, a mosaic of concurrent ‘lessons’ and explanations to choose from (cf. ἀμφιβαλλομένων τινών), since, by definition, the παράδοσις does not take a stance (cf. οὐ διεσταλμένην).

5.2 Λόγος

In the face of such diversity, the decision comes down to the λόγος. This, too, has many facets. On one level, it designates an analogical reasoning which, in confronting the unknown with the known, the doubtful with the certain, helps to normalise the language and to correct texts. Of constant use in the study of morphology, analogical reasoning is often designated as such by the adjective ἀνάλογος, the adverb ἀναλόγως or the derived noun ἀναλογία.⁴⁷ One example among many: is ἐμεῖο, the Homeric form of the first-person pronoun in the genitive case correct? Perfectly so (ἀναλογωπάτην), for it stands in exactly the same relation to ἐμεῦ as ἐμοῖο does to ἐμοῦ (*Synt.* II 119, 218.10).⁴⁸ The same reasoning is valid in syntax: in δοῦρα σέσηπεν and σπάρτα λέλυνται (*Il.* 2.135), where after a plural subject the verb is singular in the one case, plural in the other, the (more) regular form (ἀναλογώτερον) is the second, because we say λέγουσι (and not *λέγει) οἱ ἄνθρωποι “the men (masc.) speak” (and not **“speaks”*), and we do

46 See Montana in this volume.

47 We find 45 occurrences of the words of this family in the work of Apollonius, with a remarkable frequency of the comparative ἀναλογώτερος (17 times, plus one of the superlative ἀναλογωπάτην): the conformity to analogy is the object of an appreciation which admits of degrees. For the analogy in ancient grammar see, in this volume, Montana, Valente (section II), and Pagani.

48 ἐμεῦ and ἐμεῖο are two concurrent genitive forms of the first-person pronoun in Homer. Of these two forms the second is problematic. To save it, Apollonius invokes the two concurrent (and non-problematic) genitive forms of the possessive “my”, ἐμοῦ and ἐμοῖο, and constructs the proportion ἐμοῦ : ἐμοῖο :: ἐμεῦ : X, concluding with a perfect rigour that X = ἐμεῖο. This last form is thus legitimised by a flawless analogical reasoning.

not say *φιλοπονῶ *‘‘I work hard’’, but rather φιλοπονοῦμεν παῖδια ὄντα ‘‘we work hard, being children (neut.)’’ (*Synt.* III 51–52, 317.9). Likewise, Μυρμιδόνεσσιν ἄνασσε (*Il.* I 180) is unacceptable (ἀπαράδεκτος) because, just as in βασιλεύω τούτων, the object of all the verbs of domination is in the genitive, not in the dative (*Synt.* III 174, 420.10). Such is the constrictive force of analogy.

But there is, in syntax, another facet of the λόγος, which the φυσική παρακολούθησις of *Synt.* I 61, 52.5 probably refers to, at least vaguely. Beneath this somewhat enigmatic expression of a ‘‘natural intelligence’’, we see an indication that, for Apollonius, syntactic rationality is not at all arbitrary, but has a ‘‘natural’’ foundation to which the grammarian should refer in order to understand whether a given construction is grammatical. Thus we saw earlier that the usage of cases after verbs of perception reflects the different physiological modalities of the various sense-organs. Equally, it should be understood that a transitive base phrase is calqued, more or less, on the AGENT-ACTION-PATIENT scenario that it describes: this is what emerges, in *Synt.* III 86–87, 344.16, from the analysis of constructions with two accusatives of the type συνέβη ἐμὲ φιλεῖν Τρύφωνα, literally ‘‘it happened to me (acc.) to love Tryphon (acc.)’’, where the coexistence of the two accusatives creates an ambiguity about the respective function of each. It is therefore the order in which the two accusatives appear—one before, the other after the verb—that dispels the ambiguity, the first designating the agent, the second the patient—and this order is founded, for Apollonius, on the (onto)logical precedence of the active over the passive (δεύτερα τὰ πάθη τῶν ἐνεργειῶν ἔστιν ‘‘passions are secondary with respect to actions’’, 345.18). The consequence of this analysis is that, in *Iliad* V.85, δὸς δέ τ’ ἔμ’ ἄνδρα ἐλεῖν, ‘‘let me take the man’’, the grammarian finds a hyperbaton, the verb which expresses the transitive diathesis not being in its ‘‘natural’’ place between the pronoun ἔμ’ (agent) and the noun ἄνδρα (patient) (345.20).

5.3 Norm and Figure

This example reveals a characteristic aspect of Alexandrian syntax, that of the normative ‘appeal to order’ when confronted with empirical data. Here the Apollonian metalanguage presents an entire series of terms which have in common that they qualify a form, whether morphological or syntactic, representing a norm of reference, by contrast to all the alterations (πάθη) it can undergo in actual usage. These terms can evoke the following:

- The norm, generally speaking, *viz.* that which should be the case (τὸ δέον, *e.g.* *Synt.* 107.18, opposed here to (Homeric) usage, τὸ σύνηθες), as opposed to its literal contrary (τὸ οὐ δέον, *e.g.* *Synt.* 52.5); or, by a well-worn medical

- metaphor, that which is healthy (ύγιής, *e.g. Synt.* 31.19, opposed here to the deviant, παρεμπίπτων)
- that which conforms to a regularity (ἀκόλουθος), as opposed to that which is irregular (ἀνακόλουθος), *e.g. Synt.* 63.17
 - that which is congruent (κατάλληλον), as opposed to the incongruent (ἀκατάλληλον);
 - that which is complete and integral (έντελής, όλόκληρος), as opposed to that which is elliptical (έλλειπής), defective (ένδεής) or, on the contrary, pleonastic (πλεονάζων), *e.g. Pron.* 38.23, *Synt.* 53.8, etc.;
 - that which is in (good) order (τό έξής), as opposed to that which has suffered a displacement (τό ύπερβατόν), *e.g. Pron.* 41.3.

Although incomplete, this enumeration amply illustrates the normative tools elaborated and used by the Alexandrian grammarians, γραμματικοί like Aristarchus, his disciples and epigones (witnessed in the scholia to literary works), or τεχνικοί, like Apollonius, Herodianus and the later tradition. It remains to study the focus of their procedures. All are aiming firstly to help establish (διόρθωσις), read (ανάγνωσις) and explain (έξήγησις) a transmitted text—above all, the Homeric epics. To this end, they all needed a theoretical (λόγος) and practical (τέχνη) knowledge which might give them a firm grasp on poems composed in an archaic language, and full of variants in the manuscript transmission, poems which, to them, were disconcerting empirical objects. This knowledge was the γραμματική which they discovered and perfected in the last centuries of the pagan era and the first of the Christian era. At Alexandria, like other parallel disciplines then in full flight (medicine, mathematics, mechanics, astronomy, etc.) and in opposition to empiricist currents, it took a resolutely rationalist direction. Apollonian syntax is therefore presented as a reason-based syntax, which confronts empirical textual occurrences (“examples”, παράθεσις) with a theoretical standard (cf. τό άντιπαραπεπηγμένον τόυ λόγου, *Synt.* 1 62, 52.9), and it is by reference to this standard that a number of alterations (πάθη) are diagnosed; then, depending on the instance, each alteration falls under the heading of the error/mistake (άμάρτημα, κακία) or deserves the positive label of “figure” (σχήμα). While faults must be corrected by definition, figures form an integral part of syntactic description, the existence of which they safeguard by serving as a buffer between the theoretical model and the diversity of empirical data that might call it into question.⁴⁹ At the beginning of his *Syntax* (1 3–7), Apollonius underlines that the combination of forms into sentences gives rise to the same πάθη (5.6) as do the forms

49 For the Apollonius’ theoretical method cf. Pagani in this volume.

themselves: reduplication, pleonasm, ellipsis. To these figures can be added others: hyperbaton, already touched upon, affects the order of words, while hypallage is a figure of substitution, for instance of one case for another:

[Words] with five cases demonstrate a hypallage of case, which we can either accept as a figure of speech, when it appears in the ordinary usage of a dialect, or reject as an incongruity. In this instance we dismiss [the latter solution], since [such hypallages] hark back to an archaic usage, and there are innumerable attestations of the same form <e.g. with the substitution of the direct case for the vocative of a different form, as> in:

ἠέλιός θ', ὃς πάντ' ἐφορᾷς (*Il.* 3.277)

and you, sun (nomin., instead of voc.) who see all things,

δός, φίλος (*Od.* 17.415)

give, friend (nomin.),

ὦ φίλτατ' Αἴας (*Soph., Aj.* 977, 996)

o very dear (voc.) Ajax (nomin.),

and similar [turns of phrase] are innumerable. We might say that they illustrate the Attic figure, since, as we have said, the vocative demands another ending. We find the opposite situation when the vocative is used instead of the direct case, following the Macedonian or Thessalian usage, as our predecessors have established, for instance:

αὐτὰρ ὁ αὖτε Θυέστ' Ἀγαμέμνονι (*Il.* 2.107)

lit.: in his turn the (nomin.) Thyestes (voc.) (handed over the sceptre) to Agamemnon,

Here the article also betrays the deviation in case. (*Synt.* III 34, 300.8)

τὰ γὰρ ἀναμερισθέντα εἰς πέντε πτώσεις τὰς ἀνθυπαλλαγὰς τῶν πτώσεων ἐμφανίζει, ἃς παραδεχόμεθα ἢ κατὰ τὸν τῶν σχημάτων λόγον, ἐθιμώτερον διαλέκτου τὸ τοιοῦτον ἐνδειξαμένης, ἢ ἀπαραδέκτους ποιούμεθα κατὰ τὸν τοῦ ἀκαταλλήλου λόγον. οὐχ ὑποπίπτουσα γὰρ ἀρχαϊκῇ χρήσει, ἀπειράκις κατὰ τὸ αὐτὸ παρειλημμένη <.....> τὸ ἠέλιός θ', ὃς πάντ'

ἐφορᾶς (Γ 277), δός, φίλος (ρ 415), ὦ φίλτατ' Αἴας (Soph. *Ai.* 977 and 996), ἄπειρα τὰ τούτοις ὅμοια, <ᾶ> τὸ Ἄττικὸν σχῆμα παραστήσει, καθότι, ὡς ἔφαμεν, ἡ κλητικὴ ἕτερον τέλος ἀπήτει. ἢ ἀντεστραμμένως, ὅτε ἡ κλητικὴ ἀντ' εὐθειῶν παραλαμβάνεται κατὰ Μακεδονικὸν ἔθος ἢ Θεσσαλικόν, ὡς οἱ πρὸ ἡμῶν τὸ τοιοῦτον ἐπιστώσαντο, αὐτὰρ ὁ αὖτε Θυέστ' Ἀγαμέμνονι (B 107), συνελέγχοντος καὶ τοῦ ἄρθρου τὴν παραλλαγὴν τῆς πτώσεως.

This passage clarifies, using the example of hypallage of case, the procedure of the Alexandrian syntactician as it has been presented here. Let us distinguish the principal contributions: 1) The vocative is normally the case of address. 2) The corpus, both Homeric and classical, offers examples of the nominative functioning as a vocative, and *vice versa*. 3) Is this a fault or a figure of speech? The venerable age and considerable quantity of occurrences of the phenomenon leads us to believe that it is a figure—namely, hypallage. 4) This figure is considered “Attic” in the *nominativus pro vocativo* case; in the inverse case, we may speak of other dialectal usages. The dialectal details do not concern us here; what is important, rather, is that the deviation of case (παραλλαγὴ τῆς πτώσεως) should be identified and recovered for use. The syntactic norm remains safe, while deviations are given as figures, attributable to dialectal diversity.⁵⁰

This chapter has offered a depiction—a simplified one admittedly, but hopefully faithful—of the characteristic features of Alexandrian syntax, as represented by Apollonius Dyscolus: a discourse on the “construction of words together” (as the masters of Port-Royal would say), whose rationalist orientation is continually compromised by empirical data—the whole together aiming to clarify the logic of the language, τὰ τοῦ λόγου, and to “explain poetry”, πρὸς ἐξήγησιν τῶν ποιημάτων (to put it like Apollonius).

50 Idiomatic in other cases: among other singularities, Homer is accustomed to elide his articles (ἔλλειπτικός ἐστι τῶν ἄρθρων, *Synt.* I 42, 38.5).

Ancient Etymology: A Tool for Thinking¹

1 Introduction

This chapter will deal with the ancient scholarly and poetic practices of etymology.² Rather than providing a historical overview, its main focus will be on the cultural and historical embedding of these practices, an analysis of the type of discourse they represent, and their cognitive and rhetorical functions. These aspects of etymology remain important throughout antiquity and

-
- 1 Parts of this chapter are based on Sluiter [1997b], and on the 'etymology dossier' in Copeland-Sluiter [2009] 339–366 (esp. 339–344). I am grateful to Christopher Pelling, Philomen Probert, and Stephen Halliwell, and to the other colleagues and students in Oxford (where I was allowed to give the Nellie Wallace Lectures in the Spring of 2010 on 'Thinking with Language'); parts of this material were also presented in Leiden, Utrecht (ΟΙΚΟΣ), and the Department of Christiane Reitz at Rostock; it also informed some of my contributions to the team studying 'textual practices', including etymology, at the Max-Planck-Institut für Wissenschaftsgeschichte in Berlin, brought together by Lorraine Daston, Anthony Grafton and Glenn Most in the Summer of 2012. I would like to thank them, and also Gregory Nagy and his wonderful staff and librarians at the Center for Hellenic Studies for providing me with the peace of mind to write this chapter.
 - 2 For historical overviews, see *e.g.* Amsler [1989], Lallot [1991a], and the introductions to Buridant [1998] and Nifadopoulos [2003b].

the Middle Ages and they connect technical, poetic, and general (rhetorical) uses, even though at the same time there is a development in the technical disciplines to use etymology for the more specialized purpose of thinking about morphology and lexicon by organizing words into clusters with a family resemblance.³

Even there, though, it has virtually nothing to do with our modern academic practice of etymology. The first thing to clear out of the way, then, is the possible confusion of ancient etymology and the modern form that has given us our etymological dictionaries, the most recent one for Greek by Robert Beekes [2010]. Such dictionaries ultimately go back to the linguistic discoveries by the *Junggrammatiker* of the 19th century, based on the comparison of different languages, and in particular the realization that a number of them, including ancient Greek and Latin, are related as Indo-European languages. These languages all derive from a reconstructed common ancestor, Proto-Indo-European, and they diverge from that common stock in accordance with strictly defined and strictly conditioned phonological changes (sound laws). These laws describe the situation before and after the sound changes, including the phonological contexts in which at a given moment all phonemes under the scope of the law underwent its influence. Exceptions need to be explained either as the result of later sound changes or on the basis of processes of analogy.

The ancient discursive practice of etymology, on the other hand, is simply a different kind of language game. In antiquity, to the extent that rules are formulated, they are mostly *ad hoc*⁴ and as it were ‘after the fact’, the ‘fact’ being a preliminary *semantic* observation, leading to an interpretive relationship between the *explanandum* and the *explanans*. This is to say that etymologies are mostly put forward to *corroborate* a specific view of what a word ‘really’ means, probably even where they are presented as a tool to *find* the meaning of a word.⁵ There are some attempts to systematize, but as we will see, they are designed to allow maximum amplitude in relating words to other words. This observation is not in any way meant as a disparagement of the ancient practice. Quite to the contrary, its aim is to allow us to value and appreciate that ancient practice for what it really is and purports to do, rather than trying to

3 Philoxenus (1st c. BC) may be our first source to move in this direction, see Lallot [1991b]. We see a similar development in Herodian, the Greek lexicographical tradition (the *Etymologica*), and in the Middle Ages, where it is the branch of grammar called *ethimologia* that subsumes the study of morphology, see Law [1985].

4 There were also some general principles guiding these practices; see below § 3.2.

5 For this heuristic function, see Maltby [2003] and below § 4.

make it conform to what we consider the correct, even the only scientific, way of talking about language.

The differences that we can observe are connected with the different purposes of ancient and modern etymology. Modern etymology is interested in the systematic nature of language change and is a historical discipline relating words to their past forms (the Proto-Indoeuropean roots). Although this may also be useful as a general background to the study of semantic developments, this form of etymology cannot be used reliably to explain the actual usage of a word at any given point in time. It is usually made very clear to students that we should not fall into the trap of confusing diachrony with synchrony: synchronic semantics (and syntax, and phonology) can be described as a system *without reference to* the developments that led to any given state of that system. Diachronic linguistics, on the other hand, needs knowledge of the successive synchronic states to construe the development that led from one to the other. De Saussure used his famous comparison with a game of chess for this purpose: we can completely and adequately describe the positions of the pieces on the chessboard without knowing or caring what moves created those particular positions on the board.⁶

Ancient etymology, on the other hand, is all about synchrony, even though it invokes a discourse that references the past. It is about the relationship between words and their semantic explanation or definition—it wants to know *why* anything is called what it is called, the *reason* for the name, and what *motivates* the namegiver—and the explanations it comes up with are not intended to give us insight into the past, into the historical processes and developments leading to the present situation; rather, and importantly, (ancient) etymology is about *understanding the present*.⁷ So whereas modern etymology does not provide an immediate insight into the contemporary semantics of a word, that is actually precisely what ancient etymology is meant to do. Ancient etymology is primarily about the present, modern etymology is about the

6 De Saussure [1916 (1974)] 124–127. Scholars have pointed out various infelicities in this comparison (*e.g.* Willems [1971]), some of which were already anticipated by De Saussure himself (notably the fact that playing chess is an intentional activity, whereas language change, apart from analogical change, is an evolutionary process (cf. [1916 (1974)] 127). However, the main point referenced above is still an important one.

7 This is true both in technical and non-technical forms of etymology. For the ‘near-absence of considerations relating to the history of the Greek language’ in the Alexandrians, cf. Lallot [2011] *passim*, here at 248; for the same point specifically about etymology, and for etymology as ‘Benennungsgrund’, see Herbermann [1991].

past.⁸ Modern etymology is about phonology, ancient etymology is almost entirely about semantics.

2 Ancient Etymology: ‘Denkform’ and ‘Discursive Practice’

In antiquity, etymology is what we may call a *Denkform* and a ‘discursive practice’, a particular mode of thinking and speaking. Since language is always simply *there*, it belongs to the shared background, or, more technically, the *common ground* of speakers and addressees in any communicative situation. A shared awareness of the language they are using makes language itself readily available as a *topic* of joint reflection and a *source* of arguments: it becomes a ‘tool for thinking’, not in the sense that language offers various possibilities to express our thoughts (for instance, certain grammatical constructions, such as embedding, that facilitate particular types of thought), but as a shared *object of thought* and a common focus of attention: the words we use become ‘intuition pumps’ for how the world they represent functions.⁹ When thinking about and trying to understand the present, whatever the specific issue at stake, one way of getting a grip is by thinking about and trying to understand the language itself that we use to speak about such issues. Hence the attraction of the etymological turn, in which language in general, but particularly names, become the object of research. Such etymological ‘language talk’ is couched in a very recognizable discourse, as we will see in more depth in *Discourse characteristics* below.¹⁰ It is a constant fixture of ancient poetry, but it also occurs in prose texts. Its use by the language disciplines (grammar, rhetoric, and dialectic)

8 For the importance of synchrony and interpretation, see Peraki-Kyriakidou [2002] 480–482. Socrates’ position in Plato’s *Cratylus* is exceptional, but the positions he is arguing against are the typical ones. What is new in Socrates’ position is that he considers etymology a way to *reconstruct* the namegivers’ thoughts and considerations in producing specific names for specific things. This would make etymology a historical type of investigation, leading to knowledge about a situation in the past; Socrates’ attempt to disqualify etymology from contributing relevant arguments to investigations of contemporary issues is virtually unique in antiquity, see below § 3.

9 For the linguistic notion of ‘common ground’, see *e.g.* Clark-Brennan [1991]; ‘tools for thinking’: Dennett [2000]; [2013], where the equally appealing term “intuition pump” is also used. This label is applied primarily to thought experiments by Dennett, but it seems readily applicable to the exploratory character of numerous ancient etymologies.

10 The term ‘language talk’ to describe the various, often informal, discursive practices that take language itself as its starting point and object is inspired by the unpublished Leiden dissertation on ideas on language in Euripides by Christaan Caspers [2011], whose first chapter is about ‘ὄνομα—πρᾶγμα talk’.

is in part similar to the general use, and in part more specifically tailored to talking about issues of morphology and lexicography.¹¹ In the list of the tasks of grammar by Dionysius Thrax, the fourth item is specified as ἐτυμολογίας εὑρεσις, ‘the invention of etymology’.¹² This means that etymology is now (2nd c. BC) a canonical part of grammar, but at the same time, the formulation suggests a link with rhetorical *inventio* and the argumentative role of etymology which is part of its general and poetic use. The reason why it came to be subsumed under the field of grammar is probably precisely because it plays such an important role in poetry—poetry after all is the primary study and teaching material of the grammarian.

2.1 *Anchoring Practices: Etymology, Mythology, Genealogy*¹³

Ancient etymology is best understood as one of the ‘anchoring’ practices by which human beings seek to create points of reference and orientation in past and present. In that sense it belongs with cultural practices such as mythology and genealogy. An important role of mythology is that it provides a group with a set of stories, a narrative construction of formative moments in the past, and thus helps, among other things, to create a sense of group identity in the present. Mythology provides a common frame of reference. Genealogy, too, is a discursive practice that ultimately serves to explain the *status quo* in the present by anchoring that present, in an unbroken line of generations, to a founding moment in the past, *e.g.* a hero or a god.¹⁴ Both mythology and genealogy are forms of cultural memory; both have recognizable generic features, *i.e.* they constitute a genre with its own discursive characteristics, and both, it may be argued, are ultimately more ‘about’ the present than the past, in spite of their ostensive occupation with that past. The same goes for etymology, and in fact, that practice is regularly related to the other two.

For the link between etymology and genealogy, we may think, with Peradotto [1990], of the name of Penelope, who was most probably named after a kind of ‘duck’ (πηνέλοψ)—there are more ancient examples of girls being named after animals. However, as Peradotto points out, it is possible that the name

11 For etymology as a criterion of correctness in ancient prosody and orthography, see Pagani, Probert, and Valente (section III.2) in this volume.

12 Dion. T. *Ars Gram.* GG I 1.6.1–2.

13 I am making use in this section of Sluiter [1997b] for the connection between etymology, mythology, and genealogy. See Manetti [1987] for ancient semiotic practices.

14 The importance of this practice in an oral society was very well described by Thomas [1989]; Leclerc [1993] 258; West [1985] 27; 29 (rightly pointing out the relation between genealogical narrative and *explanations*).

itself became the object of reflection, and was re-etymologized and connected to *πήνη*, “woof”, and *λώπη* “robe, mantle”; this etymology would have been an impulse or mnemonic support to generate the story of a heroine who spun a robe by day and undid her work by night.¹⁵ Of course, the alternative is that the myth was there first, and that a suitable name for its heroine was subsequently devised: this is a chicken-and-egg question, but however that is, there is an undeniable link between the etymology of the name and the mythological story.

In the *Odyssey*, the name of Odysseus, too, is etymologically connected to the role and character of the hero; “Odysseus” is etymologized many times (Rank [1951] 51–63).¹⁶ The most explicit instance links the choice for baby Odysseus’ name to the verb *ὀδύσασθαι* (*Od.* 19.406ff.). *ὀδύσασθαι*, “to hate, to be mad at”, characterizes, it is said, the relationship between Odysseus’ grandfather Autolycus and the world, and it is projected onto the new baby, who gets a name that fits his grandfather.¹⁷ Two implicit references come in the words of Athena to Zeus in *Odyssey* 1.62, where Odysseus has “grown into his name” and

-
- 15 Rank [1951] 66 discusses, but rightly rejects, an allusion to an etymology *πήνεα λέπουσα* in Penelope’s story of her wily weaving in *Od.* 19.137 (οἱ δὲ γάμον σπεύδουσιν· ἐγὼ δὲ δόλους τολυπέω “they are urging marriage; but I am weaving tricks”) on the grounds that all basis in assonance is lacking here (see below § 3.2). Peradotto’s view on the content-generating effect of names is reminiscent of Guiraud’s concept of “*rétro-motivation*” [1972], with its dynamic movement from ‘forme’ to ‘fond’ (content) rather than the other way around (where there would be an actual impulse to create a motivated name, *i.e.* ‘motivation’). In “*rétro-motivation*”, the sign literally creates its referent, the ‘word’ brings about the ‘thing’. For names generating myths, cf. further Kraus [1987] 18; Leclerc [1993] 271.
- 16 The etymologies are implicit in that no term such as ‘etymology’ is used (the Greek term goes back to Chrysippus, 3rd c. BC; cf. D. L. 7.200, who lists two books on Ἑτυμολογικά. However, there is signposting, most explicitly in *Od.* 19.406ff., since the issue there is the naming of baby Odysseus. For etymological signposting (*e.g.* through naming constructions), see below § 3.1. For a collection of all the passages with possible connections between Odysseus and *oduromai*, *odussomai*, and other punning relationships of words or endings with part or whole of the name of Odysseus, see Rank [1951] 51ff.
- 17 There are many more literary examples of children who are given speaking names that characterize primarily their fathers or grandfathers, *e.g.* Astyanax, whose name reflects Hector’s role of protector of the city: *Il.* 6.402f. Hector called the boy Scamandrius, ἀντάρ οἱ ἄλλοι / Ἀστυάνακτ’. οἶος γὰρ ἐρύετο Ἴλιον Ἐκτωρ, “but the others called him Astyanax. For Hector was the sole protector of Troy”; Asty- correspond to Ἴλιον, and ἐρύετο to -anax; note that Hector’s name has a perspicuous etymology denoting the same thing, to which Priam alludes in *Il.* 24.499 εἶρτο δὲ ἄστυ καὶ αὐτούς “(my son) who protected the city and the people”. Similarly, Ajax’ son Eurysaces (“Broadshield”) is named after Ajax’ signature military gear (for the connection, see Soph. *Aj.* 574–576).

carries it in his own right, for she asks Zeus: “why, Zeus, are you so mad at him?” (τί νύ οἱ τόσον ὠδύσσαο, Ζεῦ;) The same passage also hints at a link with ὀδύρομαι “to lament”, when Athena says that Circe is holding back poor Odysseus, who is lamenting his fate: δύστηνον ὀδυρόμενον κατερύκει (*Od.* 1.55). Odysseus is not only, like here, frequently in the position of having cause for lamentation himself, in the *Odyssey* he is obviously also the object of the lamentations of those who miss him, notably Penelope, Telemachus, and, in a striking passage, Eumaeus.¹⁸ In this case, we have both a link with the story and a link between etymology and genealogy: Odysseus gets the name that fits his grandfather and only subsequently does that name become appropriate to the man Odysseus as well. The three discursive practices of genealogy, mythology and etymology are all useful in helping to create a mental roadmap of reality, to give people a sense of where they are in the world.

2.2 *Discourse Characteristics*

Etymological discourse has a number of characteristics to which the modern reader should be alerted, since they help diagnose that we are actually confronted with this particular tool for thinking at a given point in the text. I will list them briefly here, and then discuss each of them in more detail.

The first and most prominent feature is the emphasis on *causality, motivation, and explanation*: the reasons and motivations for why a name or a word is what it is. The prominence of this feature deserves separate discussion in the subsection below.

Since ancient etymology is not about the reconstruction of the single, historically accurate, route from word form to word form, but about using language as a tool for thinking about contemporary reality, this intellectual framework does not require just one single and accurate etymology for each word: several

18 Penelope, e.g. *Od.* 14.129f.—where notice the context of the absent husband: καί οἱ ὀδυρομένη βλεφάρων ἄπο δάκρυα πίπτει / ἢ θέμις ἐστὶ γυναικός, ἐπὶν πόσις ἄλλοθ' ἔληται “and the tears fall from her eyelids, while she weeps, as is the way of a woman, when her husband dies afar” (trad. Murray); Eumaeus, a little further on in the same passage, claims that not even his absent parents arouse such weeping and longing in him as does his absent master Odysseus (*Od.* 14.142ff., where ὀδύρομαι evokes the name of Ὀδυσσεύς, a name Eumaeus states he feels socially inhibited using): notice how the explicit reference to naming may be considered a clue to the presence of etymologizing (οὐδέ νυ τῶν ἔτι τόσσον ὀδύρομαι, . . . ἀλλά μ' Ὀδυσσῆος πόθος αἴνυται οἰχομένοιο. / τὸν μὲν ἐγών, ὦ ξεῖνε, καὶ οὐ παρέοντ' ὀνομάζειν / αἰδέομαι . . . ἀλλά μιν ἠθεῖον καλέω “yet it is not for them that I henceforth mourn so much; instead, it is longing for Odysseus, who is gone, that seizes me. His name, stranger, absent though he is, I am ashamed to pronounce; . . . instead I call him ‘honored friend’ ” (trad. Murray-Dimock).

explanations can co-exist, they can be true *simultaneously*, because different ones can elucidate and highlight different aspects of the same concept, and there is virtually always a certain *fluidity* to etymological discourse. Several etymologies can even add up to an *explanatory narrative* that illuminates the workings of a certain concept in society.

Since etymologies frequently have an argumentative function, the construction of the etymological argument is often such that they will be maximally *persuasive*; the rhetorical presentation of the material can sometimes be demonstrated from the use of a certain *bridging technique* to smooth the semantic connection between word and suggested etymology. Etymologies can also be used *polemically*, to underpin different positions in a debate. Since technical terminology is frequently avoided, there are other forms of signposting that should alert us to the presence of etymological discourse: the context often features words for “name” or “naming”.¹⁹

To shore up the explanation that is being offered, there will always be a phonological or, in this case better, phonetic link between the *explanandum* and the *explanans*: the phrase that is offered as an etymological explanation of the word will have some sounds or letters²⁰ in common with the word that is being explained. The explanation will sometimes detail the path of transformation to the word-form under discussion (*phonetic bridging*).

We will go into the *discourse of motivation* separately, and then illustrate the features mentioned above through a close reading of one case study, taken from Plato’s *Cratylus*.

2.3 *Emphasis on Causality and Motivation*

The fact that ancient etymology serves as a tool for thinking and an orienting device explains a constant feature of etymological discourse both in literature in general and in the language arts (grammar, rhetoric, dialectic): it is strongly

19 See O’Hara [1996] 60 and 75ff. on “naming constructions as etymological signposts” (in Vergil); we just saw an example in the Eumaeus passage *Od.* 14.142ff. (see n. 18). Another example: *Ov. Fast.* 3.725ff., is about explaining the *causae*, the reasons why the vine-father summons (*vocet*) the people to his cakes. The combination of *causa* and *vocare* is enough to prime an ancient audience for the presence of etymologies: there follows a connection between *liba* and *Liber*, but the real connection comes at 733–736: *Liber* explains the name *libamina*, and then states *liba* “are so called, because” [again causal language calling attention to the etymology] *part* of them (*i.e.* of the *libamina*) is dedicated. This must be a playful etymology: *liba* forms part of the word *libamina*, and that fits the actual sacrificial procedure. For the phrases ἀπὸ τοῦ or παρὰ τό as signposts, see Peraki-Kyriakidou [2002] 482.

20 These are never clearly distinguished in antiquity; the term γράμμα or στοιχείον can cover both or either. φωνή is usually reserved for (inarticulate) sound.

marked by the language of causation, motivation, and reasoning. Etymological discourse explains, rationalizes and motivates the meaning of words, it makes explicit the causal relationships obtaining between the thing and the name. *Why* should a word have a particular meaning, *why* has the thing been given that particular name?²¹ Such causal discourse works by linking what is well-known (the word-form that is the starting point) to what is less well-known (the semantic motivation for that word-form); borrowing a term from Fowler, we may call this process “retrospective shaping”.²² This is to say that the etymology will rarely be a heuristic to *find out* what a word means: that meaning, or someone’s opinion on the meaning, is the given, and the etymology is a form of reverse engineering that will make it possible to read off that meaning from the surface of the word.

The urge to motivate our words may be connected to the impulse to use metaphorical language or other poetic devices: both in etymological discourse and in metaphor (or poetry) we may recognize an attempt to undo the arbitrariness of the linguistic sign by making language essentially motivated.²³ Very few ancient Greeks or Romans would have accepted the claim of arbitrariness, but it takes work to deny it. The same resistance can also be detected in the long tradition of folk etymology that lasts until our own day. This is how etymology is a tool for thinking: it supplies a particular kind of argument and explanation.

This characteristic of etymology is directly reflected in the discourse that expresses it, which is often strongly marked by the presence of causal language (true both in Greek and Latin). Some examples of typical phrases that point to etymologizing are:

-
- 21 This is what Herbermann [1991] calls the ‘Benennungsgrund’. For the earliest reflections on words’ origin and meaning in the Greek world, see Novokhatko and Pagani in this volume.
 - 22 For this concept (without the name) applied to genealogy, see West [1985] 11; Fowler [1999], 2 n. 7.
 - 23 See Culler [1988] 11 and 13, pointing out this importance of the urge to motivate. “Precisely because the linguistic sign is arbitrary, discourse works incessantly, deviously to motivate”. For undoing the arbitrariness of the sign through metaphor and poetic language, see Conte [1986] 45, who uses Plato’s *Cratylus* as a parallel for this process. Etymology makes ‘poetry’ out of language, *i.e.* it makes language ‘*substantially motivated*’ (*ibid.*). O’Hara [1996] 3 also adopts this view of Conte in thinking about poetic etymologizing (cf. Conte [1986] 50).

- ἐπώνυμον οὖνεκα . . . [“a significant name because . . .”]
- [(name) x] is “as it were”, or “just like” (ὡσπερεί, οἶονεί, *quasi, velut(i), sicut(i), tamquam*) x [where x “unpacks” the information contained in the name]
- a thing has a particular name, because (*quod, quia*) x
- the reason (*ratio*) or cause (*causa*) for a particular name is x²⁴

Cicero is one of our sources stating this causal principle quite clearly, both when speaking about the Academics and the Stoics (the latter in a very critical passage):

Cic. *Acad.* 1.8.32 (on the old Academy)

verborum etiam explicatio probabatur, id est, *qua de causa quaeque essent ita nominata*, quam ἐτυμολογίαν appellabant; post argumentis quibusdam et quasi *rerum notis ducibus utebantur* ad probandum et ad concludendum id quod *explanari* volebant.

They commanded the explanation of words, *i.e.*, why each thing was called by its particular name (they called this *etymology*). Later they used some of them as arguments and deployed as it were the signs of things as guides to prove and show conclusively that which they wished to have explained.

Cic. *Nat. D.* 3.24.63 (on the Stoics)

. . . vocabulorum *cur quidque ita appellatum sit causas explicare*.

To explain the reasons for the names, why each has that particular name.

24 Some examples: ἐπώνυμον οὖνεκα Hom. *Il.* 9.562; *Hymn. Hom. Ap.* 3.372ff.; Hes. *Theog.* 144; ὡσπερεί cf. Pl. *Cra.* 407b; οἶονεί: *e.g.* Heracl. *Gram. Quaest. Hom.* 55 Hermes stands for λόγος, Leto is opposed to him: λόγῳ δὲ παντὶ μάχεται Λητώ, οἶονεί ληθῶ τις οἶσα καθ' ἑνὸς στοιχείου μετάθεσιν “Leto fights all reason, being *as it were* a *letho* [‘forgetfulness’] if one changes one element”; *quasi etc.*: see Isid. *Etym. passim, e.g.* 1 v 3 *oratio dicta quasi oris ratio*; (combined with *quod*): 1 iii 2 *litterae autem dictae quasi legiterae, quod iter legentibus praestent* “litterae [letters] are called as it were *legiterae*, because they show readers (*leg-entibus*) the way (*iter*)”; cf. further phrases such as Isid. *Etym.* 1 xvli 2 (on metrical feet) *ipsi autem pedes habent speciales causas nominum quare ita vocentur. Pyrrhichus dictus est quia . . .* “the (metrical) feet themselves have special reasons for their names, why there are called what they are called. The Pyrrhichus is called that because . . .”; an example of an allusive etymology, betraying knowledge of the Greek tradition is Vergil’s *trunca pedum* “devoid of feet”, as flagged by the grammarian Sacerdos (*GL* 6.477.16): *apes quasi ἄπους quod sine pedibus nascatur, sicut Virgilius de his [Georg. 4.310] trunca pedum ‘apes’ ‘bee’ is as it were a-pous ‘feet-less’, because it is born without feet, as Vergil says about them ‘devoid of feet’.*

The “indications or signs of reality” (*rerum nota*) are used as “guiding principle”, to argue and to underpin whatever explanation is offered.²⁵ This explanation of etymology as the ‘Benennungsgrund’ and motivation for names is clearly expressed by *qua de causa quaeque essent ita nominata*, and *cur quidque ita appellatum sit causas explicare*.

Since the normal order of cause (here: the semantic explanation) and effect (here: the word under discussion) is precisely that, we also see the frequent use of Α ἀπό (τοῦ) Β; (*ducere*) *a(b)* etc.

2.4 The Successful Etymology

The successful mapping of names and world unto each other (the goal of the etymologist) may be flagged by commenting on the appropriateness of the name through terms such as ἔτυμον (ἐτύμως), ἐτητύμως, ἀληθῶς, πρεπόντως, δικαίως, ἐνδίκως, καλῶς, εὐλόγως, ὀρθῶς, each of which may again be followed (or preceded) by a *motivation* of such a declaration of appropriateness. All of these terms (minus the adverb ἐτύμως) can be found as early as the Greek tragedians, and all indicate that a name can be motivated in a satisfactory way, that there is a ‘click’ between the world and the way we speak about the world. Although all of these terms are compliments, indicating a ‘good fit’, they do come from different semantic field. The first three (ἐτύμως, ἐτητύμως, ἀληθῶς) indicate “truth”, *i.e.* they say something about the epistemological status of these names, their reliability, and the extent to which they indicate what really is the case.²⁶ πρεπόντως indicates a certain impression on the senses, it means that the name is *conspicuously* fitting; there may also be an overtone of seemliness. A famous example with both ἐτητύμως and πρεπόντως is the passage where the chorus comments on the truthfulness of the name of Helen and the conspicuousness of that truth in Aeschylus’ *Agamemnon* 681ff. In this case the name-giver had some inkling of what lay in store (*pronoiais*), and the *nomen* proved an *omen*:²⁷

25 See n. 72 for Cicero’s terminology.

26 This aspect of ‘truthfulness’ survives deep into the technical tradition, see, *e.g.*, *Sch. Dion. T.*, *GG I* 3.14.23–24: Ἐτυμολογία ἐστὶν ἡ ἀνάπτυξις τῶν λέξεων, δι’ ἧς τὸ ἀληθές σαφηνίζεται “etymology is the unfolding of the words by which the truth is clarified”.

27 ἐτύμως referring to etymologies is not found as adverb prior to the 4th c. BC, and esp. in prose from the 2nd c. BC onwards, mostly in technical literature. However, both the adverb and the adjective ἔτυμος are used with verbs or nouns referring to types of speech, *e.g.* λέγειν ἐτύμως in Xenophanes, *Fragm.* 8 (West); ἔτυμον ἐρέω, *Hom. Il.* 10.534 ψεύσομαι ἢ ἔτυμον ἐρέω; “shall I lie or tell the truth?”; φάμι ἔτυμον, *Soph. Ant.* 1320; ἔτυμος λόγος, *Stesich.* 15 (Page); *Pind. Pyth.* 1.68; ἔ. ἄγγελος *Aesch. Sept.* 82, ἔ. φήμη, *Eur. El.* 818; ἔ. φάτις *Ar. Pax* 114; ἔ. φθογγά *Soph. Phil.* 205; in later prose referring to etymology, in a text dealing with “allegory” *Heraclitus Quaest. Hom.* 5.1–2 (Buffière) on the word ἀλληγορία: σχεδὸν γὰρ

τίς ποτ' ὠνόμαζεν ᾧδ'
 ἔς τὸ πᾶν ἐτήτύμως·
 μή τις ὄντιν' οὐχ ὀρώμεν προνοί-
 αῖσι τοῦ πεπρωμένου
 γλώσσαν ἐν τύχαι νέμων·
 τὰν δορίγραμβρον ἀμφινει-
 κή θ' Ἑλέαν; ἐπεὶ πρεπόντως
 ἑλένας, ἔλανδρος, ἑλέ-
 πτολις ἐκ τῶν ἀβροπήνων
 προκαλυμμάτων ἔπλευσεν.

who can have given a name so altogether true—was it some power invisible guiding his tongue aright by forecasting of destiny?—who named that bride of the spear and source of strife with the name of Helen? For, it was conspicuously as a Hell to ships, Hell to men, Hell to city that she sailed the sea, stepping forth from her delicate and costly-curtained bower (trad. Weir Smyth/Lloyd-Jones, adapted).

Ἐτήτυμος and ἔτυμος both mean “true”. Modern etymological lexica do not agree about the precise derivation of these words: they are certainly related to an adjective ἐτός (ἐτά is paraphrased in Hesychius as ἀληθῆ, ἀγαθά), which is itself related to ἐτάζω. Ἐτήτυμος may either have an expressive reduplication or it is formed through a combination of ἐτός and ἔτυμος. Both words are only used in connection with the *technical* terminology of etymology (ἔτυμολογία) at quite a late stage: while they obviously indicate an etymology in Aeschylus, the *term* etymology is much later.²⁸ But the principle is clear: Helen has a truth-speaking name. The term *πρεπόντως* in 687 conveys that as she sailed out, she was both “conspicuously” and possibly “fittingly” men-, ship- and city-destroying,

αὐτὸ τοῦνομα καὶ λίαν ἐτύμως εἰρημένον ἐλέγχει τὴν δύναμιν αὐτῆς. ὁ γὰρ ἄλλα μὲν ἀγορεύειν τρόπος, ἕτερα δὲ ὦν λέγει σημαίων, ἐπωνύμως ἀλληγορία καλεῖται; (in a work not dealing with etymology) Artem. 1.4: a dream of a hostel called “the camel” was explained as announcing that the dreamer would break a leg: καὶ τὸ ξενοδοχεῖον κάμηλος καλούμενον τὸν μηρὸν κατὰξειν (sc. ἐδήλου), ἐπεὶ καὶ τὸ ζῶον τὸ καλούμενον κάμηλος μέσους κάμπτει τοὺς μηροὺς ὑποτεμνόμενον τοῖν σκελοῖν τὸ ὕψος ἐτύμως κεκλημένον κάμηλος οἰονεὶ κάμμηρος; and ἀληθῶς: Aesch. *Supp.* 315 on the name of Epaphus, derived from ἐφάπτωρ χειρὶ (see vs. 313): “Ἐπαφος ἀληθῶς ῥυσίων ἐπώνυμος “Epaphus, and truly named from laying on of hands” (trad. Weir Smyth).

28 The word etymology is absent from Plato's *Cratylus* and was apparently coined by the Stoic philosopher Chrysippus in the 3rd c. BC. τὸ ἔτυμον for ‘etymology’ is first used by Plutarch, *e.g. Mor.* 278c ἔστι δὲ τοῦ ὀνόματος τὸ ἔτυμον . . . “the etymology of the word is . . .”.

i.e. she behaved in a way appropriate to her name, as if she was somehow socially expected (πρέπει, τὸ πρέπει) to do the right thing by her name. She was certainly *seen* to be doing what her name might suggest. Notice how the ἐπεὶ clause *motivates* the appropriateness of the name.

Δικαίως and ἐνδίκως mean that things are as they ought to be, that regularity and order are preserved.²⁹ Καλῶς comes from the semantic field of aesthetics,³⁰ εὐλόγως of reasonableness,³¹ and ὀρθῶς of correctness, rightness according to a (straight) rule—this of course is the word that will become the 5th-century catchword for correctness of speech.³²

- 29 An example combining ὀρθῶς, ἐνδίκως and ἐπώνυμον is Aesch. *Sept.* 400ff. (Eteocles speaking, on Tydeus' shield emblem of 'night'): καὶ νύκτα ταύτην ἦν λέγεις ἐπ' ἀσπίδος . . . εἰ γὰρ θανόντι νύξ ἐπ' ὀφθαλμοῖς πέσοι / τῷ τοι φέροντι σῆμ' ὑπέροκμον τόδε / γένοιτ' ἂν ὀρθῶς ἐνδίκως τ' ἐπώνυμον "as for this 'night' which you say is on his shield (this will prove prophetic): for if the night of death should fall on his eyes, then his boastful device would prove to be rightly and properly true to its name for its bearer" (trad. Sommerstein). This passage is intriguing because it refers to a σῆμα that is not a linguistic sign (the word 'night'), but rather a graphic representation; it needs to be verbalized, *and* interpreted metaphorically as the night of death before the diagnosis of the 'perfect fit' between sign and reality will hold. For δικαίως, see also Soph. *OT* 1282f.
- 30 For a passage combining ἐτήτυμος and καλῶς, see Aesch. *Cho.* 948ff. ἔθιγε δ' ἐν μάχρᾳ χερὸς ἐτήτυμος / Διὸς κόρα, Δίκαν δέ νιν / προσαγορεύομεν / βροτοὶ τυχόντες καλῶς "and in the battle his hand was guided by her who is in very truth daughter of Zeus, breathing murderous wrath on her foes. We mortals aim true to the mark when we call her ΔΙΚΑ (Justice)" (trad. Weir Smyth, adapted): here the truth of Dika's parentage as daughter of Zeus (the first function of ἐτήτυμος here) is confirmed by her name (Δι [os]- K[or]A), a name given by mortals that is beautifully to the point.
- 31 See *e.g.* Aesch. fr. 6.3 Radt A τί δῆτ' ἐπ' αὐτοῖς ὄνομα θήσονται βροτοί; / Β σεμνοῦς Παλικῶς Ζεὺς ἐφίεται καλεῖν. / Α ἦ καὶ Παλικῶν εὐλόγως μένει φάτις; / Β πάλιν γὰρ ἵκουσ' ἐκ σκότου τόδ' εἰς φάος "A So what name will mortals give them? / B Zeus ordains that they be called the holy Palici. / A And will the name of Palici be appropriate and permanent? / B Yes, for they have *come back* from the darkness to this realm of light" (trad. Sommerstein): the etymology is based on πάλιν and ἵκειν—they are "Back-comers" (Sommerstein); cf. also Aesch. *Supp.* 251ff. (εὐλόγως ἐπώνυμον). For linguistic correctness (*Hellenismos*) see Pagani in this volume.
- 32 For ὀρθῶς, see Aesch. *Sept.* 829 οἱ δῆτ' ὀρθῶς κατ' ἐπωνυμίαν / <...> καὶ πολυνεικεῖς ὦλοντ' "who have verily perished in a manner appropriate to their names / ... with 'much strife'" (trad. Sommerstein): the chorus claims that both brothers are "Polyneiceis", and plays on the etymology of that name; Soph. fr. 965 Radt ὀρθῶς δ' Ὀδυσσεὺς εἰμ' ἐπώνυμος κακῶν. / πολλοὶ γὰρ ὠδύσαντο δυσμενεῖς ἐμοί "I am rightly called Odysseus, after something bad: for many enemies have been angry with me". ὀρθῶς is used in particular for the correspondence between expressions and things meant—the crucial point in etymology.

Any name carrying these commendations shares the fact that it is ἐπώνυμος, it is significant, and establishes a meaningful relationship between language and the world. It refers to the fact that something is *named after* something else.³³ The term ἐπώνυμος is used from Homer onwards.³⁴

3 A Case Study: Plato's *Cratylus* on the Name of Apollo³⁵

In the 5th and 4th centuries it became increasingly fashionable to explore and exploit the notion that language itself can somehow be of direct and instrumental use in illuminating the relationship between reality, thought, and language itself, that there is a satisfying fit between language and reality, and that this relationship can be expressed as right, just, true, correct or beautiful, as fits the context. In Plato's *Cratylus*, written in the 4th c. BC, but with a dramatic date in the 5th, Socrates is made to address this fashion in an attempt, in his case, to disqualify language as a direct route to philosophical truth. As in several other dialogues, Socrates dismantles the etymological method only after having proven his unrivalled excellence at this form of discourse.³⁶—Plato always makes sure that the 'sour grapes' argument will never affect Socrates: whenever

-
- In Aeschylus, we also encounter the terms *τορῶς* and *σαφῶς* "clearly": these are terms that refer to the auditory domain, the shrillness and clarity of sounds; they are less relevant here.
- 33 For ἐπώνυμος, used for a name in so far as it relates to something else, see Sulzberger [1926], Sluiter [1997b] 157. ἐπώνυμον ends up in the technical tradition as a subclass of nouns (Dion. T. *GG* I 1 38.3 ἐπώνυμον δέ ἐστιν, ὃ καὶ διώνυμον καλεῖται, τὸ μὲθ' ἑτέρου κυρίου καθ' ἑνὸς λεγόμενον, ὡς Ἐνοσίχθων ὁ Ποσειδῶν καὶ Φοῖβος ὁ Ἀπόλλων "an eponym, also called di-onym (double name), is the name that is used for a single referent together with another word that is the proper name, e.g. Poseidon is (also) 'Earthshaker', and Apollo is also 'Phoebus'").
- 34 E.g. Hom. *Od.* 19.409 τῷ δ' Ὀδυσσεὺς ὄνομ' ἔστω ἐπώνυμον "therefore let Odysseus be his (significant) name", "the name by which he is called"; Soph. *Aj.* 430ff. (Ajax speaking) αἰαί. τίς ἂν ποτ' ᾤεθ' ᾧδ' ἐπώνυμον / τοῦμόν ξυνοίσειν ὄνομα τοῖς ἐμοῖς κακοῖς; / νῦν γὰρ πάρεστι καὶ δις αἰάζειν ἐμοί "Alas! Who ever would have thought that my name would come to harmonise with my sorrows? For now I can say 'Alas' a second time" (trad. Lloyd Jones); this is a case of Ajax having "grown into" his name, where the assonance with the interjection of lament *aiai* has suddenly become meaningful; cf. the relationship between Πηνελόπειος and πένθος in Eur. *Bacch.* 367 (without a term like ἐπώνυμος flagging the etymology).
- 35 This example was also discussed with a slightly different focus in Sluiter [1998].
- 36 Barney [1998] for the competitive nature of Socrates' performance; on *Cra.*, see further in particular Baxter [1992]; Silverman [1992]; Barney [2001]; Sedley [2003b], and the commentary by Ademollo [2011].

a particular type of discourse is rejected as a sound way to philosophical truth, (mostly) Socrates is first shown to have absolute mastery of it.³⁷

Probably without intending to do so, Plato gave an enormous impetus to the fashion of ‘thinking with language’ through his *Cratylus*. The dialogue was taken dead seriously throughout antiquity.³⁸ It provided for the first time some sustained theoretical reflection on etymological practice, and this combined with etymology’s status as a fixture of poetry to secure a permanent place for it in the language disciplines: grammar, rhetoric and dialectic.³⁹

There is every reason to think that the discourse deployed in the *Cratylus* gives a reliable depiction of the type of discourse current among ‘etymologists’, in this case probably the people applying it in the context of intellectual debate in sophistic circles; but clearly, they could also rely on an earlier tradition. And, indeed, the parallels between *Cratylus* and both the earlier and later traditions suggest that its presentation of etymological discourse must have been quite recognizable. What is new, is that *Cratylus* provides us with an early example of longer stretches of sustained etymological argument. In order to illustrate the characteristics of etymological discourse, let us take a look at the etymology of the name of Apollo in *Cratylus* 405a–406a:

Pl. *Cra.* 405a–406a: Apollo:

οὐ γὰρ ἔστιν ὅτι ἂν μᾶλλον ὄνομα ἤρμοσεν ἔν ὃν τέτταρσι δυνάμεσι ταῖς τοῦ θεοῦ, ὥστε πασῶν ἐφάπτεσθαι καὶ δηλοῦν τρόπον τινὰ μουσικὴν τε καὶ μαντικὴν καὶ ἰατρικὴν καὶ τοξικὴν. . . . (b) κατὰ μὲν τοίνυν τὰς ἀπολύσεις τε καὶ ἀπολούσεις, ὡς ἰατρὸς ὢν τῶν τοιούτων, (c) “Ἀπολούων” ἂν ὀρθῶς καλοῖτο· κατὰ δὲ τὴν μαντικὴν καὶ τὸ ἀληθές τε καὶ τὸ ἀπλοῦν—ταῦτόν γάρ ἐστιν—ὥσπερ οὖν οἱ Θετταλοὶ καλοῦσιν αὐτόν, ὀρθότατ’ ἂν καλοῖτο· “Ἀπλου” γὰρ φασί

-
- 37 *E.g.* forensic rhetoric in *Ap.*; different types of epideictic rhetoric in *Menex.*, *Symp.*, *Phdr.*, *Prt.*; sophistic discourse in *Thet.*, and *Euthd.*; Other types of discourse, not always rejected for philosophical purposes: symbouleutic rhetoric in the preambles of *Leg.*; cosmological discourse in *Ti.* (with Timaeus as speaker), historiographical discourse (again not with Socrates as speaker) in *Ti.*, *Cri.*, *Leg. III*; legal discourse in *Leg.* See also Nightingale [1995].
- 38 The modern discussion about taking the *Cratylus* seriously or not is probably not quite on target: the use of etymology as a vehicle for philosophical discussion is explored quite seriously; the outcome that it should not be so used is equally serious. None of this precludes a certain playfulness on the way. In antiquity the *Cratylus* was sometimes seen as originating etymological theory, *e.g.* Dion. Hal. *Comp.* 16: πρῶτῳ τὸν ὑπὲρ ἐτυμολογίας εἰσαγαγόντι λόγον Πλάτωνι τῷ Σωκρατικῷ, πολλαχῆ μὲν καὶ ἄλλῃ μάλιστα δ’ ἐν τῷ Κρατύλῳ “Plato the Socratic was the first to introduce the theory of etymology, in many other places, but in particular in his *Cratylus*”.
- 39 Cf. Pagani, Probert, and Valente (section III.2) in this volume.

πάντες Θετταλοὶ τοῦτον τὸν θεόν. διὰ δὲ τὸ αἰεὶ βολῶν ἐγκρατῆς εἶναι τοξικῆ “Αειβάλλων” ἐστίν. κατὰ δὲ τὴν μουσικὴν δεῖ ὑπολαβεῖν [ὡςπερ τὸν ἀκόλουθόν τε καὶ τὴν ἄκοιτιν] ὅτι τὸ ἄλφα σημαίνει πολλαχού τὸ ὄμου, καὶ ἐνταῦθα τὴν ὄμου πόλῃσιν καὶ περὶ τὸν οὐρανόν, οὓς δὴ “πόλους” καλοῦσιν, καὶ [τὴν] περὶ (d) τὴν ἐν τῇ ᾠδῇ ἁρμονίαν, ἣ δὴ συμφωνία καλεῖται, ὅτι ταῦτα πάντα, ὡς φασιν οἱ κομψοὶ περὶ μουσικὴν καὶ ἀστρονομίαν, ἁρμονία τινὶ πολεὶ ἅμα πάντα· ἐπιστατεῖ δὲ οὗτος ὁ θεὸς τῇ ἁρμονίᾳ ὁμοπολῶν αὐτὰ πάντα καὶ κατὰ θεοῦς καὶ κατ’ ἀνθρώπους· ὡςπερ οὖν τὸν ὁμοκέλευθον καὶ ὁμοκοιτιν “ἀκόλουθον” καὶ “ἄκοιτιν” ἐκαλέσαμεν, μεταβαλόντες ἀντὶ τοῦ “ὄμο-” “ἄ-”, οὕτω καὶ “Ἀπόλλωνα” ἐκαλέσαμεν ὅς ἦν “Ὀμοπολῶν”, (e) ἕτερον λάβδρα ἐμβαλόντες, ὅτι ὁμώνυμον ἐγίγνετο τῷ χαλεπῷ ὀνόματι. ὅπερ καὶ νῦν ὑποπτεύοντές τινες διὰ τὸ μὴ ὀρθῶς σκοπεῖσθαι τὴν δύναμιν τοῦ ὀνόματος φοβοῦνται αὐτὸ ὡς σημαῖνον φθορὰν τινὰ· τὸ δὲ [πολύ], (406a) ὡςπερ ἄρτι ἐλέγετο, πασῶν ἐφαπτόμενον κεῖται τῶν τοῦ θεοῦ δυνάμεων, ἀπλοῦ, αἰεὶ βάλλοντος, ἀπολούοντος, ὁμοπολούοντος.

For no single name could more aptly indicate the four functions of the god, touching upon them all and in a manner declaring his power in music, prophecy, medicine, and archery... (b) In accordance, then, with his acts of delivering and his washings, as being the physician of such diseases, (c) he might properly be called Apoluon [ἀπολούων, the washer], and in accordance with his soothsaying and truth and simplicity (*haploun*)—for the two are identical—he might most properly be called by the name the Thessalians use; for all Thessalians call the god Aplun. And because he is always by his archery controller of darts [βολῶν] he is ever darting [αἰεὶ βάλλων]. And in accordance with his music we have to understand that *alpha* often signifies ‘together’, and here it denotes moving together both in the heavens about the poles, as we call them, and with respect to (d) harmony in song, which is called concord. For, as the ingenious musicians and astronomers tell us, all these things move together by a kind of harmony. And this god directs the harmony, making them all move together, among both gods and men. And so, just as we call *homokeleuthon* (him who accompanies), and *homokoitin* (bedfellow), by changing the *homo-* to *alpha*, *akolouthon* and *akoitin*, so also we called him Apollo who was Homopolo, (e) and the second lambda was inserted because without it the name sounded of disaster. Even as it is, some have a suspicion of this, because they do not properly regard the force of the name, and therefore they fear it, thinking that it denotes some kind of ruin. But in fact, (406a) as was said, the name touches upon all the qualities of the god, as simple, ever-darting, purifying, and accompanying. [trad. Fowler, slightly adapted]

3.1 *Illustration of Discursive Principles*

This text provides a perfect demonstration of the principles of etymological discourse.

- (1) First of all, here are four etymologies that are clearly meant to give us, collectively, a picture of the roles of Apollo in 5th–4th-century Athens: roles in music, divination, medicine, and archery. The different etymologies do not exclude, but rather supplement each other. None of them is supposed to offer the single true historical derivation of the name, but each of them reveals an aspect of the god. They are *simultaneously true*.
- (2) Second, each of the four gives a *Benennungsgrund*, they motivate the name of the god; each time the *Benennungsgrund* is different in accordance with the different roles of the god. The etymologies are marked by the use of causal language or the suggestion of causal connections.⁴⁰ The etymologies are evaluated, in this case primarily by means of terms such as ὀρθῶς and ὀρθότατ' (405c).⁴¹
- (3) Apart from the causal language, the vocabulary used draws explicit attention to the presence of names (*e.g.* in the very first line of this excerpt: ὄνομα) and the practice of naming (various forms of καλέω are used throughout this text). In the *Cratylus*, with its explicit focus on etymology, this may not cause wonder, but as noted above, such discourse elements may signpost etymologies also in texts that are not explicitly *about* etymology.

All the points mentioned so far can readily be paralleled in the poetic tradition, for instance in the multiple explanations for the name of Ion in Euripides' *Ion*; in the prologue by Hermes we learn that Apollo will make sure that he will be called by the name Ion throughout Greece: as future founder of the *Ionians* (*Ion* 74–75), he will be their “eponymous hero”, *i.e.* they will be named after him; and in fact, Hermes proceeds immediately to call him by that name he is yet to get (80–81). The actual naming is based on Apollo's oracle to Ion's new father Xuthus: whoever encounters Xuthus on his leaving the temple (ἐξιόντι, 535) will be his son, says Apollo, and Xuthus converts the fact that Ion is the

40 In 405b κατά may mean no more than “in accordance with”, “with reference to”, but the implication is clearly that etymology and domain are in accordance with each other; 405b ὡς + ptc. “because”; in 405c, again the use of κατά, especially διά, and again κατά; 405d ὅτι; supplemented with a principle of analogy (405d ὅσπερ . . . οὕτω . . .).

41 The qualification ὀρθῶς is obviously important in *Cra.* given its theme of ὀρθότης τῶν ὀνομάτων. But the other commendations also play a role, *e.g.* ἀλήθεια (vs. εὐστομία ~ καλῶς) Pl. *Cra.* 404d.

first person he saw into the motivation for his name.⁴² “Leaving” or “going (out)” is thus something done by *the father*. When the chorus reports the naming incident, they seem to transfer the “going” to the son—of course, “meeting” is something done mutually.⁴³ Each time, the etymology is signposted by the vocabulary of names and naming, and a causal relationship is suggested between name and motivation. The name also related to what happens in the story. This takes us back to the *Cratylus* example again.

- (4) In the Apollo example, the etymologies together make up a narrative: they are a story about Apollo, in fact, the passage has a neat ring-composition that strengthens that effect (406a picks up 405a). It has frequently been observed that etymology is an important tool in allegory, without completely coinciding with it.⁴⁴ Etymology can provide the building blocks, often based on establishing individual interpretations (or motivations) of names. Put together, these can constitute allegorical narratives. This is what we see happening, for instance, in the 1st c. AD work by Cornutus. However, as we see, etymology by itself also has narrative potential.⁴⁵
- (5) Fifth, the last etymology, with its reference to people who believe that the name of Apollo is somehow related to the verb ἀπόλλυμι “to destroy”, is polemical in tone. It is claimed that the insertion of a second lambda was in fact done on purpose to prohibit such an association. In fact, however, our poetic tradition does indeed offer such an etymology, for instance in Aeschylus’ *Agamemnon* 1080–1082,⁴⁶ where Cassandra calls on Apollo,

42 Eur. *Ion* 661–663 Ἴωνα δ’ ὀνομάζω σε τῇ τύχῃ πρέπον, / ὀθούνεκ’ ἀδύτων ἐξιόντι μοι θεοῦ / ἔχνος συνήψας πρῶτος “I give you the name Ion, a name befitting the happy circumstances, because you were the first when I left (*ex-ion-ti*) the temple of the god, to cross my path”. Notice the causal language (ὀθούνεκ’), the success of the etymological relation (πρέπον), and the assonance between *Ion* and *ex-ion-ti*.

43 Eur. *Ion* 802 (response to the question: what name did his father give him?) Ἴων, ἐπεὶ περ πρῶτος ἦντησεν πατρί (“Ion, since he was the first to encounter his father”), cf. above n. 17 on Hector and Astyanax. The verb ἀντάω is used as a synonym for ἰέναι, which we need to get to “Ion”.

44 Boys-Stones [2003a]; see also Long [1992] 54–58 on Cornutus and etymology.

45 Cf. O’Hara [1996] 58 (about etymology in poetry): “An etymology is a story . . . and poets play with details of the story in a way that may be compared with the way they play with myths”.

46 The destructiveness of Apollo is a topos of the poetic tradition, cf. for instance Soph. *OT* 1329f. (Oedipus) Ἀπόλλων τάδ’ ἦν, Ἀπόλλων, φίλοι / ὁ κακὰ κακὰ τελῶν ἐμὰ τάδ’ ἐμὰ πάθεα “this was Apollo, Apollo, my friends, who brought about these evil evil sufferings of mine”. Note that κακὰ τελῶν again represents a paraphrase of the term ἀπόλλυμι which is necessary for the actual etymology. Another destructive Apollo is encountered in the first book of the *Iliad*, where he brings about the pest.

and claims that he has destroyed her: "Ἀπολλον Ἀπολλον / ἀγυιάτ', ἀπόλλων ἐμός. / ἀπώλεσας γὰρ οὐ μόλις τὸ δεύτερον ("Apollo, Apollo, god of the ways, my *Apollón*:⁴⁷ for you have destroyed me (*apólesas*) without any trouble for the second time"). Notice here too the explicit mention of the *Benennungsgrund*: γὰρ, motivating the name Apollo. The polemic against Aeschylus and others demonstrates that you can *argue* with and with the help of etymologies, and that there is a certain *fluidity* to them. A different etymology will correspond to a different view of the underlying reality, in this case the role of Apollo.

- (6) Finally, this text is also a valuable illustration of the technical aspect of etymology: the linguistic operations that will lead from one form to the next. These deserve separate discussion.

3.2 *Etymological Technique*

- (a) An important aspect of etymological persuasive technique, and a demonstration of its rhetorical use is *semantic bridging*, the semantic transition technique that Socrates uses. For instance, when he speaks about the mantic qualities, the aspects of divination in Apollo's name (405c), he starts with the term *μαντική*—this represents his initial claim that the name of Apollo will somehow reveal this function of Apollo. He then substitutes τὸ ἀληθές "truth"—this is unlikely to be a controversial move, since divination is conventionally about establishing truth, and from there he moves to ἀπλοῦν: this move *is* surprising, but it is the word he needs to make the etymology work. Hence his explicit confirmation that truth and simplicity are really the same thing.⁴⁸ It would not have worked to go straight from *μαντική* to ἀπλοῦν.⁴⁹
- (b) Within etymological discourse any linguistic principle or observation can be put to good use: the etymologist can take recourse to different dialects, as here to that of the Thessalians, 405c, where Aeolic *psilos* helps to bring ἀπλοῦν via ἄπλουν closer to Ἀπόλλων. Socrates also refers to the (correctly identified) similarity of ἀ- and ὁμο-, *i.e.* he realizes that the

47 Here related to ἀπόλλυμι/ἀπολλύω as if from ἀπόλλω.

48 Cf. the use of synonyms and paraphrase.

49 Cf. also 405b6ff., where Socrates introduces the purificatory aspects of Apollo (ultimately using ἀπολούω for "to purify") via the more usual καθαίρω: οὐκ οὖν ὁ καθαίρων θεὸς καὶ ὁ ἀπολούων τε καὶ ἀπολύων τῶν τοιούτων κακῶν οὗτος ἂν εἴη; . . . Ἀπολούων ἂν ὀρθῶς καλοῖτο "Wouldn't then the god who purifies and washes clean and delivers from such evils be him? . . . He would rightly be called Cleanwasher".

alpha may not just be an *α privans* but may also indicate a relationship of “togetherness”. And he uses a principle of analogy: the relation between *ὀμόκοιτις* and *ἄκοιτις* is the same as that between *ὀμοπολῶν* and *Ἀπόλλων*. To say that etymology is a very different language game from our discipline of historical grammar is definitely not to say that there is not a great amount of linguistic observation and knowledge feeding into it.⁵⁰

- (c) This is also our first extant text in which the avoidance of homonymy is explicitly invoked as a reason for linguistic change—in later grammatical theory we will encounter the phrase *ἵνα μὴ συνεμπεσῆ* “in order to avoid coincidence”; *συνεμπίπτειν* refers to the coincidence of forms (*co-in-cide* is actually a ‘calque’ of *συν-εμ-πίπτειν*).⁵¹
- (d) Another issue of the technique of etymology is *phonetic bridging*, the phonetic transition technique that takes us from one word-form to the next. This is connected with the set of rules, also going back to the *Cratylus* that is associated with etymology in antiquity. These rules are asserted quite confidently by Socrates in the passage in the *Cratylus* in which he claims to be under the influence of a strange inspiration. If we wish to understand why a word is called whatever it is called—a clear enunciation of the ancient mission statement of etymology—he says, we should fully focus on the *semantic* aspect. Ultimately, that is the only thing that counts. The *word-form* can undergo all kinds of changes, which will not ultimately affect the meaning. Socrates distinguishes four kinds of change or operations:

Pl. *Cra.* 394b οὕτω δὲ ἴσως καὶ ὁ ἐπιστάμενος περὶ ὀνομάτων τὴν δύναμιν αὐτῶν σκοπεῖ, καὶ οὐκ ἐκπλήττεται εἴ τι πρόσκειται γράμμα ἢ μετάκειται ἢ ἀφίρηται, ἢ καὶ ἐν ἄλλοις παντάπασιν γράμμασιν ἔστιν ἢ τοῦ ὀνόματος δύναμις. (*E.g.* Hector and Astyanax have only a *tau* in common, yet they mean the same thing).⁵²

50 In that sense the criticism of Nifadopoulos [2003b] of the observation that ancient etymology will use anything that will create the desired result is misguided. The recognition that ancient etymology is a particular “tool for thinking” in its own right rather than a precursor of historical grammar is perfectly compatible both with taking it seriously, and with acknowledging that observations of linguistic regularities may feed into it (cf. also Pagani, Probert, and Valente [section III.2] in this volume).

51 See Sluiter [1990] 125–139.

52 See above n. 17.

So perhaps the man who knows about names considers their value and is not confused if some letter is added, transposed or subtracted, or even if the force of the name is expressed in entirely different letters. (trad. Fowler)

Socrates is talking here about an expert in names (a dialectician) who wants to understand what the namegiver has done. The namegiver has expressed in his names a certain principle (in the case of Hector and Astyanax the principle of “protecting a city”). The precise form in which he does so is irrelevant. Socrates himself notes that Hector and Astyanax have only the letter *tau* in common, yet they mean the same thing—the idea is *not*, therefore, that one is somehow ‘derived’ from the other, they both express the same semantic idea in different sounds.⁵³ Aristotle will use the same four categories as an exhaustive explanation of the forms that any change can take: change will come about by addition or subtraction or transposition or substitution (πρόσθεσις, ἀφαίρεσις, μετάθεσις, ἐναλλαγή). And we will find these same four categories throughout the grammatical tradition,⁵⁴ whether discussion is about dialects or accentuation or pathology or syntax; they also underlie the theory of rhetorical tropes and figures. Socrates has a long shadow here.

Two comments should be made here. The first one is positive and constructive: the fact that all these changes are enumerated and that they receive their own labels points at the fact that the causal link constructed between a name and its etymology cannot do without *some* form of material support in the word form. The plausibility of the causal connections that are constructed in this explanatory exercise may depend primarily on the semantic link, but phonological (or rather: phonetic) adstruction is necessary. There needs to be a form of assonance between the *explanandum* and the *explanans*, even if just a very slight one.⁵⁵ Issues of euphony may be invoked to explain why the shift in the ‘soundscape’ of the word took place (*e.g.* 404d), and *phonetic bridging* will often provide a series of subtly changed forms connecting the semantically perspicuous to the semantically opaque one.

On the other hand, it will also be clear that if all these changes are permitted, this means that ultimately we can get from any single word to any single other word or phrase—and that, of course, is precisely the criticism that Socrates himself at a later point in the *Cratylus* anticipates and that will be taken up by

53 Note again that like all ancient thinkers, Socrates does not distinguish between sounds and letters.

54 See Pagani in this volume.

55 See O’Hara [1996] 59 and 60ff. on *paronomasia* (the poetic linking of words of similar sound).

that part of the ancient tradition that is highly critical of etymology (such critics of etymology notably include Aristotle, Cicero and Galen). In Cicero's *De Natura Deorum*, for instance, it is put like this:⁵⁶

Cic. *Nat. D.* 3.24.62f.

enodatio nominum... in enodandis autem nominibus quod miserandum sit laboratis... quamquam, quoniam Neptunum a nando appellatum putas, nullum erit nomen quod non possis una littera explicare unde ductum sit; in quo quidem magis tu mihi natare visus es quam ipse Neptunus. (63) magnam molestiam suscepit et minime necessariam primus Zeno post Cleanthes deinde Chrysippus commenticiarum fabularum reddere rationem, vocabulorum cur quidque ita appellatum sit causas explicare.

The unraveling of names... in unraveling names, what a pitiful effort are you making!... though since you think the name Neptune comes from *nare* "to swim", there will be no name of which you could not make the derivation clear on the basis of one letter. In this matter you seem to me to be more at sea than Neptune himself. (63) A great deal of quite unnecessary trouble was taken first by Zeno, then by Cleanthes, and lastly by Chrysippus, to rationalize these purely fanciful myths and explain the reasons for the names by which the various deities are called (trad. Rackham, adapted).

The criticism is put quite clearly here: if Neptune can be derived from *nare*, any word can be linked to any other by having just one letter in common: one letter will suffice to explain its provenance (*una littera explicare unde ductum sit*). This criticism, too, would be long-lived. It is the basis for Mark Twain's famous dictum on the derivation of the name of the village of "Middletown" from "Moses", "by dropping oses and adding iddletown".⁵⁷

The *Cratylus* passage has provided examples of semantic bridging, of the use of any kind of linguistic observation, of the argument from linguistic economy, and of phonetic bridging with its application of the four categories of change. These will remain important instruments of etymologists throughout antiquity and the Middle Ages.⁵⁸

56 This is part of the same text quoted above, in § 2.3.

57 Taken from Culler [1988] 4.

58 For etymologies *a contrario* of the type *lucus a non lucendo*, not represented in this passage, see e.g. Quint. *Inst.* 1.6.34: etiamne a contrariis aliqua sinemus trahi, ut "lucus" quia umbra opacus parum luceat, et "ludus" quia sit longissime a lusu, et "Ditis" quia

4 Functions of Etymology

If ancient etymology is not a historical discipline with a primary interest in phonological change, what does it *do*? As I argued in this chapter, to understand the intellectual and socio-cultural niche occupied by etymology, it is imperative that we understand its *functions*. Focusing on function rather than on technique has the important advantage that it starts from the Principle of Charity: it gives a maximizing interpretation of the relevance and coherence of the ancient practice before criticizing it.⁵⁹ I will pull together some threads from my earlier discussion in this overview of the functions of etymology.⁶⁰

As we demonstrated above, etymology, just like genealogy and mythology, may support cultural memory: in this mnemonic capacity, the words themselves are turned into repositories of cultural information (Carruthers 1992). But not everyone has the key to these repositories. There is a considerable performative element to etymological discourse.⁶¹ The poets, or later the more technical language specialists, put themselves forward as masters of language, capable of making language ‘special’, ‘marked’, and ‘motivated’, in that any seemingly opaque element of language in their hands becomes transparent and meaningful in and of itself. The masterful unpacking of the information carried by the very words themselves is an instant demonstration of the poet’s superior and playful command of language; it allows him to compete with others in a particular form of power play, and thus to claim his place in a literary tradition.⁶² At the same time, the reader is actively involved in the same language game, particularly where the etymology is signposted, but not fully spelled out. Following the poets’ lead in squeezing knowledge of the world out of their words becomes an aesthetic experience, contributing to the pleasure of the reader. Etymological suggestions also frequently create thematic connections with (poetic) content, and thus support and reinforce the narrative. While these elements are all crucial to the primarily *poetic* and *literary* functions of etymology, they spill over into different areas of ancient intellectual life; in particular, there is an important feedback loop between the production of poetry and Alexandrian scholarship, from which grammar and philology

minime dives?; August. *De dialect.* 6; for their explanation as euphemistic expressions, see O’Hara [1996]; Sluiter [1997b] 159.

59 For the Principle of Charity applied to linguistic thought, cf. Sluiter [1998].

60 The excellent discussion by O’Hara [1996] 103ff. has provided the basis for this section.

61 This is definitely also true for Socrates’ performance in the *Cratylus*; see further Ford [1999].

62 O’Hara [1996] 102–111, here at 103 (“I too am a poet”, cf. Conte [1986] 42).

take their cue.⁶³ And there is a second important feedback loop connecting the language disciplines (grammar, rhetoric, dialectic, philology).

It is in technical grammar (but also in rhetorical contexts) that etymology is also used—or at least presented—as a *heuristic* tool, an ‘intuition pump’ for assessing the meaning or orthography of a word.⁶⁴ This presupposes that the etymology is easy to follow. Varro complains about an etymology in Ennius that presupposes knowledge of Greek to an extent that makes the etymology itself highly obscure.⁶⁵ In the technical grammarians Apollonius Dyscolus and Herodian (2nd c. AD), etymology plays a rather minor role.⁶⁶ However, two passages from Herodian may illustrate the range of its usage.

Herodian, *De Il. prosod.*, GG 3.2.30

“Ἡφαιστον· δασύνεται διὰ τὴν ἐτυμολογίαν· παρὰ γὰρ τὸ ἄπτω ἐγένετο.

Hephaestus: Rough breathing on account of the etymology. For it comes from (the word) *haptō*.

This is the usage traditionally labeled ‘heuristic’: the etymology of the name Hephaestus is used as an argument to settle the question of whether the opening vowel should have a rough or a smooth breathing.⁶⁷ Since ἄπτω has a rough breathing, so should Ἡφαιστος. However, the etymology itself is offered quite apodictically.⁶⁸ There is no argument or motivation for it, *i.e.* the name

63 See Montana in this volume.

64 See e.g. Maltby [2003], 103–118. See further Pagani, Probert, and Valente (section III.2) in this volume.

65 Varro *Ling.* 7.82 (note that Varro does not doubt the correctness of the etymology, but its effectiveness) *apud Ennium “Andromachae nomen qui indidit, recte indidit” . . . imitari dum voluit Euripiden et ponere ἔτυμον, est lapsus; nam Euripides quod Graece posuit ἔτυμα sunt aperta. ille ait adeo nomen additum Andromachae, quod ἀνδρὶ μάχεται; hoc Ennii quis potest intellegere in versu[m] significare “Andromachae nomen qui indidit recte indidit”?* “in Ennius: “whoever gave Andromache her name, gave it rightly” . . . he made a mistake when he wanted to imitate Euripides by giving the etymology. For Euripides’ suggestion in Greek is a clear etymology. He said that Andromache had been given her name, because she *andr-i mach-etai*. But who can understand that this is the meaning of Ennius’ verse “whoever gave Andromache her name, gave it rightly”? (Example from O’Hara [1996] 52).

66 Cf. Pagani, Probert, and Valente (section III.2) in this volume.

67 Cf. Hdn. *Pros.* GG 3.1.543.24, where it becomes apparent that the rough breathing in Hephaestus is exceptional (other words starting with η followed by an aspirate (here φ) have a smooth breathing). The etymology motivates the exception.

68 For comparison: Chantraine (*Dictionnaire étymologique de la langue grecque*) calls Hephaestus “nom divin particulièrement obscur”. In Plato’s *Cratylus* (407c) Socrates makes it clear that he’d rather not be forced to discuss his suggestion in detail.

Hephaestus is not motivated through an explicit semantic link with the verb ἅπτω “to touch”. The second example takes a different approach still:

Herodian, *De Il. Prosod.*, GG 3.2.95 (on *Il.* 15.365 ἦϊε Φοῖβε)

ἦϊε· Ἀρίσταρχος δασύνει, ἀπὸ τῆς ἕσεως τῶν βολῶν. οἱ δὲ περὶ τὸν Κράτητα ψιλῶς, ἀπὸ τῆς ἰάσεως. καὶ οὕτως ἐπέισθησαν οἱ γραμματικοὶ πρὸς διάφορον ἔτυμολογίαν διαφόρως ἀναγινώσκειν. ἀγνοοῦσι δὲ ὅτι ὁ χαρακτήρ μάχεται· αἶε γὰρ τὸ η̄ πρὸ φωνήεντος ψιλοῦται, ἦῶς, ἦια.

Aristarchus writes ἦϊε (*ê-i-e*) with a rough breathing, from the shooting (*hesis*) of darts, but Crates and his followers with a smooth breathing, from healing (*iasis*). And thus the grammarians let themselves be persuaded to read this differently in accordance with their different etymologies. But they do not realize that the word-type is inconsistent with this: for *êta* before vowel *always* has a smooth breathing, (e.g.) *êôs, êia*’.

We immediately recognize two of the etymologies attached to Apollo in the *Cratylus* (see above). We also again see that different groups of grammarians use etymology as an argument for (different) orthographical decisions to do with prosody. But Herodian overrules them all because the etymology turns out to be irrelevant: whatever it is, the word would have started with an ‘*êta* + smooth breathing’, because *all* Greek words starting with *êta* before a vowel have a smooth breathing. The technical grammarian works with sweeping rules based on phonological conditions (or at least sequences of letters) which may outweigh etymological considerations. There is no doubt that we are again encountering a performance of mastery in conditions of fierce intellectual competition: but etymology is not the winning weapon here.

As a tool of interpretation and persuasive argumentation, etymology may serve widely divergent causes.⁶⁹ For instance, Ovid rejects an etymology of April that would not support the Augustan political agenda and Julian claims of descent from Venus. The background to his stance is one of politics and poetic patronage.⁷⁰ In rhetoric, etymology is part of *inventio*,⁷¹ the first task of

69 On Stoic etymological interpretation, cf. Long [1992].

70 *Ov. Fast.* 4.85–90 where an etymology of April from *aperire* (of nature in Spring) is rejected in favor of one connecting the name of the month to Venus; cf. Herbert-Brown [1994] 90f. I thank Stephen Heyworth for this suggestion. See Maltby [1991] s.v. *aprilis*.

71 The slightly curious phrasing of the fourth task of grammar in Dionysius Thrax as ἔτυμολογίας εὔρεσις is probably indicative of the place of etymology in precisely this neighboring language discipline, namely rhetoric. See at n. 12.

the rhetorician, in which he *finds* the argumentative structure and material for his speech, not in the sense of inventing, but of discovering what is already there. Etymology is a topos of invention, and has a place in works called *Topica*, both by Aristotle and by Cicero.⁷² The argumentative role of etymology is crucial. An example of such an etymological argument from a legal context, where it may have fulfilled the role of, precisely, an intuition pump, a *prima facie* argument, is the fragment by the Roman legal scholar M. Antistius Labeo (from the time of Augustus).

M. Antistius Labeo, *GRF* 557–63. Fragm. 7
soror appellata est quasi seorsum nascitur

a *soror* “sister” has that name as if she is born *seorsum* “apart”.

The fragment relates the word for “sister” (*soror*) etymologically to *seorsum* “separate” or “apart”. A reasonable guess would be that Labeo used this etymology to argue for the legal status of “sisters”: by nature, that is in natural law, they would be expected to leave the house and the jurisdiction of their fathers when they got married and to go over into the *manus* of their husband. This natural state of affairs appears from their name *soror*, and it means that natural law and positive law are in agreement. This argument would have appealed to the Stoa and may in fact have been inspired by them.⁷³

Finally, there may be a more basic mnemonic function than the one we started out with: etymologies are a helpful support for memory, simply because they can be delightful, clever, and easy to remember. We will end this overview with two examples from the Middle Ages, where yet another type of etymology becomes popular: the syllabic one.⁷⁴ This leads to etymologies such as *cadaver* = *ca-ro da-ta ver-mibus* (“flesh given to worms”) or *fenestra* = *fē-rens n-os extra* (“taking us outside”).⁷⁵ These etymologies are funny and

72 *E.g.* Arist. *Rh.* 1400b17–25; *Top.* 112a32–38; Cic. *Top.* 35–37 *cum ex vi nominis argumentum elicitur* “when an argument is drawn from the meaning of a name”. Cicero experiments with different translations, but rejects the literal *veriloquium* (a ‘calque’ of ἐτυμολογία) for *notatio* (*quia sunt verba rerum notae* “because words are symbols of reality”, relating this choice to Aristotle’s σύμβολον. Cic. *De or.* 2.256–257 provides more examples of *paronomasia* and rhetoric based on etymology (in spite of the philosophical objections raised in *Nat. D.*, see above at n. 56).

73 See Allen [2005] on Stoic etymology.

74 The *Di-ka* ~ *Dios Kora* example discussed above at n. 30 is an early version of this.

75 To be found in Petrus Helias, *Summa super Priscianum* 1 2 (see Copeland-Sluiser [2009], 351); the gloss on Priscian *Promisimus* (Copeland-Sluiser [2009], 356).

memorable, and excellently suited for teaching Latin to non-native speakers, which adds a pedagogic function to our list. And the unorthodox use of the window in particular, if we think not of just staring out of it, but actually using it as an exit, may have appealed to schoolboys in particular.

5 Final Adhortation

Ancient linguistic thought takes all kinds of shapes: etymologizing is one of the most varied intellectual habits of classical antiquity in spite of all the ridicule and criticism it has also invited. But it needs to be engaged on its own terms, and we need to be alert to its often hidden and allusive nature. It is an intuition pump used to demonstrate authority and mastery over language, no longer a random instrument for speaking, but a motivated and meaningful one that helps us explore the *common ground* formed by language itself. It suggests *prima facie* arguments and interpretations, and it supports memory. And most importantly, it can be delightfully clever. But that, admittedly, is also a matter of taste.

Ancient Theory of Prosody¹

1 Introduction

The term 'theory' is used in a number of different senses. In a fairly weak sense, theory involves not just the statement of known facts but some generalisation over those facts. In a somewhat stronger sense 'theory' is used of the *systematic* statement of generalisations over a large and in some way complete body of facts. The second edition of the *Oxford English Dictionary's* definition of 'theory', sense 5, begins, "In the abstract (without article): Systematic conception or statement of the principles of something; abstract knowledge, or the formulation of it: . . .".

A systematic treatment of the facts of ancient Greek prosody was achieved by the second century AD, when Herodian² produced a large work entitled *Περὶ καθολικῆς προσωδίας* "On prosody in general". Before Herodian, Heraclides of Miletus had composed a work entitled *Περὶ καθολικῆς προσωδίας*, and therefore presumably also a systematic treatment of the field, in the late first or early second century AD. But we have too scant remains of this work to have

1 I am very grateful to Eleanor Dickey and Stephanie Roussou for helpful comments and corrections.

2 See Matthaïos in this volume.

a clear idea of its scope or structure (see the fifteen fragments assigned to the work by Cohn [1884a] 37–44).

Neither Herodian's *Περὶ καθολικῆς προσωδίας* nor his other treatises survive complete, with the exception of the *Περὶ μονήρους λέξεως* "On exceptional words";³ but we have two epitomes of the *Περὶ καθολικῆς προσωδίας*. One of these is attributed to Arcadius in some manuscripts and to Theodosius of Alexandria in others; we shall refer to it under the name [Arcadius]. The other is ascribed to Johannes Philoponus of Alexandria and may be an abbreviated version of an epitome Philoponus produced. We also have a body of Homeric scholia deriving from Herodian's *Περὶ Ἰλιακῆς προσωδίας* "On the prosody of the *Iliad*" and *Περὶ Ὀδυσσειακῆς προσωδίας* "On the prosody of the *Odyssey*";⁴ and numerous citations of Herodian in later authors, and other passages whose content can be attributed to Herodian with more or less certainty.⁵

Herodian was dependent on Alexandrian discussions of prosody beginning in the early second century AD (see below), and his Alexandrian predecessors are explicitly mentioned in some of our surviving sources. Aristarchus, in particular, is very frequently mentioned in the Homeric scholia deriving from Herodian.⁶ But we have much fuller information on Herodian's works relating to prosody than we have for those of any of his predecessors. For this reason, the following discussion will focus on the concepts and categories Herodian used in formulating the regularities of ancient Greek prosody, and in stating exceptions to these regularities, but will attempt to show which concepts and categories are known to have been used already in early Alexandrian discussions.

2 Branches of Prosody

Nineteen of the twenty books of Herodian's *Περὶ καθολικῆς προσωδίας* were devoted to accentuation, while the twentieth book was devoted to vowel quantities and breathings.⁷ For Herodian accentuation, vowel quantities, and

3 See Pagani in this volume, §5.2, 6.1.1.

4 Cf. Matthaios in this volume, §4.1, and Dickey in this volume, §7.2.

5 For an introduction to Herodian's works and to scholarship on Herodian, see Dyck [1993a]; Dickey [2014].

6 See Montana in this volume.

7 See [Arc.] 4. 22–23, the entry for book 20 in the table of contents preserved in all the manuscripts of [Arcadius]. Information on vocalic quantities and breathings, corresponding to this part of the original work, is found only in one manuscript (Par. gr. 2102) of [Arcadius], with no corresponding part in Philoponus' epitome. This part of Par. gr. 2102 is likely to have been interpolated to repair the loss of the information on vocalic quantities and breathings; the compiler may have been Jacob Diassorinus, in whose hand the manuscript is written (see

breathings thus made up the field of ‘prosody’. All these subjects have in common that they pertain to aspects of the pronunciation of Greek which were not represented in writing, or in the case of vowel quantities not fully represented in writing, in ordinary (non-scholarly) written Greek of the Hellenistic or Roman periods. An interpolated passage of uncertain date appearing in two 16th-century manuscripts (Par. gr. 2603 and 2102) of [Arcadius] ([Arc.] 211. 8–216. 2) explains that the marks for accents, vowel quantities, and breathings were invented in order to disambiguate words, and to indicate the ‘singing’ qualities of the voice:

οἱ χρόνοι καὶ οἱ τόνοι καὶ τὰ πνεύματα Ἀριστοφάνους ἐκτυπώσαντος γέγονε πρὸς τε διαστολὴν τῆς ἀμφιβόλου λέξεως, καὶ πρὸς τὸ μέλος τῆς φωνῆς συμπάσης καὶ τὴν ἁρμονίαν, ὡς ἐὰν ἐπάδοιμεν φθεγγόμενοι. ([Arc.] 211. 8–12)

The (marks for) quantities and pitches and breathings, which Aristophanes [of Byzantium] created, were devised for the purpose of disambiguating an ambiguous reading and for the singing of the whole voice and the melody, as if we were to sing along to our speaking.

Although the antiquity of the material in this passage is unclear,⁸ the etymology of *προσῳδία* (approximately “singing along”) suggests that in origin the *προσῳδαίαι* were considered to be features of speech ‘accompanying’ the basic

Dyck [1993a] 778–779, with bibliography). Our knowledge of Herodianic doctrine on breathings is consequently the poorer, and work remains to be done in distinguishing Herodian's views from those of his successors (see Egenolff [1903] 39–61; Dyck [1993a] 779), but Lentz [1860] provides a most useful collection and discussion of ancient doctrine on breathings in general, while Egenolff [1903] 39–61 provides a very useful critique of Lentz' [1867–1870] reconstruction of Herodianic doctrine on breathings. Apollonius Dyscolus refers to a work on breathings of his own (called *Περὶ πνευμάτων* at *Synt.* 458. 10, *περὶ δασείας* at *Pron.* 57.6, and *περὶ δασείας καὶ ψιλῆς* at *Adv.* 198. 26–27), and we have a few fragments of a *Περὶ πνευμάτων* by Trypho (see von Velsen [1853] 5–10). Theognostus refers to a *Περὶ πνευμάτων* by Herodian (*An. Ox.* ii. 19. 33), but the relevant part of the twentieth book of the *Περὶ καθολικῆς προσῳδίας* may be meant. For Herodianic doctrine on vocalic quantities we are more fortunate in that Herodianic material on vocalic quantities is transmitted as a separate treatise *Περὶ διχρόνων* “On vowels capable of being either long or short”, possibly excerpted from the *Περὶ καθολικῆς προσῳδίας* (see Dyck [1993a] 783 with n. 58 and bibliography, and cf. Dyck [1993a] 778–779).

8 For some of the controversy see Pfeiffer [1968] 179 with n. 1 and Nagy [2000a] 15–16 n. 21, both with bibliography. The part of the passage I print here occurs in both Par. gr. 2603 and Par. gr. 2102 (see Lameere [1960] 91), so whatever its origin it was not composed by Jacob Diassorinus (in whose hand Par. gr. 2102 is written) since, as Nagy [2000a] 16 n. 21 emphasises, the consensus is that Par. gr. 2603 is independent of Par. gr. 2102.

sequence of vowels and consonants—a notion not very different from the modern notion of suprasegmental features.

It is possible that the term *προσῳδία* was already used to include breathings in one passage of Aristotle,⁹ but otherwise the attested uses of the term before the Roman period refer to accents only (when the term has anything to do with what we would call phonology).¹⁰ In the first century BC Trypho applied the term to breathings as well as accents, if we can trust a passage of [Ammonius] crediting him with an explanation of the term *ψιλὴ προσῳδία* “smooth prosody” (*i.e.* smooth breathing):

οἱ Δωριεῖς ψίλιον καλοῦσι τὸ ἄκρον, ὅθεν καὶ ἡμεῖς τὴν ἐπ’ ἄκρων χειλέων λεγομένην προσῳδίαν “ψιλὴν” ἐκαλέσαμεν, ὡς φησι Τρύφων. ([Ammonius] 521 Nickau = Trypho fr. 108 von Velsen)

The Dorians call an extremity *ψίλιον*, whence we too call the prosody made with the outermost edges of the lips *ψιλὴ*, as Trypho says.¹¹

Also in the first century BC, however, Dionysius of Halicarnassus refers to vowel quantities and prosodies as if the latter did not automatically include the former:

τὰ γράμματα ὅταν παιδευόμεθα, πρῶτον μὲν τὰ ὀνόματα αὐτῶν ἐκμανθάνομεν, ἔπειτα τοὺς τύπους καὶ τὰς δυνάμεις, εἴθ’ οὕτω τὰς συλλαβὰς καὶ τὰ ἐν ταύταις πάθη, καὶ μετὰ τοῦτο ἤδη τὰς λέξεις καὶ τὰ συμβεβηκότα αὐταῖς, ἐκτάσεις τε λέγων καὶ συστολὰς καὶ προσῳδίας καὶ τὰ παραπλήσια τούτοις.

When we learn the letters, first we learn their names, then their shapes and values, then similarly the syllables and the changes that happen in them, and after this words and their accompaniments, I mean lengths and shortnesses of vowels and prosodies and things similar to these. (Dion. Hal. *Comp.* 25. 41)

9 *Soph. el.* 177b4, but see Gudeman [1934a] 343.

10 The word *προσῳδία* is also used for a song sung to music, for “addressing” a person, and for modulations of the spoken voice more generally. For these senses see LSJ, *s.v.* *προσῳδία*. On the early history of the Greek term *προσῳδία*, see again the useful comments of Gudeman [1934a] 343.

11 This fragment also illustrates the lack of an accurate phonetic understanding of aspiration in the Greco-Roman grammatical tradition.

The first really clear indication, then, that *προσῳδία* applied to the whole triad consisting of accents, breathings, and vowel quantities is the inclusion of all three of these in Herodian's *Περὶ καθολικῆς προσῳδίας*. After Herodian, the definition of *προσῳδία* was extended still further, and eventually the term came to be usable of almost any feature of a text for which a diacritic mark was available. The term appears in this sense in the already-mentioned interpolation in the text of [Arcadius]:

προσῳδίαι εἰσὶ δέκα· ὀξεῖα, οἶον· θεός´, βαρεῖα, οἶον· Πάν` , περισπωμένη, οἶον· πῦρ ~ , μακρά, οἶον· Ἄρης (Ἄρης Schmidt) ¯ , βραχεῖα, οἶον· Ἄρης ˇ , δασεία, οἶον· ἥλιος ´ , ψιλῆ, οἶον· ἠέλιος ´ , ἀπόστροφος, οἶον· ὡς ἔφατ´ ´ , ὑφέν, οἶον· πασιμέλουσα ~ , ὑποδιαστολή, οἶον· Δία δ´ οὐκ ἔχε , νήδυμος ὕπνος. Διαίρουνται δὲ αὐταὶ εἰς τέσσαρα· εἰς τόνους, εἰς χρόνους, εἰς πνεύματα καὶ εἰς πάθη. ([Arc.] 216. 4–11)

“There are ten *προσῳδίαι*: acute, as in θεός (´); grave, as in Πάν (`); circumflex, as in πῦρ (˘); long mark, as in Ἄρης (¯); short mark, as in Ἄρης (ˇ); rough breathing, as in ἥλιος (´); smooth breathing, as in ἠέλιος (´); apostrophe, as in ὡς ἔφατ´ (´); sign of non-word-division, as in πασιμέλουσα (~); word-divider, as in Δία δ´ οὐκ ἔχε , νήδυμος ὕπνος. And these are divided into four classes: into accents, quantities, breathings, and alterations”.

The inclusion of the apostrophe, non-divider (ὑφέν), and word-divider under *προσῳδίαι* is inconsistent with the scope of the work as a whole, and is a sign that this interpolation is composed of at least partly post-Herodianic material (see Lentz [1867–1870] i. xxxiv); the passage is very similar to the beginning of a treatise *Περὶ προσῳδιῶν*, possibly by Theodosius of Alexandria (fourth or fifth century AD) and transmitted as a supplement to the *Τέχνη γραμματική* attributed to Dionysius Thrax (*GG* I.i 105. 3–107. 2). But it provides a good example of a later use of the term *προσῳδία*, in which the meaning of the term has shifted a little away from a concept like that of “suprasegmental feature” to one closer to “diacritic mark”.¹²

In what follows we shall devote most attention to accentuation, which even for Herodian was the main subject of a work on prosody, but we shall first look briefly at ancient theory on breathings and vocalic quantities, and particularly that of Herodian and earlier grammarians.

12 However, Robins [1986] 18, [1997⁴] 48 observes that this use of the term *προσῳδία* groups together a range of phenomena remarkably similar to those of central concern to Firthian prosodic phonology.

3 Breathings

The Ionic alphabet that was normally used for writing Greek in the Hellenistic period did not include a letter for the sound *h*. Breathing marks are an invention of Alexandrian scholarship (whether or not they are actually due to Aristophanes of Byzantium,¹³ as the above-quoted passage implies), and appear sporadically in more scholarly Hellenistic papyri. An interest in establishing regularities for the aspiration of vowels arose in the context of the textual criticism of Homer and other already ancient authors, since correct pronunciation depended on knowing which vowels were aspirated, but not all words were still heard in the Hellenistic period and the texts which had come down to the Alexandrian period did not indicate aspiration on vowels.

Although the transmitted texts did not indicate aspiration on vowels, they did show whether a voiceless stop was aspirated or not when it occurred immediately before a word-initial vowel (often as a result of elision), and in such cases the aspirated or unaspirated status of the stop provided evidence for the aspiration or non-aspiration of the following vowel (see Lentz [1860] 647–649; Wackernagel [1916] 41 n. 1). Thus, Sch. *Il.* 6. 239c (A), deriving from Herodian, shows that the phrase οὗτ' ἔτης in a line of Aeschylus (fr. 281a. 28 Radt), and οὐκ ἔτη in a line of Euripides (fr. 1014 Kannicht), were transmitted as OYTETHΣ and OYKETHI respectively; Herodian argues from the transmitted T (rather than Θ) of οὗτ' and the K (rather than X) of οὐκ that the word ἔτης had a smooth breathing, not a rough breathing.

But not all words whose aspiration or non-aspiration needed to be established were attested in contexts where preceding voiceless stops would provide evidence. For other words general rules were established on the basis of words whose aspiration or non-aspiration was known. Some of the criteria that featured most prominently in these rules were:

- (a) The sequence of vowels and consonants with which the word began (see Lentz [1860] 649–650, 697–700, 718–776). Rules about which sequences received which breathing were produced at least as early as Trypho (see e.g. *Etym. Magn.* 148. 41–2 = Trypho fr. 1 von Velsen: Τρύφων ἐν τῷ Περὶ πνευμάτων φησί, τὸ Α προτασσόμενον τοῦ ΠΙ συστέλλεται καὶ δασύνεται “Trypho says in the Περὶ πνευμάτων that α before ρπ is short and has a rough breathing”). For an example deriving from Herodian see e.g. Sch. *Il.* 6. 348b (b(BCE³)T), stating that ἔρσεε should have a smooth breathing

13 Cf. Montana in this volume, §2.5.

- because a (word-initial) vowel followed by ρσ usually has a smooth breathing.
- (b) Etymological connections between different words or word forms (see Lentz [1860] 649–664). These were considered relevant at least as early as Aristarchus. Thus, the Herodianic scholion Sch. *Il.* 15. 10a (A) reveals that Aristarchus gave the form εἴατο a smooth breathing, taking it to be a form of εἶμι ‘be’, while Herodian gave it a rough breathing, taking it to be a form of ἤμαι ‘sit’ (see Lentz [1860] 654).
- (c) Facts about the aspiration habits of particular dialects (not least the Aeolic habit of not aspirating vowels at all), together with a principle that a word displaying features of some dialect should be consistent with that dialect in its other features too (see Lentz [1860] 700–706). Thus, the Herodianic scholion Sch. *Il.* 9. 6b¹ (A) shows that Herodian argued that ἄμυδις should have an Aeolic smooth breathing because the form had other features he considered Aeolic: the υ in the second syllable, and the recessive accent (see Lentz [1860] 691).

Inevitably, many of the rules governing words beginning in certain ways were valid only by chance for the majority of relevant words with known aspiration or non-aspiration, and the use of such rules to predict the aspiration or non-aspiration of obsolete words was a risky enterprise. Furthermore, when different criteria for determining aspiration or non-aspiration came into conflict, there was no consistent system for deciding which criterion should prevail (see Lentz [1860] 659–661, 697). However, many of the ancient observations on breathings are genuinely insightful. Furthermore, two of them foreshadow, respectively, an important result of modern comparative philology and a point which has received much discussion in modern Homeric scholarship: the observation that (with certain exceptions) no vowel preceding an aspirated stop is aspirated (and nor is a stop followed by vowel plus aspirated stop),¹⁴ and

14 For the generalisation applying to vowels before aspirated consonants see *Lex. spir.* 211. 17–20 and *Etym. Gud.* 573. 13 Stefani (both reading πᾶν φωνῆεν πρὸ δασέος ψιλοῦται “every vowel before an aspirated stop has a smooth breathing”). Related but more restricted generalisations appear e.g. at Apol. *Dysc., Adv.* 209. 22 (οὐδέποτε τὰ φωνήεντα πρὸ τοῦ X δασύνεται “vowels preceding χ never have a rough breathing”) and the Herodianic scholia Sch. *Il.* 12. 260 (A) (πᾶν φωνῆεν πρὸ τοῦ X ψιλοῦται “every vowel before χ has a smooth breathing”); Sch. *Il.* 12. 391a¹ (A) (πᾶν . . . φωνῆεν πρὸ δασέος καὶ τοῦ Ρ ψιλοῦται . . . ὑπεσταλμένου τοῦ ἄθρους . . . “every vowel before an aspirated stop plus ρ has a smooth breathing . . . apart from ἄθρους”). See further Lentz [1860] 652–653, with bibliography. For observations on the avoidance of aspirated consonants in successive syllables, see [Herodian], Παρεκβολαὶ τοῦ μεγάλου ῥήματος 21. 16–21 La Roche, referring to a rule δτι

the observation that Homeric pairs of variant forms, such as ἦμαρ and ἡμέρᾱ “day”, tend to have a rough breathing in at most one member of the pair.¹⁵

The principle that vowels and consonants preceding aspirated stops are unaspirated (as in ἔχω, despite future ἔξω, and genitive τριχός, despite nominative θριξί) is significant not only because it foreshadows the modern discovery of a sound change. It also identifies a respect in which aspiration genuinely merits treatment as not just a unit of sound but a property or suprasegmental feature of a larger unit, such as the word: a feature whose occurrence within the larger unit is subject to some restrictions on the ways it can contribute to the overall shape of that unit.

4 Vowel Quantities

In the Hellenistic period the Greek letters α, ι, and υ represented both long and short vowels; these vowels were termed δῖχρονα “anceps”, i.e. capable of being long or short. Alexandrian grammarians were interested in establishing the correct lengths of these vowels in Homeric and other literary words; the Homeric scholia frequently record the views of Alexandrian scholars on vowel quantities, although usually without an indication as to the reasoning the Alexandrians used to arrive at the correct quantity.¹⁶

By Herodian’s day the distinction between long and short vowels had at least begun to break down, though it is controversial when this distinction was

οὐδέποτε δισύλλαβος λέξις θέλει εἶναι ἐν χρήσει, τῆς προτέρας συλλαβῆς ἀρχομένης ἀπὸ δασέος καὶ τῆς δευτέρας ἀπὸ δασέος “a disyllabic word is not usually in use with the first syllable beginning with an aspirate and the second with an aspirate”); approximately the same rule at Choer. Th. 2. 146. 33–35; see also the discussion at Choer. Th. 2. 146. 16–148. 4 and cf. Choer. Th. 2. 327. 17–19; 2. 327. 25–26. Graßmann [1863] demonstrated that aspiration on a vowel or stop was lost in the prehistory of Greek when an aspirated stop began the next syllable. For more recent discussion, see Collinge [1985] 47–61.

- 15 The Herodianic scholion Sch. *Il.* 9. 6*b*¹ (A) suggests that this observation was already made by Aristarchus or his circle (cf. Lentz [1860] 691, 696); cf. Sch. *Il.* 1. 576 (A), also deriving from Herodian. For modern discussion see Wackernagel [1916] 40–52; Wathelet [1970] 218–221; Chantraine [1988] 184–188; West [1988] 163.
- 16 *E.g.* Sch. *Il.* 2. 53*c*¹ (b(BCE³E⁴T)); Sch. *Il.* 6. 268*b*¹ (A). Cf. Herodian, *δῖχρ.* 13. 16–17, with an observation from Aristophanes of Byzantium’s Ἀττικαὶ λέξεις “Attic words” on the long iota of comparatives in -ίων in Attic.

lost entirely.¹⁷ Vowels continued to be considered theoretically ‘long’ or ‘short’, however, and the distinction remained important for the correct understanding of poetry in classical metres. The distinction was also helpful for correct accentuation. For example, the Greek accent always fell on one of the last three syllables of the word, but if the last syllable contained a long vowel the accent always fell on one of the last two syllables.¹⁸ Thus, the accent fell on the antepenultimate syllable of the word μέλισσα “bee”, with a short α in the final syllable, but moved to the penultimate syllable for the accusative plural μέλισσας, with a long α. The retention of the idea that some vowels were ‘long’ and some were ‘short’ allowed a very simple account of the restrictions on the position of the accent, but the theoretical distinction between ‘long’ and ‘short’ vowels came to be an early example of an abstract phonological feature.

The lengths of many vowels in Greek words are completely unpredictable, but many others can be predicted with the help, as we would say now, of some morphological analysis. For example, a particular suffix may contain a particular (long or short) vowel in all its occurrences, or a suffix may have a lengthening or shortening effect on a preceding vowel. Since most of the inflectional and derivational morphology of Greek involves suffixes, it is particularly vowels near the ends of words whose lengths tend to be predictable. In the Greek grammatical tradition, inflectional and derivational morphology was not analysed in terms of suffixes, but many of the Herodianic rules transmitted

17 The loss of distinctions in vowel quantity appears to have progressed at different rates in different areas of the Greek-speaking world. Orthographic mistakes involving vowel quantity do not become common in Attic inscriptions until about 100 AD (see Threatte [1980] 385–387), but for Egypt the evidence of papyri suggests a significant loss of distinction in vowel quantity already in the Hellenistic period (see Mayser-Schmoll [1970] 117–119; Gignac [1976] 325 with n. 2). The dating of the completion of the process is, however, controversial for all parts of the Greek-speaking world because there is no consensus as to the weight that should be given to apparently relevant spelling mistakes at periods when they are still rare (see Dickey [2009] 151). For an early dating for the loss of distinctive vowel length even in Attic, see Teodorsson [1974] 218–219, but cf. Ruijgh [1978] 84.

18 The accent was also restricted to the last two syllables if the last syllable was closed by a consonant cluster, as in πολυπίδαξ “rich in springs” (see Steriade [1988] 273–275), although not many Greek words end in a consonant cluster. The statement οὐδέποτε, μακρὰς οὔσης τῆς ἐπὶ τέλους, τρίτη ἀπὸ τέλους πίπτει ἢ δεξεία at Io. Philop. *Ton. praecept.* 5. 5–6 may implicitly recognise that the restriction to the last two syllables applies to words with a final consonant cluster as well as words with a long vowel in the final syllable, since the expression τῆς ἐπὶ τέλους needs to be taken with συλλαβῆς understood, and a final syllable was considered ‘long’ if it contained a long vowel or was closed by a consonant cluster (see e.g. [Arc.] 160. 14–15).

in the *Περὶ διχρόνων* apply to vowels occurring in particular terminations a word might have, where we would recognise particular suffixes. In the following example, the vowel in question belongs to a particular present-forming suffix, -άνω:

τὰ διὰ τοῦ ΑΝΩ ῥήματα ὑπὲρ δύο συλλαβὰς βαρυνόμενα ἔχει τὸ Α συνεσταλμένον, λιμπάνω, μανθάνω, λανθάνω, λαμβάνω. τὸ μέντοι ἰκάνω καὶ κιχάνω ἄλογον ἔχοντα τὸν πρῶτον χρόνον [τοῦ ἀορίστου] ἐκτείνει τὸν δεῦτερον. (Herodian, *διχρ.* 10. 5–8)

Verbs of more than two syllables in -άνω, with a recessive accent,¹⁹ have the α short: λιμπάνω, μανθάνω, λανθάνω, λαμβάνω. But ἰκάνω and κιχάνω, which have an irregular first quantity (*i.e.* have a light rather than a heavy first syllable), lengthen the second one.

In the following example, the vowel in question does not belong to any particular suffix, but its shortness is predictable from the form of the comparative suffix that follows:

πάν εἰς ΣΣΩΝ λήγον συγκριτικόν, εἰ ἔχει δίχρονον ἐν τῇ πρὸ τέλους συλλαβῇ, συνεσταλμένον αὐτὸ ἔχει, πάσσω, μάσσω, βράσσω, γλύσσω. σεσημειώται τὸ θάσσω καὶ ἐλάσσω ἐκτείνοντα τὸ δίχρονον. (Herodian, *διχρ.* 13. 11–13)

Every comparative ending in -σσω, if it has an *anceps* vowel in its penultimate syllable, has this vowel short: πάσσω, μάσσω, βράσσω, γλύσσω. The words θάσσω and ἐλάσσω are exceptions, having their *anceps* vowels long.

Some of the rules insightfully identify particularly complex morphological alternations:

τὰ εἰς ΡΑ λήγοντα καθαρὸν, εἰ παραλήγοιτο τὸ Υ, ἀμοιβαῖον ποιεῖται χρόνον· εἰ γὰρ ἐκτενίνοιτο τὸ Υ, τὸ Α συστέλλεται καὶ προπαροξύνεται, ὡς ἔχει τὸ ἄγκυρα, Κέρκυρα, ὄλυρα· εἰ δὲ συστέλλοιτο τὸ Υ, τὸ Α ἐκτείνεται καὶ παροξύνεται θηλυκὰ ὑπὲρ δύο συλλαβὰς ὄντα, Ἐφύρα, πορφύρα. τὸ οὖν κολλύρα κατ' ἀμφοτέρα δίχρονα ἐκταθὲν σημειώδες. (Herodian, *διχρ.* 11. 10–15)

19 On the meaning of βαρυνόμενα (= βαρύτονα), see § 7 below.

Words ending in -ρα preceded by a vowel, if the vowel in the penultimate syllable is υ, alternate their lengths. For if the υ is long, the α is short and the word is proparoxytone, as in ἄγκυρα, Κέρκυρα, ὄλυρα. But if the υ is short, the α is long and feminine words of more than two syllables are paroxytone: Ἐφύρα, πορφύρα. But κολλύρα is exceptional, having both its *anceps* vowels long.

τὰ εἰς ΣΑ λήγοντα θηλυκὰ εἴτε ἐπὶ ὀνομάτων εἴτε καὶ ἐπὶ μετοχῶν, εἰ ἔχοι τὴν πρὸ τέλους συλλαβὴν εἰς δίχρονον καταλήγουσαν, πάντως ἐκτεταμένον αὐτὸ ἔχει, πᾶσα, πτάσα, φύσα, δύσα, Τίσα, Κρίσα, κνίσα· οὐκ ἀγνώω δὲ ὅτι Πίσαν εἶπε τὴν πόλιν κατὰ συστολὴν Πίνδαρος. εἰ μέντοι εἰς σύμφωνον λήγει ἢ πρὸ τέλους συλλαβή, τὸ δίχρονον συστέλλεται, θάλασσα, ἄνασσα, πίσσα, νύσσα, λύσσα. (Herodian, διχρ. 12. 12–17)

Feminine words ending in -σα, whether in nominal forms or in participles, if they have their penultimate syllable ending in an *anceps* vowel, always have it long: πᾶσα, πτάσα, φύσα, δύσα, Τίσα, Κρίσα, κνίσα. But I am aware that Pindar pronounced the name of the city Πίσα with a short vowel. If, however, the penultimate syllable ends in a consonant, the *anceps* vowel is short: θάλασσα, ἄνασσα, πίσσα, νύσσα, λύσσα.

Not all the rules apply to the ends of words. Some apply to word-initial vowels in contexts that we would label purely phonological, not also morphological (e.g. διχρ. 17. 9–11, on word-initial α followed by σ plus stop). The following rule applies to a prefix, ‘alpha privative’, and is noteworthy for its metrical explanation of the long initial ἄ- of ἀθάνατος and ἀκάματος, which provided the starting point for extensive modern discussion of the long ἄ- of these words:²⁰

τὸ Α ἢ στέρησις συστέλλεσθαι θέλει, ἄκακος, ἄσεμνος, ἄφιλος. τὸ γὰρ ἀθάνατος καὶ ἀκάματος ἐξέτειναν τὸ Α διὰ τὰς ἐπαλλήλους τέσσαρας βραχείας, αἱ τινες ἄθετοὶ εἰσιν εἰς ἡρωϊκὸν μέτρον. (Herodian, διχρ. 15. 28–30)

Alpha privative is usually short: ἄκακος, ἄσεμνος, ἄφιλος. For ἀθάνατος and ἀκάματος have the ἄ- long because of the four short syllables in a row, which cannot be fitted into the epic metre.

But the central branch of ancient ‘prosody’, to which we now turn, was the accent, the branch of prosody which yielded the largest number of storable

20 See Schulze [1892] 140–142, with Hoekstra [1978] 3 n. 10 and 25–26, with bibliography.

regularities when treated as a rule-governed ‘accompaniment’ to the sequence of vowels and consonants.

5 Types of Accent

Aristophanes of Byzantium (librarian at Alexandria in the early second century BC²¹) is credited, in the above-mentioned interpolation found in two manuscripts of [Arcadius], with the invention of a system of three written marks for accents: the acute (´), circumflex (ˆ), and grave (`).²² It is impossible to be sure whether Aristophanes really invented the three accent marks, but in all probability they were invented during or not long after his lifetime, since the first surviving papyri with accent marks were produced during the second century BC, and on the rare occasions when earlier authors mention accentuation (see Probert [2006] 16–19) they do so in terms that do not suggest an awareness of the system of three signs (see Laum [1928] 103–114; Gudeman [1934a] 343). We have very few fragments of Aristophanes of Byzantium relating to accentuation (see Slater [1986] 210), but what we have seems to presuppose the system of three signs. We have a considerable number of fragments on accentuation, clearly using the system of three signs, from Aristophanes’ successor but one as librarian at Alexandria, Aristarchus of Samothrace, who died c. 144 BC.²³ Accents were never written consistently on papyri, but sporadically on some papyri of (normally) literary authors, but the written accents we find conform to the system of three signs described in the grammatical tradition.

In the Hellenistic system of three accent marks, the acute was normally called the *δξεία* (*προσῳδία*), the high-pitched prosody. The grave was called the *βαρεία* (*προσῳδία*), the low-pitched prosody. The circumflex was most often called the *περισπωμένη* (*προσῳδία*), the ‘bent’ prosody, and was conceived as a combination of the acute and the grave (as the shape $\hat{\ }^$ suggests, although both the shapes $\hat{\ }$ and $\tilde{\ }$ are found).

A short vowel bearing the word accent was considered to carry an acute accent, and could be marked with the acute. Accented long vowels and diphthongs allowed a contrast between two kinds of accent, one marked with a circumflex and the other with an acute. It is clear that the circumflex represented the word accent on the first half (now often called the first *mora*) of the

21 See Montana in this volume.

22 [Arc.] 211. 8–12; 212. 11–213. 11. Cf. Lameere [1960] 91–92, n. 3.

23 See Montana in this volume.

long vowel, so that over the whole vowel a falling pitch was perceived.²⁴ One might expect the other kind of accent on a long vowel or diphthong, marked with an acute, to constitute the word accent on the second mora of the long vowel or diphthong, and it is clear that grammarians understood a long vowel or diphthong marked with an acute to occur under circumstances where one would expect the second mora to be accented. Thus, if two vowels contract then (other things being equal) the resulting vowel has a circumflex if the first vowel in the sequence was accented before contraction, and an acute if the second vowel was accented before contraction: uncontracted φᾶος “light” gives contracted φῶς, but uncontracted ζῶός “alive” gives contracted ζῶς.²⁵ What is less clear is how the accent represented by an acute on a long vowel or diphthong was pronounced. The assumption that a rising pitch was heard is perhaps the easier one, given the occurrence of this accent where a rising pitch might be expected.²⁶ However, the choice of the same accent mark for this accent and for the accent on a short vowel suggests that what was perceived was rather similar in the two cases. Possibly the word accent on a short vowel was also perceived as a rising pitch, so that the accent that really stood out as sounding different was the accent on the first mora of a long vowel.

In the Hellenistic system the grave accent mark or βαρεῖα προσῶδία designated lack of accent; every syllable that did not have an acute or circumflex accent was considered to carry a grave, and could be marked with the grave accent. In the system of writing accents that had become regular by the Byzantine period, however, the grave is never used when a word is written by itself. Rather, a word that has a final acute when written in isolation is written with a final grave before another non-enclitic word, as long as punctuation does not intervene. Thus, the genitive singular Διός “of Zeus” has an acute on the final syllable when written in isolation or before punctuation or an enclitic; in the expression Διὸς υἱός “son of Zeus”, however, the final syllable of Διός is written with a grave. This use of the grave accent mark is not regular in the Hellenistic and early Roman periods, but examples are found, and there is

24 See Io. Philop. *Ton. praecept.* 6. 19–20, and cf. (in the interpolation already mentioned) [Arc.] 212. 14–213. 4.

25 See Io. Philop. *Ton. praecept.* 6. 19–29; Sch. *Il.* 5. 887a¹ (A), with the parallel passages cited by Erbse *ad loc.*

26 Support for a rising pitch has been seen in fragments of ancient Greek non-strophic music with words, where a long vowel or diphthong with an acute accent is sometimes set to two notes of which the second is the higher, but only very rarely to two notes of which the second is the lower (Devine-Stephens [1994] 193). However, perusal of the Hellenistic and probably non-strophic compositions in Pöhlmann-West [2001] suggests that a long vowel with acute or (in modern notation) grave accent was not set to a rising sequence of notes any more often than a long unaccented vowel.

further evidence that Hellenistic scholars already recognised a special status for the accent on the final syllable of an oxytone word in the sentence. In accented papyri earlier than the third century AD, the most normal practice is to avoid writing any accent on the final syllable of an oxytone word in the sentence—as if the pitch peak is not striking enough to merit an acute sign but not weak enough to merit a grave. When a pause or enclitic follows, however, an acute accent may be written.²⁷ Furthermore, both Apollonius Dyscolus and sources deriving from Herodian suggest that oxytone words (other than interrogative τίς, τί) have a basic acute accent which is erased (or turned into the βαρεῖα προσωδία) when a non-enclitic word follows without intervening punctuation:

τὸ μὲν γὰρ ἐγκλινόμενον αὐτὸ μόνον κοιμίζει τὴν ὀξεῖαν,
 αὐτὰρ ἐγὼ καὶ Τυδεΐδης·
 τὸ δ' ἐγκλιτικὸν μετὰ τοῦ τὸν τόνον ἀποσβεννύειν καὶ τὴν <πρὸ> ἑαυτοῦ
 βαρεῖαν ὀξύνει,
 Ἄπολλώνιος μοι, ἐτίμησάς με. (Apol. Dysc. *Pron.* 36. 1–5)

For an enclinomenon [a word with a 'lulled' accent] just lulls its own accent:

αὐτὰρ ἐγὼ καὶ Τυδεΐδης·

But an enclitic, in addition to extinguishing its accent, also makes the grave before it acute:

Ἄπολλώνιος μοι, ἐτίμησάς με.

... κανόνος λέγοντος, ὅτι πᾶσα λέξις ὀξύτονος πολλακίς ἐν τῇ συνεπείᾳ²⁸ κοιμίζει τὴν ὀξεῖαν εἰς βαρεῖαν, χωρὶς τοῦ τίς, οἶον· Ζεὺς Ζεὺς δέ· καλὸς καλὸς ἄνθρωπος· σοφὸς σοφὸς ἀνὴρ. πρόσκειται “χωρὶς τοῦ τίς”, ἐπεὶ τοῦτο φυλάττει τὴν ὀξεῖαν, οἶον· τίς πόθεν εἰς ἀνδρῶν. δεῖ δὲ προσθεῖναι τῷ κανόνι “χωρὶς εἰ μὴ ἐπιφέρηται στιγμῇ ἢ ἐγκλιτικόν”. τότε γὰρ οὐ κοιμίζεται ἡ ὀξεῖα εἰς βαρεῖαν, οἶον· ὦκὺς Ἀχιλλεύς· ([Arc.] 160. 20–161. 4)²⁹

27 A large literature on this question was motivated by the controversial thesis of Laum (1928) that the ‘modern’ use of the grave was, in most contexts, a late and purely graphic convention. The papyrological evidence is well collected and presented by Mazzucchi (1979b), with further bibliography.

28 I print the variant *συνεπεία* rather than (with Schmidt) *συνθέσει* ‘in composition’. The sense requires *συνεπεία*, which is also found in a parallel passage at [Arc.] 199. 6.

29 The two discussions of enclitics at [Arc.] 159. 4–162. 9 and (immediately afterwards) [Arc.] 162. 10–169. 23 are thought to be composed (to a greater or lesser degree) of Herodianic

... since the rule says that every oxytone word often lulls its acute to a grave in connected speech, apart from *τίς*, as in *Ζεύς* but *Ζεὺς δέ*; *καλός* but *καλὸς ἄνθρωπος*; *σοφός* but *σοφὸς ἀνὴρ*. The words “apart from *τίς*” are added because this word keeps the acute, as in *τίς πόθεν εἶς ἀνδρῶν*. And one needs to add to the rule, “unless punctuation or an enclitic follows”. For then the acute is not lulled to a grave, as in *ὠκὺς Ἀχιλλεύς*.³⁰

It appears from a Herodianic scholion to the *Iliad* that Aristarchus already made use of the concept of cancelling an acute on an oxytone word in connected discourse:

φθάν δὲ μέγ' ἰππήων <ἐπὶ τάφρω κοσμηθέντες>: ὁ Ἀρίσταρχος βαρύνει, καὶ δῆλον ὅτι ὑγιῶς· κοιμίζεται γὰρ ἢ ὀξεῖα ἐν τῇ συνεπείᾳ· “Ζεὺς δ' ἐπεὶ οὖν Τρώας τε”. (Sch. *Il.* 11. 51b (A))

φθάν δὲ μέγ' ἰππήων <ἐπὶ τάφρω κοσμηθέντες>: Aristarchus makes (φθάν) unaccented, and it's clear that (he does this) correctly. For the acute is lulled in connected speech: “Ζεὺς δ' ἐπεὶ οὖν Τρώας τε”.

As Erbse explains (*apparatus ad loc.*), Aristarchus' treatment of φθάν as βαρύτονος “unaccented” or “grave” (on the terminology see further below) implies the word division φθάν δὲ rather than a reading φθάνδε or φθάνδε. The explanation κοιμίζεται ... ἢ ὀξεῖα ἐν τῇ συνεπείᾳ is due to Herodian, and we do not know whether Aristarchus would have put the matter in these terms, but we can be reasonably confident that he operated with the concept that an acute on a final syllable was cancelled in connected speech.

Modern scholars differ as to the phonetic reality behind the principle that the accent of an oxytone word was turned into a grave in the sentence. The terminology κοιμίζει τὴν ὀξεῖαν εἰς βαρεῖαν ‘lulls the acute to a grave’ suggests complete neutralisation of the acute accent, since the βαρεῖα was the prosody proper to unaccented syllables. On the other hand, Apollonius Dyscolus (quoted above) seems to distinguish between the “lulling” of the accent of an oxytone word (κοιμίζειν) and the “extinguishing” of the accent on an enclitic (ἀποσβεννύειν), as if enclitics might have been more decisively unaccented

material, but enclitics (and the accentuation of connected speech more generally) were originally discussed in a supplement appended to the *Περὶ καθολικῆς προσωδίας* (see [Arc.] 5. 1–14 and Cohn [1895b] 1156)).

30 Cf. the fuller discussion of the same material, ascribed to Choeroboscus, at Sch. Dion. T. 127. 31–128. 10, and see also [Arc.] 5. 6–10; 199. 6–9; Io. Philop. *Ton. praecept.* 3. 23–4. 1; 6. 5–10.

than oxytone words with “lulled” accent. Evidence from fragments of ancient Greek music also suggests that a “lulled” acute was higher in pitch than an unaccented syllable but lower in pitch than an ordinary acute.³¹ The conclusion that a “lulled” accent was a reduced rather than neutralised high pitch may be supported further by the avoidance in accented papyri of either acute or grave accents on syllables with “lulled” accents.³² If oxytone words within the sentence had a reduced high pitch rather than a complete neutralisation of the accent, this point was never quite explicitly recognised in grammatical discussions, but the grammarians’ treatment of oxytone words in the sentence certainly displays a concept of contextual variation. Oxytone words are treated as having a basic or underlying acute on the final syllable, subject to a rule “lulling” the accent in connected discourse. The “lulling” rule does not apply before punctuation or enclitics. Alternatively, enclitics are treated as “waking up” an already “lulled” acute (so Apol. Dyc., *Pron.* 90. 19; [Arc.] 167. 12–14).

6 Positions for the Word Accent

From the Hellenistic period onwards, word accents were classified according to the syllable on which the accent fell, counting syllables from the end of the word, and whether the accent was an acute or a circumflex. The following terms, which have given rise to modern equivalents, go back to the Hellenistic period:³³

ὀξύτονος (oxytone) = having an acute on the final syllable: λιγυρός

περισπώμενος (perispomenon) = having a circumflex on the final syllable:
λιγυροῦ

παροξύτονος (paroxytone) = having an acute on the penultimate syllable: πατέρα

31 See Wackernagel [1896]; Ehrlich [1912] 252; West [1992] 199; Devine-Stephens [1994] 181–183.

32 On the other hand, the practice of avoiding any accent marks on these syllables could, in principle, be due to awareness of an underlying word accent, on the one hand, and of this accent’s lack of phonetic realisation, on the other.

33 Most Hellenistic scholarship on the accent is not preserved in words which we can be confident are the original ones, but see *e.g.* Sch. *Il.* 15. 656b (b(BCE³)T^{il}) = Dion. T. fr. 22 Linke, where the text of the b manuscripts suggests that Dionysius Thrax is being quoted directly. From the first century BC, we have fragments of Trypho in which this terminology appears to be due to Trypho himself (see *e.g.* [Ammonius] 405 Nickau = Trypho fr. 15 von Velsen).

προπερισπώμενος (properispomenon) = having a circumflex on the penultimate syllable: σωτήρα

προπαροξύτονος (proparoxytone) = having an acute on the antepenultimate syllable: λεγόμενος³⁴

The first two terms in this list can also be used of individual syllables within the word: any syllable with an acute accent may be called ὀξύτονος, and any syllable with a circumflex may be called περισπώμενος.³⁵ When applied to whole words, all the terms in the above list take the final syllable of the word as a reference point: a word described as ὀξύτονος is one whose final syllable is ὀξύτονος; a word described as περισπώμενος is one whose final syllable is περισπώμενος; a word described as παροξύτονος is one whose pre-final syllable is ὀξύτονος; and so on. This classification of positions for the accent recognises an important fact about Greek accentuation: positions for the accent need to be reckoned from the end of the word in order to show how words with a similar morphological structure often turn out to be accented in the same way. Thus, nominative singular masculine forms of adjectives with the suffix -ικός- are almost all oxytone: ἠθικός “expressing character”, Αἰολικός “Aeolic”; μαθηματικός “scientific, mathematical”. If the position of the accent is calculated instead from the beginning of the word, ἠθικός is accented on the third syllable, Αἰολικός on the fourth, and μαθηματικός on the fifth; but the reckoning of the position of the accent from the end of the word shows how all these words share a position for the accent. We shall return further on to the importance given to the terminations of words in giving rules determining how individual words are accented.

7 ‘Barytone’ Words

In modern discussions of the ancient Greek accent, it is not considered sufficient to describe morphological classes of words as oxytone, perispomenon, paroxytone, properispomenon, or proparoxytone. The main reason why this classification is insufficient is that many classes of word are accented as far from the end of the word as the limits on the position of the Greek accent

34 In addition to these adjectives, associated active and passive verbs are used: ὀξύνει = “puts an acute on the final syllable”; ὀξύνεται = “is accented with an acute on the final syllable”; περισπᾷ = “puts a circumflex on the final syllable”; περισπάται = “is accented with a circumflex on the final syllable”; παροξύνει = “puts an acute on the penultimate syllable”; etc.

35 See *e.g.* Sch. *Il.* 9. 529d (A).

normally allow: two syllables from the end of the word if the final syllable has a long vowel or is closed by more than one consonant, and three syllables from the end otherwise. Words with an accent as far from the end as these limits allow are called “recessive” in modern terminology. The concept of the recessive accent allows one to express clearly what most finite verb forms, for example, share in their accentuation: they are recessive. Thus in the paradigm of βουλεύω “deliberate” the forms βουλεύω, βουλεύετω, ἐβουλευσάμην, βουλεύομεν, ἐβούλευσα, and βουλευοίμεθα are all recessive, although the first three are paroxytone and the last three proparoxytone.

Herodian was aware of the limits on the position of the Greek accent (see especially Io. Philop. *Ton. praecept.* 4. 28–6. 5), but the concept of the ‘recessive’ accent as a useful category is only partly developed in ancient grammar. A word which might be described as παροξύτονος, προπερισπώμενος, or προπαροξύτονος is often described instead as βαρύτονος. In Philoponus’ epitome of Herodian’s *Περὶ καθολικῆς προσῳδίας*, the term βαρύτονος is explicitly defined as referring to a word with neither an acute nor a circumflex on the final syllable:

ἰστέον δὲ ὅτι καθ’ ἐκάστην λέξιν ἐν μιᾷ συλλαβῇ τίθεμεν ἢ ὀξεῖαν ἢ περισπωμένην, ἐν δὲ ταῖς λοιπαῖς συλλαβαῖς βαρεῖαν· οἷον ἐν τῷ Μένελάδος δευτέρα συλλαβὴ ὀξύνεται, αἱ δὲ λοιπαὶ βαρύνονται, καὶ ἐν τῷ ἄλλοῖδος³⁶ ἡ μέση περισπάται, ἡ δὲ πρώτη καὶ τρίτη βαρύνονται. διὸ καὶ βαρύτονα καλεῖται τὰ παροξύτονα καὶ προπαροξύτονα καὶ προπερισπώμενα, διὸ ἡ τελευταία τούτων βαρύνεται. (Io. Philop. *Ton. praecept.* 6. 10–17)

And one must know that for every word we put either an acute or a circumflex on one syllable, and on the other syllables a grave. So in Μένελάδος [Μενέλαος] the second syllable has an acute, and the rest have a grave, and in ἄλλοῖδος [ἄλλοῖος] the middle syllable has a circumflex, and the first and third have a grave. This is also why paroxytone and proparoxytone and properispomenon words are called βαρύτονα: because the last syllable of these has a grave.

Not all words which are βαρύτονος by this definition are recessive. Thus, Philoponus’ example ἄλλοῖος “of another kind” is βαρύτονος but not recessive, as is (for example) πατέρα “father” (acc. sg.). Occasionally, the term βαρύτονος is indeed used for such non-recessive properispomenon and paroxytone

36 I print ἄλλοῖος rather than ἄλοῖος here, as suggested by Dindorf [1825] iv.

words.³⁷ Thus, *ἐκείνος* appears in a list of ‘barytone’ words in the following passage:

αἱ μονοπρόσωποι μονοσύλλαβοι μὲν οὔσαι ὀξύνονται· μὴν καὶ νίν. ὑπὲρ μίαν δὲ συλλαβὴν οὔσαι καὶ μὴ ἔχουσαι τὴν διὰ τοῦ Ι ἐπέκτασιν βαρύνονται· οὔτος ἐκείνος ὄδε... ([Arc.] 203. 19–22)

(Pronouns) of only one person, if they are monosyllabic, are oxytone: *μὴν* and *νίν*. And if they have more than one syllable and are not extended with -ι, they are ‘barytone’: *οὔτος ἐκείνος ὄδε*...

In practice, however, in the vast majority of instances the term *βαρύτονος* (and *βαρύνεται*, etc.) is applied to recessive words. Thus, the practical application of the term *βαρύτονος* suggests an awareness of recessive words as a category, but the awareness does not extend to an explicit recognition of this category in the way in which *βαρύτονος* is defined.

8 Classification of Words into Groups with Similar Accentuation

The preface to [Arcadius]’ epitome of Herodian’s *Περὶ καθολικῆς προσωδίας* suggests that Herodian thought the following criteria relevant to a word’s accentuation: *γένος* “gender”, *εἶδος* “derivational status (underived or derived)”, *σχῆμα* “compositional status (simple or compound)”, *κατάληξις* “final syllable/termination”, *παράληξις* “penultimate syllable/part before the termination”, *ἀρχή* “beginning”, *χρόνος* “length (*i.e.* the presence of a long or short vowel in a particular position)”, *στοιχεῖον* “letter (*i.e.* the presence of a certain letter in a particular position)”, *πάθος* “change in form” ([Arc.] 1. 9–10). All these criteria, and more, appear in the rules given by [Arcadius], as well as the accentual rules found in other ancient grammatical works. Thus, the following rule covers words with a certain termination (-*ην*), with a voiced stop (*β*, *δ*, or *γ*) before the *η*, and with an *anceps* vowel (one capable of being long or short, *i.e.* *α*, *ι*, or *υ*) or a long vowel in the penultimate syllable:

37 Occasionally, *βαρύτονος* or the associated verb is also used of oxytone words with a ‘lulled’ acute: so [Arc.] 167. 12.

τὰ εἰς HN ἔχοντά τι τῶν μέσων πρὸ τοῦ Η ὀξύνεται, ὅποτε διχρόνῳ παραλήγοιτο, ἢ φύσει μακρᾶ, οἷον· Ὡγγὴν ἀδὴν †άττην†³⁸ ἄτταγγὴν τριβὴν (ὁ τρίπους). ([Arc.] 7. 15–17)

Words in -ην with one of the voiced stops before the η are oxytone, whenever they have an *anceps* vowel in the penultimate syllable, or a vowel long by nature, as in Ὡγγὴν ἀδὴν †άττην† ἄτταγγὴν τριβὴν ('tripod').

The following rule covers words with a certain termination (-ην) that are not compounds, and with an aspirated or unaspirated voiceless stop (π, τ, κ, φ, θ, χ) before the termination:

τὰ εἰς HN λήγοντα μὴ συντεθειμένα ἀπὸ τῶν εἰς HN ῥητῶν, εἰ ἔχοι πρὸ τοῦ HN δασὺ σύμφωνον ἢ ψιλόν, ὀξύνεσθαι θέλει, οἷον· ἀρχὴν εὐχὴν ναυχὴν κηφὴν ὀρφὴν. ([Arc.] 6. 10–13)

Words ending in -ην and not compounded from words in -ην in common use, if they have an aspirated or unaspirated voiceless stop before the -ην, tend to be oxytone, as: ἀρχὴν, εὐχὴν, ναυχὴν, κηφὴν, ὀρφὴν.

However, not all these criteria were regarded as equally important for grouping words likely to be accented similarly. The overall organisation of Herodian's *Περὶ καθολικῆς προσωδίας*, preserved in [Arcadius]' epitome, divided words first of all into major groups depending on their part of speech: (i) ὀνόματα or nominal forms (both adjectives and nouns), a group which occupied the first fifteen of the twenty books; (ii) verbs; (iii) participles; (iv) pronouns; (v) articles; (vi) prepositions; (vii) adverbs; and (viii) conjunctions.³⁹ Within most of these groups, there are major subdivisions into words with similar terminations. Thus, the citation forms of masculine and feminine nominal forms with more than one syllable are treated in the first twelve books, of which the first deals with words ending in -ν, the second with words ending in -ξ, -ρ, and -ας, the third with words ending in -ης, and so on.⁴⁰ The main divisions within these books are also into words with the same termination. Thus, [Arcadius]' first book deals in order with words ending in -αν, -ην, then more specifically -μην and -ρην, -ιν, -υν, -βων, -γων, -δων, -ζων, -ηων, -θων, -κων, -λων, -μων, then more specifically -αιμων, -νων, -ξων, -πων, -ρων, -σων, -των, -υων, -φων, -χων, various

38 For possible corrections see Schmidt, apparatus ad loc.

39 See [Arc.] 3. 1–4. 21; 6. 1–211. 4; Io. Philop. *Ton. praecept.* 7. 16–42. 25.

40 See [Arc.] 3. 1–4. 6; 6. 1–133. 19; Io. Philop. *Ton. praecept.* 8. 8–9. 18.

further categories of words ending in $-\omega\nu$, then $-\iota\omega\nu$, $-\alpha\omega\nu$, two further categories of words ending in $-\omega\nu$, and $-\alpha\iota\omega\nu$ (see [Arc.] 6. 1–18. 12).

Herodian thus based his rules of accentuation on a large collection of groups of words with the same termination. Aristarchus already, in prescribing accents, thought it relevant to adduce similarly accented words ending in the same way.⁴¹ Material coming at the end of the word remains crucial in modern descriptive and theoretical work on the ancient Greek accent, and there has been considerable discussion of the influence of the last derivational suffix, in particular, on the accent of a word (see Probert [2006] 117–119, 145–148).

9 Base Accent and Case Accent

The paradigm plays an important role in Herodian's organisation of information on the accentuation of nominal forms. The first fourteen books of the *Περὶ καθολικῆς προσῳδίας* treated the accentuation of citation forms (the nom. sg. for a noun, and the nom. sg. masc. for an adjective), while the fifteenth book dealt, much more briefly, with the rules for deriving the other forms in the paradigm once the accent of the citation form was known.

Modern descriptive works on ancient Greek accentuation often make use of the notion that, with some exceptions, noun and adjective paradigms have a “persistent” accent.⁴² In a paradigm with persistent accentuation, the accent remains throughout the paradigm on the same syllable, reckoning syllables from the *beginning* of the word, as in the dictionary form (the nominative singular for a noun, and the nominative singular masculine for an adjective). A concept of persistent accentuation is visible particularly in the introductory part of Philoponus' epitome of Herodian's *Περὶ καθολικῆς προσῳδίας*, in the course of an explanation of the limits on the position of the accent:

οὐδέποτε, μακρὰς οὔσης τῆς ἐπὶ τέλους, τρίτη ἀπὸ τέλους πίπτει ἡ ὀξεῖα· ἔνθεν τῆς εὐθείας τοῦ Ὀμηρος καὶ αἰτιατικῆς καὶ κλητικῆς προπαροξυνομένων, Ὀμηρος, Ὀμηρον, Ὀμηρε, ἡ γενικὴ καὶ δοτικὴ, τοῦ Ὀμήρου καὶ τῷ Ὀμήρῳ, διὰ τὴν ἐπὶ τέλους μακρὰν παροξύνονται, . . . (Io. Philop. *Ton. praecept.* 5. 5–10)

41 See *e.g.* Sch. *Il.* 8. 355 (A) (Aristarchus made *ἀνεκτῶς* perispomenon like *ἀνδρῖκῶς*); Sch. *Il.* 2. 755b (A) (Aristarchus makes *ἀπορρῶξ* oxytone like *θυλακοτρῶξ*). However, the meaning Aristarchus intended in using the formula “X ὡς Y” in such instances is controversial: see Matthaios [1999] 28–30, with bibliography.

42 See *e.g.* Chandler [1881] 5–6, although the term “persistent” is not used; Probert [2003] 50–51, 54. For a somewhat different conception, see Bally [1945] 29–30.

When the final syllable is long,⁴³ the acute never falls three syllables from the end. Thence, although the nominative, accusative, and vocative [singular] of Ὀμηρος are proparoxytone (Ὀμηρος, Ὀμηρον, Ὀμηρε), the genitive and dative [singular], Ὀμήρου and Ὀμήρῳ, are paroxytone because of the long final syllable.

The principle of persistent accentuation itself is left implicit here, but in order to see why the accent of Ὀμήρου and Ὀμήρῳ requires any explanation at all, we are expected to understand that if it were not for the long vowels in the final syllables of these forms, they would be accented on the first syllable, like the nominative and accusative. In the part of Philoponus' epitome corresponding to Herodian's fifteenth book (Io. Philop. *Ton. praecept.* 9. 19–20. 34),⁴⁴ persistent accentuation in most nominal paradigms is recognised in that the accentuation of most forms is related to that of the nominative singular in the same paradigm (or sometimes the nominative of the same number as the form being discussed). Thus, most accusative singulars and vocative singulars are said to be accented on the same syllable as the nominative singular in the same paradigm (Io. Philop. *Ton. praecept.* 12. 7–13. 1; 13. 8–12). The accentuation of most genitive singular forms is also stated in terms of that of the nominative singular, with allowances for the need for the accent to shift in paradigms such as that of Ὀμηρος, gen. sg. Ὀμήρου (Io. Philop. *Ton. praecept.* 9. 34–10. 2; 10. 14–34). But relationships between pairs of non-nominative case forms are expressed too. For example, any dative singular is said to be accented in the same way as the genitive singular in the same paradigm, provided the two forms have the same number of syllables (Io. Philop. *Ton. praecept.* 11. 6–12). This statement captures a significant generalisation even about paradigms that do not display persistent accentuation: even where the genitive singular is not accented like the nominative singular, as in third-declension words with monosyllabic stems such as nom. πούς, gen. ποδός “foot”, the dative singular is accented like the corresponding genitive singular if the two forms have the same number of syllables: so gen. ποδός, dat. ποδί “foot”.

In addition to recognising the phenomenon of “persistent” accentuation, Philoponus' (and probably Herodian's) method of formulating regularities for the accentuation of oblique cases is an example of the ancient “word and paradigm” approach to morphology, which has found advocates among linguists of

43 On the definition of a ‘long’ final syllable, see n. 18.

44 The corresponding part of [Arcadius] epitome, [Arc.] 146. 9–159. 3, is sometimes taken to be interpolated: see Cohn [1895b] 1156.

our time for its ability to capture significant generalisations about the structure of paradigms.⁴⁵

10 'Basic' Word Accent and Accents due to Enclitics

The concept that oxytone words have a basic acute accent on the final syllable, which is "lulled" in some contexts within the sentence and may be "woken up" in others, has already been mentioned above. Not only oxytone words, however, but all words are considered to have a "basic" accent, a κύριος or ἴδιος τόνος. Their accentuation may be altered not only by the rules applying to oxytone words within the sentence but also by the rules applying to words followed by enclitics.

Enclitics, like other words, were considered to have a basic accent of their own; in fact all enclitics were considered to be either oxytone or perispomenon ([Arc.] 162. 11–12). The normal rules for enclitics apply only to monosyllabic enclitics and to disyllabic enclitics containing not more than one heavy syllable;⁴⁶ the basic accent of these enclitics was considered to be thrown back onto the preceding word in certain contexts:

The enclitic throws its accent back onto the preceding word (to give an acute on the last syllable of that word) if the preceding word is

- (a) proparoxytone: as one might now express the idea, underlying "Ὀμηρος ἐστὶ becomes "Ὀμηρός ἐστι
 - (b) paroxytone with a trochaic ending: underlying τυφθέντα τέ becomes τυφθέντά τε⁴⁷
 - (c) properispomenon as long as the last syllable is not closed by more than one consonant: underlying γυνάικες εἰσὶ becomes γυνάικές εἰσι⁴⁸
- (See [Arc.] 160. 5–17)

45 See Robins [1959] and Matthews [1991²] 185–205, who proposes a modernisation of the ancient model. On the ancient model see further Roussou (2012).

46 A category of disyllabic enclitics with two heavy syllables was also recognised: see [Arc.] 160. 1–5, and cf. Probert [2003] 150–151.

47 This rule is not observed in most modern editions of ancient texts, and is generally suspected of having been stated too generally in the grammatical tradition. For discussion and bibliography see Probert [2003] 148–150.

48 The restriction to words whose last syllable is not closed by more than one consonant is necessary because words such as φοῖνιξ and κήρυξ are properispomenon but do not receive an accent on their final syllables when an enclitic follows (so φοῖνιξ ἐστὶ, not *φοῖνιξ ἐστι: see [Arc.] 160. 14–17).

In other contexts, the enclitic was considered to lose its basic accent while the preceding syllable kept its own basic accent:

The enclitic loses its basic accent while the preceding word keeps its basic accent if the preceding word is

- (a) oxytone: underlying Ζεύς τέ becomes Ζεύς τε
 - (b) perispomenon: underlying καλῶς μοί becomes καλῶς μοι
- (See [Arc.] 160. 17–161. 3)

Alternatively, a preceding oxytone word is considered to have its basic accent “woken up”; one might now express this idea in terms of a derivation in which underlying αὐτός μοί gives first αὐτός μοί and then αὐτός μοι (see [Arc.] 167. 12–16).

Finally, a monosyllabic enclitic following a paroxytone word loses its basic accent, while a disyllabic enclitic following a paroxytone word keeps its basic accent, but in either case the paroxytone word simply keeps its basic accent: underlying πολλάκις εἰσί simply gives πολλάκις εἰσί, while underlying μεταμέλει μοί gives μεταμέλει μοι (see [Arc.] 161. 7–21).⁴⁹

It appears from [Arcadius]’ account that the basic accent of an enclitic was considered to appear, under most circumstances, either on the enclitic itself or on the final syllable of the preceding word. When the basic accent of the preceding word already fell on the final syllable, the accent of the enclitic simply coincided with the basic accent of the preceding word (καλῶς μοι), although if this accent was an acute then the enclitic at least prevented or reversed a change to a grave (αὐτός μοι). In a sequence such as μεταμέλει μοι, however, both the enclitic and the final syllable of the preceding word appear without an accent. [Arcadius] remarks that in such instances τῷ νῶ μόνῳ γίνεται ἡ ἔγκλισις “the enclisis [*i.e.* the ‘throwing back’ of the accent] happens only mentally” ([Arc.] 161. 17–18), and continues with the following explanation:

ταῦτα γὰρ οὔτε τὸν ἴδιον τόνον δύνανται φυλάττειν, οὔτε ἀναπέμπουσιν αὐτὸν τῇ προηγούμενῃ λέξει. ([Arc.] 161. 19–21)

For these [enclitics] neither can keep their own accent, nor do they throw it back onto the preceding word.

It is tempting to compare the whole concept of enclitics having accents that may surface on themselves or on the preceding word with modern autoseg-

49 An exception is made for paroxytone words followed by enclitic pronoun forms beginning with σφ-: see [Arc.] 161. 13–16; 166. 19–22; and cf. Probert [2003] 150.

mental phonology (on which see Goldsmith [1990]). Furthermore, the idea that there is implicit or “mental” enclisis in a sequence such as *μεταμέλει μοι*, with the enclitic unable to keep its own accent or to throw it onto the preceding word, is rather comparable to the notion of floating tones in autosegmental phonology: tones that exist underlyingly but fail to surface in environments where there is no syllable on which the language in question allows them to surface. It would, however, be a mistake to regard Herodian or [Arcadius] as having developed autosegmental phonology in any detail.

11 Concluding Remarks: Prosody as a Part of Ancient Grammar

All branches of prosody formed an integral part of ancient grammar, and ancient theory of prosody therefore depends on larger characteristics of ancient grammatical theory, such as the operation and function of analogy; the theory of *πάθη*; the criteria for establishing etymologies; and the status of different varieties of Greek and shifting approaches to what was ‘correct’. These have been discussed elsewhere in this volume,⁵⁰ and I shall not try to discuss them here with special reference to prosody. But we may finish by mentioning, by way of example, how prosody provided some constraints on the operation of *πάθη*, although *πάθη* themselves were operations applying to vowels and consonants.⁵¹

The Hellenistic grammarians first started to develop a theory of *πάθη*, “changes”, to account for the differences between variant forms of a word in different dialects or different stages of the language, and to describe the hypothetical developments from one word to another in ancient etymologies. The *πάθη* include the addition or deletion of a letter or syllable; the shortening or lengthening of a vowel; and the contraction of two vowels into one or splitting of one vowel into two. It would appear that with this list of possible operations any form could be turned into any other: that ‘anything goes’. Yet there were some constraints on the operation of *πάθη* and therefore on possible etymologies, and one of those was provided by the accent:⁵² the operation of a *πάθος* does not alter the accentuation of a word, unless the *πάθος* would otherwise cause a violation of a general accentual law (such as the limits on the position of the accent) or a specific law applying to the particular class of word

50 See Pagani, Lallot, and Valente (section III.2) in this volume.

51 On *πάθη* and accentuation, cf. Probert [2006] 30–32.

52 On the constraints on *πάθη* in general, see Wackernagel [1876], and for this one in particular Wackernagel [1876] 15–16.

involved. Apollonius Dyscolus appeals to this constraint in order to attack a proposed etymology, one linking the particles ἦ and δῆ:

ἐκεῖνό τε σαφέστατόν ἐστιν, ὡς τὰ ἀφαιρεθέντα συμφώνου ἦ καὶ προσλαβόντα σύμφωνον τύπου μὴ ἀντικειμένου ὁμότονά ἐστιν. οὔτε οὖν ὁ δῆ ἦ ἐγένετο, οὔτε κατὰ πρόθεσιν τοῦ Δ ὁ ἦ δῆ, καθὸ ὁ μὲν περισπᾶται, ὁ δὲ ὀξύνεται. (Apol. Dysc., *Conj.* 256. 29–257. 1)

And the following is most clear: that words that have lost a consonant or acquired a consonant have the same accentuation, unless a general rule opposes this. Therefore δῆ did not become ἦ, nor did ἦ become δῆ by the addition of the δ. For the one has a circumflex, the other an acute.

Breathings, too, could not simply come and go at random when a word was affected by a πάθος. Some πάθη affected breathings, but they did so according to rules that could be stated (see Lentz [1860] 664–697). For example, word-initial ου- normally had a smooth breathing, and when a πάθος turned word-initial ο- into ου-, the resulting ου- received a smooth breathing even if the ο- of the basic form had a rough breathing. Apollonius Dyscolus appeals to this regularity in the course of an argument that the form οὔτοι is derived from τοὔτοι by the deletion of word-initial τ-, a πάθος that causes a rough breathing:

πότε γὰρ ἢ ΟΥ δίφθογγος δασύνεται, ὅπου γε καὶ τὰ δασυνόμενα ἐγγινομένης αὐτῆς ψιλὰ γίνεται, ὄλος οὔλος, ὄρος οὔρος; δασύνεται δὲ τὸ οὔνεκα διὰ τὸ τούνεκα. οὐκ ἂν οὖν ἄλλως δασυνθεῖν τὸ οὔτοι, εἰ μὴ λάβοι ἀπολογίαν τὴν ἔλλειψιν τοῦ Τ. (Apol. Dysc., *Synt.* 153. 21–154. 4)

For when does the diphthong ου have a rough breathing, considering that even aspirated vowels become unaspirated when it appears? (So) ὄλος (becomes) οὔλος, ὄρος (becomes) οὔρος. But οὔνεκα has a rough breathing because of τούνεκα. Therefore οὔτοι would not otherwise have a rough breathing, if it didn't have a reason in the deletion of τ-.

Thus the relationship between prosody and segmental phonology is not exhausted with the correct mapping of one onto another—the way in which the prosody should ‘accompany’ the vowels and consonants. Vowels and consonants, as well as prosodic phenomena, were subject to operations of various sorts, and both prosody and segmental phonology needed to be taken into account for these operations to be properly constrained. Ancient theory of prosody needs to be studied together with other aspects of ancient grammar.

Orthography*

- 2 *Ancient Origins: From the Beginnings to Aristarchus*
- 3 *The Rise of Greek Orthography: Asclepiades of Myrlea, Trypho and Apollonius Dyscolus*
- 4 *Herodian and the Sistematization of the Greek Orthography*

1 Introduction

Greek orthography was a well-defined part of ancient grammar from the 2nd half of the 2nd century BC onwards. According to the standard definition, initially formulated by Trypho and then repeated with slight modifications by all the Greek grammarians, orthography (ὀρθογραφία) is both the correct spelling of a word and the account of its correctness. It does not address all the spelling problems, as modern orthography does, but only particular ζητήματα (“inquiries”):¹ as Quintilian stresses (*Inst.* 1.7.1), the orthographical art “has all its subtlety in dubious points” (*totam . . . subtilitatem in dubiis habet*)² and examines those cases in which the pronunciation does not help to determine the correct spelling of a word.³

There are three fields of research within Greek orthography: syntax, quality and quantity.⁴ Σύνταξις, “syntax” (or μερισμός, “division”) deals with problems of syllabification, especially with the boundaries of syllables; ποιότης, “quality”, concerns doubts in the spelling of consonants, and ποσότης, “quantity”,

* I would like to express my gratitude to Marco Ercoles, Leonardo Fiorentini, Camillo Neri, and Renzo Tosi for their valuable suggestions and critical appraisal of my paper, as well as to Rachel Costa and Christopher Sheppard for revising my English.

doubts in the spelling of vowels. The criteria used by grammarians to correct and/or establish spelling are four: analogy, etymology, dialect, and history, or *paradosis*, which refers to literary and textual tradition.⁵

The origins of Greek orthography can be traced back to the Hellenistic period, when the ancient grammarians and scholars began to elaborate upon the first grammatical remarks in the orthographical field. However, it was only in the generation after Aristarchus that orthography was gradually distinguished as an autonomous part of grammar. It developed as a result of the contacts between Greek culture and the Roman world in the 1st centuries BC and AD,⁶ when it became a branch of ancient grammar closely linked to the doctrine of *Hellenismos* (ἑλληνισμός), the correct Greek.⁷ It reached its peak at the end of the 2nd century AD with the grammarian Aelius Herodian: his treatise on *Orthography*, now lost, marked a turning point in ancient orthography, collecting the studies of his predecessors and endowing them with the organization that would become canonical in later centuries. Thus, Late-Antique and especially Byzantine orthographical treatises,⁸ despite the lack of reliable critical editions and studies on their textual traditions, are the primary source for reconstructing ancient orthography, in particular that of Herodian and, to some extent, the doctrines of the orthographers of which he was able to avail himself.⁹ As a matter of fact, Herodian's *Orthography* had for centuries consistently been the main source for all Byzantine orthographers:¹⁰ it was copied, epitomised, revised and criticised, in order to adjust his statements to the changed pronunciation and to the school needs.

Ever since the Hellenistic age, and until the Byzantine period, Greek orthographers had constantly sought to achieve correctness in writing and avoidance of mistakes in spelling deriving from the phonetic changes in the Greek language, which concerned both consonants and vowels (for instance, iotacism).¹¹

10 See Egenolff [1888] 3f.; Wendel [1942a] 1440; Hunger [1978] 18; Alpers [2004] 2f.

11 See M. Victor. 4.58 (p. 80 Mariotti = GL 6.17.13) *orthographia Graecorum ex maxima parte in iōτα littera consistit* (“Greek orthography consists for its most part in the letter iota”; see Wendel [1942a] 1444; Blank [1998] 198). The development of the diphthong epsilon-iota to the sound [i], already (but rarely) attested in the 4th century BC, is quite typical of the Hellenistic period (see Schwyzler [1959³] 193; Meillet [1965⁷] 273, 307f.; Thraette [1980]

Prior to the modern age the Greek language had never undergone any spelling reform that would adapt changes in pronunciation to the written language. However, for centuries grammarians had aimed to preserve the traditional spelling and its rules,¹² thus opposing the historical evolution of the Greek language and formulating new and ever stricter rules and canons of correction.

2 Ancient Origins: From the Beginnings to Aristarchus

Since orthography implies a grammatical background, nothing can be said about Greek orthography in the Archaic period, when the alphabet was borrowed from the Phoenicians,¹³ as well as in the Classical age, when the Ionic alphabet was adopted in Athens.¹⁴ Moreover, we know little of the Athenian school system, and even less of those of other Greek *poleis*.¹⁵ As far as we are aware from epigraphic and literary sources, Greek dialects never had any defined spelling principles, except for Boeotian and its orthographic reform attested in stone inscriptions beginning from the 4th/3rd centuries BC and also in the famous Corinna-papyrus (*P. Berol.* 13284).¹⁶ Nevertheless, the roots of orthography can be traced back to this period, and are related to the philosophical speculations about language theories, and in particular about correct language (ὀρθοέπεια or ὀρθότης τῶν ὀνομάτων/ἑπῶν).¹⁷ These reflections

190–207; Allen [1987³] 70; Adrados [2005] 192f. with bibl.). However, grammarians seem to have begun to handle this phenomenon only in the 2nd century BC (see Wendel [1942a] 1438). It must be stressed that Greek orthographical treatises could represent important (but sometimes neglected) witnesses of the phonetic evolution of the Greek language.

12 Such views have contributed to the increasing dichotomy between the spoken and written language, which brought about the modern distinction between *demotiké* and *katharevousa* (see Adrados [2005] 291ff. with bibl.).

13 See Wendel [1942a] 1438; Jeffery [1961] 1–42.

14 See Threatte [1980] 26–51; Erbse [1994] 82f. with bibl.; Ruijgh [2001] 269f.; Smith [2003] 318. For instance, some passages of Plato's *Cratylus* are based on speculations about the introduction of the Ionic alphabet in Athens (e.g. 398d–e, 410c: see Lebeck [1969] 61).

15 See Marrou [1965⁶] 74–86; Morgan [1998] 9–21. For the history of orthography in the classical age, passages like Xen. *Mem.* 4.2.20, where the knowledge of reading and writing correctly (ὀρθῶς) seems to be limited to primary school education, do not help to recover the rules designed to correct the written (and spoken) language, if indeed such rules existed.

16 See Maas [1922] 1396; Page [1953] 59f., 66f.; Meillet [1965⁷] 96f.

17 See Barwick [1922] 202f.; Fehling [1965] 216; Siebenborn [1976] 14–24; Pfeiffer [1968] 37, 42, 53, 280f.; see also Novokhatko and, especially, Pagani in this volume. For the distinction between correct spelling and correct diction, see for instance Vel. Long. 9f. Di Napoli (= *GL* 7.71f.): see Barwick [1922] 203, 208f.; Siebenborn [1976] 36f.).

are essential for investigation into the further development of *Hellenismos* (ἑλληνισμός)—the correct usage of Greek language—which became a matter of inquiry first for the Peripatetics¹⁸ and Stoics,¹⁹ and later for the Hellenistic scholars.²⁰ According to this theoretical background, the grammarians “took over what they found useful from the Peripatetics, and especially from the Stoics, applying it in their own field and modifying it as they saw fit” (Blank-Atherton [2003] 320).²¹

However, the origins of Greek grammar properly speaking, and consequently orthography, date back to the philological work of the Alexandrian scholars, such as Aristophanes and Aristarchus, who concerned themselves with Homeric textual criticism in particular. Beside problems like the right *divisio verborum*, prosody, explanation of glosses and dialect words,²² they also dealt with the correct spelling to be used.²³ In particular, Aristarchus played a fundamental role in the development of grammatical and linguistic studies for textual criticism:²⁴ he accomplished the process of defining parts of speech, elaborated *in nuce* by Aristophanes of Byzantium,²⁵ and, most significantly, he refined the use of criteria like analogy, etymology, dialect, the (Homeric) usage (the so called *συνήθεια*),²⁶ and *paradosis* (that is the textual tradition).²⁷ These criteria were employed only for practical means, namely for textual criticism. Although some kind of theoretical reflection must necessarily be assumed (and it is unquestionable for the theory of the parts of speech), the complete lack of any systematic and prescriptive treatise on grammar and, less so, on orthography is very likely.²⁸ The quotations of Alexandrian scholars

in the scholia and epimerisms to Homer and in Byzantine lexica with regard to orthographic (and more generally grammatical) problems are more likely due to later grammarians,²⁹ who used them as *auctoritates* both *in bonam* and *in malam partem*, shifting their criteria for textual criticism to a more theoretical and normative perspective. In this respect, some good examples are provided by the Alexandrian discussions on the right spelling of Σκίρων (“Skiron”)—which involved at first Callimachus and Aristophanes³⁰—and on the spelling of θίς (“shore”) and ρίς (“nose”).³¹ On these two latter problematic cases, the primary source is an entry of the *Etymologicum Gudianum* (77.16–21 de Stefani *s.v.* ἀκτίς), which preserves the doctrine of Herodian (*GG* 3.2 431.1–11) through the intermediation of Choeroboscus’ *Orthography*:³²

... τὸ δὲ θίς καὶ ρίς ὁ Ἀρίσταρχος διὰ τῆς εἰ διφθόγγου ἀξιοῖ γράφεσθαι καὶ ἀκολουθῶν τῇ ἐτυμολογίᾳ ἔλεγεν ὅτι τὸ θείς παρὰ τὸ θείνεσθαι ἐστὶ, καὶ γὰρ ἐν τῷ αἰγιαλῷ θείνονται καὶ τύπτονται τὰ κύματα· ἢ παρὰ τὸ θέειν, καὶ γὰρ ἐν τῷ αἰγιαλῷ τρέχει τὰ κύματα. τὸ δὲ ρείς παρὰ τὸ ρεῖν γέγονε, καὶ γὰρ ἐκ τῆς ῥίνδος ῥέουσι καὶ κατέρχονται τὰ περιτώματα τῆς κεφαλῆς. ἀκολουθῶν οὖν ταύτη τῇ ἐτυμολογίᾳ εἴρηκεν αὐτὰ διὰ τῆς εἰ διφθόγγου. ἢ δὲ παράδοσις οἶδεν αὐτὰ διὰ τοῦ ι κτλ.

Aristarchus thinks that θίς (“shore”) and ρίς (“nose”) are rightly spelt with the diphthong epsilon-iota and, following the etymology, he said that θείς comes from θείνεσθαι (“to be struck”), because the waves strike on and hit the beach, or from θέειν (“to run”), because the waves run on the beach; ρείς comes from ρεῖν (“to flow”), because the head secretions flow and run down from the nose. Thus, following such an etymology, he says that these words are spelt with the diphthong epsilon-iota, while the paradisis knows them with iota.

29 See Wendel [1942a] 1439; Desbordes [1990] 165f.; Schneider [1999] 850f.

30 See below, section 4.

31 See Lentz [1867] XCIII; Wendel [1942a] 1439; Siebenborn [1976] 31.

32 See Choerob. *Orth.* 167.15 (*unde plenior Etym. Gud.* 76.13 de Stefani). The direct tradition of Choeroboscus’ *Orthography*—a work in alphabetic order and ἀπὸ φωνῆς, that is to say, notes taken at his lectures or classes—preserves only an epitome of the work, while a fuller version was the source of the Byzantine *Etymologica* (see Alpers [2004] 31ff. with bibl.; Valente [2010a] 639–642). On Choeroboscus’ sources, see Alpers [2004] 33ff. with bibl.; Dickey [2007] 80f. with bibl. and in this volume.

Aristarchus created the spellings $\theta\epsilon\acute{\iota}\varsigma$ and $\rho\acute{\epsilon}\iota\varsigma$ on account of their etymology³³ (respectively from $\theta\epsilon\acute{\iota}\nu\epsilon\sigma\theta\alpha\iota$ and $\rho\acute{\epsilon}\acute{\iota}\nu$)³⁴ instead of $\theta\acute{\iota}\varsigma$ and $\rho\acute{\iota}\varsigma$ of the paradosis. His primary goal was to improve the Homeric text, not to focus on the abstract orthographical problems: later Herodian, in his *Orthography*, set in a wider grammatical canon these (par)etymological spellings introduced by the Alexandrian scholar.³⁵

3 The Rise of Greek Orthography: Asclepiades of Myrlea, Trypho and Apollonius Dyscolus

The development of orthography as an autonomous field within the grammatical art (*γραμματική τέχνη*) and the systematization of the criteria used by the Alexandrian scholars for spelling correction took place a generation after Aristarchus,³⁶ as is confirmed by the grammatical treatise preserved in the *scriptio inferior* (7th–8th cent.) of the palimpsest manuscript *Lipsiensis gr. 2* (*olim Tischendorffianus 2*),³⁷ which Alpers ([2004] 49) convincingly identified with the lost Orus' *Commentary to Herodian's Orthography* (*Ἐπιόμνημα τῆς ὀρθογραφίας τοῦ Ἡρωδιανοῦ*).³⁸ In the fragmentary preface there is a list of grammarians who dealt with orthographic problems (fol. 22^v ll. 18–26),³⁹ but

33 On this (par)etymological spelling, see Apollon. Soph. 86.24 (~ Hsch. θ 591 Latte; see also *Epin. Hom.* 34D^{1,2} Dyck with the testimonia *ad ll.*; Eust. *Il.* 109.4f.). See also Schironi [2004] 276–279.

34 See van der Valk [1964] 145, who deals with the Aristarchean creation of the reading $\delta\iota\nu\acute{\omega}$ instead of the correct $\delta\epsilon\iota\nu\acute{\omega}$ (“terrible”) in *Il.* 20.259, stressing that “we need no doubt that $\delta\iota\nu\acute{\omega}$ originates with Arist[archus]. The latter coined a new word in order to make the text more interesting”, and in n. 282: “we must not forget that a number of similar instances can be mentioned which illustrate Aristarchus’ mentality in this respect. Thus he explained $\rho\acute{\iota}\varsigma$ and $\theta\acute{\iota}\varsigma$ by $\rho\acute{\epsilon}\iota\varsigma$ and $\theta\epsilon\acute{\iota}\varsigma$ ”.

35 See Pagani in this volume.

36 Nevertheless, in all the grammatical works up to Herodian the interpretation of texts remained basic and still performed, as can be seen, for instance, in the fragments of Asclepiades of Myrlea, Tyrannion, and Philoxenus (see Montanari [1993b] 256).

37 See Tischendorf [1847] 54–56; Tchernetska [2000] 100f.; Ascheri [2005] 412ff. with further bibl.

38 Formerly, Reitzenstein ([1897] 299ff., [1901] 84ff.) ascribed this text to Herodian (followed by many, like Wendel [1939c] 1179; [1942a] 1441). See also Ascheri [2005] 417–420 with further bibl.

39 I print Reitzenstein’s text [1897] 302: *καὶ γὰρ Πτ[ολεμαῖος ὁ] καὶ Διονύσιος ὁ Θραξῆς |²⁰ [καὶ Ἀσκληπιάδης ὁ Μυρλεανός, ἔτι δὲ | [***]φος καὶ Πτολεμαῖ[ος ὁ Ἀσκαλωνίτης, ἀ]λλὰ μὴν καὶ Δημήτρι[ος] καὶ Ἀρχίας ὁ διδάσκαλος | [Δημητρίου, αὐτὸς] τε ὁ Τρύφων καὶ*

not necessarily authors of monographs on this subject.⁴⁰ Beside particular issues, such as the identification (or omission) of specific grammarians in the Leipzig palimpsest,⁴¹ what clearly emerges is that the ancient grammatical tradition, which is probably to be traced back to Trypho,⁴² identifies Dionysius Thrax⁴³ and, possibly, Ptolemaeus Pindarion,⁴⁴ two of Aristarchus' pupils, as the first grammarians to have concerned themselves with orthography. In particular, some of Dionysius' fragments address orthographic problems such as the spelling of the adverb ἤχι/ῆχι ("where", fr. 10 Linke):⁴⁵ he chose the first alternative, following his master Aristarchus, because in Doric it is spelt ἄχι,⁴⁶ but later Apollonius Dyscolus would prescribe the form with iota (*Adv.* 209.25ff.), probably followed by his son Herodian (*GG* 3.2 519.12).⁴⁷

Between the 2nd half of the 2nd century and the beginning of the 1st century BC orthography became a well-defined branch of ancient grammar and was inserted into the technical part (μέρος τεχνικόν),⁴⁸ according to Asclepiades of Myrlea's tripartition,⁴⁹ as far as we are aware through Sextus Empiricus (*Math.*

ὁ τοῦ |²⁵[*** Ἀπολλώνιος τε ὁ τοῦ Ἀρχιβίβ[ου]. Müller [1903] 28f. and Ascheri [2005] 428ff. suggest that this text apparently follows a strict chronological sequence, and thus they proposed different supplements.

40 See Müller [1903] 29; Ascheri [2005] 432f.; the opposite opinion is asserted by Reitzenstein [1897] 302; Wendel [1942a] 1439; Siebenborn [1976] 34; Linke [1977] 10; Desbordes [1990] 56; Schneider [1999] 85of.

41 See Ascheri [2005] 422–441 with bibl.

42 If the supplement αὐτὸς τε ὁ Τρύφων ("and Trypho himself") is correct: see Reitzenstein [1897] 302; Siebenborn [1976] 161; Schneider [1999] 857.

43 On his philological and grammatical activity, see Di Benedetto [2007] 479f.

44 If at l. 19 Müller [1903] 28 is right in suggesting Ὀροάνδου (see Ascheri [2005] 435). See also Montanari [1995b] 41–58.

45 *Sch. Il.* 1.607 a¹ Erbse (~ *sch. Il.* 1.607 a² Erbse, *brevius sch. Il.* 11.76 c Erbse) ἤχι Ἀρίσταρχος τὸ ἤχι χωρὶς τοῦ ι γράφει, καὶ Διονύσιος. παρατίθεται δὲ ὁ Διονύσιος τοὺς Δωριεῖς λέγοντας ἄχι. Linke [1977] 40f. does not recognise the orthographical problem.

46 On the usage of dialect as criterion of correction, see below, pp. 963, 971, and Pagani in this volume.

47 See *Epim. Hom.* η 13 Dyck with test.; see also Dyck [1988a]; Theodoridis [1989b].

48 See Siebenborn [1976] 33f.; Desbordes [1990] 56; Di Benedetto [2007] 418f., 477f.; Matthaios [2007] 13f. with further bibl.

49 See Heinicke [1904] 5f., 8f.; Schenkeveld [1994] 264; Blank [1998] 148; Pagani [2007a] 33. However, orthography is also part of the quadripartite grammar (see *sch. Marc.* Dion. T. 302.7–9 ~ *sch. Lond.* Dion. T. 471.8–10), as a constituent "sub-part" (μόριον) of the "corrective part", i.e. the one pertaining to textual criticism (μέρος διορθωτικόν: see Schröter [1960] 34). See Blank [1998] 263f. For further information on Asclepiades of Myrlea, see Montana in this volume.

1.252).⁵⁰ In particular, grammarians divided and analysed individual issues of grammar within the technical part and produced a range of monographs dealing on one hand with the smallest elements of words (letters and syllables) and parts of speech, and on the other with the doctrine of correct Greek—that is to say, *Hellenismos* (ἑλληνισμός)—which prescribes rules for the proper use of words and phrases through correction criteria including analogy, etymology, dialect, and usage.⁵¹

According to Sextus, Asclepiades states that the technical part of grammar concerns “the letters of the alphabet, the parts of speech, orthography, *Hellenismos*, and what follows from these” (*Math.* 1.92 περί τῶν στοιχείων καὶ τῶν τοῦ λόγου μερῶν ὀρθογραφίας τε καὶ ἑλληνισμοῦ καὶ τῶν ἀκολουθῶν). Moreover, Sextus seems to confirm Asclepiades’ orthographical interests, as attested by the Leipzig palimpsest, where he is listed among the orthographers.⁵² Although Sextus’ work does not preserve any definition of orthography, he indicates its fields of inquiry (*Math.* 1.169–175):⁵³

τὴν γὰρ ὀρθογραφίαν φασιν ἐν τρισὶ κείσθαι τρόποις, ποσότητι ποιότητι μερισμῷ. ποσότητι μὲν οὖν, ὅταν ζητῶμεν εἰ ταῖς δοτικαῖς προσθετόν τὸ ι, καὶ εὐχάλινον καὶ εὐώδινας τῷ ι μόνῳ γραπτέον ἢ τῇ εἰ· ποιότητι δέ, ὅταν σκεπτόμεθα πότερον διὰ τοῦ ζ γραπτέον ἐστὶ τὸ σμιλίον καὶ τὴν Σμύρναν ἢ διὰ τοῦ σ· μερισμῷ δέ, ἐπειδὴν διαπορώμεν περὶ τῆς ὀβριμος λέξεως, πότερόν ποτε τὸ β τῆς δευτέρας ἐστὶ συλλαβῆς ἀρχὴ ἢ τῆς προηγούμενης πέρας, καὶ ἐπὶ τοῦ Ἀριστίων ὀνόματος ποῦ τακτέον τὸ σ (...). οὐδὲν γὰρ βλαπτόμεθα, ἐάν τε σὺν τῷ ι γράφωμεν τὴν δοτικὴν πτῶσιν ἐάν τε μή, καὶ ἐάν τε διὰ τοῦ σ τὸ σμιλίον καὶ τὴν Σμύρναν ἐάν τε διὰ τοῦ ζ, καὶ ἐπὶ τοῦ Ἀριστίων ὀνόματος ἐάν τε τῇ προηγούμενῃ συλλαβῇ τὸ σ προσμερίζωμεν ἐάν τε τῇ ἐπιφερομένῃ τοῦτο συντάττωμεν κτλ.

They say that orthography is threefold divided into quantity, quality, and division. Quantity is when we inquire whether iota must be adscribed to datives, and whether εὐχάλινον (“well-bridged”) and εὐώδινας (“fruitful”)

50 “Asclepiades is probably the source of the examples in Sextus” (Blank [1998] 198; see also Calboli [1962] 147ff.; Di Benedetto [2007] 477).

51 See also Barwick [1922] 227f.; Siebenborn [1976] 53–55; Baratin [1989a] 204, [1989b] 215; Matthaios [1999] 14–16; Ax [2000] 128f.; Matthaios [2007] 13f.; Pagani in this volume.

52 See above, p. 954f. Pagani [2007a] 136 rightly reasserts that the ascription of an autonomous orthographical treatise to Asclepiades is groundless (see also Müller [1903] 29; *contra* Barr Reid Forbes-Saks [1996³] 187).

53 I print the text of Mau [1954], except for Dorville’s μόνῳ (see Egenolf [1888] 4) instead of mss’ μόνον. See also Blank [1998] 195–201 and Pellegrin [2002].

must be spelt only with iota or with the diphthong epsilon-iota. Quality is when we inquire whether *σμιλίον* (“scalpel”) and *Σμύρνα* (“Smyrna”) must be spelt with zeta or sigma. Division is when we are puzzled by the word *ἄβριμος* (“strong”), wondering whether beta begins the second syllable or ends the first, and, in the name *Ἀριστίων* (“Aristion”), we are unsure to which syllable sigma must be assigned [...]. We are not injured according to whether we spell the dative case with iota or not, and *σμιλίον* (“scalpel”) and *Σμύρνα* (“Smyrna”) with sigma or zeta, and whether we divide the word *Ἀριστίων* (“Aristion”) assigning sigma to the first syllable or to the following one.

Here Sextus provides no definition of the three parts of orthography—quantity (*ποσότης*), quality (*ποιότης*), and division (*μερισμός*)⁵⁴—but only some practical examples: quantity concerns vowels, in particular the adscription of iota in datives⁵⁵ and the spelling of [i], that is to say whether it corresponds to iota or to the diphthong epsilon-iota;⁵⁶ quality deals with consonants, and the example concerns doubts in the spelling of the sibilant (sigma or zeta) at the beginning of a word (*e.g.* in *σμιλίον*, “scalpel”, and *Σμύρνα*, “Smyrna”);⁵⁷ division focuses on doubts in syllabification, in particular of groups of two or more consonants, as in *ἄβριμος* (“strong”) and *Ἀριστίων* (“Aristion”).⁵⁸ However, Sextus does not mention any criterion for spelling correction.⁵⁹

-
- 54 See Hiller [1871] 613f.; Blank [1998] 197–201. This tripartition can also be detected in the orthographic chapter of Quintilian’s *Institutio oratoria* (1.7.1–9; see Colson [1924] 92).
- 55 See Allen [1987³] 84–88. See also Quint. *Inst.* 1.7.17 with Ax [2011] 323f.
- 56 See above, section 2.
- 57 See Threatte [1980] 510, 547–549; Allen [1987³] 45f. In Charax’ *Orthography* (see below, section 4), the spelling of *Σμύρνα* is not only a problem of quality, but also of syntax (see Egenolff [1888] 10). See also Blank [1998] 199, who rightly quotes Luc. *Jud. Voc.* 9 as useful parallel.
- 58 Syllabification was a typical exercise in Classical and Hellenistic primary school: see Guéraud-Jouguet [1938]; Marrou [1965⁶] 229–242; Threatte [1980] 64–73 for a survey of syllabic divisions in inscriptions; Criboire [1996] 269, no. 379 with bibl.; Morgan [1998] 14, who rightly cites Pl. *Plt.* 277e–278c, and 164. See also Callias’ *Alphabet Tragedy* (test. *7 K.-A. *ap.* Ath. 7.276a, 10.453c; Smith [2003] with bibl.). On the word “division” (*μερισμός*), see also *sch. Lond.* Dion. T. 447.25f. (where the focus is on *Hellenismos*); see also *comm.* Melamp. *seu* Diom. *in* Dion. T. 31.6–9 (see Blank [1998] 199 n. 185) ~ *sch. Marc.* Dion. T. 316.31–317.2. See also Quint. *Inst.* 1.7.9 (for *haruspex* and *abstemius*) with Ax’s commentary ([2011] 315).
- 59 See Heinicke [1904] 71. At least analogy, etymology and usage were already part of *Hellenismos* (see for instance Sext. *Emp. Math.* 1.189, 1.241–247). See Barwick [1922] 214, 259; Siebenborn [1976] 54; Baratin [1989b] 213ff.

After Asclepiades,⁶⁰ further important steps towards the development of Greek orthography were undertaken by Trypho.⁶¹ The title of his work *Περὶ ὀρθογραφίας καὶ τῶν αὐτῇ ζήτουμένων* (“*On orthography and its matters of inquiry*”)⁶² shows one of the peculiarities of Greek orthography: it deals only with particular inquiries (ζητήματα) concerning single doubts in spelling, without establishing a complete corpus of rules for all the aspects of correct writing. The first definition we have of orthography, as testified by the Leipzig palimpsest (fol. 22^r ll. 14–21), belongs to Trypho:⁶³

λέγεται¹⁵ τοίνυν ὀρθογραφ[ία διχῶς καὶ ἢ ὀρ]θῶς γεγραμμένη λέξις, καὶ πάλιν ὀρθογρα[φία καὶ αὐτὸς ὁ λόγος ὁ τὴν ἀπόδειξιν] περιέχων τῆς ὀρθο- γ[ραφίας, ὡς φησι Τρύ]ω²⁰ φων, ὥστε τὸ ἀποτε[λοῦν καὶ τὸ ἀποτε]λούμενον ὀνομασθ[ῆναι ὁμοίως.

Orthography has a twofold definition: it is both the word correctly spelt, and the rational account itself containing the demonstration of the orthography, as Trypho says, so that the cause and the effect are called in the same way.

The double definition of orthography as both the correct spelling of a word and the rational account (λόγος) which contains the demonstration of the orthography was subsequently preserved by later grammarians, with slight modifications.⁶⁴ Trypho, borrowing the established tripartition of orthography, may have been responsible for changing the denomination of division (μερισμός) into syntax (σύνταξις),⁶⁵ the standard denomination at least in the

60 We know little of the development of orthographical doctrine after Asclepiades: besides the names given in the Leipzig palimpsest (see above, p. 954 n. 39), we are aware that other grammarians (like Philoxenus and Diocles, that is to say Tyrannion of Stratonikeia) dealt with orthography (see Ascheri [2005] 434 and nn. 3–7 with further bibl.).

61 On Trypho and the different aspects of his grammatical studies, see Dickey [2007] 84f. with bibl.; Ippolito [2008] with bibl.; also Montana in this volume.

62 It is attested in the biographical entry of Hesychius of Miletus in the *Suda* lexicon (τ 1115 Adler; on the relation between Hesychius of Miletus and the *Suda* lexicon, see now Alpers [2009b = 2013²] 151–158 with bibl.).

63 I print Reitzenstein's text [1897] 303.

64 See below, section 4.

65 Müller [1903] 36 and Wendel [1942a] 1442 ascribe this change to Herodian. A syntax problem handled by Trypho is probably attested by *sch. Marc. Dion. T.* 446.16–19 (spelling of στράγγις, “trickle”, with or without iota *mutum*). On the term σύνταξις, see also Lambert [2011].

2nd century AD in Apollonius Dyscolus's works.⁶⁶ Furthermore, since division became quite specific for the identification and definition of the parts of speech within the treatises on *Hellenismos*,⁶⁷ grammarians may have felt the need for a new definition, and the word syntax could easily have been deduced from Asclepiades' terminology—he used the verb συντάττειν (“to put together, assign”, Sext. Emp. *Math.* 1.173).⁶⁸ Additionally, while division seems to imply only syllabification, syntax could concern all the combinatorial possibilities of letters in the building of syllables.⁶⁹ Possible evidence may come from Terentius Scaurus, a Roman grammarian of the generation before Herodian.⁷⁰ In his *Orthography* (*De orthographia*), when dealing with syllabification problems he uses two different words, “conjunction” (*annexio*, 2.5 Biddau = *GL* 7.12.1) and “connection” (*conexio*, 9.1 Biddau = *GL* 7.28.13).⁷¹ This fluctuation may testify to the lack of a firm Latin grammatical tradition on this subject,⁷² and thus may imply that Scaurus was the first Latin grammarian to borrow such terminology from a Greek source, which has not yet been identified with any certainty.⁷³

It is also worth considering that since Trypho dealt with *Hellenismos* and its criteria (namely, analogy, etymology, dialect⁷⁴ and history), he may have been the first grammarian to apply them to orthography. Once again Terentius Scaurus may offer evidence by stressing that “the correction is made on the basis of three criteria: history, derivation, which the Greeks call etymology, and correspondence, which is called analogy in Greek” (3.1 Biddau = *GL* 7.12.5–7: *recorrigitur uero regulis tribus: historia; originatione, quam Graeci ἐτυμολογίαν appellant; proportione, quae Graece ἀναλογία dicitur*), where dialect

66 See below pp. 960ff.

67 In Sext. Emp. *Math.* 1.159–161 division is also used both in a metrical context and for distinction of the parts of speech.

68 See above, section 1. This meaning of the word ‘syntax’ can, additionally, be found *e.g.* in Luc. *Jud. Voc.* 3.

69 See Wendel [1942a] 1442 (on Herodian). See also Dion. T. 6.13–16 (see Lambert [2011] 352).

70 He worked at the court of emperor Adrianus and died about 138 AD (Biddau [2008] XXVIII f.).

71 See Siebenborn [1976] 45, 144, who noticed only the word *conexio*.

72 See Biddau [2008] LIV, 65.

73 See Biddau [2008] LII, 73.

74 On Trypho's dialectological interests and writings, see Wackernagel [1876] 57ff.; Di Benedetto [2007] 417; Ippolito [2008] 4, 7 with bibl. Siebenborn [1976] 149ff., 162 assumes that Trypho was the first to add dialect to the orthographic canons, placing it in the context of usage (συνήθεια).

is predictably missing.⁷⁵ Once again, Scaurus seems to have drawn the doctrine of orthographical canons—*κανόνες* correspond to *regulae*—not from Varro, but from an unidentified Greek source.⁷⁶ The translations of *ἐτυμολογία* (“etymology”) with *originatio* and of *ἀναλογία* (“analogy”) with *proportio* seem to have been well documented, and likewise their use,⁷⁷ but the criterion of *historia* within the grammatical field seems to be otherwise unattested in Latin authors.⁷⁸ Thus if Scaurus’ source was Trypho, we would have a primary witness as to his lost work. Moreover, Scaurus’ order of the orthographical canons, *i.e.* history, etymology and analogy, may be the same as that of Apollonius Dyscolus⁷⁹ and thus may echo that of Trypho. Overall, the first canon of correction remains history, or paradosis, which therefore retains a central role as in the case of the Alexandrian scholars.⁸⁰

In short, the general conclusions of Schenkeveld ([1994] 281) on the development of Greek grammar in the Hellenistic age also apply to the first steps of Greek orthographical doctrine:

after the efforts of Aristophanes and Aristarchus systematization of the material sets in. Dionysius Thrax takes a first step in defining and describing the art of scholarship but genuine systematization of the technical part of *grammatikê* does not come before the next generation. Asclepiades of Myrlea must have been important in this respect, whereas further ordering was undertaken by Trypho. The system of ancient grammar with its part of sounds, word classes, orthography and *hellênismos* is now complete and ready for further refinement.

In the development of Greek orthography before Herodian,⁸¹ his father Apollonius Dyscolus played a leading role.⁸² His *Περὶ ὀρθογραφίας* (*On*

81 On the orthographic works of Didymus, Alexion, Soteridas, and Dracon of Stratonikeia, see Schneider [1999] 852ff. with bibl.

82 See Wendel [1942a] 1437f., 1440; Schneider [1999] 863–867; Dickey [2007] 73–75; 74; and Matthaios in this volume.

orthography)⁸³ seems to have exerted substantial influence,⁸⁴ but only a few fragments survive,⁸⁵ many of them elsewhere in Apollonius' works. In his *Syntax* (7.6–14), he introduces a parallelism between the topic of this treatise and the orthographical methodology according to the doctrine of *Hellenismos*:⁸⁶

παρεπόμενον ἔστιν ἔσθ' ὅτε ταῖς λέξεσιν καὶ παρὰ τὰς γραφὰς ἀμαρτάνεσθαι, ἃς ἢ προφανῶς ἔστι καταλαβέσθαι διὰ τῆς ἀκοῆς, ἢ ἀδήλου τοῦ τοιούτου ὄντος ἢ κατὰ τὸν ἐπιλογισμὸν ἐξέτασις κατορθοί, ἣν καλοῦμεν λόγον τὸν περὶ ὀρθογραφίας (...). εἴπερ οὖν ἔστιν μαθεῖν τάκριβες τῆς γραφῆς, μαθεῖν ἄρα ἔστι καὶ τάκριβες τῆς συντάξεως τοῦ λόγου.

It is an accident of words sometimes to be spelt incorrectly, errors which are either obvious and which one picks up aurally or which, if they are non-evident, are corrected by examination in accordance with reason, which we call the argumentation of orthography (transl. Blank [1998] 195). [...] Now since it is possible to learn the accurate details of spelling, it must also be possible to learn the accurate details of the construction of the sentence (transl. Blank [1982] 9 and 18).

According to Apollonius, orthography, or “the accurate details of spelling” (τάκριβες τῆς γραφῆς), deals only with “distinctions which were not clear in speech” (Blank [1982] 9),⁸⁷ that is, words whose correct spelling is unclear according to hearing (ἀκοή) and so must be corrected (κατορθοί)⁸⁸ with the “examination in accordance with reason” (ἢ κατὰ τὸν ἐπιλογισμὸν ἐξέτασις), namely, according to analogy.⁸⁹ Elsewhere Apollonius (*Synt.* 51.1–52.5) accounts

83 The title is indicated by Apollonius himself (*Synt.* 388.8, see below n. 90). See Schneider-Uhlig [1910] 7 (*Suda* ε 3422 Adler is quoted, where such work is missing); Wendel [1942a] 1437f., 1440.

84 Especially if he is the Apollonius who begins the list of orthographers in the canon of the *Par. Coisl.* 387 (see Kroehnert [1897] 7; Wendel [1942a] 1440; Alpers [1981] 144; Schneider [1999] 872).

85 See Reitzenstein [1897] 302; Schneider-Uhlig [1910] 7; Blank [1982] 8, 69 n. 83; Schneider [1999] 867.

86 See Blank [1982] 8–10; Lallot [1997] 2.14.

87 See also Schneider [1999] 864.

88 For the idea of correction in the orthographic field, see for instance Apol. *Dysc. Conj.* 213.11–14 and Wackernagel [1876] 48; Dalimier [2001] 223f.

89 See Lallot [1997] 2.14; Schneider [1999] 865. On ἐπιλογισμός (“reason”) used in an analogical context, see also Sophronius' excerpts from Charax' commentary to Theodosius (*GG* 4.2 431.19–21 Hilgard).

for the use of analogy to solve syntactic problems by introducing once again the parallelism with orthography within the doctrine of Hellenism:

καθάπερ οὖν πάμπολλός ἐστιν ἡ εὐχρηστία τῆς κατὰ τὸν Ἑλληνισμόν παραδόσεως, κατορθοῦσα μὲν τὴν τῶν ποιημάτων ἀνάγνωσιν τὴν τε ἀνά χεῖρα ὁμιλίαν, καὶ ἔτι ἐπικρίνουσα τὴν παρὰ τοῖς ἀρχαίοις θέσιν τῶν ὀνομάτων, τὸν αὐτὸν δὴ τρόπον καὶ ἡ προκειμένη ζήτησις τῆς καταλληλότητος τὰ ὁπωσδήποτε διαπεσόντα ἐν λόγῳ κατορθώσει. ἤδη μέντοι καὶ τινὰ τῶν κατὰ παράδοσιν οὐ διεσταλμένην ἔχει τὴν προφορὰν, τῶν μὲν δισταζόντων εἰ τὸ εἶρηκας Ἑλληνικὸν ἢ ἔρηκας διὰ τοῦ ε, ἢ ὡς τινες ἀποφαίνονται, Ἑρμεῖ διὰ διφθόγγου, τοῦ λόγου αἰτουήντος τὴν διὰ τοῦ η γραφήν. καὶ φαίνεται ὅτι ἡ τοῦ λόγου συνέχεια τὸ ἐν κακίᾳ εἰρημένον παρατρέψει.

Now just as the collected research on Hellenism is extremely useful, serving to correct readings in poetry and everyday language as well and even judging the imposition of words by the ancients, in the same way the present investigation of syntactical regularity will correct whatever sorts of mistake occur in discourse. Now there are obviously some questions which are not clearly answered by tradition, so that people disagree as to whether εἶρηκας is the correct Greek form or εἶρηκας with an ε, or whether, as some claim, Ἑρμεῖ is to be spelled with εἰ, though reason demands a spelling with η. And it turns out that the flawlessness of reason will correct the fault of speech (transl. Blank 1982, 15 with slight modifications).

Here the grammarian, focusing on a peculiar orthographical question—the adscription of iota in datives (Ἑρμεῖ/-ῆ), a problem he addressed earlier in his *Orthography*⁹⁰—focuses on the value of two criteria shared by *Hellenismos* and orthography: tradition (παράδοσις) and analogy (ἀναλογία). The latter plays the most important role in the solution of grammatical problems,⁹¹ as he stresses in another passage of his *Syntax* (250.5–8),⁹² where he states that analogy rules investigation in the field of tradition-history (ἡ συμπεφωνημένη

90 *Synt.* 388.4–8 ὡς τὰ δεύτερα καὶ τρίτα ὀφείλοντα ἰσοχροεῖν ἢ τὸ αὐτὸ ὠ παραδέξεται ἢ τὸ ἰσόχρονον ἡ συγγραφομένου τοῦ ι, καθὸ ἢ ἐν πρώτῳ γενομένη κατάληξις τοῦ ω τὴν ἐν δευτέρῳ καὶ τρίτῳ προσώποις ἐκφορὰν ἔχει μετὰ φωνήεντος συνόντος τοῦ ι, τοῦ τοιοῦτου ἐντελέστερον ἀποδεικνυμένου ἐν τῷ περὶ ὀρθογραφίας. See Schneider-Uhlig [1910] 6f. (with the quotation of Choerob. in *Theod.* 219.18–24); Lallot [1997] 2.238. See also Schneider [1999] 866, who quotes the so-called ‘Anonymous Cramerī’, *AO* 2.311.5–12 Cramer.

91 See Siebenborn [1976] 54f.; Blank [1982] 24.

92 πῶς δ’ οὐ δοθήσεται τὸ ἔλαττον ὑπὸ τοῦ πλείονος διελέγχεσθαι, οὐ μόνον ἐν παραθέσει τῶν λέξεων, ἀλλὰ καὶ ὅτε ἡ συμπεφωνημένη παρὰ πᾶσιν ἱστορία τὴν παρηλλαγμένην πρὸς τινος οὐ προσίεται, καὶ σχεδὸν ἐπὶ ἀπάντων τὸ τοιοῦτον συμφωνεῖν; (see Lallot [1997] 2.149).

παρὰ πᾶσιν ἱστορία, “the history agreed by all”), in order to discover the incorrect and singular usages to be rejected.

As for Trypho, nothing can be said about the internal organization of his *Orthography* with regard to quantity, quality and syntax. However, besides the two aforementioned quantity problems, Apollonius also seems to have known orthographical syntax, as can be inferred from the *incipit* of his *Syntax* (2.2–10).⁹³ Here, he analyses the different meanings and uses of the word ‘syntax’ in grammar: firstly it concerns the combination (ἐπιπλοκή)⁹⁴ of letters (στοιχεῖα) in building up syllables, then the combination of syllables in building up words (σύνταξις), and lastly the combination of words in the phrase, which is the topic of the treatise.⁹⁵ Once again Apollonius introduces a comparison: the correct construction is basic for grammatical correctness at every stage (syllable, word or phrase). Elsewhere, Apollonius (*Synt.* 449.1–450.1) also uses the word ‘syntax’ (and the related verb συντάσσω) with regard to syllabification, as a parallel for the syntax of the parts of speech, dealing with problems of the letter sigma, and in particular with the spelling of Τίρυσ/Τίρυνς (“Tiryrs”). In searching for a solution to this problem, the grammarian uses the criterion of dialect, taking into account the Argive usage (παρ’ Ἀργείοις πάνπολλός ἐστιν ἡ τοιαύτη σύνταξις).⁹⁶ The passage testifies to the use of this criterion in orthography, while the last criterion, etymology, although not mentioned in an orthographic context, is indeed also considered in his work.⁹⁷

93 ἦδη γὰρ καὶ ἡ πρώτη ῥηθεῖσα ἀμερῆς ὕλη τῶν στοιχείων τοῦτο πολὺ πρότερον κατεπηγγεῖλατο, οὐχ ὡς ἔτυχεν ἐπιπλοκάς ποιησαμένη τῶν στοιχείων, ἀλλ’ ἐν τῇ κατὰ τὸ δέον συντάξει, ἐξ ἧς σχεδὸν καὶ τὴν ὀνομασίαν εἴληχεν. ἢ τε ἐπαναβεβηκυῖα συλλαβῆ ταυτὸν ἀνεδέξατο, εἶγε αἱ ἐκ τούτων συντάξεις ἀναπληρούμεναι κατὰ τὸ δέον ἀποτελοῦσι τὴν λέξιν. καὶ σαφές ὅτι ἀκόλουθόν ἐστι τὸ καὶ τὰς λέξεις, μέρος οὖσας τοῦ κατὰ σύνταξιν αὐτοτελοῦς λόγου, τὸ κατὰλληλον τῆς συντάξεως ἀναδέξασθαι (“for already even the so-called first, undivided matter of the elements of the alphabet [*i.e.* φωνή] demonstrated this long before, insofar as it did not make combinations of elements in just any manner, but only in the construction which was according to the necessity, whence they virtually took their name [*i.e.* στοιχεῖα]; and the syllable, going beyond the element, has accepted this same thing, since the constructions resulting from syllables and filled-out according to the necessity’s law complete the word. And it clearly follows from this that the words too, since they are part of the sentence which is syntactically complete, accept the regularity of syntax”, trans. Blank [1982] 30).

94 See Lallot [1997] 292.

95 See also Dalimier [2001] 34f.

96 See Apol. Dyc. *Synt.* 9.2 (see Dalimier [2001] 34f.); see also *e.g.* [Timotheus of Gaza] *AP* 4.241.10 Cramer (Hdn. *GG* 3.2 393.28 and 395.25).

97 On dialect, see Apol. Dyc. *Conj.* 213.11–14 (see above, n. 88), *Pron.* 94.14–17 (together with paradosis; see Siebenborn [1976] 150), on etymology see *Adv.* 153.8 (quotation of Trypho fr. 67 von Velsen).

In conclusion, Apollonius seems to be aware of orthography as an autonomous, well-defined part of grammar, very likely according to the systematization made by his predecessor Trypho. This enabled him to invoke analogy as a means of creating and strengthening his arguments and, accordingly, to apply it in the grammatical discipline of the syntax of the phrase.

4 Herodian and the Systematization of the Greek Orthography

The peak of Greek orthographical studies was reached with Herodian:⁹⁸ although his *Orthography* is now lost and preserved only in fragments,⁹⁹ its structure and contents, and especially its methodological introduction, can be reconstructed with a certain precision, since it has consistently been the common source of all the Byzantine orthographers. One of them is John Charax (2nd half of the 6th cent.),¹⁰⁰ who wrote a complete and tripartite *Περὶ ὀρθογραφίας* (*On orthography*), still unedited, which is closely dependent on Herodian's *Orthography*.¹⁰¹ His preface reads:¹⁰²

98 See Dyck [1993a] with bibl.; Alpers [2004] *iff.* with bibl.; Dickey [2007] 75–77 with bibl.; Matthaios in this volume.

99 On the title of this work, see Egenolff [1888] 7f.; Schneider [1999] 770, 776f.; the standard but not unchallenged edition is that of Lentz [1967–1970], see Dyck [1993a] 788f., Alpers [2004] *if.* with bibl.

100 On Charax, see Alpers [2004] 19ff. with bibl.

101 See Egenolff [1888] 4ff.; Alpers [2004] 7f.

102 I print the text of Alpers [2004] 6f. with few changes in punctuation: moreover, I adopt Graux' *κατορθούμεν γραφήν* instead of *κατορθώμεν γράφειν* of the manuscripts, and *χίλιοι* proposed by Egenolff ([1888] 20 n. 14) instead of *χιλίος*. See Valente [2010a] 647ff. Another complete preface to orthography (very close to that of Charax) is preserved in the *Grammar* falsely ascribed to the grammarian Theodosius (see Uhlig [1883] xxxvii; Egenolff [1888] 10–13; Alpers [2004] 23ff. with bibl.): this work, a hotchpotch of grammatical materials from many different and heterogeneous sources (some of them still unidentified), was badly edited for the first time by Goettling [1822] (see Alpers [2004] 23–26) on the basis of *Parr. gr.* 2553 and 2555; the orthographic chapters are contained on pp. 61–79. The preface on orthography of Ps.-Theodosius (pp. 61.22–62.26) was also edited by Bekker [1821] 1127f. n. * on the basis of *Vat. gr.* 1370 (see Egenolff [1888] 11; Alpers [2004] 8, 24). The relationship between the latter text and Charax is complex and still unclear: it is generally assumed that they do not derive one from another, but independently use Herodian as the direct source. In particular, Ps.-Theodosius pp. 61.22–62.26 shows a striking coincidence with a passage of Choeroboscus' *Epimerisms on the Psalms* (89.5–30, *unde Etym. Gud.* 499.26–40 Sturz; see Valente [2010a] 642f.), and thus could possibly come from Choeroboscus' lost preface to his *Orthography* (see Hilgard [1894] LXXXI; Alpers [2004] 32 n. 130; Valente [2010a]).

ὀρθογραφία διττῶς λέγεται· ὀρθογραφία γάρ ἐστι καὶ <ή> κατὰ τὴν λέξιν ἠκριβωμένη γραφή καὶ ὁ κανὼν ὁ ἀποδεικτικὸς, ᾧ ἀποδείκνυται ἡ ὀρθῶς γεγραμμένη λέξις. ἐὰν γὰρ τὸ ἔαρινός γράφω διὰ τοῦ ι, καὶ αὐτὴ ἡ λέξις ἡ ὀρθῶς γραφείσα ὀρθογραφία λέγεται. κὰν ἐρωτηθῆς τὴν αἰτίαν τῆς γραφῆς εἶπω· πάντα τὰ εἰς ἰνος καιροῦ παραστατικά διὰ τοῦ ι γράφεται· ἡμερινός, νυκτερινός, καὶ ὁ κανὼν αὐτὸς ὀρθογραφία λέγεται.

εἶδη τῆς ὀρθογραφίας τρία· σύνταξις, ποιότης, ποσότης. σύνταξις μὲν οὖν ἐστὶ ζήτησις στοιχείων περὶ κατάληξιν καὶ ἐπιφορὰν συλλαβῶν, ὡς ὅταν ζητῶμεν, ποῖα συλλαβὴ συντάξομεν τὰ στοιχεῖα, οἶον· ἐν τῷ ἀσθενῆς τὸ σ πότερον ληκτικόν ἐστὶ τῆς πρώτης συλλαβῆς ἢ τῆς δευτέρας ἀρκτικόν; ποιότης δὲ ζήτησις περὶ σύμφωνα καὶ τὴν τούτων μεταβολήν, ὡς ὅταν ζητῶμεν, ποῖόν ἐστὶ στοιχείων ἐν τῷ ἔμπορος, τὸ ν ἢ τὸ μ. ποσότης δὲ ἐστὶ ζήτησις περὶ πλειονα ἢ ἐλάσσονα φωνήεντα κατὰ τὴν λέξιν, τουτέστι περὶ διφθόγγου ἢ μονοφθόγγου, οἶον· τὸ μῖμος πῶς γραπτέον; διὰ τοῦ ι ἢ διὰ τῆς ει διφθόγγου; ταῦτα μὲν οὖν τὰ εἶδη τῆς ὀρθογραφίας.

κανόνες ὀρθογραφίας τέσσαρες· ἀναλογία, διάλεκτος, ἐτυμολογία καὶ ἱστορία. καὶ ἔστι ἀναλογία μὲν κανὼν ἀποδεικτικὸς, ἱστορία δὲ ἡ τῶν παλαιῶν παράδοσις, διάλεκτος δὲ ἰδίωμα γλώσσης, ἐτυμολογία δὲ σύντομος καὶ ἀληθῆς ἀπόδειξις τοῦ ζητουμένου παρὰ τὸ ἔτυμον, ὃ ἐστὶ ἀληθές. καὶ πάλιν ἀναλογία μὲν οὖν κατορθοῦμεν γραφήν, ὅταν κανόνα ἀποδῶμεν, ὡς ἐπὶ τοῦ ἡμερινός ἐφάνη, διαλέκτω δέ, ὅταν τὸ μείλιχος διὰ ει γράφω εἶπω· ἐπειδὴ οἱ Αἰολεῖς μέλλιχος λέγουσι τὸ προσὸν ε ἐν τῇ λέξει ἐκφωνήσαντες, ἐτυμολογία δέ, ὅταν εἰλωτες διὰ τῆς ει διφθόγγου γράφω εἶπω· παρὰ τὸ Ἔλος, ἢ τὸ εἰλικρινῆς παρὰ τὴν ἔλιν, τουτέστι τοῦ ἡλίου αὐγήν· ἱστορία δέ, ὅταν τὸ χίλιοι διὰ τοῦ ι γράφω εἶπω, ὅτι οὕτως αὐτὸ γράφεσθαι βούλεται ἢ παράδοσις. χρὴ μὲν γινώσκειν ὡς ἡ ἱστορία πολλάκις ἐναντιοῦται διαλέκτω· τῶν γὰρ Αἰολέων χέλλιοι¹⁰³ λεγόντων ἀπῆτει διὰ τῆς ει διφθόγγου γράφεσθαι, ἢ δὲ παράδοσις τῶν παλαιῶν τὸ ι ἔχει.

Orthography has two meanings: it is both the exact spelling according to the word and the demonstrative canon which demonstrates the word correctly spelt. For instance, if I spell ἔαρινός ('of spring') with iota, the word itself correctly spelt is called orthography. And if I am asked about the account of the spelling and I say "all the adjectives indicating seasons or moments of the day ending in -ινος are spelt with iota, as ἡμερινός ('diurnal') and νυκτερινός ('nocturnal')", then the canon itself is called orthography.

103 The correct spelling would be χέλιοι (see Hamm [1957] 20, section 27), but χέλλιοι is shared also by *Etym. Magn.* 816.52 and therefore must not be corrected: see below, pp. 969f.

The fields of orthography are three: syntax, quality, quantity. Syntax is the investigation concerning letters at the end and in the sequence of syllables, as when we inquire to which syllable we should assign the letters: for example, does the first sigma in the adjective ἀσθενής ('weak') end the first syllable or begin the second? Quality is the investigation into consonants and their change, as when we inquire which is the letter in the word ἔμπορος ('trader'), my or ny. Quantity is the investigation into the presence of more or fewer vowels in a word, in other words a diphthong or a monophthong: for example, how must the word μίμος ('mime') be spelt? Whether with iota or with the diphthong epsilon-iota?¹⁰⁴ These are the fields of orthography.

The canons of orthography are four: analogy, dialect, etymology, and history. Analogy is the demonstrative canon, history the tradition of the ancients, dialect is a special form of a language, etymology is the concise and true demonstration of the matter of inquiry according to its genuine sense, that is, its true origin. And we correct the spelling by analogy when we enunciate a canon, as has been made clear for the word ἡμερινός. For instance, we use analogy by invoking dialect, as when I spell the word μείλιχος ('gentle') with the diphthong epsilon-iota and I say: "because the Aeolians say μέλλιχος pronouncing the epsilon present in the word", or we make use of etymology, as when I spell εἴλωτες ('helots') with the diphthong epsilon-iota and I say: "it comes from Ἑλος ('Helos')", or εἴλικρινής ('pure') from ἔλη ('warmth of the sun'), that is, the brightness of the sun. On occasion we may also appeal to history, as when I spell χίλιοι ('a thousand') with iota and say that the paradosis has it spelt in this way. It should be borne in mind that history often contradicts dialect: for instance, given that the Aeolians say χέλλιοι, the dialect would require the spelling with the diphthong epsilon-iota, but the paradosis of the ancients has iota.

In the first section Charax gives a definition of orthography which recalls that of Trypho, although he shows slight but significant differences:¹⁰⁵ in Trypho's definition the formula "word correctly spelt" (ἡ ὀρθῶς γεγραμμένη λέξις)¹⁰⁶ appears twice, namely in both parts. On the other hand Charax (or better still his source Herodian) defines orthography first as "the exact spelling according to the word" (ἡ κατὰ τὴν λέξιν ἠκριβωμένη γραφή), introducing Trypho's formula

104 In the translation of these passages I take into account that of Blank [1998] 197.

105 See Reitzenstein [1897] 303; Wendel [1942a] 1437.

106 The same definition occurs in Ps.-Theodosius (p. 61.23f. Goettling [1822], and Bekker [1821] 127 n. *): Valente [2010a] 644f.

only in the second part (ἡ λέξις ἢ γραφεῖσα ὀρθῶς). Furthermore, Charax' second definition is quite different from Trypho's ("the account itself containing the demonstration of the orthography", αὐτὸς ὁ λόγος ὁ τὴν ἀποδειξιν περιέχων τῆς ὀρθογραφίας), since it is defined as "the demonstrative canon which demonstrates the word correctly spelt" (ὁ κανὼν ὁ ἀποδεικτικός, ᾧ ἀποδείκνυται ἡ ὀρθῶς γεγραμμένη λέξις).¹⁰⁷

Moreover, Charax' statement "the correct spelling according to the word" (ἡ κατὰ τὴν λέξιν ἠκριβωμένη γραφή) seems to echo Apollonius Dyscolus (*Synt.* 7.13f.),¹⁰⁸ where the word 'orthography' is paraphrased as "the accurate details of spelling" (τάκριβες τῆς γραφῆς). It can also be compared with two passages: first, with a passage of John Philoponus' introduction of *Τονικὰ παραγγέλματα* (4.7–12 = Hdn. *GG* 3.1 7.17–20),¹⁰⁹ where he reworks Herodian's *Καθολικὴ Προσῳδία* and states that it is necessary to know not only the correct prosody of every word, but also "the exactness according to the orthography" (τὴν τε κατὰ τὴν ὀρθογραφίαν ἀκριβείαν); second, with Hesychius' *Epistula to Eulogius*, where the lexicographer stresses that while compiling his lexicon he followed the accurate orthographical rules given by Herodian (34f. Latte μετὰ πάσης ὀρθότητος καὶ ἀκριβεστάτης γραφῆς κατὰ τὸν γραμματικὸν Ἡρωδιανόν, "with all the correct and most exact spelling according to the grammarian Herodian").¹¹⁰ Thus it can be inferred that Charax follows closely the definition of orthography given by Herodian, who explained the autoschediastic definition of Trypho, focusing on the idea of "exactness" (ἀκριβεία) already pointed out by his father Apollonius. Further, a similar process can be seen in

107 Here, Ps.-Theodosius' definition (p. 61.24f. Goettling [1822], and Bekker [1821] 1127 n. *) is close to that of Charax: ὁ κανὼν ὁ {ἀποδοτικός καὶ} (Bekker : *om.* Goettling, *seclusi*) ἀποδεικτικός τῆς ὀρθῶς γεγραμμένης λέξεως, "the demonstrative canon of the word correctly spelt" (Valente [2010a] 644f.). A quite different definition of orthography is testified to by the ms. *Vindob. phil. gr.* 240 (see Egenolff [1888] 13; Wendel [1942a] 1449): αὕτη ἡ ὀρθογραφία ἐστὶ στοιχείων διὰ τῆς γραφῆς φανέρωσις τῶν διὰ τῆς φωνῆς δηλουμένων. διαιρεῖται δὲ εἰς τρία· εἰς σύνταξιν, εἰς ποιότητα καὶ εἰς ποσότητα, ἔχει δὲ κανόνας τέσσαρας· ἀναλογίαν, ἱστορίαν, διάλεκτον καὶ ἐτυμολογίαν ("this orthography is the written manifestation of letters revealed through the voice. It is divided into three parts: syntax, quality and quantity; it has four canons: analogy, history, dialect and etymology"). On the influence of Greek definitions of orthography on Latin grammarians, see Wendel [1942a] 1437.

108 See above, section 3.

109 ... ἀναγκαῖόν τε πρὸς τούτοις εἰδέναι ἐκάστην λέξιν ἐπὶ ποίας συλλαβῆς τὸν τόνον ἔχει· ὅπερ ἐν ἔξ μυριάσιον Ἡρωδιανῶ πεπραγμάτευται· τὴν τε κατὰ τὴν ὀρθογραφίαν ἀκριβείαν κτλ. On the relationship between this work and Herodian, see Dyck [1993a] 777 and nn. 23f. with bibl.; Dickey [2007] 81f. with bibl.

110 See Lentz [1867] XCIX, 7 app. l. 19f.; Schneider [1999] 781.

the substitution of Trypho's λόγος ("account") with κανών ("canon"): the more general rational account of the correct spelling, still present in Apollonius Dyscolus (*Synt.* 7.6–14),¹¹¹ is replaced by a stronger grammatical (and strictly analogical) demonstrative canon (κανών ἀποδεικτικός). In particular, the adjective ἀποδεικτικός ("demonstrative") may be seen as an allusion to the 'apodeictic' method of Galen, which would later be adopted by Apollonius¹¹² and was mostly based on analogy, while the substantive κανών ("canon") refers to the building of grammatical paradigms through the systematic use of the four orthographic canons (analogy, dialect, etymology, and history). Consequently, the spelling of a single word (like ἐαρινός, "of spring") is assured by its inclusion in a wider grammatical canon (like "all the adjectives indicating seasons or moments of the day ending in -ivos are spelt with iota etc.").¹¹³

In the second section, Charax defines the three orthographical as "investigations", ζητήσεις (see also the formula "when we inquire", ὅταν ζητῶμεν), a word which immediately recalls the title of Trypho's work: *Περὶ ὀρθογραφίας καὶ τῶν αὐτῆς ζητουμένων* (*On orthography and its matters of inquiry*). Their names (with the aforementioned exception of syntax) and the examples show striking coincidences with Asclepiades,¹¹⁴ thus demonstrating once again the strict conservatism of Greek orthographical theorization.

Syntax concerns the division of groups of two or more consonants into contiguous syllables. As in Asclepiades, the example deals with the division of a group of two consonants (σθ) into two syllables per each word (ἀσθενής): the question is to determine where the first syllable ends (ἄ- or ἄσ-) and the second begins (-θε- or -σθε-).¹¹⁵ Similar problems are often discussed by Herodian¹¹⁶ and by later orthographers using his *Orthography*.¹¹⁷

111 See above, n. 3.

112 See Blank [1982] 14; Dalimier [2001] 28.

113 See Fehling [1956] 237; Siebenborn [1976] 67.

114 Herodian (and not Trypho, according to Scaurus) probably reversed the order given by Asclepiades (Wendel [1942a] 1442).

115 See Ps.-Theodosius p. 62.2–7 Goettling [1822], and Bekker [1821] 1127 n. *: Valente [2010a] 644f.

116 See for example Hdn. *Orth.* fr. 1 GG 3.2 407.5–10 in Prisc. *GL* 2.3.5ff. *si antecedens syllaba terminet in consonantem, necesse est etiam sequentem a consonanti incipere, ut 'artus'; 'ille'; 'arduus'; nisi sit compositum, ut 'abeo'; 'adeo'; 'pereo'. Herodianus tamen de orthographia ostendit rationabilius esse sonoriusque quantum ad ipsam vocis prolationem in compositis quoque simplicium regulam in ordinandis syllabarum literis servare, see Charax in Egenolff [1888] 9 *πᾶσα συλλαβὴ ἐν μιᾷ λέξει εἰς σύμφωνον λήγουσα ἔχει τὴν ἐξῆς ἀπὸ συμφώνου ἀρχομένην, οἷον ἄρτος ἄνθος ἀρχῶν ὄρχος ὄρμος ὄρκος*.*

117 See e.g. Egenolff [1888] 6ff.; Wendel [1942a] 1441; Alpers [2004] 21f.

Quality deals with consonants and their change (μεταβολή) in their mutual combinations.¹¹⁸ The example concerns the spelling of ἔμπορος (“trader”) with my or ny.¹¹⁹ Another famous and similar problem of quality is the spelling of ἄμ βωμοῖσι (“upon altars”) in *Il.* 8.441:¹²⁰ Chrysippus’ spelling (*SVF* 3 fr. 771) as a single word (ὕφ’ ἔν) was challenged by Aristarchus, who recognised two different parts of speech (δύο μέρη λόγου). He was followed by Herodian, who added that the first must be spelt with my (διὰ τοῦ μ γράφεται), even if they are separated (παράθεις), giving the reason for this spelling in his *Orthography* (fr. 4, *GG* 3.2 408.16–21).¹²¹

Quantity concerns vowels and, especially, the spelling of homophones:¹²² for instance, the question of whether the sound |i| in the word μῖμος corresponds to a monophthong, *i.e.* iota, or to the diphthong epsilon-iota.¹²³ However, as in Asclepiades, Trypho and Apollonius,¹²⁴ quantity also deals with the problem of iota adscript, as is attested also in the fragments of Herodian’s *Orthography* (*e.g.* the dubious spelling of δῶσι/δῶσι, “he grants”, in *Il.* 1.129).¹²⁵

In the section following these observations, Charax introduces the four orthographical canons which assure correct spelling.¹²⁶ A useful parallel is provided by an entry of the *Etymologicum Magnum* (816.52):¹²⁷

118 On spelling problems concerning consonants in Attic inscriptions, see Threatte [1980] 434–643.

119 See Siebenborn [1976] 39 with n. 6, who rightly quotes M. Victor. 4.53 (p. 79 Mariotti = *GL* 6.16.6) and 4.70 (p. 82 Mariotti = *GL* 6.19.12); Threatte [1980] 595–597.

120 See *sch. Il.* 8.441b¹ Erbse (~ *Etym. Gen.* α 614 Lasserre-Livadaras, *unde Etym. Magn.* α 1048 Lasserre-Livadaras = 81.15 Gaisford) ἄμβωμοῖσι· Χρύσιππος (fr. l.) ὕφ’ ἔν προφέρεται, ὁ μέντοι Ἀρίσταρχος δύο μέρη λόγου παραλαμβάνει καὶ προπερισπᾶ· λέγει γούν καὶ ἀλλαχού “χρύσειοι δ’ ἄρα κοῦροι εὐδμή των ἐπὶ βωμών” (*Od.* 7.100). χρῆ μέντοι γινώσκειν ὅτι διὰ τοῦ μ γράφεται, κἂν παράθεις ἦ, ὁμοίως τῶ “ἄμ φόνον, ἂν νέκυας” (*Il.* 10.298). τὸ δὲ αἴτιον ἐν τοῖς Περὶ ὀρθογραφίας εἴρηται (Hdn. l.l.). See also Threatte [1980] 616f., 620–623.

121 See Lentz [1867] CI; Hiller [1871] 614.

122 On spelling problems concerning vowels in Attic inscriptions, see Threatte [1980] 120–434.

123 See also M. Victor. 4.58 (p. 80 Mariotti = *GL* 6.17.13; see Siebenborn [1976] 40 n. 2).

124 See above, section 3.

125 See *sch. Il.* 1.129a¹ Erbse (Hdn. *Orth.* fr. 48, *GG* 3.2 419.1–9); see Erbse [1960] 91.

126 See also Choerob. *Epim. Ps.* 89.5–30 Gaisford: see above, n. 102.

127 Hilgard [1894] LXXXI points out that this entry may come from the lost preface to Choeroboscus’ *Orthography* (see Choerob. *Orth.* 275.19 ~ *Etym. Gud.* 566.26–36 Sturz [Hdn. *GG* 3.2 604.30]); see Alpers [2004] 8 n. 26, 32 n. 130; Valente [2010a] 641 n. 9; however, the similarities with Charax’s introduction [see above, n. 102] could suggest a different interpretation). Alpers ([2004] 8 n. 26) suggests that the similar definitions of the four canons in *sch. Lond.* Dion. T. 454.14 (dealing with the 12 canons of ἀνάγνωσις,

χίλιοι· ὅτι τεσσάρων ὄντων τῆς ὀρθογραφίας κανόνων, ἡ μὲν ἀναλογία τῷ Τεχνικῷ ἔστι κανόνων ἀπόδοσις· ἡ δὲ διάλεκτος, γλώσσης ἰδίωμα, ὡς ἐπὶ τοῦ μείλιχος· μέλλιχος γράφεσθαι γάρ φασιν οἱ Αἰολεῖς· ἱστορία δὲ ἔστιν ἡ τῶν παλαιῶν χρήσις, ἡ καὶ παράδοσις· (ἰστέον δὲ ὅτι πολλάκις <ἡ> ἱστορία ἐναντιοῦται διαλέκτῳ· τοῦ γὰρ χίλιοι ἀπαιτοῦντος τὴν εἰ δίφθογγον, χέλλιοι¹²⁸ γάρ φασιν οἱ Αἰολεῖς, ἡ ἱστορία ἐναντιομένη διὰ μόνου τοῦ ι γράφει, οὕτω γὰρ ἡ παράδοσις ἔχει·) ἐτυμολογία δὲ ἔστιν ἐπισημασία λέξεων ἑπιτοπλείστον τὸ πάθος† (i.e. ἐπὶ τὸ πλείστον τὸ πιθανόν)¹²⁹ ἔχουσα.

χίλιοι (“a thousand”): it is necessary to know that since the canons of orthography are four, according to the Grammarian analogy is the explanation of the canons, dialect is a special form of a language, as in the case of μείλιχος (“gentle”)—in fact, the Aeolians say that it is spelt μέλλιχος—; history is the usage of the ancients, which is also the textual tradition (it is necessary to know that history is often opposed to dialect: in fact, since dialect accounts for the spelling of χίλιοι with the diphthong epsilon-iota—the Aeolians say χέλλιοι—, history opposes and spells it only with iota—in fact, the textual tradition has it spelt in this way); etymology is that meaning of words which has the greatest degree of plausibility.

According to these texts, the four orthographical canons can be properly defined as follows:¹³⁰

i) analogy¹³¹—“the pivotal notion of the views of the *grammatici* on *hellénismos*” (Schenkeveld [1994] 282)—is the main orthographical canon. Fehling rightly stresses ([1956] 238) that “*Analogie sei die Zusammenstellung des Ähnlichen, die zur Aufstellung der Regeln (worunter hier und im Folgenden speziell die ‘κανόνες’ der antiken Flexionslehre verstanden sein sollten) führe [...]; sie—oder vielmehr der Grammatiker mit ihr—stellt die ähnlichen Wörter*

‘reading’, see Fehling [1956] 251) may likewise come from Choeroboscus (see also Siebenborn [1976] 159).

128 See above p. 956f.

129 The meaningless ἐπιτοπλείστον τὸ πάθος of *Etym. Magn.* should probably be understood as ἐπὶ τὸ πλείστον τὸ πιθανόν on the basis of *sch. Lond.* Dion. T. 454.14.

130 See Siebenborn [1976] 67, 159ff. See also the anonymous excerpt in Reitzenstein [1897] 384–386 (first edited by Aldus in the *Thesaurus cornu copiae et horti Adonidis*, Venetiis 1496), falsely ascribed to Choeroboscus (see Hilgard [1894] LXXXII; Reitzenstein [1897] 384 n. 1).

131 See Fehling [1956] 219ff.; Siebenborn [1976] 56ff.; Sluiter [2011]; Pagani in this volume.

zusammen und bildet daraus die Regeln.¹³² Analogy allows one to build paradigmatic canons: the enunciation of the canon (κανόνων ἀπόδοσις)¹³³ suffices to find the correct spelling of a word. Thus analogy can be the “demonstrative canon” itself (κανὼν ἀποδεικτικὸς),¹³⁴ corresponding to the second definition of orthography;

ii) dialect is a special form of a language (ιδίωμα γλώσσης).¹³⁵ Dionysius Thrax may well have used this criterion to solve the spelling problem of the adverb ἦχι,¹³⁶ but it was probably only with Trypho that it became one of the four orthographic canons.¹³⁷ For example, the spelling of μέλιχος is accounted for by the Aeolic form μέλιχος: this concise account can be explained on the basis of Herodian’s wider canon (*GG* 3.2 302.6–12), in which some Aeolic and Attic forms of corresponding words are compared to justify the correct spelling;¹³⁸

iii) etymology¹³⁹ is “the concise and true demonstration of the matter of inquiry according to its genuine sense, that is, its true origin, or the meaning that has the maximum degree of plausibility” (σύντομος καὶ ἀληθῆς τοῦ ζητήματος ἀπόδοσις, παρὰ τὸ ἔτυμον, ὃ σημαίνει τὸ ἀληθές ἢ ἐπισημασία ἐπὶ τῶν πλείστων τὸ πιθανὸν ἔχουσα).¹⁴⁰ In orthography, etymology is used to analyse a

132 See *Comm. Melamp. seu Diom. in Dion. T.* 15.11–17, *sch. Marc. Dion. T.* 309.9f. (see Siebenborn [1976] 67 n. 1).

133 See *sch. Lond. Dion. T.* 454.17f. κανόνων ἀπόδοσις ἐκ παραθέσεως τοῦ ὁμοίου γενομένη (“explanation of the canons which comes from the juxtaposition of what is similar”). For παράθεσις τοῦ ὁμοίου (“juxtaposition of what is similar”) indicating the criterion of analogy, see *Sext. Emp. Math.* 1.199, 1.236 (Siebenborn [1976] 63 with n. 3; Schenkeveld [1994] 282f.; Sluiter [2011] 294f.).

134 See *sch. Vat. Dion. T.* 169.26f. ~ *sch. Marc. Dion. T.* 303.22f.

135 The same definition is given by Gregory of Corinth (p. 9 Schaefer): see Morpurgo Davies [1987] 7f. As Siebenborn [1976] 91f. demonstrated, Usener [1913] 622 and Barwick [1922] 258 n. 3 are wrong in trying to identify dialect with usage (συνήθεια), a canon of *Hellenismos*.

136 See above, section 3.

137 See above, section 3. See also *sch. Lond. Dion. T.* 470.22–25 οὐ μόνον δὲ αἱ διάλεκτοι τῶ σημαينوμένῳ χρήσιμοι, ἀλλὰ καὶ πρὸς ὀρθογραφίαν· διὰ γὰρ τῶν ἰδίων κινήματων ἐμφαίνουσι τὸ ἀληθές τῆς γραφῆς, ὡς Αἰολεῖς τὸ εἶναι ἔμμεναι λέγοντες δεικνύουσι τὴν διὰ τοῦ ε γραφὴν τὸν αὐτὸν τρόπον καὶ ἐπὶ πασῶν (see Siebenborn [1976] 147).

138 *Etym. Magn.* 582.34–50 (*breuius* [Zonar.] 1342.3–7) ~ Choerob. *Orth.* 242.15–27 (*unde Etym. Gud.* 413.44–52 Sturz [Hdn. *Orth. GG* 3.2 557.4–12]; see also Heracl. Mil. fr. 19 Cohn; Eust. *Il.* 1340.18). See also Siebenborn [1976] 147.

139 See Usener [1913] 297; Barwick [1922] 208f.; Fehling [1956] 252; Schröter [1960] 25–37; Siebenborn [1976] 141ff.

140 On this twofold definition, see Siebenborn [1976] 160, who rightly cites Quint. *Inst.* 1.6.28ff. (see Ax [2011] 272ff. with further bibl.). On the other hand Charax has only the first (with the probably inferior variant readings ζητούμενον and ἀπόδειξις).

word in order to discover its true origin, not for a theoretical but for a practical goal: correct spelling. As Schröter stresses ([1960] 35), “*die Erkenntnis des Ursprungs verhilft zur Erkenntnis der richtigen sprachlichen Form, der Lesung und Schreibung. ἐπισημασία im zweiten Teil bedeutet etwa ‘Kennzeichnung’, gleichsam den Umriss oder Abdruck geben wie bei einem Siegel oder einer Münze. Es kann wohl Bedeutung und Formales enthalten. Wichtig ist die Einschränkung ihrer Gültigkeit am Schluß: sie muß überzeugend sein*”. This is the case, for instance, of εἴλωτες and εἰλικρινής,¹⁴¹ as well as of the challenged spelling of θίς and ρίς,¹⁴² which involved Aristarchus and Herodian in different perspectives (textual criticism for Aristarchus, grammatical-orthographical for Herodian),¹⁴³

iv) history¹⁴⁴ is “the usage of the ancients, which is also the textual tradition” (ἡ τῶν παλαιῶν χρῆσις,¹⁴⁵ ἡ καὶ παράδοσις). The distinction between usage (χρῆσις) and the textual tradition or paradosis (παράδοσις) is not an idle question,¹⁴⁶ as can be confirmed by an entry of the *Etymologicum Magnum* (791.49–792.10),¹⁴⁷ which offers a good example of an ancient orthographical inquiry and comes from Herodian (who discusses a spelling of Aristarchus)¹⁴⁸ through Choeroboscus:¹⁴⁹

141 For example, as regards εἴλωτες, see Steph. Byz. ε 69 B.-Z., Choerob. *Orth.* 208.25–27 (Hdn. *Orth. GG* 3.2 500.24–26) ~ Choerob. in *Theod.* 250.3–7 and *Etym. Gud.* 419.19f. de Stefani (cf. [Hdn.] *Epim.* 48.9); on εἰλικρινής, see e.g. Choerob. *Orth.* 204.5–10 (Hdn. *Orth. GG* 3.2 499.34–500.4).

142 See above, section 2.

143 On the use of etymology in the field of syntax, see the case of ληστής, “thief” (Quint. *Inst.* 1.7.17 with Ax [2011] 323f., Hdn. *Mon. Lex. GG* 3.2 946.4f., *Etym. Gen.* λ 95 Alpers [Hdn. *Orth. GG* 3.2 545.4f.], *Comm. Melamp. seu Diom. in Dion.* T. 40.4). For the use of etymology in a Roman context (in the field of syntax), see e.g. Scaur. 2.5 (p. 7.10ff. Biddau) and 9.1 (p. 51.12ff. Biddau), Quint. *Inst.* 1.7.9 (see Siebenborn [1976] 144; Ax [2011] 315).

144 See Siebenborn [1976] 85ff. Before becoming one of the criteria of *Hellenismos*, it was originally used for textual criticism by Alexandrian scholars (see van Groningen [1963] 1; Siebenborn [1976] 86).

145 See Hdn. *Mon. Lex. GG* 3.2 910.7f., 911.11 and 24, 919.6, 920.1, 935.6 and 8. See also *sch. Lond. Dion.* T. 470.4f. and 22f.

146 On this opposition originally belonging to textual criticism, see *Etym. Magn.* 815.16–21; Rutherford [1905] 374; Siebenborn [1976] 86ff.

147 See Schironi [2004] 205f.

148 See Schironi [2004] 205–211 with bibl.

149 See also *Epim. Hom.* φ 47 Dyck with testt., Choerob. in *Theod.* 27.2–5 διὰ τοῦτο σημειούμεθα τὸ φῆς ἔχον τὸ προσγεγραμμένον, ἀπὸ γὰρ τοῦ φημί γέγονε τροπή τῆς μι εἰς ς ὡφειλε οὖν χωρὶς τοῦ εἶναι, ἀλλ’ ἡ παράδοσις βούλεται ἔχειν αὐτὸ τὸ προσγεγραμμένον ~ 328.6–9 καὶ ἀπὸ τοῦ φημί δὲ τὸ δεύτερον πρόσωπον φῆς ὡφειλεν εἶναι χωρὶς τοῦ εἶ, τροπή τῆς μι εἰς ς, ἀλλ’ ἡ παράδοσις σὺν τῷ εἶ οἶδεν αὐτὸ γεγραμμένον, οἷον φῆς, ὡς ἐν τῇ Ὀρθογραφίᾳ, εἰ θεῶ φίλον, μαθησόμεθα and

φής (...) δεῖ γινώσκειν, ὅτι τὸ “ἢ φῆς τοῦτο κάκιστον” (*Od.* 1.391) ἐνεστῶς ἐστὶ δευτέρου προσώπου, καὶ σὺν τῷ ι γράφεται· καὶ ὅσον κατὰ ἀναλογίαν οὐκ ὤφειλεν ἔχειν τὸ ι (...)· εἰ οὖν τὸ φημί οὐκ ἔχει τὸ ι (...), δῆλον ὅτι οὐδὲ τὸ φῆς ὤφειλεν ἔχειν τὸ ι· ἀλλὰ κατὰ ἱστορίαν, ἦγουν κατὰ παράδοσιν, ἔχει τὸ ι προσγεγραμμένον. πότε γὰρ τῇ ἱστορίᾳ χρώμεθα; ἡνίκα τι κατὰ παράδοσιν γράφεται, ὡσπερ τὸ σκεῖρω† (*l.* Σκεῖρω<ν>).¹⁵⁰ ἰστέον δὲ ὅτι ἡ ἱστορία διττὴ ἐστίν· ἔστι γὰρ ἡ χρῆσις, ἣτις καὶ ὡς ὕλη ὑπόκειται τῇ ὀρθογραφίᾳ· λέγεται δὲ ἱστορία καὶ ἡ μαρτυρία τῶν ἀρχαίων καὶ ἐνδόξων ἀνδρῶν· ἣτις καὶ ὄργανόν ἐστὶ τῆς ὀρθογραφίας. διὰ τοῦτο καὶ ἔσχατον τέτακται ἡ ἱστορία, ἐπειδὴ οὐκ αἰεὶ κεχρήμεθα αὐτῇ, ἀλλ’ ὅτε οὐ δυνατόν ἐστὶ τὴν λέξιν διὰ τῶν ἄλλων κανόνων ὀρθῶσαι, ἀναλογίας, διαλέκτου, ἢ ἐτυμολογίας· τούτου χάριν τελευταία ἐτάγη κτλ.

φής (“you say”): [...] it is necessary to know that in the line “ἢ φῆς τοῦτο κάκιστον” (“or you say that is the worst”, *Od.* 1.391) φῆς (“you say”) is a second person of the present tense and it is spelt with iota; though according to the analogy it should not have iota [...]. So, if φημί (“I say”) has no iota [...], it is clear that not even φῆς (“you say”) should have iota, whereas it has the iota adscriptum according to the history, which is in accordance with the paradosis. When do we make use of history? When something is spelt according to the paradosis, like Σκεῖρων (“Skeiron”); in this context, it should be kept in mind that there are two kinds of history: the one is usage, which can be regarded as the constitutive matter of orthography; but history is also called the evidence of ancient and famous men, and thus it can be an instrument of orthography. History is placed last, because we do not always make use of it: we invoke it only when it is not possible to correct the word with the other canons (that is to say, analogy, dialect, or etymology). This explains why it is awarded the last place.

History is not only the evidence of the paradosis, which is the starting point of any orthographical inquiry, as the Leipzig palimpsest confirms (ll. 15–17 πειρώμεν[ο]ς [τοὺς κανόνας εὐρεῖν] | τῆς παραδεδομένης γραφῆς, “trying to find

332.28–31 τὸ φῆς οὐκ οἶδεν ὁ Ἀπολλώνιος (*Apol. Dysc. fr. GG* 2.3 117.3–5) σὺν τῷ ι γεγραμμένον, ἢ μέντοι παράδοσις καὶ ὁ Ἡρωδιανὸς σὺν τῷ ι οἶδεν αὐτὸ γεγραμμένον, ὡς ἐν τῇ Ὄρθογραφίᾳ (*GG* 3.2 419.11–13), εἰ θεῶ φίλον, μαθησόμεθα. See Schneider [1999] 253 with n. 141, 394.

150 Siebenborn [1976] 85 n. 3, 160 n. 2 writes Σκεῖρων on the basis of *sch. Vat. Dion. T.* 165.22 and *sch. Lond. Dion. T.* 448.24 (see *Etym. Gen.* AB s.v. Σκεῖρων, and below, n. 158), instead of σκεῖρω of the *Etymologicum Magnum*.

the canons of the transmitted writing”). History is also the (literary) usage,¹⁵¹ namely the literary tradition (μαρτυρία τῶν ἀρχαίων καὶ ἐνδόξων ἀνδρῶν, “evidence given by ancient and famous men”, or ἡ τῶν παλαιῶν χρῆσις, “the usage of the ancients”¹⁵²). Thus history is the constitutive matter of orthography (ὡς ὕλη ὑπόκειται τῇ ὀρθογραφίᾳ). At the same time, it is also an orthographic tool (ὄργανον . . . τῆς ὀρθογραφίας) to be used as *extrema ratio* in the correction (κατόρθωσις), if a spelling could not be corrected with the other three canons.¹⁵³ This specification provides greater insight not only into the explanations given for the spellings of φῆς, θίς and ρίς,¹⁵⁴ but for that of χίλιοι as well:¹⁵⁵ its spelling with iota could not be explained on the basis of dialect, because, since the Aeolic form is χέλλιοι,¹⁵⁶ the expected spelling should have been χεῖλιοι.¹⁵⁷ Therefore, it is now evident why history and dialect are often contrasted with each other (ἡ ἱστορία—οἷ ἡ δὲ παράδοσις τῶν παλαιῶν—πολλάκις ἐναντιοῦται διαλέκτῳ).

Moreover, the entry of the *Etymologicum Magnum* is useful to clarify the equivalence of history and paradosis, briefly hinted at with the spelling problem of Σκείρων. It was a Hellenistic *vexata quaestio* involving Callimachus and Aristophanes of Byzantium with regard to the challenged spelling Σκίρων/Σκείρων (*Etym. Gen. AB s.v. Σκείρων*):¹⁵⁸ while Callimachus in the *Hecale* (fr. 296 Pfeiffer = 59 Hollis) used the (correct) spelling with iota for the name

151 Siebenborn [1976] 90: “der literarische Sprachgebrauch”.

152 See Siebenborn [1976] 88; Ax [2011] 300f. (on Quint. *Inst.* 1.6.42).

153 Yet Varro (in Char. *GL* 1.50.25–51.20 = 62.13–63.20 Barwick ~ Diomed. *GL* 1.439.15–30) considered the *auctoritas* the last of the four canons of *Latinitas*, after *natura*, *ratio* and *consuetudo* (see Usener [1913] 296; Barwick [1922] 213f.; Fehling [1956] 235, 252f.; Siebenborn [1976] 93 n. 4).

154 See above, pp. 965f., 970.

155 See above, pp. 965f., 976. See Schwyzer [1959³] 193; Siebenborn [1976] 148; Threatte [1980] 194; Chantraine [1999²] 1260f. The account of this peculiar spelling is given by Choerob. *Orth.* 275.19 ~ *Etym. Gud.* 566.26–36 Sturz (Hdn. *GG* 3.2 604.30).

156 See above, p. 965 with n. 103.

157 It is attested in Ionic inscriptions (see Chantraine [1999²] 1260); see also *e.g.* Archil. fr. 101.2 W.² (where χεῖλιοι is Fick’ right correction for χίλιοι of the mss.).

158 I print the text of Theodoridis [2009] 396f.: Σκείρων· ἔστιν ὄνομα ληστοῦ πολλῆς φθορᾶς ὦν αἴτιος· καὶ γὰρ τοὺς παρερχομένους ἔρριπτεν ἐπάνω τῆς χελώνης· ἡ δὲ δεχομένη ἤσθιεν αὐτοῦς· γράφεται δὲ διὰ τῆς εἰ διφθόγγου ἀπὸ ἱστορίας· καὶ γὰρ Καλλιμάχου γεγραφότος αὐτὸ διὰ τὸ ἰ, Ἀριστοφάνης ὁ γραμματικὸς (fr. novum) προσέθηκεν τὸ ε Κείρων (Σκείρων ci. Plew). ὁμοίως δὲ καὶ τὸ †Κουσεῖρωνα†. καὶ ὁ Φιλίμων ὁ τὴν Ἀττικὴν γράψας (fr. novum) διὰ τῆς εἰ διφθόγγου γράφει· καὶ κατὰ ἀναλογίαν δὲ διὰ τῆς εἰ διφθόγγου γράφεται, ἐπειδὴ ἀπὸ τοῦ κείρω γέγονε Κείρων καὶ Σκείρων. This entry of the *Etymologicum Genuinum* is the source of *Etym. Sym. cod.* V in Gaisford 2020a–c and *Etym. Magn.* 716.47 (see Theodoridis [2009] 397 n. 12).

of the famous robber,¹⁵⁹ Aristophanes¹⁶⁰ recommended Σκείρων. Later, such problems entered the field of orthography: Aristophanes' authoritative choice was probably made on the basis of the paradosis. However, within an orthographical context (no longer philological), this criterion was identified with the historical explanation (ἀπὸ ἱστορίας, "on the basis of history").¹⁶¹ Such discussions can be dated back to the 1st centuries BC and AD.¹⁶² Later, the spelling recommended by Aristophanes was explained on the basis of analogy (κατὰ ἀναλογίαν), possibly by Herodian himself, as shown perhaps by Choeroboscus' *Orthography* (261.27–32 s.v. σκείρω),¹⁶³ the source of the entry in the *Etymologicum Genuinum*.¹⁶⁴

In conclusion, Herodian is responsible for the final systematization of ancient orthography, its fields of investigation and the four canons of correction. According to the later tripartite orthographical works, which are divided into syntax, quality and quantity (like those of Charax and of the so-called 'Anonymus Crameri'), Herodian's *Orthography* was very likely organised in a systematic way, "d.h. auf jeweils übergeordnete allgemeine Regeln (κανόνες) folgen entsprechende Beispiele und gelegentlich Ausnahmen von der jeweiligen Regel" (Alpers [2004] 16).¹⁶⁵ To conclude this survey of ancient orthography, it seems worthwhile to cite an entry of Orus' *Commentary to Herodian's Orthography*. Although we cannot identify what belongs to Herodian and what

159 On the correct spelling with iota, see Pfeiffer [1949] 273; Threatte [1980] 193; Nelis [1994] 93f., especially no. 106 (Berlin, Staatl. Mus. F 2288); Hollis [2009²] 210.

160 *Deest* in Nauck [1848a] and Slater [1986], see Callanan [1987] 24 n. 20; Theodoridis [2009] 397.

164 See Wendel [1939c] 2151; Pfeiffer [1949] 273; Schneider [1999] 253 with n. 140; Theodoridis [2009] 397 with n. 13.

165 See also Egenolff [1888] 6. Herodian's *Orthography* was not alphabetically arranged, like the works of Timotheus of Gaza, Orus and, later, Theognostus (see Alpers [2004] 8–19, 29–50 with bibl.).

to Orus' revision (except for the alphabetical arrangement) with any certainty, it provides a good example of an ancient orthographic investigation.¹⁶⁶

[φθει]σῆνωνρ· ει ἡ παράδοσις [καὶ οἱ παλαιοὶ γραμματικ]οί, ἴσως ἀπὸ τοῦ [φθείσω. τοῦτο δὲ Ἄ]λεξίων (fr. 22 Berndt) καὶ Φιλόξενος (fr. 619 Theodoridis) [διὰ τοῦ ι γράφουσιν] κατὰ τὴν ἀναλογίαν [τοῦ φθίω, ὡς Ὀμηρος (*Il.* 18.446)] “ἦ τοι ὃ τῆς ἀχέων [φρένας ἔφθιεν]· καὶ “ἀπ]ὸ δ’ ἔφθιθεν ἐσθλοὶ [ἑταῖροι]” (*Od.* 23.331). τὴν δὲ διὰ τ]οῦ [ι] γραφὴν Δίδυμος [ἐν τῷ β’ ὑπομνήματ]ι αὐτοῦ τῷ Τρύφω[νι ἐπόμενος ἐλέγχει λ]έγων· ἐπεὶ ἡ παράδοσις [ἔχει τὸ ει “φθεισῆ]νωνρ” (*Il.* 2.833) καὶ “φθείσω” (*Il.* 6.407?) [οὐκ ἀποβλητέον. ἀλλ]’ εἰ ἔστιν τὸ φθίω, [ἐκ τοῦ φθῶ ἐστιν, το]ῦ δὲ φθῶ τ<ὸ> φ<θεί>[ω παράγωγον, ἔχον τὴν δι]φθογγον. ἔστιν δὲ [ῶσάυτως διὰ διφθόγγ]ου τὸ χλίω καὶ χλεί[ω καὶ τίω κτλ.

φθεισῆνωνρ (“destroying man”): the paradosis and the ancient grammarians spell it with epsilon-iota, maybe from φθείσω (“I will destroy”). Alexion and Philoxenus spell it with iota in analogy with φθίω (“I perish”), as in Homer “verily in grief for her was he wasting his heart” [transl. Murray] and “and his noble comrades perished” [transl. Murray]. Didymus in the second book of his *Commentary*, following Trypho, opposes the spelling with iota and says: “since the paradosis has the diphthong epsilon-iota, φθεισῆνωνρ (“destroying man”) and φθείσω (“I will destroy”) must not be rejected. But if φθίω comes from φθῶ, φθειώ with diphthong is derived from φθῶ. It is the same for χλίω and χλείω and τίω with diphthong etc.”

The challenged spelling of φθεισῆνωνρ (“destroying man”) seems to be accepted according to history, based on the paradosis and the grammatical tradition, supported by Trypho and Didymus according to some Homeric passages. Yet the spelling with iota proposed on the basis of analogy by Alexion and Philoxenus, according to two different Homeric occurrences of the verb from which the adjective derives, is rejected. The spelling problem remained closely linked to the literary texts and was investigated with the philological tools of past scholars, with extensive use of citations of the Homeric text.¹⁶⁷

166 I print the text of Theodoridis [1976] 362 (see his apparatus for a complete survey of orthographical *loci paralleli*); see Reitzenstein [1897] 307, [1901] 84f.; Alpers [2004] 47.

167 In the 3rd century, the same scholarly activity applied to a contemporary text can be found in Porphyry's correction of autographs of Plotinus (*Plot.* 7 διορθοῦν αὐτοῦ τὰ συγγράμματα and 24 τὴν διόρθωσιν τῶν βιβλίων), who “wrote [...] paying no attention to the orthography” (*Plot.* 8 ἔγραφε [*scil.* Plotinus] δὲ . . . οὔτε τῆς ὀρθογραφίας φροντίζων κτλ.).

The structure and rules of ancient orthography finally codified by Herodian have been preserved by the Byzantine orthographers. However, they had to face new spelling problems due to the phonetic changes in Byzantine Greek, which compelled them to produce new orthographical rules. Unable to find these rules in their own sources, they created new canons in order to take new spelling problems into account.¹⁶⁸ Byzantine orthographical literature is very extensive and, for the most part, rarely studied and poorly edited: most of the orthographical treatises are anonymous or falsely ascribed in antiquity to one of the grammarians of the past; there are few critical editions, some careless transcriptions of individual manuscripts, and few studies of the textual traditions.¹⁶⁹ Nevertheless, only a complete study of this heterogeneous *corpus* will shed new light on the history of ancient grammar and, perhaps, literature.¹⁷⁰

1 Introduction

There are many ways in which the ancient disciplines of grammar and rhetoric interact, intertwine and overlap.¹ It is neither possible nor desirable to draw clear boundaries between the two disciplines, as Quintilian already implies when he describes the activities of the grammarians and rhetoricians

1 This contribution builds on work that I have published earlier, especially in de Jonge [2007], [2008], and [2011]. De Jonge [2014] deals with the relationship between grammar and rhetoric in a more condensed form. While summarizing some of the most important results of those publications, the present article presents also new material in a comparative discussion of three Greek rhetoricians and their views on grammar and style, viz. Demetrius, Dionysius, and Longinus.

in Rome.² Grammar and rhetoric were the pillars of the traditional system of Hellenistic and Roman education.³ The rhetorician would formally start his teaching where the grammarian had finished, but Quintilian records that grammatical teaching in many cases anticipated the lessons of the rhetorician (*Inst.* 2.1.4–13). On the other hand, the teacher of rhetoric devoted much attention to grammatical doctrine, thereby introducing his pupils to deeper levels of linguistic understanding. Since both grammar and rhetoric deal with language and linguistic communication, there are inevitably many topics where the two disciplines meet. The most important domain where grammar and rhetoric come together is the study of style (λέξις, φράσις, ἐρμηνεία, *elocutio*), understood as the expression of thoughts in words. The correct use of language (ἐλληγισμός, *Latinitas*)⁴ was regarded as the first of the so-called “virtues of style” (ἀρεταὶ λέξεως). It is therefore only natural that rhetoricians make extensive use of linguistic categories, employing, adapting and elaborating the theories that were developed not only by grammarians, but also by philosophers and theorists of music: all these disciplines contributed their share to the body of linguistic knowledge that we find in ancient rhetorical treatises.

A central activity in the rhetorical teaching of the Hellenistic and Imperial periods was the close reading of poets, orators and historians of archaic and classical Greece: the works of Homer, Lysias, Demosthenes, Thucydides, Plato and the tragedians were the models that Greek students continuously had to read, analyze and imitate. In the education of Roman students, Greek texts were combined with Vergil, Cicero and other Latin classics. How could a powerful sentence in a speech by Demosthenes, a narrative passage from Herodotus, or a few Homeric hexameters inspire new writing? And in what way could a student imitate such classical examples without presenting himself as a mere epigone of the ancient writers? It was the task of the teachers of rhetoric to demonstrate the quality of the classical texts, and to guide their students in the eclectic and creative imitation (μίμησις) of these models.⁵ Although the rhetoricians admired the stylistic models of the past, they needed to be pragmatic as well. In many cases, teachers had to warn their students that a text was actually not the best model to be imitated, for instance if the choice of words was archaic or the syntax too complex. Dionysius of Halicarnassus identifies such characteristics in passages from Plato and Thucydides, which he considers less

2 See esp. Quint. *Inst.* 2.1.4–13. On Quintilian’s ‘grammar’ (*Inst.* 1.4–8), see Ax [2011].

3 See Marrou [1965⁶], Bonner [1977], Morgan [1998].

4 See Pagani in this volume.

5 On the concept of μίμησις in ancient rhetoric, see Russell [1995²] 99–113. Dionysius of Halicarnassus, *On Imitation* survives in fragments and an epitome: see Aujac vol. 5 [1992].

appropriate to be adopted in an actual debate, where clear communication is the most important requirement.⁶

A rhetorician could decide that the style of a given classical text was to be imitated or emulated, to be corrected and improved, or altogether to be avoided. In all cases, the text under discussion had to be examined carefully: the sounds, diction, composition and syntax had to be analyzed and explained. The philological interpretation of given texts was therefore an important part of rhetorical teaching: ancient philological observations were not confined to commentaries, which have been partly preserved in scholia, but they were also part and parcel of ancient rhetorical teaching. The stylistic treatises of the Hellenistic and Imperial periods contain numerous analytical discussions of classical Greek prose and poetry, and similar material can be found in the Latin tradition.

This chapter offers an introductory survey of important ways in which grammatical theory is employed in Greek rhetorical treatises. The present discussion will be selective in two respects. Firstly, it will deal with those stylistic categories that are most obviously influenced by grammatical (and philosophical) theory: letters (and phonetic sounds), parts of speech, word order and grammatical figures of speech. Less attention will be devoted to the rhetorical theory of clauses and periods. The second limitation of scope concerns the corpus of rhetorical works. There were of course stylistic treatises of many sorts and kinds, produced in different periods between the fourth century BC and late antiquity, focusing on diverse topics, *e.g.* composition, figures, types of style, sublimity, etc., adopting various aims and methods, and written either for beginning or for more advanced students or scholars.⁷ In order to bring some focus to this diverse material, this chapter will concentrate on three representatives of Greek rhetoric who are especially noteworthy for their integration of grammatical theory and rhetorical teaching: Demetrius, the author of a handbook *On Style* (second or first cent. BC), Dionysius of Halicarnassus, who wrote several treatises and literary letters on the classical Greek orators and historians (end of first cent. BC), and the author of the treatise *On the Sublime* (date unknown), who is conventionally named Longinus or Pseudo-Longinus (see below).⁸ The works of these three authors belong to the tradition of Greek

6 For Dionysius' criticism, see esp. Dion. Hal. *Ep. Amm.* 2, with de Jonge [2011].

7 *Rhetores Graeci*: ed. Walz [1832–1836] and Spengel [1853–1856]. For the system of classical rhetoric, Lausberg [2008⁴] is indispensable. Kennedy [1994] and Pernot [2000] are useful surveys of the history of rhetoric in antiquity.

8 In this chapter Demetrius, Dionysius, and Longinus are cited according to the editions of Innes [1995], Aujac [1978–1992], and Russell [1964]. Translations are adapted from Innes [1995], Usher [1974–1985], and Fyfe-Russell [1995].

rhetorical theory, but they are also properly characterized as treatises of literary criticism, for they combine prescriptive instruction with the analysis and evaluation of passages from classical Greek literature. Their thorough interest in stylistic expression stimulates these critics to reflect on grammatical categories and to formulate their views on the sounds of human speech, the use of connectives, articles, and other parts of speech, word order and grammatical figures of speech. Before we examine their rhetorical applications of these linguistic categories, the three main characters of this contribution will be briefly introduced.

2 Three Rhetoricians: Demetrius, Dionysius, and Longinus

Demetrius is the conventional name of the author who wrote the treatise *On Style* (Περὶ ἐρμηνείας).⁹ Although various dates between the third century BC and the second century AD have been suggested, it seems most plausible that the work was written in the second or early first century BC.¹⁰ The doctrine of different styles or types of style was a very productive branch of ancient stylistic theory. A basic dichotomy was recognized as early as Aristophanes' *Frogs* (405 BC), which portrays Aeschylus and Euripides as representing the grand style and the plain style respectively. From the first century BC, rhetoricians generally employed a system of three styles (plain, middle, and grand or elevated).¹¹ Demetrius however presents a system of four styles, which most probably belongs to an earlier period in the tradition of stylistic theory. His four types of style (χαρακτήρες λέξεως) are the grand (μεγαλοπρεπής), the elegant (γλαφυρός), the plain (ισχνός) and the forceful (δεινός), each of which is treated under three headings: content, diction, and composition (πράγματα, λέξις, σύνθεσις). It is in the discussion of composition (σύνθεσις) that Demetrius includes grammatical observations on syntax, word order, and the use of the parts of speech. As we will see below, this rhetorician has a special interest in the category of connectives (σύνδεσμοί), which can be used with various effects in different styles. Since the date of Demetrius is unknown, it is difficult to

9 Edition and translation: Innes [1995]. Marini [2007] provides a useful commentary. It is plausible that the author of the treatise *On Style* was called Demetrius: the tenth-century manuscript P ascribes the work first mistakenly to "Demetrius of Phaleron" (superscription), and later just to "Demetrius" (subscriptio): see Schenkeveld [1964] 135–148, Rhys Roberts [1902] 49–64, Innes [1999] 312–321, and Marini [2007] 4–16.

10 See the overview in de Jonge [2009].

11 *Rhet. Her.* 4.11–16 and *Cic. Orat.* 20–21.

establish his place in the history of grammar and rhetoric. But he clearly stands in the Peripatetic tradition: he was influenced not only by Aristotle's *Rhetoric* and Theophrastus' *On Style*, but also by the linguistic ideas of Praxiphanes of Mytilene, who was a student of Theophrastus.¹²

Dionysius of Halicarnassus was active in Rome under Augustus (end of the first cent. BC).¹³ Apart from a history of early Rome, he wrote a number of critical essays and treatises on style. His works include *On the Ancient Orators* (with separate essays *On Lysias*, *On Isocrates*, *On Isaeus* and *On Demosthenes*), *On Thucydides* and several letters that he addressed to intellectual friends and colleagues. Many of these works contain grammatical observations as well as linguistic analyses of passages from Plato, Thucydides and Demosthenes. An important work for our purposes is *On Composition* (Περὶ συνθέσεως ὀνομάτων), the only extant treatise on the arrangement of words to survive from antiquity.¹⁴ The ancient theory of style generally distinguished between two separate procedures, viz. the selection of words (ἐκλογὴ ὀνομάτων) and the combination of words (σύνθεσις ὀνομάτων). *On Composition* deals with the latter topic, following the organization of a systematic handbook. Starting from a definition of composition (σύνθεσις), the treatise discusses the activities (ἔργα) of composition, its two aims (attractiveness and beauty), the four means of attaining these aims (melody, rhythm, variety and appropriateness) and the three composition types or "harmonies" (ἁρμονίαι). These are the austere composition (σύνθεσις αὐστηρά), smooth composition (σύνθεσις γλαφυρά) and well-blended composition (σύνθεσις εὐκρατος). The concluding discussion of the work (*Comp.* 25–26) deals with the relationship between prose and poetry. Since composition is defined as "a certain process of arranging the parts of speech" (*Comp.* 2.1), grammar forms the starting point for Dionysius' views on word arrangement, although he has also much to say on the musical aspects of σύνθεσις. Dionysius makes use of linguistic doctrines from several traditions.¹⁵ The influence of Stoic philosophy on his work is significant, and he himself refers to Chrysippus' work *On the Syntax of the Parts of Speech* (Περὶ τῆς συντάξεως τῶν τοῦ λόγου μερῶν, *Comp.* 4.20).¹⁶ He also mentions the work of Alexandrian scholars like Aristophanes of Byzantium (*Comp.* 26.14),

12 The influence of Theophrastus and Praxiphanes on the linguistic chapters in Demetrius' *On Style* will be discussed below (section 5.2).

13 Edition: Aujac [1978–1992]. Translation: Usher [1974–1985]. On grammar and rhetoric in Dionysius, see de Jonge [2008].

14 See Pohl [1968].

15 See de Jonge [2008] 34–41.

16 Chrysip. fr. 199 Dufour. Cf. Van Ophuijsen [2003] 81 and de Jonge [2008] 274–280.

Callimachus and the scholars of Pergamon (*Din.* 1.2). Dionysius' discussion of letters and euphony clearly shows the influence of Aristoxenus and musical theory (see below). Further, his knowledge of technical grammar suggests that he was familiar with the treatises of such scholars as Asclepiades of Myrlea (*On Grammar*), Tyrannio (*On the Classification of the Parts of Speech*) or Trypho (*On Articles, On Prepositions, On Conjunctions, On Adverbs*), who all came to Rome in the first century BC.¹⁷

On the Sublime (Περὶ ὑψους) is a unique treatise in the tradition of ancient rhetoric and criticism.¹⁸ We do not know the name of the author, nor do we know when he wrote his work. In the past the treatise was attributed to Cassius Longinus (third cent. AD), but it is for various reasons more plausible that the unknown author was active somewhere in the first century AD.¹⁹ The author is called Pseudo-Longinus or (as in this contribution) simply Longinus. One of the arguments for an earlier dating is the fact that the author presents his works as a polemical response to a treatise *On the Sublime* by Caecilius of Caleacte, who was a contemporary of Dionysius of Halicarnassus.²⁰ Although it is in the nature of the sublime to be elusive and difficult to define, one could describe ὑψος as an inspiring effect that overwhelms, carries away and elevates the reader or listener of a poem, discourse or speech. Longinus deals with five sources of the sublime, two of which are innate (great thoughts and emotion), whereas three are technical (figures of speech, diction and composition). It is in his discussion of figures (σχήματα) and composition (σύνθεσις) that Longinus makes effective use of grammatical categories. The impact of the sublime is in many cases achieved by the unexpected use of linguistic elements, such as the transposition of words from their regular order or the surprising use of case, tense or number.

17 On the possible influence of the grammarians Asclepiades, Tyrannio and Trypho on Dionysius, see de Jonge [2008] 111–113. Both Dionysius and Trypho arrived in Rome in 30 BC.

18 Edition: Russell [1964]. Translation: Fyfe-Russell [1995]. The commentary of Mazzucchi [2010a] is indispensable.

19 On date and authorship, see Russell [1964] xxii–xxx; Mazzucchi [2010a] xxix–xxxvii. Heath [1999] argues for the authorship of Cassius Longinus.

20 See *Subl.* 1.1. Ofenloch [1907] and Augello [2006] have edited the fragments of Caecilius. Caecilius of Caleacte also makes use of grammatical categories in his work *On Figures*: see below on the grammatical figures (section 7).

3 Linguistic Units in Rhetorical Treatises

Although the organization of ancient treatises on style can adopt different forms, the general focus of ancient stylistic teaching is on the selection of words (ἐκλογὴ ὀνομάτων), the combination of words (σύνθεσις ὀνομάτων) and the artistic arrangement of words in figures of speech (σχήματα λέξεως). Individual treatises can concentrate on one or more of these topics. Dionysius' *On Composition* deals with σύνθεσις only; Demetrius deals with both diction and composition (which in his case includes figures: see *Eloc.* 59), but also content; Longinus regards diction, composition and figures as three sources of the sublime. It is a common idea in ancient language disciplines (philosophy, grammar as well as rhetoric) to view language as a systematic structure that consists of several levels. The different levels most often distinguished in rhetorical teaching are those of letters (γράμματα), syllables (συλλαβαί), words (ὀνόματα or λέξεις) or parts of speech (μέρη λόγου), clauses (κῶλα), periods (περίοδοι) and text or discourse (λόγος).²¹ The linguistic units of one level are treated as the building blocks of the units at the next level. As the letters are the “elements of speech” (στοιχεῖα φωνῆς), the parts of speech can be called “elements of expression” (στοιχεῖα λέξεως).²²

4 Letters, Elements of Speech, and Euphony

Euphony is an essential component of rhetorical theory. In the selection and combining of words, certain sounds or collocations of sounds must be avoided because of their roughness, whereas other sounds are attractive to the ear. Hence, rhetoricians offer detailed discussions of the acoustic qualities of letters, and they comment on the contexts in which these sounds may or may not be used. Such discussions of letters (γράμματα) or “elements” (στοιχεῖα) of speech in the context of stylistic teaching reveal that music and musical

21 Demetrius (*Eloc.* 1–35) offers a systematic discussion of clauses and periods.

22 Parts of speech as “elements”: Dion. Hal. *Comp.* 2.1. Letters as “elements”: *Comp.* 14.1. Dionysius explains that the primary units of speech are called “letters” (γράμματα) because they are signified by certain “lines” (γραμμαί): a similar explanation is found in the *Tekhné grammatiké*, [Dion. T.] par. 6, G.G. 1.1, 9.2–3. According to Dionysius of Halicarnassus (*Comp.* 14.1), the letters are called “elements” (στοιχεῖα) because “all sound has its origin from these units in the first place, and is ultimately resolved in them” (πάσα φωνὴ τὴν γένεσιν ἐκ τούτων λαμβάνει πρώτων καὶ τὴν διάλυσιν εἰς ταῦτα ποιεῖται τελευταία). The *Tekhné grammatiké*, [Dion. T.] par. 6, G.G. 1.1, 9.5–6, gives a different explanation of the term στοιχεῖα. See also de Jonge [2008] 50–53 on “the hierarchical structure of language”.

teaching had a substantial impact on ancient rhetorical theory.²³ In their treatments of euphony, both Demetrius and Dionysius refer to the ideas of “musicians” (μουσικοί). Dionysius in particular acknowledges the influence of the Peripatetic philosopher and musical theorist Aristoxenus of Tarentum (fourth cent. BC).²⁴ More generally, the rhetorical discussions of euphony often have a Peripatetic flavor, as they seem to build on the theory of expression in Theophrastus’ *On Style*.²⁵

Dionysius of Halicarnassus examines the acoustic properties of the letters in his discussion of μέλος (melodious sound), one of the four means of composition (*Comp.* 14).²⁶ The twenty-four letters (γράμματα) or elements (στοιχεῖα) are defined as “the primary and indivisible units of human and articulate speech” (*Comp.* 14.1: ἀρχαί . . . τῆς ἀνθρωπίνης καὶ ἐνάρθρου φωνῆς αἱ μηκέτι δεχόμεναι διαίρεσιν). These units are first divided into vocal sounds (φωναί) or vowels (φωνήεντα) on the one hand, and noises (ψόφοι) on the other. The non-vowels are then divided into semivowels (ἡμίφωνα) and voiceless sounds (ἄφωνα). According to Dionysius it is not easy to say how many letters there are, but he claims that this problem belongs not to his own discipline, but rather to grammar (γραμματική) and metrical studies (μετρική) or even philosophy (φιλοσοφία) (*Comp.* 14.6). He then presents the familiar system of twenty-four letters, which we also find in the *Tekhnê Grammatikê* attributed to Dionysius Thrax. Of the seven vowels, two are short (ε, ο), two long (η, ω) and three of two quantities (α, ι, υ). Of the eight semivowels, five are simple (λ, μ, ν, ρ, σ) and three double (ζ, ξ, ψ). Of the nine voiceless letters three are smooth or ‘bare’ (κ, π, τ), three rough (χ, φ, θ) and three intermediate (γ, β, δ).

As rhetorician Dionysius of Halicarnassus is especially interested in the aesthetic qualities of the sounds of speech, which are related to their production in the human mouth. In general, he considers long vowels most pleasant, and short vowels inferior. The more open the mouth, the more attractive the sound. Of the long vowels, the long α is best, “for it is pronounced with the mouth open to the fullest extent and the breath forced upwards to the palate”. The η comes in the second place, “because it presses the sound down around the base of the tongue and not upwards, and the mouth is only moderately open”. The ω comes third, followed by υ and ι. None of the short vowels is beautiful, but

23 Cf. Nünlist in this volume.

24 Demetrius (*Eloc.* 176) refers to “the musicians”; Dionysius (*Comp.* 14.2) mentions “Aristoxenus the musician”. Longinus’ discussion of composition (*Subl.* 39) draws an elaborate comparison between language and instrumental music.

25 See e.g. Theophr. fr. 686, 687, 688, 692 Fortenbaugh.

26 On phonetics and euphony in Dionysius, see Vaahtera [1997].

“ο is less ugly (ἥττον δυσηχέες) than ε”: again, the shape of the mouth in producing these vowels explains the difference. A classification of the semivowels follows. The double semivowels are superior to the simple ones. In the latter category λ is “sweetest” (γλυκύτεατον), ρ is “most noble” (γενναιότατον), μ and ν are intermediate, and σ is “neither charming nor pleasant” (ἄχαρι δὲ καὶ ἀηδέες), as it sounds like the hissing of an irrational animal. Among the double semivowels, ζ is most pleasant, whereas ξ and ψ produce a hiss (συριγμός). Of the nine semivowels, the rough sounds (χ, φ, θ) are the best, whereas the ‘bare’ sounds (κ, π, τ) are least attractive.

In the formation of syllables and words (*Comp.* 15–16) the writer or orator must make use of these different qualities of the letters, so as to imitate the characters, things or events that he describes. Dionysius demonstrates that Homer uses fine and soft sounds when portraying beauty, unpleasant and ill-sounding letters when introducing a frightening scene, and harsh, clashing syllables when depicting a warrior.

Demetrius includes similar observations on sounds and euphony in his discussions of the four styles. In his account of the elegant style, he refers to the so-called “beautiful words” (*Eloc.* 173: καλὰ ὀνόματα), and he cites the definition of Theophrastus (fr. 687 Fortenbaugh): “Beauty in a word is that which gives pleasure to the ear or the eye, or has an inherent nobility of thought” (κάλλος ὀνοματός ἐστι τὸ πρὸς τὴν ἀκοὴν ἢ πρὸς τὴν ὄψιν ἡδύ, ἢ τὸ τῆς διανοίας ἔντιμον).²⁷ In his explanation of Theophrastus’ doctrine, Demetrius points out that words like Καλλίστρατος (Callistratus) and Ἄνοῶν (Annoôn, but the text may be corrupt here) are “pleasant to the ear” because the double “l” and double “n” have a certain resonance. For the sake of euphony an extra ν (“n”) can sometimes be added, as “the Attic authors” do when writing Δημοσθένην (Demosthenes) and Σωκράτην (Socrates) (*Eloc.* 175). Demetrius (*Eloc.* 176–177) also reports that musicians made a classification of words on the basis of the acoustic qualities of vowels: a word can be smooth (λεῖον), rough (τραχύ), well-proportioned (εὐπαγές) or weighty (ὄγκηρον). A smooth word is mainly or exclusively built from vowels (e.g. Αἴας, “Ajax”); an example of a rough word is βέβρωσκεν (“devoured”); a well-proportioned word is a mix of smooth and rough. “Weightiness consists in three aspects, breadth, length and emphatic pronunciation” (*Eloc.* 177: τὸ δὲ ὄγκηρον ἐν τρισί, πλάτει, μήκει, πλάσματι). Demetrius’ acoustic classification of different kinds of words shows some resemblance to Dionysius’ distinction of

27 See Fortenbaugh [2005] 281–286. According to Dionysius (*Comp.* 16.15), Theophrastus (fr. 688 Fortenbaugh) distinguished “words that are naturally beautiful” (ὀνόματα φύσει καλά) from “words that are paltry and mean” (μικρὰ καὶ ταπεινά).

three types of composition or “harmonies” (*Comp.* 21–24: see below), which he calls smooth (γλαφυρά), austere (αύστηρά) and well-tempered (εὐκρατος).

5 The Parts of Speech and Stylistic Composition

Ancient philosophers and grammarians developed an elaborate system of the so-called parts of speech (τὰ μέρη τοῦ λόγου, *partes orationis*),²⁸ and these units were also indispensable in rhetorical teaching. Although similar terminology was used in various language disciplines, the parts of speech had in fact different functions for philosophers, grammarians and rhetoricians.²⁹ While philosophers like Aristotle and the Stoics were mainly interested in the analysis of the assertion (λόγος ἀποφαντικός) or meaningful sentence into its “parts” (μέρη), Alexandrian philologists and grammarians focused on the distinction of different ‘word classes’ with their *accidentia*. The grammatical system that we know from the *Tekhnê Grammatikê* attributed to Dionysius Thrax lists eight word classes: ὄνομα (noun), ῥήμα (verb), μετοχή (participle), ἄρθρον (article), ἀντωνυμία (pronoun), πρόθεσις (preposition), ἐπίρρημα (adverb), and σύνδεσμος (conjunction). This system of eight parts, which did not become canonical before the first century AD, was the result of a long development, to which both philosophers and grammarians contributed their ideas.

The rhetorician Dionysius of Halicarnassus is the first ‘historian of linguistics’ to present the history of the parts of speech doctrine, distinguishing various stages from Aristotle and Theodectes (who are said to have known only ὀνόματα, ῥήματα and συνδεσμοί) until the grammarians who knew nine parts of speech (including the προσηγορία or appellative as a separate part).³⁰ As Dionysius remarks, there were scholars who introduced even further divisions, “making the primary parts of speech many in number”.³¹ Characteristic of Dionysius’ approach to the history of the parts of speech theory is the idea of gradual progress: successive philosophers and grammarians “carried” the system “forward” (προήγαγον, *Comp.* 2.1), each generation adding more parts of speech and making more subtle distinctions.

Dionysius presents his history of the parts of speech at the beginning of his work *On Composition* (2.1), where he defines composition (σύνθεσις) as “a certain

28 For an overview on the topic see Swiggers-Wouters (section III.2) in this volume.

29 See Matthaios [2002f]; de Jonge [2008] 91–104.

30 On Dionysius as ‘historian of linguistics’, see de Jonge [2008] 168–183.

31 Dion. Hal. *Comp.* 2.1–3; Quintilian (*Inst.* 1.4.17–21) presents a similar history of the theory of the parts of speech, but there are some interesting differences between the two accounts: de Jonge [2008] 168–183.

process of arranging the parts of speech (λόγου μόρια) or elements of diction” (στοιχεῖα λέξεως).³² It is important to notice that this is the context in which he introduces his little ‘history of linguistics’. While discussing the linguistic doctrine of the parts of speech, which was, as he acknowledges, developed by philosophers and grammarians, Dionysius is explicitly adopting the perspective of his own discipline. The philosophical “parts of the assertion” and the grammatical “word classes” now become the stylistic “building blocks” (στοιχεῖα) from which an orator or writer constructs his text. Where the builder of a house or a shipwright combines stones, timber and tiling, the writer who composes a text must use his nouns, verbs, and the other parts of speech.³³ Any composition will thus start from combining the parts of speech, using their *accidentia* not only correctly but also elegantly. For Dionysius of Halicarnassus, σύνθεσις consists of various activities (ἔργα). One of them is σχηματισμός, the process of selecting the form of a word: it decides “the form in which the noun or verb, or whatever else it may be, will occupy its position more elegantly (χαριέστερον) and will fit more appropriately (πρεπωδέστερον) into its context”. It is thus not only syntactic correctness, but also stylistic attractiveness and appropriateness that will determine the number (singular or plural), case (nominative or one of the oblique cases) and gender (masculine, feminine or neuter) of nouns, as well as the gender, mood and tense of verbs in a text.³⁴

If the parts of speech are the building blocks of stylistic composition, it is obvious that the resulting composition can also be described and analyzed in terms of its parts of speech. One of the most influential doctrines in ancient rhetoric is that of the different styles or composition types. These types of style are characterized not only by linguistic sounds, choice of words (plain or elevated), prose rhythm and figures of speech, but also by the presence, absence or particular use of the parts of speech, as we can observe in Dionysius of Halicarnassus’ *On Composition* and Demetrius’ *On Style*.

5.1 *Dionysius: The Parts of Speech and the Types of Composition*

In his treatise on σύνθεσις, Dionysius of Halicarnassus (*Comp.* 21–24) asserts that there are three different composition types or “harmonies” (ἁρμονίαι).³⁵ The three types are the austere (αὐστηρά), the polished (γλαφυρά) and the well-blended (εὐκρατος) harmony. In fact, Dionysius admits that there are

32 Rhetoricians use the terminology of μόρια λόγου in order to distinguish them from the parts of a speech or text (μέρη λόγου).

33 Dion. Hal. *Comp.* 6.3–4.

34 Dion. Hal. *Comp.* 6.5–7.

35 See also Dion. Hal. *Dem.* 37–41. Pohl [1968] discusses Dionysius’ theory of composition types. On the parts of speech in the three harmonies, see also de Jonge [2008] 204–213.

many distinct forms of composition, but he finds it useful to distinguish two extremes, and a middle style that results from the relaxation and intensification of these extremes (*Comp.* 21.5). Whereas the austere harmony is primarily characterized by a certain rough discontinuity, the polished harmony gives the impression of a smoothly flowing stream of sound (*Comp.* 22–23).

Grammatical categories are especially mentioned in the discussion of the ἀρμονία αὐστηρά. In the austere composition, the parts of speech are placed “at considerable distances from one another, separated by perceptive intervals” (*Comp.* 22.1). The writer or poet who composes in this style, like Pindar or Thucydides, is said to have a preference for long words, hiatus, harsh collocations of sounds at word boundaries, and impressive rhythms. The austere composition type is “flexible in its use of cases” (ἀγχίστροφος περὶ τὰς πτώσεις), “containing few connectives” (ὀλιγοσύνδεσμος), “omitting articles” (ἄναρθρος) and in many cases “neglecting grammatical sequence” (ὑπεροπτική τῆς ἀκολουθίας: *Comp.* 22.6). Dionysius does not elaborate on these grammatical characteristics, but it is plausible that he finds that they contribute to the unstudied character of a discontinuous style. The omission of connectives and articles, the unexpected use of cases and the neglect of grammatical order (ἀκολουθία) are all devices that make the style less precise and more difficult to follow for the reader or listener.³⁶

It is possible to connect Dionysius’ views on the austere style with the observations in some other important texts of the rhetorical tradition. Dionysius’ view that the austere harmony uses few connectives could be related to Aristotle’s observation that asyndeton creates amplification (αὐξησης): “the connective makes many things seem one, so that, if it be removed, it is clear that the contrary will be the case, and that one will become many” (ὁ γὰρ σύνδεσμος ἐν ποιεῖ τὰ πολλά, ὥστ’ ἐὰν ἐξαίρεθῆ, δῆλον ὅτι τούναντίον ἔσται τὸ ἐν πολλά).³⁷ Demetrius asserts that the absence of connectives (διάλυσις: *Eloc.* 61, 64; see below) may contribute to grandeur, although he acknowledges that the opposite can also be true (*Eloc.* 59; see below). Like Dionysius’ austere harmony, Demetrius’ grand style is characterized by “variety in the use of cases” (*Eloc.* 65; see below). In his *Second Letter to Ammaeus*, Dionysius himself illustrates how Thucydides uses for example a genitive instead of an accusative, or a dative instead of an accusative (*Ep. Amm.* 2.12), so that the historian “could be said to be committing solecism” (σολοικίζειν).³⁸ Thucydides is an admired representative of the

36 On ἀκολουθία, see Sluiter [1990] 61–62 and de Jonge [2008] 253–273.

37 Arist. *Rh.* 3. 1413b32–34. Transl. Freese [1975].

38 See de Jonge [2011] 468–469. For the concept of solecism see Pagani and Lallot in this volume.

austere composition type (*Comp.* 22.34–45), but the terminology of “solecism” reveals that grammatical grandeur often borders closely on linguistic failure.

5.2 *Demetrius: The Parts of Speech and the Types of Style*

Demetrius describes his four styles from various points of view, dealing with themes, diction and composition. His treatment of the composition (σύνθεσις) of each style includes observations on rhythm (like the use of the paeon in the grand style), euphony (hiatus, rough versus smooth sounds, etc.), and the length of clauses (long clauses produce grandeur, etc.). He also pays due attention to the use of the parts of speech: the connectives (σύνδεσμοι) in particular play a decisive role in distinguishing the four styles. It should be noted at the outset that the ancient category of σύνδεσμοι covers the modern categories of both “conjunctions” and “particles”.³⁹ The following discussion will examine Demetrius’ grammatical observations in each of the four styles (grand, plain, elegant, and forceful).

The grand style (χαρακτήρ μεγαλοπρεπής) is appropriate for descriptions of battles, earth and heaven and similar elevated themes (*Eloc.* 75–76), and in its diction it employs unusual words and metaphors (*Eloc.* 77–102).⁴⁰ But a writer can also elevate his style by the use of σύνδεσμοι, for “connectives make the composition grand” (*Eloc.* 59: οἱ μὲν δὴ σύνδεσμοι τὴν σύνθεσιν μεγαλοπρεπῆ ποιοῦσιν). Demetrius argues that particles like μὲν and δέ (“on the one hand”, “on the other hand”) should not correspond too precisely, because the grand style (which has some resemblance to Dionysius’ austere composition) has an unstudied character (*Eloc.* 53). This recommendation is illustrated with a passage from Antiphon (fr. 50 Blass) in which the word μὲν (“on the one hand”) is repeated twice before it is answered by δέ (“on the other hand”). Polysyndeton can also have an effect of grandeur (*Eloc.* 54), as when Homer combines the names of Boeotian towns with the connective τε: Σχοῖνόν τε Σκῶλόν τε, πολύκνημόν τ’ Ἐτεωνόν (*Il.* 2.497: “and Schoenus and Scolus and mountainous Eteonus”).⁴¹

39 See Schenkeveld [1988].

40 For word order in the grand style (*Eloc.* 50–52), see below.

41 The same example is cited in *Eloc.* 257 (see below). Dionysius (*Comp.* 16.17–19) cites the same line in context (*Hom. Il.* 2.494–501). He points out that Homer has mixed the unpleasant names of Boeotian towns with more elegant “supplementary words” (παραπληρώματα), so that the clever combination of inferior names results in a beautiful composition. Just before citing the Homeric passage, Dionysius refers to Theophrastus’ theory of beautiful words (see above: fr. 688 Fortenbaugh). This might suggest that *Il.* 2.494–501 was a favorite example in the Peripatetic tradition of poetics and rhetoric, to which Demetrius is surely indebted.

Both grammarians and rhetoricians acknowledged the existence of a specific category of connectives with a stylistic function: the σύνδεσμοι παραπληρωματικοί (“expletive connectives”).⁴² Grammarians like Trypho (first cent. BC) supposed that the contribution of these conjunctions to a text was not a semantic but an aesthetic one: having no meaning of themselves, these conjunctions could be used as “padding” (στοιβή), making an expression more elegant by reducing its roughness.⁴³ Demetrius mentions two examples of such expletive σύνδεσμοι (the particles νυ and δῆ), which should in his opinion be used not as “empty additions” (προσθήκαις κεναίς), but only in order to achieve grandeur (μέγεθος).⁴⁴ Having cited passages from Plato’s *Phaedrus* and Homer’s *Iliad*, Demetrius argues that without the word δῆ these texts would lose their dignity (*Eloc.* 56). In a similar way the removal of the word δῆ from Calypso’s words to Odysseus, οὕτω δῆ οἰκόνδε φίλην ἐς πατρίδα γαίαν | αὐτίκα νῦν ἐθέλεις ἰέναι; (Hom. *Od.* 5.204–205: “must you, just like that, go home to your own native land forthwith?”) would take away the emotion (πάθος) from her question.⁴⁵ In warning against the superfluous use of expletive connectives, Demetrius (*Eloc.* 57–58) is explicitly following the Peripatetic scholar Praxiphanes (fr. 13 Wehrli), who compared the aimless use of particles with the meaningless addition of exclamations like φεῦ (“alas”) or αἶ αἶ (“ah! ah!”).⁴⁶

In his discussion of figures in the grand style (*Eloc.* 59–67), Demetrius has further recommendations on the use of connectives, drawing attention to the grandeur of both asyndeton and polysyndeton (*Eloc.* 61–64). On the one hand, the repetition of the same connective “suggests infinite numbers”, as in the anonymous fragment ἐστρατεύοντο Ἕλληγές τε καὶ Κάρρες καὶ Λύκιοι καὶ Πάμφυλοι καὶ Φρύγες (“to the war marched Greeks and Carians and Lycians and Pamphylia and Phrygians”). On the other hand, the omission of καὶ (“and”) can be equally impressive, as in κυρτά, φαληριώντα (Hom. *Il.* 13.799: “high-arched, foam-crested”).

42 See Sluiter [1997a] and de Jonge [2008] 206–208.

43 Trypho fr. 41 von Velsen = Apol. *Dysc. Conj.*, G.G. 2.1, 247.26–29. According to Aristotle (*Po.* 20. 1456b38) a conjunction is a non-significant sound (φωνὴ ἄσημος), but later grammarians asserted that only the subtype of “expletive” connectives was meaningless.

44 Demetrius’ third example of expletive connectives (*Eloc.* 55) is πρότερον (“earlier”), but the transmitted text may be corrupt here.

45 Transl. Murray, ed. Dimock [1995]. Demetrius cites *Od.* 5.203–204, not 205.

46 Praxiph. fr. 13 Wehrli (= fr. 24 Matelli) = Demetr. *Eloc.* 57. On Praxiphanes, see Wehrli [1969²c] and Martano-Matelli-Mirhady [2012]. Wehrli [1969²c] 110–111 suggests that Praxiphanes discussed the use of σύνδεσμοι in a work *On Poems*. Matelli [2012b] 197 points out that the fragment could be from a treatise on the parts of expression.

Two figures in the grand style are concerned with the use of case (πτῶσις). The first one is anhypallage (*Eloc.* 60: ἀνθυπαλλαγή), which is the substitution of one case for another. In οἱ δὲ δύο σκόπελοι ὁ μὲν οὐρανὸν εὐρὺν ἰκάνει (Hom. *Od.* 12.73: “the two rocks, one of them reaches up to the wide heaven”), the genitive (τῶν δὲ δύο σκοπέλων) would have been “usual” (σύνηθες), but “anything usual is trivial”, Demetrius asserts. The parallel discussion of “substitutions of cases” (ἀνθυπαλλαγαὶ τῶν πτώσεων) in Apollonius Dyscolus’ *Syntax* casts light on the connections between rhetorical and grammatical theory.⁴⁷ The grammarian explains that these constructions, although they are strictly incongruent, can be accepted as figures if they have the authority of ancient usage.⁴⁸

A second figure related to πτώσις is described as “not staying in the same case” (*Eloc.* 65: τὸ μηδὲ ἐπὶ τῆς αὐτῆς μένειν πτώσεως). Demetrius cites an example from Thucydides (4.12.1), where the grammatical subject of the first verb, accompanied by a participle in the nominative, becomes the subject of a genitive absolute: καὶ πρῶτος ἀποβαίνων ἐπὶ τὴν ἀποβάθραν ἔλειποψύχησέ τε, καὶ πεσόντος αὐτοῦ ἐς τὴν παρεξευρεσίαν... (“The first to step on the gangway, he fainted, and in his falling on the oars...”). Similar observations on Thucydides’ syntax of cases can be found in Dionysius’ *Second Letter to Ammaeus* as well as the Thucydides scholia.⁴⁹ We have already seen above that Dionysius characterizes the austere harmony as “flexible (quick-changing) in its use of cases” (*Comp.* 22.6: ἀγχίστροφος περὶ τὰς πτώσεις); Thucydides is an important representative of that type of composition type.

The elegant style (χαρακτήρ γλαφυρός: *Eloc.* 128–189), which covers the charm (χάρις) typically associated with Sappho, the urban wit (ἀστεϊσμός) of Lysias, and various other forms of elegant expression, is again treated in terms of diction, composition and subject matter. Here Demetrius has much to say on the use of rhythm, euphony, composition and word order (on which see below), but technical grammar recedes into the background, only to return in the discussion of the plain style.

The plain style (χαρακτήρ ἰσχνός: *Eloc.* 190–239) takes its topics from everyday life; it makes use of common words and a clear syntax. Clarity (τὸ σαφές, *Eloc.* 192–203) involves a number of linguistic characteristics. The use of connectives is essential, as “sentences that are unconnected and disjointed throughout are always unclear” (*Eloc.* 192). Asyndeton, on the other hand,

47 Apol. *Dysc. Synt.* 3.34, *G.G.* 2.2, 300.8–302.2. Apollonius Dyscolus cites some examples from Homer and Sophocles, in which a nominative is used instead of a vocative.

48 See Lallot [1997] II 173–174.

49 Dion. Hal. *Ep. Amm.* 2.11. Cf. de Jonge [2011] 468–471. Dion. Hal. *Ep. Amm.* 2.4 comments on the same passage from Thucydides (4.12.1).

for which the term λύσις (dissolution) is used here, is said to fit the disjointed style (ἡ διακελυμένη λέξις), also known as the performative or acting style (ὑποκριτική). In Menander's ἐδεξάμην, ἔτικτον, ἐκτρέφω, φίλε (fr. 456 Kassel-Austin: "I conceived, I gave birth, I nurse, my dear") the emotion (πάθος) is due to the lack of connectives, as Demetrius points out.⁵⁰

One might wonder how these observations on σύνδεσμοι in the plain style precisely relate to the discussion of connectives and polysyndeton in the grand style (see above, esp. *Eloc.* 59: "connectives give grandeur to the composition"). Apparently, connectives are important both in the grand and the plain style. In the first instance this might seem to be a little confusing, but we should realize that the focus in the discussion of the plain style (unlike that of the grand style) is consistently on the contribution that σύνδεσμοι can make to clarity. For example, "epanalepsis" (*Eloc.* 196) is "the resumptive repetition of the same connective in the course of a long sentence". Demetrius cites an example (author unknown) in which the particle μέν ("on the one hand") is repeated for the sake of clarity. The passage cited in *Eloc.* 53 (Antiphon fr. 50 Blass, mentioned above under the grand style) had a similar repetition of μέν, but that passage illustrated a different point: there the point was not so much the repetition of the particle μέν, but the lack of correspondence between the particles μέν and δέ, which fits the imprecise character of the grand style.

The plain style avoids πλαγιότης (*Eloc.* 198), which scholars interpret either as "the use of dependent constructions" or as "the use of oblique cases".⁵¹ The example cited from Xenophon (*An.* 1.2.21) does not decide the matter. It starts with καὶ ὅτι τριήρεις ἤκουεν περιπλεύσας... ("and that he had heard that triremes were sailing" etc.), whereas Demetrius' own rewriting of the same passage not only begins with the nominative, but also omits ὅτι, the conjunction that introduces a dependent statement: τριήρεις προσεδωκῶντο... ("triremes were expected" etc.). The discussion of word order that immediately follows this passage, however, suggests that the correct interpretation of πλαγιότης is "the use of oblique cases": Demetrius points out that in narrative passages one should start with the nominative (*Eloc.* 201: ἀπὸ τῆς ὀρθῆς ἀρκτέον) or accusative (ἀπὸ τῆς αἰτιατικῆς), whereas other cases cause obscurity (ἀσάφεια).

The forceful style (χαρακτήρ δεινός: *Eloc.* 240–304) is especially associated with the strong emotion aroused by speeches of Demosthenes. Brevity in composition and harsh collocations of sounds are some of the characteristics of this style. Whereas the elegant style strives for euphony, the forceful style

50 Cf. Dion. Hal. *Comp.* 22.6 (see above): the austere harmony is "sparing of connectives" (ὀλιγοσύνδεσμος).

51 See Innes [1995] 467 and LSJ s.v. See also Marini [2007] 214–215 on *Eloc.* 104 (τὸ πλάγιον).

employs “cacophony” (κακοφωνία), which can sometimes be achieved by placing connectives (σύνδεσμοι) like δέ or τε at the end of the clause or sentence (*Eloc.* 257–258), for example: οὐκ εὐφήμησε μὲν, ἄξιον ὄντα, ἠτίμασε δέ (“he did not praise him on the one hand, although he deserved it; he insulted him, on the other hand”; author unknown). Confusion between the different styles might potentially arise when Demetrius cites a Homeric example (*Il.* 2.497: Σχοῖνόν τε Σκῶλόν τε) that he has already discussed under the grand style (*Eloc.* 257, cf. *Eloc.* 54). In the earlier chapter, as we have seen, Demetrius pointed to the polysyndeton in this line, whereas the focus in the later chapter is on the final position of the connective τε. “In Homer’s lines it is grandeur which is the result of ending with a connective”, Demetrius quickly adds (*Eloc.* 258), before he gives a new example where ending with τε does create forcefulness rather than grandeur.

In the discussion of figures, it turns out that asyndeton (διάλυσις, “separating”) produces forcefulness more than any other figure (*Eloc.* 269–271), because it fits dramatic delivery (ὑπόκρισις; see also *Eloc.* 194) and active involvement (ἀγών).⁵² Again, Demetrius’ student might be confused in the first instance, as asyndeton apparently can have a place both in the forceful and in the grand style (which are indeed neighboring categories; cf. *Eloc.* 61–62). But on a more general level it is clear that connectives play a different role in the various styles. In the grand style, Demetrius emphasizes the role of polysyndeton and the imprecise correspondence between particles like μὲν and δέ; in the plain style, the proper use of connectives for the sake of clarity is crucial; in the forceful style, asyndeton is the figure *par excellence*.

6 Word Order

The order of words is of central concern to ancient rhetoricians. Observations on word order are related to many different stylistic matters, such as euphony (different juxtapositions of words result in different collocations of sounds), prose rhythm (different arrangements have different rhythmical structures) and figures of speech (including anastrophe and hyperbaton).⁵³ Whereas euphony and prose rhythm belong to the procedure of composition (σύνθεσις), figures of speech are often treated as a separate category.

Apart from explicit instructions on word order in the various styles, the ancient treatises contain many linguistic experiments that aim to bring out

⁵² On ἀγών and ἐναγώνιος, see Ooms-de Jonge [2013].

⁵³ Ernst [2003] examines the concept of order in ancient rhetoric.

the aesthetic effects of different word arrangements. Teachers of rhetoric often test the quality of a given text by changing its word order: the first version can thus be compared with a new formulation of the same thought, so that students are able to identify the stylistic strength or weakness of the original.⁵⁴ This procedure, which is also known as “metathesis”, is very prominent in the works of Dionysius, Demetrius and Longinus. The method of metathesis has an important pedagogical function, as it involves the readers (and students) in the analysis and examination of specific examples from classical Greek literature.

6.1 *Natural Word Order versus Hyperbaton*

A fundamental distinction in ancient rhetorical theory is that between “nature” and “art” (φύσις and τέχνη), which is also applied to word order. The concept of ‘natural’ word order, which is discussed in various ancient treatises, can in fact mean different things. In many cases nature (φύσις, *natura*) refers to that which is “usual” or imitates the non-professional language of everyday communication. On a second level, “natural word order” can also be understood as the arrangement that closely follows the logical or chronological relationships in the real world: according to this approach, natural language must mirror reality as closely as possible. Finally, natural word order may be the pragmatic order of clear communication, which presents the constituents in the most accessible way to the audience.

Dionysius’ experiment with natural word order (*Comp.* 5) starts from the implicit idea that the arrangement of words should follow the logical and chronological relationships that exist in reality.⁵⁵ For instance, nouns (ὀνόματα) should precede verbs (ῥήματα) because substance (οὐσία) precedes accident (συμβεβηχός). Likewise, verbs (ῥήματα) should precede adverbs (ἐπιρρήματα), because “that which acts or is acted upon” (τὸ ποιοῦν ἢ τὸ πάσχον) naturally precedes “the accompanying circumstances” (τὰ συνεδρεύοντα). The narrative should also present earlier events before later events. Further, substantives would naturally precede adjectives, appellative nouns should come before proper nouns, pronouns before appellative nouns, indicatives before other moods, and finite verb forms before infinitives. Dionysius tests the first three rules on lines from the *Iliad* and *Odyssey*, only to conclude that Homer does not follow the logical and chronological rules of nature: in some cases the noun comes before the verb, but in many cases the verb precedes the noun; and the same applies to the other rules of “nature”. Homer’s authority

54 De Jonge [2005] examines the use of metathesis in the works of Dionysius.

55 See the more extensive discussion in de Jonge [2008] 253–315.

proves that nature is wrong, so that Dionysius decides to reject the rules that he formulated at the beginning of his experiment. In the remaining part of his treatise he adopts a more musical approach to word arrangement, based on considerations of melodic sound, rhythm, appropriateness and variety. Although Dionysius did presumably not copy his discussion of natural word order (*Comp.* 5) from a Stoic source, as some scholars have thought in the past, it is plausible that the experiment on natural word order was inspired by Stoic philosophy, in particular by the doctrine of categories.

A more pragmatic account of natural word order (ἡ φυσικὴ τάξις) is presented in Demetrius' *On Style* (199–201).⁵⁶ This rhetorician argues that in the plain style “the topic” (τὸ περὶ οὗ) is mentioned first, and then “what it is” (ὃ τοῦτό ἐστιν), as for example in Ἐπίδαμνος ἐστὶ πόλις... (Thuc. 1.24.1: “Epidamnos is a city...”). But Demetrius, who immediately acknowledges that the reverse order is also possible, adopts a rather flexible attitude in his discussion of word order. Clear communication is a central concern in his discussion of the plain style. This is especially obvious in his advice on the use of cases. In narrative passages, he points out, one should begin either with the nominative or with the accusative: “use of the other cases will cause some obscurity (ἀσάφεια) and torture (βάσανος) for the actual speaker and the listener”. While Demetrius' terminology echoes that of Aristotle's *Rhetoric*, his views on the order of “the topic” and “what it is” can be seen to anticipate the theories of modern scholars on “topic” and “focus” constituents in Greek word order.⁵⁷

Whereas Demetrius is interested in the lucid presentation of the plain style, the author of the treatise *On the Sublime* concentrates on the surprising and unexpected use of language that elevates or overwhelms the audience. One of the figures of speech that can contribute to this effect is hyperbaton (*Subl.* 22.1), which is defined as the “dislocated ordering of words or thoughts out of the logical sequence” (λέξεων ἢ νοήσεων ἐκ τοῦ κατ' ἀκολουθίαν κεκλιμένην τάξις).⁵⁸ The term ἀκολουθία (sequence) is also used in the works of Dionysius of Halicarnassus.⁵⁹ As we have seen, the austere composition type is characterized as “in many cases neglecting the logical order” (*Comp.* 22.6: ἐν πολλοῖς

56 See de Jonge [2007].

57 Arist. *Rh.* 3. 1415a12–13: the introductions of speeches and epic poems contain a sample of the subject, so that the audience knows “what the text is about” (περὶ οὗ ὁ λόγος). De Jonge [2007] compares Demetrius' views on word order with the theories of Dik [1995] and other modern scholars.

58 See de Jonge [2008] 318–321; Mazzucchi [2010a] 228–230.

59 E.g. Dion. Hal. *Dem.* 27.5 on Pl. *Menex.* 237b2–c3: see de Jonge [2008] 264–267. On ἀκολουθία, see the references in n. 36.

ὑπεροπτική τῆς ἀκολουθίας). Because Dionysius takes much interest in stylistic clarity, he is never really enthusiastic about the writing of authors like Thucydides and Plato, whom he accuses of neglecting logical order and syntax. Longinus, however, who concentrates on the overwhelming effect of sublime language, finds that deviation from regular order is, as it were, “the truest mark of engaging emotion” (*Subl.* 22.1: χαρακτήρ ἐναγωνίου πάθους ἀληθέστατος). Longinus observes that people who are angry or frightened often mix up the normal order of words. In this sense, hyperbaton also imitates nature (φύσις): “For art is only perfect when it looks like nature, and nature succeeds only when she conceals latent art.”

6.2 Demetrius on Word Order and Style

We have seen that Demetrius deals with natural word order in his discussion of the plain style (199–201): the topic (τὸ περὶ οὗ) should precede “that which it is” (ὃ τοῦτό ἐστιν), and one should start with the nominative or the accusative. Demetrius has more to say on word order in his treatments of the grand, the elegant, and the forceful styles. In each case, the idea of climax is essential: the most salient words (either vivid or charming or forceful) should be placed at the end.

The word order in the grand style (*Eloc.* 50–52) is a matter of vividness (ἐνάργεια): the words that are not particularly vivid (τὰ μὴ μάλα ἐναργῆ) should be placed first, followed by the more vivid words (ἐναργέστερα), so that the sentence gains strength towards the end. Examples from Plato (*Resp.* 411a–b) and Homer (*Od.* 9.190–192) illustrate the effect of climax.

A similar pattern applies to the elegant style (*Eloc.* 139), where, however, the word that creates charm (τὸ τὴν χάριν ποιοῦν) should be placed at the end. In order to prove his point, Demetrius rewrites a sentence from Xenophon: δίδωσι δὲ αὐτῷ καὶ δῶρα, ἵππον καὶ στολὴν καὶ στρεπτόν, καὶ τὴν χώραν μηκέτι ἀρπάζεσθαι (*An.* 3.1.31: “He gives him gifts too—a horse, a robe, a torque, and the assurance that his country would no longer be plundered”). When the unexpected last item of the original sentence is placed at the beginning, the sentence is obviously less attractive, as Demetrius demonstrates by rewriting the passage.

In the forceful style (*Eloc.* 249) it is the most striking word (τὸ δεινότατον) that is to be placed at the end. Demetrius criticizes the word order of a passage from Antisthenes (fr. 12 Caizzi): σχεδὸν γὰρ ὀδυνήσει ἄνθρωπος ἐκ φρυγάνων ἀναστάς (“for almost a shock of pain will be caused by a man standing up out of the brushwood”). He then improves on the original version (he claims) by placing the most striking word (ὀδυνήσει, “will cause pain”) at the end of the sentence rather than in the middle. As we have seen above, ending with a connective (σύνδεσμος) like δέ or τέ (*Eloc.* 257) can also contribute to the forcefulness of

style. Demetrius' fascinating experiments with word order deserve to be studied carefully by modern scholars of Greek linguistics.⁶⁰

7 The Grammatical Figures of Speech

The grammatical figures of speech, which are also known as linguistic “changes” or “alterations” (ἐναλλαγáι, ἐναλλάξις, etc.), clearly form a bridge between the disciplines of grammar and rhetoric.⁶¹ This group of figures is discussed in a number of rhetorical treatises of the Imperial period, including Greek handbooks *On Figures* by Caecilius, Alexander, Tiberius, Zonaeus and Phoebammon, as well as Quintilian's *Institutio oratoria*.⁶² The present discussion will focus on the discussion of the grammatical figures in the treatise *On the Sublime*, which will be compared with Caecilius of Caleacte and Quintilian. These Greek and Roman rhetoricians were able to build on the work of Hellenistic scholars, who had paid due attention to the concept of linguistic “change” in their philological commentaries on Homer and classical literature. Aristarchus frequently commented on the variations or substitutions that he found in Homer's language, like the change of voice: the use of active for passive forms and vice versa. By claiming that such variations were characteristic of Homer's linguistic usage, Aristarchus was able to explain textual difficulties in the *Iliad* or to defend his reading of the text.⁶³

Caecilius of Caleacte (first cent. BC) may have been the first rhetorician to offer a systematic discussion of the grammatical figures in stylistic theory.⁶⁴ Caecilius' *On Figures* (Περὶ σχημάτων) has not survived, but fragments of this influential work have been preserved in the works of later rhetoricians, especially in Tiberius' treatise *On Figures in Demosthenes* (probably third or

60 See *e.g. Eloc.* 256 on the difference between οὐ παρεγένετο and παρεγένετο οὐχί.

61 See the discussions in Josef Martin [1976] 295–299, Scheuer [1992], Lausberg [2008⁴] par. 509–527, Schenkeveld [2000a], and de Jonge [2014].

62 The ancient treatments of the grammatical figures include Caecilius of Caleacte fr. 75 Ofenloch = fr. 15 Augello (cited in Tib. *Fig.* 47 Ballaira = 80.18–81.22 Spengel); Long. *Subl.* 23–27; Quint. *Inst.* 9.3.2–27; Alex. *Fig.* 33.15–34.21 Spengel; [Plut.] *Vit. Hom.* 41–64; Zonae. *Fig.* 168.3–15 Spengel; Phoeb. *Fig.* 49.1–50.5 Spengel. The Greek texts can be found in Spengel vol. 3 [1856]. On the connections between Caecilius, Tiberius and Alexander Numenius, see Schwab [1916].

63 See Matthaios [1999] 309–318 (change of voice) and 331–340 (change of tense).

64 In his *Second Letter to Ammaeus*, Dionysius (Caecilius' contemporary) also points to the grammatical “alterations” in Thucydides, like the change of number, gender, case and tense. See de Jonge [2011] 460–465.

fourth cent. AD).⁶⁵ According to Tiberius, “Caecilius also introduces the figure of change, and says that it occurs in nouns, cases, numbers, persons and tenses”.⁶⁶ Apart from a work *On Figures* (Περὶ σχημάτων) and several pamphlets on Atticism, Caecilius of Caleacte wrote a treatise *On the Sublime* (Περὶ ὕψους). The extant work with the same title presents itself as a polemical reaction to that earlier treatise (*Subl.* 1.1). It is thus plausible that Longinus knew Caecilius’ theory of figures, either from his work *On Figures* or from the treatment of figures in his *On the Sublime*.⁶⁷

Tiberius’ summary suggests that Caecilius discussed only five subtypes of ἀλλοίωσις, but in later theory the list of grammatical figures was quickly extended. Quintilian (*Inst.* 9.3.2–27) presents a total of sixteen different alterations. Apart from the change of nouns (or gender: see below), case, number, person and tense, which we find in Caecilius, Quintilian mentions several other categories, such as the change of voice, the alteration of mood, and the confusion of the word classes themselves, like the use of verbs for nouns and participles for verbs. The terminology of these grammatical “changes” was rather flexible: in the rhetorical handbooks many terms are used, including ἀλλαγὴ, ὑπαλλαγὴ, ἐναλλαγὴ, ἐξαλλαγὴ, ἑτεροίωσις, ἀλλοίωσις, and the Latin *mutatio*.⁶⁸ Longinus (see below) prefers the term ἐναλλάξις. In early theory, the grammatical figures are not explicitly distinguished from the other σχήματα: Demetrius (*Eloc.* 60), as we have seen above, mentions ἀνθυπαλλαγὴ or change of case as one of the figures used in the grand style. But as the tendency towards systematization increases, the grammatical figures acquire a fixed position and separate status within the rhetorical system.⁶⁹

Since grammatical figures were considered to be “changes” or deviations from regular or natural usage, they could easily be mistaken as linguistic errors. Quintilian (9.3.11) points out that “there is a figure corresponding to every kind

65 Edition: Ballaira [1968].

66 Tiberius, *Fig.* 47 (Caecilius fr. 75 Ofenloch = fr. 15 Augello): καὶ τὸ τῆς ἀλλοιώσεως σχῆμα εἰσάγει ὁ Καικίλιος, καὶ φησιν αὐτὴν γίνεσθαι κατ’ ὀνόματα καὶ πτώσεις καὶ ἀριθμούς καὶ πρόσωπα καὶ χρόνους.

67 On Caecilius and Longinus, see Innes [2002].

68 Cf. Lausberg [2008⁴] par. 509.

69 Quintilian, *Inst.* 9.1–3 (cf. Lausberg [2008⁴] par. 506–527) distinguishes between tropes and figures. The figures are divided into figures of thought and figures of speech. The latter category is then split into two kinds (*Inst.* 9.3.2): one is more grammatical and “produces innovations in speech” (*loquendi rationem novat*), the other is more rhetorical and “is sought mainly in word arrangement” (*maxime conlocatione exquisitum est*). The figures that produce grammatical innovations of speech largely correspond to the “alterations” in Greek rhetorical treatises.

of solecism”.⁷⁰ Normally, the use of present instead of past tense would be considered a fault, but if there was a literary precedent, for example a passage in Vergil’s *Aeneid*, the same confusion of tenses could be regarded as a figure. Apart from literary authority, the criteria for the distinction between figures and mistakes are antiquity, usage and logical principle.⁷¹

7.1 *Longinus on the Grammatical Figures*

The treatise *On the Sublime* contains one of the most fascinating treatments of the grammatical figures, as it relates the concept of grammatical change to the dislocating and emotional impact of the sublime (ὑψος). Longinus (*Subl.* 1.4) describes the effects of the sublime in terms of ἔκπληξις (“mental disturbance”) and ἔκστασις (“displacement”, “ecstasy”). In his discussion of σχήματα (*Subl.* 16–29) he concentrates on those figures of thought and speech that in his view especially contribute to the sublime: oaths, rhetorical questions, asyndeton, anaphora, hyperbaton, and periphrasis. The grammatical figures (*Subl.* 23–27) are presented as a separate category (*Subl.* 23.1):

τί δὲ αἱ τῶν πτώσεων χρόνων προσώπων ἀριθμῶν γενῶν ἐναλλάξεις, πῶς ποτε καταποικίλλουσι καὶ ἐπεγείρουσι τὰ ἐρμηνευτικά;

But what of changes of case, tense, person, number and gender? How do they vary and excite the expression?

Longinus here mentions five *accidentia* of nouns and verbs, and he then illustrates the variations (ἐναλλάξεις) that occur in the use of three of those *accidentia*. The change of number (*Subl.* 23–24) concerns the substitution of plural for singular and of singular for plural. The discussion of change of tense (*Subl.* 25) focuses on the use of present for past tense. The change of person (*Subl.* 26–27), finally, can be the use of second person for third person, the use of first person for third person, or the turning away from one addressee to another.

A comparison of the lists of grammatical figures in Caecilius (fr. 75 Ofenloch = fr. 15 Augello) and Longinus shows that their treatments of this category are closely related, despite some terminological differences. Longinus refers to these variations as ἐναλλάξεις, whereas Caecilius calls the same figure ἀλλοίωσις

⁷⁰ Translations of Quintilian are adapted from Russell [2001b].

⁷¹ See Quint. *Inst.* 9.3.3. On the ancient criteria of linguistic correctness, see Siebenborn [1976] and Pagani in this volume.

(change, alteration).⁷² Both Caecilius and Longinus mention five subtypes of this figure, four of which are the changes of case (πτῶσις), number (ἀριθμός), person (πρόσωπον) and tense (χρόνος). The fifth one might seem to be different in the first instance: Caecilius mentions the variation κατ' ὀνόματα (concerning nouns), whereas Longinus includes the alteration of gender (γενῶν). Caecilius' explanation of his first subtype (κατ' ὀνόματα) however, shows that it concerns the change of gender as well.⁷³ In one of the examples that Caecilius cites, Thucydides (2.44.4) uses τὸ φιλοτιμον ("ambition", neuter) instead of ἡ φιλοτιμία (feminine). In other words, Caecilius' variation "concerning nouns" is in fact a variation of gender, and we can therefore conclude that Longinus mentions the same five subtypes of grammatical variation that Caecilius before him already distinguished in his work *On Figures*. It is plausible that these five variations (of case, tense, person, number and gender) formed the original group of grammatical figures in rhetorical theory.

7.2 *The Grammatical Figures and the Sublime*

According to Quintilian (*Inst.* 9.3.3–5), the grammatical figures aim at variety (*varietas*): they "stimulate the ear by their novelty" (*novitate aurem excitant*). In general, "these and similar figures (...) both attract the attention of the hearer, not allowing him to relax but repeatedly rousing him by some figure, and also acquire some charm from their resemblance to faults, just as bitterness in food is sometimes agreeable in itself".⁷⁴ Later rhetoricians agree with Quintilian that the grammatical figures aim at variety. Although Longinus shares this general view, he is more explicit about the effects of specific figures. We have seen that his ἐναλλάξεις "bring variation and excite the expression" (*Subl.* 23.1): ποικιλία is a common term for stylistic variety, and ἐπεγείρουσι ("raise", "excite") closely corresponds to Quintilian's *excitant*. In his discussion of the alterations of number, tense and person, Longinus is more detailed: the change of number causes unexpected emotion and surprise, while the change of tense and the

72 It is possible, however, that this is the (later) terminology of Tiberius, who is our source of this fragment.

73 Caecilius fr. 75 Ofenloch (= fr. 15 Augello): καὶ ὀνόματα μὲν ἀλλοιοῦσιν ἀντὶ τοῦ ἄρρενος τὸ θῆλυ ἢ τὸ οὐδέτερον παραλαμβάνοντες, ἢ τῷ ἄρρενι ἀντ' ἀμφοῖν χρώμενοι. "They change nouns by adopting the feminine or neuter instead of the masculine, or by using the masculine instead of both." The first example (Thuc. 1.6.1) concerns the expression πᾶσα ἡ Ἑλλάς ("all Greece") for οἱ Ἕλληνες ("the Greeks"), where a change of gender is combined with a change of number (as Caecilius observes).

74 Quint. *Inst.* 9.3.27: *Haec schemata aut his similia... et convertunt in se auditorem nec languere patiuntur subinde aliqua notabili figura excitatum, et habent quandam ex illa vitii similitudine gratiam, ut in cibis interim acor ipse iucundus est.*

change of person actively involve the audience in the narrative. Such effects of surprise, emotion and active engagement are closely related to Longinus' concept of sublimity (ὑψος).

Longinus' presentation of the grammatical figures is different from that of other rhetoricians, due to his focus on the sublime. While Caecilius (as far as we know), Quintilian and later rhetoricians present a list of grammatical figures adding one or more literary examples for each of them, Longinus selects only three grammatical figures for discussion (the changes of number, tense and person), because they are especially relevant to the topic of his treatise. It is instructive to compare Longinus' views on these three categories with the discussions of the same figures in Caecilius and Quintilian.

7.3 Change of Number

Caecilius gives two examples of the change of number (κατὰ δὲ τοὺς ἀριθμοὺς ἀλλοίωσις): ἅπαντα γὰρ ποθοῦμεν ἢ κλεινὴ πόλις (Eupolis fr. 104: "we, the entire famous city, desire") and ὑμεῖς ᾧ βουλή (Demosthenes 21.116: "you, council"). In both examples, a collective noun in the singular is combined with a plural. Quintilian (*Inst.* 9.3.8) offers a similar example of *figura in numero* ("figure in number"): *gladio pugnacissima gens Romani* ("a race most warlike with the sword, the Romans"). His second example comes from Vergil (*Ecl.* 4.62–63): *qui non risere parentes, | nec deus hunc mensa dea nec dignata cubili est* ("those who have not smiled upon their parents—no god thinks *him* deserving of a feast, nor goddess of her bed"). In this example the plural relative pronoun *qui* in the relative clause corresponds to the singular *hunc* in the main clause: this would have been a solecism, if it had not been Vergil who deliberately combined the plural with the singular. As a separate class, Quintilian (9.3.20) mentions cases in which "we speak of a single thing in the plural" (*ut de uno pluraliter dicamus*), as when Vergil uses "we" instead of "I": *sed nos immensum spatiis confecimus aequor* (*Georg.* 2.541: "but we have travelled over boundless spaces"). The opposite figure, speaking of a number of things in the singular (*de pluribus singulariter*) also occurs, as when Vergil speaks about "the fierce Roman" (*Georg.* 3.346: *acer Romanus*).

Longinus' discussion of the grammatical changes concerning number (*Subl.* 23–24: κατὰ τοὺς ἀριθμοὺς) is related to the examples that we find in Caecilius and Quintilian, but his focus is on the grandeur that the unexpected use of either singular or plural can achieve. He starts with an example that corresponds to those of Caecilius: λαὸς ἀπείρων . . . κελάδησαν ("a numberless people shouted"; the author is unknown) is a combination of a collective noun with a plural verb; the plural is thus understood to be used instead of the singular. But Longinus immediately makes it clear that he is not primarily interested

in such *constrictiones ad sensum*. Apparently distancing himself from more traditional theory, he points out that “it is more worthy of notice that plurals sometimes make a grander impression, courting favor by the sense of multitude given by the grammatical number”.⁷⁵ Thus, when Oedipus (Soph. *OT* 1403–1408: ὦ γάμοι, γάμοι . . . πατέρας ἀδελφούς παῖδας . . . νύμφας γυναῖκας μητέρας . . .) realizes that he has married his own mother, he speaks about “marriages, marriages, fathers, sons, brothers, brides, wives and mothers”: these words refer to Oedipus and Jocasta only, but “the expansion into the plural make the misfortunes plural as well” (*Subl.* 23.3: χυθείς εἰς τὰ πληθυντικά ὁ ἀριθμὸς συνεπλήθυσσε καὶ τὰς ἀτυχίας).⁷⁶ Longinus adds two more examples of the multiplication of names (“Hectors and Sarpedons”; and Pl. *Menex.* 245d: “Pelopses, Cadmuses, Aegyptuses and Danauses”), and he observes that the accumulation of these names in the plural presents the events as “more imposing” (κομπωδέστερα).⁷⁷ Longinus’ strategy in this chapter thus becomes clear: although he starts with a traditional example of *constructio ad sensum*, which we also find in Caecilius and Quintilian, he quickly moves on to a phenomenon that is more appropriate to his treatment of the sublime: the multiplication of plural names, which creates grandeur.

The converse figure is the use of a singular for the plural (*Subl.* 24.1): “the contraction of plurals into singulars also gives a great effect of sublimity” (τὰ ἐκ τῶν πληθυντικῶν εἰς τὰ ἐνικά ἐπισυναγόμενα ἐνίοτε ὑψηλοφανέστατα). Two examples are cited: ἔπειθ’ ἡ Πελοπόννησος ἅπασα διειστήκει (Dem. 18.18: “the whole Peloponnese was split”); and εἰς δάκρυα ἔπεσε τὸ θέητρον (Hdt. 6.21: “the theatre burst into tears”). In both cases, the effect is to be found not so much in syntax, but rather in the choice of a singular collective noun that stands for a group of individuals, who are treated as one solid body. It is the unexpectedness of such a formulation that Longinus admires: “Where the words are singular, to make them unexpectedly plural suggests emotion: where they are plural and you combine a number of things into a well-sounding singular, then this opposite change of the facts gives an effect of surprise.”⁷⁸

75 *Subl.* 23.2: ἀλλ’ ἐκεῖνα μᾶλλον παρατηρήσεως ἄξια, ὅτι ἔσθ’ ὅπου προσπίπτει τὰ πληθυντικά μεγαλορρημονέστερα καὶ αὐτῶ δοξοκοπούντα τῷ ὄγκῳ τοῦ ἀριθμοῦ.

76 Tib. *Fig.* 26 reports that Caecilius of Caleacte cited the same example (Soph. *OT* 1403) in his discussion of *παλλογία* (repetition), which Tiberius himself prefers to call *ἐπανάληψις*.

77 Here we might compare Demetrius’ advice (*Eloc.* 63) that the repetition of the same connective in the grand style “suggests infinite numbers”, as in *ἐστρατεύοντο Ἑλληνῆς τε καὶ Κἄρες καὶ Λύκιοι καὶ Πάμφυλοι καὶ Φρύγες* (see above).

78 *Subl.* 24.2: ὅπου τε γὰρ ἐνικά ὑπάρχει τὰ ὀνόματα, τὸ πολλὰ ποιεῖν αὐτὰ παρὰ δόξαν ἐμαθοῦς, ὅπου τε πληθυντικά, τὸ εἰς ἓν τι εὔηχον συγκορυφοῦν τὰ πλεῖονα διὰ τὴν εἰς τούναντίον μεταμόρφωσιν τῶν πραγμάτων ἐν τῷ παραλόγῳ.

7.4 *Change of Tense*

In his treatment of the change of tense, Longinus (*Subl.* 25) concentrates on the use of the present for the past tense, a phenomenon known as the ‘historical present’ in modern scholarship. It occurs frequently in classical Greek texts, especially in historiography and narrative parts of tragedy.⁷⁹ Both Caecilius and Quintilian mention the variation of tenses, and both cite examples in which the present substitutes the past tense. Caecilius cites Euripides: ὀρώ δὲ πρὸς τὰ παρθένου θοινάματα (fr. 145 Kannicht: “I see the monster hurrying to its maiden-feast”).⁸⁰ Quintilian (9.3.11) illustrates the use of “present for past” (*praesens pro praeterito*) with a passage from Cicero: *Timarchides negat esse ei periculum a securi* (*Verr.* 5.116: “Timarchides denies that he is in danger of the axe”). Whereas Caecilius and Quintilian do not comment on the precise rhetorical or literary effect of such alterations of tense, Longinus has more to say. It is not surprising that the historical present turns out to be closely related to his ideas on the sublime (*Subl.* 25):

“Ὅταν γε μὴν τὰ παρεληλυθότα τοῖς χρόνοις εἰσάγῃς ὡς γινόμενα καὶ παρόντα, οὐ διήγησιν ἔτι τὸν λόγον ἀλλ’ ἐναγώνιον πρᾶγμα ποιήσεις. “πεπτωκῶς δὲ τις,” φησὶν ὁ Ξενοφῶν, “ὑπὸ τῷ Κύρου ἵππῳ καὶ πατούμενος παίει τῇ μαχαίρᾳ εἰς τὴν γαστέρα τὸν ἵππον· ὁ δὲ σφαδᾶζων ἀποσείεται τὸν Κύρον, ὁ δὲ πίπτει.” τοιοῦτος ἐν τοῖς πλείστοις ὁ Θουκυδίδης.⁸¹

Again, if you introduce events in past time as happening at the present moment, the passage will be transformed from a narrative into a vivid actuality. “Someone has fallen,” says Xenophon [*Cyr.* 7.1.37], “under Cyrus’ horse and, as he is trodden under foot, is striking the horse’s belly with his dagger. The horse, rearing, throws Cyrus, and he falls.” Thucydides uses such effects very often.⁸²

79 Modern scholars disagree on the precise interpretation of the historical present. While it is a common assumption that the present tense verbs in a narrative mark the events described as ‘vivid’, ‘lively’ or ‘dramatic’, recent scholars describe this phenomenon in terms of ‘actuality’, ‘immediacy’ and the ‘involvement’ of the reader. Different approaches to the historical present in Thucydides are presented in Lallot-Rijksbaron-Jacquino-D-Buijs [2011].

80 Caecilius has a second example of the change of tense, which modern scholars would rather consider a change of verbal aspect (*Dem.* 59.34): the rhetorician interestingly claims that Demosthenes uses ὀρώντας (present participle) instead of ἑωρακότας (perfect participle).

81 Boter [2009] proposes to read ἐν τοῖς πλείστοις instead of ἐν τοῖς πλείστοις.

82 The transmitted text of Xenophon (*Cyr.* 7.1.37) slightly differs from Longinus’ citation: πεπτωκῶς δὲ τις ὑπὸ τῷ Κύρου ἵππῳ καὶ πατούμενος παίει εἰς τὴν γαστέρα τῇ μαχαίρᾳ τὸν

By using a present tense for a past tense, Xenophon presents past events “as happening at the present moment” (γινόμενα καὶ παρόντα). In other words, the distance in time between the narrative and the moment of narration is annihilated, and it is as if the reader becomes an eyewitness of the events in the narrative. The story is no longer a διήγησις (narrative) but an ἐναγώνιον πράγμα, Longinus states. Fyfe and Russell translate these words as “a vivid actuality”, but the term ἐναγώνιος seems to have a more specific meaning in ancient literary criticism.⁸³ It refers to a text (style, figure) that actively involves the audience in the narrative.⁸⁴ Where a διήγησις (narrative) keeps the audience at a certain distance from the events that took place in the past, the historical present draws the reader into the text. This idea of active involvement, which Longinus associates with sublime moments in literature, anticipates the modern concept of ‘immersion’, introduced by scholars of literary theory.⁸⁵ The important word ἐναγώνιος (“actively involving”) in fact connects the change of tense with the third grammatical figure that Longinus examines.

7.5 *Change of Person*

“Change of person” (ἡ τῶν προσώπων ἀντιμετάθεσις) is equally involving (ἐναγώνιος), Longinus (*Subl.* 26.1) points out. The first example is from the *Iliad* (15.697–698), where Homer directly addresses the narratee by using the second person (φαίης, “you would say”):

φαίης κ' ἀκμήτας καὶ ἀτειρέας . . .
ἀντεσθ' ἐν πολέμῳ ὥς ἐσσυμένως ἐμάχοντο.

You would say that unworn and with temper undaunted
Each met the other in war, so headlong the rush of their battle.

When the narrator suddenly uses a second person instead of the third, the audience is directly drawn into the scene. In other words, both the change of tense (the use of the historical present) and the change of person (the unexpected address of the second person) can dislocate the audience and involve them in the narrative, as if they are “in the middle of danger” (*Subl.* 26.1: ἐν μέσοις τοῖς κινδύνοις).

ἵππον αὐτοῦ· ὁ δὲ ἵππος πληγείς σφραδάζων ἀποσείεται τὸν Κῦρον. By adding the words ὁ δὲ πίπτει (“and he falls”), Longinus includes a third historical present in his example.

83 “Vivid actuality”: Fyfe-Russell [1995] 247.

84 On the semantics of ἐναγώνιος, see Ooms-de Jonge [2013], with a discussion of *Subl.* 25 at p. 104.

85 See Ryan [2000].

Longinus adds some more examples of the same type.⁸⁶ Having cited a passage from Herodotus (2.29), he asks: “Do you see, friend (ὄρας, ὦ ἑταίρε) how Herodotus takes you along with him through the country and turns hearing into sight?” This passage is interesting for two reasons. Firstly, we notice that Longinus himself applies the figure that he is discussing, by suddenly addressing his own reader. In this way the rhetorician involves his audience in his own text just as Herodotus invites his reader to follow him on his travels: “the reader is drawn into the treatise”, as Too rightly observes.⁸⁷ Secondly, Longinus points out that the use of the second person has the effect of turning hearing into sight: the reader or listener becomes an eyewitness of the events in the text. This grammatical figure is thus closely related to the concept of visualization (φαντασία), an important source of the sublime that Longinus discusses elsewhere in his treatise (*Subl.* 15).⁸⁸

There are two further types of the change of persons that Longinus presents (*Subl.* 27). On the one hand, there is the use of the first person for the third person. The narrator, who is talking *about* a character in the third person (περὶ προσώπου) suddenly “changes into the person himself” (εἰς τὸ αὐτὸ πρόσωπον ἀντιμεθίσταται). Longinus’ first example is from the *Iliad* (15.346–349):

Ἐκτωρ δὲ Τρώεσσιν ἐκέκλετο μακρὸν αὔσας
νηυσὶν ἐπισσεύεσθαι, ἔάν δ’ ἔναρα βροτόεντα-
δὲν δ’ ἂν ἐγὼν ἀπάνευθε νεῶν ἐθέλοντα νοήσω,
αὐτοῦ οἱ θάνατον μητίσσομαι.

Hector lifted his voice and cried afar to the Trojans
To rush back now to the galleys and leave the blood-spattered booty.
Whomsoever I see of his own will afar from the galleys,
Death for him there will I plan.

When Homer unexpectedly uses the first person (νοήσω, “I see”), it is as if he himself *becomes* Hector.⁸⁹ This effect is related to what modern scholars have

86 Arat. *Phaen.* 287; Hom. *Il.* 5.58.

87 Too [1998] 200.

88 Cf. Too [1998] 199–200.

89 [Plut.] *Vit. Hom* 57 observes that Homer changes from the narrative to the mimetic mode in this passage (ἀπὸ γὰρ τοῦ διηγηματικοῦ μετέβαλεν εἰς τὸ μιμητικόν). See Hillgruber [1994] 172. Like Longinus, Plutarch does not punctuate at the end of *Il.* 15.346. Some modern scholars however interpret differently and believe that Hector’s direct speech, announced in *Il.* 15.346, ἐκέκλετο μακρὸν αὔσας, begins in *Il.* 15.347, with infinitives (ἐπισσεύεσθαι, ἔάν) for imperatives. See Russell [1964] 145; Janko [1994] 265; Mazzucchi [2010a] 236–238.

labeled the “intersubjectivity of the sublime”.⁹⁰ As soon as the narrator or poet becomes part of the scene that he is describing, the listener is also dislocated, because he now seems to be addressed by Hector himself rather than by the poet.

The final type of “change of persons” concerns those instances where a speaker, while speaking to someone, suddenly addresses another person. Two examples from Demosthenes and Homer are cited to demonstrate the strong emotional impact of this figure.⁹¹ This is the alteration concerning persons (*κατὰ δὲ τὰ πρόσωπα ἀλλοίωσις*) that Caecilius of Caleacte seems to have examined in his *On Figures*. In the fragment preserved in Tiberius, he cites a passage from Demosthenes (25.28) in which the speaker, while speaking to the judges, suddenly addresses his opponent directly; and in another passage from the same author, the speaker turns from his opponent to the judge (Dem. 18.314).⁹² The examples in Quintilian (9.3.21) are different. He cites two passages from Vergil’s *Georgics*, in which the poet uses the second person pronoun (2.298: *neve tibi ad solem vergant vineta cadentem*, “let not your vineyards slope towards the West”) and the first person pronoun (3.435: *ne mihi tum mollis sub divo carpere somnos*, | *neu dorso nemoris libeat iacuisse per herbas*; “may I not choose that moment to snatch sleep in the open, or lie on the wood’s ridge in the grass!”). Quintilian states that in both passages the poet is giving advice to all people (*omnibus*), not just to some particular person or to himself.⁹³

Although the examples in Caecilius and Quintilian can be related to some of the examples in the treatise *On the Sublime*, Longinus is clearly more explicit about the specific effects that the confusion of persons can produce. In a moment of sublimity, the reader can suddenly feel that he becomes part of the story, when he is suddenly addressed in the second person; and the author himself impersonates one of his characters when unexpectedly using the first person. Through the manipulation of grammatical person, the author (narrator), reader (narratee) and characters thus join in a sublime moment of narrative.

90 See Too [1998] 194–202, esp. 199: “[I]t becomes impossible to distinguish between the author and the audience”. In this case, the author merges not with his reader but with a character in his narrative.

91 Dem. 25.27–28; Hom. *Od.* 4.681–689: Penelope, speaking to the herald Medon, suddenly addresses the suitors.

92 Caecilius adds an example from Euripides, *Or.* 720–722.

93 Quintilian (9.3.21–22) adds a couple of examples from Cicero, where the orator talks about himself in the third person: *de nobis loquimur tamquam de aliis* (“we speak of ourselves as of other people”).

7.6 *Sublime Linguistics between Grammar and Rhetoric*

We have observed that Longinus' theory of grammatical figures is both traditional and innovative. On the one hand, his discussion of "alterations" corresponds to the treatment of these figures in the rhetorical works of his Greek and Roman colleagues. In particular, Longinus' five grammatical alterations (case, tense, person, number and gender) are the same types that Caecilius discussed in his *On Figures*. On the other hand, Longinus adopts a different approach than Caecilius, Quintilian and later rhetoricians, adapting grammatical theory so that it fits his ideas on the sublime.⁹⁴ He does not limit himself to an enumeration of figures with examples, but selects three grammatical figures that are particularly relevant to his own subject. In some cases, he can be seen to redefine existing categories.

When dealing with the change of number, he makes it clear that he is not primarily interested in *constructio ad sensum* (the combination of a collective noun in the singular with a verb in the plural), the type that one finds in the handbooks of many rhetoricians. Instead, Longinus draws attention to the effect of multiplication: an accumulation of names in the plural is impressive and causes unexpected emotion. Similarly the contraction of plurals to singulars takes the audience by surprise. The change of tense contributes to the dislocating effect of the sublime. For Longinus, the historical present is a figure that writers and poets can consciously employ in order to involve their audience in the narrative. In doing so, they present past events as happening at the present moment, so that the distance between the characters of the narrative on the one hand and the narrator and audience on the other is removed. The change of persons can have the same effect: the use of the second person within a narrative involves the listener in the story. Emotion is the main purpose of the other changes of person: the unexpected use of the first person suggests that the narrator transforms himself into one of his characters, a dramatic shift that takes the audience by surprise.

The grammatical figures form a fascinating category between the disciplines of grammar and rhetoric. By relating the categories of number, tense and person to the ecstatic and emotional effects of ὑψος, Longinus demonstrates that one simple linguistic change can have an enormous impact on the audience of the orator or writer. This happy marriage between grammar and rhetoric may indeed be characterized as sublime linguistics.

94 It is difficult to determine whether Longinus was entirely original in this respect. It is possible that Caecilius offered a similar discussion of the grammatical figures in his treatise *On the Sublime*.

1.1 *Sophistic Methods prior to the Sophistic Movement*

According to Xenophanes, no man ever has seen nor ever will see τὸ σαφές, “that which is clear” (B 34 D.-K.);¹ Heraclitus believes that it is impossible to reach the boundaries of the soul (B 45 D.-K.);² according to Democritus, “truth is in the depths” (B 117 D.-K. ἐν βυθῶ), *i.e.* far beyond our reach. Yet despite such statements, the world of archaic *physikoi* is predominantly the world of

* I would like to thank F. Ademollo and R. Chiaradonna, whose valuable suggestions contributed greatly to this paper; naturally, final responsibility for any errors in the content lies exclusively with me.

1 See F. Declava Caizzi [1974], who composed a classic study on fr. 34 of Xenophanes. I am inclined towards the ‘pessimistic’ interpretation.

2 The text of the fragment is controversial (cf. Dorandi [2010a]; Mansfeld [2010]), but the overall meaning is clear.

certainty. So fully convinced are they of their assertions that they hardly ever find it necessary to support their opinions with arguments and to assess the grounds in favor and against their views.³

In the iconography of the ancient scholar, intellectual—but also physical— isolation is a recurrent element. Take the case of Heraclitus: in principle, he does not seem to be averse to engaging with the overall community, but his aspiration is that the community should conform to his ideals. Since such an outcome is not accomplished, he withdraws disdainfully and turns to playing dice with some small boys (D. L. 9.3). However, isolation cannot give rise to debate,⁴ and if debate does not come into being, then neither does science; moreover, if science does not come into being, neither does a scientific language, nor the interest in creating one. But what is a scientific language? First and foremost, it consists of speakers' willingness to agree on the meaning of certain terms.

In a passage from *Politics* (1261a15–21), Aristotle writes:

I refer to the ideal of the fullest possible unity of the entire state (τὸ μίαν εἶναι τὴν πόλιν . . . ὅτι μάλιστα πᾶσαν), which Socrates takes as his fundamental principle. Yet it is clear that if the process of unification advances beyond a certain point (γίνομένη . . . μίᾳ μᾶλλον), the city will not be a city at all; for a state essentially consists of a multitude of persons, and if its unification is carried beyond a certain point, city will be reduced to family and family to individual, for we should pronounce the family to be a more complete unity than the city, and the single person than the family; so that even if any lawgiver were able to unify the state, he must not do so, for he will destroy it in the process.⁵

But Socrates (*i.e.* Plato) never uttered the statement attributed to him here. What he asserts is that the good city must be “one”, but in the sense of “unitary”.⁶ Aristotle, on the other hand, insists on the meaning of “one” as “homogeneous”,

3 A quest for consensus and support was present among the archaic thinkers as well (see Obbink [1992] 196), but it was not systematic.

4 This is Cornford's well known argument [1952]. According to a widespread tradition, Heraclitus is said to have written his *biblion* in a deliberately obscure style, “in order that none but adepts should approach it, and lest familiarity should breed contempt” (D. L. 9.6; transl. Hicks [1925] II, 413).

5 Transl. Rackham [1932] 7.

6 *Resp.* 5.422e–423a, and above all 462a–b: “Do we know of any greater evil for a state than the thing that distracts it and makes it many instead of one, or a greater good than that which binds it together and makes it one?” (transl. Shorey [1930] 469).

“undifferentiated”. Since the idea of Aristotle failing to understand Plato’s words can be ruled out, it is clear that he deliberately misunderstood.

This method of discussion based on intentional distortion of another man’s thought is generally considered to be the poison fruit of Sophistics. In actual fact, it was in use even earlier. The Greeks—Heraclitus relates—believed that Hesiod was a great master and a great wise man; but a man cannot be wise if he “does not recognize day and night. For they are one” (ἡμέρην καὶ εὐφρόνην οὐκ ἐγίνωσκεν· ἔστι γὰρ ἓν: B 57 D.-K.).⁷ According to H. Diels (*ad loc.*: vs⁶ 1, 163; see Gemelli Marciano [2007] 346, *ad loc.*), Heraclitus is referring to *Theogony* 123–124 and 748–749:

From Chasm, Erebus and black Night (μέλαινά τε Νύξ) came to be; and then Aether and Day (Ἡμέρη) came forth from Night (. . .). Where Night and Day (Νύξ τε καὶ Ἡμέρη) passing near greet one another as they cross etc.⁸

If these are the Hesiodic lines referred to by Heraclitus,⁹ the polemic cannot but be based on the twofold meaning of “day”, which indicates both the 24-hour span and also the (roughly) 12 hours of daylight. Heraclitus feigns that Hesiod is talking about astronomy and that he makes a mistake involving astronomy. It is quite clear, however, that Hesiod is speaking as a poet, and that Heraclitus is striking a blow at a target he himself has built.

In both examples, one from the period following the age of Σοφιστική, and one from an earlier period, the method is the same: singling out a word from its context and interpreting it in a manner different from that intended by the author. The Sophists ‘legalized’ this method and turned it into an element of the *paideia* of a successful man. But they by no means invented the method. It is attested in every era of ancient thought, and bears direct responsibility for the fact that in Greece a specifically philosophical language was late in arising, and perhaps never came to exist. In any case, the Greek philosophers, including the *physikoi*, drew considerable advantage from being able to shift tacitly from the commonly accepted meaning of a term to its technical significance.¹⁰ We will return to this question later.

7 A similar critical statement, but more comprehensible, is attested in B 106 D.-K.

8 Transl. Most [2006] 12 and 63.

9 And this is by no means certain: see *e.g.* Kirk [1962] 156–157.

10 The first explicit ‘protest’ against obscure and ambiguous philosophical writing was, according to Mansfeld [1995] 226 and Trépanier [2004] 79, fr. 1 D.-K. of Diogenes of Apollonia, who recommended that the *lexis* should be “simple and dignified” (but see

1.2 *An Unreformed Language*

Gorgias heaped praise on the potential of language, describing it as a weapon which, in its own right, is neutral, and can be used either for good or for evil purposes. In ch. 14 of the *Encomium of Helen* one finds the celebrated comparison between *logos* and *pharmakon*, the latter meaning either “medicine” or “poison”.¹¹ Gorgias looks back to an illustrious tradition: the motif of the ambiguity of the *logos* is already present in epic poetry: the Muses can tell either the truth or a falsehood (Hes. *Theog.* 27–28).

This notwithstanding, the Gorgian experience did not follow the morally neutral idea through to its potential completion. It does not ensue automatically from the ambiguity of the *logos* that the art of Gorgias is concerned with means rather than ends.¹² In Gorgias there persists the archaic unity between a fine speech and the speaker’s moral qualities. There is nothing in the *Encomium* allowing the suggestion that even a wicked man can deliver a fine speech (καλῶς). Not only ‘weak’ Helen, but even Paris, a thief and kidnaper, is an elevated spirit, since he is capable of appreciating beauty. In some sense the beauty of the *logos* has an influence over the quality of the action, rehabilitating it morally. One struggles to imagine that Helen would have been lured by the seductive powers of the *logos* if this *logos* had been pronounced by, for instance, Thersites, “who knew so many words, but devoid of *kosmos*” (*Il.* 2.13–14). In Gorgian terms, such a *logos*, even had it displayed a well crafted turn of phrase, would not have been a genuinely fine statement.

More interesting than Gorgias, in our perspective, are Protagoras and Prodicus,¹³ the first to have attempted to study language from within, independently of its psychagogic elements. Prodicus pointed out that in everyday language a given thing can be indicated in several different ways: on the level of basic communication, a certain dose of ambiguity does not prevent two speakers from understanding each other. It is, however, an imperfect understanding. In actual fact, for each thing there exists *only one* name that defines it precisely, ὀρθῶς. This vision outlined by Prodicus marked the starting point of the formula “correctness of names”, ὀρθότης τῶν ὀνομάτων, which was to enjoy considerable fortune,¹⁴ and whose effects were destined to make themselves

Lapini [2013] 161ff.). Be that as it may, it can also be noted that the philosopher who criticized other authors’ failure to eliminate ambivalence did not himself feel equally under the obligation to express himself without ambiguity.

11 On this passage, see now Ioli [2013] 239ff.

12 Thus e.g. Guthrie [1971] 271, wrongly in my opinion.

13 For linguistic reflections of the Sophists cf. Novokhatko in this volume.

14 See Pagani in this volume.

felt in the *rheseis* of Euripides, in the *logoi* of Thucydides,¹⁵ in the *Tetralogies* of Antiphon, in the so called Anonymus Iamblichi, in Thrasymachus of Calchedon, in Critias of Athens, and in the many others who “went in search of lexical propriety” (τοὺς ἀκριβεῖς λόγους).¹⁶

It should be noted, however, that Prodichean *orthotes* and Gorgian *Kunstprosa* never became one thing only. The followers of *orthotes*, such as Thucydides, Antiphon, and the Anonymus Iamblichi, adopted a difficult and harsh style, while polished and harmonious writers like Lysias and Isocrates fashioned a far more discreet genre of *orthotes*. The correctness of names is an intellectualistic fact, of which the spoken language can tolerate no more than a moderate quantity. Here is an example drawn from Anonymus Iamblichi 4.2 διὰ τοιούτων δέ τι ταῦτα πάσχοουσιν· φιλοψυχοῦσι μὲν, ὅτι τοῦτο ἡ ζωὴ ἐστίν, ἡ ψυχὴ· ταύτης οὖν φεῖδονται κτλ. (“therefore something of the kind happens to them: they are strongly attached to their soul because precisely the latter, the soul, is life; this is why they try to safeguard it” etc.). The author enunciates a theory, and in so doing he takes care to explain the reason why “holding life dear” (φιλοψυχεῖν) is expressed through a reference to the word “soul” (ψυχὴ). In ch. 43, after mentioning αἱ νόσοι, τὸ γῆρας, αἱ ἐξαπιναιῖοι ζημίαι (“sickness, old age, sudden *zemiai*”), the author stops for a moment, in order to specify the meaning he wishes to bestow on ζημίαι: οὐ τὰς ἐκ τῶν νόμων λέγων ζημίας (...) ἀλλὰ τὰς τοιαύτας, πυρκαϊάς, θανάτους οἰκετῶν κτλ. (“by *zemiai* I do not mean the punishments provided by the law, but rather misfortunes, e.g. fires, the death of loved ones”, etc.). The addition was not necessary, because, given the context, the reader was already capable of grasping the value of the term. But the author aimed to be absolutely precise, to the point of pedantry. On the other hand, it is clear that if detailed reports and carefully framed distinctions have to be provided at every step, then the communications will soon falter and come to a halt. This explains why, although Prodicheanism and Gorgianism effectively happen to meet occasionally, they do not proceed far together.

A similar line of reasoning is found in Protagoras’ ὀρθοπέπεια, “correctness of speech”,¹⁷ the foundation of which is summarized in the following statement Plato attributes to Protagoras in the *Theaetetus* (168c):

15 Thucydides took from Prodicus τὴν ἐπὶ τοῖς ὀνόμασιν ἀκριβολογίαν (Marcellin., *Vit. Thuc.* 36).

16 Dion. Hal., *Isae.* 20.

17 Which is not the same thing as “correctness of names”. This distinction is already noted in Pfeiffer [1968] 40 and 280. On Protagorean ‘correctness’ in general see Brancacci [2002b] 169ff.; [2010] 53ff., and Corradi [2012] 166ff. On Protagoras’ ὀρθοπέπεια, see also Novokhatko and Pagani in this volume.

And upon this basis you will enquire whether knowledge and perception are the same thing or different things. But you will not proceed as you did just now. You will not base your argument upon the use and wont of language; you will not follow the practice of most men, who drag words this way and that at their pleasure (ὄπη ἄν τύχῳσιν ἔλκοντες), so making every imaginable difficulty for one another.¹⁸

Since Protagoras wrote works on the origins of the mankind, it was probably in precisely this context that he discussed the nature of language, and it is quite possible that he took up a position with regard to the nature/convention alternative (φύσει/νόμῳ).¹⁹

Several doctrines formulated by Protagoras are known. We know from Diogenes Laertius (9.53) that he divided the parts of discourse into four,²⁰ *i.e.* entreaty (εὐχῳλή), question (ἐρώτησις), answer (ἀπόκρισις), and command (ἐντολή).²¹ This subdivision evidently underlies the passage from Aristotle, *Poetics* 19.1456b15–19:

Protagoras criticizes Homer for purporting to pray (εὐχεσθαι) but giving a command (ἐπιτάττει) by saying “Sing, goddess, of the wrath . . . ?” (To bid someone do or not do something, says Protagoras, is a command [ἐπιτάξις]).²²

It would thus appear that Protagoras’ reproof of Homer was due to the poet’s use of ἐντολή (*Il.* 1.1 ἄειδε) instead of εὐχή or εὐχῳλή. Additionally, Aristotle, *Rhetoric* 3.5.1407b6, attests that Protagoras distinguished nouns according to the genders: masculine, feminine, and neuter.²³ A further item of information on Protagoras’ gender-based subdivision is again preserved by Aristotle in *Sophistical Refutations* 14.173bff., from which it emerges that Protagoras

18 Transl. Levett [1990] 294.

19 And this independently of whether or not the words νόμος and φύσις were used. The Aristotelian testimony of *Soph. el.* 14.173b on μῆνις and on πῆληξ (see below) would be sufficient, Momigliano [1969] 159 argued, to attest that Protagoras belonged to conventionalism.

20 See Novokhatko (§ 3.5) in this volume.

21 Diogenes specifies that he himself was the first to conceive of this subdivision (although the merit for its creation was then attributed to the Stoics: see Shalev [2006] 309).

22 Transl. Halliwell [1995] 97.

23 But the Greek text says “masculine names (ἄρρενα), feminine names (θῆλεα) and inanimate things (σχεύη)”. See also Novokhatko in this volume.

contested the gender of μῆνις (wrath) and πῆληξ (helmet), which in his view ought to have been masculine (whereas these words are actually feminine).²⁴

Aristophanes drew inspiration for numerous touches of comedy from discussions on language like those of Protagoras and Prodicus. In particular, he identified the essence of Sophistics as residing in linguistic artifice rather than in fee-paying tuition and the kind of rhetorical devices so frequent in worldly-wise verbal sparring matches. The Aristophanean sophist *par excellence* is not Cleon/Paphlagon (*Knights*), but one who engages in sophisticated reasoning like Socrates and his pupil Pheidippides (*Clouds*). A Sophist is not so much a man who uses the power of language to sway the crowds as, rather, one who deceives and dupes the individual. The education of Strepsiades (*Nub.* 658ff.) consists in knowledge of the meaning and gender of nouns:²⁵ a man devoid of knowledge (and thus of control) of the functioning of language appears as one who does not know what he wants, and thus, in a sense, as one who has no rights.

1.3 *Nomen et nominatum*

It was in the Sophistic age that the question arose as to whether names reflect the reality of things or whether they reflect nothing other than an agreement among speakers, tacitly renewed generation after generation.²⁶ The two positions were later represented in an exemplary manner through the characters of the Platonic *Cratylus*: namely Hermogenes, according to whom names exist by convention (θέσει), and Cratylus, according to whom names exist by their own nature (φύσει).²⁷

Science also took an interest in the problem. The anonymous author of the Hippocratic treatise *On the Art of Medicine* (Περὶ τέχνης), which some date to the late 5th century BC, others to the 4th, writes as follows (ch. 2):

οἶμαι δ' ἔγωγε καὶ τὰ ὀνόματα αὐτὰς (i.e. τὰς τέχνας) διὰ τὰ εἶδεα λαβεῖν· ἄλογον γὰρ ἀπὸ τῶν ὀνομάτων ἡγεῖσθαι τὰ εἶδεα βλαστάνειν, καὶ ἀδύνατον·

24 See the observation by Dorion [1995] 312–313, and by Fait [2007] 168–169.

25 Not by chance, Diels included ll. 658ff. of the *Clouds* among the Protagorean imitations (C 3 D.-K.). It is worth recalling the examination on the Homeric γλώσσαι that the bad boy has to face in Aristophanes' *Banqueters*: Pfeiffer [1968] 14–15. In the competition depicted in the *Frogs* it is, once again, names that constitute the topic of discussion (Dover [1994] 24–37). On the general question, see Classen [1959b].

26 See Novokhatko in this volume.

27 On *Cratylus*, see now the monumental commentary by F. Ademollo [2011].

τὰ μὲν γὰρ ὀνόματα φύσιος νομοθετήματά ἐστι, τὰ δὲ εἶδεα οὐ νομοθετήματα, ἀλλὰ βλαστήματα.

I for my part think that the names also of the arts have been given them because of their real essences; for it is absurd—nay impossible—to hold that real essences spring from names. For names are conventions, but real essences are not conventions but the offspring of nature.²⁸

The overall tone, strongly based on Sophistic categories,²⁹ leaves no doubt as to the fact that the author sides with conventionalism: in the *first* place there arise the arts, and only *after that* are names found to indicate them. But why, then, should names be defined as “conventions of *nature*”, *i.e.* as established things, imposed by nature? The genitive φύσιος would be more understandable if it were placed close to the subsequent βλαστήματα; and indeed, this is precisely where Gomperz placed it. However, this is a brutal and perhaps pointless transposition. The received text can be salvaged with the help of Democritus. Democritus was probably the first *physikos* who attempted to undertake semantic analyses outside of the gnoseological and ontological confines of archaic thought. Undoubtedly, the Democritean opinions on language rest on the *physis*, but the nature/convention alternative is not a black-and-white alternative: for although language does develop νόμῳ, or τύχῃ,³⁰ or θέσει, the *primum movens* is the need to communicate, which is a biological necessity, inherent in the *nature* of all living beings. The argument proposed by the author of the Περὶ τέχνης could be built up according to the same line, and the puzzling expression νομοθετήματα φύσιος could perhaps be translated as “impositions of nature”. The implicit train of thought could be that the arts, which are present in the animal world as well (the spider’s web, mole burrows, etc.) are βλαστήματα φύσιος in that they are created *directly* by nature, whereas names are created by nature through the presence of men. In short, *physis* reaches the half-way point, then it hands the baton over to *thesis*, which covers the remaining half of the stretch. Once men have received the impulse

28 Transl. Jones [1923] 193, who, however, following Gomperz, prints φύσιος after βλαστήματα.

29 On the close relationship of *On the Art* with Sophistic debates, see now Mann [2012] 1–7, and *passim*, in the commentary.

30 As underlined by Momigliano [1969] 156, τύχῃ is a much stronger expression than θέσις; but it cannot be categorically ruled out that it may have been used by Democritus. See Bertagna [2007] 395, with the important footnote 9.

to communicate, they will create names and languages in various ways that differ from group to group and from population to population.³¹

It is also worth mentioning (though an in-depth analysis would be beyond the scope of this paper) a passage from the commentary by Olympiodorus on Plato's *Philebus* (12c); this is a passage where Democritus is credited with the surprising definition of the names of the gods as ἀγάλματα φωνήεντα (B 142 D.-K.), which one could translate as “statues endowed with words” or “talking images” or “vocal effigies of the gods”.³² Strictly interpreted, the fragment implies a natural correspondence between *nomen* and *nominatum*; this, on the other hand, would be in contradiction with the idea that language is νόμος, or τύχη (B 26), having no necessary relationship with πράγματα. On the basis of A 127 D.-K. ὁ δὲ Ἐπίκουρος καὶ ὁ Δημόκριτος καὶ οἱ Στωϊκοὶ σῶμά φασι τὴν φωνήν, Haag believed that in Democritus' vision even the *nomen* was constituted by atoms.³³ This would imply a physical and material correspondence—an extremely firm bond—between name and object. Furthermore, Haag also maintained that the Democritean *doxa* could even be seen as having influenced the section of the *Cratylus* that investigates the relation holding between names and reality. But ingenious though Haag's position may be, it is evidently an over-interpretation: ἀγάλματα φωνήεντα is more likely to have the simpler meaning that names reflect in an immediate manner what men say, *i.e.* what men think, about the gods: accordingly, names should be seen as cultural products that have undergone a particular process of elaboration, and not at all as a product of *physis*. In short, it does not seem appropriate to distance Democritus from Hermogenes' positions in order to bring him as close as possible to those of Cratylus.

1.4 Language as Added Value

Plato's early dialogues are often built around the conceptual analysis of a word. In *Euthyphron* he analyzes piety (*hosiotetes*), in *Laches* courage (*andreia*), in *Charmides* self-restraint (*sophrosyne*), and so on. The question that sets in motion the analysis is at the same time its instrument: namely the τί ἐστὶ, the “what is it?”. Thus it is no coincidence that Plato wrote a dialogue such as

31 According to Pohlenz [1955²] I, 36, the first thinkers to recognize this phenomenon were precisely the Stoics. In actual fact, however, Democritus had already suggested the existence of a relationship between the variety of languages and the variety of νόμοι. The same phenomenon would subsequently be recognized by the author of [Aristotle] *Pr.* 10.38.895a6 τοῦ ἀνθρώπου μία φωνή, ἀλλὰ διάλεκτοι πολλαί (cf. *Hist. an.* 4.9.356b).

32 Graham [2010] I, 613.

33 Haag [1933] 22.

the *Cratylus*. This work is by no means out of place in Platonic production: on the contrary, it is absolutely central. Through the etymologies (whether serious, semiserious or ironic matters little), Plato displays some *practical* models of language manipulation, models he himself does not hesitate to put to use.³⁴ The most important Platonic theories are not formulated only through strictly philosophical means: there is always an ‘external’ contribution, which can be a citation, a mythic tale, a linguistic artifice, or, at times, all three together.³⁵ Take the case of *Theaetetus* 173e:

ἀλλὰ τῷ ὄντι τὸ σῶμα μόνον ἐν τῇ πόλει κείται αὐτοῦ καὶ ἐπιδημεῖ, ἡ δὲ διάνοια, ταῦτα πάντα ἡγησαμένη σμικρὰ καὶ οὐδέν, ἀτιμάσασα πανταχῆ πέτεται κατὰ Πίνδαρον ‘τὰς τε γὰς ὑπένερθε’ καὶ τὰ ἐπίπεδα γεωμετροῦσα, ‘οὐρανοῦ θ’ ὕπερ’ ἀστρονομοῦσα, καὶ πᾶσαν πάντη ἐρευνημένη τῶν ὄντων ἐκάστου ὄλου, εἰς τῶν ἐγγὺς οὐδέν αὐτὴν συγκαθιέισα.

It is in reality only his³⁶ body that lives and sleeps in the city. His mind, having come to the conclusion that all these things are of little or no account, spurns them and pursues its winged way, as Pindar says, throughout the universe, “in the deeps below the earth” (τὰς τε γὰς ὑπένερθε) and “in the heights above the heaven”; geometrizing upon earth, measuring its surface, astronomizing in the heavens (οὐρανοῦ θ’ ὕπερ); tracking down by every path the entire nature of each whole among the things that are, and never condescending to what lies near at hand.³⁷

The two short quotations from Pindar (which constitute the fr. 292 Maehler) are not intended to stand in for words that are beyond the scope of ‘normal’ prose (quite the opposite: the concept is extremely simple), but rather to warn the reader that the continuation of the sentence is not to be taken in the literal sense. The things “in the deeps below the earth” and “in the heights above the

34 Ademollo [2000] 72 has very aptly defined the etymological section of *Cratylus* as “a sort of encyclopaedia of Greek culture”. And also—I would add—as a vast anthology of argumentative models; cf. Amsler [1989] 39: “*Etymologia* as a strategy for reading becomes a strategy for writing other texts which encode the technical, historical, and exegetical understandings produced by etymological explanations and interpretations”. Amsler is speaking of later authors, but the same line of reasoning is already valid for Plato. Cf. Sluiter in this volume.

35 See e.g. Trabattoni [2002] 91.

36 I.e. of the *sophos*.

37 Transl. Levett [1990] 301.

heaven” do not refer to genuine geological, meteorological or astronomic studies; they serve instead to summarize intellectual activity in itself, for in the case of the true *sophos*, such activity, far from being exercised through the study of physical phenomena, is, on the contrary, carried out through study of abstract concepts like justice or happiness.

In a similar manner, the link between love and philosophy is also founded on a verbal expedient. Eros is not actual possession of the loved one, but the desire to possess the person. Thus the normal condition of the lover is that of desiring something, of reaching out towards something. The same happens with *philosophia*, which is not *sophia*, but, as the word itself says, desire for *sophia*. Therefore eros and philosophy work in the same manner: “So that Love is necessarily a philosopher, and as a philosopher, necessarily between wisdom and ignorance” (*Symposium* 204b: Transl. Rowe [1998] 83). But the intriguing association rests on the equivalence *philein/eran*, which in everyday language holds *only in certain cases*.

Another example. The ideal state set up in the *Republic* will—like the existing *poleis*—need to have soldiers. However, these will not be called “soldiers” (στρατιῶται) but rather “defenders”, “guardians” (φύλακες).³⁸ What is the reason for this innovation? A first answer is that the army of the Ideal State will be called upon to fight only defensive wars, and also to fulfil tasks of political policing (415d9–e2). Such tasks are better described by the term *phylax* than by *stratiotes*. But there is also a more general and more structural explanation. The *kallipolis* is not, as is often said in a simplifying manner, divided into three, but into two:³⁹ on the one hand there stand men characterized by the *epithymetikon*, on the other those characterized by the *thymoeides*. The best among the latter will be selected for tasks involving the issuing of commands and will become *archontes*, giving rise to the third class, the most important one. Since the third class originates from the second, the word that defines the members of both cannot be either *stratiotai* or *archontes*. But the two classes are united by a common duty: that of always preserving the same *dianoia*, i.e. the same convictions and attitudes, the same way of thinking and feeling. In book II of the *Republic*, Plato announces this general principle (380d, 381a):

Is it not true that to be altered and moved by something else happens least to things that are in the best conditions? (...) And is it not the soul

38 The first time the term *phylakes* appears in the plural and with a technical meaning is in *Resp.* 374d τὸ τῶν φυλάκων ἔργον.

39 The division into three is developed in depth only in books VI and VII.

that is bravest and most intelligent, that would be least disturbed and altered by any external affection?⁴⁰

The *dianoia* of the rulers cannot change because if they are true rulers, they will ensure that their government conforms to eternal and immutable principles. But neither can the *dianoia* of the soldiers change. Were it to change, this would be as if dogs protecting a flock were to turn into wolves. Thus there exists a virtue held in common by the highest classes, namely the virtue of *preservation* (σώζειν, φυλάττειν).

From the point of view of expression, Plato's line is the same as that of the *physikoi*: innovating as little as possible, accepting conventional language.⁴¹ But anthropology is often more delicate, more complex than the *physike*, and it requires a richer *Wortschatz*. Accordingly, after ἀρχή, λόγος, νοῦς etc., even ὄρος, μέθοδος, οὐσία, στοιχείον, εἶδος, ἀρετή etc. take on, when necessary, a technical value. As always, the great store of names is found in the world of the arts and sciences: horse-riding, divination, medicine and so forth.

The osmosis between philosophical language and everyday language produces two effects: on the one hand it guarantees that philosophy will not become isolated from common people, while on the other it provides thinkers with the formidable resource of having at their disposal a set of double-faced words, which can be used in the technical or non-technical sense according to the requirements of the given case. This averts the risk that research may be blocked by the impossibility of reaching absolute precision on certain points. It thus becomes clear why, in *Charmides* 163d and in *Politicus* 261e Plato states that distinctions like those of Prodicus are of no help in doing philosophy.⁴² Rigid pursuit of the "correctness of names" would soon lead to paralysis.

In 4th century BC linguistic speculation, an important role must be awarded to Antisthenes, who was first a rhetor, and then a philosopher. Titles such as *On Expression, or Styles of Speaking* and *On Talk* show that he devoted great attention to theoretical questions of language. One of his works on this subject

40 Transl. Shorey [1930] 189, 191.

41 See Ademollo [2000], esp. p. 62; Ademollo [2011] 424–425.

42 *Chrm.* 163d, Socrates to Charmides: "I have heard Prodicus drawing innumerable distinctions between names. Well, I will allow you any application of a name that you please; only make clear to what thing it is that you attach such-and-such a name" (transl. Lamb [1927] 45); *Plt.* 261e, the Stranger to Socrates: "If you preserve this attitude of indifference to mere names, you will turn out richer in wisdom when you are old" (transl. Fowler [1925] 21–23).

has come down to us in sch. *Od.* α 1 l1 (pp. 7–9 Pontani),⁴³ through the mediation of Porphyry. The scholium bears witness to a debate, probably between Socrates and Hippias, on the term πολύτροπος used by Homer in the proem of the *Odyssey*. Can πολύτροπος be considered a term of appreciation? At first glance, the answer would appear to be negative, given that it is the contrary of ἀπλοῦς, “simple”. Having an extensive array of ways (*tropoi*) of entering into relations with others points to duplicity, a tendency towards deceitfulness. Besides, no other great hero—Achilles, Ajax, Agamemnon etc.—is ever described in this manner.

But it is conceivable—this is the argument put forward by Antisthenes—that Odysseus was called πολύτροπος not because πονηρός, but rather because σοφός. And here there follows a detailed *episkepsis* of the word *tropos* and its numerous meanings. The concept of *tropos*, Antisthenes points out, can be applied both to character and to ways of speaking. Thereafter, however, the line of reasoning becomes uncertain. The assertion that “the responsibility for the *tropos* of the *logoi* lies with the πλάσεις” would be a good conclusion if we knew exactly what is meant by πλάσεις and if the correctness of the text were not somewhat doubtful.⁴⁴ But in any case the conclusion would seem to be the following: that the *polytropos* is not necessarily a cheat or a traitor: he may also be one who knows how to adapt the *logoi* to his addressees. Men are of many different kinds, and therefore a λόγος μονότροπος, a “unilateral statement”, does not always achieve its aim. And so one has to be like doctors, who adapt the treatment to the patient. There is a significant sentence: λόγου δὲ πολυτροπία καὶ χρήσις ποικίλη λόγου εἰς ποικίλας ἀκοὰς μονοτροπία γίνεται (sch. *Od.* α 1 l1, p. 9 Pontani), “the multiformity of the *logos* and its constantly changing use proves to be the only form suited to constantly different ears”. From the ethical point of view, it is true that the authentic *agathos* is *monotropos*; but, paradoxically, its unity of character is manifested precisely in its ability to adapt to each individual. In short: to achieve ethical *monotropy* one must necessarily act through *polytropy* of behavior.

1.5 *Focus on Aristotle*

Aristotle is the first to have studied language on a large scale,⁴⁵ laying the foundations for further systematizations and classifications. Reflections on language can be found in many parts of his vast *oeuvre*, e.g. in chapters 20–22 of

43 On this very extensively debated passage see Brancacci [1990] 58–60; Luzzatto [1996], Brancacci [2002a], as well as the sensible overview by Pontani [2005b] 30 n. 29.

44 Pontani [2007] 8 wisely prints the *crucis*: τρόποι δὲ λόγων † αἴτιοι αἱ † πλάσεις.

45 Cf. Novokhatko in this volume.

Poetics and in book III of *Rhetoric*, but the most extensive and in-depth investigations are found in the works of the *Organon*, in particular in the treatise *On Interpretation* (Περὶ ἑρμηνείας). It is in the *Organon* that a tight-meshed bond was established between language and logic, and between grammar and philosophy, a bond that was destined to be long-lasting⁴⁶—with its positive and negative aspects. The positive aspect is that logic is of aid in understanding the imperfections of language, especially since language is not fully overlapping with things; logic thus helps to identify more clearly the pitfalls of the *Σοφιστικὴ*. Furthermore, if *logoi* and *pragmata* are not fully overlapping, it follows that casting doubt on language does not necessarily imply casting doubt on things, e.g. science, the institutions, ethics, etc.

The negative aspect, at least from the modern point of view, is that the language/logic association is not always temporary: it can become a cohesive and enduring unity. In this perspective, Swiggers and Wouters went as far as to introduce the concept of “‘endogenesis’ of grammar from within a philosophical *theoria*—always fed by the close familiarity with the great literary texts”.⁴⁷ And a third aspect should also be considered: once language becomes an object of study, it becomes secularized, losing forever its archaic sacral component. Aristotle states very clearly, in a celebrated passage, that utterances (τὰ ἐν τῇ φωνῇ) are the corresponding elements of thoughts (παθήματα ἐν τῇ ψυχῇ, or νοήματα) (Arist. *Int.* 16a3–4);⁴⁸ this explains why he had little sympathy for the manner in which the *physikoi* formulated their theories. At times, his criticism is highly trenchant: e.g. in *Meteorology* 2.3.356a24, “ridiculous” is the term he uses in reference to the Empedoclean definition of the sea as the “sweat of earth” (B 55 D-K. γῆς ἰδρῶτα): “On the poetic level—Aristotle says—Empedocles’ wording may have been adequate (for metaphor is indeed appropriate for poetry), but, as far as knowledge of nature is concerned, he did not express himself adequately”. Or consider *Generation of Animals* 4.8.777a7, where Aristotle disparages Empedocles’ definition of milk as “white pus” (B 68 D-K. πύον λευκόν), and suggests, speculatively: “As for Empedocles, either he

46 See e.g. Blank [1994] 149–150; de Jonge [2008] 147ff. One of the reasons for the failure to separate philosophy and grammar was the use of a substantially shared range of vocabulary: στοιχεῖον, διάθεσις, συμβεβηκός, etc.

47 Swiggers-Wouters [2002c] 14. See also, on the grammar-logic-philosophy interaction, Swiggers-Wouters [1996b] 124, [1997] 38ff., and [2005] 3ff., chapter *Les rapports entre grammaire et philosophie*.

48 See E. Montanari [1988] 31ff.

was mistaken (οὐκ ὀρθῶς ὑπελάμβανεν), or else his metaphor was a bad one (οὐκ εὖ μετήνεγκεν), when he wrote how the milk is formed”.⁴⁹

Aristotle also offered important reflections on the various forms of ambiguity. He notes that not every ὄν is matched by a corresponding ὄνομα, and *vice versa*. Reality and language are not overlapping. There are defects and excesses: some object may be indicated by many names, another one by no name. Aristotle knows that *polyonymia*, *anonymia*, *amphibolia* etc. are a hindrance to *theoresis* (*Metaph.* Γ 4.1006b7 τὸ γὰρ μὴ ἔν σημαίνειν οὐθὲν σημαίνειν ἐστίν: “For not to have one meaning is to have no meaning”),⁵⁰ but he does nothing to limit the damage—on the contrary, he avoids innovations as much as possible, even in his writings destined to a restricted and specialist public. Admittedly, he uses expressions such as ἐντελέχεια and τὸ τί ἦν εἶναι, which make sense only within the framework of the Aristotelian system, but on the whole the deficiency of language is not ‘corrected’ but, rather, neutralized with discretion, now by resorting to the principle of πολλαχῶς λέγεσθαι (especially in the *Metaphysics* and in the treatises on theoretical physics), now by making use of the formula ὁ καλούμενος (especially in the treatises on biology). Overall, Aristotle leaves scientific language more or less as he found it.⁵¹

1.6 Language and Hellenistic Philosophies

In the Hellenistic age, as Schenkeveld pointed out, language became almost a science in its own right.⁵² But it was the object of interest on the part of philosophy, rhetoric and scholarship, each of which dealt with a particular aspect. According to Quintilian 3.1.15, the study of rhetoric was practised most actively by philosophers, above all Stoics and Peripatetics: “Theophrastus, Aristotle’s pupil, also wrote scholarly works on rhetoric, and from this time forward it was the philosophers, especially the leading Stoics and Peripatetics, who showed even more interest in the subject than the rhetors”;⁵³ rhetoric, it was argued, does not study language itself, but the manner of rendering it more effective. And as far as scholarship is concerned, its aim was that of restoring the textual truth of the works of the authoritative poets (and prose writers).⁵⁴

49 Transl. Peck [1942] 473.

50 Aubenque [1967] 259: “One of the requirements Aristotle imposes for the first time on our use of language is the need for *univocalness*”.

51 On this topic, the reflections of Lanza [1972] 415–419 remain fundamental.

52 Schenkeveld [1999] 177–178.

53 Transl. Russell [2001b] 15–17.

54 Naturally, reality was more complex than this: the subdivisions between philosophers, rhetors and grammarians correspond to a school-based model: it is useful as long as

Epicurus addresses the birth of language in chapters 75–76 of the *Letter to Herodotus* and also in some passages of the work *On Nature* (Περὶ φύσεως).⁵⁵ In ch. 16 of the commentary on Plato’s *Cratylus*,⁵⁶ Proclus states that with regard to the birth of language, Pythagoras and Epicurus are closer to Cratylus, whereas Democritus and Aristotle are closer to Hermogenes (τῆς Κρατύλου δόξης γέγονεν Πυθαγόρας τε καὶ Ἐπίκουρος, Δημόκριτος δὲ καὶ Ἀριστοτέλης τῆς Ἑρμογένους). This presence of Epicurus in the field that opposed Democritus may raise eyebrows, but it is not unjustified. Epicurus does not deny that the early stages of language may have benefited from a contribution on the part of *physis*, as in his view men utter the first sounds under the impulse of certain impressions.⁵⁷ The rest of his thoughts on the development of language follow along the lines of the Democritean arguments. Clearly, such a conception bore little relation to that of Cratylus, as in Epicurus’ vision a relation between a sound and a thing was something that existed only at the very beginning, after which it ceased to exist. Cratylus, on the other hand, believed that the relation persisted, so much so as to be recognizable by those with the ability to make a careful study of names.

Epicurus, likewise, set great store by univocalness: this is indeed the programmatic beginning of the *Letter to Herodotus* (ch. 37–38):

πρώτον μὲν οὖν τὰ ὑποτεταγμένα τοῖς φθόγγοις, ὧ Ἡρόδοτε, δεῖ εἰληφέναι (...). ἀνάγκη γὰρ τὸ πρῶτον ἐννόημα καθ’ ἕκαστον φθόγγον βλέπεσθαι καὶ μηθὲν ἀποδείξεως προσδεῖσθαι.

nobody believes there existed ‘pure’ grammarians. Not even the Alexandrians can be classified as ‘pure grammarians’. The Alexandrians/Stoics opposition is another school-based framework which, while of practical aid, is also weak: on these issues see the short but highly effective overview given by Blank [1982] 4–5, and Montana in this volume.

55 Cf. Sedley [1973] 17ff., with the additions by Tepedino Guerra [1990].

56 For a study of the passage (not only of the part anthologized by Diels in 68 B 26), see Ademollo [2003].

57 Plato says something similar in *Cra.* 422d–423a: “If we had no voice or tongue, and wished to make things clear to one another, should we not try, as dumb people actually do, to make signs with our hands and head and person generally? (...) If we wished to designate that which is above and is light, we should, I fancy, raise our hand towards heaven in imitation of the nature of the thing in question; but if the things to be designated were below or heavy, we should extend our hands towards the ground; and if we wished to mention a galloping horse or any other animal, we should, of course, make our bodily attitudes as much like theirs as possible” (transl. Fowler [1939] 133).

First of all, Herodotus, we must grasp the ideas attached to words (...). For this purpose it is essential that the first mental image associated with each word should be regarded, and that there should be no need of explanation.⁵⁸

Diogenes Laertius also emphasized the clarity displayed by Epicurus: “Epicurus was so lucid (σαφής) a writer that in the work *On Rhetoric* he makes clearness (σαφήνεια) the sole requisite” (D. L. 10.13–14 = fr. 54 Usener);⁵⁹ however, Diogenes additionally reports an opinion voiced by Aristophanes (fr. 404 Slater) according to whom Epicurus’ λέξις was too “personal” (ιδία), that is to say, not easily understandable to those who did not belong to his school.

But the greatest theoreticians of language in the Hellenistic age (albeit without reaching the prodigious results sometimes attributed to them, e.g. discovery of the category of aspect of the Greek verb) were the Stoics.⁶⁰ Describing, or even merely outlining, their thought on the subject of language would require an in-depth treatment and would be beyond the scope of this paper; we will therefore restrict our observations to a few brief comments. Firstly, few of the ancient philosophies are so profoundly identified with language as was Stoicism. The very production of the Stoics attests to an intense interest in the technical and formal aspects: Zenon wrote a work *On Variety of Style* (Περὶ λέξεων), a book *On the Reading of Poetry* (Περὶ ποιητικῆς ἀκρόασιως) and five books of *Homeric Problems* (Προβλημάτων Ὀμηρικῶν πέντε); Cleanthes a treatise *On the Poet* (Περὶ τοῦ ποιητοῦ) and four books of *Interpretations of Heraclitus* (Ἡρακλείτου ἐξηγήσεις); Chrysippus wrote a work *On Poems*, another on *How to Interpret Poems* and a work *Against the Kritikoi* (D. L. 7.4, 7.175, 7.200); Sphaerus of Borysthene a *Course of Five Lectures on Heraclitus* (Περὶ Ἡρακλείτου πέντε διατριβῶν) (D. L. 7.177); Antipatros of Tarsus, finally, studied the parts of speech and the definitions.

The Stoics identified five parts of speech: the proper noun, the common noun, the pronoun, the article and the verb, but they made a clear-cut distinction separating the nominal parts (proper noun, common noun and pronoun) from the verb, as the first three elements indicate corporeal entities (σώματα), whereas the verb indicates a predicate, which is incorporeal.⁶¹

The Stoics introduced into their reflection on language the general characteristics of their thought: a rigorous approach, clear-cut distinction between

58 Transl. Bailey [1926] 21.

59 An extensive commentary of the passage in Milanese [1989] 18ff.

60 Cf. Frede [1978] 33; Blank [1994] 149; Novokhatko and Montana in this volume; etc.

61 On all this, see the important essay by A. Luhtala [2005] ch. 2, pp. 12ff.

truth and error, aversion for the art of the possible. They by no means eliminated—on the contrary, they accentuated—the overlapping between logic and grammar.⁶² Their affinity with Aristotle is evident, but some differences can also be noted. One of the main divergences lies in the Stoics' belief that language is a product of *physis*: Origenes, *Against Celsus* 1.24, raised the question of “whether, as Aristotle thinks, names were bestowed by arrangement, or as the Stoics hold, by nature; the first words being imitations of things, agreeably to which the names were formed”, etc.

The general doctrine can be summarized in the following manner: words are, in origin, imitations of things, *i.e.* onomatopoeic. Over time, onomatopoeic terms undergo alterations and distortions, sometimes to the point of a radical change in appearance. But if one succeeds in removing the encrustations, the original truth reappears. Whoever looks at language in this way cannot fail to regard it as insidious and ambiguous. But also fertile: for ambiguity can create unexpected correspondences, just as the appearance of material objects changes with a change in vantage point. A famous case in point (see D. L. 7.62) was that of ΑΥΛΗΤΡΙΣΠΕΠΤΩΚΕ, which, according to how it is divided up, can mean “a dancing-girl has fallen” (αὐλητρίς πέπτωκε) or “a house has three times fallen” (αὐλή τρίς πέπτωκε).⁶³ Obviously, here we are dealing simply with word-play. But in the treatise *How to Study Poetry* 31e, Plutarch states that Cleanthes divided the Homeric invocation Ζεῦ ἄνα Δωδωναίε (“Zeus, lord of Dodona”) in such a way as to obtain Ζεῦ ἀναδωδωναίε, *i.e.* “which provokes the exhalation of the vapour from the earth”. Plutarch adds that this case belonged to the category of ‘ironic’ interpretations; but it is an irony that reflects reality,⁶⁴ and therefore it is no longer merely a joke.

Whereas Aristotle mainly uses everyday language, the Stoics introduced numerous innovations (cf. Cic. *Acad. post.* 1.41: Zenon used *plurima nova verba*), not so much in order to fill the blank spaces of the *anonymia*, as, rather, to Stoicize the concepts. Consider the example of καταλαμβάνειν. Greek is rich in words meaning “to understand, to comprehend” (*e.g.* συνιέναι, μαθάνειν, etc.). So why adopt καταλαμβάνειν and the derivatives κατάληψις, καταληπτικός and so forth? Evidently because συνιέναι and μαθάνειν belong to everyone,

62 See *e.g.* Frede [1978] 29ff., 36, and *passim*.

63 This ambiguity was very famous: see *e.g.* Atherton [1993] 220ff.

64 Atherton [1993] 233–234 draws attention to a series of examples in which Cleanthes and Chrysippus modified the conventional orthography of the texts, above all the Homeric texts, in order “to capture distinctions in morphology and meaning” (but this was an old method, already used earlier by Hippias of Thasus). On the specific example of “Zeus lord of Dodona”, see Atherton [1993] 246.

whereas *καταλαμβάνειν* immediately brings Stoicism to mind. In speaking of Chrysippus, but inevitably involving the overall context of Stoicism, Galen asserts, in *Differences of Pulses* 10, that Chrysippus, although not an Athenian, is intent on dictating the rules of correct speech (the word used is *νομοθετεῖν*, “giving laws, law-making”) to the Athenians.⁶⁵ And naturally, Chrysippus fails to achieve his objective, since these *καταλαμβάνειν*-words are foreign to the Attic style (Gal. *Opt. Doctr.* 1, 94.1ff. Barigazzi). Among the beliefs of the Stoics, one of the things Galen condemns is the myth of *orthotes*, with its characteristic flourish of intellectual finessing and artifice. He contrasts the Stoics with Plato, pointing out that Plato is relatively unconcerned with the pursuit of an abstractly rigorous approach, but is more interesting in expressing the *πράγμα*, making himself understood.⁶⁶

Dogmatism led the Stoics to criticize certain aspects of everyday language. Some Stoics, Cicero observes (*Off.* 1.128), deplore a hypocritical use of words: men do not hesitate to make explicit mention of ignoble actions like stealing, whereas generating offspring, which is *honestum*, tends to be expressed with euphemisms:

We are to ignore the Cynics or such Stoics as were virtually Cynics who scold and mock us because we consider it scandalous to use the terms for acts which are not shameful, and yet we call by their proper names those which are. Robbery with violence, swindling, adultery are all disgraceful when performed (*re turpe est*), but we speak of them without indecency (*sed dicitur non obscene*), whereas the effort of begetting children is honourable but a filthy expression (*liberis dare operam re honestum est, nomine obscenum*).⁶⁷

But further insight into the Stoics' attitude can be gleaned from the following anecdote reported by Cleanthes, taken from D. L. 7.172: in response to a young man who was determined to put him on the spot with a play on words, Cleanthes answered: “Similar words do not necessarily indicate similar situations” (*αἱ δ' ἀνάλογοι φωναὶ τὰ ἀνάλογα οὐ πάντως σημαίνουσι πράγματα*), thereby showing he was fully aware that language is not univocal and that this non-univocality can give rise to misunderstandings and deceit. Another passage worthy of attention is in D. L. 7.20:

65 For Galen's attitude towards Atticism see Manetti [2009] 158ff.

66 And therefore Galen regards it as his duty to combat ambiguity, the greatest defect of language: Schiaparelli [1999] 164–165.

67 Transl. Walsh [2000] 43.

τοῖς εὖ λεγομένοις οὐκ ἔφη δεῖν καταλείπεσθαι τόπον, ὥσπερ τοῖς ἀγαθοῖς τεχνίταις, εἰς τὸ θεάσασθαι· τοῦναντίον δὲ τὸν ἀκούοντα οὕτω πρὸς τοῖς λεγομένοις γίνεσθαι, ὥστε μὴ λαμβάνειν χρόνον εἰς τὴν ἐπισημείωσιν.

“Telling periods”, he said, “unlike the works of good craftsmen, should need no pause for the contemplation of their excellences; on the contrary, the hearer should be so absorbed in the discourse itself as to have no leisure even to take notes”.⁶⁸

The interpretation is controversial,⁶⁹ but the meaning would appear to be that words can be deceptive when they are fast-moving and thus leave us no time to ponder their implications. Zenon maintained it was important to know the στοιχεῖα τοῦ λόγου, “the constitutive parts of speech”, and the manner in which they are linked to one another (ἀρμόττεσθαι). Thus, as asserted by Plutarch, *Stoic Self-Contradictions* 8.1.1034e, when passing judgments there should be no need to listen to the opposite party in order to form one’s own opinion:

The second speaker must not be heard whether the former speaker proved his case (for then the inquiry is at an end) or did not prove it (for that is tantamount to his not having appeared when summoned or to having responded to the summons with mere gibberish); but either he proved his case or he did not prove it; therefore, the second speaker must not be heard.⁷⁰

The Stoics strongly proclaimed the primacy of philosophy over grammar, and this aspect of their doctrine gained great popularity: Philo, *On Mating with the Preliminary Studies* 146 (111, 102.15 Wendland) declares that philosophy laid the bases for the traditional sciences. Equilateral and scalene triangles were discovered thanks to geometry. But this was not a genuine act of “discovering” (εὐρίσκειν): it was merely “perfecting the discovery” (προσεξευρίσκειν), because the fundamental concepts on which geometric figures are based, for instance the point where there are no parts (οὐ μέρος οὐδέν), the infinite line, the surface without the third dimension, are all things forming part of the objects of study of philosophy. And the same is true of grammar. There exists a basic grammar, which teaches reading and writing, and a specialist

68 Transl. Hicks [1925] II, 131.

69 And the text is likewise uncertain: Von Arnim proposed ἐλεγχόμενοις instead of εὖ λεγομένοις, and Kassel τεχνητοῖς instead of τεχνίταις. See Dorandi [2013a] 487.

70 Transl. Cherniss [1976] 429.

grammar, which is concerned with explaining the works of poets and prose writers (ποιηταί and συγγραφείς). But when it is a question of identifying functions and relations, one has to turn to philosophy. It is philosophy that clarifies what is meant by conjunction, noun, verb, the question form or exclamations.

This primacy that the Stoics assigned to philosophy emerges from an interesting passage of the commentary by Ammonius on Aristotle's *On Interpretation* 42.30ff. Busse (= Praxiphanes *34 Matelli, pp. 234–237). The question concerns whether the nominative is to be called simply *onoma*, as Aristotle prescribes, or *ptosis*, as asserted by the Stoics and grammarians (note the association Stoics-grammarians). The Peripatetics argue that one cannot speak of πτώσις because the nominative is not a grammatical case, *i.e.* it does not descend from something else. The Stoics' answer was that the nominative does indeed 'fall' from the νόημα we have in our soul. The nominative Σωκράτης 'falls' from the Σωκράτης that resides within us. The supporters of this theory expressed an underlying aspiration: to find something superordered, something truly basic and primitive, for the elements of conversation. In a sense, even modern grammar seeks the aid of νόημα. For us the nominative is a *ptosis*, the most primitive among the *ptoseis*,⁷¹ but not the most primitive in absolute terms. The line of argument embodied by οἱ ἀπὸ τῆς Στοᾶς, as reported by Ammonius, could be simplified as follows: the nominative is *ptosis* of the so-called stem; Σωκράτης is the *ptosis* of Σωκρατεσ-, which does not exist other than as ἐννόημα. This confirms once more that, for the Stoics, linguistics was not an autonomous discipline, with methods of its own; instead, it formed part of the conceptual structure of the school. The system of declensions is a hindrance to abstraction, to the καθ' αὐτό of the word. We speakers of a modern language, devoid of declensions or with weakened declensions, have the word in itself, for example "Zeus". The ancients had Ζεὺς, Ζῆνα and Δία, all forms of one and the same word, yet at the same time independent words. And this circumstance opens up great scope for etymology. As Chrysippus would later say,⁷² Ζεὺς is Ζεὺς because he gives life (ζῆν), but he is also Δία because δι' αὐτὸν πάντα ἐστίν.⁷³ Etymologies of this kind are not 'errors' but theories, the extreme and

71 Not only for us: in 1.139, Herodotus says that all Persian names ended with the letter the Dorians call *san* and the Ionians *sigma*. But this is not true. Herodotus did not check his sources; however, he was so sure of his statement that he transformed the god Mit(h)ras from masculine to feminine: 1.131 καλέουσι δὲ Ἀσσύριοι τὴν Ἀφροδίτην Μύλιττα, Ἀράβιοι δὲ Ἀλιλάτ, Πέρσαι δὲ Μίτραν. Quite apart from the mistake, it is evident that for Herodotus "name" means "name in the nominative".

72 And before him Aesch. *Ag.* 1485ff.

73 See Stob. *Ecl.* 1, p. 31.11 W.

condensed versions of complex doctrines. Their function is not fundamentally different from that of myth.⁷⁴

The Stoics' writings are not devoid of the kind of contradictions already seen so many times: an *orthotes* for which great claims are made—in words—but then not applied (in actual fact inapplicable) in concrete reality. The Stoics proclaimed their aim of eliminating ambiguity, yet not only did they not eliminate it, but they made use of its dialectical resources, just as all their predecessors had done. One example will suffice: a rigorous application of *orthotes* would have required, at the very least, a distinction between the *logos* in its psychological-anthropological aspect, the *logos* as a divine attribute and the *logos* as the instrument of speech. Effectively, however, the word *logos* continued to be used rather indiscriminately, just as had been the case for the 'pre-Stoic' Heraclitus. And the same could be said with regard to thematic words such as *πνεῦμα*, *ψυχή*, etc.

2 Philology

2.1 *Alexandrian Scholarship as a Cultural Paradigm*

Literary philology has an identifiable date of birth: the official edition of the tragic playwrights, drawn up by Lycurgus around 330 BC ([Plut.] *X orat.* 841f). As far as philosophical philology is concerned, however, finding a starting point is more problematic. In an article significantly entitled *Die Anfänge der Philologie bei den Griechen*, H. Diels singled out Democritus as the progenitor of the line of descent from which "wir Philologen" can all trace our ancestry.⁷⁵ In Democritus one finds the study of correctness of expression (*ὀρθοέπεια*), attention to style, observations "bis ins Kleine und Kleinste" on music, poetry, and Homeric language.⁷⁶

But what Diels meant above all by 'Philologie' was interpretation ("die Seele der Philologie ist die Interpretation"),⁷⁷ whereas here, in addition to interpretation, we will also focus on *Textkritik*, endeavoring to maintain the two concepts distinct as far as possible.

The first form of interpretation is that which poets apply to themselves.⁷⁸ Take fr. 84 D.-K. of Empedocles (= Arist. *Sens.* 437b–438a). Lines 1–3 describe

74 Cf. Sluiter in this volume.

75 Diels [1910] 12.

76 Diels [1910] 9–10, see also Novokhatko in this volume.

77 Diels [1910] 12.

78 Pfeiffer [1968] 3ff.

a sensible man who, before stepping outside on a stormy night, provides himself with a lantern and equips it with “lantern-sides as shields against the various winds”.⁷⁹ Line 4 continues in the following manner: “(shields) that protect against the gusts of gale-force winds”. The syntax of line 3 is difficult, and the line has numerous obscure words. Line 4 clarifies its meaning, repeating the same concept in a more easily understandable manner.

In addition to using their own poetry to interpret themselves, the poets also use it to interpret other poets (almost inevitably Homer and Hesiod). Consider another example, Empedocles B 35.6 D.-K. οὐκ ἄφαρ ἀλλὰ θέλημα συνιστάμεν' ἄλλοθεν ἄλλα, “Not immediately, but coming together from different directions at will”.⁸⁰ In the context, θέλημα (which Wright translates as “at will”) is the opposite of ἄφαρ and therefore it has been taken in the sense of “at a leisurely pace, slowly, little by little”, κατὰ βραχύ, probably bearing in mind Hesiod, *Works* 118 οἱ δ' ἐθέλημοι | ἤσυχοι ἔργ' ἐνέμοντο, “And they themselves, willing, mild-mannered, shared out the fruits of their labors”,⁸¹ where ἤσυχοι seems like a selfgloss.⁸²

Looking beyond the sphere of the poets, the first name encountered is Theagenes of Rhegium (VI century BC). He would subsequently be followed by Hippias of Thasus, Metrodorus of Lampsacus and Stesimbrotus of Thasus; and later Democritus, Alcidamas, Antisthenes and many others.⁸³ But exegesis conducted in a religious background should not be overlooked: consider for example the interpretation of oracles, extensively represented in Herodotus, its extension and influence being testified by Aristophanes in his parodies (*Eq.* 125ff.).

Furthermore, in the context of Aristophanes, it is worth noting that precisely his comedies offer the first example of extended exegesis.⁸⁴ The reference here is to *Frogs* and the famous contest between Aeschylus and Euripides (ll. 830ff.). The accusations Aeschylus and Euripides launch against each other—archaic features, fixity or, alternatively, freedom, luxuriance—have aspects that verge on caricature, almost as if the one were trying to describe the other through the eyes of the man on the street. But the two characters also address precise criticisms to each other, of a conceptual nature, which the average spectator probably would not have grasped. Stinging criticisms are voiced against

84 Cf. Novokhatko in this volume.

individual words, discussions focus on their semantics. And improper uses are called “errors” (*psogoi, hamartiai*: ll. 1129ff.).

Another example to be considered is the passage from Plato’s *Protagoras* in which Socrates analyzes a poem by Simonides (fr. 19 Page = F 260 Poltera).⁸⁵ Socrates states that it’s one thing to be good, but quite another to become good. He maintains that *χαλεπόν* means “bad”. Even an insignificant *μέν* is brought into the discussion. Socrates applies *hyponoia*, i.e. the quest for hidden meanings, which is an archaizing element. Overall, it is a rather contrived, specious analysis, designed not with the idea of facilitating comprehension of the actual text, but for a didactic and moral purpose. However, a complex array of instruments is present, together with the remarkable method of comparison, to the point that H. Baltussen went as far as to wonder whether this might not be “a quite early version of the *Homerum ex Homero* principle, which holds that an author can be best explained internally, or from (*ex*) his or her own words”, and thus whether the passage, despite its confused structural arrangement and the continuous intermingling of the words of the poet with philosophical considerations,⁸⁶ might not perhaps constitute a sort of ‘prehistory’ of the commentary.⁸⁷

Once we reach the Derveni Papyrus, dated to earlier than 300 BC, we are no longer in pre-history. Its text is a line by line commentary which, very clearly, is a forerunner of the Alexandrian *hypomnema*.⁸⁸ The unknown author awards great importance to the linguistic element, making use of tools that were already in use such as metaphors, similes, allegories, etymologies etc.⁸⁹ But some novelties can also be observed: for instance, the interpretation of *ἑἶς* as “good” and not as “his own”,⁹⁰ an interpretation the author put forward on the basis of Homeric usage: “This is—as Madeleine Henry rightly stated—philological criticism of the oldest and best sort”.⁹¹

At this point, a strictly chronological overview of the subject-matter discussed here would now require focus on the Alexandrian school.⁹² But this would take us beyond the bounds of our specific perspective, as the interests of

85 See Poltera [2008] 203, and (especially) 454ff.

the various scholars such as Zenodotus, Aristophanes and Aristarchus did not basically center on philosophy. Perhaps, however, the *roots* of this school may have been less foreign to sphere of philosophy.

It is well known that Pfeiffer regarded the Alexandrian school as a sort of absolute incipit of philology.⁹³ Subsequent studies, intensified by discoveries and connections, have underscored the momentous force of this experience. In a series of seminal studies, F. Montanari argued that the importance of the Alexandrian philologists did not consist merely in the results they obtained, but also—and above all—in the fact of creating a new cultural paradigm, describable as a strong unity between exegesis, collation and text criticism aimed at restoring the exact wording.⁹⁴ This was a radically new paradigm, a mental horizon previously unexplored. But a question naturally arises: did this great innovation spring from nowhere, or was it a fire that blazed up from sparks that had long been glowing? Certainly, if we consider scholarship in the narrow sense, that is to say, exclusively as the production of editions, then Alexandrian philology has no precedents at all; but if scholarship is construed as reflection on the text, then one has to go much further back in time, at least to Aristotle and his school.⁹⁵

Aristotle, *Parts of Animals* 1.5.644b22ff., asserts that while knowledge of eternal things, such as the stars, is “more pleasant” (ἡδίων), perceptible situations, by the very fact of being closer to us, provide us with greater opportunities for acquiring knowledge. And even from this type of research, pleasure can be derived (645a8–11):

For though there are animals which have no attractiveness for the senses, yet for the eye of science, for the student who is naturally of a philosophic spirit and can discern the causes of things, Nature which fashioned them provides joys which cannot be measured.⁹⁶

This celebrated passage is not only an expression of praise for empirical research, but also (although Aristotle could not have been aware of this) an early theoretical foundation of philological research, which is not oriented

93 More than any other consideration, what seems significant to me is the sentence: “So (...) it was only *after* Philitas, the poet and scholar, that the true scholar came into being” (Pfeiffer [1968] 92–93). Rather fascinating, but also somewhat beyond its ‘best before date’, is this almost teleological commitment to identifying the true scholar.

96 Transl. Peck [1937] 99.

towards the great, the beautiful and the important, but is non-evaluative, in the sense that attention is denied to no-one and nothing. An overall assessment of the influence of the Peripatos on Alexandrian scholarship⁹⁷ was delineated by N. J. Richardson in a study published in 1994. Strabo 13.1.54 (608–609) relates, as a conclusion to the story on the Aristotelian writings, that Aristotle “taught the kings of Egypt the arrangement of a library” (διδάξας τοὺς ἐν Αἰγύπτῳ βασιλέας βιβλιοθήκης σύνταξιν).⁹⁸ Clearly, the teaching was not imparted directly, given that Aristotle died long before the Ptolemies came to power in Egypt. However, one may discern in the testament of Aristotle a hint of similarity between the organization of the Lyceum and that of the Mouseion. The collection of books and the corresponding system of cataloguing may have acted as a model for the library in Alexandria; materially, the connecting link may have been the Peripatetic Demetrius of Phalerum, who moved from Athens to Egypt.

Even clearer links between the Peripatetic school and Alexandrian philology can be perceived in the field of antiquarian and documentary studies. Aristotle produced erudite works on *Non-Greek Customs* (Νόμιμα βαρβαρικά), on the constitutions (πολιτεῖαι) of 158 Greek cities, on the chronographies of winners of the Pythian and Olympic games, as well as on the victors of drama competitions. These writings were certainly used by the Alexandrians as source material: by Eratosthenes in his *Chronographiai* and in his *Olympionikai*, by Callimachus in his *Table and List of Dramatic Poets* and in the *Aitia*, by Aristophanes of Byzantium in his *hypotheses*. To this should be added that Aristotle was the author of a work which would later become known by the name *Homeric Problems* (Ἀπορήματα Ὀμηρικά).⁹⁹

What this suggests is that if there was a dependency between Alexandrian scholarship and Aristotle, there is also likely to have been a relation between Alexandrian aesthetics and Aristotelian aesthetics. Besides, the persistence of Aristotelian elements in the tradition of Homeric studies (and this tradition has an uncontrovertible Alexandrian base) is an acknowledged fact. See *e.g.* sch. *Od.* δ 69a, which indicates the recognition of Odysseus as being a recognition with *περιπέτεια*, making use of categories that were found in the Aristotelian *Poetics*, in particular chapters 10, 11 and 24.¹⁰⁰ Note, though, that it is precisely in this regard that Pfeiffer raised objections,¹⁰¹ arguing that

101 Pfeiffer [1968] 137 and 95.

Aristotle loves that which is complete and unitary whereas the Alexandrians cultivate that which is small, episodic, refined. But Aristotelian admiration for Homer does not imply that he believed it was possible for the Homeric manner to be replicated in the present. As pointed out by Montanari, Aristotle and the Peripatetics were the premise, the ‘ferment’ of Alexandrian scholarship.¹⁰² Moreover, the method of posing questions and showing solutions, as documented in *Poetics* (see the beginning of ch. 25 *περὶ δὲ προβλημάτων καὶ λύσεων*), has been construed by some as a ‘prototype’ of the Alexandrian commentary.¹⁰³

2.2 *Apologetic Philology: Philology and Philosophical Schools*

One interesting issue that needs to be addressed here, prior to dwelling in greater depth on the concept of the commentary, concerns the question of when *Textkritik* first began to be practised, and why. That there has never been much love lost among philosophers is common knowledge, but, as far as we know, the fault-finding attitudes among the archaic *physikoi* did not involve particularly censorious strictures. Plato and Aristotle, although not without enemies, launched attacks that mainly pursued the goal of doctrinal confutation. Aristotle was not shy of expressing scornful judgements, but he did not stoop to ridiculing his opponents, he did not indulge in caricaturing them (save perhaps in the case of Hippodamus of Miletus: *Politics* 1267b22–30, a passage which, however, may be spurious).¹⁰⁴

The situation degenerated when individual philosophers began to be replaced by schools, which immediately entered into bitter competition with one another, in a contest that was not devoid of contempt and taunting insinuations. One of the most typical accusations was that of plagiarism (*λογολοπία*), as for example in the charges famously launched against Plato, who, so Theopompus asserts (Ath. 11.508c), supposedly copied the majority of his dialogues from Aristippus, Antisthenes and Bryson of Heracleia. Aristoxenus alleged that Plato had lifted the *Republic* (his masterpiece!) from the *Antilogies* of Protagoras (80 B 5 D.-K.). It was also rumored that even *Timaeus* had been copied from a Pythagorean book. This was an ingenious and insidious way of launching an attack, because it offered the opportunity to stike a blow against the theorizers while leaving the theory unscathed: saying that Plato wrote the *Timaeus* by copying Pythagoric doctrines debased Plato on the personal level without in any way affecting the value of those doctrines.

102 Montanari [1993b] 262.

103 Grintser [2002] 75.

104 See Lapini [2013] 146 and n. 66.

Establishing whether a given person was or was not the first to have said a certain thing gave rise, starting from the 4th century BC, to a vast ‘protoheurological’ production. Theophrastus composed a work *On Discoveries*, in two books (D. L. 5.47); Heraclides Ponticus also was named as the author of a book with the same title (D. L. 5.88). Although both these texts are now lost, in antiquity they constituted a valuable source of information for erudites of the imperial age such as Favorinus of Arles—whose *Miscellaneous History* (Παντοδαπή ἱστορία) certainly contained a heurematic section¹⁰⁵—and even for Diogenes Laertius, whose interest in πρώτα εὐρήματα can be vividly perceived throughout his production.¹⁰⁶

Another remarkable aspect is that those who hunted for πρώτα εὐρήματα dealt not only with *doxai*, laws, customs and institutions, but also with quite down-to-earth questions. Consider for instance the following passage from Diogenes Laertius (which, however, is unfortunately far from clear) on the vicissitudes of Heraclitus’ book (9.11–12): no less than a veritable example of *Überlieferungsgeschichte*:

The story told by Ariston of Socrates, and his remarks when he came upon the book of Heraclitus, which Euripides brought him, I have mentioned in my Life of Socrates (2.22). However, Seleucus the grammarian says that a certain Croton related in his book called *The Diver* that the said work of Heraclitus was first brought into Greece by one Crates, who further said it required a Delian diver not to be drowned in it.¹⁰⁷

Naturally the accusations of λογοκλοπία stirred up strong reactions. Making a statement on the authenticity or falsehood of a work was nothing new: since the very outset, epic poetry had always posed problems of this type. But debate on philosophical writings took off on a grand scale above all when polemics between different schools rose to fever pitch. Fr. 25 Angeli-Colaizzo of Zenon of Sidon expresses doubts on many of the Epicurean works, among which the *Letter to Pythocles*. Another famous case is the polemic surrounding the *Politeia* of Diogenes the Cynic, the contents of which were extreme and full of scandal-mongering; the polemic is recounted in PHerc. 339, which contains the Περὶ Στωϊκῶν of Philodemus.¹⁰⁸ The Stoics, the closest heirs of Cynicism, sought to deny the authenticity of Diogenes’ *Politeia*, but Philodemus’ repartee

105 See Lapini [2011] 18ff.

107 Transl. Hicks [1925] II, 419.

108 Ferrario [2000] 59–60.

was that Cleanthes and Chrysippus had already drawn some citations from the work, thereby recognizing it as authentic.

It has to be admitted, however, that misgivings as to the authorship of works, including some of the important works, were not always unfounded. The very structure and manner of working within the philosophical schools lay at the root of these uncertainties. In examining the various *corpora*—Platonic, Aristotelian, Hippocratic, etc.—one finds both authentic and spurious works, but also cases where it is hard to tell whether a work is authentic or spurious. Furthermore, if a work is indeed spurious, this may not necessarily be the result of deliberate falsification. K. Gaiser has claimed that when Plato's pupils moved to settle in the Troas and took up residence under the protection of the tyrant Hermias, a *Philosophenkreis* was gradually built up where research was carried out in common, and then 'signed' jointly by Aristotle and Theophrastus, and presumably also by other pupils who enjoyed a certain prestige.¹⁰⁹ And the habit may have continued later as well, after the foundation of the Peripatos. Aristotle and Theophrastus may have consciously sat down to divide up the study of biology between themselves, with one devoting himself to zoology and the other to botany.¹¹⁰

A few examples may offer insight into this manner of working. The last six chapters of the *Categories* (10–15) are classed as Aristotelian, but perhaps they are not, as already suggested by Andronicus. It is conceivable that someone composed them to create a link between *Categories* and *Topics*,¹¹¹ a step Aristotle himself perhaps did not take but would have done, if he had had the means and the time.

Aristotle wrote a treatise on physiognomy, and in the *corpus Aristotelicum* there does indeed exist a monograph that goes precisely by the name of *On Physiognomy* (D. L. 5.25 Φυσιογνωμονικόν). But the work preserved in the *corpus* is not the same as that mentioned in D. L. 5.25. What we actually have is a composite product, not attributable to Aristotle. It consists of two distinct parts: the second part is a rough and ready composition, simplistic, clearly of a late date. The first part, on the other hand, is written by someone who knew how to put forward arguments and conduct a line of reasoning in Aristotelian

109 Gaiser [1985]. See in particular the chapter entitled *Die Zusammenarbeit zwischen Aristoteles und Theophrast* (87–89). The first fruits of this collaboration (which may already have begun, Gaiser conjectures, within Plato's Academy) are said to have been the treatises *On Fire* and *Meteorology IV*.

110 Gaiser [1985] 89.

111 Moraux [1974] 271–272.

terms, and this section may genuinely reflect the true thought of Aristotle.¹¹² It cannot be ruled out that the author was a pupil, quite unaware that his text could be taken as a forgery.¹¹³

Whenever a scholar found himself faced with the accusation that an important work of his school was false, or when a member of his school was lambasted for producing an indecent work or making an offensive statement, there were two possible lines of defense: blame either a disreputable saboteur (διασκευαστής) or the scribe (γραφεύς). The genetic core of the *Textkritik* known as Lachmannian resides precisely in this dilemma: trying to ascertain what is authentic and to free it from the layers of false encrustations.

The school that made the greatest contribution to formal philology is that of the Epicureans. This is somewhat ironic, given the scorn this school displayed towards erudition.¹¹⁴ But two aspects inevitably induced the Epicureans to turn to philology: firstly, it was a school *unius viri*, and secondly, its message concentrated, more so than in other cases, on basic principles. For Epicureanism, *ataraxia* was of paramount importance and, according to its teachings, it consisted of a limited number of intangible certainties, which could often be expressed in the form of maxims. Such certainties represented the *raison d'être* of the school itself and were to be defended at all costs: casting doubt on them would be a ruinous perspective.¹¹⁵ Unfortunately, Epicurus was hardly a very readable writer.¹¹⁶ He himself was aware of this, and sought to remedy the defect by composing epitomes in the form of letters which had—or aimed to have—a more widely understandable character.¹¹⁷ Dissemination of his thought in more readable forms continued after his death (Philonides, Artemon, etc.).

But a commentary needs to be founded on certainty of the text, a certainty that was often in abeyance. The schools had specialist libraries, which held more than one copy of a given text, necessarily different from one another, and it was often not a question of purely minor differences. For instance, the Herculaneum library undoubtedly held several exemplars of *Periphyseos*.¹¹⁸

112 See Lapini [1992] 66ff.

113 Or conceivably he may have been convinced he was paying a great tribute to the Master by feigning to take on the latter's identity: Moraux [1974] 266–267.

114 Blank [1998] 281–282, 295–296; de Jonge [2008] 37ff.

115 See Erler [1993] 286–287.

116 Cic. *Fin. bon. mal.* 2.5.15; Plut. *Adv. Col.* 112F, etc.

117 These *Letters* are preserved integrally, as is well known, by Diogenes Laertius in book x of the *Lives of Philosophers*, together with the *Principal Doctrines*.

118 See e.g. Puglia [1988] 49–50.

Its most ancient nucleus of works may have been brought to Herculaneum by Philodemus, and may have consisted of exemplars from the 3rd–2nd century BC, *i.e.* exemplars very close to the library Epicurus bequeathed to Hermarchus (D. L. 10.21). But there are known to have been other copies in circulation as well.

Eudemus, who was the head of a school in Rhodes, sent a letter to Theophrastus, in Athens, to enquire whether a passage from Theophrastus' own version of *Physics* was identical to the copy he himself possessed.¹¹⁹ Events of this kind are likely to have been quite common, although they probably involved rather more important questions than establishing a δέ or a γε or an ἄρα. The special aspects of ancient publication should also be borne in mind.¹²⁰ Once a stage A of a certain text had been reached, the author would 'publish' it, in other words, he would allow copies of it to be made.¹²¹ But he would then continue to work on the text up to phase B, then C, etc.; the exemplars copied during the phases A, B, C, etc. certainly diverged from one another, and undoubtedly became hybridized. It is this process of hybridization that was ultimately responsible for the survival of an author's variants, which were difficult to identify yet without a doubt did exist, and they continue to exist—camouflaged in one way or another—at the present time.¹²²

2.3 *The Formal Philology of the Epicureans*

It is appropriate, at this point, to take a look at the interesting personality of the Epicurean Demetrius Laco, who lived in the 2nd century BC. A philosopher and philologist, he devoted attention to uncovering the inaccuracies or falsehoods that had crept into the *corpus Epicureum*, and he also addressed important questions of *Sprachphilologie*.¹²³ For Demetrius Laco, we are lucky enough to have not only testimonies, but also a first-hand document,

119 See Moraux [1970] 70.

120 "For an author—Gurd states [2011] 170—ἐκδοσις was little more than a gesture, and as a gesture it was liable to interpretation". One need only reflect on the difference between the modern concept of edition and the meaning this concept assumed in authors such as Galen, with his differentiation between works written πρὸς ἔκδοσιν and οὐ πρὸς ἔκδοσιν: see von Staden [2009].

121 Or, simply, he did not—or could not—prevent its publication: on the meanings of ἐκδιδόναι see *e.g.* van Groningen [1963]; Mansfeld [1994] 6off.

122 An attempt to identify some of them is made by R. Kassel, in Aristotle's *Rhetoric* (Kassel [1976]). An authorial variant is accepted in Plato's *Cratylus* 437d1off. by Nicoll-Duke [1995] 269–271, and by Sedley [2003b] 6ff.

123 Puglia [1982] 21.

PHerc. 1012. The title of the work contained in PHerc. 1012 is unknown,¹²⁴ but we do know that it was a defense of the writings of Epicurus against incongruities and contradictions that some unnamed adversaries purported to have spotted. Demetrius availed himself of two possible procedures: one was to adduce a comparison with other Epicurean passages (the method of *Epicurum ex Epicuro σαφηνίζειν*, “explaining Epicurus by Epicurus himself”), thereby demonstrating that his opponents were wrong, due to ignorance or malice, while the other was to maintain that the master’s sentences had been distorted by careless scribes. In the latter case, Demetrius made extensive use of specific philological terminology, e.g. col. 25 ll. 1–2¹²⁵ διορθώσαντες εἰς ἀμαρτη[θέντ’] ἀντίγραφα; col. 25 ll. 3–4 γραφικῶν ἀμαρτημάτων; col. 25 l. 7 διέστρεψαν οἱ γραμματικοί; col. 21 ll. 4–5 διόρθωσις δὲ κακῆ γραφικᾶς ἀμαρτίας ποιεῖ; col. 44 ll. 7–9 τοῦτο εἰσάγειν τὸ ἀμάρτημα τοῦ γραφέως; col. 50 ll. 3–4 χωρὶς τοῦ γραφέως ἀμάρτημ’ εἰσάγεσθαι etc.

Some of Demetrius’ discussions can be almost entirely reconstructed. Some parts of coll. 31–32 are given here below:

—ἐκ τοῦ]των τῶν ἐπῶν το[ι]οῦτό [τι] | γε<γο>νός τῆς ἀμφι[βο]λίας ἐν|τροχάξε[ι]. “Νάστης Ἀμφίμα|⁵χός τε Νομείονος ἀγ[λα]ῖά τέ|[κ]να [δς] και χρυσὸν ἔχων πό|[λ]εμ[όνδ’] ἴε|ν”. και τα[ῦτα τὰ] | ἀμ[φι]βολ]α κτλ.

(...)

—ἀλλάξαντες | τὸ μὲν ἔλπισμα’ και ποήσαν|τες ἔνκατέλπισμα’, τὸ δὲ ‘πε|ρι ταύτης’ ἀλλάξαντες και | ποήσαντες τὸ ‘περι τοῦ|του’ κτλ.

...from these lines a type of ambiguity of this kind: “Nastes and Amphimachus, glorious sons of Nomion; who went to war covered in gold” (...).

(...)

Having changed *elpisma* and having transformed it into *enkatelpisma*, and having changed *peri tautes* and having transformed it into *peri toutou* (...).

In col. 31 there is a mention of a type of *amphibolia* and the Homeric lines of *Iliad* 2.871–872 are cited: the lines are taken from the final part of the Catalogue of Ships, and must have borne some relation to the question at issue:

124 De Falco [1923] 23 proposed *exempli gratia* ‘something like Περί τινων Ἐπικούρου δοξῶν, “On some opinions of Epicurus”; Croenert [1906] 115 a more polemical Δημητρίου Περί τινων ἀλόγως προστετριμμένων, “Demetrius: on some senseless accusations”.

125 Columns and lines are quoted according to the edition of E. Puglia [1988].

τῶν μὲν (*i.e.* τῶν Καρῶν) ἄρ' Ἀμφίμαχος καὶ Νάστης ἠγησάσθη,
 Νάστης Ἀμφίμαχος τε Νομίονος ἀγλαὰ τέκνα,
 ὃς καὶ χρυσὸν ἔχων πόλεμόνδ' Ἴεν ἠϋτε κούρη
 νήπιος κτλ.

These (*i.e.* the Carians) were led by captains twain, Amphimachus and Nastes—Nastes and Amphimachus, the glorious children of Nomion. And he came to the war all decked with gold, like a girl, fool that he was etc.¹²⁶

In antiquity, scholars wondered whether the one who went to war covered in gold was Amphimachus, as the syntax would appear to suggest, or Nastes, as Simonides believed (fr. 60 Page): see sch. A *Il.* 872a ἐπὶ τοῦ Ἀμφιμάχου ἐστὶ τὸ “ὃς καὶ χρυσὸν ἔχων”, ὁ δὲ Σιμωνίδης ἐπὶ τοῦ Νάστου λέγει, “the sentence ὃς καὶ χρυσὸν ἔχων refers to Amphimachus, but according to Simonides it should be construed as referring to Nastes”.

In col. 32 there was certainly a discussion of what is now fr. 68 Usener, taken from Epicurus' *On the End* (Περὶ τέλους) and transmitted by Plutarch in the treatise *That Epicurus Actually Makes a Pleasant Life Impossible* 1089d in the form:

τὸ γὰρ εὐσταθὲς σαρκὸς κατάστημα καὶ τὸ περὶ ταύτης πιστὸν ἔλπισμα τὴν ἀκροτάτην χαρὰν καὶ βεβαιωτάτην ἔχειν τοῖς ἐπιλογίζεσθαι δυναμένοις.

The stable and settled condition of the flesh and the trustworthy expectation of this condition contain (...) the highest and the most assured delight for men who are able to reflect.¹²⁷

Demetrius shows awareness of two variants: ἐγκατέλπισμα instead of ἔλπισμα and περὶ τούτου instead of περὶ ταύτης; apparently he rejected them both.

Do the two columns deal with different problems, or the same problem? And does the *amphibolia* of col. 31 concern a problem already addressed (or one in which the discussion ends with the Homeric citation) or does it also continue in col. 32, thus involving fr. 68 Usener? The latter position is adopted by E. Puglia, who holds that the meaning of the sentence varies according to whether *κατάστημα* and *ἔλπισμα* are the subjects or objects of *ἔχειν*. Thus we would be dealing with an *amphibolia* of the most frequent type, *e.g.* Aristotle,

126 Transl. Murray [1924] I, 115.

127 Transl. Einarson-De Lacy [1967] 37.

Sophistical Refutations 166a τὸ βούλεσθαι λαβεῖν με τοὺς πολεμίους; [Aristotle], *Rhetoric to Alexander* 1435a δεινόν ἐστι τοῦτον τύπτειν τοῦτον.

A different opinion is put forward by A. Roselli, who rightly objects that the formulation with the verb in the infinitive and the subject in the accusative could well be an effect of Plutarch's paraphrase. Furthermore, it is hard to see a conceptual relationship between *Iliad* 2.871–872 and Epicurus' fr. 68. The ambiguity present in the Homeric lines (in which the problem resides in determining whether the subject of ἔν is Amphimachus or Nastes) seems to be of a completely different type. According to this interpretation, columns 31 and 32 are independent.¹²⁸

Be that as it may, in col. 32 the discussion focuses on two errors that could be merely mechanical, *i.e.* not due to a writer's intention to cast Epicurus in a bad light. Ἐγκατέλιπμα instead of ἔλιπμα is likely to be an *Echoschreibung* of κατάστημα, and περὶ τούτου instead of περὶ ταύτης is likely to have arisen through the influence of the neuters κατάστημα and ἔλιπμα.

Let us now take a look at col. 34:

ἀποστροφῆς τοῦ λόγου δυναμένης γενέσθ[αι]. καὶ κ[α]|θ' ὑπόβασιν δὲ τῶν
παρ[α]|⁵γεγραμμένων εἰς τὰ ἐδ[ά|φ]η τῶν ἀντιγράφων ἔσ|τιν εὔρε[ῖν] {εὐρεῖν}
γραφι|[κ]ᾶς ἀμαρ[τί]ας κειμένας |¹⁰ [π]αρὰ τοῖς περὶ τ[ὸ]ν Ἐπίκου|[ρον κτλ.

The terms ἀντίγραφα and γραφικαὶ ἀμαρτίαι are often used by Demetrius. The term ἐδάφη found in ll. 5–6 is, however, more obscure. In a study published in 2006, devoted above all to Galen, but also dealing with this passage from Demetrius, D. Manetti proposed that ἔδαφος should be taken as meaning “writing area”, in contrast with the μέτωπα, which would thus refer to the blank margins where the author jotted down second thoughts and variants which the *grapheus*, unaware of their function, often introduced into the text, with the consequences one can well imagine.

In short, there is only one genuinely obscure term: τὰ παραγεγραμμένα. Puglia takes it to mean “punctuation signs”, but I believe that A. Roselli is more likely to be correct in suggesting that the most probable supplement is τῶν παρεγγεγραμμένων, to be understood as *marginalia*, author's variants, ‘footnotes’.¹²⁹ This would also explain ὑπόβασις, penetrating, becoming inserted, which in Puglia's interpretation would create somewhat greater difficulty.

128 Roselli [1990] 122–123.

129 Roselli [1990] 124–125.

The overall thought expressed in col. 34 could be that certain ἀποστροφαι τοῦ λόγου are to be attributed to the introduction of material deriving from the margins into the text. It is not Epicurus who says meaningless things: rather, it is the *graphais* who render his words meaningless.

Another textual problem can be observed in col. 38:

—ή παν]|τὸς τοῦ ἀλγοῦντος ὑπεξαί|ρεσις. τὸ μὲν γὰρ ‘παντὸς’ διέλ|κεται κατὰ τὰ ἀντίγραφα, προσ|⁵τιθεμένου τοῦ ‘παντὸς’ ἐν | τισιν, ἐν δὲ τισιν μὴ προσ|τιθεμένου. κατὰ πάντα | δὲ τὰ κα[κ]ῶς ἔχοντα ἀντ[ι]|γραφα [γέ]γραπται ‘ἡ τοῦ ἀλ|¹⁰γοῦντος ἐξαίρεσις’ οὐχ ‘[ύ]|πεξαίρεσις’, [ὡς δηλο]ῖ τ[ὸ κα]|κένφατον τ[ὸ] τῆ[ς] ἐξ[αίρε]σ[ε]ως κτλ.

This column features a discussion on Epicurus’ third Principal Doctrine: ὄρος τοῦ μεγέθους τῶν ἡδονῶν ἢ παντὸς τοῦ ἀλγοῦντος ὑπεξαίρεσις. ὅπου δ’ ἂν τὸ ἡδόμενον ἐνῆ, καθ’ ὃν ἂν χρόνον ἦ, οὐκ ἔστι τὸ ἀλγοῦν ἢ λυπούμενον ἢ τὸ συναμφοτέρων:¹³⁰ “The limit of quantity in pleasures is the removal of all that is painful. Wherever pleasure is present, as long as it is there, there is neither pain of body nor of mind, nor of both at once” (D. L. 10.139).¹³¹

The line of reasoning involves a *lectio longior* and a *lectio brevior*. Both are meaningful, but Demetrius makes it clear that he prefers the *longior*.¹³² The most important variant from the conceptual point of view is undoubtedly the presence or absence of παντός,¹³³ but according to the reconstruction offered by Puglia, Demetrius seems to be more concerned with the other variant, stigmatized as “cachemphatic” (ll. 11–13).

Col. 41 discusses Epicurus’ fr. 578:

—καὶ Ἐπικούρου διαπορίαν νομίσει]|εν ἂν τις· “εἰ σοφὸς ἀνὴρ [τρ]οφῆς φροντιεῖ”, καίτοι [δ’] ο[ὐ] τως ἔχουσιν· “εἰ σοφὸς ἀνὴρ |⁵ ταφῆς φροντιεῖ”, τάχα πε|ριπεσῶν ἀν[τιγ]ράφοις ἐν οἷς, | ἐκτετραγμέν[ο]υ τοῦ ἀλ|φα, τε[λ]έσ[αι] τὸ ῥ[ῆμα] θέλων, τὸ | [ῥ]ῶ [καὶ τὸ δ γ]ραφεὺς ἐνέω|¹⁰[σ]ε[ν]. δῆ|λον οὕτως καὶ

130 Likewise, in the tenth Principal Doctrine one also reads (D. L. 10.142): οὐδαμῶθεν οὔτε τὸ ἀλγοῦν οὔτε τὸ λυπούμενον ἔχουσιν, ὅπερ ἐστὶ τὸ κακόν, “For they would be filling themselves full with pleasures from every source and never have pain of body or mind, which is the evil of life” (transl. Bailey [1926] 97).

131 Transl. Bailey [1926] 95.

132 Provided that πάντα τὰ κα[.]ῶς ἔχοντα is to be integrated κακῶς (as is indeed the preferred reading now) rather than καλῶς.

133 On the value of διέλκειν (ll. 3–4), see Roselli [1990] 128, according to whom the term does not mean “to vary” in the sense of the variant, as Puglia maintains on the basis of LSJ, but rather “to be the object of discussion”.

τὸ κε|[λεύειν Ἐ]πίκο[υρον μὴ φιλονικῆ]σαι, ποῖον ἂν ἐκδ]οχεῖον | [μετὰ τὸν
θάνατον τὸ] σῶμα | [δέχοιτο—

The object of contention concerns the variants ταφῆς and τροφῆς. According to Demetrius the only reading possible is ταφῆς, which, he maintains, was corrupted as a result of ἔκτρωσις, “gnawing”, “erosion”, of the letter *alpha*, which a scribe probably replaced with a *rho* and an *omikron*. The passage in question is also discussed by A. Roselli, who is not fully convinced that copies containing the reading τροφῆς genuinely existed, and prefers to think there may have been a malevolent distortion, trivializing the thought of Epicurus.¹³⁴ This is a plausible hypothesis. However, as to what Epicurus—who believed that after death we no longer exist—thought about ταφή, the answer is a foregone conclusion. Determining what he thought of τροφή is less self-evident. Making a decision as to whether a *sophos* should or should not address questions pertaining to everyday life is not a subject that is unworthy of a philosopher. Accordingly, it cannot be automatically assumed that Demetrius was launching a polemic against someone: he may simply have been illustrating how easily an *antigraphon* can become corrupted. But what seems remarkable to me, in this discussion, is the importance Demetrius awards to the material item of information. A modern philologist facing the task of assessing two variants of this type would not think of mice or mold, but would take it to be a visual or psychological error, given that ταφή and τροφή are graphically similar and conceptually complementary.

Further on, roughly from col. 63 onwards, Demetrius seems to focus less intensely on textual questions and more on exegesis. More than once he defends the Master against the most typical and predictable kind of attack: namely, that of attributing to him terminological uses incompatible with his thought. A case in point is found in coll. 64–65, concerning the word ἀναπνοή, which can have a specific sense—breathing in as opposed to breathing out—and a general sense, which includes both inspiration and expiration. Another case can be seen in coll. 66–68, where Demetrius comments on Epicurus’ statement that love for one’s offspring is *not* in accordance with nature. But Epicurus never made such an absurd assertion: he knew very well that nature *drives* men to love their offspring; on the other hand, he also knew that nature cannot prevent the existence of heartless parents.¹³⁵

Demetrius evidently holds the following position: attacks against Epicurus cannot be allowed to go unnoticed, even if they are fallacious and used merely

134 See Roselli [1990] 128–129.

135 Discussion of the passage in Blank [2001] 242–243.

as a pretext, because naive and untrained readers could be deceived. All readers should be alerted to the fact that despite possible differences in the manner of setting out doctrines, the doctrines themselves remain unchanged, and therefore there is no need to become agitated (ταράσσεισθαι). If the reader bases his interpretation on the meaning, rather than simply on the words, he will not be led astray. Thus in col. 69 Demetrius writes:

—τὸ μὲν] | βλεπόμενον ὡς εἰσὶν τι|νες ὑπομενετικαὶ διδασ|καλαὶ πολλῆς
εὐοδίας ἢ⁵ μᾶς κατὰ τὴν ἀνάγνωσιν | πληρώσει, βλέποντας | ὡς οὐχ ὁμολογεῖται
τὰ ἄ|τοπα, δι' ὑπομονῆς δὲ τῆς | τούτων ἐλέγχει τοὺς κα|¹⁰[τ]ὰ τρυτὸν τὸν
τρόπον | διακαμό[ν]τας κτλ.

Based on ἐλέγχει (the first meaning of which is “to chide”) E. Puglia identifies τοὺς διακαμόντας of l. 11 with the opponents of the doctrine, who obstinately insist on (διακάμνειν = “to be obstinate” (?)) misinterpreting Epicurus’ words.¹³⁶ Blank¹³⁷ proposes a comparison with the closing phrases of book XIV of *Peri phuseos* by Epicurus, col. 43 ll. 6ff. Leone:¹³⁸

αὐτοὺς γὰρ δίκαιον φάσ|κε[ι]ν σολ[ο]ικίζειν ἢ συμ|πεφορηῆσθαι λελυμα[σ]
μέ|νους καὶ τὸ ἀπὸ τύχης |¹⁰ τ[ῆ]ς φύσ[ε]ως αὐτῶν ὀρθὸν | ἐ[π]ιφορᾶς εἶδος.
οἱ δὲ μὴ | δι[ά] τινος ὀνόματος ἢ ὀνο[μασί]ας ἀδι[α]φ[ό]ρου κοι|νό[τ]ητα, τῶι
τε λελογισ|¹⁵μ[έν]ωι κ[α]ὶ τῶι τυχόν|τι [γι]νομένην, τῆς δι|αφ[ο]ρᾶς οὐκέτι
ἐπαισθα|νόμενοι, παντελῶς ἢ|συχίαν [ἐ]χέτωσαν.

The translators have seen the final words as referring to the opponents of the Epicurean school. But in actual fact this could also be a reassurance addressed to the followers, to ‘our people’. And the same holds true for col. 69 of PHerc. 1012, where ἐλέγχει τοὺς διακαμόντας could mean “shows that those who διακάμνουσι in this manner do so pointlessly, mistakenly”.

2.4 *Two Philologists Greater than Their Time: Panaetius and Galen*

Among the Stoic texts that have come down to us, there is nothing comparable to PHerc. 1012, but Stoicism did have among its exponents a highly competent *Textkritiker*: namely Panaetius of Rhodes. We have information on his linguistic-grammatical observations (fr. 155)¹³⁹ and on antiquarian questions

136 Puglia [1988] 242–243.

137 Blank [2001] 243.

138 See Leone [1984] 64, and Leone [1987] 54–55.

139 The fragments are numbered according to the edition of F. Alesse [1997].

(fr. 142–143) as well as on issues concerning literary authenticity (fr. 150–151). Of particular interest are fr. 145–148, which relate that Panaetius was uncertain as to the authenticity of Plato's *Phaedo*. This uncertainty is surprising: if Panaetius genuinely cast doubt on the Platonic authorship of *Phaedo*, our high esteem of him would be severely undermined. However, it could be merely the result of a misunderstanding by the author of the citations, or, more simply, Panaetius may have intended to say (as is true) that the doctrines on the immortality of the soul put forward in the *Phaedo* do not correspond to other Platonic doctrines on the same topic.

It is worth recalling that according to D. L. 3.37, Euphorion and Panaetius had drawn attention to the magmatic state of the *incipit* of Plato's *Republic*: “Euphorion and Panaetius relate that the beginning of the *Republic* was found several times revised and rewritten”, where “revised and rewritten” is the translation chosen by Hicks¹⁴⁰ for the participle ἐστραμμένην. But unfortunately it is hard to tell how far the στρέφειν may have been due to the intervention of the γραφείς and how far it can be attributed to second thoughts by Plato himself.¹⁴¹

Another extremely important passage is fr. 153 = Plutarch, *Life of Aristides* 1.6, where Panaetius unravels a question of homonymy by starting out from the type of characters written on a stele. Since the stele is engraved in writing using a post-Euclidean alphabet (*i.e.* the alphabet adopted officially in Athens in 403–402), it cannot refer to Aristides called “the Just”, who died shortly after 470 BC. The Homeric scholia often explain errors and confusions by appealing to the μεταγραμματισμός, *i.e.* the transition from more ancient to newer writing conventions. Panaetius may have drawn this argument from the Alexandrian scholars, but with the difference that his was not an abstract line of reasoning, but an argument based on a genuinely existing document.

From the point of view of awareness and theoretical maturity, in antiquity perhaps Galen¹⁴² was the only philologist greater than Panaetius. It is impossible to do justice to his prodigious activity in just a few lines. We are lucky enough to have the work of eminent scholars who have already performed this task, the foremost among them being D. Manetti and A. Roselli, but also Von Staden, Hanson, and many others whom we cannot name within the limited space available here. Thus we will restrict our observations to a brief overview.

Galen discusses the authenticity of works and passages, as do the other authors. But what distinguishes him from the latter is the fact of having

140 Hicks [1925] I, 311.

141 Dion. Hal. *Comp.* 6.25.33 (II, 133, 7ff. Us.-Rad.) subscribes to this second hypothesis. See Dorandi [2007] 21, and now the updated report by Regali [2012] 73 n. 278.

142 See Manetti in this volume.

profound—and direct—knowledge of the circulation of books, of autograph composition and its phenomenology.¹⁴³ Like all ancient scholars, he was inclined to identify that which was old with that which is authentic (a principle which in general is correct). He was aware of error typologies, even the least obvious among them, such as the penetration of marginal notes into the text.¹⁴⁴ He had knowledge of the errors of numerals written with letter symbols (indeed, he knew these errors were particularly frequent); he also knew the kind of errors due to μεταγραμματισμός from one alphabet to another, and he came close to identifying the concept of *lectio difficilior*.

The aspect that reveals the greatest distance of Galen and of all the ancients from Lachmannian philology is, once again, lack of familiarity with the psychological element of error. A case in point is the prooemium to the commentary *On Epidemics VI* (794.10–795.4 Kühn), which features a discussion on a correction introduced by Heraclides of Tarentum into Hippocrates' text. Galen attests to the fact that according to Heraclides the original reading was θύραι, but since the horizontal stroke of the letter (the μέση γραμμή) of the letter *theta* had apparently disintegrated, he concludes that the βιβλιογράφος probably read οὐραί.

2.5 *The Aristotelian Commentaries*

Earlier, we touched on the pre-history of the commentary, with a brief reference to 'Simonides' passage' and the Derveni Papyrus. But the first commentaries on a recognizably philosophical text belong to Crantor (3rd century BC), a philosopher of the Old Academy, mentioned several times with the designation of ἐξηγητής, and to the Stoic Posidonius (1st century BC). Both commentaries concern Plato's *Timaeus*. There may also have been a commentary Περὶ τῶν Τιμωνος Σίλλων by Sotion (Ath. 8.336d),¹⁴⁵ and also another represented by the anonymous *Theaetetus* Commentary (PBerol. inv. 9782), which Sedley

143 Manetti [1994], esp. p. 49.

144 Particularly clear (but not the only one on this subject) is the passage *On Epidemics I* (80.2–8 Wenkebach): "Sometimes, when I write two versions of the same concept, putting one in the text (κατὰ τὸ ὕφος), the other in one of the margins (ἐπὶ θάτερα τῶν μετώπων), so that I can take my time, later, in choosing one of the two, then what tends to happen is that the first person who copies the book actually transcribes both versions (ὁ πρῶτος μεταγράφων τὸ βιβλίον ἀμφότερα ἔγραψεν). And, if I don't notice what has happened, and I fail to correct the mistake, the mistake gets left there and the book starts to circulate in this very form".

145 Some have held that this work was an *attack* against Timon of Phlius, but in actual fact it must have been a genuine commentary, with a literary part and a philosophical part; Apollonides of Nicaea drew on the commentary by Sotion in order to compose a ὑπόμνημα

dates to the 1st century BC.¹⁴⁶ How these commentaries were organized is not known, but they focused on the same interests as the other cases seen so far: language and identification of the correct form of the text.¹⁴⁷

But from the point of view that concerns us here, the commentaries that were truly important, in that they founded a precise literary genre, are those on Aristotle. They begin from the moment when the exoteric works were brought to light, and therefore considerably later than the *floruit* of the Alexandrian school, of which they inherited the methods and goals.

The story of the reappearance of Aristotle's exoteric books,¹⁴⁸ recounted by Strabo,¹⁴⁹ partly has the air of a fairytale, but is partly realistic. They are said to have disappeared from the age of Theophrastus to the age of Sulla. A particularly controversial figure in this question is that of Apellicon of Teos,¹⁵⁰ who, having come into possession of the library of Aristotle and Theophrastus, worked on some of the books that had deteriorated, "supplementing them wrongly and editing them with a great quantity of blunders" (ἀναπληρῶν οὐκ εὖ, καὶ ἐξέδωκεν ἀμαρτάδων πλήρη τὰ βιβλία, Strab. 13.1.54).

Andronicus, the eleventh successor of Aristotle and first commentator of Aristotle's recovered works, is a key figure, if for no other reason than that he was the one who materially gave the *corpus Aristotelicum* roughly the structure it still has now.¹⁵¹ His activity was not merely redactional and ecdotic but also philological *stricto sensu*. Among the works he declared to be inauthentic, mention should be made of *On Interpretation* (see Alexander of Aphrodisias, *On Aristotle's Prior Analytics* 160.32–161.1 Wallies) and the final part of *Categories* (see Simplicius, *On Aristotle's Categories* 159.31–32 Kalbfleisch).¹⁵² His reason for issuing this judgment—which was also a typical manner of

on the *Silloi*. It is probably from this work that Diogenes Laertius took the citations from Timon: see Mejer [1978] 30 n. 61.

146 Sedley [1997] 112. But it is possible that the range of time was more extensive: 1st century BC–1st century AD (Bastianini-Sedley [1995] 515).

147 Sedley [1997] 116, 124.

150 Cf. *e.g.* Moraux [1973] 30–31.

151 Moraux [1986] 131.

152 What Andronicus declared to be spurious has nevertheless come down to us. This does not demonstrate that there were rival editions, nor that Andronicus' judgment was ignored, but rather that the (exceptionally important) principle adopted by the Alexandrians had already gained widespread acceptance, namely, the principle that a judgment of inauthenticity did not imply the consequent physical suppression of what was held to be inauthentic.

reasoning displayed by these commentators¹⁵³—is illustrated by Ammonius, *On Aristotle's On Interpretation* 5.28–6.4:

When Andronicus heard Aristotle in the proemium of this book (16a3) calling thoughts (νοήματα) “passions of the soul” (παθήματα τῆς ψυχῆς) and adding (16a8) “these have been discussed in <my> *On the Soul*”, he failed to understand where in the course *On the Soul* the Philosopher called thoughts “passions of the soul” and, thinking it necessary for one of the two courses, this one and *On the Soul*, to be shown to be a counterfeit <work> of Aristotle, he considered he had to reject this one as spurious, rather than *On the Soul*.¹⁵⁴

Erudite activity did not involve only one genre. A distinction should be made between the epitome, the thematic essay on specific points, paraphrase, and the running commentary, though genre distinctions are naturally valid only up to a certain point¹⁵⁵ (in effect it would be helpful to make use of the definition proposed by F. Montanari, “text on a text” or “text about a text”).¹⁵⁶ But let us examine the running commentary, which was the predominant form. Its characteristic feature is the chapter-by-chapter analysis, or sentence by sentence, sometimes word by word. Strictly speaking, it does not presuppose a parallel text on the ‘facing page’, because the commentary practically rewrites the whole text from the beginning to the end. Effectively, by uniting the lemmata, one obtains an exemplar insertable into a stemma.

Scribal errors often impair the exact correspondence between the lemma and the commentary. For instance, the scribe may make a mistake while transcribing the lemma, in which case the explanation will refer to a reading that no longer exists. Some reader may then try to restore coherence, but there is no guarantee that this will be done correctly: if the procedure is not carried out properly, the reader is likely to adapt the (right) explanation to the (corrupted) lemma, with the result of corrupting the explanation as well. Or, *vice versa*, an error may occur in the explanation, resulting in an inappropriate correction of the lemma. At other times the error may lie in the source, as documented by the following small fragment from Sextus, *Against the Mathematicians* 7.111, the single witness for the greater part of the proem of Parmenides’ *Peri physeos*.

153 Some of the causes at the root of the judgments on falsity are indicated by Müller [1969]; often these were causes we would not imagine: see Barnes [1992] 267–268.

154 Transl. Blank [1996] 15.

155 For a typology of philological writings, see Dubischar in this volume.

156 Montanari [2011a] 15.

The beginning of l. 10 is cited in the form εἰς φάος. In the subsequent analysis of the passage, the expression reappears, but this time in the form ἐς φάος, which, as Sider points out, “probably came from another glance at his (*i.e.* Sextus’) exemplar”.¹⁵⁷ The opposition εἰς φάος vs ἐς φάος seems to be due to Sextus himself, and this is somewhat surprising: the ‘prose’ form εἰς is in the poetry citation, whereas the more poetic ἐς is found in the prose paraphrase. The text interventions further complicate the situation. When one is told that a certain reading “was found” (the verbs used are εὐρίσκειν, φέρειν etc.) in a given author, it is difficult to establish whether this is the fruit of a conjecture or a more ancient reading. To give only one example, when Alexander of Aphrodisias, in the commentary *On Metaphysics* 59.6–8, reports that Aspasius attested that in Aristotle’s *Metaphysics* 998a10–11 Eudorus and Euharmostus had emended an ἀρχαιοτέρα γραφή, one cannot tell whether the form Aspasius presented as a conjectural reading might not, more simply, have actually been the reading Eudorus and Euharmostus had found in their *Vorlage*.¹⁵⁸ Problems of this kind are not an isolated phenomenon in classical studies: they are well-known to Homeric scholars.

It was mentioned above that the reappearance of Aristotle’s exoteric works called a halt to research, redirecting scholarly activity towards systematization and clarification. But as R. Chiaradonna has pointed out, the return of these treatises into circulation was not a sudden event: it continued over several centuries, and could not be regarded as concluded until Alexander of Aphrodisias.¹⁵⁹ Indeed, the very importance of Andronicus in the ‘revival’ of Aristotelianism in the 1st century BC is today sometimes downplayed,¹⁶⁰ while on the other hand a certain familiarity with Aristotle’s fundamental views can be perceived even in authors such as Antiochus of Ascalon, although the latter, partly also for chronological reasons, had no experience of first-hand use of the Aristotelian school treatises.¹⁶¹

But the cultural background and the context in which the exoteric works became available again had already become receptive to the new frame

157 Sider [1985] 362.

158 See Barnes [1999] 11 and n. 40, although μεταγραφείσης ὕστερον cannot mean “later accepted”. Undoubtedly Aspasius and Alexander sincerely believed that Eudorus and Euharmostus had emended. The most common sense of μεταγράψαι is “altering a text”: see *e.g.* Cassio [2002] 107. On the passage forming the object of textual discussion, see Bonazzi [2005] 146ff.

159 Sharples [2007]; Chiaradonna [2011].

160 Note that Chiaradonna [2013] 30 writes “Andronicus’ ‘edition’” between inverted commas.

161 On this, see Chiaradonna [2013].

of mind.¹⁶² Between the end of the 2nd and the beginning of the 1st century BC, Pythagoreanism and Skepticism had lost much of their impetus, or were only just beginning to experience a reawakening of interest. Stoicism, which had come under the influence of the Roman world, had lost its sheen and liveliness in the realm of theory. As far as Epicureanism is concerned, it persisted in its vocation of faithfulness to the Master's thought. If Sedley's basic theory is right, as I believe it is, then it is not incorrect to say that Lucretius set down Epicurean doctrine in verse without introducing any noteworthy innovation at all.¹⁶³ During the 2nd–1st centuries BC and 1st AD the tendency of philosophers to look back to the past had already become established. This is the tendency Seneca was challenging when he wrote *philosophia philologia facta est* (*Ep. Lucil.* 108.23), remarking that it was by now an entrenched habit for thinkers to draw up erudite commentaries on the authors of the past rather than putting these authors' precepts into practice.

Up to the 3rd century AD, Aristotelian commentaries were characterized by an absolute veneration for the Master.¹⁶⁴ The basic idea was that the truth had already been discovered—by Aristotle—and that a good follower of the Master should bring it back into the limelight, confute misguided interpretations of his words and clarify his vision for the benefit of those who are (or pretend to be) incapable of understanding it. And in effect, even in this first period the commentaries were well constructed, probing into the topics in considerable depth. So why did the production of commentaries on Aristotle continue for centuries? One reason is that the commentaries concerned the exoteric works, which were difficult, technical, and in need of exegesis. But above all, the commentaries continued because from a certain moment onwards they became a form of philosophical expression: being a philosopher began to coincide with the art of being a commentator.¹⁶⁵ In this period the Peripatetics focused almost entirely on Aristotle; Adrastus of Aphrodisias is the only Aristotelian who wrote commentaries on a figure other than Aristotle (Plato). After Epicureanism—which had a distinct history of its own—the

162 See e.g. Donini [1994] 5038ff.

163 Sedley [1998a]; as Gottschalk [1996] has clarified, Lucretius' innovations were due mainly to his *Romanitas* and his personal character.

164 None of them aspires to achieve that 'neutrality' which Galen would subsequently endeavor to respect—or so he claimed—in his commentaries on Hippocrates (Manuli [1983] 471–472). One has the impression that the Epicureans felt it was more important to reassert the infallibility of the Master than to pursue a disinterested search for truth (Gigante [1999] 50).

165 See Donini [1994] 5037–5038, 5042, 5053ff., and Fazzo [2004] 4ff.

Peripatos was the most ‘autistic’ school. In addition to investigating and studying the truth, scholars of the Peripatos busied themselves with cataloguing, putting in the proper order, perfecting and justifying the work of Andronicus.¹⁶⁶

The commentaries were founded on the idea that the whole of a text must be examined, in all its aspects. There was a precise order of events to be followed in the investigation: the enquiry started out from the author (the principle of *σ αφηγιζειν*) and then extended the range of vision to include a glance at other authors. As far as Aristotle was concerned, as time went on it would be above all Simplicius who would feel that it was important to quote actual passages from the Presocratic philosophers mentioned or alluded to by Aristotle.¹⁶⁷

Of course, the commentators of Aristotle often came across variants. The older a reading was, the more it was likely to be reliable—so they reasoned, on the assumption that the older commentators had respect for the text whereas the newer generations had no scruples about altering it. In contrast to Galen, the Aristotelian commentators did not specifically concern themselves with issues of *theoretical* text criticism,¹⁶⁸ but they were well aware of such aspects; particular attention to these problems was shown by Alexander of Aphrodisias, who cites commentaries and variants, and hypothesizes lacunae and translocations.

During the imperial age the running commentary gradually became sclerotized into a single fixed form, with a precise subdivision into parts. One of the elements always present was the *prolegomena*, which addressed a series of preliminary questions such as authenticity, relations with the rest of the *corpus*, etc. This repetitiveness can be explained in the light of scholastic teaching. The teacher, who has already composed a commentary on Aristotle, utilizes his own commentary when holding lessons at school. His pupils take notes. Over time, a pupil then himself becomes a teacher, and in order to comment on Aristotle, he will—quite naturally—draw on his old teacher’s notes, integrating them with his own observations, but without taking care to distinguish the other man’s work from his own additions, since such a distinction was regarded as being of no significance from the point of view of the user. The composite commentaries gradually acquired a typical shape,

166 On this aspect of Aristotelian exegesis belonging to the first period, see *e.g.* Montanari [2006a] 11–12.

167 See Baltussen [2002], esp. pp. 175 and 182.

168 With regard to Galen and his manner of dealing with *Textkritik* on the theoretical level, the work of Manetti-Roselli [1994], *passim*, remains fundamental.

characterized by the peaceful coexistence of similar—or at times identical, or possibly incompatible—sections.¹⁶⁹

It goes without saying that the texts that most frequently became the object of a commentary were those which were felt to be of the greatest interest, namely the works of the *Organon*, especially *Categories*, considered as the most outstanding among the exoteric works.¹⁷⁰

Interest also focused on *Metaphysics* and on the treatises dealing with theoretical physics (*Physics*, *On the Heavens*, *On Coming-to-be and Passing-away*, *Meteorologics*), whereas works concerning specific physical problems aroused considerably less interest. A certain amount of attention was devoted to biology, and also to the *Nicomachean* and *Eudemian Ethics*. On the other hand, there was total indifference towards *Politics*, which discussed issues no longer felt to be of current relevance. Nor did *Politics* easily lend itself to use as a source from which to draw *excerpta*, given its unadorned style. Plato's work met with a similar fate, with interest focusing on *Timaeus*, but not the *Republic*.¹⁷¹

A similar sclerotization can be noted in various other forms of handbooks, such as grammatical treatises. They were composed according to a rigidly constructed format, which over time was applied even more intransigently instead of allowing a degree of flexibility, despite the major cultural changes—some of momentous impact—taking place in the course of the centuries (to mention just one: the transition from paganism to christianity). But what is worth pointing out is that these works increasingly staked out a central role for themselves: logic, rhetoric and grammar, exploiting *pro domo sua* the examples of the past, claimed a position as ἀρχή of all the other sciences. Suffice it to call to mind Isidorus of Seville and his conception of grammar as the basis of philosophy and *therefore* as philosophy in its own right, the buttress that holds up the entire edifice of knowledge.¹⁷²

This was a sign, unequivocally, that the Medieval era had now begun.

169 On this aspect, which is in any case well known, see *e.g.* Fazzo [2004] 5–6.

170 See Rashed [2007] 42. A new commentary on *Categories* (by Porphyry?) has been identified in the Archimedes Palimpsest: cf. Chiaradonna-Rashed-Sedley [2013].

171 See *e.g.* Donini [1994] 5040.

Mythography

Claudio Meliadò

- 1 *The Origins of Mythography*
- 2 *The Birth of Scientific Mythography*

What was mythography in ancient times? The answer to this question cannot be easily deduced from the occurrences of terms such as “mythographers” and “mythography” (understood as a literary genre). *Μυθογράφοι* is used for the first time by Polybius, who in *The Histories* 4.40.2 classifies the mythographers together with poets, as witnesses on whom to base knowledge of the world; in this context the mythographers are probably to be identified with the first logographers, who were authors of *Genealogies*.¹ This association also occurs in later writers and in some cases it is the poets themselves who are called *μυθογράφοι*. In this sense an *excerptum* of Diodorus Siculus handed down by Eusebius of Caesarea is characteristic (*Praep. evang.* 2.2.54 = Diod. Sic. 6., fr. 1): among the historians (ιστορικοί) Euhemerus of Messene is mentioned, while poets such as Homer, Hesiod and Orpheus are considered as mythographers. As regards the latter, Philon (*De spec. leg.* 1.28) states in the same way that in order to charm the readers of their works they had adapted the falsehood to the melodies, rhythms and metres (πρὸς δὲ τὸ εὐπαράγωγον μέλεσι καὶ ῥυθμοῖς καὶ μέτροις ἐνηρμόσαντο τὸ ψεῦδος, νομίζοντες ῥαδίως καταγοητεύσειν τοὺς ἐντυγχάνοντας).

In a more general perspective, the mythographer (*μυθογράφος*) was he who narrated a myth (*μυθογραφεῖν*), either in prose or in poetry. In this sense the term is used by Strabo (4.1.7) with reference to Aeschylus who had been attacked by the philosopher-scientist Posidonius because, in his *Prometheus Unbound*, he had tried to explain the origins of the “Stony Plain”, situated between Massilia and the mouth of the Rhodanus river, narrating that Heracles had found himself without arrows and Zeus, in order to help him in the fight against the Ligurians, had made stones rain down from a cloud, which the hero of Tiryns had then used to beat his enemies.

1 Cf. Diod. Sic. 4.14.4 Ζεὺς γὰρ πρώτη μὲν ἐμίγη γυναικὶ θνητῇ Νιόβῃ τῇ Φορωνέως, ἐσχάτη δ’ Ἀλκμήνῃ· ταύτην δ’ ἀπὸ Νιόβης ἑκαταδεκάτην οἱ μυθογράφοι γενεαλογοῦσιν.

1 The Origins of Mythography

The first narrator of myths in prose was Hecataeus of Miletus (550–480 BC),² an author of *Genealogies*, which the sources also called *Histories* or Ἡρωολογία³ (*Heroic Tale*), as well as of a work of a geographical nature, the *Periegesis*, written at the end of the sixth century accompanied by a sort of map, the Περίοδος γῆς, in which a description of the lands known until then appeared.

His activity is usually seen from two points of view. One approach sees him as the inventor of genealogical chronography and the rationalistic exegesis of mythical traditions;⁴ the other denies him the merit of being the father of historical research and considers him merely as a continuer of the Hesiodic tradition: thus in this interpretation the only novelty he introduced would be the transformation into prose of material dealt with by poets.⁵ The main features of his *Genealogies* can however be drawn from the opening phrase of the work preserved for us by Ps.-Demetrius (*Eloc.* 12 = Hec. fr. 1 Fowler):

Ἐκαταῖος Μιλήσιος ὧδε μυθεῖται· τάδε γράφω, ὡς μοι δοκεῖ ἀληθέα εἶναι· οἱ γὰρ Ἑλλήνων λόγοι πολλοί τε καὶ γελοῖοι, ὡς ἐμοὶ φαίνονται, εἰσίν.

Thus says Hecataeus of Miletus: I write these words as they seem to me to be true; for the stories of the Greeks, as they seem to me, are many and ludicrous. (Transl. by Fowler [2001] 101)

What emerges clearly from this proem is the embarrassment of the historian in the face of the contradictory nature of innumerable and ridiculous stories. If previously it was the authority of the poet inspired by the Muses which guaranteed the veracity of the song, for Hecataeus instead the only 'yardstick' is the author's opinion. In fact he does not limit himself to recording the traditions he encounters but makes a *krisis* of his sources so as to be able to create interpretations that respond to a precise criterion of likelihood. Proof of this is, for

2 Bertelli [2001].

3 From a *Heroologia* of Anaximander of Miletus (to be identified with the historian of the first part of the fourth century BC mentioned by D. L. 2.2 and by *Suidas* s.v. Ἀναξίμανδρος) only one certain fragment remains: Ath. (*Deipn.* 11.99 p. 498a = Anax. fr. 1 Fowler) informs us that Anaximander had used, as did Hesiod before him in the *Melampodia* (fr. 271–272 M.-W.), the form σκύπφος instead of σκύφος; the fragment is also important as it states that in the view of Anaximander, Pterelaus was the son of Teleboas, in his turn the son of Poseidon, while Pterelaus is usually given as the father of Teleboas. Cf. Schubart [1832], pp. 62–63.

4 So for example Jacoby [1912a] 2667ff.

5 Pearson [1939] 105ff.

instance, his explanation about the real nature of Cerberus the “dog of Hades” of Cape Taenarum (Paus. 3.25.4 = Hec. fr. 27 Fowler):

ἄκρα Ταίναρον [...] ἐπὶ δὲ τῇ ἄκρῃ ναὸς εἰκασμένος σπηλαίῳ καὶ πρὸ αὐτοῦ Ποσειδῶνος ἀγαλμα. ἐποίησαν δὲ Ἑλλήνων τινὲς ὡς Ἡρακλῆς ἀναγάγοι ταύτηι τοῦ Ἄιδου τὸν κύνα [...]. ἀλλὰ Ἑκαταῖος μὲν ὁ Μιλήσιος λόγον εὖρεν εἰκότα, ὄφιν φήσας ἐπὶ Ταινάρῳ τραφήναι δεινόν, κληθῆναι δὲ Ἄιδου κύνα, ὅτι ἔδει τὸν δηχθέντα τεθάναι παραυτίκα ὑπὸ τοῦ ἰοῦ· καὶ τοῦτον ἔφη τὸν ὄφιν ὑπὸ Ἡρακλέους ἀχθῆναι παρ’ Εὐρυσθέα.

On the promontory (*sc.* Taenarum) is a temple like a cave, with a statue of Poseidon in front of it. Some of the Greek poets state that Heracles brought up the hound of Hades here [...]. But Hecataeus of Miletus gave a plausible explanation, stating that a terrible serpent lived on Taenarum, and was called the hound of Hades, because anyone bitten was bound to die of the poison at once, and it was this snake, he said, that was brought by Heracles to Eurystheus. (Transl. by Jones [1926] 159–161)

Among the criteria to establish the veracity of a story, Hecataeus therefore paid attention to the possible linguistic misunderstandings caused for example by homonymy. This certainly does not make him a rationalist *tout court*; one has the impression that in his *Genealogies* he has attempted to demythicize some elements in the narration that provoked particular surprise and incredulity, with the aim of strengthening the reliability of the tale. On the whole, he does not seem to have had doubts about the traditional mythological system.

Acusilaus of Argos,⁶ who lived in the sixth century BC or more probably in the first half of the fifth, also wrote *Genealogies*. *Suidas s.v.* Ἀκουσίλαος (test. 1 Fowler) defines him as “the oldest of the investigators” (ἱστορικὸς πρεσβύτατος) and reports a legend according to which he wrote his work on the basis of the text of some bronze tablets, found by Cabas, his father, digging somewhere in his house. From Welcker⁷ onwards this tradition has been considered a late invention, but, even though it was Acusilaus himself who stated this, it could represent an interesting parallel for the use that Herodotus would make of Theban inscriptions of the archaic period, which he had interpreted with reference to the breed of the Labdacids.

6 Mazzarino [1966] 60–70; Dowden [1992] 30; Toye [1995]; Calame [2004]; Pàmias [2008] 166–169; Fontana [2012].

7 Welcker [1844] 444.

During the writing of his *Genealogies*, in at least three books, he had probably used material found in the epic poems written before his time: he followed the *Phoronis* making Phoroneus, the “first man”, the father of Niobe (mother of Argos and Pelasgus) and of Sparton (father of Mykeneus), thereby foreshadowing the conflict between Mykene and Argos that led to the destruction of the former in 468 BC (fr. 24 Fowler). Because of his dependence on poetic sources, in particular on Hesiod, he had been accused of plagiarism for having limited himself to transforming into prose what his predecessors had expressed in poetry (Clem. Al. *Strom.* 6.26.8 = test. 5 Fowler); however, this opinion is not completely trustworthy if we consider what can be deduced from the fragments of Acusilaus. In the *Bibliotheca* attributed to Apollodorus (2.1.1), it is stated that according to Acusilaus (fr. 25 Fowler), Pelasgus was the son of Zeus and Niobe, while Hesiod (fr. 160 M.-W.) had defined him as ἀυτόχθονος (“born from the earth”). Similarly, while according to the poet of Ascra (fr. 131 M.-W.), the daughters of Proetus had gone mad for not having accepted the Dionysiac rites, Acusilaus had attributed the reason of their folly to the fact that they had not honored a statue of Hera (fr. 28 Fowler).⁸ All this confirms what was stated by Flavius Joseph (*Apion.* 16 = Acus. test. 6 Fowler):

περίεργος δ' ἂν εἶην ἐγὼ τοὺς ἐμοῦ μᾶλλον ἐπισταμένους διδάσκων ὅσα μὲν Ἑλλάνικος Ἀκουσιλάω περι τῶν γενεαλογιῶν διαπεφώνηκεν, ὅσα δὲ διορθοῦται τὸν Ἡσίοδον Ἀκουσίλαος.

It would be superfluous for me to instruct those who know more than I how much Hellenicus disagreed with Acusilaus on the genealogies, how often Acusilaus corrects Hesiod. (Transl. by Barclay [2007] 18)

In the *Genealogies* there were also alternative versions about the fleece captured by the Argonauts, which in reality was not golden but turned purple by the sea (fr. 37 Fowler), and as regards the Trojan war, provoked by Aphrodite to bring about the defeat of the breed of Priam and to favour the descendants of Anchises (fr. 39 Fowler).

Probably of the same period as Acusilaus was Pherecydes of Athens.⁹ Despite the condition of information about him in *Suidas Lexicon*, in which a certain confusion with two other homonymous writers of Syros and of Leros occurs, it is possible, with a high degree of certainty, to attribute to him a genealogical work, on the basis of the evidence of Diogenes Laertius (1.119) and of Dionysius

8 Kowalzig [2007] 276.

9 Dolcetti [2004].

of Halicarnassus (*Ant. Rom.* 1.13.1): the former informs us that according to Andron of Ephesus two “Pherecydes” who were natives of Syros had existed, the astrologist and the theologian, Pythagoras’ master; instead, Eratosthenes believed that only one Pherecydes came from Syros, while a γενεαλόγος (“genealogist”) with the same name was Athenian; to this can be added the eloquent statement by Dionysius who defines the Pherecydes in question as γενεαλόγων οὐδενὸς δεύτερος (“not inferior to any of the genealogists”). His *Ἱστορίαι* in ten books, a possible but not certain title of the Pherecydean text, judging from the extant fragments with the indication of which book they belonged to, may have had a division κατὰ γένος; the author should have systematically treated the stories about the characters belonging to each single race. Uhl¹⁰ therefore supposes that the work had a three-part structure: Inachides (Books 1–5),¹¹ Deucalionides (Books 5–8)¹² and Atlantides (Books 8–10).¹³ The reconstruction proposed by P. Dolcetti is more complex: the first book may have been taken up by the first part of the race of Asopus (descendants of Aegina and Salamina) and by the race of Inachus; this theme was continued in the second book (Heracles), in the third (Heraclides), in the fourth (race of Agenor) and in the fifth (Cadmus, Dionysus and Theban races), which included the first part of the treatment of the race of Deucalion, that goes as far as part of the eighth book, where it gives place to the second part of the race of Asopus (descendants of Arpin: Oenomaus, Ippodamia, Pelops and Pelopides). This fills the ninth book (Trojan war and Νόστοι and other descendants of Pelops) and the tenth (descendants of Antiope). We can have a fairly clear idea of how detailed and wide the treatment of the myth by Pherecydes was from some fragments preserving quotations of his *ipsissima verba*. For example, fr. 105 Fowler about the events that were at the basis of the Argonaut venture:

Ἔθνε τῷ Ποσειδῶνι ὁ Πελῆης, καὶ προεῖπε πᾶσι παρῆναι· οἱ δὲ ἦῖσαν οἳ τε ἄλλοι πολῖται καὶ ὁ Ἰήσων. ἔτυχε δὲ ἀροτρεύων ἐγγυὸς τοῦ Ἀναύρου ποταμοῦ, ἀσάμβαλος δὲ διέβαινε τὸν ποταμόν, διαβάς δὲ τὸν μὲν δεξιὸν ὑποδεῖται πόδα· τὸν δὲ ἀριστερὸν ἐπιλήθεται, καὶ ἔρχεται οὕτως ἐπὶ δειπνον. ἰδὼν δὲ ὁ Πελῆης

10 Uhl [1963] 83ff.

11 1. Pelasgians-Arcades, Asopides, Athenians; 2. A catalogue of the Danaides, breed of Lynceus, Heracles (first part of the twelve labours); 3. The continuation of the labours and other feats, descendants of Heracles; 4. Races of Agenor and Phoenix, descendants of Europa, Cadmus; 5. Cadmus and Theban families.

12 5. Hellenus, Aeolus; 6. Atamas, Creteus, Argonauts; 7. Argonauts, race of Creteus, Deion; 8. Alcestis, Eleoetolic races.

13 8. Tantalus, Sterope; 9. Electra-Dardanus, Taygete; 10. Alcyone.

συμβάλλει τὸ μαντήϊον, καὶ τότε μὲν ἠσύχασε, τῇ δ' ὕστεραίη μεταπεμψάμενος αὐτὸν ἤρετο ὅ τι <ἄν> ποιοίη εἰ αὐτῷ χρησθεῖη ὑπὸ τοῦ τῶν πολιτῶν ἀποθανεῖν· ὁ δὲ Ἰήσων, πέμψαι ἂν εἰς Αἴαν αὐτὸν ἐπὶ τὸ κῶας τὸ χρυσόμαλλον, ἄξοντα ἂν ἀπὸ Αἰήτεω. ταῦτα δὲ τῷ Ἰήσωνι Ἡρῆ ἐς νόον βάλλει, ὡς ἔλθοι ἡ Μήδεια τῷ Πελίῳ κακόν.

Pelias was sacrificing to Poseidon, and summoned all to attend. Among the citizens who came was Jason. He happened to be ploughing near the river Anauros, which he crossed without his sandals on; once across he tied on the right one, but forgot the left, and thus he came to the feast. Pelias saw him and understood the oracle. For the time being he kept quiet, but the next day he sent for him and asked what he would do if he had an oracle saying that one of the citizens would kill him; Jason replied that he would send him to fetch the golden fleece from Aietes. Hera put this in Jason's mind so that Medea's arrival would spell doom for Pelias. (Transl. by Fowler [2006] 39)

Among the constant elements of the Pherecydean tales there emerges, according to Dolcetti,¹⁴ the attempt to blend different traditions, harmonizing them in order to present a consistent and exhaustive treatment, sometimes almost rationalistic. Fowler, on the other hand, argues that "Pherecydes seems to have given his genealogies straight, without qualification, variants, or anxiety about truthfulness".¹⁵

An author of *Genealogies* in three books and of a *Περὶ εὐρημάτων* (*On discoveries*) was Simonides of Ceus, writing in the second half of the fifth century BC, perhaps the grandson of the more famous lyrical poet. Only two fragments remain of the first work: they deal with the two daughters of Itonus, Athena and Iodama, who was killed by her sister (Sim. fr. 1 Fowler),¹⁶ and with the genealogy of Ancaeus, the son of Poseidon and of Astypalaea.¹⁷

Of the same period as Thucydides, but older, was Hellanicus,¹⁸ probably a native of Mitylene. Tradition attributes at least 23 works to him, in prose and in verse according to *Suidas* s.v. Ἑλλάνικος, classifiable in three main groups:

14 Dolcetti [2004] 34.

15 Fowler [2001] 104.

16 On the fragment, Kowalzig [2007] 363 n. 75.

17 For Jacoby [1957] 480, the work of Andron of Halicarnassus, author of *Συγγένεια* or *Συγγενικά* (*Relationships*) in at least eight books, can be attributed to a phase of transition between the genealogies and the works of a strictly historiographical nature.

18 Pearson [1939] 152–235; Toye [1995]; Fowler [1996]; Möller [2001]; Ambaglio [2005].

to the first phase of his activity belong his works of a mythographical-genealogical nature (*Phoronis, Deukalioneia, Atlantis, Asopis, Troika*)¹⁹ and the ethnographic works (*Argolika, Boiotika, Thessalika, Aigyptika, Expedition to the Shrine of Ammon, On Lydia, On Arcadia, Origins of Cities and Tribes, On the Foundation of Chios, Barbarian Customs*); later he devoted himself to the writing of chronicles (*Victors at the Carneia, Priestesses of Hera at Argos, Atthis*).²⁰

In the *Phoronis*, perhaps in two books, he reconstructed the history of the Pelasgians, and also described their stationing in Thessaly and in Italy, where they took the name of Tyrrenians (Etruscans). Among the surviving fragments no reference appears to the mythical founder of the race, Phoroneus, the first man, but it is probable that Hellanicus dealt with the genealogies of his three sons (Iasus, Pelasgus and Agenor) systematically, describing them separately. The second book was partly dedicated to Heracles, to the expedition against Troy and to his labours: for example, fr. 102 names Bembina, a place near Nemea; fr. 103 refers to the battle against the Hydra of Lerna, fr. 104a to the birds Stymphalides, fr. 111 to the oxen of Geryones.

The structure of the *Deukalioneia* is difficult to reconstruct. It may possibly begin, as Pearson²¹ hesitantly proposes, with the flood, then dealing with the story of Ionians, Dorians and Aeolians, the Hellenic tribes descending from Dorus, Xuthus and Aeolus, three grandsons of Deucalion, the sons of Hellenus. The story of the Argonautic venture could have been placed in the section regarding Aeolus, who had received the kingdom of Thessaly from Hellenus, and his descendents.²² Kullmer²³ proposes a different reconstruction, according to which the work in Book 1 dealt with Deucalion, the flood and the foundation of the first cities, the descendants of Deucalion and their spreading throughout Thessaly and into the bordering lands, with particular attention to

19 According to Möller [2001] 250 “in the *Deukalioneia, Phoronis, Asopis, and Atlantis* he reduced the mass of mythological tales and genealogies to just four ancestors. He managed to tell the stories of those four ‘lineages’ in a parallel and synchronistic manner, leading to the generation of the Trojan war, which he described in the *Troika*”.

20 Such a large number of titles might be due to the fact that ancient authors may have referred to the same work when citing a subtitle or title of a section. For example, Pearson [1939] 170 suggests dividing the *Phoronis* into three parts (or books), and identifying the first, concerning the descendants of Agenor and the Theban saga, with the *Boiotika*, the second, connected to the race of Iasus and Heracles, with the *Argolika*, the third, centering on the descendants of Pelasgus, with the *Thessalika*.

21 Pearson [1939] 176.

22 As Ambaglio [2005] 137 conjectures.

23 Kullmer [1902].

the race of Aeolus. The second book might have contained the narration of the propagation of the Hellenic tribes in Asia.

The other mythographic works (the *Atlantis*, the *Asopis* and the *Troika*) are connected to the Trojan war. In Book 1 of the *Atlantis* a Homeric *scholion* (Il. 18.486) places the catalogue of the divine lovers of six of the seven daughters of Atlas and of the children of each couple: Taygete and Zeus gave birth to Lacedaemon, Maya and Zeus to Hermes, Electra and Zeus to Dardanus,²⁴ Alcyone and Poseidon to Hyrieus, Sterope and Ares to Oenomaus, Celaeno and Poseidon to Lycus.²⁵ Fr. 21 lists the names of the children of Niobe, who had married Amphion, a descendent of Alcyone and Poseidon, and was the daughter of Tantalus and therefore sister of Pelops. The latter is the protagonist of fr. 157, dealing with his relationship with Hippodamia, daughter of Oenomaus (perhaps the grandson of that Oenomaus who was born from the union of Sterope and Ares), and the curses he sent down on his children, Atreus and Thyestes. Almost nothing can be said about *Asopis*. The only explicit reference to this work is in a passage of *The life of Thucydides* by Marcellinus (2–4 = fr. 22), from which we learn that, like Pherecydes, Hellanicus likewise considered Miltiades as a descendent of Aeacus. The *Troika* were in at least two books: the first had an exclusively genealogical character, while the second was devoted to the story of the events of the Trojan war. The work, in which the author tried, among other things, to clarify obscure elements in the Homeric poems, sometimes giving an interpretation of a rationalising nature, might have contained references to the wanderings of Aeneas and Odysseus.

A genealogical treatment of the Trojan Saga is suggested by the title of the *Περὶ γονέων καὶ προγόνων τῶν εἰς Ἴλιον στρατευσαμένων* (*On the sons and grandsons of those who fought against Troy*) of Damastes of Sigeus, pupil or master of Hellanicus.²⁶ Nothing remains of this work in two books, mentioned by *Suidas* s.v. *Δαμάστης* (Dam. test. 1 Fowler) and it can possibly be identified with the *Γενεαλογία τῶν ἐπὶ Ἴλιον στρατευσάντων Ἑλλήνων καὶ βαρβάρων* (*Genealogy of the Greeks and of the Barbarians who fought at Troy*) of Polus of Acragas, about which *Suidas* s.v. *Πῶλος* (test. 1 Fowler) notes that somebody attributed the work to Damastes (τινὲς δὲ αὐτὸ Δαμάστου ἐπιγράφουσι).

24 Fr. 23 attributes information about Dardanus and Electra to the first book of the *Troika*, therefore Sturz [1826] 103 proposed considering this work as a section of the *Atlantis*. Instead Pearson [1939] 181 believes that *Atlantis* and *Asopis* were parts of the *Troika*.

25 A similar treatment is also present in *P.Oxy.* 8.1084, attributed by Hunt to the *Atlantis*. *Contra* Pearson [1939] 177–178.

26 On the chronological relation between the two authors, see Gallo [2005].

After Hellanicus, we find evidence of other works dedicated to the Trojan Saga with the title *Troika*;²⁷ only two fragments survive of the text of Metrodorus of Chius (second half of the fourth century BC); from the first (fr. 1 Fowler = Ath. *Deipn.* 4.82 p. 184) we learn that it was Marsyas who had invented the *syrix* and the *aulos*, the second (fr. 2 = *Sch. Il.* 21.444c) is about the service carried out by Poseidon and Apollon to Laomedon. We know nothing certain about the grammarian Palaephatus (*FGrHist* 44),²⁸ born in Egypt or Athens, author among other things of *Trojan Stories* (Τρωικά) in seven books, of which we possess three brief quotations containing historical-geographical information about Asia Minor. Between the third and the second century BC Hegesianax of Alexandria in Troas published his *Troika* under the pseudonym of Kephalon or Kephalion of Gergitha (*FGrHist* 45 T 7).²⁹ Of the ten surviving fragments of this work, only two mention the title: *FGrHist* 45 F 1 attributes to Hegesianax (with the specification “author of the *Troika* of Kephalon”, ὁ δὲ τὰ Κεφάλωνος ἐπιγραφόμενα Τρωικά συνθείς) the idea that Cycnus who had duelled with Achilles had been brought up at Leucophrys by the bird whose name he bore; the second fragment (*FGrHist* 45 F 2) derives from the *manchette* of one of the *Narrationes* of Parthenius of Nicaea, who states that the story of Oenone had been narrated by Nicander in his work *On poets* (fr. 13 Schneider) and by Kephalon of Gergitha ἐν Τρωικοῖς.³⁰

Around 400 BC, Herodorus³¹ dealt with some mythical traditions that bore a connection with his native land, Heracleia on Pontos. We know almost nothing about his life: Aristoteles in his *Historia Animalium* (6.5 p. 563a 7 = test. 1a Fowler) defines him as “father of the sophist Bryson” (Βρύσωνος τοῦ σοφιστοῦ πατήρ), the latter known as a pupil of Platon and object of the comic ‘arrows’ of Ehippus (fr. 14 K.-A.), who in order to censure his greed had coined the *hapax* Βρυσωνοθρασυμαχειοληψικέρματος (“who takes a little coin like Bryson and Thrasymachus”).

The works which can be attributed with certainty to Herodorus are two, written probably in Ionic dialect: in the first he discussed, in at least seventeen books, the facts relating to Heracles (ὁ καὶ Ἡρακλῆα λόγος); in the second, whose title might have been *Argonautika* or *Argonautai* (sources vary between the two forms), dealt with the Argonautic Saga. He may also have written a

27 See below for the *Troika* of Dionysius Skytobrachion.

28 Wipprecht [1892] 49–53; Schrader [1893] 43–48; Ippolito [2007].

29 Lightfoot [1999] 391–393; Cameron [2004] 124–125; Pagani [2005b].

30 Tradition preserves the memory of the *Troika* of Abas (*FGrHist* 46), of Servius (*FGrHist* 47) and of Theodorus of Ilion (*FGrHist* 48).

31 Fraser [1972, 1] 627–632; Desideri [1991]; Borin [1995].

Pelopeia. Judging from the content of the fragments, transmitted mostly by the scholiographic documentation, his aim was not to offer, like the previous mythographers, an arrangement of the myths, but rather to draw up, at least for the stories regarding the eponymous hero of his city, a sort of encyclopaedic, almost romanced, account, rich in astronomical, geographical and zoological information.

Furthermore, it cannot be excluded that he had rationalistic and allegorical tendencies:³² basing himself in fact on the double meaning of the term *ἄετός*, interpretable both as *eagle* and as the name of a river, he stated that Prometheus had been a Scythian king whom his subjects had chained up because, after a flooding of the Aetos, he had not been able to ensure them the necessities of life. Heracles intervened, deviated the course of the river into the sea and freed the king from his imprisonment (fr. 30 Fowler). An allegorical interpretation is recognisable in fr. 13 Fowler (Clem. Al. *Strom.* 1.15):³³

Ἡρόδωρος δὲ τὸν Ἡρακλέα μάντιν καὶ φυσικὸν γενόμενον ἱστορεῖ παρὰ Ἄτλαντος τοῦ βαρβάρου τοῦ Φρυγῶς διαδέχεσθαι τοὺς τοῦ κόσμου κίονας, αἰνιττομένου τοῦ μύθου τὴν τῶν οὐρανίων ἐπιστήμην μαθήσει διαδέχεσθαι.

Herodorus recounts that Heracles, who was a soothsayer and a naturalist, received from Atlas, a barbarian from Phrygia, the “Columns of the world”: but the myth really means that he received, through learning, the knowledge of celestial things.

Similarly, his vision of the conquest of the apples of the garden of the Hesperides is very eloquent (fr. 14 Fowler = Io. Antioch. *Archaeol.* 1 fr. 6.2 Roberto). In fact according to Herodorus, Heracles had to kill the snake of evil passions (τὸν πολυποίκιλον τῆς πικρᾶς ἐπιθυμίας λογισμὸν) with the club of philosophy (διὰ τοῦ ῥοπάλου τῆς φιλοσοφίας), wearing a lion skin to indicate the nobility of the spirit (ἔχοντα περιβόλαιον φρόνημα ὡς δορὰν λέοντος). Moreover the apples symbolized three virtues, abstention from anger, greed and hedonism (τὸ μὴ ὀργίζεσθαι, τὸ μὴ φιλαργυρεῖν, τὸ μὴ φιληδονεῖν).

32 Jacoby [1957] 502; Ramelli-Lucchetta [2004] 207.

33 It is possible that Herodorus interpreted rationalistically the figure of the snake guarding the golden fleece: cf. Fowler [1996] 70.

2 The Birth of Scientific Mythography

The birth of the μυθογραφία, understood as “attività di registrazione e trasmissione scritta dei materiali narrativi e descrittivi che per convenzione secolare ed empiricamente condivisa, siamo soliti chiamare *mitici*”,³⁴ is mainly dated to the period when there arose, in the critical conscience of the scholars of the first Hellenistic age, the necessity of an approach to mythical traditions (conveyed by epic, lyric and tragic poetry) that was of a philological nature and scientifically based. It is usual, therefore, to identify the first real mythographer with Asclepiades of Tragilos (second half of the fourth century BC).³⁵ According to what can be read in the Plutarchean *Corpus* (*X orat.* 837c, 8–11), he was a pupil of Isocrates together with Theodectes of Phaselis and the historians Theopompus of Chios and Ephorus of Kyme. In his *Τραγωδούμενα* (*Subjects of Tragedies*) in six books³⁶ he examined myths treated by the tragedians, comparing them with the well-known versions of the epic and lyric poets and the mythographers of the first generation such as Pherecydes of Athens.³⁷ To understand the richness of the information which must have been contained in this work, it may be useful to examine briefly a recently restored fragment. A *scholion* to the *Rhesus* (v. 916 = Ascl. fr. 14 Bagordo),³⁸ citing the *Commentary on the Catalogue of the ships* by Apollodorus of Athens, reveals the existence of two brothers named Thamyras, the elder of whom was the maternal grandfather of Orpheus, while the younger had generated Antiphemus, from whose union with Pandias, Selene’s daughter, Musaeus (father of Eumolpus) had been born. After this information, the scholiast adds the detailed account, which preserves particulars otherwise unknown, of the contest between Thamyras and the Muses, which Asclepiades had perhaps dealt with in reference to Sophocles’ *Thamyras*:

34 Pellizer [1993] 284.

35 Werfer [1815]; Wagner [1891] 137, 145–147, 149, 266–267, 278, 294; Bagordo [1998] 33 and 102–108; Pagani [2004]; Villagra Hidalgo [2008]. Pressler [1997] tentatively has made the proposal to identify Asclepiades with the homonymous winner at the Lenaea in 351, indicated in the tragic *didascaliae* (*DID* A 3b, 54, in Snell [1986] 30).

36 Cf. Steph. Byz. s.v. Τράγιλος, p. 630, 11–13 Meineke.

37 Von Wilamowitz-Moellendorff [1875] 183 n. 3. Heyne [1803] 353 had hypothesized that the text was in verse, but Photius (*Bibl. cod.* 260) writes ἐπὶ τούτοις καὶ Ἀσκληπιιάδης, ὅς τὰ Τραγωδοῦμενα συνεγράψατο (“and this subject is also dealt with by Asclepiades, the author of the *Tragodumena*”), employing the verb συγγράφεισθαι generally used with regard to prose works. Also Werfer [1815] 495–496.

38 See now the new edition supplied by Merro [2006].

ὁ γοῦν Ἀσκληπιάδης ἐν τῷ β' περὶ αὐτῶν φησι τὸν τρόπον τοῦτον· «τὸν μὲν Θάμυριν περὶ τὸ εἶδός φησι θαυμα[στ]όν· τῶν δὲ ὀφθαλμῶν τὸν μὲν δεξιὸν γλαυκὸν [λευκὸν cod.] εἶναι, τὸν δὲ ἀριστερὸν μέλανα, περὶ δὲ τὴν ᾠδὴν οἶεσθαι διαφέρειν τῶν ἄλλων ἀπάντων. ἀφικομένων δὲ τῶν Μουσῶν εἰς Θράκην, τὸν μὲν Θάμυριν μνεῖαν ποιήσασθαι πρὸς αὐτὰς ὑπὲρ τοῦ συνοικεῖν ἀπάσαις, φάσκοντα τοῖς Θραξὶ νόμιμον εἶναι πολλαῖς τὸν ἕνα συνεῖναι. τὰς δὲ προκαλεσάμενῳ ἐπὶ τούτῳ ποιείσθαι τὴν δι' ᾠδῆς ἄμιλλαν, ἐφ' ᾧ, ἔάν μὲν αὐταὶ νικήσωσιν, ὅτι ἂν θέλωσιν αὐτὸν ποιεῖν, εἰ δὲ ἐκείνος, ὅσας ἂν αὐτὸς βούληται, τοσαύτας λήψεσθαι γυναικάς. συγχωρηθέντων δὲ τούτων, νικήσαι τὰς Μούσας καὶ τοὺς ὀφθαλμοὺς ἐξελεῖν αὐτοῦ».

Asclepiades in the second book [of the *Tragodumena*] speaks thus about these characters: “it is said that Thamyris was of an extraordinary beauty: his right eye was blue, while the left one was black and his singing was different from all the others. When the Muses reached Thrace, Thamyris had asked to join them, saying that for the Thracians it was usual for one man to couple with many women. The Muses, on hearing this, proposed him a song contest: if they won they would do what they wanted with him, but if Thamyris won, he could take as many women as he wanted. After arranging this, the Muses won and blinded him”.

The first work about myths on the stage is however recognizable in the Περὶ Αἰσχύλου μύθων (*On the Myths of Aeschylus*) by Glaucus of Rhegium (second half of the fifth century BC)³⁹ of which only two fragments survive. In the first (Glauc. fr. 1 Bagordo), handed down by the *hypothesis* of the *Persae*, Glaucus is cited as a witness of the fact that the subject of the tragedy had been taken from the *Phoenissae* of Phrynicus; very probably what is reported by a Euripidean *scholion* (*Hec.* 41 = Glauc. fr. 2 Bagordo) can also be attributed to the same work; according to the *scholion*, while Ibycus and Euripides had stated that Polyxena had been killed by Neoptolemus, Glaucus writes that for the author of the *Cypria*, Diomedes and Odysseus had killed her. The Περὶ τῶν παρ' Εὐριπίδῃ καὶ Σοφοκλεῖ (*On the <Myths> of Euripides and Sophocles*) by Heraclides Ponticus (fourth century BC) must have been complementary to the text of Glaucus; this work probably narrated the plots of the tragedies by the other two tragedians.⁴⁰

39 Lanata [1963] 278–279; Huxley [1968]; Bagordo [1998] 14–15 and 137–138; Caroli [2006] 9; Ucciardello [2007a].

40 Cf. Hiller [1886] 428, Wehrli [1953] 123, Bagordo [1998] 30–31 and Ippolito [2009]. For the collection of Ὑποθέσεις τῶν Εὐριπίδου καὶ Σοφοκλέους μύθων (*Plots of the Myths narrated by Euripides and Sophocles*), apparently attributed by Sextus Empiricus to a pupil of Aristotle, Dicaearchus of Messene, and for all the problems concerning the identification

Philochorus of Athens⁴¹ devotes a *Περὶ Σοφοκλέους μύθων* in five books to the myths in the tragedies of Sophocles between the fourth and third century BC, as we can learn from a hint in *Suidas* (s.v. Φιλόχορος = Philoch. fr. 2 Bagordo). Little more than mere names are also Demaratus (or Demagetus),⁴² who wrote *Tragodumena* in at least three books and probably a text about the Argonautic saga used by Dionysius Skytobrachion, and Thersagoras,⁴³ an epitomator of tragic myths (λόγω ἐπιτομᾶς Θερσαγόρου τῶν τραγικῶν μύθων), cited in a private letter of 170 AD (*P.Oxy.* 18.2192) published in 1941 by E. Turner.

The activity of Dionysius,⁴⁴ working probably between 270 and 220, can be dated to the mid third century BC; in several sources he is called Σκυτοβραχίων (“Leather-arm”), a nickname of unknown origin. Diodorus Siculus (3.66.6) provides us with a list of the subjects to which Dionysius had given his attention: the Amazones, Dionysus, the Argonauts and the Trojan War. Another list can be found in *Suidas* s.v.

Διονύσιος, Μιτυληναῖος, ἐποποιός. οὗτος ἐκλήθη Σκυτοβραχίων καὶ Σκυτεύς. τὴν Διονύσου καὶ Ἀθηναῖς στρατεῖαν, Ἀργοναῦται ἐν βιβλίοις ς´. ταῦτα δὲ ἐστὶ περὶ· Μυθικὰ πρὸς Παρμένοντα.

Dionysius, Mitylenean, epic poet.⁴⁵ He was nicknamed “Skytobrachion” (Leather-arm) and Skyteus. He wrote the *Military campaign of Dionysus and Athena*, the *Argonauts* in six books (these are prose works), *Mythical Narrations* against (or “dedicated to”) Parmenon.⁴⁶

of this work with the *hypotheses* handed down by some papyri, see Cannatà Fera [2002], cf. also Montana and Dickey in this volume.

41 Bagordo [1998] 33 and 155–156; Caroli [2006] 10.

42 Schwartz [1901]; van Looy [1970]; Bagordo [1998] 35 and 118; Caroli [2006] 11. The correct name is Demaretēs for Wendel [1931].

43 Bagordo [1998] 70–71 and 168; Cameron [2004] 59; Caroli [2006] 10.

44 Welcker [1865] 70ff.; Bethē [1887]; Rusten [1982b]; Stephens [2003] 39–43; Ippolito [2006a]. Lehnus [1993] had proposed to identify Dionysius Skytobrachion with one of the *Dionysioi* listed among the *Telchines* in the *Scholia Florentina to Callimachus* fr. 1,1 (ll. 3–8) Pf. The correctness of this hypothesis has been recently demonstrated by Bastianini [2006], who after revising the papyrus that transmits the *scholia* was able to rectify the transcription of the previous editors, reaching the conclusion that at lines 3–4 it is possible to read] Διονυσίους δυ[σ]ί, τῷ Σκ[υ]τοβραχίοντι.

45 ἐποποιός is certainly an error: the works of Dionysius, as can be seen from *P.Hibeh* 2.186 and *P.Oxy.* 37.2812 which transmit some fragments of them, were in prose.

46 Lehnus [1993] 27–28 insightfully proposes the hypothesis that this may be Parmenon, a native of Byzantium, but working in Alexandria, a contemporary of Callimachus. We have an iambic fragment (fr. 2 Diehl) by this Parmenon, in which a clear relationship with the

The title of the first work can be explained in the light of a comparison with Diodorus 3.71.3–4 (Dion. fr. 10 Rusten), where it can be read that Athena and the Libyan Amazones joined Dionysus in the struggle against the Titans. The setting of the fight must have been Libya and, although the actual title of the work is unknown, we can imagine that it was something like *Libyan Stories*. The *Argonauts* are known through the citations in the *scholia* to Apollonius Rhodius also as Ἀργοναυτικά (*Argonautic Stories*).

Another entry of *Suidas* may be of help in reconstructing the production of Dionysius:

Διονύσιος, Μιλήσιος, ἱστορικός. Τὰ μετὰ Δαρεῖον ἐν βιβλίοις ε΄, Περιήγησιν οἰκουμένης, Περσικά Ἰάδι διαλέκτῳ, Τρωικῶν βιβλία γ΄, Μυθικά, Κύκλον ἱστορικὸν ἐν βιβλίοις ζ΄.

Dionysius, Milesian, historian. He wrote *Facts after Darius* in 5 books, *Periegesis of the inhabited earth*, *Persian Stories* in Ionic dialect, three books about the Trojan events, *Mythical narrations*, *Historical cycle* in 7 books.

Excepting the *Facts after Darius* in five books, the *Periegesis of the inhabited earth* and the *Persian Stories*, works of a late Archaic historian, native of Miletus, the Κύκλος ἱστορικός is without doubt to be attributed to Dionysius “the Cyclographer”, son of Musonius, while the Τρωικῶν βιβλία γ΄ and the Μυθικά to Skytobrachion. For the first work a correspondence can be found in Diodorus who attributes to the Dionysius in question a text about the Trojan War (3.66.6 τὰ κατὰ τὸν Ἰλιακὸν πόλεμον πραχθέντα), and the Μυθικά are to be identified with the Μυθικά πρὸς Παρμένοντα of the *Suidas*’ entry on Dionysius of Mitylene.

The *scholia* to Apollonius Rhodius sometimes define him as *Mitylanean* and sometimes as *Milesian*, but a comparison with Diodorus Siculus, who is one of the primary sources of our knowledge of this grammarian, allows both ethnics to be referred to the same character. Müller made a suggestion that had a certain popularity: Dionysius of Mitylene, who in his *Libyan Stories* seems to have introduced false sources speaking of the Ἀτλάντιοι and of Dionysus, and who was accused by Artemon of Cassandreia of falsifying the *Lydian Stories* (Λυδιακά), a work transmitted under the name of Xanthus of Lydia (test. 4 R.),⁴⁷

beginning of the first *Iamb* of Callimachus can be recognized. Cf. Gerhard [1909] 211 and Maas [1949].

47 See Rusten [1982b] 82–84.

may have invented Dionysius of Miletos as his source, to give authority to his narratives.⁴⁸ According to Rusten, Welcker's thesis is more probable; in his opinion, one of the epithets Μιτυληναῖος and Μιλήσιος was the result of an error, caused perhaps by its belated insertion by a scribe.⁴⁹ As the historian Dionysius of Miletus, author of *Persian Stories*, who lived between the sixth and fifth century BC, could not have had any link with the *Argonauts*, very probably the correct ethnic must be "Mitylenean",⁵⁰

The approach adopted in the treatment of the mythological sagas, subjects of the two works we know best, the *Libyan Stories* and the *Argonauts*, is of a rationalistic nature, based on the ideal of the λόγος εἰκός, so that mythographers attempted to explain certain extraordinary features of the myth, justifying them as mere misunderstandings of far more normal facts. In this sense, Dionysius' re-elaboration of the Argonaut myth is exemplary. Tradition had it that Aeetes, king of Colchis, had received an oracle who informed him that he would die when some foreigners had succeeded in stealing the golden fleece of a ram (κρίος) kept in a sanctuary. According to the legend, the place was guarded by fire-breathing bulls (ταῦροι), and the fleece by a never-sleeping serpent (δράκων). Dionysius notes that Δράκων (Dracon) was really the name of the man who guarded the sacred enclosure, while the Ταῦροι were nothing but the guards from the Chersonesus Taurica. Moreover, the skin preserved inside the temple had an origin different from the fantasy reconstructions of the myth: while Phrixus was a prisoner in Colchis together with his *paedagogus*, the king of the Scythians, brother of Aeetes, the fell in love with the young man and received him as a gift from Aeetes. The *paedagogus*, whose name was Krios (Κρίος), was sacrificed to the gods and his skin was hung in the sanctuary. Characteristic is also the role played by Heracles within Dionysius' narrative: if it is up to Iason to organize the expedition and build the ship, his role as captain seems to be reduced in favour of the predominant presence of the hero of Tiryns, whose responsibility for the civilization of distant and savage peoples the mythographer strongly underlines. This probably underlies the characterization of the inhabitants of Colchis as cruel barbarians (fr. 14 R. = Diod. 4.40.4):

τὸν δὲ Πόντον κατ' ἐκείνους τοὺς χρόνους περιοικούμενον ὑπὸ ἐθνῶν βαρβάρων
καὶ παντελῶς ἀγρίων ἄξενον προσαγορεύεσθαι ξενοκτονούντων τῶν ἐγχωρίων
τοὺς καταπλέοντας.

48 Müller [1848] 6. And also Schwartz [1905] 932 and Jacoby [1957] 510.

49 Welcker [1865] 80.

50 So Rusten [1982b] 72–76.

The Pontos, inhabited at that time along its coasts by barbarian and extremely savage peoples, was called *Axenos* (“Unhospitable”), because the people of the region killed the foreigners who landed there.

Behind the glorification of Heracles there probably lay the celebration of Alexander the Great’s conquests,⁵¹ as is possible to deduce from Diodorus 4.53.7 (Dion. fr. 37 R.):

ταχὺ δ’ ἐπ’ ἀνδρείᾳ καὶ στρατηγίᾳ θαυμασθέντα στρατόπεδόν τε κράτιστον συστήσασθαι καὶ πᾶσαν ἐπελθεῖν τὴν οἰκουμένην εὐεργετοῦντα τὸ γένος τῶν ἀνθρώπων.

As he was the object of admiration for his courage and commanding skill, he rapidly put together a very strong army and visited all inhabited lands, benefitting mankind.

Skytobrachion had been wrongly identified by Heyne as another grammarian who probably lived between the third and second century BC, Dionysius called the “Cyclographer” (*FGrHist* 15),⁵² about whom we obtain some confused information from *Suidas* s.v. Διονύσιος Μουσωνίου (*FGrHist* 15 T 1). Dionysius was in fact the son of Musonius, originally from Rhodes or Samos, a priest of the temple of Helios and author of *Local Tales* in 6 books, *Periegesis of the earth, Instructive Story* in 10 books. As has been seen previously, *Suidas’* entry on Διονύσιος Μιλήσιος (*FGrHist* 15 T 2) cites the *Kyklos Historikos* in 7 books, a work to be attributed to the Cyclographer.⁵³

Bethe,⁵⁴ struck by the strong similarity between Proclus’ summaries of the myths of the *Cycle* and the corresponding narratives in the *Bibliotheca* of Ps.-Apollodorus, suggested that they both drew their information from a manual of mythology, the *Kyklos* of Dionysius, about which Proclus (in Phot. *Bibl. cod.* 239) may have said that it was read not so much for its artistic value as for the sequence of events narrated in it (σπουδάζεται τοῖς πολλοῖς οὐχ οὔτω

51 This naturally meant celebrating at the same time all the Ptolemaic race who boasted origins from Heracles, precisely through Alexander. See Meliadò [2004a].

52 Heyne [1783] 980–982; Meliadò [2005a] with further bibliography.

53 It cannot be excluded that *Ἱστορία παιδευτική* in 10 books is to be identified with the *Κύκλος ἱστορικός* in 7 books, even though the fragments do not allow for a certain conclusion.

54 Bethe [1891].

διὰ τὴν ἀρετὴν ὡς διὰ τὴν ἀκολουθίαν τῶν ἐν αὐτῷ πραγμάτων).⁵⁵ Bethe's thesis is undoubtedly without grounds: when Proclus names the *Kyklos* he clearly intends to indicate the poems of the *Epic Cycle* (τοῦ ἐπικοῦ κύκλου τὰ ποιήματα) and not, as supposed by the scholar, the set of mythical sagas. The Dionysian work probably dealt with the same myths narrated in the *Cycle* and the complementary ones in the poems not included in the *Cycle* (if we consider the *Danaïdes* and the *Alcmaeonis* as not belonging to the collection), but when we find a comparison with the surviving fragments and with Proclus' *excerpta*, the difference between these and the narrative of Dionysius is evident. We can deduce from this that Dionysius the Cyclographer was not Proclus' source, but he collected in his *Kyklos* learned versions of the myth which were different from the tales, universally known, of the *Epic Cycle*. Book 1 is likely to have mentioned the guardian of Io, Argos; according to Dionysius (*FGrHist* 15 F 1) he wore a skin (probably that of the bull which infested Arcadia, as we learn from [Apollod.] 2.1.2) and his whole body was covered with eyes. The myth was dealt with in the *Aegimius* ([Hes.] fr. 294 M.-W.) and probably in the *Nostoi* (fr. 9 Bernabé). In addition, a piece of information about the number of children that Heracles had had from Megara also belonged to the same book; not three, four or eight as stated elsewhere but two, Therimachus and Deicoon (*FGrHist* 15 F 2).⁵⁶ *FGrHist* 15 F 7 refers to a mythical detail present in the *Alcmaeonis*, which, according to Dionysius, Euripides followed when speaking about the lamb with the golden fleece. Referring to the events narrated in the *Ilias parva*, *FGrHist* 15 F 3 (Clem. Al. *Protr.* 4.47.6) relates that the *palladium*, taken away from Ilium by Diomedes and Odysseus and entrusted to Demophon, was built with the bones of Pelops, just like the Zeus of Olympia with the bones of an elephant (ἐκ τῶν Πέλοπος ὀστέων κατεσκευάσθαι, καθάπερ τὸν Ὀλύμπιον ἐξ ἄλλων ὀστέων Ἰνδικοῦ θηρίου). *FGrHist* 15 F 5 can be linked to what was recounted in the same poem; it informs us of Dionysius's statement that Demophon, the son of Theseus, had asked for the return of Aethra so as to take her back home. Menelaus had therefore sent Talthybius to Helena ordering that Aethra should

55 Brown [2002] 15 and n. 63 has recently agreed with this hypothesis.

56 As Cingano [2002–2003] 65 underlines, Creon, the father of Megara and king of Thebes, in the most ancient phase of the tradition, seems linked exclusively to the cycle of Heracles, and not to that of Oedipus. So it is probable that the information about the children of Heracles and Megara was contained in a section about the hero of Tiryns, from which fr. 1 may also come; we know in fact that the *Aegimius* narrated the aid brought by Heracles to the king of the Dorians, Aegimius, against Coronus and the Lapithes, and that Aegimius had in the end adopted Hyllus out of gratitude.

be accompanied; Aethra, embellished with every kind of ornament, was then sent to Demophon and Acamas. The story told in the cyclic poem, however, was different: according to the testimony of Pausanias (10, 25, 8 = *Ilias Parva* fr. 20 Bernabé), Aethra, after the fall of Troy, reached the Greek camp, where she was recognized by the sons of Theseus. *FGrHist* 15 F 4 links up with the *Odyssey*; from this fragment we learn that according to Dionysius' interpretation, Odysseus had given the Cyclops some wine to drink in a *κυμβίον*, not in a *κισσύβιον*. Perhaps the corrupt *FGrHist* 15 F 6 can be compared with the content of the extra-cyclic poem *Danaides*. From this fragment it is at least possible to deduce that Dionysius concurred with the view that Aegyptus had not gone to Argos together with his fifty sons. In *FGrHist* 15 F 8 we read that, according to Dionysius, Homer lived during the Theban expedition and the Trojan war.

For the second century BC, Apollodorus of Athens (ca. 180–110) should be mentioned.⁵⁷ At first a pupil of Diogenes of Babylon in Greece, after moving to Egypt he completed his education under the guidance of Aristarchus of Samothrace. After the expulsion of the philologists from Alexandria in 145 BC, by Ptolemaeus VIII Euergetes II, he went to the court of Attalus II at Pergamum, returning to Athens between 138 and 133, where he died between 120 and 110 BC. He wrote about comedy and about the Athenian prostitutes, collected the comedies of Epicharmus in 10 *volumina*, composed a chorography (Γῆς περιόδος) in comic metre (cf. Strab. 14.5.22) and a commentary in twelve books on Book 2 of the *Iliad*, the so-called *Catalogue of the ships* (Περὶ τοῦ τῶν νεῶν καταλόγου), not displaying any doubt as to the Homeric authorship of this section of the poem; he also wrote a work entitled *Chronicles* (Χρονικά) in three books, again in iambics in order to help memorization (*FGrHist* 244 T 2.35), from the Trojan war (which, in agreement with Eratosthenes, he dated to 1184 BC) until 145/144 BC. He then added a fourth book to cover the time period up to 120/119. He also dealt with Greek myths in his *On the Gods* (Περὶ θεῶν) in 24 books. With regard to the nature of this work Photius (*Bibl. cod.* 161 = *FGrHist* 244 T 11) informs us:

ἀνεγνώσθησαν ἐκλογαὶ διάφοροι ἐν βιβλίοις ιβ' Τὸ μὲν οὖν πρῶτον περὶ τῶν παρ' Ἑλληνισι μυθολογουμένων θεῶν διαλαμβάνει· ὁ συνείλεται ἐκ τῶν Ἀπολλοδώρου περὶ θεῶν γ' λόγου. Ἀθηναῖος δὲ ὁ Ἀπολλόδωρος, καὶ γραμματικὸς τὴν τέχνην. Οὐκ ἐκ τοῦ τρίτου δὲ μόνον ἡ διαλογὴ αὐτῷ πεποιήται, ἀλλὰ δὴ καὶ ἐκ δ' καὶ ε' καὶ θ', τοῦ τε α' πάλιν καὶ ιβ' καὶ ιε' τε καὶ ις' καὶ μέχρι τοῦ κδ'. ἐν ἣ συλλογῇ τὰ τε μυθικῶς περὶ θεῶν διαπεπλασμένα, καὶ εἴ τι καθ' ἱστορίαν

57 Pfeiffer [1968] 253–266; Fraser [1972, 1] 471 and 538–539; Habicht [1997] 119–121; Pontani [2005b] 54.

εἴρηται, περιείληφε, περί τε τῶν παρ' αὐτοῖς ἡρώων καὶ Διοσκούρων καὶ περὶ τῶν ἐν Ἄιδου καὶ ὄσα παραπλήσια.

Several extracts have been read in the twelve books by the sophist Sopater... the first, then, deals with Greek theology expressed in the myths, and it is a collection from the third book of *On the Gods* of Apollodorus. Apollodorus came from Athens, and from the point of view of his skills, he was a philologist and man of letters. (Sopater), however, did not only summarize the third book, but also the fourth, the fifth and the ninth books and again, the first, the twelfth, the fifteenth and sixteenth, as far as the twenty-fourth. And this sylloge embraced both the invented myths about the gods, and what has been said in historical-legendary narratives, both regarding the heroes of their tradition and the Dioscuri, and also about what is in the Hades and other similar matters.

In his work Apollodorus seems to start from the interpretation and etymology of the names of the gods, in order to show, by resorting to the most varied literary testimonies, the link between their functions and the epithets.⁵⁸ It is not clear whether, in this respect, *Περὶ θεῶν* was influenced by Stoic doctrine; even though the recourse to etymology for analyzing the names of the gods may have been inspired by the writings of the philosophers of the Stoa, this is not sufficient to prove that Apollodorus subscribed to those theories. In any case it is certain that he derived the names of the divinities not from toponyms connected with cults (οὐκ ἀπὸ τῶν ἱερῶν τόπων), but ἀπὸ τῶν ψυχικῶν ἐνεργειῶν ἢ... συμβεβηκότων περὶ τὸ σῶμα, “from the active faculties of the soul, or from qualities of the body” (*FGrHist* 244 F 353.11). For instance, he maintained that the epithet *Δήλιος* of Apollon had no connection with the island of Delos, but was due to the fact that the god made everything visible (*FGrHist* 244 F 354 ὡς δῆλα καὶ εὐόρατα πάντα ποιῶν).⁵⁹ The explanation of why the sun was also called *Ἴήιος* is likewise significant: according to Apollodorus (*FGrHist* 244 F 95 = Macrob. *Sat.* 1.17.19), this was attributable to the fact that it races round the universe (ἀπὸ τοῦ κατὰ τὸν κόσμον ἰέσθαι καὶ ἰέναι, *quod sol per orbem impetu fertur*).

58 Parsons [1993] 167. Etymological explanations of the names of the Greek gods are contained in *Ἐπιδρομή τῶν κατὰ τὴν Ἑλληνικὴν θεολογίαν παραδεδομένων* (*Introduction to the Traditions of Greek Theology*) by L. Annaeus Cornutus, who lived in the second half of the first century A.D. and was the teacher of Persius and Lucanus.

59 A summary of the section of *Περὶ θεῶν* centred on Apollo is transmitted by the second column (ll. 1–36) of *P.Oxy.* 37.2812, identified by the editor princeps E. Lobel with a commentary on a tragedy. See Rusten [1982b] 30ff.

The same interpretative mechanism is also applied to the bream (τριγλή) that is sacrificed to Artemis because of the similarity of the names, inasmuch as the goddess has three forms (τρίμορφος).⁶⁰

Our knowledge of the work is based not only on numerous fragments of indirect tradition, but also on lucky findings of papyrus fragments which help to understand the research method adopted by Apollodorus. The first text, linked to him by R. Merkelbach,⁶¹ was published in 1952 by Lobel (*P.Oxy.* 20.2260).⁶² In it the use of the adjective δολιχάρορος in relation to Athena made by the post-Homeric poets (among whom Philitas and the author of the *Phoronis*) is criticized, as ἄρορ, the second term of the compound, in these circumstances must necessarily be a synonym of δόρυ (“spear”), whereas in Homer it is always understood as ξίφος (“sword”). Criticism is also voiced with regard to the improper use of the adjective Pallas, which together with Τριτογένεια is the subject of another papyrus fragment probably by Apollodorus, the *P.Köln* 3.126.⁶³ The preserved text opens with the citation of a fragment of Epicharmus (fr. 135 K.-A.) from which we learn that the adjective Pallas derived perhaps from the name of one of the Titans,⁶⁴ who, during a battle against Cronus (ἐν μάχαι | τῆι γενομέναι κατὰ Κρόνον), had been killed by Athena, at which point she then put on his skin. After quoting the comic verses, Apollodorus states that he had come across a poem entitled *Meropis*,⁶⁵ of which he had not managed to identify the author (περιεπέσομεν δὲ ποιήμασιν, ἐφ’ ὧν ἦν ἐπιγραφή Μεροπῆς οὐ δηλοῦσα τὸν ποιησο[...]). The subject treated in the work (summarized by Apollodorus and exemplified with a series of textual quotations) was the battle at Cos between Heracles and Asteros, the latter being defeated thanks to the intervention of Athena who, having skinned him, had put on his skin in this case as well (τέλος δὲ ἀπολομένου τούτου ὑπ’ αὐτῆς συνθεωρηῆσαι χρῆσιμον αὐτοῦ τὸ δέρος ἐσόμενον πρὸς τοὺς [ἄλ]λους κινδύνους). Moreover, the mythographer explains the motives that had made him cite this obscure poem:

ἔδόκει δέ μοι τὰ ποιήμα[τα] νεωτέρου τινὸς εἶναι· διὰ [δὲ] τὸ ἰδίωμα τῆς ἱστορίας [ἔξε]λάβομεν αὐτό.

60 *FGrHist* 244 F 109 = Athen. *Deipn.* 7.126, p. 325b.

61 Merkelbach [1956].

62 On the papyrus, see now De Luca [1999].

63 Koenen-Merkelbach [1976]; *SH* 903 A; Lloyd-Jones [1984]; Bernabé [1996] 131–135. Recently Obbink [2011] 29 has proposed assigning *P.Oxy.* 76.5094 to Apollodorus.

64 So Olson [2007] 54.

65 On which, see the careful analysis of Henrichs [1993] 187–195.

The poem looked post-Homeric to me. I excerpted (?) it because of the peculiarity of the story. (Transl. by Henrichs [1993] 188)

Apollodorus' idea that the *Meropis* was a post-Homeric work is certainly correct, but even today it is debated whether it should be dated to the sixth century BC (as seems more probable) or even to the Hellenistic period.

The fame of this work *On the Gods* and of its author were such that Apollodorus was even credited with the authorship of an anonymous mythological handbook entitled *Bibliotheca* (Βιβλιοθήκη). While the name of the author is destined to remain unknown, some attempts were made in the past to understand to what period the composition dated back.⁶⁶ A *terminus post quem* for the dating is clearly identifiable in the citation of Castor of Rhodes (first century BC) author of *Chronica*, in *Bibliotheca* 2.1.3; thus C. Robert in 1873 proposed to date the work to the first half of second century AD (M. van der Valk thought the first century AD was more likely)⁶⁷ and to consider it an instrument for use in schools.⁶⁸ The mainly linguistic criterion used by Carrière and Massonie,⁶⁹ who believed that the handbook was addressed to a cultivated public in the period of the second sophistic, led them to identify a language with an imperial tone, datable between the first and the third century AD, with numerous lexical and semantic contacts with Plutarch, Lucian and the scholiographic tradition; accordingly, they dated the work to the age of the Severi, between the end of the second and beginning of the third century AD, probably around 200 AD, also keeping in mind that Philostratus in his *Imagines* of 175 AD seems to know the *Bibliotheca*.

In his summary of the Greek myths, the author of the handbook resorts to numerous literary sources. As well as Homer and Hesiod's *Theogony*, he certainly knew the *Catalogue of the women*, which he seems to have used as a basis for the genealogical structure of his work.⁷⁰ He knew the contents of the

66 The attribution of the work to Apollodorus seems implicitly testified in the *subscriptions* of some *historiae* present in Homeric *scholia* (*ad Il.* 1.195, 2.103, 1.42, 2.494), in which at the foot of the treatment of the myths present also in the *Bibliotheca* we can read Ἀπολλόδωρος ἐν α', β', γ'. On the other hand, this may instead be a reference to the monumental Περὶ θεῶν by Apollodorus of Athens. Cf. Diller [1935] 297–301.

67 Van der Valk [1958].

68 Some scholars were convinced that it was correct to credit Apollodorus of Athens with the *Bibliotheca*, which might be an epitome of his Περὶ θεῶν: Haeniche [1875] (according to whom it could be Sopater's epitome) and Lehrs [1878] (who moreover hypothesizes that the reference to Castor of Rhodes is the result of an interpolation).

69 Carrière-Massonie [1991] 9–12.

70 See among others Dräger [1997] 11, 36–107.

Epic Cycle, even though we cannot tell whether it was from a direct reading of the various poems or thanks to mythological summaries. As regards archaic poetry he also cites Orphic texts, the *Geryoneis* and the *Palinodia* by Stesichorus, Telesilla. Furthermore, the mythographers of the fifth century BC are present in the *Bibliotheca* (Acusilaus, Pherecydes, Herodorus and Hellanicus; knowledge of Philochorus cannot be excluded) and authors less well-known to us (Amelesagoras, Demaratus, Philocrates). Ps.-Apollodorus mentions the three tragedians (in particular Euripides) and also Callimachus, Apollonius Rhodius, Asclepiades and Dionysius of Mitylene.

Photius (858 A.D.) attributes the handbook to the grammarian of Athens and summarizes its purposes perfectly (*Bibl. cod.* 186):

Ἐν τῷ αὐτῷ δὲ τεύχει καὶ Ἀπολλοδώρου γραμματικοῦ βιβλιδᾶριον ἀνεγνώσθη μοι· Βιβλιοθήκη αὐτῷ ἢ ἐπιγραφῇ· περιεῖχε δὲ τὰ παλαιτάτα τῶν Ἑλλήνων, ὅσα τε περὶ θεῶν καὶ ἡρώων ὁ χρόνος αὐτοῖς δοξάζειν ἔδωκεν, ὀνομασίας τε ποταμῶν καὶ χωρῶν καὶ ἔθνων καὶ πόλεων ὅθεν καὶ τὰ ἄλλα ὅσα εἰς τὸ ἀρχαῖον ἀνατρέχει, καὶ κάτεισι μέχρι τῶν Τρωϊκῶν, καὶ ἀνδρῶν τινῶν πρὸς ἀλλήλους μάχας καὶ ἔργα ἐπιτρέχων καὶ τῶν ἀπὸ Τροίας πλάνας τινάς, μάλιστα δ' Ὀδυσσέως εἰς ὃν αὐτῷ καὶ ἡ ἀρχαιολογία καταλήγει.

In the same codex I also read a little book by a grammarian Apollodorus entitled *Bibliotheca*. It contained the antiquities of the Greeks, which they had come to believe in the course of time concerning gods and heroes, and the names of rivers and countries and tribes and cities with their origins, and other matters that go back to early times; and he comes down to the Trojan War, touching upon the fights of some of the champions with each other and their deeds, as well as some of the wanderings back from Troy, especially that of Odysseus, with whom he ends his account of antiquity. (Transl. by Diller [1935] 300)

In the text of Photius an epigram follows which may have opened the *Bibliotheca* originally, but its authenticity is debatable:⁷¹

αἰῶνος σπείρημα ἀφυσσάμενος ἀπ' ἐμείο
 παιδείης, μύθους γνῶθι παλαιγενέας,
 μηδ' ἐς Ὀμηρεῖην σελίδ' ἔμβλεπε μηδ' ἔλεγείην,
 μὴ τραγικὴν Μοῦσαν, μηδὲ μελογραφίην,
 μὴ κυκλίων ζῆται πολύθρου στίχον· εἰς ἐμέ δ' ἀθρῶν
 εὐρήσεις ἐν ἐμοὶ πάνθ' ὅσα κόσμος ἔχει.

71 The epigram is considered genuine by van der Valk [1958] 167–168.

Draw your knowledge of the past from me and read the ancient tales of learned lore. Look neither at the page of Homer, nor of elegy, nor tragic muse, nor lyric strain. Seek not the vaunted verse of the cycle; but look in me and you will find in me all that the world contains.

The *Bibliotheca*, on the grounds of presumed citations in the *Scholia minora* to Homer, was divided from the *editio princeps* of Aegius (Romae 1555) onwards into three books. In the first the author speaks of the birth of the gods (1.1–44) and of the race of Deucalion (1.45–147); in the second he deals with the race of Inachus (2.1–180); in the third (and in the epitomes preserved) he is concerned with the races of Agenor (3.1–95), Pelasgus (3.96–109), Atlas (3.110–155), Asopus (3.156–176), of the kings of Athens (3.177–218 and Ep. 1.1–24), and of the descendants of Pelops (Ep. 2.1–16); he also touches on the events in the Trojan war preceding the Iliadic narration (Ep. 3.1–35), the events recounted in the *Iliad* (Ep. 4.1–8), the events in the Trojan war following the *Iliad* (Ep. 5.1–25), the consequences of the Trojan war (Ep. 6.1–30), and the wanderings of Odysseus (Ep. 7.1–40).

While Photius must have had a complete copy of the work at his disposal, in the manuscripts known today only the first two books are integral; the third is gravely damaged and finishes when Theseus is spoken of; its content has been re-constructed thanks to the finding of two epitomes at the end of the nineteenth century. The *Epitome Vaticana*, discovered by R. Wagner⁷² in 1885 in a fourteenth century codex (*Vat. gr.* 950), is probably the work of Ioannes Tzetzes who, in the twelfth century, used the mythographical handbook for the compilation of the *scholia* to the *Alexandra* of Lycophron and for his *Chiliades*. The publication by A. Papadopoulos-Kerameus⁷³ of the so-called *Fragmenta Sabaitica* dates back to 1891; in 1887 he had identified the text of Ps.-Apollodorus in a thirteenth century manuscript (*Sabbaiticus-Hierosolymitanus* 366), during the classification of the codices preserved in the Library of the Jerusalem patriarchy.

During the Hellenistic age a certain Pisander⁷⁴ must also have been working, as the *scholion* to line 1760 of Euripides' *Phoenissae* attributes to him some mythographical material about the Labdacids. After rejecting the hypothesis that he could be one of the homonymous epic poets of Kamyros and of Laranda, the former probably living in the sixth century BC and the latter in the third century AD, Welcker⁷⁵ proposed identifying Pisander with an otherwise

unknown mythographer to whom Keydell⁷⁶ later attributed another four fragments, taken from the *Bibliotheca* of Ps.-Apollodorus and from the *scholia* to Apollonius Rhodius and Euripides. According to Jacoby,⁷⁷ Pisander probably took his material from various sources, among which the cyclic *Oedipodia* and the *Phoenissae* and the *Chrysipus* of Euripides.⁷⁸

Recently A. Cameron,⁷⁹ following in the steps of N. Marinone,⁸⁰ suggested identifying him with the Pisander mentioned by Macrobius in *Sat.* 5.2.4–5, in a section regarding the Greek sources of Virgil:

Dicturumne me putatis ea, quae uulgo nota sunt, quod Theocritum sibi fecerit pastoralis operis auctorem, ruralis Hesiodum, et quod in ipsius Georgicis tempestatis serenitatisque signa de Arati Phaenomenis traxerit, uel quod eursionem Troiae cum Sinone suo et equo ligneo ceterisque omnibus, quae librum secundum faciunt, a Pisandro ad uerbum paene transcripserit, qui inter Graecos poetas eminent opere, quod a nuptiis Iouis et Iunonis incipiens uniuersas historias, quae mediis omnibus saeculis usque ad aetatem ipsius Pisandri contigerunt, in unam seriem coactas redegerit.

You are perhaps thinking that I shall speak of things that are common knowledge: for example, that in his pastoral poetry Vergil took Theocritus for his model, and in his work on husbandry, Hesiod; and that in the *Georgics* he drew on the *Phaenomena* of Aratus for the signs of bad and good weather; or that he copied his account of the overthrow of Troy, with the tales of Sinon and the wooden horse and all the rest that goes to make up the second book of his *Aeneid*, almost word for word from Peisandros, a writer eminent among the poets of Greece for a work which, beginning with the marriage of Jupiter and Juno, has brought within the compass of a single sequence of events all the history of the world through the intervening ages down to its author's own day. (Transl. by Cameron [2004] 257)

There are, as we have seen, two Greek poets called Pisander, one native of Kamyros, the author in the archaic period of an *epos* on Heracles, and one from

76 Keydell [1935] 301–302 and [1937].

77 Jacoby [1957] 493–496 and 544–547.

78 In contrast, von Wilamowitz-Moellendorff [1925] denied the existence of this mythographer and connected the *scholion* with an *epos* of Pisander of Kamyros entitled *Kyklos*.

79 Cameron [2004] 255–260.

80 Marinone [1967] 510 n. 6.

Laranda, who corresponds perfectly to the description made by Macrobius, but the latter cannot be held in consideration because he lived at the time of the Severi, at the beginning of the third century AD. This explains why Heyne suggested that Macrobius had confused the two authors. Cameron's interpretation is different: he suggests that the Pisander mentioned in the *Saturnalia* is actually the Hellenistic mythographer, who, given that he is cited in the *scholion* to Apollonius Rhodius, must have lived before the grammarian Theon (compiler of a commentary on which the *scholia* partly depend) and therefore also before Virgil. On the grounds of this re-construction, Macrobius may have taken the catalogue of Virgil's Greek sources, and with them the reference to Pisander, from the writings of the first and second centuries AD in which the Roman poet was accused of plagiarism.

The activity of Parthenius of Nicaea⁸¹ dates back to the first half of the first century BC. We know very little about his life: *Suidas* s.v. Παρθένιος states that he was the son of Heraclides and Eudora or Tetha, and came from Nicaea or Myrlea, and in this regard, Meineke⁸² had hypothesized that his family, coming from Myrlea, had moved to Nicaea and that Parthenius was born there.

After being captured during the third Mithridatic war, he was taken to Italy where he became Virgil's teacher. A refined poet, classified by ancient sources with Callimachus, his fame is due above all to his elegiac production, consisting of *Arete* in three books (for his dead wife), *Aphrodite*, *Delos*, *Leucadia*, *Crinagoras*. He also wrote *epicedia* (*Lament for Archelais*, *To Bias*, *To Timander*, *Lament for Auxithemis*), a poem whose original title might have been *Propemptikon* and perhaps a composition entitled *Moretum*. We do not know the metre of other poems mentioned by *Suidas*, (*Anthippe*, *Heracles*, *Iphiclus*, *Idolophanes*). As for the *Metamorphoses* we do not know whether it was written in prose or rather in hexameters, according to the model of Nicander's Ἑτεροιούμενα. He compiled, between 52 and 26 BC, a collection of thirty-six myths about unhappy loves (Ἐρωτικά Παθήματα), which opens with an epistolary dedication to the poet Cornelius Gallus:

Μάλιστα σοι δοκῶν ἀρμόττειν, Κορνήλιε Γάλλε, τὴν ἄθροισιν τῶν ἐρωτικῶν παθημάτων ἀναλεξάμενος ὡς ὅτι πλείστα ἐν βραχυτάτοις ἀπέσταλκα. τὰ γὰρ παρά τισι τῶν ποιητῶν κείμενα τούτων, μὴ αὐτοτελῶς λελεγμένα, κατανοήσεις ἐκ τῶνδε τὰ πλείστα· αὐτῷ τέ σοι παρέσται εἰς ἔπη καὶ ἐλεγείας ἀνάγειν τὰ μάλιστα ἐξ αὐτῶν ἀρμόδια. <μηδὲ> διὰ τὸ μὴ παρεῖναι τὸ περιττὸν αὐτοῖς, ὃ

81 Lightfoot [1999].

82 Meineke [1843] 256.

δὴ σὺ μετέρχῃ, χεῖρον περὶ αὐτῶν ἐννοηθῆς· οἴομαι γὰρ ὑπομνηματίων τρόπον αὐτὰ συνελεξάμεθα, καὶ σοὶ νυνὶ τὴν χρῆσιν ὁμοίαν, ὡς ἔοικε, παρέξεται.

Thinking, Cornelius Gallus, that the collection of sufferings in love was very appropriate to you, I have selected them and sent them to you in as brief a form as possible. For those among the present collection that occur in certain poets where they are not narrated in their own right, you will find out for the most part from what follows. You, too, will be able to render the most suitable of them into hexameters and elegiacs. Think none the worse of them because they lack that quality of refined elaboration which you pursue. For I have collected them after the fashion of a little notebook, and they will, I trust, serve you in the same way. (Transl. by Lightfoot [1999] 309)

Thus the official purpose of the collection was that of serving Cornelius Gallus as a background to poetic compositions.

Some elements present in the *Erotika pathemata* can be classified as typically Hellenistic: loves with a tragic epilogue, morbid passions, an interest in foundation myths. Moreover, the narratives seem to contain moralistic elements and in the main the author avoids divine intervention and recourse to *adynata* (only three *metamorphoseis*: Daphne, Harpalyce and Byblis can be found), but this does not imply that he was a euhemeristic mythographer. As J. Lightfoot underlines, some plots repeat well-known myths: the ventures of Lyncus (*Amat. narr.* 1), which center on an oracle received at Didyma, seem to resemble those of Ion and Aegeus associated with the Delphic oracle; the story of Leucippus (*Amat. narr.* 5) has much in common with that of Althaemenes and his sister; the very famous myth of Oenomaus and Hippodamia is repeated in the *narratio* about Sithon and Pallene (*Amat. narr.* 6) and the same happens for Leucone and Cyanippus (*Amat. narr.* 10) who are modelled on Cephalus and Procris.

Even though in the dedicatory epistle Parthenius states expressly that he took his stories from previous poems (but he probably also consulted prose works, as can probably be suggested for the ventures of Oenone, Paris and Corythus, which may depend on Hegesianax),⁸³ he rarely mentions his sources during his discussion. Speaking of Byblis (*Amat. narr.* 11) he quotes ten lines of Nicaenetus, a long passage of his *Apollon*; he adds twenty-one lines from the *Foundation of Lesbos* in the story of Peisidice (*Amat. narr.* 21) and three lines from Nicander testifying a variant of the story of Corythus (*Amat. narr.* 34).

83 See Lightfoot [1999] 246.

The possible sources of Parthenius are however explained by some brief annotations, commonly known by the name of *manchettes*, inserted in the upper or lower margin of the only manuscript that hands down the *Erotika pathemata* and the *Metamorphoses* by Antoninus Liberalis (*Palatinus Heidelbergensis gr.* 389—ninth century AD), corresponding with most of the *narrationes* in the two collections. Modern scholars mostly reject the hypothesis that these indications date back to the authors (Sellheim for example thought so)⁸⁴ and regard it as probable that these brief notes refer to works in which the various stories were presumably present. We do not know when the *manchettes* were compiled but, judging from the authors cited, a dating for the middle of the third century AD has been proposed, even though an earlier date cannot be excluded. A. Cameron⁸⁵ has recently brought back to favour their attribution to the author; he argues that they must originally have been contained in a ‘bibliography’ placed at the beginning of the roll containing the work, a sort of index in which were specified the titles of the various chapters followed by their sources. According to this reconstruction, we could have had the beginning of an imaginary roll of the *Erotika pathemata*:

(α') περι Λύρκου. Ἡ ἱστορία παρὰ Νικαινέτω ἐν τῷ Λύρκω καὶ Ἀπολλωνίῳ Ῥοδίῳ Κάνῳ.

(β') περι Πολυμήλης. Ἱστορεῖ Φιλητάς Ἑρμῆ.

(γ') περι Εὐίππης. Ἱστορεῖ Σοφοκλῆς Εὐρυάλλω.

(δ') περι Οἰνώνης. Ἱστορεῖ Νίκανδρος ἐν τῷ περι ποιητῶν καὶ Κεφάλων ὁ Γεργίθιος ἐν Τρωϊκοῖς.

(ε') περι Λευκίππου. Ἱστορεῖ Ἑρμησιάναξ Λεοντίῳ. And so on.

It may have been a copyist who transferred the information into the margins when he copied the two works from the roll to the codex.

The same solution is also proposed by Cameron for the *manchettes* which accompany the work of Antoninus Liberalis.⁸⁶ We know nothing about this author's life: on a linguistic basis he has been tentatively placed in the second century AD,⁸⁷ while the *gentilicium* Antoninus would seem to lead to a placement in the third AD.⁸⁸ We have a collection of forty-one narratives of metamorphoses handed down under his name: they are metamorphoses of

88 Bücheler *ap.* Oder [1886] 56 n. 1.

people, groups of people or animals, of which some deal with a *ἀφανισμός*, some contain metamorphoses at the origin of a cult, others are centred on *κτίσεις*, *ὀνομασῖαι* and *μετονομασῖαι*. The various typologies of transformations, in which the erotic *topoi* (derived from the Hellenistic literature)⁸⁹ often have a primary role, can be thus summarized: a) metamorphoses into birds (1, 2, 3, 5, 6, 7, 9, 10, 11, 12, 14, 15, 16, 18, 19, 20, 21, 27) or winged insects (22); b) into plants (31, 32, 34); c) into animals (24, 28, 29, 35); d) metamorphoses into stone (4, 23, 33, 36, 38, 39, 41); e) *catasterismi* (25, 36); f) disappearances (*ἀφανισμοί*—8, 13, 40); g) metamorphoses into echoes (26); h) changes of sex (17); i) acquisition of immortality (27, 30, 32, 33).

The *manchettes* mainly cite Nicander and Boius (a Hellenistic poet, author of an *Ornithogonia*), beside whom another twelve authors are present: Antigonus Carystius (poet of the imperial age), Apollonius Rhodius, Areus Laconicus, Athanadas, Corinna, Didymarchus (an Alexandrian poet), Hermesianax (an elegiac poet of the third century BC), Hesiod, Menecrates Xanthius (a historian of the fourth century BC, author of *Lydiaca*), Pamphilus (an Alexandrian grammarian of the first century BC), Pherecydes, Simmias Rhodius.

Our knowledge of the mythographer Conon and of his *Διηγήσεις* ('Narratives') almost entirely derives from the *Bibliotheca* of the patriarch Photius (cod. 186 = Con. test. 1 Brown):⁹⁰

Ἄνεγνώσθη βιβλιδάριον Κόνωνος Διηγήσεις· προσφωνεῖ μὲν τὸ πονημάτιον Ἀρχελάῳ Φιλοπάτορι βασιλεῖ, περιέχεται δ' αὐτῷ ἐκ πολλῶν ἀρχαίων συνειλεγμένα ν' διηγήματα.

A little book was read, the *Narratives* of Konon. He dedicates this short work to King Archelaos Philopator, and it consists of fifty narrations gathered from many ancient sources. (Transl. by Brown [2002] 47).

On the basis of the dedication to Archelaus Philopatris (correction by Jacoby instead of Photius' Philopator), king of Cappadocia from 36 BC to 17 AD, it has been proposed to date Conon's activity in the reign of Augustus, between 36 BC and 10 AD. Some rhetorical elements in the *Διηγήσεις* might suggest that he was a simple teacher or a librarian at the court of Archelaos, or a rhetor, but it is not easy to establish this, just as it cannot be excluded that he was also the author of a *Heracleia*, of *Italica* and of a text about the Jews, attributed to a certain Conon (not otherwise identified) respectively by a *scholion* to Apollonius

89 Calderón Dorda [2002].

90 Henrichs [1987] 244–247; Brown [2002].

Rhodium (1.1165 = fr. 2), by Servius (*Ad Aen.* 7.738 = fr. 3), and by Flavius Joseph (*Apion.* 1.216 = fr. 4). The *Narrationes*, on the grounds of what can be deduced from Photius' summaries, were a collection of fifty tales on mythological subjects, which often give new versions of well-known myths. In some cases (*Narr.* 1 about Midas, 37 about Cadmus, 40 about Cepheus and Andromeda) Conon produces stories supplying a rationalistic reading, in order to eliminate the elements that violated the principle of veracity.

That the *Διηγήσεις* were little read is demonstrated by the total lack of mention in ancient sources except for Photius, even though some papyrus fragments (*P.Oxy.* 53.3648), published in 1984, which hand down stories 46 and 47 in a more extended version, testify to a certain circulation in Egypt in the second century AD. The aims of the work cannot be clarified with certainty. As regards Conon's style, Photius writes:

Ἄττικὸς δὲ τὴν φράσιν ἐστὶ, ταῖς τε συνθήκαις καὶ ταῖς λέξεσι χαρίεις τε καὶ ἐπαφρόδιτος, ἔχων τι καὶ τοῦ συνεστραμμένου καὶ ἀνακεχωρηκότος τοῖς πολλοῖς.

He is Attic in style, graceful and charming in his constructions and words, having a certain terseness and avoiding the commonplace,⁹¹

thereby letting it be understood that the *Διηγήσεις* had not been conceived as simple summaries of stories taken from other sources (like Parthenius' *Erotika Pathemata*, about which the author himself, in the dedication to Cornelius Gallus, apologises for the unrefined style): rather, they had literary claims. The subjects treated, mostly belonging to the kind of the *Lokalsagen* (epichoric myths and legends), can be grouped into various categories, closely connected to themes already widely exploited by previous poets and prose writers, above all in the Hellenistic period, when the protagonists are men and the gods have a clearly marginal role:

- 1) foundation myths (*κτίσεις*): 2, 3, 4, 8, 12, 13, 14, 19, 21, 28, 29, 36, 37, 41, 46, 47, 48;
- 2) aetiological myths: 6, 11, 15, 17, 19, 20, 24, 30, 33, 35, 44, 45, 49;
- 3) love vicissitudes: tragic and unhappy loves already recounted by Parthenius (2, 10, 23) and homosexual loves (16);
- 4) paradoxographical stories: 5, 22, 43;
- 5) paroemiographical myths: 28 and 34;

91 Transl. by Brown [2002] 351.

- 6) fables: 35, 38, 42;
 7) Trojan and Roman myths: 4, 6, 8, 12, 13, 18, 21, 23, 28, 29, 34, 41, 46.

In the surviving text the sources used by the mythographer are never specified, but this does not mean that Conon had been deliberately reticent, as suggested until now by scholars;⁹² on the contrary the fact that Photius says that the διηγήματα (“narrations”) had been taken from various ancient authors (ἐκ πολλῶν ἀρχαίων συνειλεγμένα), means instead that the indications of the sources were probably present in the original version of the work and that the Patriarch had omitted them in the process of abridgement.⁹³ This work had led him initially to transcribe the first three stories almost completely, later deciding to summarise further the contents. At the end of the third *Narratio* he notes:

Ἄλλὰ τί μοι δεῖ μικροῦ μεταγράφειν ταύτας, δέον πολλῶ κεφαλαιωδέστερον ἐπελθεῖν;

But why should I practically transcribe these? I must approach them in a much more summary manner. (Transl. by Brown [2002] 68)

The activity of the so-called *Mythographus Homericus*⁹⁴ likewise very probably dates back to the first century AD; he compiled a mythographical commentary on the *Iliad* and the *Odyssey*, a complete collection of *historiae* regarding the mythical characters, places, origins of rites and customs of the Homeric *epos*, ordered according to the succession of books and lines. Traces of this work have reached us through numerous papyrus fragments (distributed over a period of time which ranges from the late first century AD to the fifth)⁹⁵ and the mythological narratives incorporated during the proto-Byzantine age in the *scholia* D to the *Iliad* and in the *scholia* V to the *Odyssey*. The structure of the *historiae* remains nearly constant: the text opens with a lemma (a line

92 Henrichs [1987] 246 and Brown [2002] 31.

93 Thus in Cameron [2004] 72–73.

94 Van der Valk [1963] 303–413; Arrighetti [1968]; Arrighetti [1977a]; Arrighetti [1977b]; Arrighetti [1987] 204–210; Montanari [1995c]; Rossum-Steenbeek [1998] 85–118; Montanari [2002b]; Pontani [2005b] 71–72; Pagès Cebrián [2007]. The name *Mythographus Homericus* was coined by Panzer [1892], who had made conjectures about the existence of the collection before the finding of the papyrus fragments. See also Dickey in this volume.

95 *P.Oxy.* 418 (I–II); *P.S.I.* 1000 (I–II); *P.Hamb.* 199 (II); *P.Lond.Lit.* 142 (II); *P.Oxy.* 3003 (II); *P.Oxy.* 3830 (II); 4096 (II); *P.Berol.* 13282 (III); *P.S.I.* 1173 (III); *P.Vindob.* 29784 (III); *P.Berol.* 13930 (V).

or part of a line, sometimes in *ekthesis*) which gives a link with the Homeric poems; this is followed by the mythological narrative, centred on the name in the lemma; at the end almost always a *subscriptio* is inserted stating the source from which the story is taken, usually in the form ἡ ἱστορία παρὰ τῷ δεῖνα, (ὡς) ἱστορεῖ ὁ δεῖνα or οὕτως ὁ δεῖνα. See for example the narrative about *Il.* 3. 151:

τεττίγεσσιν ἑοικότες· Τιθωνοῦ τοῦ Λαομέδοντος, Πριάμου δὲ ἀδελφοῦ, ἠράσθη ἡ Ἥμερα, ἐξ οὐπερ ἐποίησεν υἷον Μέμνονα. μακρῶι δὲ βίωι δαπανηθέντος ἐκείνου μετέβαλεν αὐτὸν εἰς τέττιγα ἢ θεός. διὸ δὴ αὐτοῦ τοὺς συγγενεῖς δημογέροντας τέττιξιν εἰκάζει ὁ ποιητής. ἱστορεῖ Ἑλλάνικος.

similar to the crickets: Hemera fell in love with Tithonus, son of Laomedon and brother of Priam, and with him she generated a son, Memnon. As Tithonus had lived a long life, the goddess transformed him into a cricket. For this reason the poet compares the chiefs [of the Trojans], his relatives, to crickets. Hellanicus recounts this.

In a dissertation published at the end of the nineteenth century, Schwartz, from a study of the *historiae* present in the *scholia* D, deduced that in order to write the stories the *Mythographus* had used a mythological compendium similar to the *Bibliotheca* of Ps.-Apollodorus; therefore, he reasoned, the subscriptions, which in his view had been added in the Byzantine period,⁹⁶ did not intend to prove the presence of all the elements of the narrative in the authors indicated at the foot of the page, but to advise that part of the story was present in those authors.⁹⁷ In 1961 Lünstedt re-examined the question and, focusing his research on those subscriptions that mentioned preserved authors, he noted that some details in the stories, although not present in the sources indicated, could have been taken from the exegetic literature linked to those texts. He therefore reached the conclusion that a certain value should be attributed to the subscriptions as evidence, since “the reference to the author cited does actually exist in some ways”.⁹⁸ In reality it is not possible to establish with certainty the origins of the material assembled by the *Mythographus*: the compiler may have drawn the diegetic material directly from the works cited, starting from the input of the Homeric text: that is, he may have resorted to the unmediated reading of authors such as Hesiod, Acusilaus, Hellanicus, Euphorion and Lycophron, but it is more plausible that the *historiae* are based

96 The discovery of ἱστορία on papyrus naturally demonstrated the fallacy of this hypothesis.

97 Schwartz [1881].

98 Montanari [1995c] 144.

on material deriving from works dedicated to the Homeric exegesis (*hypomnēmata*, *syggrammata*) or on investigations of a mythographical-antiquarian nature.⁹⁹ The approach recently used by Cameron¹⁰⁰ is different. Cameron considers it almost impossible to assume that the great Alexandrian philologists would have devoted so much space to mythological themes in their commentaries; besides, it is improbable that the collection of the *Mythographus Homericus* continued to circulate until the Byzantine period as an independent work, if it limited itself to reflecting material coming from Homeric *hypomnēmata*. It would be better, Cameron continues, to presume that philologists like Didymus and Theon dipped into the same sources as the *Mythographus*. In works such as Apollodorus' Περὶ θεῶν the mythological narrative was undoubtedly enriched by quotations from poets and prose-writers, intended to illustrate different versions of the stories. During the transfer of the material, the *Mythographus Homericus* might have eliminated the citations, moving the names of the authors cited to the subscriptions.

There are serious doubts about the genuineness of the sources cited by Ptolemaeus Chennos ("The Quail"),¹⁰¹ an Alexandrian grammarian who lived between Nero and Hadrian. Photius (*Bibl. cod.* 190) speaks of his Καινὴ ἱστορία ("New History"), in seven books, describing its richness and usefulness, but also underlining the presence of a number of incredible stories, irrational and badly structured. In the work, of which we have knowledge thanks to *excerpta* handed down above all by Eustathius and Tzetzes, and to the synthesis given by the Patriarch, there is, therefore, a mixture of paradoxographical and mythographical information, and new and traditional versions of mythological stories. Let us consider, for example, what he writes about Odysseus in the first book (*Phot. Bibl. cod.* 190, p. 147a):

Ἵτι Ὀδυσσεύς, διότι ὦτα μεγάλα εἶχεν, Οὐτίς πρότερον ἐκαλεῖτο· ἕτεοῦ δὲ φησι γενομένου μὴ ἀντισχοῦσαν τὴν μητέρα ἐγκυον οὔσαν κατὰ τὴν ὁδὸν τεκεῖν, καὶ τὸν Ὀδυσσεά διὰ τοῦτο οὕτως ὀνομασθῆναι.

That Odysseus, because he had big ears (ὦτα), was first called Οὐτίς; but he says also that, one rainy day, his pregnant mother, as she could not hold out, gave birth by the side of the road (ὁδός), and that is why he was then called Odysseus.

99 Montanari [1995c].

100 Cameron [2004] 104–106.

101 Tomberg [1968]; Pagani [2005a] n. 5; Pontani [2005b] 72–73; Pagani [2006a]; Hose [2008].

In the fifth book Ptolemaeus also touches on a presumed plagiarism committed by Homer (p. 151a–b): a woman of Memphis, called Phantasia, is said to have composed (συνέταξε) the Trojan war (τὸν Ἰλιακὸν πόλεμον) before Homer's poem and the story about the adventures of Odysseus (τὴν περὶ Ὀδυσσεύος διήγησιν), and to have deposited these books at Memphis; according to this report, Homer then went to that place, obliged the scribe in the temple to give him some copies and subsequently composed his poems. Modern criticism tends to consider Ptolemaeus a supporter of the *gelehrte Lüge*, a genre much appreciated at the court of the Roman Emperors: in the *Καينὴ ἱστορία* he is said to have collected narratives he himself had invented, which he attributed to sources—partly real and partly invented—in order to increase their reliability.¹⁰² However, some have seen this work as a miscellaneous collection to be placed in the ambit of similar peripatetic texts, thus attempting to give a more positive reappraisal of the author.¹⁰³

This overview on the principal mythographers recorded in the Greek literary tradition, which certainly does not claim to be complete, may have helped to define the fundamental role covered by the study of myth in ancient times. An interest in this subject arose, as can be seen, from the most varied cases: historical and ethnological research, reconstruction of the origins of epichoric traditions, customs, rites and cults, philological investigations. Of the hundreds of works which entered into the stream of the *μυθογραφεῖν*, Fate has allowed us to read only small scraps of texts, apart from a very few fortunate exceptions: yet meagre though they are, they are not without their fascination and able, sometimes, to trace the outlines of a world still, from many points of view, shrouded in shadows.

102 The first to propose this was Hercher [1855–1856] 276 and 282.

- 6 *Brief Afterword on Latin Historiography and Antiquarianism*

1 Foreword

The definitions of historiography, ethnography, and geography, and of their respective disciplinary domains, has been found to be problematic not only because of the tendency for works in these fields frequently to cut across borders (as exemplified by the broad compass of Herodotean *ιστορίη*; by geographical accounts in the histories of, *e.g.*, Ephorus, Polybius, Sallust, Caesar; by the geographic and ethnographic works of historians such as Poseidonius and Strabo), but also due to the intersections with other disciplines, and notably with philosophy (see the historical concerns of the so-called sophists, *e.g.* Hippias; but also Democritus, Protagoras, etc.) and with the Earth sciences (works *περὶ ὠκεανοῦ*).¹ The several disciplines, however, eventually progressed towards more clear-cut definitions during the fourth century, and continued to do so in the Hellenistic period. Aristotle and his school played a significant part in determining the outcomes in the classification and organization of knowledge. Only to cite one example, in Arist. *Rh.* 1360a 33–37 we find the distinction being drawn between the domains of *πολιτικὴ τέχνη* and *ῥητορικὴ τέχνη*:

ὥστε δῆλον ὅτι πρὸς μὲν τὴν νομοθεσίαν αἱ τῆς γῆς περίοδοι χρήσιμοι (ἐντεῦθεν γὰρ λαβεῖν ἔστιν τοὺς τῶν ἔθνων νόμους), πρὸς δὲ τὰς πολιτικὰς συμβουλὰς αἱ τῶν περὶ τὰς πράξεις γραφόντων ἱστορίαι· ἅπαντα δὲ ταῦτα πολιτικῆς ἀλλ' οὐ ῥητορικῆς ἔργον ἔστιν.

¹ See Nicolai [1986].

It is clear, therefore, that for legislation books of travel are useful, since they help us to understand the laws of other nations, and for political debates historical works. All these things, however, belong to Politics and not to Rhetoric. (Transl. J. H. Freese)

What is significant to this discussion is Aristotle's assertion that knowledge of the νόμοι of the various peoples derives from the γῆς περίοδοι, and that the latter must inevitably overlap, at least partially, with the category of the πολιτεία.

Philology also resists clear-cut definition, particularly with regard to history, ethnography, and geography. Although pragmatism might suggest that philology be understood as the critical and exegetical interest in literary texts, these plain terms simply shift the difficulties in the definition of philology to what 'textual criticism' and 'exegesis' might mean, or what exactly we ought to regard as a 'literary text'.² Moreover, however obvious we find the divergences between ancient practices in ἐκδόσεις and modern standards for critical editions (since the former only amounted to a work of transcription which could also, though not necessarily, involve some degree of textual emendation), even greater difficulties arise when we compare the various instances of exegetical practice in antiquity with the notion of 'exegesis' as currently understood. Limiting ourselves to the field of literature (a concept which never came to be unambiguously defined with the Greeks), we must note that even the understanding of literary practices varied considerably over the centuries, and that what we would now regard as the 'literary' proper only came to be defined in the fourth century BC.³ Let us also recall that when, as frequently happened, historians used texts which were non-literary, *e.g.* epigraphs, their commentaries would often reveal great critical sensitivity (see, for instance, Thuc. 6. 54. 7).

Related to the uncertain definition of philology as it was understood in antiquity is the question of the origins of philological practice. The view upheld by Pfeiffer, whereby a properly philological approach to texts was strictly the accomplishment of the poet-philologists of the Hellenistic Age, needs to be rectified:⁴ poetry had been the object of comment and interpretation long before the Hellenistic Age, as the major middle section of Plato's *Protagoras* testifies (Pl. *Prt.* 339a ff.). Even the assumption that practices diverged with regard to their respective ends at least calls for qualification: no rigid demarcation

2 Cf. Montana in this volume.

3 On this issue, see my *Gorgia e Isocrate: i poteri della parola e la scoperta della letteratura* (in print).

4 Pfeiffer [1968]. Cf. Rossi [1976]; Nicolai [1992] pp. 265–275; Montanari [1993b] 262; Richardson [1994].

line will hold between an alleged 'pre-history' of philology, with ethical concerns to the fore, and an 'age of the philologists', in which the interest shifted wholly to the questions of editing and interpreting the texts. What had been displayed as the *πρέπον* criterion as early as Hdt. 2. 116. 1, also remained the foundation for the textual criticism and exegesis of the Alexandrian scholars.

2 Historians as the Object of Philological Enquiry and Rhetorical Analysis

Philological investigations of the work of the historians began in the Hellenistic Age, although it should be remembered that their work had already been mined for the purposes of historical documentation in the exegesis of other literary texts: this occurred specifically with regard to the *ιστοριῶν ἀπόδοσις*, *i.e.* the elucidation of the narrative import of the texts.⁵ The fragment of the epitome of a *ὑπόμνημα* to Herodotus by Aristarchus of Samothrace,⁶ conserved in P. Amherst 11 12, has given rise to an ultimately rather unproductive diatribe over the hypothetical existence of an Alexandrian edition of Herodotus as the stem for the manuscript tradition of the Middle Ages.⁷ As far as Thucydides is concerned, there is nothing to attest the existence of Alexandrian commentaries with any certainty, although Didymus might plausibly have drawn on the philological work of his predecessors.⁸ What the later tradition of grammarians might indicate is that Herodotus and Thucydides were used as examples of the Ionic and Attic dialects respectively.

The reasons for using the work of individual historians in the schools of rhetoric would vary: the prevailing concern of rhetoricians was to establish whether and to what extent historians could serve as a model for orators. Central to the debate was the analysis of direct speech, to which the greater part of Dionysius' work on Thucydides is devoted. Dionysius especially concentrated on the choice and distribution of Thucydides' speeches (17f.) and

5 On the use of historians as sources of information for orators, who certainly did not enjoy a robust foundation in philology, see Nicolai [2007]. The authors of commentaries on the orators greatly relied upon the historians, as the commentary to Demosthenes by Didymus shows.

6 On the problems raised by anonymous epitomes and other issues regarding fragments by the philologists or otherwise of philological interest, see Montanari [19970] (on the epitomes in particular, see p. 283).

7 See Nicolai [1992] 272f., cf. also Montana and Dickey in this volume.

8 Thus Pfeiffer [1968] 349f.; on the provenance of the scholia on Thucydides, see Luschnat [1954].

advanced a sophisticated analysis of style, based on the distinction between *πραγματικὸν μέρος* (*inventio*), in which Thucydides excelled, and *λεκτικὸν μέρος* (*dispositio, elocutio*), in which the level of his achievements tended rather to fluctuate. Dionysius devoted particular attention to the lexical and syntactic solutions of Thucydides, in an attempt to refute the authorities who regarded him as an appropriate model for historians, as well as those who assumed that the Greek in Thucydides was representative of the spoken language of his own time (34f.). As a model for oratory, Demosthenes is preferred over Thucydides, as a successful imitation not beset by the latter's stylistic imbalance (52–55). He was also equally adamant that Thucydides could not usefully serve as model for deliberative and judicial rhetoric, and further noted that there were passages in Thucydides which were hardly intelligible without grammatical commentary (51; and cf. 49 on the need for an interpreter, as though Thucydides had been writing a foreign language).

The debate on historians as a model for orators became particularly lively in the first century BC, as witnessed by the works of Dionysius (*De Thucydide, Epistula ad Pompeium, De imitatione*), and also, e.g., by Cicero's writings on rhetoric.⁹ The tenets of the latter debate were summarized by Quintilian, who related it to his discussion of the relations between historiography and poetry (*Inst.* 10. 1. 31):¹⁰

historia quoque alere oratorem quodam uberi iucundoque suco potest. verum et ipsa sic est legenda ut sciamus pleraque eius virtutes oratori esse vitandas. est enim proxima poetis, et quodam modo carmen solutum est, et scribitur ad narrandum, non ad probandum, totumque opus non ad actum rei pugnamque praesentem sed ad memoriam posteritatis et ingenii famam componitur: ideoque et verbis remotioribus et liberioribus figuris narrandi taedium evitat.

History also can nourish the orator with its rich, sweet sap. But we should read it too in the knowledge that many of its excellences are to be avoided by the orator. History is very close to the poets. In a sense it is a prose poem, and it is written to tell a story, not to prove a point. Moreover, it is wholly designed not for practical effect and present conflicts, but to preserve a memory for future generations and for the glory of its author's

9 See Nicolai [1992] esp. 74–83.

10 See Nicolai [1992]; on the theoretical framework of antiquity for the relationship between historiography and poetry see 233–247.

talents. It therefore avoids tedium in a narrative by employing more out-of-the-way words and freer figures. (Transl. D. A. Russell)

Quintilian's assessment is interesting to us because it sanctions the inclusion of historiography within the literary system through its comparison with poetry. The works of historians thereby also became potential sources for grammarians, whose chief efforts went into the exegesis of poetry.

During the second century BC, historiography had become a rightful component of the literary canons.¹¹ Dionysius of Halicarnassus, Cicero, and other sources¹² all attest to the existence of two triads of historians, possibly of Alexandrian derivation: one comprising Herodotus, Thucydides, and Xenophon; the other Philistus, Theopompus, and Ephorus. Although a wider canon of ten historians (possibly devised to parallel the ten orators) is also attested by the Byzantine lists edited by Kroehnert,¹³ the point of general validity is that the ultimate inclusion of historians in literary canons was a correlate of the use to which they were put in the schools of the grammarians and rhetoricians.

3 Genealogists and Geographers

Interest in the exegesis of poetic texts, particularly epic poetry, originated with the early prose authors, especially those whose subject matter was mythology and genealogy.¹⁴ All of them, though in varying degrees, may be regarded as exegetes of epic, which they would use for information, but would also comment on and criticize, at times comparing versions of the same narrative episode.¹⁵ The term λογογράφοι to designate these prose writers indicates they were authors of λόγοι to be recited in public (ἀκροάσεις).¹⁶ We cannot follow Dionysius of Halicarnassus in his inclination to regard them as a homogeneous group, mainly on stylistic grounds (*Thuc.* 5). There are marked differences among them regarding purposes and methods of composition, and, not least,

16 See Ferrucci [2001].

the use they made of epic poetry. I will offer a limited number of examples, mostly from Hecataeus, to illustrate different typologies of usage and exegesis of epic.

Very little is known of Pherecydes of Syros:¹⁷ although his theogony is clearly independent of both Homer and Hesiod, the surviving fragments are insufficient to establish whether he wrote allegorical interpretations of epic poetry, as some have surmised.¹⁸ The words of Celsus reported in Origen *C. Cels.* 6. 42 (= fr. 83 Schibli) could be seen to provide an indication:

ταῦτα δὲ τὰ Ὀμήρου ἔπη οὕτω νοήσαντα τὸν Φερεκίδην φησὶν εἰρηκέναι τό-
 “Κείνης δὲ τῆς μοίρας ἔνερθέν ἐστιν ἡ ταρταρὴ μοῖρα. φυλάσσουσι δ’ αὐτὴν
 θυγατέρες Βορέου Ἄρπυιαι τε καὶ Θύελλα, ἔνθα Ζεὺς ἐκβάλλει θεῶν ὅταν τις
 ἐξυβρίσῃ”.

These words of Homer, he (= Celsus) alleges, were so understood by Pherecydes, when he said that beneath that region is the region of Tartarus, which is guarded by the Harpies and Tempest, daughters of Boreas, and to which Zeus banishes any one of the gods who becomes disorderly. (Transl. F. Crombie)

Although the reference is to Hom. *Il.* 8. 13–16, we must be wary of backdating to an archaic author the allegorical mode which was only later to become established and habitual. Allegorical interpretation, the search for hidden layers of meaning (ὑπόνοια), only became genuinely established with Theagenes of Rhegium towards the end of the sixth century.¹⁹

Hecataeus of Miletus, wrongly regarded by modern (though not by ancient) scholars as the initiator of historiography,²⁰ produced works on genealogy and geography. In both fields he turned to epic, which was invaluable in establishing genealogies, and also ancient history and the toponymy of regions and cities.²¹ His celebrated proemial assessment of Greek λόγοι, which were

21 See Jacoby, *FGrHist* 1, *Komm.*, [1957] 535: “Die Ἑλλήνων λόγοι gehen ganz, oder doch in erster Linie, auf die epischen Dichter”. See also Jacoby [1949] 228 n. 9: the term “Ἕλληνες, which in Hecataeus designates mainly, though not exclusively, the epic poets, accumulated a wider range of senses in Herodotus, to cover also the prose works of the genealogists, geography, and the περὶ φύσεως. On the use of epic poetry as a documentary source in Hecataeus, see Nicolai [2003a] 86–98. Cf. also Meliadò in this volume.

numerous and unreliable, and which he unfavourably contrasted with his own narrative (*FGrHist* 1 F 1, *ap. Ps.-Demetr. Eloc.* 12 Ἑκαταίος Μιλήσιος ὧδε μυθεῖται. τάδε γράφω, ὡς μοι δοκεῖ ἀληθέα εἶναι. οἱ γὰρ Ἑλλήνων λόγοι πολλοί τε καὶ γελοιοί, ὡς ἐμοὶ φαίνονται, εἰσὶν, “Hecataeus of Miletus thus relates. ‘I write these things as they seem to me to be true. For the tales told by the Greeks are, as it appears to me, many and absurd’” [Transl. W. Rhys Roberts]), makes it clear that he strove for a dependable reconstruction of the heritage of Greek traditions, emended of the most controversial and outrageous elements. Hecataeus never challenged the view that the gods interacted with human beings, as *Hdt.* 2. 143 clearly attests, but he did want to consolidate the traditions upon which the hegemonic claims of the Greek aristocracy were grounded.

The fragments of the *Genealogies* refer to the most important γένη, the ones most widely celebrated in epics: Danaïds, Deucalionides, Argonauts, Heracleidae, Labdacids. The clearest illustration of the use of epos as a documentary source is F 19, *ap. sch. Eur. Or.* 872:

ἡ πολλὴ δόξα κατέχει μὴ ἀφίχθαι τὸν Αἴγυπτον εἰς Ἄργος, καθάπερ ἄλλοι τέ φασι καὶ Ἑκαταίος γράφων οὕτως. “ὁ δὲ Αἴγυπτος αὐτὸς μὲν οὐκ ἦλθεν εἰς Ἄργος, παῖδες δέ, <έόντες>, ὡς μὲν Ἡσίοδος [fr. 127 Merkelbach-West] ἐποίησε, πεντήκοντα, ὡς ἐγὼ δέ, οὐδὲ εἴκοσι”.

As fame widely has it, Egypt never came to Argos. Among others there is the account of Hecataeus, who writes: “Egypt did not come to Argos, but his sons did, whom Hesiod said to be fifty in number, but I say were not even twenty.”

Hecataeus set himself on a level with Hesiod, claiming for himself the authority to establish (ποιεῖν) the number of the sons of Egypt, and to amend the figure given by Hesiod. The scholiast’s reference to πολλή δόξα relates to the *corpus* of poetry (mainly epic and tragic) and mythography which was available to him. F 18, *ap. sch. Ap. Rhod.* 4. 259 refers to the journey of the Argonauts along the Phasis: as far as can be established, on this point the opinions of Hecataeus and Hesiod (fr. 241 Merkelbach-West, *ap. sch. Ap. Rhod.* 4. 259) must have differed only in part, and the problem was represented by the course of the Phasis, which Hecataeus believed to flow into the Ocean. In F 27, *ap. Paus.* 3. 25. 4 (cf. *sch. Antimach., ap. PCairo* 65741, col. II 26ff., p. 83 Wyss) Hecataeus examines the *vulgate*, of Homeric descent, regarding Cerberus, possibly following a Hesiodic version according to which the keeper of Hades was actually a dreadful serpent.²² An interesting case, in which the epic poets

22 The suggestion is put forward in Nenci [1955] 136.

are not explicitly referred to, is F 15, *ap. Ath.* 2. 35 a–b, with its account of the genealogy of Oeneus (Οἰνεύς) and of the ancient name for the vine (οἶνη), and in which the evocation of the παλαιοὶ Ἕλληνες must correspond to the epic poets (cf. Hes. *Op.* 572 and [Sc.] 292).²³

As a criterion for the study of the geographical work of Hecataeus when direct references to epic sources are absent, it is viable to cross-reference the disappearance of the site for which we are given a toponym with its survival in the epics.²⁴ Some instances are the toponyms recorded in the Catalogue of the Ships, and the Trojan Catalogue: Kynos (F 131), Olizon (F 135), Enete,²⁵ Alazia (tied to the Alazones: F 127), Φθειρῶν ὄρος (F 239). Thus, F 308, *ap. Aristid.* 36. 108, II 297 K. (ὁ τοίνυν Κάνωβος ὄνομά ἐστι Μενελάου κυβερνήτου, ὡς Ἐκαταίος τε δὴ φησιν ὁ λογοποιὸς καὶ τὸ κοινὸν τῆς φήμης, οὗ τελευτήσαντος περὶ τὸν τόπον τοῦτον λείπεται τοῦνομα, “‘Canobus’ was the name of Menelaus’ steersman, according to the account of Hecataeus logographer and to *communis opinio*. When he died, the place we speak of was named after him”) names Canobus, steersman of the ship of Menelaus, whose name was given to the site of his death; and when the name of Hecataeus is associated with τὸ κοινὸν τῆς φήμης, this probably ought to be taken to indicate the epic tradition (*Nostoi*) on the one hand, and the exegesis of the epics, and mythography on the other.

No less than Hecataeus and the other logographers, Hellanicus of Lesbos²⁶ found epic poetry to provide a frame of reference, as a passage in the *Contra Apionem* of Flavius Josephus (1. 16 = *FGrHist* 4 T 18) clearly attests:

περίεργος δ' ἂν εἶην ἐγὼ τοὺς ἐμοῦ μᾶλλον ἐπισταμένους διδάσκων ὅσα μὲν Ἑλλάνικος Ἀκουσίλαω (*FGrHist* 2 T 6) περὶ τῶν γενεαλογιῶν διαπεφώνηκεν, ὅσα δὲ διορθοῦται τὸν Ἡσίοδον Ἀκουσίλαος, ἢ τίνα τρόπον Ἐφορος μὲν Ἑλλάνικον ἐν τοῖς πλείστοις ψευδόμενον ἐπιδείκνυσιν.

It would be superfluous for me to point out to readers better informed than myself what discrepancies there are between Hellanicus and Acusilaus on the genealogies, how often Acusilaus corrects Hesiod, how the mendacity of Hellanicus in most of the statements is exposed by Ephorus. (Transl. H. St. J. Thackeray)

23 Cf. n. 21, above.

24 An instance is the toponym Oechalia in the *Genealogies* F 28.

25 See Nicolai [2003b] and *infra*.

26 Cf. Meliadò in this volume.

Apart from the sequence of the corrections, what stands out is that Hesiod should be placed at the start of the chain. In actual fact, F 94, *ap. sch. Eur. Rhés.* 29 (ὁ δὲ Ἡσίοδος Εὐρώπης μὲν φησιν αὐτὸν ** ὡς Ἑλλάνικος, “Hesiod says that [Sarpedon] was born of Europa. Likewise Hellenicus”) testifies to a convergence of Hellenicus with Hesiod; but then, on the other hand, F 95, *ap. sch. Ap. Rhod.* 2. 178 (Ἀγήνορος γὰρ παῖς ἐστίν, ὡς Ἑλλάνικος. ὡς δὲ Ἡσίοδος φησιν [fr. 138 Merkelbach-West], Φοίνικος τοῦ Ἀγήνορος καὶ Κασσιεπείας, “[Phineus] is the son of Agenor, as Hellenicus records. Otherwise, as Hesiod maintains, he was the son of Phoenix, in turn born of Agenor, and of Cassiopea”) shows a divergence. Equally, divergences from Homer are to be found in F 141 and F 144. In F 141, *ap. sch. Hom. Il.* 24. 495, it is said that Priam had 56 sons and daughters, and not 50, which makes it likely Hellenicus was also drawing on the epic cycle, alongside the *Iliad*;²⁷ the argument in F 144, *ap. Strab.* 10. 2. 14, instead, largely relies on the Catalogue of the Ships (spec. *Hom. Il.* 2. 631ff.), although some of its elements probably originated with Hellenicus, and filtered to Strabo through Apollodorus of Athens. Hellenicus also studied the biographies of the more archaic poets, and traced back the genealogies of Homer and Hesiod to Orpheus (F 5).²⁸

An author we frequently find in connection with Hellenicus, of whom *Suda* claims he was the pupil (*FGrHist* 5 T 1), is Damastes of Sigeum,²⁹ who produced, among other things, a work in two books *Ancestors of Those who Fought at Troy* (Περὶ γονέων καὶ προγόνων τῶν εἰς Ἴλιον στρατευσαμένων), a *Catalogue of the Peoples and Cities* (Ἐθνῶν κατάλογος καὶ πόλεων) and one *On Poets and Sophists* (Περὶ ποιητῶν καὶ σοφιστῶν). No fragment is extant of the genealogical work; of the geographical tract there is only a surviving fragment on the northernmost peoples, including the Hyperboreans (F 1, *ap. Steph. Byz. s.v. Ὑπερβόρειοι*, p. 650 M.). Of the fragments bearing no title or heading, F 3, *ap. Dion. Hal. Ant. Rom.* 1. 72. 2, deals with Aeneas and the founding of Rome; F 7, *ap. Plut. Vit. Cam.* 19, establishes a date for the capture of Troy; F 9, *ap. Strab.* 1. 3. 1, the extent of the Troad; F 11, *ap. Vit. Hom. Rom.* p. 30. 24 Wil., records the place of birth and genealogy of Homer.

There is not enough room to attend to other great genealogists, such as Acusilaus of Argos and Pherecydes of Athens;³⁰ nor to touch upon the *corpora* of the sophists who were most interested in the ἀρχαιολογία, *i.e.* the most remote history, such as Hippias of Elis, or to human progress, such as Protagoras of

27 See Jacoby, *FGrHist* 1, *Komm.* [1957] 466f.; Ambaglio [1980] 126.

Abdera, author of the treatise *On the Original State of Things* (Περὶ τῆς ἐν ἀρχῇ καταστάσεως), of which we can form a partial idea through references in Plato's *Protagoras*.³¹ What we are able to establish with confidence is that the practice of drawing on epic was to some extent common to all: from Hesiod, mostly, in the case of the genealogists; from epic poetry in general, and especially the *Iliad*, with authors interested in archaic history. Exegesis was grounded in the cross-examination of epic sources, and the principle of verisimilitude; most certainly it also extended to a linguistic approach, as testified by the exegesis of the poem of Simonides in Plato's *Protagoras*.

4 The Great Historiography of the Classical Age

Herodotus was rightly considered an eminently Homeric author (Ps.-Long. *Subl.* 13. 3), and this ancient assessment was largely based on narrative technique.³² The distance between Herodotus and former genealogists and geographers can mostly be gauged by the extent to which he relies on epic poetry,³³ a point I shall expand through a small set of examples.

Herodotus inserts the Trojan saga in his second book, and sets it against the timeframe of the Egyptian dynasties (2. 112–120).³⁴ Herodotus cannot expunge the Trojan war from the sequence of events, but critically revises and rewrites it,³⁵ stating his preference for the Egyptian version according to which, after she had been abducted by Paris, Helen was detained in Egypt by king Proteus. According to this version, the Greeks and the Trojans fought each other in vain, and Menelaus was only able to recover his wife in Egypt after Troy had been destroyed. The point of interest is not whether Herodotus is reliable or whether the version he relates actually did originate in Egypt. The issue is that Herodotus prefers a paradigm more closely matching the sensitivity of the tragic poets over an epic paradigm (represented by the Trojan cycle).³⁶ Paris alone is responsible for the destruction of the city of Troy and the plight of its

31 See Nicolai [2005] 250–253.

32 See Rengakos [2006].

33 See Nicolai [2003a] 98–101.

34 See Nicolai [2012b], and see also the bibliography therein, to which we may add: de Jong [2012], according to whom the touch of Herodotus is apparent in all of the Herodotean narration, and Saïd [2012], who examines all references to the Trojan saga in Herodotus and endorses its standing as paradigm. On the broader issue of the presence of myth in Herodotus, see Baragwanath-de Bakker [2012].

35 Thus Montanari [2006b] 52.

36 See Saïd [2012] p. 97f., who cites Stadter [1992] 783.

innocent inhabitants; on the other hand, Menelaus commits a wrong which matches that of his brother Agamemnon in the sacrifice of Iphigenia. In the Egyptian account, that is, Menelaus was prevented from leaving the Egyptian shores by unfavourable winds and was thus induced to sacrifice two local children. Admittedly, Herodotus relates in his proemial section the same version of the rape of Helen recorded in the epics, crediting the Persian λόγοι with it (1. 3). His divergence from the epics takes the form of a string of arguments, grounded in the principle of verisimilitude (εἰκός), which could well have found its place in the *argumentatio* of a piece of judicial oratory (2. 120). In actual fact, the main preoccupation of Herodotus is not with the truth of the matter: namely whether Helen was taken to Troy or instead remained in Egypt. Herodotus, rather, replaces a paradigm he regards befitting of epic poetry (2. 116. 1) with a different paradigm that is markedly foreign to epic. The paradigm in question is attributed to an archaic source which he regards reliable: the Egyptian priesthood. In terms of its truth-content, the Egyptian version of Helen's story has nothing to do with a historical account; rather, it is akin to the myth of Atlantis in Plato's *Timaeus-Critias*, which is also recorded as deriving from the priests of Egypt, and also incorporates precise references to Herodotus.³⁷ In either instance, a paradigmatic event which may be entirely or partly fictional is attributed to the source which is taken to be most reliable, and regarded as superior to the texts upon which the Greeks based the narrative of their own past.

In his discussion of the Homeric account, Herodotus claims that Homer was aware of the Egyptian version and chose not to adopt it because it befitted epic to a lesser extent than the version he preferred to use (2. 116. 1 οὐ γὰρ ὁμοίως ἐς τὴν ἐποποιίην εὐπρεπέης ἦν τῷ ἐτέρῳ τῷ περ ἐχρήσατο, "but seeing that it was not so well suited to epic poetry as the tale of which he made use" [Transl. A. D. Godley]). The argument in Herodotus is based on passages from Homer (2. 116. 3–5 with citations from *Il.* 2. 289–292; *Od.* 4. 227–230 and 4. 351f.) which suggest Paris did not go to Troy directly. According to several commentators, the citations from the *Odyssey* result from an interpolation, because in 2. 116. 6 Herodotus' argument can only be taken to refer to the stay at Sidon which is mentioned in the passage from the *Iliad*, and also because both passages from the *Odyssey* deal with Menelaus' homeward journey from Troy. Without going into the complexities of the state of the text, I should call attention to the fact that ancient exegesis is not devoid of unwarranted citations, which are often inspired by loose associations and tenuous references. On the grounds of the verses he cites, Herodotus establishes the *Cypria* to be not the work of

37 On this point, see Nicolai [2012a].

Homer, since this poem states that Paris arrived at Troy with Helen on the third day due to favourable winds and sea condition, whereas the passage from the *Iliad* clearly has Paris sailing across the Mediterranean before he reaches Troy (2. 117). This section of Homeric exegesis, the conclusion of which is explicitly marked (2. 117 "Ὀμηρος μὲν νῦν καὶ τὰ Κύπρια ἔπεα χαίρετω, "enough, then, of Homer and the Cyprian poems"), offers the clearest illustration of Herodotus' use of the principle of *πρέπον* (2. 116. 1 *εὐπρεπής*). Herodotus wished to question the attribution to Homer of the poems of the epic cycle, bringing to light the inconsistencies with the *Iliad* and *Odyssey* accounts, and thus gave proof of his deep familiarity with the entire *corpus* of texts attributed to Homer (2. 116. 2 *καὶ οὐδαμῆ ἄλλῃ ἀνεπόδισε ἑωυτόν*, "and nowhere else does he return to the story" [Transl. A. D. Godley]). The digression on Homer indicates that Herodotus must have been writing for readers who regarded the matter worthy of interest, and who must also have been able, though not uniformly, to follow his line of argument.

In terms of authorial ascription, Herodotus (4. 32) also doubted the Homeric attribution of the *Epigons*, this being a poem from the Theban cycle which was also ascribed to one Antimachus of Teos. The passage swiftly goes over the few mentions made of the Hyperboreans, and quotes the names of Hesiod (fr. 150 Merkelbach-West) and, precisely, of the *Epigons*.

The two passages cited above should confirm the view that the *Iliad* and *Odyssey* were the only poems to be regarded as undoubtedly Homeric, and as such were rated as more reliable informants than the remainder of the epic cycle. What is particularly significant in this connection is the determination of a time-line for Homer and Hesiod in Hdt. 2. 53. Herodotus established that both poets had been active four hundred years before his time, and credits them with the creation of a theogony for the Greeks, specifying that they bestowed on their several gods their *ἔπωνυμῖαι*, and individuated their *τιμαί* and *τέχνη* (2. 53. 1). Some poets who were assumed to pre-date Homer and Hesiod should, according to Herodotus, be regarded as posterior. Herodotus ascribes to himself the authority with regard to all information concerning either poet (2. 53. 3 *οἱ δὲ πρότερον ποιηταὶ λεγόμενοι τούτων τῶν ἀνδρῶν γενέσθαι ὕστερον, ἔμοιγε δοκέειν, ἐγένοντο. τούτων τὰ μὲν πρῶτα αἱ Δωδωνίδες ἱρήϊαι λέγουσι, τὰ δὲ ὕστερα τὰ ἐς Ἡσιόδον τε καὶ Ὀμηρον ἔχοντα ἐγὼ λέγω*, "But those poets who are said to be older than Hesiod and Homer were, to my thinking, of later birth. The earlier part of all this is what the priestesses of Dodona tell; the later, that which concerns Hesiod and Homer, is what I myself say" [Transl. A. D. Godley]).

Herodotus did therefore rely on the testimony of the poets, Homer especially, but, unlike Hecataeus and the other genealogists, did not set them as the starting point for his investigation. He moved, rather, from his own empirical

enquiry and, based on the data so obtained, sought confirmation in the work of the poets, which he subjected to critical scrutiny.³⁸ An instance is 4. 29, where *Od.* 4. 85 is cited in order to corroborate, contrastively, the observation that hornless oxen live in the cold climes:

δοκέει δέ μοι καὶ τὸ γένος τῶν βοῶν τὸ κέλον διὰ ταῦτα οὐ φύειν κέρεα αὐτόθι.
μαρτυρεῖ δέ μοι τῇ γνώμῃ καὶ Ὅμηρου ἔπος ἐν Ὀδυσσηΐῃ ἔχον ὦδε (Hom.
Od. 4. 85)

καὶ Λιβύην, ὅθι τ' ἄρνες ἄφαρ κεραοὶ τελέθουσι
ὀρθῶς εἰρημένον, ἐν τοῖσι θερμοῖσι ταχὺ παραγίνεσθαι τὰ κέρεα. ἐν δὲ τοῖσι
ἰσχυροῖσι ψύχεσι ἢ οὐ φύει κέρεα τὰ κτήνεα ἀρχὴν ἢ φύοντα φύει μόγις.

And in my opinion it is for this reason that the hornless kind of cattle grow no horns in Scythia. A verse of Homer in the *Odyssey* attests to my opinion: "Libya, the land where lambs are born with horns on their foreheads", in which it is correctly observed that in hot countries the horns grow quickly, whereas in very cold countries beasts hardly grow horns, or not at all. [Transl. A. D. Godley]

Homer is invoked in support of the γνώμη of Herodotus (regarding which cf. 2. 99. 1) who, in the previous chapter, had described the long, bitter Schythian winters in great detail.

Felix Jacoby had noted that Herodotus frequently measures himself against the Ἑλλήνων λόγοι in his second book, and had highlighted some of the passages in which Homer and poets at large are discussed. In 2. 23 Herodotus criticizes the believers in the existence of the river Ocean:

ὁ δὲ περὶ τοῦ Ὠκεανοῦ λέξας ἐς ἀφανὲς τὸν μῦθον ἀνενεΐκας οὐκ ἔχει ἔλεγχον.
οὐ γάρ τινα ἔγωγε οἶδα ποταμὸν Ὠκεανὸν ἐόντα, Ὅμηρον δὲ ἢ τινα τῶν
πρότερον γενομένων ποιητέων δοκέω τοῦνομα εὐρόντα ἐς ποίησιν ἐσενεΐκασθαι.

The opinion about Ocean is grounded in obscurity and needs no disproof; for I know of no Ocean river; and I suppose that Homer or some older poet invented this name and brought it into his poetry. (Transl. A. D. Godley)

In 3. 115. 2, the name of Eridanus, Greek and not barbaric, is shown to betray its origins as the making of some poet (τοῦτο μὲν γὰρ ὁ Ἑριδανὸς αὐτὸ κατηγορεῖ

38 Thus Funke [1986] 79.

τὸ οὖνομα ὡς ἔσσι 'Ελληνικὸν καὶ οὐ βάρβαρον, ὑπὸ ποιητέω δέ τινος ποιηθέν, "The very name Eridanus betrays itself as not a foreign but a Greek name, invented by some poet" [Transl. A. D. Godley]).

In 6. 52. 1 (Λακεδαιμόνιοι γὰρ ὁμολογέοντες οὐδενὶ ποιητῇ λέγουσι κτλ., "The Lacedaemonians say—but no poet agrees etc." [Transl. A. D. Godley]), a traditional Spartan narrative is compared with its version in the poets, with which it does not tally. Herodotus compares three distinct traditions (the Spartan, the common Greek, and Persian) regarding the origins of Spartan royalty.³⁹ In recounting the common Greek tradition, Herodotus dwells upon the limitations that impinge upon genealogies, remarking how he could go no further than Perseus, son of Danae (6. 53. 1f.):

ταῦτα μὲν Λακεδαιμόνιοι λέγουσι μόνοι 'Ελλήνων, τάδε δὲ κατὰ τὰ λεγόμενα ὑπ' 'Ελλήνων ἐγὼ γράφω, τούτους γὰρ δὴ τοὺς Δωριέων βασιλέας μέχρι μὲν δὴ Περσέος τοῦ Δανάης, τοῦ θεοῦ ἀπεόντος, καταλεγόμενους ὀρθῶς ὑπ' 'Ελλήνων καὶ ἀποδεικνυμένους ὡς εἰσὶ "Ἕλληνες· ἤδη γὰρ τηνικαῦτα ἐς "Ἕλληνας οὗτοι ἐτέλεον. "Ἐλεξα δὲ μέχρι Περσέος τοῦδε εἵνεκα, ἀλλ' οὐκ ἀνάκαθεν ἔτι ἔλαβον, ὅτι οὐκ ἔπεςτι ἐπωνυμίη Περσεΐ οὐδεμίᾳ πατρὸς θνητοῦ, ὥσπερ 'Ηρακλεΐ 'Αμφιτρύων· ἤδη ᾧ ὀρθῶ λόγῳ χρεωμένῳ μέχρι Περσέος ὀρθῶς εἴρηται μοι.

The Lacedaemonians are the only Greeks who tell this story. But in what I write I follow the Greek report, and hold that the Greeks correctly recount these kings of the Dorians as far back as Perseus son of Danae—they make no mention of the god—and prove these kings to be Greek; for by that time they had come to be classified as Greeks. I said as far back as Perseus, and I took the matter no further than that, because no one is named as the mortal father of Perseus, as Amphitryon is named father of Heracles. So I used correct reasoning when I said that the Greek record is correct as far back as Perseus. [Transl. A. D. Godley]

Herodotus implicitly identified the common Greek tradition with that of the poets, but did not ratify it as far as acknowledging that the father of Perseus is Zeus, who was united to Danae in the guise of a rainfall of gold. The term of comparison appears in the renowned passage from the second book of the *Histories*, where Herodotus introduces Hecataeus, who recites his own genealogy before the priests of Thebes as far back as a god (2. 143. 1 ἐς ἑκκαίδεκατον θεόν,

39 The method is employed by Herodotus in the proemium (Hdt. 1. 1–5), for instance, where he discusses the abduction of women (Io, Medea, Helen), which supposedly gave rise to hostilities between the Greeks and Barbarians.

“in the sixteenth generation”), while the priests point him to the 345 statues of their own human forebears οὐ δεκόμενοι παρ’ αὐτοῦ ἀπὸ θεοῦ γενέσθαι ἄνθρωπον, “for they would not be persuaded by him that a man could be descended from a god” (2. 143. 4) (Transl. A. D. Godley). The emendation in Herodotus is thus far more radical than Hecataeus, of whom Mazzarino remarked that he “could not cast aside, for this Egyptian encounter, his conviction that the gods had had dealings with humans, in Greece, up to a date that would approximately coincide with the year 1100 BC.”⁴⁰ The poetic tradition was thus seen as the originator for names and myths which later were to become part of the common tradition: however, albeit implicitly, the poets were also held accountable for the lapses in verisimilitude of the tradition.

Thucydides’ Archaeology (Thuc. 1. 2–19) is a piece of demonstrative discourse with the aim of establishing the greatness of the Peloponnesian War, which Thucydides is about to relate, over all former wars.⁴¹ A framework of socio-economic dynamics, rooted in the development of non-nomadic communities, in their accumulation of wealth, and their efforts to defend it is employed to relate the more remote history. Thucydides makes use of Homer as witness, at times quoting him directly. In 1. 2. 2, the general frame of what we would call pre-historic Greece is clearly moulded on the description of the social organisation of the Cyclops in book IX of the *Odyssey*:

τῆς γὰρ ἐμπορίας οὐκ οὔσης, οὐδ’ ἐπιμειγνύντες ἀδεῶς ἀλλήλοις οὔτε κατὰ γῆν οὔτε διὰ θαλάσσης, νεμόμενοί τε τὰ αὐτῶν ἕκαστοι ὅσον ἀποζῆν καὶ περιουσίαν χρημάτων οὐκ ἔχοντες οὐδὲ γῆν φυτεύοντες, ἀδηλον ὃν ὁπότε τις ἐπελθὼν καὶ ἀτειχίστων ἅμα ὄντων ἄλλος ἀφαιρήσεται, τῆς τε καθ’ ἡμέραν ἀναγκαίου τροφῆς πανταχοῦ ἂν ἡγούμενοι ἐπικρατεῖν, οὐ χαλεπῶς ἀπανίσταντο, καὶ δι’ αὐτὸ οὔτε μεγέθει πόλεων ἴσχυον οὔτε τῇ ἄλλῃ παρασκευῇ.⁴²

There was no commerce, and they could not safely hold intercourse with one another either by land or sea. The several tribes cultivated their own soil just enough to obtain a maintenance from it. But they had no accumulations of wealth, and did not plant the ground; for, being without walls, they were never sure that an invader might not come and despoil them. Living in this manner and knowing that they could anywhere obtain a

40 Mazzarino [1965] 78.

41 See Nicolai [2001b].

42 See Nicolai [2005] 237–240. The passage from the *Odyssey* is cited in Pl. *Leg.* book three, where the passage on the founding of Troy is also cited (*infra*). See also Tulli [2003].

bare subsistence, they were always ready to migrate; so that they had neither great cities nor any considerable resources. [Transl. B. Jowett]

Contrast, in particular, the passage from Thucydides above with Hom. *Od.* 9. 105–129, esp. 108, 123 (the absence of agriculture among the Cyclops), 125–129 (the absence of ships and sea-faring skills among the Cyclops). Other information from the same passage in the *Odyssey* was thoroughly revised in Thucydides' adaptation. For instance, the remark on the absence of assemblies and civic institutions (Hom. *Od.* 9. 112 τοῖσιν δ' οὔτ' ἀγοραὶ βουλευφόροι οὔτε θέμιστες) and of the cave-dwelling of the Cyclops translates with Thucydides into the notion that there were no major powerful cities in 'pre-historic' times. A hint of elaboration upon the Homeric source is probably to be seen in the passage of the Archaeology of Thucydides in which it is reported that the cultivation of the land in more ancient times was limited to a level of subsistence (Thuc. 1. 2. 2 νεμόμενοί τε τὰ αὐτῶν ἕκαστοι ὅσον ἀποζῆν), and should also be set in relation to Hom. *Od.* 9. 114f. (θεμιστεύει δὲ ἕκαστος / παῖδων ἢδ' ἀλόχων, οὐδ' ἀλλήλων ἀλέγουσι, "and each one is lawgiver to his children and his wives, and they reckon nothing one of another" [Transl. A. T. Murray]), where it is held that the Cyclops only look after their closest kin, with no regard for the others. It may thus be maintained that both the treatment reserved by the Cyclops for their guests, and their weak social bonds (Hom. *Od.* 9. 401–412), the same which, combined, ensured the outcome of Odysseus' verbal trick, might have contributed to the picture painted by Thucydides. *Ex post* confirmation may be derived from Pl. *Leg.* 680b 3ff., which, within a like context, explicitly cites Hom. *Od.* 9. 112–115.

In Thuc. 1. 3. 3, the authority of Homer is called upon to prove the name Hellenes is subsequent to the Trojan war;⁴³ in 1. 5. 2, the ancient poets serve as evidence upon the problem of piracy, and reference is clearly made to such testimonies as, *e.g.*, Hom. *Od.* 3. 71 ss., 9. 252ff.

The much-debated Thucydidean passage on the founding of cities (Thuc. 1. 7)

τῶν δὲ πόλεων ὅσαι μὲν νεώτατα ὤκισθησαν καὶ ἤδη πλωιμωτέρων ὄντων, περιουσίας μᾶλλον ἔχουσαι χρημάτων ἐπ' αὐτοῖς τοῖς αἰγιαλοῖς τείχεσιν ἐκτίζοντο καὶ τοὺς ἰσθμοὺς ἀπελάμβανον ἐμπορίας τε ἔνεκα καὶ τῆς πρὸς τοὺς προσοίκους ἕκαστοι ἰσχύος. αἱ δὲ παλαιαὶ διὰ τὴν ληστείαν ἐπὶ πολὺ ἀντίσχευον ἀπὸ θαλάσσης μᾶλλον ὤκισθησαν, αἱ τε ἐν ταῖς νήσοις καὶ ἐν ταῖς

43 See Vannicelli [1989] esp. 37ff. and 45ff., according to whom Thucydides has in mind *Il.* 2. 681–685 particularly.

ἡπίροις (ἔφερον γὰρ ἀλλήλους τε καὶ τῶν ἄλλων ὅσοι ὄντες οὐ θαλάσσιοι κάτω ὤκουσιν), καὶ μέχρι τοῦδε ἔτι ἀνωκισμένοι εἰσίν.

In later times, when navigation had become general and wealth was beginning to accumulate, cities were built upon the sea-shore and fortified; peninsulas too were occupied and walled-off with a view to commerce and defence against the neighboring tribes. But the older towns both in the islands and on the continent, in order to protect themselves against the piracy which so long prevailed, were built inland; and there they remain to this day [Transl. B. Jowett]

may perhaps be clarified in the light of its Homeric hypo-text (*Il.* 20. 215–218):⁴⁴

Δάρδανον αὖ πρῶτον τέκετο νεφεληγερέτα Ζεὺς,
κτίσσε δὲ Δαρδανίην, ἐπεὶ οὐ πῶ Ἴλιος ἱρή
ἐν πεδίῳ πεπόλιστο πόλις μερόπων ἀνθρώπων,
ἀλλ' ἔθ' ὑπωρείας ὤκειον πολυπίδακος Ἴδης.

at the first Zeus, the cloud-gatherer, begat Dardanus, and he founded Dardania, for not yet was sacred Ilios builded in the plain to be a city of mortal men, but they still dwelt upon the slopes of many-fountained Ida [Transl. A. T. Murray].

The position of Troy enabled the city to control a stretch of coastline (thus Strab. 13. 1. 7, who bases himself on Homer) and the straits, whereas old Dardania, perched upon the slopes of Ida, had no outlets for economic and military expansion. Over the fifth and fourth centuries, the frequency of direct or indirect references to *Il.* 20. 215ff. (aside from Thucydides: *Hellenic. FGrHist* 4 F 25a; Pl. *Leg.* 681e 1–5) suggests the Homeric source had been commented upon prior to Thucydides, not only for its documentary evidence on antiquity, but also because it may have entered the speculative debate on the development of human civilization. The topos of city-foundation as a fundamental stage towards progress appears in Protagoras (Pl. *Prt.* 322a 8f., which possibly derives from the *Περὶ τῆς ἐν ἀρχῇ καταστάσεως*) and Hippias (Pl. *Hp. mai.* 285d 6–e 2). The words Plato has Hippias pronounce point to some correlation between the genealogies of humans and of heroes, and the foundation of cities; meaning that the foundation of the oldest cities was the work of heroes, most of whom were the heroes of epic poetry.

44 See Nicolai [2005] 241–245.

The Thucydidean section on the Trojan war (Thuc. 1. 9–12. 2) may be regarded as a re-writing of the Trojan cycle, starting from its premises: Agamemnon's power, and not the oaths of Helen's suitors to Tyndareus, are to be taken as motive for his gathering of the army (1. 9. 1). The oral tradition from the Peloponnesus is preferred over Homer and the epic (1. 9. 2 οἱ τὰ σαφέστατα Πελοποννησίων μνήμη παρά τῶν πρότερον δεδεγμένοι, "Those Peloponnesians who possess the most accurate traditions" [Transl. B. Jowett]). Homer is explicitly adduced with regard to the extent of Agamemnon's fleet and the information that he offered to supply the Arcadians with ships. In particular, within the context of a detailed analysis of Hom. *Il.* 1. 2. 108, Thucydides (1. 9. 4) calls upon Homer as a witness in order to prove that the role of Agamemnon was determined by his military power, and notably that, as ruler of several islands, he possessed a mighty fleet:

φαίνεται γὰρ ναυσί τε πλείσταις αὐτὸς ἀφικόμενος καὶ Ἀρκάσι προσπαρασχών, ὡς Ὅμηρος τοῦτο δεδήλωκεν, εἴ τῳ ἰκανὸς τεκμηριώσαι. καὶ ἐν τοῦ σκήπτρου ἅμα τῇ παραδόσει εἶρηκεν αὐτὸν πολλῆσι νήσοισι καὶ Ἄργεϊ παντὶ ἀνάσσειν. οὐκ ἂν οὖν νήσων ἕξω τῶν περιοικίδων (αὐταὶ δὲ οὐκ ἂν πολλαὶ εἶεν) ἡπειρώτης ὦν ἐκράτει, εἰ μὴ τι καὶ ναυτικὸν εἶχεν. εἰκάζειν δὲ χρὴ καὶ ταύτῃ τῇ στρατείᾳ οἷα ἦν τὰ πρὸ αὐτῆς.

Of the chiefs who came to Troy, he, if the witness of Homer be accepted, brought the greatest number of ships himself, besides supplying the Arcadians with them. In the Handing down of the Sceptre he is described as "The king of many islands, and of all Argos." But, living on the mainland, he could not have ruled over any except the adjacent islands (which would not be 'many') unless he had possessed a considerable navy. From this expedition we must form our conjectures about the character of still earlier times. [Transl. B. Jowett]

Even the notorious argument upon the archaeology of the future is set in between two statements concerning the numbers of the Achaean expedition on Troy and the reliability of the testimony of the poets (1. 10. 1 and 1. 10. 3 respectively):

καὶ ὅτι μὲν Μυκῆναι μικρὸν ἦν, ἢ εἴ τι τῶν τότε πόλισμα νῦν μὴ ἀξιόχρεων δοκεῖ εἶναι, οὐκ ἀκριβεῖ ἂν τις σημείω χρώμενος ἀπιστοίῃ μὴ γενέσθαι τὸν στόλον τοσοῦτον ὅσον οἴ τε ποιηταὶ εἰρήκασιν καὶ ὁ λόγος κατέχει.

When it is said that Mycenae was but a small place, or that any other city which existed in those days is inconsiderable in our own, this

argument will hardly prove that the expedition was not as great as the poets relate and as is commonly imagined. [Transl. B. Jowett]

οὐκ οὐκ ἀπιστεῖν εἰκός, οὐδὲ τὰς ὄψεις τῶν πόλεων μᾶλλον σκοπεῖν ἢ τὰς δυνάμεις, νομίζειν δὲ τὴν στρατείαν ἐκείνην μεγίστην μὲν γενέσθαι τῶν πρὸ αὐτῆς, λειπομένην δὲ τῶν νῦν, τῇ Ὀμήρου αὖ ποιήσει εἴ τι χρὴ κἀνταῦθα πιστεῦειν, ἦν εἰκός ἐπὶ τὸ μείζον μὲν ποιητὴν ὄντα κοσμήσαι, ὅμως δὲ φαίνεται καὶ οὕτως ἐνδεεστέρα.

We ought not then to be unduly sceptical. The greatness of cities should be estimated by their real power and not by appearances. And we may fairly suppose the Trojan expedition to have been greater than any which preceded it, although according to Homer, if we may once more appeal to his testimony, not equal to those of our own day. He was a poet, and may therefore be expected to exaggerate; yet, even upon his showing, the expedition was comparatively small. [Transl. B. Jowett]

The bent of the argument in Thucydides is to prove that the scale of the Trojan war was comparatively small, when set against the Spartan-Athenian war he narrates—although the former had, in fact, been the greatest of all previous conflicts. For the same quantitative ends, Thucydides examines the figures in the Catalogue of the Ships, estimating the number of participants in the Achaean expedition on the basis of the men embarked on the Boeotian ships and on the ships of Philoctetes. The exegesis of the Catalogue in Thucydides is a display of remarkable accuracy (1. 10. 4f.):

πεποίηκε γὰρ χιλίων καὶ διακοσίων νεῶν τὰς μὲν Βοιωτῶν εἴκοσι καὶ ἑκατὸν ἀνδρῶν, τὰς δὲ Φιλοκτῆτου πενήκοντα, δηλῶν, ὡς ἐμοὶ δοκεῖ, τὰς μεγίστας καὶ ἐλαχίστας. ἄλλων γοῦν μεγέθους πέρι ἐν νεῶν καταλόγῳ οὐκ ἐμνήσθη. αὐτερέται δὲ ὅτι ἦσαν καὶ μάχιμοι πάντες, ἐν ταῖς Φιλοκτῆτου ναυσὶ δεδῆλωκεν. τοξότας γὰρ πάντας πεποίηκε τοὺς προσκώπους. περίνεως δὲ οὐκ εἰκός πολλοὺς ξυμπλεῖν ἕξω τῶν βασιλέων καὶ τῶν μάλιστα ἐν τέλει, ἄλλως τε καὶ μέλλοντας πέλαγος περαιώσεσθαι μετὰ σκευῶν πολεμικῶν, οὐδ' αὖ τὰ πλοῖα κατάφαρκα ἔχοντας, ἀλλὰ τῷ παλαιῷ τρόπῳ ληστικώτερον παρεσκευασμένα. πρὸς τὰς μεγίστας δ' οὖν καὶ ἐλαχίστας ναῦς τὸ μέσον σκοποῦντι οὐ πολλοὶ φαίνονται ἐλθόντες, ὡς ἀπὸ πάσης τῆς Ἑλλάδος κοινή πεμπόμενοι.

For it numbered, as he tells us, twelve hundred ships, those of the Boeotians carrying one hundred and twenty men each, those of Philoctetes fifty; and by these numbers he may be presumed to indicate the largest and

the smallest ships; else why in the catalogue is nothing said about the size of any others? That the crews were all fighting men as well as rowers he clearly implies when speaking of the ships of Philoctetes; for he tells us that all the oarsmen were likewise archers. And it is not to be supposed that many who were not sailors would accompany the expedition, except the kings and principal officers; for the troops had to cross the sea, bringing with them the materials of war, in vessels without decks, built after the old piratical fashion. Now if we take a mean between the crews, the invading forces will appear not to have been very numerous when we remember that they were drawn from the whole of Hellas. [Transl. B. Jowett]

The information regarding the problem of supplying the Achaean army with food, and the need to cultivate the lands of Chersonesus and also practice piracy (1. 11) is derived from the combination of the *Iliad* with other sources, most likely the Trojan cycle, and provides an explanation for the ten-year duration of the war. Thucydides also mentions the Achaean wall (1. 11. 1), a greatly debated issue in the exegeses of antiquity (and one surviving into modern times).⁴⁵ Once again the drift of the argument is to confirm the small scale of that war, when measured both against the data, and against its representation in the poets (1. 11. 2 *ἀλλὰ δι' ἀχρηματίαν τά τε πρὸ τούτων ἀσθενή ἦν καὶ αὐτὰ γε δὴ ταῦτα, ὀνομαστότατα τῶν πρὶν γενόμενα, δηλοῦται τοῖς ἔργοις ὑποδέεστερα ὄντα τῆς φήμης καὶ τοῦ νῦν περὶ αὐτῶν διὰ τοὺς ποιητὰς λόγου κατεσχηκότος*, "Poverty was the real reason why the achievements of former ages were insignificant, and why the Trojan War, the most celebrated of them all, when brought to the test of facts, falls short of its fame and of the prevailing traditions to which the poets have given authority" [Transl. B. Jowett]). The epic cycle is also the source for information regarding the perilous homeward voyages of the Achaeans from Troy (1. 12. 2), whereas the calculations concerning Boeotian colonisation may be relying on the exegetical work of the logographers, who had most likely taken an interest in the toponym 'Arne' (*Il.* 2. 507; *Thuc.* 1. 12. 3).⁴⁶

Chapter 21 is a synthetic presentation of the methodology for the investigation in the Archaeology, and of its results: in this chapter, the current war is by far the greatest of all former conflicts, although the available evidence will only serve for quantitative estimates. Here too, the value of the poets as documentary sources is played down, and that of the logographers as well (1. 21. 1):

45 See Porter [2011].

46 Nicolai [2001b] 272.

ἐκ δὲ τῶν εἰρημένων τεκμηρίων ὅμως τοιαῦτα ἂν τις νομίζων μάλιστα ἂ διήλθον οὐχ ἁμαρτάνοι, καὶ οὔτε ὡς ποιηταὶ ὑμνήκασι περὶ αὐτῶν ἐπὶ τὸ μείζον κοσμοῦντες μᾶλλον πιστεύων, οὔτε ὡς λογογράφοι ξυνέθεσαν ἐπὶ τὸ προσαγωγότερον τῇ ἀκροάσει ἢ ἀληθέστερον, ὄντα ἀνεξέλεγκτα καὶ τὰ πολλὰ ὑπὸ χρόνου αὐτῶν ἀπίστως ἐπὶ τὸ μυθῶδες ἐκνευικηκότα, ἠύρησθαι δὲ ἡγησάμενος ἐκ τῶν ἐπιφανεστάτων σημείων ὡς παλαιὰ εἶναι ἀποχρώντως.

Yet any one who upon the grounds which I have given arrives at some such conclusion as my own about those ancient times, would not be far wrong. He must not be misled by the exaggerated fancies of the poets, or by the tales of chroniclers who seek to please the ear rather than to speak the truth. Their accounts cannot be tested by him; and most of the facts in the lapse of ages have passed into the region of romance. At such a distance of time he must make up his mind to be satisfied with conclusions resting upon the clearest evidence which can be had. [Transl. B. Jowett]

The fact that this formulation comes after the section bemoaning the excessive credulity among the “sayings of those who were our predecessors” (ἀκοαὶ τῶν προγεγεννημένων), illustrated by two mistakes in Herodotus (who is not named, however) (1. 20), demonstrates that Thucydides is at once measuring himself against Homer and epic poetry, on the one hand, and also, on the other, against both Herodotus and the logographers.

Outside the Archaeology, Homer is named only twice, in 2. 41. 4 and 4. 104, where two passages from the *Hymn to Apollo* are cited. In the latter instance, Thucydides borrows from the Homeric testimony in order to demonstrate the importance and great antiquity of the celebrations at Delos, in a pattern that is modelled upon the Archaeology in the first book. Epic is also relied upon in 4. 24. 5, in a discussion of the strait of Messina,⁴⁷ and in a further Archaeology, namely the Sicilian Archaeology (6. 2. 1), where the poets provide the information on the most ancient inhabitants of the island: Cyclops and Laestrygonians. As in the first book, Thucydides draws from the poets only a modicum for his discussion, deliberately refraining from venturing into speculation that must have been current in his own time. Besides, the localisation of the Cyclops and Laestrygonians in Sicily is not to be found in the Homeric epics, and is a derivation from successive exegesis, possibly starting as early as Hesiod (fr. 150. 25–26 Merkelbach-West; cf. Strab. 1. 2. 14).

When comparing the attitudes of Herodotus and Thucydides towards the poetic tradition, particularly the Homeric tradition, it is interesting to note that

47 See Hornblower [1996] 180–182.

the Herodotean critical approach seeks to pinpoint whether poets may serve as informants; Thucydides, on the other hand, neatly discriminates between recent and ancient history, and will only allow the authority of the poets in the investigation of the latter, whilst marking the limitations of the validity of their testimony. The Archaeology of the first book may thus be read as a *virtuoso* piece of epideictic writing, proving the incomparable greatness of the Peloponnesian war; it is also, however, a discourse on method, dealing with the tools and sources that will allow past events to be reconstructed correctly.

The relation of Ephorus of Cyme with Homer, whom he considered a fellow native of Cyme, must have been particularly strong. In *FGrHist* 70 F 1, *ap.* [Plut.] *Vit. Hom.* 1. 2, Ephorus discusses the genealogies of Homer and Hesiod. In F 9, *ap.* Harp. α 244 Keaney, in the context of a statement on methodology, we are offered an appreciation of the wealth of narrative detail that is of the essence in epic and myth:

περὶ μὲν γὰρ τῶν καθ' ἡμᾶς γεγενημένων [...] τοὺς ἀκριβέστατα λέγοντας πιστοτάτους ἡγούμεθα, περὶ δὲ τῶν παλαιῶν τοὺς οὕτω διεξιόντας ἀπιθανωτάτους εἶναι νομίζομεν, ὑπολαμβάνοντες οὔτε τὰς πράξεις ἀπάσας οὔτε τῶν λόγων τοὺς πλείστους εἰκὸς εἶναι μνημονεύεσθαι διὰ τοσοῦτων.

On the fact which occurred in our own time [...] we have deemed to be wholly worthy of credit those authors who related most precisely; but upon ancient events, those whose narratives were equally precise we have regarded unreliable entirely, assuming it to be most contrary to reason that they should remember at such a removal in time neither all of the facts, nor most of the words.

The ancient facts of which Ephorus speaks match chronologically with the Trojan war, and belong to that heroic age which only the words of the poets made accessible. Just like the genealogists, Ephorus refers to the entire epic *corpus*: in F 15, *ap.* Steph. Byz. *s.v.* Δυμᾶνες, p. 240 M. he discusses Egymius, king of the Dorians and the subject of a poem which in antiquity had been attributed to Hesiod, though the attribution is doubtful.

Ephorus' approach to *κτίσεις*, and to *ἀρχαιολογία* more in general apparently contradicts the time constraints determined by the upper limit of the homecoming of the Heracleidae.⁴⁸ F 11, *ap.* Ath. III p. 105d, takes us to the survivors

48 On the issue of delimiting the *spatium historicum* in Ephorus, see Parmeggiani [1999], who excludes there are rigid boundaries and highlights the use in Ephorus of the investigation techniques employed by Thucydides in the Archaeology. See also Breglia Pulci Doria

in the deluge of Deucalion; F 14, *ap. sch.* Ap. Rhod. 1. 1168, takes us to Heracles; F 23, *ap. Sud.* π 1168 Adler, and F 34, *ap. Ael. Theon Progymn.* 2 p. 95. 27 Sp., take us to Pirithous and Theseus; in F 24, *ap. Steph. Byz. s.v. Ἀθήναι*, p. 33 M. Diante is discussed; in F 122, the Curetes. This latter fragment combines a statement that may be compared to the Archaeology of Thucydides (1. 2. 6: whether the Athenians are autochthones) with the documentary use of inscriptions (see discussion below). F 147, *ap. Strab.* 10. 4. 8, contains a version of the myth of Mynosses which is, let us say, more acceptable—Mynosses being represented as following the example of a notably righteous man, who was also his brother's namesake, being called Rhadamanthys. The nine years spent by Mynosses in Zeus' cave would explain *Od.* 19. 178. F 31ab, *ap. Ael. Theon Progymn.* 2 p. 95. 8 Sp. + *Strab.* 9. 3. 11f., offers diverging evaluations, within a limited time-frame, of the treatment reserved by Ephorus to mythical subject matter. The rhetorician Theon interprets the Ephorean version of the myths of Tityos and Python as models of ἀνασκευή of myth (F 31a, *ap. Ael. Theon Progymn.* 2 p. 95 Sp.). Strabo, instead, is keen on distinguishing the domains of history and myth and condemns Ephorus for having betrayed his promise, and for pointlessly humanizing mythical characters (F 31b, *ap. Strab.* 9. 3. 11–12).⁴⁹ Ephorus' manner of proceeding has a precedent at least in Hecataeus (cf. *FGrHist* 1 F 27). The question that might be asked, rather, is whether, in the fourth century, Ephorus could have been in a position to disregard myths, as Strabo would have it. We must answer in the negative. Ephorus at least still depended on Apollo as founder of the Pythian oracle and had no access to an abstract, transcendent conception of the divine:

Ephor. *FGrHist* 70 F 31b, *ap. Strab.* 9. 3. 11f. "Ἐφορος δ', ᾧ τὸ πλείστον προσχρώμεθα διὰ τὴν περὶ ταῦτα ἐπιμέλειαν, καθάπερ καὶ Πολύβιος μαρτυρῶν τυγχάνει, ἀνὴρ ἀξιόλογος, δοκεῖ μοι τάναντία ποιεῖν ἔσθ' ὅτε τῇ προαιρέσει καὶ ταῖς ἐξ ἀρχῆς ὑποσχέσεσιν. ἐπιτιμῆσας γοῦν τοῖς φιλομυθοῦσιν ἐν τῇ τῆς ἱστορίας γραφῇ καὶ τὴν ἀλήθειαν ἐπαινέσας προστίθησι τῷ περὶ τοῦ μαντείου τούτου λόγῳ σεμνὴν τινα ὑπόσχεσιν, ὡς πανταχοῦ μὲν ἄριστον νομίζει τάληθές, μάλιστα δὲ κατὰ τὴν ὑπόθεσιν ταύτην. "ἄτοπον γάρ, εἰ περὶ μὲν τῶν ἄλλων τὸν τοιοῦτον αἰεὶ τρόπον διώκομεν" φησὶ "περὶ δὲ τοῦ μαντείου λέγοντες, ὃ πάντων ἐστὶν ἀψευδέστατον, τοῖς οὕτως ἀπίστοις καὶ ψευδέσι χρησόμεθα λόγοις".

[2001] 154–162, who documents the interest in Ephorus towards the pre-history of the different sites.

49 For an analysis of the fragment in its context in Strabo, see Parmeggiani [2001].

Ephorus, whom I am using more than any other authority because, as Polybius, a noteworthy writer, testifies, he exercises great care in such matters, seems to me sometimes to do the opposite of what he intended, and at the outset promised, to do. At any rate, after censuring those who love to insert myths in the text of their histories, and after praising the truth, he adds to his account of this oracle a kind of solemn promise, saying that he regards the truth as best in all cases, but particularly on this subject. “For it is absurd,—he says—if we always follow such a method in dealing with every other subject, and yet, when speaking of the oracle which is the most truthful of all, go on to use the accounts that are so untrustworthy and false”. [Transl. H. L. Jones]

I would not rule out that Strabo conflated the proemial remarks of Ephorus concerning *veritas* and the space to be assigned to traditional narratives (along the lines of Thuc. 1. 22. 4) with the preamble to the story narrated in book four of his work.⁵⁰ The key to the passage lies in the definition of the Delphic oracle: ὁ πάντων ἐστὶν ἀψευδέστατον, “which is the most truthful of all”. If Ephorus had undermined the Apollonian lineage of the oracle, he would not only have disqualified that particular myth: the framework for the founding of the cities would have caved in on itself, since most acts of foundation were, as we know, inspired by the oracle’s pronouncements. The public demanded to have the *μυθῶδες*, to use the Thucydidean term, because it needed it. Moreover, we should not disregard the renewed importance of Delphic amphictyony in the fourth century.⁵¹ Riccardo Vattuone has noted that in F 31b Ephorus studies a remote tradition and seeks to verify it by means of contemporary data, such as the Pythian procession.⁵² Comparable use of the same method is made within

50 On this point, see Vattuone [1998] 193: “La soluzione più plausibile entro l’argomentazione di Strabone è che Eforo abbia biasimato i φιλομαθοῦντες all’inizio dell’opera (ταῖς ἐξ ἀρχῆς ὑποσχέσειν) in un discorso più ampio su ἀλήθεια, e che poi sia ritornato sull’argomento all’inizio del IV libro, a proposito di un tema che si prestava in maniera particolare al rifiuto di ἄπιστοι καὶ ψευδεῖς λόγοι, vale a dire il racconto delle vicende del santuario delfico”.

51 On this point, see Spreca [2007] 196, in the context of a work which emphasizes the relationship between Athens and the civilizing impulse of the god Apollo. See also Avagianou [1998] 136, according to whom “the Ephoran Apollo functions like the Isocratean Theseus and fulfills the panhellenic point of view of the historian, standing for humanity and virtue”.

52 Vattuone [1998] 192–194. On the presumptive method of Ephorus, see Parmeggiani [2001] 190 who suggests the definition “autopsia archeologica”. On the fragment, see also Parmeggiani [1999] esp. 120f. and Breglia Pulci Doria [2001] 153f.

the like context of Isocrates' *Panegyric* (28), in the discussion on the gifts of Demeter, which is fundamentally a discussion of traditional lore, of its credibility and value.

Ephorus appears to be placed firmly within a historical-geographic tradition which had begun with the early exegetes of epic and had been continued in historical writings as well as in the *ἱστοριῶν ἀπόδοσις* of the grammarians.⁵³ The use of poetic texts as μαρτύρια (F 122, *ap.* Strab. 10. 3. 2–4) finds a parallel in the Thucydidean discussion upon Delos (Thuc. 3. 104). It is a fragment we owe to Strab. 10. 3. 2–4, which ends with a citation that Strabo reads as a climax of proud assertion, sealing the successfulness of the argument:

ὁ δ' ὡσπερ κατωρθωκῶς ἐπιλέγει, διότι ταῦτα καὶ τὰ τοιαῦτα “διακριβοῦν εἰώθαμεν, ὅταν ᾗ τι τῶν πραγμάτων ἢ παντελῶς ἀπορούμενον ἢ ψευδῆ δόξαν ἔχον”.

But Ephorus, as though he had achieved success in his argument, adds: “It is my wont to examine such matters as these with precision, whenever any matter is either altogether doubtful or falsely interpreted”. [Transl. H. L. Jones]

With this formulation, Ephorus expresses a noteworthy statement of method: when it comes to antiquarian issues, the historian is urged to examine the matter more thoroughly, *e.g.* by making recourse to epigraphic documentation, as in this instance.⁵⁴

Anaximenes of Lampsacus,⁵⁵ according to Diod. Sic. 15. 89. 3 (*FGrHist* 72 T 14; cf. T 6), began his exposition “from the origins of the gods and of the first generation of humans” (*ἀπὸ θεογονίας καὶ ἀπὸ τοῦ πρώτου γένους τῶν ἀνθρώπων*) and then moved on to epic subject matter. Anaximenes not only composed works on history, but was also a rhetorician and the author of a text *On Homer* (T 13), in which he examined the issue of the birth place of the poet (F 30, *ap. Vit. Hom. Rom.* vi p. 30. 24 Wil.). Anaximenes was the pupil of Zoilus of Amphipolis, the grammarian known by the designation of Ὀμηρομάστιξ (T 1, *ap. Sud.* α 1989 Adler). That he devoted himself to other authors as well is witnessed in T 22, dealing with the Seven Sages who were said to have cultivated poetry.

53 See Nicolai [2005–2006].

54 On this issue and more generally on the use of documents in Ephorus, see Schepens [2003] 343 and 345f. On the sources used by Ephorus and his possible recourse to autopsy and local informers, see Breglia Pulci Doria [2001] 141–147.

55 See Meliaddò in this volume.

His interest in the myths transmitted by the poets surfaces in F 3, *ap. Ath.* VI p. 231c, where he accounts for the fame of the necklace of Eriphyle in terms of the rarity of gold among the Greeks at that ancient time. This account is analogous to the discussion in Thuc. 1. 5. 2 of the testimonies in Homer regarding piracy. Anaximenes' interest in grammar finds confirmation in the work of his pupil Timolaus of Larissa in Macedonia, who reportedly added in his Τρωικός one verse of his own for each verse in the *Iliad* (T 20, *ap. Sud.* τ 626 Adler). This operation required a great knowledge of epic poetry, equal or possibly greater to that of the later composers of centos.

Callisthenes of Olynthus, a nephew and pupil of Aristotle, also approached the text of Homer in terms of textual criticism. Strab. 13. 1. 27 (= *FGrHist* 124 T 10) records that Alexander the Great, with Callisthenes and Anaxarchus, would read and annotate with critical symbols (σημειωσαμένου) a copy of the *Iliad*, dubbed ἐκ τοῦ νόρθηκος. Strabo, with a display of great propriety in the use of philological terminology, acknowledges that Alexander and his companions were engaged in a practice that was not wholly dissimilar from that of the Alexandrian philologists.⁵⁶

In F 10, *ap. sch. Eur. Hec.* 910, from the second book of the *Hellenika*, Callisthenes expresses his view on the date of the capture of Troy, developing an argument of astronomy based on a line from the *Little Iliad* (9 Bernabé).⁵⁷ Callisthenes contrasts his own view with the opinion of τινες τῶν ἱστορικῶν—though the label is somewhat broad, and could refer to anyone researching any field, including investigations in the past. Recourse to the natural sciences in the study of epic poetry stems, on the one hand, from the scientific mindset of the Peripatetic school while, on the other, it leads back to epic as the starting point for the exposition and elucidation of scientific doctrines. Commentaries on epic allowed the ancient schools to include a number of subjects which would otherwise have been excluded, such as astronomy, geography, the natural sciences. The Trojan war was perhaps also treated in F 1, *ap. Ath.* XIII p. 560b–c, from the writing *On the Holy War*, which possibly conducted a comparison of the Third Holy War with both the First Holy War and the Trojan war.⁵⁸

56 See Nicolai [2005–2006] 59f., also with regard to the position of Pfeiffer, who denies the existence of an Aristotelian edition of Homer.

57 See Prandi [1985] 61f.

58 Thus Prandi [1985] 66–68; see also Nicolai [2006] 712f.

5 Hellenistic Historiography and Geography

Use of epic poetry as documentary matter continued during the Hellenistic period as historians and geographers worked to gain an understanding of the remoter ages. The gradual perfecting of philological skills in certain authors allowed some, notably those with interests in grammar, to probe issues in exegesis and textual criticism which had been approached only marginally in former times.

Interest in the biographies of the poets also continued, applying the habitual technique of drawing the information regarding an author from his own work. An example is to be found in Timaeus of Tauromenium, *ap.* Polyb. 12. 24. 1f., who observed that poets and prose writers disclosed aspects of their temperament through high frequency phrase occurrences in their work. Accordingly, Homer could thus be characterized as a glutton, because he often talks about the practice of dismembering flesh, whereas Aristotle betrays his disposition as a *gourmand* by the frequent mention of succulent dishes. Athenaeus (10. 430a), likewise, cites poems from Alcaeus to conclude he must have been devoted to wine—drinking as he does at all seasons and on all occasions.

In the Hellenistic period, geography graduated to the rank of an independent discipline with Eratosthenes and Strabo—the latter providing a compendium of all ancient geographic wisdom. Quite naturally, geography came into existence before geography: before the scope and purposes of the discipline were defined, that is. Strabo, among other things, merged the physico-mathematical approach with the geographical-ethnographic interest.⁵⁹ Alongside the documentary mining of epic, a debate arose on the subject of the status of geographical indications in Homer. This debate stemmed from issues in the education of young men, Homer being awarded central position in the pedagogical system; because it also involved the definition of the epic genre against geography, it became an extension of the debate on poetics, from Aristotle onward.

According to the account in the opening section in Strabo (1. 1. 1), Eratosthenes of Cyrene believed Homer, Anaximander, and Hecataeus to have dealt with geography first (fr. I A 1 Berger = 1 Roller). Strabo (fr. I A 4, I A 19, I A 21 Berger = 2 Roller) also teaches that, according to Eratosthenes, diversion and not instruction was the aim of the poets. Eratosthenes criticised Homer for excessive detail in his information on the toponyms of Greece and the bordering regions, when measured against his limited display of knowledge of more

59 See van Paassen [1957].

remote lands.⁶⁰ Reference is made to some of the designations in the Catalogue of the Ships. As far as we can tell, the main drift of his critique was concerned with the voyage of Odysseus. In what is possibly the most famous fragment of the *Geographikà*, we read (I A 16 Berger = 5 Roller, *ap. Strab.* 1. 2. 15):

οὐκ ἐπαινεί δὲ οὐδὲ τὴν τοιαύτην τοῦ Ἐρατοσθένους ἀπόφασιν, διότι φησὶ τότ' ἂν εὐρεῖν τινα ποῦ Ὀδυσσεὺς πεπλάνηται, ὅταν εὕρῃ τὸν σκυτέα τὸν συρράψαντα τὸν τῶν ἀνέμων ἀσκόν.

He [Polybios] does not approve of this assertion by Eratosthenes, where he says that one will find where Odysseus wandered when you find the cobbler who sewed up the hide of winds. (Transl. D. W. Roller)

Another fragment forms part of the same context (I A 12 Berger = 6 Roller, *ap. Strab.* 1. 2. 12), in which it is said:

ταύτης φησὶ τῆς ἰδέας εἶναι καὶ τοὺς κατὰ τὴν Ὀδυσσεύως πλάνην λεγομένους, τοὺς δὲ μὴ πεπλάσθαι λέγοντας ἀλλ' ὑποκείσθαι ἐξ αὐτοῦ τοῦ μὴ συμφωνεῖν ἐλέγχεσθαι ψευδομένους.

He [Eratosthenes] says that those mentioned in the wanderings of Odysseus are also a construct, and that those who say they are not invented but substantiated are convicted of falsehood because they do not agree with one other. (Transl. D. W. Roller)

The critique of Eratosthenes was founded in poetics, in a notion destroying any exegetic attempt to salvage reliance on Homer, as the above cited fr. I A 12 Berger = 6 Roller (*ap. Strab.* 1. 2. 12) makes clear:

πειράται διαβάλλειν φανερώς ψευδῆ καὶ οὐκ ἄξια λόγου διὰ μακρῶν, πρὸς δὲ τὴν προτέραν, ποιητὴν τε ἅπαντα ἀποφήνας φλύαρον καὶ μήτε τόπων ἐμπειρίαν μήτε τεχνῶν πρὸς ἀρετὴν συντείνειν νομίσας.

He believes that he [Homer] attempts to misrepresent something obviously false and unworthy of a lengthy discussion, and in the former, that all poets tell falsehoods and that their experience of places and arts does not lead to virtue (Transl. D. W. Roller).

60 See fr. I A 4 Berger = 2 Roller; I A 6 Berger = 8 Roller; I A 11 Berger = 3 Roller.

In the same train of argument, Strabo also draws an interesting comparison between Homer and Hesiod. Strabo (1. 2. 14) asks:

ἢ καὶ Ἑσιόδῳ μὲν ἔπρεπε μὴ φλυαρεῖν, ἀλλὰ ταῖς κατεχούσαις δόξαις ἀκολουθεῖν, Ὁμήρῳ δὲ πᾶν ὅ τι ἂν ἐπ' ἀκαιρίμαν γλώσσαν ἤη κελαδεῖν;

Is it fitting for Hesiod not to talk nonsense and to follow prevailing opinions, yet for Homer 'to shout forth everything that comes to this untimely tongue'? (Transl. D. W. Roller)

A widely discussed passage among ancient philologists is *Od.* 1. 23:⁶¹ Eratosthenes also joined in the debate, and accused Homer of being ignorant (I A 8 Berger = 10 Roller). The systematic critique of Homer by Eratosthenes, a polygraph with keen philological skills, was later to be taken up by Apollodorus of Athens.

Polybius frequently quotes from Homer in order to prove his familiarity with epic poetry. He devotes a section of his thirty-fourth book to the voyage of Odysseus (34. 2–4) in an attempt to refute Eratosthenes and to find elements in support of the view that Homer stands as a witness. The passage is mentioned in Strabo (see above), who agrees with Polybius. A different fragment in book thirty-four shows that Polybius was acquainted with the allegorical exegesis of Homer (34. 11. 20):

ἀφ' οὗ δὴ τὸ μυθωδέστατον δοκοῦν εἰρήσθαι τῷ ποιητῇ οὐ μάτην φαίνεσθαι λεχθέν, ἀλλ' αἰνιξαμένου τὴν ἀλήθειαν, ὅταν φῆ ταμίαν τῶν ἀνέμων τὸν Αἰόλον.

Therefore, it appears that Homer did not speak without meaning, but was stating a truth allegorically when he called Aeolus 'steward of the winds'. (Transl. E. S. Shuckburgh)

The formulation αἰνιξαμένου τὴν ἀλήθειαν should be understood as referring to the attempts to seek hidden truths to which Homer alluded even in the statements that are most doubtful or contrary to πρέπον.

A philological stance is also taken in book twelve, in the section on the errors of Timaeus. In 12. 4a. 4ff. Polybius criticises Timaeus,⁶² who in turn had blamed

61 On the discussion surrounding this passage in the *Odyssey*, cf. Cratet. fr. 37 Broggiato (with the annotations in Broggiato [2001] 200–203).

62 See Nicolai [1999] especially for the critique of the speeches of Timaeus.

Ephorus for a mistake in stating the timeline for the kingdom of Dionysius the Elder. Polybius remarks (*ibid.*):

τοῦτο γὰρ οὐδεὶς ἂν εἶπαιε δῆπου τοῦ συγγραφέως εἶναι τὸ διάπτωμα, τοῦ δὲ γραφέως ὁμολογουμένως. ἢ γὰρ δεῖ τὸν Ἐφορον ὑπερβεβηκέναι τῇ μωρίᾳ καὶ τὸν Κόροιβον καὶ τὸν Μαργίτην, εἰ μὴ δυνατὸς ἦν συλλογίζεσθαι διότι τὰ τετταράκοντα καὶ δύο προστεθέντα τοῖς εἴκοσι καὶ τρισὶν ἐξήκοντα γίνεται καὶ πέντε. ἢ τοῦτου μηδαμῶς ἂν πιστευθέντος ὑπὲρ Ἐφόρου φανερόν ὅτι τὸ μὲν ἀμάρτημα *** ἐστὶ τοῦ γραφέως, τὸ δὲ Τιμαίου φιλεπίτιμον καὶ φιλέγκλημα οὐδεὶς ἂν ἀποδέξαιτο.

For surely no one could say that the mistake here was the author's, but it is obviously the scribe's. Either Ephorus must have surpassed Coroebus and Margites in stupidity if he could not reckon that forty-two added to twenty-three make sixty-five, or as nobody would believe this of Ephorus, the mistake is evidently due to the scribe. No one, however, could approve of Timaeus' love of cavilling and fault-finding. (Transl. W. R. Paton)

In the course of the diatribe against Timaeus, Polybius stresses that Timaeus has a reputation for historical accuracy—only to then remark on his omissions and accuse him of wilful untruths (12. 10. 4):

καίτοι διότι τοῦτ' ἴδιόν ἐστὶ Τιμαίου καὶ ταύτη παρῆμιλληται τοὺς ἄλλους συγγραφέας καὶ καθόλου τῆδὲ πῆ τῆς ἀποδοχῆς ***—λέγω δὲ κατὰ τὴν ἐν τοῖς χρόνοις καὶ ταῖς ἀναγραφαῖς ἐπίφασιν τῆς ἀκριβείας καὶ τὴν περὶ τοῦτο τὸ μέρος ἐπιμέλειαν—δοκῶ, πάντες γινώσκομεν.

And yet Timaeus' special boast, the thing in which he outvies other authors and which is the main cause of the reputation he enjoys, is, as I suppose we all know, his display of accuracy in the matter of dates and public records, and the care he devotes to such matters. (Transl. W. R. Paton)

And also (12. 11. 1–3):

ὁ γὰρ τὰς συγκρίσεις ποιούμενος ἀνέκαθεν τῶν ἐφόρων πρὸς τοὺς βασιλεῖς τοὺς ἐν Λακεδαίμονι καὶ τοὺς ἄρχοντας τοὺς Ἀθήνησι καὶ τὰς ἱερείας τὰς ἐν Ἀργεὶ παραβάλλων πρὸς τοὺς ὀλυμπιονίκας, καὶ τὰς ἀμαρτίας τῶν πόλεων περὶ τὰς ἀναγραφὰς τὰς τούτων ἐξελέγχων, παρὰ τρίμηνον ἐχούσας τὸ διαφέρον, οὗτός ἐστι. καὶ μὴν ὁ τὰς ὀπισθοδόμους στήλας καὶ τὰς ἐν ταῖς φλιαῖς τῶν νεῶν

προξενίας ἐξευρηκῶς Τίμαιός ἐστιν. ὄν οὐθ' ὑπάρχον τι τῶν τοιούτων ἀγνοεῖν οὐθ' εὐρόντα παραλιπεῖν πιστευτέον οὔτε ψευσαμένῳ συγγνώμην δοτέον οὐδαμῶς.

For this is the author who compares the dates of the ephors with those of the kings in Lacedaemon from the earliest times, and the lists of the Athenian archons and priestesses of Hera at Argos with those of the victors at Olympia, and who convicts cities of inaccuracy in these records, there being a difference of three months. Yes, and it is Timaeus who discovered the inscriptions at the back of buildings and list of proxeni on the jambs of temples. We cannot then believe that he would have missed any such thing had it existed, or omitted to mention it had he found it, nor can we in any way excuse his mendacity. (Transl. W. R. Paton)

Beyond the interest in the different outlooks on the work of the historian that are upheld by Timaeus and Polybius, it is worth pointing out that by the time of Polybius, the practice of gathering documentation, especially epigraphic, and analysing it had become established.⁶³ The very critique of Timaeus shows with great clarity that the works of the predecessors were carefully anatomised, in a search for contradictory or fallible statements. In this regard, the historian operated much like the judicial orator, whose task it was to bring out the non-conformities of the opponent's δῆγησις with εἰκός. Familiarising with the work of the predecessors and comparing accounts is, according to Polybius (12. 25e. 1), the first stage in pragmatic history. Polybius, however, deemed scholarly knowledge to be insufficient, needing the support of first-hand military and political experience, and calling for personal acquaintance with the territories (12. 25g. 1–25i. 2). What Polybius (12. 25i. 1) does concede to Homer, instead, is profound knowledge of life—once more marking his variance from Eratosthenes on the subject of geography in Homer (see above).

Dionysius of Halicarnassus chose ancient Roman history as his object of study, ending with the first Punic war. As a matter of course, the investigation of his topic forced him to rely heavily on previous historiography, to compare the several versions of obscure and remote events, and to turn occasionally to poetic sources. Dionysius traces a brief *status quaestionis*, listing the historians who had covered ancient Roman history (1. 6. 1f.): the picture he gives the reader is one of great familiarity with the Greek tradition of historiography,

63 We must at least recall the gathering of epigraphs in Polemon of Ilion (first half of the second century BC). On the use of documents in ancient historiography, see Biraschi-Desideri-Roda-Zecchini [2003].

as well as with the Latin authors who had written in Greek. I shall give one example of the exegetical method in Dionysius from chapter fifty-three of the first book, on the arrival of Aeneas in Italy. Dionysius uses two monuments as τεκμήρια; then he justifies his digression (παρέκβασις) as necessary and as motivated by the divergence of opinion among the συγγραφείς. The notion that Aeneas should have returned to Troy after leading his people into Italy derived, in his opinion, from a misinterpretation of *Il.* 20.307–308 (1. 53. 4):

ὥς μὲν ἐγὼ εἰκάζω τοῖς Ὅμηρου ἔπεσιν οὐκ ὀρθῶς λαμβανομένοις παρακρουθέντες.

According to my conjecture these writers are deceived by mistaking the sense of Homer's verses. (Transl. E. Cary)

Strabo⁶⁴ was roughly a contemporary of Dionysius, and is especially important to our investigation since his work combines the Homeric exegesis of the philologists with the historical and geographic exegesis first practiced by the early genealogists and mythographers, and later developed by historians interested in the events of remotest antiquity. Strabo, in line with his predecessors, has no particular regard for the professional category within which the author of a given statement or interpretation might fall: Alexandrian philologists are cited side by side with Hecataeus and Plato, Anaximenes, and Eratosthenes. Despite his assertions of exclusive interest in current affairs (12. 8. 7), Strabo allows his κολοσσοργία to embrace discussions of ancient history and historical geography. Because the works of his predecessors have since been lost (notably those of Eratosthenes), Strabo also stands as a valuable source. He received a solid education in grammar under Aristodemus of Nysa and Tyrannion, and discussed several issues of Homeric geography in the context of his own geographical work. Book thirteen is especially rewarding, with a lengthy section on the Troad, introduced by an unusually ironic prologue (13. 1. 1):

ἔστι δὲ Τρωάς πρώτη τῆς παραλίας ταύτης, ἣς τὸ πολυθρύλητον καίπερ ἐν ἔρειπίοις καὶ ἐν ἔρημίᾳ λειπομένης ὅμως πολυλογίαν οὐ τὴν τυχοῦσαν παρέχει τῇ γραφῇ. πρὸς τοῦτο δὲ συγγνώμης δεῖ καὶ παρακλήσεως, ὅπως τὴν αἰτίαν τοῦ μήκους μὴ ἡμῖν μᾶλλον ἀνάπτωσιν οἱ ἐντυγχάνοντες ἢ τοῖς σφόδρα ποθοῦσι τὴν τῶν ἐνδόξων καὶ παλαιῶν γνῶσιν. προσλαμβάνει δὲ τῷ μήκει καὶ τὸ πλῆθος τῶν ἐποικησάντων τὴν χώραν Ἑλλήνων τε καὶ βαρβάρων, καὶ οἱ συγγραφεῖς οὐχὶ τὰ αὐτὰ γράφοντες περὶ τῶν αὐτῶν οὐδὲ σαφῶς πάντα. ὧν ἐν τοῖς πρώτοις ἐστὶν

64 See Nicolai [2005–2006].

“Ομηρος εικάζειν περι τῶν πλείστων παρέχων. δεῖ δὲ καὶ τὰ τούτου διαιτᾶν καὶ τὰ τῶν ἄλλων ὑπογράφαντας πρότερον ἐν κεφαλαίῳ τὴν τῶν τόπων φύσιν.

The first country on this seaboard is the Troad, the fame of which, although it is left in ruins and in desolation, nevertheless prompts in writers no ordinary prolixity. With this fact in view, I should ask the pardon of my readers and appeal to them not to fasten the blame for the length of my discussion upon me rather than upon those who strongly yearn for knowledge of the things that are famous and ancient. And my discussion is further prolonged by the number of the peoples who have colonized the country, both Greeks and barbarians, and by the historians, who do not write the same things on the same subjects, nor always clearly either; among the first of these is Homer, who leaves us to guess about most things. And it is necessary for me to arbitrate between his statements and those of the others, after I shall first have described in a summary way the nature of the region in question. (Transl. H. L. Jones)

Strabo most certainly had access to the works of Apollodorus of Athens on the Catalogue of the Ships and to that of Demetrius of Scepsis on the Trojan Catalogue; it is also likely he was able to consult a commentary along the lines of those transcribed in Venetus Marcianus A—possibly that of Aristonicus (see 1. 2. 31). He also had access (some direct, some indirect) to much prior historiography, and frequently quoted from it where controversial interpretations were at issue. His awareness of the problems deriving from the transcription of manuscripts is clearly voiced where he relates the circumstances of the library of Aristotle,⁶⁵ which, through Sylla, reportedly ended up in the hands of Tyrannion and of certain booksellers, who then entrusted the works to unskilled copyists and neglected to compare copies (13. 1. 54 βιβλιοπῳαί τινες γραφεῦσι φαύλοις χρώμενοι καὶ οὐκ ἀντιβάλλοντες, “certain booksellers who used bad copyists and would not collate the texts”), as occurred with the works copied out for sale in Rome and Alexandria. The only viable collation, in instances such as these, is that of the copy with its antigraph.⁶⁶ In 12. 3. 22 Strabo discusses several authors—Hecataeus, Menecrates of Elea, Palaephatus—who modify the old reading (τὴν ἀρχαίαν γραφήν, “the early text”), plausibly on the strength of the pre-Alexandrian *Homervulgata*. That a pre-Alexandrian variant of *Il.* 2. 852 was attested in Hecataeus is something we learn from Strab. 12. 3. 8:

65 See Novokhatko and Montana in this volume.

66 On the collation between different witnesses as a method of text criticism of ancient scholars, see Montanari in this volume.

it is the reading ἐξ Ἑνετῆς, also known to Zenodotus, instead of the ἐξ Ἑνετῶν, which was to prevail in the Medieval manuscript tradition.⁶⁷ Erbse attributes the scholium containing the reading ἐξ Ἑνετῆς to Aristonicus, affording us a glimpse of the tradition of scholia from which Strabo drew. I cannot here dwell on the long Homeric digression in 12. 3. 20–27, aimed at refuting the mistaken emendations of Homer's text and also its mistaken interpretations, such as that of Apollodorus. What we have, at any rate, is a σύγγραμμα of sorts, which enables us to understand something of the composition of texts of its kind—namely of those works in which Homeric issues were discussed. I shall also refrain from discussing the several questions of Homeric exegesis that stem from issues of toponymy and the elucidation of narrative contents (ἱστοριῶν ἀπόδοσις), in which Strabo uses the poets as *auctoritates*, and holds fast to the principle that Homer demands interpretation, even when he appears to be contradicting the actual facts of the matter: the principle being that Homer must in all cases be justified, even where this involves elaborate exegetical argument. Among his other interests that can be referred to the domain of grammar we have the biographies of the poets (*e.g.*, besides Homer, Anacreon in 14. 1. 30) and the discussions of linguistic issues, extending to languages other than Greek. See, for instance, the discussion of the term βαρβαρόφωνος as attributed to the Carians in *Il.* 2. 867, in the course of which Strabo also mentions the τέχνη περι ἑλληνισμοῦ (14. 2. 28).

Strabo represents a picture of geography as a far-ranging domain, and one which is in constant communication with philology—this too redefined in the broadest possible sense, to encompass textual criticism, exegesis, the commentary of the ἱστορίαι and research on antiquities, studies in language.

The *Geography* of Strabo may be compared with the *Description of Greece* by Pausanias, another work to have carved out a space of its own within the Greek literary system. The *Description* develops as a travelling itinerary, with digressions covering monuments and expositions of local history, and with a general attention to those events which had not found a place in the great historical writings. The localised outlook in Pausanias becomes predominant over the panhellenic, so that Greece becomes a museum of monuments and recollections.

To give a few examples, in book four, devoted to Messenia, Pausanias has recourse to poetry for the remotest history: see, in this regard, 4. 2. 1 where *Eoiae*, *Naupaktia*, *Asius*, and *Cinaethon* are mentioned, and whom Pausanias claims to have consulted on questions of genealogy. In 4. 1. 3f., the *Catalogue of the Ships* and the *Odyssey* are used to support the claim that no city of the

67 See Nicolai [2003b].

name of Messenia ever existed, but only a Messenian people.⁶⁸ The argument closely resembles that in Thucydides 1. 3 on the subject of the designation 'Hellenes'. In 4. 30. 1–4. 31. 1 a discussion of historical geography appears, based on references to the *Iliad* and to the *Hymn to Demeter*. Pausanias makes documentary use of epic, with a keen exegesis of geographical and genealogical issues in particular. The example of Messenia is of interest, in that the loss of political autonomy prevented a local historiography from being established in Messenia prior to 370 BC: the understanding of Messenic identity therefore had to be derived from epic poetry, for accounts of remotest history, and from oral traditions for the Messenic wars and more recent events. In this perspective, we find epic poetry being used as a matrix for new epic compositions (Rhianus of Bene) and as providing the grounds for erudite discussions, such as those in Pausanias.

6 Brief Afterword on Latin Historiography and Antiquarianism

Latin historiography was born from a rib of Hellenistic historiography, as the choice of writing in Greek by the first Latin historians manifests. Cicero had outlined a historical investigation that would remedy the absence of stylistically commendable works among the *litterae Latinae* (cf. *Brut.* 228), but never wrote it. One of his dialogues, however, the *De legibus*, has several historical and antiquarian discussions woven into its plot.⁶⁹

Antiquarianism, by its very nature straddling the domains of historiography and philology, is arguably the genre that most invites the exegetical discussion of texts. Its correct placement within the literary system is hard to define, leaving the issue still open to investigation. The chief representative of this mode of writing in Latin is Varro, who cites and comments upon archaic texts in his *Antiquitates*, and especially upon writings on law and religion. Antiquarian enquiry becomes linguistic and lexicographic, with Varro,⁷⁰ and his exegesis shifts away from poetic texts (which had served Greek historians as a source for the remotest past) to the study of official documents. Over the Hellenistic and Imperial ages in Rome, philology, antiquarianism, and historiography continued to feed into each other. At the same time, however, a synthetic formulation of the achievements in the field must remain poised between two worlds:

68 See Musti-Torelli [1991] 204f., with valuable insights on the role of Andania and the reasons for certain decisions in Pausanias.

69 See Nicolai [2001].

70 See Della Corte [1981] 149–216, in particular p. 166.

although Greek and Latin historiography did gradually incorporate the study of proper documents, it has to be acknowledged that the integration of narrative and antiquarian historiography was never fully accomplished by the ancients, and that only with the accomplishment of that step do we have, in the definition of Arnaldo Momigliano,⁷¹ the turning point for modern historiography.

71 Momigliano [1950].

1 Literacy and Medicine: Texts and Medical Practice

It has been remarked that the adoption of writing by the ancient Greek physicians brought about a profound innovation in the history of medicine.¹ Thus although apparently ancient doctors did not *need* to use writing in their craft, written medical texts are already attested in the mid 5th century as part of a consolidated activity of the *techne*.² For instance, this was the period (the second part of the 5th century BC) that saw the creation of some important medical texts attributed to Hippocrates, under whose name roughly sixty writings

* Translation by Rachel Barritt.

1 See Lonie [1983]; Althoff [1993].

2 *Suidas* s.v. Δημοκλήδης (δ 442) attributes a medical work to the physician Democedes, who lived at the court of the Persian king Darius, around 500 BC. Also dating from this period is a work by Alcmaeon of Croton, a *physikos logos*, mainly on medical issues: see Althoff [1993] 211–212. See also the remarks by Grensemann [1975] 50, according to whom some Hippocratic medicaments imply that the recipes achieved written form no later than about 480 BC, and, for a general survey of the writing practice in medicine, Perilli [2006] and [2009].

have come down to us. They are the core of the present essay. But on reading through these materials it immediately becomes evident that even the most ancient are by no means the first experiments in writing: the authority of the so called *Knidiai gnomai* (*Cnidian Sentences*) reveals a firm tradition, which no physician could afford to disregard, as is made clear by the polemics against this work in the Hippocratic treatise *Regimen in acute diseases*. The text, produced by a collective writing community (οἱ συγγράψαντες), is assumed to be known to its readers; moreover, it has been also revised or re-edited³ to correct mistakes and make improvements. What the author of *Regimen in acute diseases* attacks is a written tradition⁴ and he seeks to counterbalance its influence by using the same kind of medium. And the opinion of *Epidemics* III “The power to study correctly what has been *written* I consider to be an important part of the art of medicine”⁵ shows that the medical profession was extensively ‘literate’.⁶ Furthermore, rewriting for a different purpose, with additions or adaptations, seems to have been a widespread feature in ancient medical texts, as was pointed out in the 1970s by J. Jouanna and H. Grensemann⁷ with regard to the so-called nosological and gynecological treatises of the *Corpus Hippocraticum*.

It should also be borne in mind that while some physicians began either to write lists of diseases for internal use or to produce pamphlets promoting their craft (for ex. *On the art*), or addressed a lay public in order to disseminate basic knowledge on healing (for ex. *On affections*), they also used private notebooks

3 *Acut.* 3 (36, 21 July = II 226, 8 L.) οἱ μέντοι ὕστερον ἐπιδιασκευάσαντες.

4 *Acut.* 3 (37, 2–3 July = II 226, 9–10 L.) ἀτὰρ οὐδὲ περὶ διαίτης οἱ ἀρχαῖοι συνέγραψαν οὐδὲν ἄξιον λόγου.

5 *Epid.* III 3.2,16 (III 100, 7–8 L. = III 16, p. 256 Jones), discussed by Pigeaud [1992²] 325. See also Pigeaud [1978], Marganne [2004a] and [2004b] 102–126.

6 Even the polemical remarks by some Hippocratic authors, such as in *On joints* (33, IV 148, 16 ff. L.), concerning the risks of excessive use of written material in educating the surgeon, reveal that the presence of writing had by that time become inescapable. Furthermore, there was already one ancient historiographical tradition embodied by Celsus, *On medicine*, which underscored that an essential condition for the development of medicine was literacy, see von Staden [1999b] 261 f.

7 Jouanna [1974 = 2009²]; Grensemann [1975], [1982]. That a common literary model underlies parts of the nosological treatises, and that internal comparison permits a distinction between the common heritage and additions inserted at a later time, is a consolidated acquisition of Hippocratic scholarship, independently of the question as to whether they are or are not of ‘Knidian’ origin: see the discussion in Langholf [1990] 12–36. The influence of a common text source can likewise still be discerned in a scrap of papyrus dating from the 2nd c. AD, PKÖln 356, which preserves a parallel version of *Int.* (see Jouanna [2004] 231–236).

(*Epidemics*) to record case histories, and wrote notes to remind themselves of relevant observations or to structure oral teaching, or as a means of tentatively exploring reality. Such notes, once recorded, probably on *pinakes* or some similar informal typology⁸ and shared by the scientific community, were preserved and later selected and manipulated in order to create a teaching text or a *vade mecum* or some other kind of text. This is the context that led to the composition of books like *Aphorisms*, which excerpted, ‘rewrote’ and collected parts of *Epidemics*, of *Airs waters and places* and other medical texts in order to construct a sort of general handbook.⁹

I will not tackle here the notable problem of the parallel texts in the *Corpus Hippocraticum*, but it is important to underline that from the very beginning, in the field of medicine the written text played a crucial role, even before the time of Hippocrates, in the structuring and transmission of knowledge (acting as a complement to practical experience and oral lessons) within the groups of physicians (I deliberately eschew the term ‘school’).¹⁰ Consider, for example, what has been defined the ‘first medical doxography’,¹¹ namely *On the nature*

8 See *Epid.* VI 8.7 τὰ ἐκ τοῦ μικροῦ πινακίδιου (166 Manetti-Roselli = 278 Smith = V 344, 17 L.). “Things from the small tablet”: it is a sort of title which declares the source of the immediately following material. That texts like *Epidemics* could be preserved in tablets or leaflets is not at all surprising; moreover, some accident in their preservation may also account for the composition of *Epidemics* V and VII, which contain many ‘parallel’ passages, see Langholf [1977] 271–273; for the function of similar notes Langholf [1990] 142–149, Alessi [2010]. Langholf [2004] identifies sets of distinct text units within the Hippocratic texts, such units being sometimes arranged in a rather random order; they originated from materials gathered together in what could be termed ‘fact files’ or ‘index records’. The works, which were constitutively anonymous, were built up progressively by successive stratifications and modifications of text blocks.

9 On *Aphorisms*, see Roselli [1989]; for a general sketch of the fluid entities of some writings of the *Corpus Hippocraticum* and the accretive model of composition, Hanson [1997] 304–311.

10 The link with medicine in the temples of deities associated with healing certainly goes back to a very ancient date; cases and therapies were recorded, and the material was destined both to confidential use by the practitioners concerned and also to public use (for ex. the stelae of Epidaurus). This material was sometimes also transcribed by persons not internal to the temple, cf. Perilli [2009] 87–96. Even more ancient is the link between the scriptorial practice of Greek medicine and Egyptian medicine, as noted by Langholf [1989] 64–65.

11 The definition is due to Deichgräber [1971] 98. For a survey of the discussion on its composition and date see Duminil [1998] 75–115 (notice in particular 102: “Beaucoup de difficultés s’éclaireraient si on admet que *Nature des os* est une doxographie issue du fichier d’une bibliothèque médicale”).

of bones: although it is never mentioned in ancient literature, it must have already been attributed to Hippocrates in the 3rd century BC, when Bacchius of Tanagra, a pupil of Herophilus, (see *infra*) glossed a term from it. Such a work, consisting in a series of excerpts on vessels, presupposes the availability of written material (in a library? in a temple? or simply within the medical group?) from which passages could be selected according to the compiler's interest. Texts of this kind had a predominantly 'internal' circulation, but they were continually reproduced, re-adapted and re-used. But other types of text, destined to a broader public, may have had a wider "reception", if it is plausible to perceive an allusion to a sentence from the Hippocratic treatise *De flatibus* in a fragment of the comic playwright Antiphanes (4th c. BC).¹²

Unlike other *technai*, writing practices in the sphere of ancient medicine are testified specifically for the function of training and teaching, and they also had a role in promoting knowledge on medicine beyond the confines of the discipline itself.¹³ This contrasted with the situation observed in other disciplines: for example, handbooks of architecture do not appear to have exerted a similar influence in the promotion of art, although they were presumably used in the context of professional communities.¹⁴

The production and circulation of medical texts was carried out on a multiplicity of supports. Galen, in his commentary on *Hippocrates' In the surgery* (XVIII B 630, 12–14 K.), mentions ancient medical books some of which were on rolls (βιβλία), others on individual sheets of papyrus (χάρται), or on linden-bark paper (φιλύραι). Some idea of the kind of circulation can be gained from the extant medical papyri, but it is only a rough generalization since many of the finds came about by chance and in a discontinuous manner. Marie-Hélène Marganne¹⁵ gives an overview of the existing documentation concerning medical texts preserved on papyrus, and this documentation testifies to virtually all the typologies of supports and scriptorial practices that were common to the various genres of Greek literature. It is worth pointing out that in addition to practical and commonly used typologies such as *ostraka*, papyrus sheets and

12 For the production, circulation and reutilization of technical texts, Perilli [2006] and [2009], Langholf [2004]; on Antiphanes, Langholf [1986] 17–21. The presumed allusion to *Oath* in Aristophanes' *Thesm.* 272–274, proposed by H. S. Jones, is not plausible: see Anastassiou-Irmer [1997] I, 289 with bibliography.

13 See Aristotle's remark that medical writings are useful only for lay people in *Eth. Nic.* x 10, 1181b 2 ff. For the secondary effect of nevertheless addressing a larger audience in producing written texts, Althoff [1993] 221–223.

14 Perilli [2006] and [2009].

15 Marganne [2004b]; the most recent printed list in Andorlini [1993] 458–562, and for a continuous up-dating see <http://promethee.philo.ulg.ac.be/cedopal>.

rolls re-utilized by writing on the reverse side, there are also numerous cases of carefully written books, showing a professional hand.¹⁶

2 The Rise of Interest in Medical Texts: Focus on Hippocrates

The 4th century tradition of medicine soon became centered around the name of Hippocrates, who will be taken as the reference point in addressing the “philology of medical texts”.¹⁷ The so-called “Hippocratic question”, which galvanized the attention of generations of scholars in the attempt to identify the real Hippocrates, has become somewhat outdated and has given way to different trends of investigation, but it needs to be addressed at least as part of the quest to delineate the history of the *Corpus Hippocraticum*, and, if possible, to highlight the stages of a “body that was growing” over time.¹⁸ Pre-Alexandrian evidence is limited to a famous—and much debated—passage from Plato, in which the name of Hippocrates is brought up, as well as a mention of Aristotle and a medical doxography produced in the Peripatos, all of which have given rise to a never-ending bibliography.¹⁹

Several preliminary remarks will be helpful here. Since we will be dealing essentially with the reception of Hippocrates, it should be noted that his ‘reception’ can be understood in several different meanings: 1) a reference to Hippocratic doctrines, 2) a reference to Hippocratic writings, 3) philological-exegetic interest (collection and cataloguing of texts, text criticism enquiring into the issue of authenticity, glossaries, editions, commentaries), 4) doxography, 5) genealogy/biography.²⁰ In this paper the focus of investigation will mainly concern the last three points, which are interrelated and include the definition of a *Corpus* of works attributed to Hippocrates and the debate on their authenticity, the first signs of interest and attention to the texts in the form of lexicons and editions, the extensive development of works devoted to interpretation of the Hippocratic texts and the historical interest in the life and works of Hippocrates within the context of the history of the discipline.

16 For ex. the most ancient exemplar of a Hippocratic work, *Epidemics* II, 1st c. BC, PSchøyen inv. MS 2634/3 + PPrinc inv. AM 15960A = *CPF* [2008] 137–143, or a late exemplar of Gal. *De comp. medic. per genera*, PAnt 186 (5th c. AD) = *CPF* [2008] 10–43.

17 On the scanty traces of philological and exegetic activity devoted to other medical authorities, see *infra* § 4.

18 Roselli [2000].

19 For an overview see Lloyd [1975], Smith [1979] 34–44; Jouanna [1992] 85–105.

20 Kudlien [1989] 355.

Allusions to a Hippocratic text or to Hippocratic doctrines appearing in some 4th century texts and authors (such as that of Antiphanes cited earlier) tell us very little about the putative authorship of a work.

For the Pre-Alexandrian period (4th–3rd c.), the reception of Hippocrates can be considered only in the first two meanings. Certainly, the fame of Hippocrates and his family had become consolidated on Cos during the 4th c., although he does not appear ever to have practised medicine in his native area,²¹ but he also enjoyed considerable renown in Athens, as shown by the presence of Hippocrates' family in the genealogical work by Pherecydes of Athens,²² and by the evidence of Plato and Aristotle.²³

No specific exegetic interest focusing on Hippocrates can be demonstrated either in the work of Ctesias of Cnidos (5th–4th c. BC), a relative of Hippocrates, who seems to take up a polemical stance towards him,²⁴ nor in that of Diocles of Carystus (4th c. BC). One can merely take note of Ctesias' unsurprising knowledge of Hippocratic surgical practice²⁵ or Diocles' familiarity with some Hippocratic work.²⁶ Nevertheless it seems extremely probable that in the early Peripatos there were at least some Hippocratic texts that were read and discussed,²⁷ and the great interest in medicine—already cultivated by the physician's son Aristoteles²⁸—resulted in the first attempt at a historical sketch of medicine. I am referring here to 'Aristotle's' doxography, preserved

-
- 21 On the importance of local traditions of Cos and Cnidos, and on the confirmation that some 'biographic' texts of the *Corpus*, considered to be of a late date, have received by epigraphic testimonies, see Jouanna [1992] mainly 43–84.
- 22 Pherecydes *FGrHist* 3 F59 = Sor. *Vit. Hipp.* 1 (CMG IV, p. 175, 3–7).
- 23 Pl. *Prt.* 310c, *Phdr.* 270c; Arist. *Pol.* VII 4 (1326a 15). I do not intend to address the interpretive problems connected with these passages.
- 24 F67 Lenfant = Gal. *In Hipp. Art.* IV 40 (XVIII A 731, 6–9 K.), see Jouanna [1992] 92.
- 25 Jouanna [1992] 592 n. 14; Lenfant [2004] clix–clxi.
- 26 T162 van der Eijk [2000–2001] I, 262, and commentary, II, 302. Galen's commentary on *Airs, waters, places* quotes a passage of *Hygieina* (or of *On catarrhs*, see fr. 137 van der Eijk) by Diocles, where he discusses the meaning of the 'so called' *κέδμα* (*Är.* II 78, 3 L. etc.). *kedma* is attested only in the Hippocratic *Corpus* and in Aretaeus, see Anastassiou-Irmer [2001] II 1, 48 n. 1. Inference of Diocles' direct connection to *Aph.* is possible in frgs. 55a, 55b van der Eijk.
- 27 For the relationship between the *Problemata* and the *Corpus Hippocraticum* (especially with *Aphorisms*, *Airs waters places* and *Epidemics*) see Bertier [1989], Jouanna [1996].
- 28 This has to do with a 'Hippocratic' quotation in *Hist. an.* 512b 12 ff. where Aristotle quotes a passage of *On the nature of man* (*Nat. hom.* II, CMG, I 1, 3, pp. 192, 15–196, 5) but ascribes it to Polybus (who in the biographical tradition is Hippocrates' son-in-law and pupil). In general I do not approach the problem of the traces of Hippocratic treatises in Aristotle: for a summary see Kudlien [1989] and most recently on the issue Oser-Grote [2004].

in PBritLibr inv. 137, the so called Anonymus Londiniensis.²⁹ Upon its first appearance the Hippocrates of the Anonymus, clearly based on the treatise *On Breaths*, ill accorded with the image that had taken shape in the course of nineteenth-century scholarship. I will not go into the history of the question in detail; suffice it to note that according to the doxography, both *On breaths* and *Aphorisms* were regarded in the Peripatos as belonging to the Hippocratic context.³⁰ That the treatise *On breaths*, a work bearing the hallmark of a decidedly rhetorical approach, was very well known (although its Hippocratic authorship cannot be demonstrated) emerges from the above cited fragment of Antiphanes' comedy *The physician* and also from a Callimachean allusion identified by V. Langholf.³¹ Finally, Callimachus takes us to Alexandria, which is not only the turning point of the history of the reception of Hippocrates but also the place where a 'philological' interest in medical texts blossomed in its most concentrated form.

Two preliminary problems must at least be raised: 1) from where and how did medical texts, whether connected to the figure of Hippocrates or not, arrive in Alexandria? 2) is it possible to identify a certain number of works, attributed to him in the most ancient period, which may have constituted the starting point of a *Corpus*?

An erudite culture with literary and dialectological interests had already developed on Cos in the 4th–3rd century, with Philitas of Cos—the author of the *Ἀτακτοὶ γλῶσσαι*³²—who was Ptolemy II's tutor and also the teacher of Zenodotus, the first chief librarian of the Museum. Therefore it is hardly a coincidence that the earliest writer to take an interest in the language of Hippocrates, dedicating a glossary to him, was precisely a grammarian, Xenocritus of Cos, probably a contemporary of Philitas.³³

29 The so-called Anonymus Londiniensis, first edited by H. Diels, *Anonymi Londinensis ex Aristotelis Iatricis Menoniis et alius medicis eclogae* (Berlin 1893) now re-edited by Manetti [2011a]. Even recently some scholars, following in the footsteps of Diels, still attribute the doxography preserved by the papyrus under the name of Aristotle to Menon, Aristotle's pupil (Žhmud [2006] 126 and n. 33, 128, 144–145), on the basis of a passage of Galen (*In Hipp. Nat. hom.*, CMG V 9.1, pp. 15, 25–16, 3). My view remains skeptical, not on the Aristotelian historiographical project and on medicine being a part of it (Žhmud [2003] 109–126), but on the possibility of demonstrating Menon's historical existence: see Manetti [1986]. But the question is not relevant here. For the substantial connection of the doxography to the early Peripatos, see Manetti [1999a].

30 Manetti [1999a] in particular 103–109.

31 Langholf [1986].

32 Fraser [1972] 343–44, Montana § 2.1 in this volume.

33 Erot. prooem. p. 4, 24 Nachmanson: see Fuhrmann [1983] 1533.

Furthermore, Praxagoras of Cos was the teacher of Herophilus, who later became the most important physician in 3rd century Alexandria. The links between Cos and Alexandria, and in particular with the Ptolemies, were close from the very beginning, and testify to a genuinely high regard of the royal family for the Coan physicians, such as Kephisophon, a physician who lived at the court of Alexandria under Ptolemy III, and who was the son of the physician Philippus, the latter having himself lived in Alexandria and the dedicatee of an epigram by Callimachus.³⁴ During the 4th century BC, in concomitance with the increasing prestige of the Asclepiads, Hippocrates' family,³⁵ Cos had probably seen the rise of an interest in the biography of the most famous physician of Cos and certainly also in the writings associated with him. The apparent mention of archives containing medical texts, testified by the late Hippocratic biographies, should certainly be approached with caution, but should not be dismissed out of hand.³⁶ As early as the 3rd century BC, however, the malicious interpretation given by Andreas—a direct pupil of Herophilus—concerning the reason why Hippocrates had left Cos presupposes the existence both of a well developed biography and of libraries and archives. It is not inconceivable that Andreas was expressing a hostile reaction to 'patriotic' versions of the Hippocratic biography that had already filtered through from Cos.³⁷ Nothing can be demonstrated with any certainty, but it seems reasonable not to rule out the possibility that a group of texts on medicine had reached the Alexandrian library from none other than Cos itself³⁸ (*e.g.* brought by physicians such

-
- 34 *Anth. Pal.* XII 150: see also Marasco [1996] 450–451. On the decree of Cos for Kephisophon, see Samama [2003] n. 132, 240–243. In the 3rd and 2nd century the island of Cos was an 'exporter' of physicians towards other cities, which issued honorary decrees for them: these decrees stated they had behaved in a manner that was worthy (*ἀξιῶς*) of the homeland (see Samama [2003] 225–55, 266–68, nn. 56, 126, 136): a confirmation of the prestige enjoyed by the local medical tradition.
- 35 A symptom of this prestige, which continued the biographic tradition of the relations of Hippocrates the Great with Perdiccas (see *infra*), can also be seen in the presence of a Hippocrates (IV) of Cos as the physician of Roxane (the widow of Alexander the Great); this physician was murdered upon the instigation of Cassandra: *Suidas s.v.* Ἱπποκράτης τέταρτος (η 567) and Jouanna [1992] 69–71.
- 36 Soranus, *Vit. Hipp.* 4 (CMG IV p. 175, 9 ff.).
- 37 They are similar to those represented, for ex., in the pseudohippocratic treatise *Presbeutikos* 7, in which Hippocrates' journeys are depicted in a eulogistic manner, confirming the renown and philanthropy of Hippocrates. An ancient genealogical tradition that linked the *Asclepiadae* of Cos to Podalirius is testified as early as Theopompus (*FGrHist* 115 F103, 14), in the 4th century BC.
- 38 Fraser [1972] 346 admits that there may be some elements of truth in the hypothesis that the *Corpus* was perhaps the core of a library of a physician of Cos.

as Herophilus, who had received his training on Cos, or purchased by the Ptolemies).

On the other hand, the debt the entire cultural project of the Ptolemies owed to the school of Aristoteles³⁹ is well known, and the Ptolemies are said to have bought Aristotle's library. In actual fact, there are two versions of this story: one by Athenaeus, according to whom the library passed into the hands of Neleus of Skepsis, who is then claimed to have sold it to Ptolemy II, the other being that of Strabo and Plutarch, which depicts a much more adventurous story. In the latter version, Aristotle's library, having passed into the hands of Theophrastus, is then said to have been received by Neleus and his heirs, who purportedly kept it in dreadful conditions, until it was eventually bought by Apellicon of Athens (1st c. BC), from whom it was seized by Sulla, during the era of the occupation of Athens. Sulla is said to have transported it to Rome and to have spread knowledge on its contents, thereby giving rise to a revival of studies on the works of Aristotle.⁴⁰ One of the critical points of the two versions certainly lies in the ambiguity of the concept "Aristotle's library", which fails to distinguish between books *possessed* by Aristotle and those *written* by Aristotle (including the notes forming part of his school materials or his personal notes).⁴¹ It has been suggested that the two versions could perhaps be reconciled by drawing a distinction based on these two major categories, thus separating the works pertaining to various different doctrines that Aristotle had gathered together in his school, which Neleus might perhaps have sold straightaway, from the works composed by Aristotle himself, which, according to this conjecture, Neleus and his family retained for a considerable length of time.⁴² But regardless of which of the two sources is held to be more credible, given the Ptolemies' links with the figures who were active in the early Peripatos and the indisputable knowledge of the Aristotelian texts in the Museum, the concept of the purchase of a stock of books is highly plausible, and it may have represented one of the ways in which medical texts reached Alexandria, since it is quite clear that works of a medical nature were indeed present in the school.⁴³

39 Montana § 2.2 and Lapini § 2.1 in this volume; Irigoien [1994] 50–53.

40 Ath. 1.3a–b; Strab. XIII 1.54 C609, Plut. *Vit. Sull.* 26.1–2.

41 See Blum [1991] 53; cf. also Montana § 2.2 and Lapini § 2.5 in this volume.

42 For a sketch of the different positions, see Blum [1991] 57–58; for the conciliatory interpretation, Irigoien [1994] 52–53.

43 Skepticism regarding the disappearance of the Aristotelian works has been expressed by Barnes [1997] in particular 12–16, where he underlines the attested knowledge of Aristotelian texts at Alexandria; a critic of Strabo's version in Lindsay [1997] 290–98.

There is no reason to postdate the arrival of works of a technical nature in the Museum merely on the grounds that they were not included in Callimachus' *Pinakes*.⁴⁴ Although available information on Callimachus' *Pinakes* is incomplete, nothing rules out the possible presence of physicians among the writers belonging to the individual branches of *paideia* to which the title of his work refers.⁴⁵ In any case, Galen gives us evidence on the existence of *Pinakes* that also involve Hippocrates. Thus in the comment on the passage of *On Joints*, where Hippocrates reminds the readers of a work of his, entitled *περὶ ἀδένων οὐλομελῆς*, Galen points out that the work had not survived and that the work with the same title that was currently in circulation was a modern falsification. Galen adduces two pieces of evidence to prove his case: the earlier physicians did not cite it, but "those who composed the *Pinakes*" did not know it either.⁴⁶ The lack of interest in medical texts during the very early period of the Museum can to some extent be attributed to the obvious hierarchy of literary authors, but it is also far less real than may be imagined. The insertion of medical texts into the *Pinakes* naturally also involved the beginning of an *Echtheitskritik*, although the traces of this that have come down to us are from a far later date.

Galen, the main repository of our knowledge of Alexandrian medical history, gives us some details of the cultural strategy of the Ptolemies; and in the

Blum [1991] 61–64 argues that the Ptolemies did indeed buy Neleus' library, and this position is then followed by Nagy [1998] 205–206.

- 44 Irigoin [1994] 53: "Apparemment, ces traités ne se trouvaient pas au Musée lorsque Callimaque établit ses *Pinakes*, mais il est probable que des copies en ont été acquises plus tard".
- 45 Wendel [1949a] 71–73; Blum [1991] 151. Pfeiffer [1949] 344 (fr. 429), attributes the mention of Eudoxus of Cnidos to his tutor Philistion of Locri, in the class of physicians. Wellmann [1929] 17, goes so far as to suggest that the edition of Hippocrates by Bacchius of Tanagra was based on the list provided by the *Pinakes* of Callimachus, but there is no solid evidence for this.
- 46 οἱ τοὺς πίνακας ποιήσαντες, see Gal. *In Hipp. Art.* XVIII A 379, 6–14 K.: dating these catalogues is difficult, but Galen's formulation is analogous to that used by Dionysius of Halicarnassus for the lists of rhetorical authors in a passage of *Ep. Amm.* 4 (= fr. 432 Pfeiffer), οἱ τοὺς ῥητορικοὺς πίνακας συντάξαντες, which, although anonymous, is nevertheless identified as a Callimachean citation, connected with that of fr. 447. Blum [1991] 150, takes it to be a broader citation, which includes Callimachus and the lists drawn up by the Pergamon grammarians. Certainly, it cannot be ruled out that the "Hippocratic" works may have entered the lists somewhat later, for example in the work by Aristophanes of Byzantium, devoted to correcting and completing Callimachus' *Pinakes* (fr. 368–369 Slater). On the other hand, Bacchius' Hippocratic Lexicon (see *infra*) does suggest the possibility of an early presence of Hippocratic works, already in the Callimachean work.

commentary on *Epidemics* III he tells a famous tale, deriving it from Zeuxis' (see *infra*) commentary on the work:

... and (they say) the Ptolemy who was then king of Egypt became so greedy for books that he ordered that the books of everyone who arrived by ship be brought to him. After he had them copied on new paper he gave the copies to the owners of the books that had been brought to him on the debarkation, and deposited the confiscated books in the library with the inscription "Of those from the ships" ... The king's agents inscribed the names of all the travellers on the books that were put in storage, because they did not take the books straight to the library, but stored them in houses in heaps.⁴⁷

This story, if it is plausible, and taken together with considerations on the Ptolemies' relations with Cos and Aristotle's library, underlines the breadth and variety of sources but also the rather casual way in which the library of the Museum may have happened to be enriched by a new supply of copies—or, more specifically, how some medical texts may have found their way to Alexandria.⁴⁸ It should also be borne in mind that the events related in the passage from Galen, which can be dated to the reign of Ptolemy III Euergetes (246–221 BC), occurred more or less contemporaneously with the classificatory activity undertaken by Callimachus, whose knowledge of a Hippocratic work and familiarity with physicians who attended the court was already noted above.

Thus while it appears plausible to assume the early presence of a certain number of medical texts in Alexandria,⁴⁹ appearing under the name of Hippocrates, or of other authors or anonymous, the presence of a *Corpus* cannot be demonstrated, even in the immaterial sense of a set of books attributed

47 Gal. *In Hipp. Epid. III*, CMG V 10.2,1 p. 79, 8–15, 19–22. This procedure (namely, having a copy made of the procured texts and then giving the copies instead of the originals back to the owners) is linked to the immediately following story of asking Athens to lend the official copy of the three tragedians (p. 79, 23 ff.); cf. also Montana § 2.3 in this volume.

48 According to Smith [1979] 201 "the medical books were collected in haphazard fashion", though in my view this does not necessarily exclude the possibility that there may also have been a nucleus of books deriving from a library repository, whether of Cos or of some other origin: cf. Smith [1990] 9.

49 The opinion is not new, see Wellmann [1929] 16–21, Edelstein [1935] 1310–1312, Smith [1979] 199 ff., Nutton [1975] 3–15. But, far from imagining a collection that immediately gave rise to a 'canonical' Alexandrian edition, already coinciding with that of Erotianus, I believe there are likely to have been groups of works of diverse origin.

to the same author, until the moment when Bacchius of Tanagra (275–200 BC), a pupil of Herophilus, decided to compose a Hippocratic lexicon (Hippocrates' *Lexeis*). As pointed out by von Staden, the work drawn up by Bacchius⁵⁰ is the oldest example of a lexicon dedicated to a specific author.⁵¹ The extant fragments allow identification of about 18 works, considered to be clearly Hippocratic: *Prognostic*, *On the sacred disease*, *On joints*, *Instruments of reduction*, *Epidemics* I, II, III, V and VI, *Prorrhetic* I, *In the surgery*, *On wounds in the head*, *On fractures*, *Regimen in acute diseases*, *On the nature of bones*, *On places in humans*, *On diseases* I, *On the use of liquids*, *Aphorisms*.⁵² Von Staden's remark that the so-called 'Coan' treatises dominating in this group confirm the lively contact between Herophilus' school, the Ptolemaic court and Cos is plausible, although one should not presume the distinction of any particular school in the term 'Coan'.⁵³ This list should be extended by addition of *On the nature of child*, if credit can be given to the *Vita Bruxellensis* of Hippocrates, according to which Bacchius reported that Hippocrates ordered *On the nature of child* after the *Aphorisms*.⁵⁴ Bacchius possibly also suggested that *In the surgery* should be read before all of the other works by Hippocrates.⁵⁵ Thus Bacchius, writing roughly in the middle of the 3rd century BC, presupposes both an already large list of texts (formed of *at least* 19 works) attributed to Hippocrates and a discussion concerning the proper order in which they were to be read.

While the number and titles of the progressively growing collection of Hippocrates' works are known from the lists in Erotianus' *Lexicon* (1st c. AD) and other sources,⁵⁶ a material order of the collection, that is to say, a sequence of writings, current at the time and concretely attested in ancient rolls, cannot be identified. Traces that could provide evidence of an accepted order in

50 With regard to a glossographic interest shown by Xenocritus of Cos, see *infra* § 3.

51 Von Staden [1992] 549; cf. also Dickey § 3.1 in this volume.

52 Von Staden [1989] 487 ff. The glosses concerning *Aphorisms* and *Epidemics* III may also derive from Bacchius' commentary on, or edition of, these works: see *infra* § 3.1.

53 Von Staden [1989] 487 and note 15 on the schools of Cos and Cnidos.

54 See Schöne [1903] 58–59 = fr. 77 von Staden, Pinault [1992]. Notice, as pointed out by Roselli [2000], that this order is consistent with the actual order of the glosses in Erotianus' *Lexicon* of Hippocrates (see *infra*).

55 Gal. *In Hipp. Off.* xviiiB 632, 5–8 K. = fr. 8 von Staden.

56 Ps.-Soranus, *Vita Hippocratis*, *Vita Bruxellensis*, *Tzetzes*, *Chiliades*: for the history of the problem, see Edelstein [1935] 1307–1317, Roselli [2000]; for the texts, see Schöne [1903] and Pinault [1992] 6–33 and 125–134.

the papyri are rare and late.⁵⁷ Only PAnt I 28,⁵⁸ a parchment codex of the 5th century AD, presents the sequence *Prognostic—Aphorisms*, and PAnt 184,⁵⁹ a papyrus codex of the 6th century AD, *On superfetation—On women's diseases*. In both cases the sequence is not attested in the medieval manuscript tradition. But the medieval manuscripts do preserve traces of ancient sequences (dating from the phase when the Hippocratic texts were still transmitted on papyrus rolls) in the so called *reclamantes* (catch-words), short passages that were copied at the end of some works (without any separative marks) and coincided with the *incipit* of the first text in the next roll.⁶⁰ In general they seem to bear witness to different sequences—which are also in contradiction with one another—as compared to the order that has actually come down to us through the manuscripts themselves. Thus the individual Hippocratic texts seem to have been gathered together and then have undergone a process of separation, followed by redistribution in different sequences over time, from an ancient phase up to the 5th–6th century AD.⁶¹ What interests us here is the one and only case that can with certainty be dated earlier than Galen (2nd century AD): at the end of *On the nature of man*, all the medieval mss. have the text of *On diseases* II 12.⁶² Furthermore, the ancient Latin translation (5th–6th c. AD), but above all Galen himself, in his commentary on the treatise, both contain this passage. In fact, Galen considers it to be an integral part of the work—even though open to doubt⁶³—yet without realising its nature. Now, Jouanna has demonstrated that the treatise *On diseases* II, as we know it in its present form, took shape through the juxtaposition of two distinct treatises, one going from chap. 1 to chap. 11 (*Morb.* II B) and the other going from chap. 12 to the end (*Morb.* II A), which is older than the previous part. Therefore the passage preserved in the medieval mss. dates back to a very ancient phase, in which the treatise *Morb.* II A was still an independent work and was located at the beginning of a roll that followed the one ending with *On the nature of man*,

57 The fragment of an Oxyrhynchus roll testifying to the sequence *Alim. > Liqu.*, currently in press, edited by David Leith (32 4B.3/K(4–6)b), is thought to date from the 2nd century AD.

58 *CPF* [2008] 77–82, 174–176.

59 *CPF* [2008] 113–125, 130–133.

60 On the subsequent material, see Jouanna [1977].

61 For the late origin (10th century) of a large collection of Hippocratic treatises from smaller groups of works, see Irigoin [1975]. Edelstein [1935] 131i, explicitly says “muss es schon im Hellenismus verschiedene Corpora Hippocratica gegeben haben”.

62 *Nat. hom.* 23, CMG I 1, 3, p. 220, 1–7 = *Morb.* II A 1 (12).

63 *In Hipp. Nat. hom.*, CMG V 9.1, p. 113, 1–18: Galen generally ascribes the doubt to the authenticity of this passage to some writers, who, however, do not recognize the origin of the text at all.

before the chapters of *Morb.* II B were joined with the above-stated treatise. This merger took place at a time long before Galen, who had no knowledge of what had happened. It probably came about because at some point, during a copying procedure, *Morb.* II B must have come to occupy a position at the end of a roll, while the next roll began with *Morb.* II A, and the homogeneousness of their content resulted in their merger into a single work. This phenomenon also highlights two aspects of the tradition, both of which are of major importance in the history of Hippocratic exegesis, influencing the structure of “Hippocratic” works, even prior to their arrival in Alexandria: a) the possibility of the merger and/or separation of blocks of text,⁶⁴ b) the probable absence of specific titles, as well as of author, in groups of treatises or, in contrast, the great variability of the titles.⁶⁵ However, while mergers and separations may have been partly due to mere chance, as soon as reflection on the texts attributed to ‘Hippocrates’ began to play a more significant role it certainly became vital to impose some ordering and cataloguing system (in the *Pinakes*?), as a means of dealing with texts that had similar content or were already known by similar titles, or had no title at all.⁶⁶ We have only very late traces of debate on the composition of certain works or on the variables influencing the titles, but it should be kept in mind that from the very beginning of their reception in Alexandria such problems must have been a feature of the medical texts that became incorporated in the *Corpus Hippocraticum*.⁶⁷

64 For instance, one needs only mention the insertion, within the block of Hippocratic gynaecological treatises *On women's diseases* I–II, of a piece on women's diseases, partially conserved, by the so-called Author C (who coincides with the author of *On generation—On the nature of child—On diseases IV*), while *On generation* and *On the nature of child*, in turn, constitute what was originally a unitary work which became divided in the medieval tradition): cf. Grensemann [1975] and [1982], Lonie [1981] 43–53. In general cf., again, Langholf [2004].

65 Jouanna [1997] 60–73.

66 On the activity of reordering or attribution of new titles in Callimachus' *Pinakes*, see Blum [1991] 156. As an example of the variety of titles, see *Regimen in acute diseases*, as in the testimony of Galen and Athenaeus (Anastassiou – Irmer [1997] I, 13; [2001] II 1, 1) or those of *Airs waters places* (*ibidem* I, 23).

67 The *Vita Hippocratis secundum Soranum* 13 (CMG IV, p. 177) briefly mentions the problems relating to the debate on the authenticity of the Hippocratic works; in Galen one finds numerous mentions of the criteria he adopted in analysis of the problem, and it is likely that he derived them from the previous exegetic tradition: see for ex. *In Hipp. Art.* quoted *supra* n. 46, and *In Hipp. Nat. Hom.* CMG V 9.1, pp. 55, 57, where Galen attributes to the Ptolemaic voracity for books the start of faking literary works. On the authenticity criteria, see for ex. Manetti – Roselli [1994] 1567–1568.

In conclusion, during the Hellenistic phase no real *Corpus* can be identified, although some works seem to have enjoyed greater renown and thus were constantly at the forefront of attention.⁶⁸ Therefore at this stage the collection of ‘Hippocratic’ texts can be seen as a fluid assemblage in which authorship was still a ‘broad’ concept. Only Erotianus (1st century AD) offers the first list of works, based selectively on those regarded at that time as authentic, and presented according to an ideal type of structuring.⁶⁹ Further lists of Hippocratic works are found only in late sources, such as those of the *Vita Bruxellensis* of Hippocrates and of *Suidas’* Hippocrates in which *Oath* (already present in Erotianus) appears in first place, followed by *Prognostic* and *Aphorisms* and by the reference to the “*much mentioned and much admired collection of sixty works* (ἡ πολυθρύλλητος καὶ πολυθαύμαστος ἐξηκοντάβιβλος)”, which alludes to a collection of writings that aspired to be complete and which was quite close to the dimensions found in the two most important medieval manuscripts of Hippocrates. Apart from these sources, judgment has to be based on the chance remnants of debates on authenticity and titles and on citations of works in the authors of medical texts of a later date, among whom, of course, Galen plays an outstanding role.

3 The Hellenistic Period up to the 1st Century BC

The history of the Museum and its library has already been outlined in this volume (see the contribution by F. Montana). As far as medicine is concerned, it must be underlined, as I suggested earlier, that knowledge of the medical (perhaps specifically ‘Hippocratic’) tradition was present at the court of the Ptolemies, and that it enjoyed considerable prestige. On the other hand, there is no evidence indicating that the first and prominent physician in Alexandria in the 3rd century BC, Herophilus of Calchedon, was ever a member of the Museum or in general that any medical research was ever conducted at the Museum.⁷⁰ But the fervent intellectual climate of the new capital stim-

68 The citations by Demetrius of Laconia (150–75 BC) of three Hippocratic works, *Epidemics* VI, *Prognostic* and *Prorrhetic* (the last explicitly attributed to Hippocrates), merely confirm that these treatises were stably associated with Hippocrates (even outside of Alexandria: it appears that Demetrius lived partly in Miletus and partly in Athens): they were already present in the group of Bacchius of Tanagra, cf. Roselli [1988].

69 See *infra* § 4.1.1.

70 A certain Chrysermus, in an inscription of the 2nd century BC from Delos, is described as “Superintendent of physicians, Administrator of the Museum”, but he was probably not a

ulated and may well have offered at least an indirect patronage of the arts.⁷¹ Herophilus (320–250 BC), probably educated in Cos by Praxagoras, exploited the possibilities of a ‘frontier’ environment, gained exceptional progress in anatomical knowledge and founded a new school.⁷² The *milieu* in which such a vast community of poets, intellectuals and scientists were active proved favourable to a fertile exchange of ideas among disciplines: it is by no means surprising that the poet Callimachus alluded to the anatomy of the eye discovered by Herophilus, nor is there anything remarkable in the fact that Callimachus was aware of and referred to the Hippocratic treatise *On breaths*,⁷³ but it is perhaps worth emphasizing Herophilus’ knowledge of dialectics (as emerges from the anecdote of his dialogue with Diodorus Cronus),⁷⁴ or his application of geometric theorems to medicine.⁷⁵ It was no less than a genuine osmosis among disciplines, which was made possible if not by the Museum itself or by the royal patronage, certainly by the common presence of so many artists and scientists within the restricted circles of the Greek élite of Alexandria, and this aspect must be borne in mind when evaluating the first stirrings of a ‘philology’ applied to medical texts. One should not underestimate the detail provided by Erotianus (1st century AD) in his *Hippocratic Lexicon*, where he states that the first to take an interest in glosses of Hippocrates was a *grammarian*, who in other respects was quite unknown, Xenocritus of Cos. His dating is uncertain,

physician and, most of all, was not the Herophilean Chrysermus (1st century BC), see von Staden [1989] 523–528.

- 71 Apart from the information that the Ptolemies permitted Herophilus to dissect human cadavers or even live condemned prisoners (on which see von Staden [1989] 139–153), it is worth noting that Andreas, one of Herophilus’ first pupils, was present at court as the personal physician of Ptolemy IV Philopator; note also the association of Dioscurides Phacas with Ptolemy XII Auletes and Ptolemy XIII (von Staden [1989] 519–522). For the connection of Apollonius of Citium with Ptolemy XII Auletes, see Fraser [1972] I 312; von Staden [1989] 455–456.
- 72 A tradition of which we have evidence from Polybius (XII 25d 2–6 = Herophilus T56 von Staden) believed Callimachus (275–205 BC) to have been a co-founder of the ‘rationalist’ school, and speaks of Herophileans and Callimacheans as parallel groupings forming part of the same school. He was probably a contemporary of Bacchius of Tanagra and Philinus of Cos, that is, the first generation pupils.
- 73 Callimachus *Hymn. Artem.* 53, cp. Herophilus T87–T89 von Staden: Oppermann [1925]. For the Hippocratic *On breaths*, see *supra* n. 12 and Langholf [1986] in particular 5–17. For scientific echoes in Callimachus, see also Most [1981] and White [1986].
- 74 T15 von Staden.
- 75 See T236 von Staden and Manetti [2011b]: von Staden [1998a] has already underlined the Herophilean Andreas’ exploitation of the new mechanical technology in the construction of an instrument for reducing dislocations of larger joints.

but what is striking is that Xenocritus shared a common homeland and interests with Philitas and the latter's *Ataktoi Glossai*. Once again, the link between Cos and the development of medicine in Alexandria seems significant. The interest in the Hippocratic texts shown by grammarians, *i.e.* an interest arising from the general point of view of language, would subsequently continue even beyond Alexandria, and would influence the early stages of Hippocratic lexicography, which seems to have flourished in an atmosphere shared with Alexandrian philology.⁷⁶

In Alexandria two medical schools opposed each other throughout the Hellenistic period: the Herophilean school, defined as 'rational' or 'dogmatic', and the Empirical school.⁷⁷ Both derive historically from Herophilus. As demonstrated by von Staden, Herophilus' pupils never took up a staunchly dogmatic position aligned with the doctrines of their master: rather, they maintained a considerable sphere of freedom of research and criticism,⁷⁸ so much so that it was in fact a first generation pupil of Herophilus, Philinus of Cos, who made a break with the original group and founded another school, which he called Empirical. This new school, polemicising with the doctrines of the master, proclaimed that all speculation on causes and all anatomical research was pointless. The rivalry between these two schools exerted a certain effect on their history, at least with regard to the Herophileans, who soon turned their backs on anatomical research in favour of greater attention to pharmacology, a theme certainly cherished by the Empiricists. However, the Empiricists, supporters of an empiricism that rejected all rational hypotheses, developed a conception of experience that was historicized in the concept of *ἱστορία*, which made it possible to accept as valid the texts of earlier physicians, with the argument that their writings bore witness to observation of real data of the past.⁷⁹ This accounts for the Empiricists' interest in reading and working

76 See von Staden [1989] 454 and *infra* § 3.1. On the osmosis among disciplines, see also, in this volume, Montana §2.4, who cites a work on wounds in the Homeric poems, composed by Aristarchus' pupil Ptolemy Epithetes. On historians-philologists and the interpenetration of these interests within the same person, see also Montana [2009c] 175–181.

77 Here I will leave aside both Erasistratus, whose activity in Alexandria rather than Antioch is still the object of debate, and also his followers, who, however, do not seem to have played a role in relation to Hippocrates: see von Staden [1989] 46–48, 142 n. 7 with the bibliography.

78 See in particular von Staden [1989] 445–462.

79 For the three ways in which experience could be gathered (*teresis, metabasis tou homoioi, historia*), see the brief sketch in Vallance [2000] 106–107. The reference text is of course Deichgräber [1930].

on the Hippocratic texts: from the very beginning they were eager to dip into this veritable treasure chest of medical ‘experience’ of the past. For instance, Philinus is said to have written a *Glossary* of Hippocrates, but he was equally quick to respond to an earlier work composed by a former fellow student of his, who had subsequently become his rival, namely Bacchius of Tanagra, of Herophilean persuasion (and prior to Bacchius another pupil of Herophilus, Callimachus, had also entered the fray). Thus within a very short space of time three physicians who had received their training in the same environment, but had subsequently parted ways on account of divergent professional choices, began to test their mettle by undertaking the same kind of work on Hippocratic texts. The Empiricists certainly used Hippocrates to build up their image and they emphasized the Empirical character of these studies, but ideological interest was not, it seems, the prime mover underlying the birth of the study of Hippocratic texts, since by right that title belongs to the Herophilean school, which did not claim to have any descentance from Hippocrates, despite remaining in some respects within its frame of reference.⁸⁰ The Herophilean school placed great emphasis on high literacy, viewed as one of the benefits of the shared cultural climate, which brought to the fore the ancient tradition of every discipline. And medicine, in particular, had long been based on the transmission of a written tradition, as noted above.

One of the common-place remarks, in this context, is that Bacchius, in writing his *Hippocrates’ Lexeis*, derived some of the material from the *Lexeis* composed by Aristophanes of Byzantium.⁸¹ Given that the two scholars were contemporaries and belonged to environments that were certainly close to each other, the assumption is in itself quite plausible, though it is based only on the preface to Galen’s *Glossary*. Galen cites Bacchius in the polemic with Dioscorides’ *Lexicon*, which had also provided explanations for common and well known words: 1) Galen argues that, in contrast with Dioscorides, Bacchius had concerned himself only with ‘glosses’, in the specific sense of difficult words, yet the very title of Bacchius’ work, *Lexeis*, as well as the reconstructible fragments, clearly show that this is not accurate; 2) additionally, Galen asserts that the grammarian “Aristarchus” (referred to in this manner in the manuscripts), “as they say”, had collected a large quantity of examples for Bacchius. Klein’s conjecture “Aristophanes”, universally accepted, corrects the obvious anachronism in Galen’s text, but as suggested by Perilli,⁸² it may not

80 Von Staden [1989] 445 ff.

81 Frr. 337–347 Slater, who tends to attribute the material mainly to the Ἀττικαὶ Λέξεις, but it cannot be ruled out that Bacchius may also have drawn on other parts.

82 Written communication: Perilli is working on the edition of Galen’s *Glossary* for CMG.

be a defect due to an error in transmission but rather a mistake made by Galen himself, who was quoting a tradition of unspecified origin and may have mixed up the two philologists, awarding priority to the more famous Aristarchus.⁸³ Erotianus, who most certainly drew on Bacchius' *Lexeis*,⁸⁴ merely states that Bacchius used many examples taken from the poets. While this scenario is plausible—Aristophanes and Bacchius were contemporaries and an interest in medical texts had already been cultivated by the grammarian Xenocritus of Cos—I would argue that it is not necessary for an explanation of the work of Bacchius.⁸⁵ It should be added that in the 3rd century, beyond the confines of Alexandria, there was also another erudite, not a physician, who seems to have taken an interest in the language of Hippocrates, as related by Erotianus, our richest source on the history of glossaries:

No grammarian who has ever achieved notable prestige neglected this man (Hippocrates): consider for example Euphorion, who read him and undertook the task of explaining all his wordings, in six books, with regard to which Aristocles and Aristetas, both from Rhodes, have written comments. And additionally Aristarchus and after all these Antigonos and Didymus, Alexandrians.⁸⁶

-
- 83 Besides, the only other time that Galen cites the philologist Aristarchus (*In Hipp. Nat. hom.* CMG V 9,1, p. 58, 7–9), is for the purpose of attributing to him the use of the *obelos* as a sign of expunction in his Homeric text (which would be imitated by Dioscorides in his edition of Hippocrates), although this sign is by no means a characteristic of Aristarchus alone.
- 84 Von Staden [1992] 553–559.
- 85 See also the accusation launched against him by Apollonius of Citium, who argued that Bacchius was more interested in the linguistic elements than in the medical content (*infra*, 1151).
- 86 Erotian. p. 5, 14–19 N: τῶν δὲ γραμματικῶν οὐκ ἔστιν ὅστις ἐλλόγιμος φανεῖς παρήλθε τὸν ἄνδρα· καὶ γὰρ ὁ ἀναλεξάμενος (codd., ἀναδεξάμενος Meineke edd.) αὐτὸν Εὐφορίων πᾶσαν ἐσπούδασε λέξιν ἐξηγήσασθαι διὰ βιβλίων ζ, περὶ ὧν γεγράφασιν Ἀριστοκλήης καὶ Ἀριστεῆας οἱ Ῥόδιοι· ἔτι δὲ καὶ Ἀριστάρχος καὶ μετὰ πάντας Ἀντίγονος καὶ Δίδυμος οἱ Ἀλεξανδρεῖς. In the text a transposition is performed: Schmidt [1854] 24 moved τῶν δὲ—ἄνδρα, which in the codices is transcribed after βιβλίων ζ, to the start of the sentence. The correction ἀναδεξάμενος introduced by Meineke, generally accepted, presupposes a previous lacuna which allows the possibility that αὐτὸν may refer to some character other than Hippocrates, conceivably a glossographer whom Euphorion may have used as a source (Klein [1865] 32,8). In actual fact the text of the mss. can be accepted, admitting that Euphorion may well have 'read' (on the meaning, cf. Callim. *Anth. Pal.* vi11 471, 4) Hippocrates: the defense of the transmitted text is already in Schmidt [1854] *ibidem* (but afterwards he changed his mind, see Klein's apparatus criticus *ad loc.*), but it is not necessary to agree with him in taking the verb ἀναλεξάμενος in the technical sense of *praelectio*.

Since Euphorion⁸⁷ had been active in Athens, before the time when he arrived in Antioch and became chief librarian of the royal library, it has to be presumed that knowledge of “Hippocratic” texts (whatever they were) had continued to flourish in Athens in parallel with the development in Alexandria.⁸⁸ Erotianus derives this piece of information from later lexicographers, such as Aristetas and Aristocles,⁸⁹ and no conclusion can be drawn concerning the literary form in which Euphorion expressed his interest. Erotianus’ list (which ends with Didymus of Alexandria) also includes Aristarchus who is not known from any other source to have been interested in Hippocrates: it has been suggested that “Aristarchus” is a mistake and that the reading should have been “Aristophanes”,⁹⁰ as in the suspected error in Galen’s *Glossary*, and indeed this is the assumption generally made. But Erotianus’ text, unlike Galen, does not link Aristarchus to Bacchius and in its concise (epitomized?) formulation it does not specify the concrete nature of the exegesis of Aristarchus. Although a cautionary approach is essential, it should be recalled that even if no ancient source ever cited the circumstance,⁹¹ a papyrus has revealed that Aristarchus wrote a commentary on Herodotus, that is to say, on an Ionian text, just as the Hippocratic texts were Ionian. However, nothing is definable as regards the form in which Aristarchus may have devoted attention to Hippocrates.⁹²

Erotianus did undoubtedly emphasize the extent to which grammarians contributed to study of the language of Hippocrates, because he was interested in highlighting Hippocrates’ nature as an ‘ancient writer’, on a par with

87 Fr. 175–176 in Gronigen [1977] 228–229: according to van Groningen Euphorion may have corrected, summarised or criticised the lexicon of Bacchius, his contemporary, and this activity could be seen as a symptom of the rivalry between Antioch and Alexandria. However, this does not seem credible, considering also that Euphorion probably became the librarian at Antioch at an advanced age. Furthermore the hypothesis seems to follow the conventional vision of the rivalry among libraries, which is not supported by other evidence. van Gronigen points out that in fr. 157 Euphorion can be seen to use technical medical language.

88 Study of the language of Hippocrates other than in Alexandria can also be traced in the *Glosses* of Nicander (2nd century BC), whom some believe to have had close ties to the Pergamon court, and additionally in Demetrius Lacon (2nd–1st century BC), cf. *infra* in this paragraph.

89 Corradi [2007]; Pagani [2011²].

90 Cohn [1895a] 873 and 1002; von Staden [1992] 566–567.

91 Pfeiffer [1968] 224–225; Montana § 2.4 and Dickey § 2 in this volume.

92 Klein [1865] 32,¹¹ assumed there was a lacuna after Aristarchus and argued that Aristarchus did not write a *Lexicon*, but a more general treatment (p. xxxvii): the conjecture “Aristophanes” offered a widely accepted reasonable solution: cf. Strecker [1891] 263. See also Ihm [2002a] 68–69 (with bibliography).

others such as Democritus, Thucydides and Herodotus.⁹³ But even so, the picture that emerges appears to me to confirm that from the very start the language of Hippocrates had a place in the studies of the Alexandrian grammarians. Indeed, it was the object of attention continuously throughout the Hellenistic period, both in medical and grammatical circles⁹⁴ and also among philosophers, if one is to believe the identification of the Demetrius cited by Erotianus, in the preface⁹⁵ and in the *Lexicon*,⁹⁶ with the Epicurean Demetrius Laco. It may be somewhat rash to attribute a *Glossary* to Demetrius, but it is by now widely known that he had a good knowledge of the Hippocratic texts.⁹⁷

Conceivably, the awareness that medical texts acted as a form of storehouse of special or dialectal expressions may have been one of the reasons for the interest displayed by philologists: Philitas, for example, had glossed dialect words and Zenodotus had likewise concerned himself with *Ethnikai Lexeis*,⁹⁸ as did Callimachus and Aristophanes subsequently.⁹⁹ Interest in dialect phenomena is a natural by-product of the conception of 'gloss' formulated by Aristotle, 'word not in common use', which allows the possibility that one and the same word may be a 'gloss' in a given author but a commonly used word in

93 See Manetti [1999b].

94 From the preface of Erotianus, in his history of the Hippocratic glossaries, one can then derive the names, in this order, of the grammarians Aristeas and Aristocles of Rhodes (5, 17–18 N.), Antigonus (5, 19; 73, 16 N.) and Didymus of Alexandria (5, 19 N.), all of whom can be dated to the period 1st century BC–1st century AD (on these see Ihm [2002a] 69, 82, with bibliography). Other grammarians are cited within the *Lexicon*, for lexicographic or erudite works not devoted to Hippocrates: Eratosthenes (3rd century BC), 94, 12 N. (= fr. 145 Strecker), perhaps cited by Callistratus (*ibidem* = *FGrHist* 348 F 2); Artemidorus (58, 11 N.); Diodorus, 51, 16 N. (Ihm [2002a] 82–83); Irenaeus (= Minucius Pacatus Irenaeus, 1st century AD) 116, 8 N.; Hipponax (perhaps = Hermonax), 103, 16 N.; Nicander (not only in the poems, but in the *Glosses*) 20, 2; 36, 16; 112, 7 N.; Polemarchus (58, 17 N.); Diagoras of Cyprus, perhaps a physician?, 71, 20 N. (Ihm [2002a] 81–82); Thoas of Ithaca, 4th c. BC (73, 13–15 N.), cited through the *Hypomnemata* of Aristotle (fr. 636 Rose, who conjectures 'Aristotle' for Ἀριστοφάνης of the mss., but cf. fr. 416 Slater, who doubts that it can be attributed to Aristophanes of Byzantium). See Gärtner [1974] 760.

95 Erotian. 5, 14 N.: Demetrius seems to be the butt of a polemical piece of writing by Lysimachus of Cos (see *infra*).

96 Gloss to *Prorrh.* 1 17 (47, 24 N.): Δ. ὁ Ἐπικούρειος.

97 Roselli [1990]; for the philological tools employed by Demetrius in defence of Epicurus' writings, see Lapini § 2.3, in this volume.

98 Nickau [1972a] 40–43. The *Ethnikai lexeis* are cited twice in Galen's *Glossary* (XIX 129, 3 and 8 K.). Wellmann [1931] attributes the citations to Bacchius' *Lexicon*.

99 A good synthesis in Pfeiffer [1968] 197 ff.; see also Montana § 2.4, in this volume.

another context.¹⁰⁰ Furthermore, the involvement of Hippocrates in the *Lexeis* can easily be comprehended if one takes into account that the ancient grammarians did not differentiate between literary and non-literary dialects.¹⁰¹ All the texts were regarded as the transcription of a language spoken at a given time and place; however, a word could be used by an author as a 'gloss' for specific stylistic purposes, drawn from a context extraneous to the author himself; hence the importance of a comparative study of the lexicon.

3.1 *Editions, Glosses and Lexicons*¹⁰²

Among Herophilus' (320–250 BC) works a discussion of Hippocratic treatises and themes is not at all surprising. The entire activity of Herophilus implies tradition and innovation, continuity and discontinuity with his Coan cultural roots. It is possible that he wrote a treatise against the Hippocratic *Prognostic*¹⁰³ even though he cannot be credited with any formal exegetical activity. His attempt at defining the boundaries between cognate concepts expressed by the Hippocratic terms *πρόγνωσις* and *πρόρρησις* is in accordance with his aim of founding a scientific language endowed with greater precision, but it ultimately remains in line with a tradition that dates back to Prodicus' studies on synonyms.¹⁰⁴ In short, Herophilus does not appear to show a genuinely lexicographic interest other than as a passing remark.¹⁰⁵

100 Montanari [2012a]. The case cited above in n. 94, of the grammarian Thoas, is held to show that Aristotle made use of the work on the Phrygian dialect of Thoas to explain *πικέριον*, a word attested, as far as we know, only in the gynaecological treatises of the *Corpus Hippocraticum* and in Aretaeus.

101 Cassio [1993b] 70–81.

102 The material is conventionally subdivided between 'editions and lexicons', 'hypomnemata and syngrammata', 'biography and doxography'. This subdivision has the aim of making it possible to give a single treatment of some clusters of problems that are linked to specific Hippocratic passages, which have over time become *loci classici* of debate, but with a warning that there will inevitably be many cross-references. For a general survey of the typology of philological writings, see Dubischar, in this volume.

103 Von Staden [1989] 74–75, while Smith [1979] 191–193, remains skeptical.

104 T262–265 von Staden.

105 T270 von Staden, with Cobet's correction *ὁ Ἡροφίλειος ἐποίησε Βακχείος*, attributes to Bacchius rather than to Herophilus (as in the mss.) the composition of a *Lexicon*. A similar correction by Cobet in T34 restores the attribution to Bacchius of a comment on *Aphorisms*. T 269 shows that Bacchius very likely endorsed an explanation of Herophilus that considered *ἀλύειν* and *πλανᾶσθαι* to be synonyms (once again a comparison among terms), but without direct relation to the Hippocratic text. As regards the word *νήπιος* of Hipp. *Epid.* VI 1.4 (fr. 267a and b von Staden), the role of Herophilus, adduced by Zeuxis

In Alexandrian philology, glossaries spring from the need to produce an *ekdosis* of the Homeric text; effectively, they represent preparatory and complementary work for the *ekdosis*. In medicine, at the current state of our sources, we have extensive information on glossaries and commentaries, but only one piece of information concerning an edition (*ekdosis*) of the Hippocratic treatise *Epidemics* III by Bacchius of Tanagra.¹⁰⁶ The subsequent editions mentioned in the sources, namely those of Artemidorus Capito and Dioscorides, date from the early decades of the 2nd century AD.¹⁰⁷ Naturally, it is highly probable that editions must have been made during the Hellenistic era—in other words, that ‘corrected’ texts were produced, but it is curious that no information in this regard has come down to us. This is probably due to the absence in the field of medicine of a particularly authoritative context comparable to the Museum. It was by virtue of the Museum that Zenodotus’ Homeric edition became a reference text for all his successors, a text that could not be disregarded. In contrast the Empiricists and Herophileans engaged in battle with each other about Hippocrates on a level playing field. The hypothesis that glossographic activity presupposes the existence of an already fixed and canonical edition, as argued by Wellman, is no longer tenable today.¹⁰⁸ However, the query as to what was concretely meant by the activity of making an edition of a medical text does quite naturally arise. With regard to the Homeric example, F. Montanari has demonstrated, along the lines of Pfeiffer,¹⁰⁹ “that making an *ekdosis* for an Alexandrian philologist, let’s say Zenodotus, did not consist in producing a new copy bearing the continuous text wanted by the grammarian, but in carrying out corrections on an already existing copy, chosen from those available and used as the basic text on which he would over time make changes and add annotations”. One may legitimately speculate that Bacchius (as perhaps was the case for others, unknown to us) followed a similar practice and that his working copy was made available to other scholars, and was still consultable in Alexandria by Apollonius Byblas (“the Bookworm”, dated 1st century BC), who cites this specific copy on the question of a passage

the Empiricist (*infra*) as a witness in his commentary *ad loc.*, by no means implies that Herophilus offered lexical reflections on Hippocrates’ text.

from *Epid.* III.¹¹⁰ More concrete indications can be drawn from a rapid overview of the papyrus documentation pertaining to Hippocrates. Unfortunately, this documentation dates mainly from the Roman era, but it can provide some examples of various redactional practices. Naturally, one finds first-hand and second-hand corrections, which were the accompaniment of the production of copies in any *scriptorium*,¹¹¹ whereas variants¹¹² or small marginal titles¹¹³ are more rarely encountered. In the more carefully produced exemplars there is evidence of reading signs and punctuation marks, such as *diplé*, *diplé obelismene*, *paragraphos*, *ektheseis* and blank spaces.¹¹⁴ In the most ancient exemplar to have survived, a fragment of a roll of *Epidemics* II (1st century BC), no marginal diacritic signs can be seen, on account of the lacunae, but it can be observed that the scribe constantly uses on-line spaces to divide text units, which in various cases do not correspond to the punctuation preserved in the medieval codexes.¹¹⁵ This text, despite its reduction to essentials, represents an *ekdosis*, because the segmentation (*i.e.* the syntactic interpretation) of composite and elliptical texts like *Epidemics* (in particular II and VI) or *Aphorisms* was one of the main critical problems: thus the blank space may itself constitute a critical intervention.¹¹⁶

As noted earlier, the grammarian Xenocritus of Cos was the first, according to the Empiricist Heraclides of Tarentum, to attempt an explanation of Hippocrates' words. It is perhaps no coincidence, in the perspective of our

-
- 110 The fact that one finds a mention, in the passage, in a coordinated sequence, of the royal library, the books 'from the ships' and the *ekdosis* of Bacchius, allows the surmise that there may have been a copy of Bacchius' *ekdosis* in the Museum library. I regard as rather implausible the hypothesis advanced by Mansfeld [1994] 201, who argues that *ekdosis* should be taken here as meaning "interpretation, which would certainly be appropriate in the context of Galen's exposition, and support the ascription of a commentary to Bacchius".
- 111 Corrections by a second hand, for ex. in PDubl 1 (*Epidemics* VII, 1st–2nd c. AD); twofold redaction in POxy 1184 (*Hipp. Epist.*, 1st c. AD), *CPF* [2008] 150–157.
- 112 PRyl 56 (*Hipp. Acut.*, II sec. in.) in *CPF* [2008] 134–137, twofold redaction in POxy 1184 (*Epist.*, 1st century AD).

observations, that the only mention of Xenocritus of Cos concerns the meaning of ἀλλοφάσσοντες in Hippocrates' *Prognosticon*,¹¹⁷ where he accounts for this meaning by invoking the Ionian usage current at the time. In contrast, Callimachus of "Herophilus' House" (last half of the 3rd c. BC)¹¹⁸ is quoted by the Empiricist Apollonius of Citium as the first to explain the difficult words in Hippocrates.¹¹⁹ Thus the reconstruction of the history of Hippocrates' glossaries points to competition between physicians and grammarians.

Bacchius of Tanagra (275–200 BC),¹²⁰ a pupil of Herophilus, composed the *Lexeis of Hippocrates*, the earliest author-specific lexicon, which was divided into three books or "collections" and appears also to have contained identification of the Hippocratic works. Each collection was not based on a grouping of Hippocratean treatises, as was done by later lexicographers like Erotianus, because one finds glosses drawn from the same text in more than one book (were there thematic criteria, perhaps?). As stated above, at least nineteen works known by Bacchius can be identified. Bacchius is the chief source of Erotianus' *Lexicon*, our main source, and is used directly. The lexicon certainly provided an aid to reading and comprehension, organizing the lemmata according to the sequence of the text. Bacchius' interest focused not only on difficult words but also on common words used in a special manner (following the Aristotelian approach of the *glossai*). The presence of quotations adduced for purposes of comparison mainly involved Homer and Euripides, but also Aeschylus and some local dialects, such as that of the population of Rhodes, and of the Eleans and the Thymbrians; thus he did not restrict his investigations to poetic sources. In the glossaries, debate naturally focused on variants or put forward evidence for variants,¹²¹ and some of Bacchius' readings can be identified in *Instruments of Reduction, Wounds in the Head* and *Prorrhetic*, but this is not sufficient to demonstrate that he also drew up an edition of the text.

117 *Prog.* 20 (11 170, 15 L.) in Erotian. 12, 6–10 N.; see Fuhrman [1983] 1533.

118 On the role of Callimachus in Herophilus' school, see *supra*, n. 72, and von Staden [1989] 480–483. He is quoted only once by Erotianus for θεῖον in *On sacred Disease*, fr. 33, 108, 17 N.

119 Apollonius wrote a Hippocratic Lexicon in polemics with Heraclides.

120 Von Staden [1989] 484–500; von Staden [1992].

121 From Erotianus we glean the following information: lemma βλιχώδες Erotian. 28, 10 N.: Lysimachus and Bacchius write πλιχώδες. Lemma ἕκταρ Erotian. 46, 19: Ischomachus and Kydias of Mylasa write ἕκταρ wrongly (47, 1–3). Lemmata καρδαμύσσειν and κορδίνημα (47, 7 and 48, 15): note, also, the alternative spelling σκαρ- σκορ-. Bacchius (57, 6–8) writes λαμπώδες instead of λαπώδες; Bacchius (57, 22) writes λαζεται instead of λάπτει. Variants are also found in the lemma φήρεα (85, 2–5); φλεδονώδεα (90, 8–20); χεδροπά (93, 15–19): βληστρισμός (102, 19–21).

Bacchius' *Lexeis* exerted considerable influence, but it was also criticized by many of the later physicians (many among the Empiricists). Perhaps the major criticism is exemplified by the words of the Empiricist Apollonius of Citium (1st century BC), who accuses Bacchius of sharing the Herophileans' lack of experience and practice (*ἀχειρία/ἀπειρία*) and of giving explanations based only on linguistic and literary considerations.¹²² Apollonius insists on Bacchius' incompetence with regard to actual practice, citing as a demonstration the rich variety of literary and linguistic parallels Bacchius used to explain the Hippocratic *ἄμβη* (raised edge).¹²³ Apollonius considers these ramblings superfluous, adding, disparagingly, that for people who rely so greatly on linguistic evidence it would have been sufficient to know the local Coan usage. He thus makes it clear that he by no means rejects lexicography but demands a technical, specific—not a general—lexicography, based on a firm knowledge of the *praxis* of the art. In the later tradition such an aim may have been achieved, but a literary interest in Hippocratic texts is nevertheless attested among later grammarians as well as among physicians. This interest became a cause for pride in Erotianus, but the twofold nature of Hippocratic glossography highlighted by Apollonius persisted over time and perhaps distinguished Herophilean glossography from that of the Empiricists. We will later encounter the same dilemma, but inverted, in the preface to Galen's *Glossary*.¹²⁴

Philinus of Cos (280–210 BC), the founder of the Empirical school, wrote a treatise in six books against Bacchius, but few fragments are preserved in Erotianus concerning *ἄμβη* fr. 322 D., *θείον* fr. 327 D., *ἀτρεκέως* fr. 328 D. However, two fragments from Athenaeus (fr. 138–139 D.) are of a lexicographic nature and both, on a botanical theme, could derive from the glossary.¹²⁵ Their character suggests a slightly different orientation as compared to Callimachus, with the appearance of *Realien*, certainly more significant for the Empiricists, who awarded priority to therapy. On the other hand, the other lemmata attributed to Philinus are of a general nature (apart from *ἄμβη*, which all authors attempted to deal with).

Glaucias the Empiricist (2nd century BC) organized his *Lexicon* as a single book, though exceedingly long, which was arranged alphabetically. This innovation certainly changed the function of the *Lexicon*, which became a tool independent of the Hippocratic text, particularly as he seems to have provided the identifying data for each lemma (fr. 311a D.). It should not be overlooked

122 CMG XI 1.1, p. 16, 3 ff.

123 CMG XI 1.1, p. 28, 1–16.

124 *Infra*, § 4.1.1.

125 Fr. 138 = Ath. xv 681b cf. Erotian. 59, 1–3 N. (*λείριον*); fr. 139 = Ath. xv 682a (*ῥίς*).

that Glaucias also wrote commentaries on the Hippocratic texts, of which only scanty traces remain (fr. 350, 354, 356 D. on *Epid.* VI): they may have been overshadowed by the enormous exegetic activity of his contemporaries and successors Zeuxis and Heraclides of Tarentum. Little information can be found that could characterize his *Lexicon*, although, it is noteworthy that in order to explain ἀμφιδέξις in *Aph.* VII 43 (Erotian. 15, 21 N.) he resorts to a traditional embryological theory.¹²⁶

Cited among subsequent physicians is Lysimachus of Cos¹²⁷ (end of 2nd–1st century BC), who wrote a glossary composed of twenty books and two works composed of three books against Kydias the Herophilean¹²⁸ and a Demetrius (of Laconia, the Epicurean),¹²⁹ which presumably were likewise devoted to discussion of the language of Hippocrates.

The polemic flared up again in the 1st century BC, with the three books by the Empiricist Heraclides of Tarentum against Bacchius, but his work was attacked in no fewer than 18 books by Apollonius of Citium, himself also an Empiricist. Thus lexicography represented an important sector in the rivalry between the Herophilean and Empirical school, but the polemic also raged within the schools themselves.

In line with his polemical intent, Heraclides of Tarentum (1st century BC) is often cited in Erotianus, in opposition to Bacchius.¹³⁰ Heraclides testifies that in his own day the work *On Art*, on which we have no further information in the Hellenistic era, had already become part of the group of works attributed to Hippocrates. Heraclides makes use of literary parallels and proposes etymologies,¹³¹ but the relatively few exegetic notes Erotianus cites could also derive from the commentaries: there is at least one case in which

126 The sentence γυνή ἀμφιδέξις οὐ γίνεται had aroused considerable discussion: while Bacchius and others invoked literary comparisons (Homer, Herodotus), Glaucias interpreted the word in the sense of “in the left side of the uterus”, basing his statement on the theory that female foetuses do not take shape on the right: Wellmann [1931] 15.

127 A physician, known as Ἱπποκράτειος in the scholia to Nicander (sch. *Alex.* 376b) and as *Hippocratis sectator* in Cael. Aur. *Tard.* I 3, 57 (CML VI 1,1, p. 462, 5, although the name is corrupted). See Nutton [1999a] 608: Erotian. 5, 11–14, 28, 13; 85, 10 N. Wellmann [1931] 29, on the other hand, dates him to the early imperial age.

128 Von Staden [1989] 564–565.

129 See above § 3.

130 See 60, 2 N. (Fr. 74 Guardasole), 44, 15 (= 76), 112, 16 (= 77), where Erotianus explicitly cites the *Lexicon*.

131 The exegesis attributed to Heraclides in Erotian. 88, 16–89, 2 N. = Fr. 73 Guardasole, which in fact specifically concerns *On Art*, cites a parallel of Sophocles and, according to Deichgräber [1930] 222 it is therefore likely to go back to Bacchius.

the commentary on *Epid.* IV¹³² is explicitly cited. The available information on Heraclides' commentaries is rather more substantial (*infra*).

The impressive work of Apollonius of Citium against Heraclides has left fewer traces in Erotianus than the preface would lead one to believe: only two glosses cited, ἄμβη and κλαγγώδη. He also devoted attention to the history of lexicography, differentiating himself from Heraclides in identifying the scholar who had been the first to compose glossaries of Hippocrates.¹³³

Epicles of Crete (1st century BC) wrote an epitome of Bacchius, as did Apollonius Ophis.¹³⁴ Epicles' *Lexicon* was arranged alphabetically, but he cut out the indications of the passages where the lemma occurred:¹³⁵ this meant yet another change in the function of the glossary, which thus became less erudite and more practical. Since it is often cited as contrasting with Bacchius, perhaps it was utilised directly by Erotianus.¹³⁶ The series closes with the Herophilean Dioscurides Phacas (end of 1st century BC).¹³⁷ An influential physician at the court of Ptolemy XII Auletes and perhaps Cleopatra, Dioscurides wrote a glossary in seven books: quoted by Erotianus in explaining φωναὶ κατείλλουσαι of *Epid.* III (p. 91, 1–6 N.), he appears to base his remarks on clinical observation.

In short, lexicographic activity flourished and underwent considerable development during the Hellenistic era, and continued to be further enriched during the Roman period, as we will see.

3.2 *Hypomnemata and Syngammata*

The need to write a commentary on a text was often linked to the school system, in other words to the need to provide effective training for physicians. Some texts, however, such as *On art* and *On ancient medicine*, never became the object of a commentary, even though they were taken into consideration in the glossaries and lexicons. They were probably never read in a school environment. The preliminary operation was that of paraphrasis, a constant practice in the schools of medicine (and not merely in such contexts);¹³⁸ it offered a

132 Erotian. 77, 9 N.

133 Fr. 311 D. = Erotian. 4, 21 ff. N., fr. 322, 330 D.

134 Not cited elsewhere: Apollonius must precede Dioscurides Phacas, see Wellmann [1895] 150–151, von Staden [1989] 519–522.

135 Erotian. 5, 5; 7, 23 ff. N.

136 Cited 23 times, see von Staden [1992] 555: for ex. at 10, 17; 13, 3; 20, 2 N. etc. See Wellmann [1907] 117.

137 Von Staden [1989] 519–522.

138 Cf. the indication in Apollonius of Citius “let no-one think that I might, due to a sort of laziness, try to avoid the exposure that should follow the mention of the *lexis*” (CMG XI 1.1, p. 20, 3–6), obviously referring to the practice within the schools. Paraphrasis is the

guide to interpretation of the individual passages, sometimes presupposing the utilization of glossaries and lexicons, and clarified the syntactic structure. But it was certainly equally possible to focus on individual problems by adopting a comparative approach to different texts. The distinction between a *hypomnema*, namely a continuous commentary on a text and subdivided into lemmata, and a *syngamma*, which discusses a text from a specific thematic perspective or addresses a problem by examining a number of texts, is less clear-cut in actual practice than in the definition. The two genres, both widely employed in Hellenistic philology, left unequal traces in medicine dating from the Hellenistic era. However, contaminations and transfers from one genre¹³⁹ to another were by no means unknown, and the work of Galen (2nd century AD) shows full awareness of the need to distinguish among the genres and their functions, as well as displaying great productivity in both directions.¹⁴⁰ With regard to the Hellenistic period, the sources speak of commentaries produced both by the Herophilean and the Empirical school, whereas *syngammata* are more rarely mentioned. Nevertheless, it is quite possible that amid the cataclysmic wreck of the works of doctors dating from this period the predominant treatment of an author of a text may lie concealed beneath some title or other. For example it is not at all certain that Herophilus (c. 325–250 BC) expressed his critical responses to Hippocrates' *Prognosticon* in the form of a commentary rather than in a treatise. On the contrary, the evidence of a commentary on *Aphorisms* by Herophilus is suspect.¹⁴¹

Moreover, a further aspect should be considered. When the sources mention interpretations of single passages of Hippocrates attributed to specific

immediate and simplest level of exegesis, and therefore it is the most constant element, although it is naturally the least documented for the authors of Hellenistic commentaries. This is also the reason why the text preserved in P^Tebt 897 = P^Bingen 1 (end 3rd century BC), which Marie-Hélène Marganne considers to be either another version of—or a commentary on—*Regimen II* 49 (most recently *CPF* [2008] 228–233) is difficult to classify. Since we have no information on any ancient commentary on the treatise, the text could be a paraphrase of the passage in another context, cf. Anastassiou-Irmer [1997] I, 460.

139 The term is used as a conscious anachronism because, as regards the secondary literature of antiquity, there certainly never existed a classification of 'genres' properly speaking, analogous to that existing for other literary forms, see Sluiter [2000a]; however, the distinction among these forms is commonly adopted in the critical literature. See also Dubischar § 1, this volume.

140 See *infra* § 4.1.2.

141 Smith [1979] 193 considers it unlikely in the extreme that Herophilus wrote a book against Hippocrates' *Prognostic* and suggests that the discussion about *prognosis* and *prorrhesis* seems appropriate to his book *Against Common Opinions*.

authors, these are not to be considered *tout court* as evidence of the existence of a written *hypomnema*. Information such as Galen's concerning Serapion of Alexandria's comment on *Epid.* VI 7.2¹⁴² could also be the trace of 'oral interpretation' in class,¹⁴³ preserved in the series of commentaries in the same Empiricist tradition. This aspect of oral exegetical practice in school must not be overlooked when considering the history of Hippocrates' reception: indeed, it constitutes the premise of interest in a thorough critical examination of the language and doctrine of Hippocrates. More than once Galen states that he had written his commentaries upon the request of ἑταῖροι or pupils, who had listened to his lectures and urged him to commit them to writing: thus the written version of commentaries would arise after prolonged practical experience of oral teaching.¹⁴⁴

The practice of writing commentaries seems to have been more pervasive in the Empiricist rather than the Herophilean school, as suggested by the fact that Galen mentions the four commentators who (in his judgment or, possibly, as far as he knew) were the most ancient. Among these, the Empiricists Zeuxis and Heraclides of Tarentum wrote commentaries on the complete range of works by Hippocrates, whereas the Herophilean Bacchius and the atomist Asclepiades wrote commentaries only on the more difficult works.¹⁴⁵ On the other hand, this piece of information may be biased as a result of the particular perspective adopted by Galen, who seems to show a certain degree of dependence on Empiricist exegetic tradition¹⁴⁶ and, above all, it does not grant us any insight into the extent of the material which, during the period of time spanning the transition from Bacchius to Asclepiades, was subsumed under the heading 'the complete range'.¹⁴⁷ But the central role of the ἱστορία in the

142 In Gal. *In Hipp. Epid.* VI, CMG V 10.2.2, p. 411, 22–29.

143 Other individual quotations concern Andreas the Herophilean, cited by Heraclides in the context of Hippocratic exegesis (in commenting *Epid.* II 2.20 = fr. 7 von Staden), and Callimachus, mentioned by Zeuxis in the commentary on *Epidemics* VI (fr. 9 von Staden). The exegesis of *Aph.* I 1 by the Empiricist Archibius (1st century AD) mentioned in P.Berol. 9764, II 7–12 = fr. 282 Deichgräber may be a similar case.

144 See for ex. Gal. *In Hipp. Epid.* III (CMG V 10.2.1, p. 60, 4–15; *In Hipp. Prog.* (CMG V 9.2, p. 328, 11–22): Manetti-Roselli [1994] 1539, 1560. Significant evidence is also provided by Galen's observations on the lessons held by his tutor Pelops and by Numisianus in *In Hipp. Aër.* (Anastassiou-Irmer [2001] II 1, pp. 44–46, especially 45, 24–26), distinguishing between the oral tradition of Pelops' commentaries and the writing of the *Eisagogai*.

145 Gal. *In Hipp. Off.* XVIIIB 631, 15 K.

146 See Manetti-Roselli [1994] *passim*, in particular 1593 ff.

147 For the possible meanings see von Staden [2006] 30 f.

Empiricists' approach¹⁴⁸ certainly explains the great significance they awarded to the Hippocratic tradition and it may suggest that their exegetic work was conducted systematically. Perhaps the very construction of Hippocrates as a character is also owed to the Empiricists, who glorified him as the first Empiricist; indeed, in our sources it is the Empiricist Apollonius of Citium who for the first time defines Hippocrates as θεϊότατος.¹⁴⁹

Almost all the information we have springs from Galen, and this has severe consequences with regard to the possibility of reconstructing the history of commentaries on Hippocrates. The selection of themes reflects the choices made by Galen, who made an abridgement of the Hippocratic Corpus as compared to the *vulgata* of his day.¹⁵⁰ Only quite by chance did some information on other commentators survive the drastic epitomation—which evidently weeded out authors with little following—of Erotianus' *Lexicon*, or on commentaries by known authors not cited by Galen. We thus come to know that Zeno the Herophilean (2nd century BC), probably drew up a commentary concerning *On places in humans*,¹⁵¹ which Galen did not include among the authentic Hippocratic works and in fact almost completely ignored,¹⁵² even though it was already present in Bacchius' *Lexeis*. For the lemma καμμάρω Zeno mentions the presence of graphic variants and interprets the *hapax legomenon* by making use of the dialect spoken by the Dorians in Italy.¹⁵³ The same lemma also notes the variant chosen by the Empiricist Lycus of Neapolis (1st century BC) in his commentary.¹⁵⁴ In another passage we learn that an otherwise unknown Pasicrates possibly wrote a commentary on *Mochlikon = Instruments of reduction*.¹⁵⁵ What becomes clear from these examples is the

148 See above § 3 n. 79.

149 CMG XI 1,1, p. 10, 4. On the mention of the 'divine Hippocrates' in the pseudohippocratic *Epistles* and their possible dating (2nd BC–1st BC), see Anastassiou-Irmer [1997] I, 195 with bibliography. On the claim that Hippocrates should be considered as an Empiricist, see for ex. fr. 310, 321, 356 Deichgräber.

150 Smith [1979] 123–176; Manetti-Roselli [1994] 1566–1569.

151 Erotian. 51, 1–52, 9 N = fr. 8 von Staden: the fact that he speaks of variants suggests that what was involved was probably a commentary.

152 Cited in the *Glossary* and then as "non authentic" in the commentary on *Airs waters places*, (Anastassiou-Irmer [2001] II 1, 322–327).

153 I do not think that the source here can be the grammarian Diodorus, the author of *Italikai Glossai*, of a later date than Zenon.

154 Cf. fr. 315–316 Deichgräber: Erotianus who speaks of an *Exegetikos*.

155 On Lycus see Deichgräber [1930] 204–205; for Pasicrates, Ihm [2002a] 180–18. It is not always possible to distinguish whether the author cited is a glossographer or a commentator: cf. also the example of Philonides of Sicily (Erotian. 36, 9; 84, 19 N.) who,

enormous amount of Hippocratic exegesis that has been lost, and that great caution should be exercised before making any generalization.

Bacchius was the first in exegetic activity as well. We know from Galen's observations that he wrote commentaries on *Aphorisms*, *Epidemics* VI, and *In the surgery*;¹⁵⁶ Galen asserts that he dealt only with the difficult Hippocratic works,¹⁵⁷ but what exactly was meant by this statement remains unclear. It is equally difficult to gain a clear idea of the approach Bacchius adopted in his commentaries; however, the mention of variants and the observations on the sequence of the Hippocratic treatises, together with his considerable linguistic and literary refinement, as can be gathered from the fragments of the *Lexeis*—a circumstance suggesting he set the Hippocratic text in a broader comparative context—all point to a base in common with Alexandrian philology of the time.¹⁵⁸

Bacchius' contemporary, Zeno the Herophilean (3rd–2nd century BC), sparked a famous controversy on *Epidemics* III which raged in the wrangles between Herophileans and Empiricists right up to the 1st century BC.¹⁵⁹ He may in fact have written a continuous commentary on the treatise, as he did with regard to other works,¹⁶⁰ but the information given by Galen indicates that he devoted an extensive *syngramma* to the so-called question of the *χρακτῆρες*.¹⁶¹ This concerned the provenance and meaning of certain marks present in some Alexandrian copies of *Epidemics* III: these symbols, mainly Greek letter symbols, or combinations of them, were written in clusters of four

although cited in both cases for a word that can be traced to *Epid.* IV, could also be the author of a glossary. It would be a further unwarranted generalisation if one were to attribute a specific action of exegesis to figures cited for the interpretation of an individual Hippocratic lemma, such as Erasistratus with regard to *ἄμβη* (23, 8–24, 10 N. = fr. 72 Garofalo) who, even though he glossed the word, may have done so in a medical work of his, like Diocles on *kedma*, cf. *supra* n. 26.

156 See fr. 8, 9, 10, 11 von Staden: the case of *Epid.* II (fr. 11) is somewhat doubtful, because the text seems to allude to his glossographic activity rather than that as a commentator. For a discussion of the supposed commentaries on *Epid.* II and III see von Staden [2006] 17 ff. For the commentary on *Aphorisms* (Gal. *In Hipp. Aph.*, XVIII A 186, 11–187, 4) see von Staden [1989] 74–76.

157 Fr. 8 von Staden (Gal. *In Hipp. Off.* XVIII B 631, 17 K).

158 For more detailed features of Bacchius' exegesis, see von Staden [2006] 17–27. I doubt that it is possible to infer from Bacchius' use of literary parallels that he did not use consistently the critical principle "Homerum ex Homero" (*ibidem*, 26).

159 For a synthesis of the question, see von Staden [1989] 501–503.

160 Zenon conceivably composed a commentary on *On places in Humans*, cf. *supra* n. 151, and *On joints* (Erotian. 23, 10 N. = fr. 7 von Staden).

161 On the form of the text, see Gal. *In Hipp. Epid.* III, CMG V 10.2.1, p. 86, 20–22.

or five at the end of individual case histories. Evidently Zeno found them in the copies at his disposal (apparently starting from the seventh case history)¹⁶² and attributed them to Hippocrates himself. Zeno's opinion was immediately attacked by the Empiricist Apollonius the Elder of Antiochia (*fl.* 175 BC), who wrote a *syngramma* on the subject. Zeno continued the dispute with another pamphlet, but the question was again treated polemically by the Empiricist Apollonius Byblas ("the Bookworm", *fl.* 150 BC), who elaborately refuted Zeno's defense of the symbols' authenticity. The great Heraclides of Tarentum (1st century BC) also entered into the fray, but it was only the Herophilean Heraclides of Erythrae (1st century BC) who succeeded in putting an end to the story, agreeing with the Empiricists on the spurious nature of the $\chi\rho\rho\alpha\kappa\tau\eta\rho\epsilon\varsigma$.

Zeno interpreted the sequence of signs as a code for summarizing the essential data of the clinical history; the subsequent controversy focused not only on the question of whether such signs were authentic or not but also on their interpretation in the individual passages (with the presence of variants and attempts at correction). His Empiricist adversaries rejected the attribution of authorship of the signs to Hippocrates himself, but recognized that they must have been arranged according to some sort of system, although the Empiricists did not agree with the readings proposed by Zeno, whom they accused of falsifying the text to confirm his own interpretation. To confute Zeno's argument, the Empiricist Zeuxis¹⁶³ possibly introduced (or he may simply, in his commentary, have made a brief mention of the reported episode) the story of a man named Mnemon from Side in Pamphilia, who borrowed a copy of *Epidemics* III from the great Alexandrian library and returned it after adding the symbols written in similar letters and ink, or, alternatively, he may have related that a personal copy belonging to Mnemon (with the symbols) was one of the books to have arrived at the Museum Library bearing the inscription "Of those from the ships by the redactor Mnemon of Side", or conceivably

162 Gal. *In Hipp. Epid. III*, CMG V 10.2.1, p. 46, 19–24, says that the ancient manuscripts (and the ancient commentators) had knowledge of the signs starting from the seventh clinical history, whereas more recent copies (and the edition of Dioscurides, see *infra* § 4.1.1) mentioned them from the first onwards; with regard to the latter, Galen does indeed begin to speak of these signs, which, however, are immediately declared to be spurious and not present in all the manuscripts (CMG V 10.2.1, p. 27, 1–28, 28). In the medieval tradition (represented only by Codex v), the signs are present in all cases. Among the modern interpretations, Fraser [1972] I 325–326, compares the signs to those used in the Homeric editions, but without any foundation.

163 Galen declares that he derived this information from Zeuxis' commentary, which at that time was still available to him, although it was extremely rare (CMG V 10.2.1, p. 78, 29–79, 3).

marked only with Mnemon's name.¹⁶⁴ What can be inferred from this story is that in the 2nd century¹⁶⁵ it was quite normal to enquire into the authenticity of parts of the Hippocratic text, and that consultation and comparison of copies held in the Royal Library and accessible to external scholars was a routine practice. Clearly, there was general awareness of the diverse provenance of the copies, and attention was paid to details and documentary evidence regarding their redaction, *e.g.* ownership notes or subscriptions, if any such marks were visible. Although no official link between the Museum and medicine is documented, everything suggests that the cultural environment was open to exchange and circulation of ideas. Moreover, Apollonius Byblas' confutation of a specific passage of Zeno's text,¹⁶⁶ adducing the argument that no manuscript of the Royal Library nor any manuscript of "From the ships", nor even Bacchius' *ekdosis*, contained the symbols as Zeno had written them, reveals the same method of collating copies, and this in turn presupposes the accessibility both of manuscripts held in the library and distinct from those of "From the ships", and also of the authoritative 'ancient' edition of Bacchius.

Although Zeuxis had composed commentaries on 'all' the Hippocratic works, the evidence derivable from the sources merely shows that he interpreted six works: *On places in humans*, *Aphorisms*, *Prorrhetic I*, *Epidemics II*, *Epidemics III* and *Epidemics VI*. It is worth highlighting the presence of *On places in humans*,¹⁶⁷ which since the very beginning had been included among Hippocratic works and attracted the attention not only of the Herophileans but also of the Empiricists, whereas it later disappeared from Galen's horizon. In addition to concerning himself with the interpretation of words or expressions,¹⁶⁸ Zeuxis also addressed textual questions.¹⁶⁹ For instance, when commenting on *Epid. VI 2.22*¹⁷⁰ he criticized Glaucias for inserting negations into the Hippocratic text and thereby trying to make it consistent with the doctrine; Zeuxis likewise appears to have been inclined to preserve the transmitted text in the case of another reading he regarded as incorrect in

164 This question is dated to the reign of Ptolemy III Euergetes I (246–221 BC).

165 Deichgräber's dating of Zeuxis around the end of the 1st century BC (Deichgräber [1965] 209, 263) has been abandoned in favour of a dating in the first half of the 2nd century: see Fraser [1972] 325–27, Manetti-Roselli [1994] 1594, von Staden [2006] 30.

166 Gal. *In Hipp. Epid. III*, CMG V 10.2.1, p. 87, 1–12, cf. *supra* § 3.1.

167 Lemma *κάμμαρον*, Erotian. 51, 1–10 N.

168 He addresses problems of accentuation (*i.e.* of syntactic interpretation) in fr. 358 Deichgräber (= Gal. *In Hipp. Epid. VI*, CMG VI 2.2.2, p. 217, 13 ff.).

169 He carried out expunctions of words and sentences: Gal. *In Hipp. Epid. VI*, CMG V 10.2.2, p. 219, 19–20, and *ibidem* p. 251, 11 ff. = fr. 359 D.

170 Gal. *In Hipp. Epid. VI*, CMG V 10.2.2, p. 114, 1–9 = fr. 354 Deichgräber.

Prorrhetic I,¹⁷¹ but in Galen's commentary on *Aphorisms* he seems to belong to those who were in the habit of altering the Hippocratic text when it did not correspond to a scientific truth.¹⁷² On occasion he also criticized *en passant* Hippocrates' excessive use of metaphors¹⁷³ in connection with *Epid.* VI 1.4, but he had no ideological bias in making use of comparisons for his interpretation: thus he drew on Herophilus for the Hippocratic use of *νήπια* and defended him against the accusations launched by the Herophilean Callimachus.

While the ideological school-based divisions were not reflected in Hippocrates' exegesis, which had a common 'philological' basis, questions pertaining to medical practice and theory did come into play in the commentaries Zeuxis composed. An important example can be found in the explanation of *λόγοι* in *Epid.* VI 4.7 (88, 4–5 Manetti-Roselli), which refers to the statements a physician must make with regard to the sick person's environment. Zeuxis reports an anecdote involving a physician by the name of Callianax and deriving from the work *Memoirs of Herophilus and of the members of his 'House'* by Bacchius. The statements that Callianax, a Herophilean physician, utters when replying to the patients are presented as an example of coarseness and lack of sensitivity. But in actual fact Bacchius' work, in origin, is hardly likely to have been polemical against a member of his own school:¹⁷⁴ Zeuxis very probably manipulated Bacchius' text, inverting the value of the anecdote. Such an attitude does not so much reveal a spiteful calumnious intent towards the Herophilean tradition as, rather, a different approach to medical 'professional ethics', aiming to give a correct interpretation of the text for practical utilization by the physician: with this purpose in mind, Zeuxis used Bacchius' biographical text in a perspective that probably diverged from the author's original goal.

Zeuxis' contemporary Glaucias (2nd century BC) not only composed important works of a doctrinal character¹⁷⁵ and was active in the field of glossography (*supra*), but he may also have written commentaries on several works, though the only reliable information concerns a commentary on *Epid.* VI. It appears that in composing the commentary he devoted considerable effort to producing what in his view was a meaningful text, even at the cost of altering the transmitted text if necessary.¹⁷⁶ He also sought to interpret the text in

171 Gal. *In Hipp. Prorrh. I*, CMG V 9.2, p. 73, 8–20.

172 Gal. *In Hipp. Aph.*, XVIII A 186, 11–187, 4 K.

173 Gal. *In Hipp. Epid. VI*, CMG V 10.2.2, p. 20, 19 ff. = fr. 351 Deichgräber.

176 See n. 172.

the light of the ‘empirical’ interpretation of Hippocrates.¹⁷⁷ At times, Zeuxis directed critical observations against him (*supra*), although on various occasions he cited Glaucias with warm approval.¹⁷⁸ Glaucias does not seem to have been favorable to the principle of internal consistency on which Zeuxis insisted as an unfailing criterion in textual criticism,¹⁷⁹ but in Galen’s vision he is nevertheless awarded the status of ancient commentator, together with Bacchius, followed by Zeuxis, Heraclides of Tarentum and Heraclides of Erythrae,¹⁸⁰ which indirectly earned him noteworthy prestige.

Heraclides of Tarentum (1st century BC) is the *μάρτυς ἀξιopiστότατος*,¹⁸¹ (“the witness worthy of the greatest confidence”) in Galen’s definition, where he appears as the symbol of the righteous commentator who does not stoop to falsifying the text for the sake of confirming his own doctrines: rather, he constantly strives towards the useful (*χρήσιμον*),¹⁸² although in some cases he succumbs to the tendency to transform Hippocrates into an Empiricist.¹⁸³ We have reliable information concerning his commentaries on *Aphorisms*, *In the surgery*, *On joints*, *Epidemics* II, III, IV and VI.¹⁸⁴ His personal background as a Herophilean, a pupil of Mantias, who shifted his allegiance and sided with the Empirical school, is reflected in his work, which displays several features having some affinity with the dogmatic strand, despite considering experience as the centre of medical activity.¹⁸⁵ He was a prolific author who expressed his thought in various different literary genres, not merely in that of the specialist *pragmateia*.¹⁸⁶ In addition to his work in glossography, he wrote systematic commentaries on ‘all’ the Hippocratic works (*supra*). A picture of great

177 Fr. 356 Deichgräber = *In Hipp. Epid. VI*, CMG V 10.2.2, p. 174, 20 ff. von Staden [2006] 44–45, points out that ideological appropriations of the Empiricists in the texts of Hippocrates are, from an overall perspective, fairly rare.

178 Gal. *In Hipp. Epid. VI*, CMG V 10.2.2, p. 451, 40–452, 2 = fr. 361 Deichgräber, where Zeuxis seems to accept the reading and interpretation of Glaucias.

179 Von Staden [2006] 41, 45.

180 Gal. *In Hipp. Epid. VI*, CMG V 10.2.2, p. 3, 8–10.

181 T 12 Guardasole (Gal. *In Hipp. Art.* XVIII 735, 10–14 K.) = F 43 (see also T 6).

182 Gal. *In Hipp. Epid. III*, CMG V 10.2.1 p. 87, 13–14. Galen had direct knowledge of Heraclides of Tarentum’s commentary on *Epid. II* and perhaps also on other treatises (*Epid. III*): Manetti-Roselli [1994] 1594–1600.

183 Together with Zeuxis and Glaucias, see the passage cited in n. 177.

184 Doubts can be expressed with regard to the information concerning his commentaries on *De humoribus* and *De alimento*, deriving from the pseudo-Galenic Renaissance commentaries, see T 32 and F 96, F 97 Guardasole.

185 Guardasole [1997] with previous bibliography.

186 Mention should be made of the dietetic work *Symposium*, in dialogic form.

erudition and of balance between doctrinal medical exegesis and philological-literary exegesis emerges from the fragments. An exemplary case—cited twice by Galen,¹⁸⁷ who adopts it as the model of *πιθανή ἐπανόρθωσις* “the plausible correction”—is his solution to *Epid.* II 2.20¹⁸⁸ where, at the end of the story of a woman who suffered a number of pathological phenomena after childbirth such as flows and swelling, one finds the enigmatic sentence *πρὸς δὲ τὸ Ἀφροδίσιον αἰ οὐραὶ ἔβλεπον* (“the woman’s tail pointed towards the Temple of Aphrodite”). The text was stable, as confirmed by all the ancient commentators. Heraclides examines all the solutions put forward by his predecessors, who were striving to make the sentence meaningful from a medical point of view and assumed that Hippocrates was using a metaphorical expression, supporting the argument by extensive recourse to parallels of a literary origin (signally, with a reference to Aristotle’s *Historia animalium*). Finally, Heraclides attempted to provide a doctrinal explanation on the basis of the transmitted text, adducing the argument that *οὐραὶ* was used metaphorically for the uterine *portio*, just as *τὸ ἀφροδίσιον* was used for the female genital organs:¹⁸⁹ taken together, these expressions could constitute a description of prolapse of the uterus. But in the end Heraclides proposes his correction, stating that instead of *OYPAI* what should be written is *ΘYPAI*, and pointing out that due to the similarity in the written form it could not be ruled out that during the copying process (or as the copies grew older and more ragged) the internal stroke of *Θ* may have been lost. Heraclides clinched his argument by stating that the correction restored a styleme characteristic of Hippocrates, namely the indication of the patient’s abode. Thus the meaning would be “the door of her house opened in the direction of the Temple of Aphrodite”, a classic case of correction of Hippocrates on the basis of Hippocrates. Heraclides was certainly in the habit of comparing manuscripts, and he did declare that he had retrieved some readings in ancient manuscripts.¹⁹⁰ Overall he was of use to Galen for

187 In addition to the commentary *ad loc.* Galen mentions it in the proem to the commentary on *Epid.* VI (F 83 Guardasole = *In Hipp. Epid.* VI, CMG V 10.2.2, p. 4, 4–15), as a guide to his behaviour as a philologist: preserve the ancient reading as far as possible, and interpret it, but where this does not prove possible, then a plausible correction should be performed, like that of Heraclides.

188 F 82 Guardasole = *In Hipp. Epid.* II, CMG V 10.1, p. 231, 25–233, I; 233, 4–42.

189 For the probable literary parallels of the original version of Heraclides, see Manetti-Roselli [1994] 1598.

190 Heraclides exercised also his own judgment in segmenting the text, *i.e.* in determining its syntactic structure: F 80 = *In Hipp. Epid.* II, CMG V 10.1, p. 220, 34–221, 7; F 81 = *In Hipp. Epid.* II, CMG V 10.1, p. 222, 30–33.

identification of interpolated passages as a witness testifying to an ancient text tradition.¹⁹¹

The only Hellenistic text to have come down to us, the *Treatise on joints* by the Empiricist Apollonius of Citium (1st century BC), is difficult to classify as a commentary, but the same difficulty arises in viewing it as a *syngramma*.¹⁹² In effect, its main aim is not that of interpreting Hippocrates' text (explaining the obscure points), nor does Apollonius seek in this work to discuss the Hippocratic doctrines on the surgical reduction of dislocations. Rather, he aims to illustrate by means of words and above all with pictures the reduction techniques performed manually or with the aid of machines, such techniques having been described by Hippocrates (ἡ διὰ τῆς ὀργανικῆς ὕλης ἔντεχνος ἀρμονία), but neglected by contemporary physicians. Accordingly, this work can be best considered as an illustrated epitome, in which the greater part of the text consists of extensive citations from *On joints*, interspersed with paraphrases and linking passages. In short, it is a form of rewriting, which only sporadically deals with questions of interpretation.¹⁹³ It could be viewed as a sort of special 'edition' dedicated to the sovereign, its characteristic feature being the link between the text and the illustrations.

In the contest between Herophileans and Empiricists focusing on Hippocratic exegesis, one name is yet to be cited, that of the Herophilean Heraclides of Erythrae (1st century BC),¹⁹⁴ traces of whose commentaries on *Epidemics* II, III and VI can be gleaned from Galen. Perhaps the information that Heraclides of Erythrae in some sense brought to an end the controversy surrounding the symbols (mentioned above in this paragraph), with the verdict that the Empiricists were right to consider them spurious, can be derived more from the commentary on *Epid.* III, rather than from an essay on the theme. Once again, it is clear that the division between the schools did not significantly affect Hippocratic exegesis. With regard to other issues, the information obtainable from Galen is too scanty to allow a credible profile of Heraclides

191 Gal. *In Hipp. Epid. II*, CMG V 10.1, p. 284, 19 = F 85 Guardasole.

192 The work (ca. 70 BC) is dedicated to Ptolemy, possibly Auletes, who seems to have commissioned it. See CMG XI 1.1, p. 10, 4 ff., see Smith [1979] 212, Potter [1993], Roselli [1998]. The title itself, *περὶ τῶν ὀρθρῶν πραγματεία*, indicates that the work involved was not a commentary. Even Erotian. 23, 8 N. cites it simply as *On joints*.

193 It is significant that such questions are linked to the polemic with the Herophilean tradition, which was accused of being aloof from medical practice: see the critique of Bacchius' *Lexeis* (CMG XI 1.1, p. 16, 2–10, 28, 1 ff.), to which, however, Apollonius had devoted a critical work composed of many books, see *supra* § 3.1, and the polemic against Hegetor (CMG XI 1.1, p. 78, 24 ff.).

194 Von Staden [1989] 555–558.

of Erythrae to be built up, apart from the fact that he belonged to the ancient authorities.¹⁹⁵

While all the above mentioned characters had an ideologically neutral or generally favorable attitude towards Hippocrates, a special case is that of Asclepiades of Bithynia (2nd century BC),¹⁹⁶ a physician active above all in Rome, who championed a corpuscular theory of matter, in open opposition to the Hippocratic tradition of humoral physiopathology. He wrote at least a commentary in 2 books on Hippocrates' *Aphorisms* and a commentary on *In the surgery*.¹⁹⁷ We now know that he also wrote a commentary on *Epidemics I*.¹⁹⁸ Here we find for the first time a work dealing with medical exegesis that does not depend on the Alexandrian milieu and is an external exegetical endeavour, because Asclepiades rejected many of the 'Hippocratic' theories. Therefore it is unfortunate that little can be deduced from Galen's citations, which concern only the commentary on *In the surgery*: possibly due to a form of censorship, the ideological elements that were probably present in Asclepiades' commentaries were sidelined and the only elements to emerge are some philological characteristics, which concern the interpretation of individual words or the attestation of variants.¹⁹⁹

3.3 *Biography and Doxography*

Interest in the biography of Hippocrates dates back to very ancient times, because his descendance from Asclepius is already present in the 5th century in the *Genealogies* by Pherecydes of Athens.²⁰⁰ The pseudo-Hippocratic

195 Manetti-Roselli [1994] 1615.

196 On the dating, there are different positions: Rawson [1982] 358–370 argues that the *terminus ante quem* for Asclepiades' death is 91 BC (the dramatic date of Cicero's *De oratore*), while Polito [1999] claims that Asclepiades could be the son of the Herophilean Andreas and may have been born at the end of the 3rd century BC, thereby connecting Asclepiades with Alexandria. But his argument is not sufficiently demonstrated.

197 Cael. Aur. *Cel.* III 1.5, and Gal. *In Hipp. Off.*, XVIII B 631 K. Erotian. 78, 14–18 s.v. *σκέπαρνος*, cites a passage of the commentary on *Off.*

198 D. Leith plans to publish the *editio princeps* of a papyrus from Oxyrhynchus preserving part of an anonymous commentary on *Epidemics I*, which contains a polemic against Asclepiades. I am grateful to him for letting me read his transcription.

199 List of the passages in Manetti-Roselli [1994] 1616.

200 The information on Hippocratic genealogy is provided by the *Vita Hippocratis* attributed to Soranus (see *infra* in this paragraph), which has a *terminus post quem* by virtue of the mention of Areios as the source of the genealogy, identified as Lekanius Areius from Tarsus, who flourished in the first century AD: Pinault [1992] 9.

speech the *Embassy*, dated to the 4th–3rd c. BC,²⁰¹ shows some essential elements of family genealogy and may be seen partly as the outcome of local traditions, as indeed is suggested by the most ancient pseudo-epigraphic texts of the *Corpus Hippocraticum*. Although these texts are difficult to date, they seem to go back to traditions on Cos, with close family ties to Thessaly. They seem to show no knowledge of the existence of a *Corpus* of works attributed to Hippocrates, and thus were composed, according to Smith, before the collection was put together in Alexandria.²⁰² Subsequently, in Alexandria it was Andreas, Herophilus' pupil, who composed a treatise *On medical genealogy* in which he argued that Hippocrates had left Cos because he had allegedly burnt the repository of books in Cnidos;²⁰³ a detail of this kind presupposes the existence of a biography already properly structured and included within a broad genealogical-biographic context. The allegation, defined as malicious by the biography attributed to Soranus, sprang from a polemical motive, but it may also have had some relation to the contemporary debate on the authenticity of the works of 'Hippocrates'.²⁰⁴ Eratosthenes is likewise said to have addressed the genealogy of Hippocrates, probably in his great chronological work, and he apparently polemicized with Andreas, accusing him of plagiary.²⁰⁵ The accusation underlines once again the intensity of exchange of ideas among intellectuals of different disciplines²⁰⁶ in 3rd c. BC Alexandria. Additionally, a Soranus of Cos (otherwise unknown), probably through Ischomachus' citation (see *infra* in this paragraph), is said to have checked all the archives of the island in search of precise details on the chronology of Hippocrates' life.

One rather remarkable composition, probably more of an ethical-biographic than doxographic character,²⁰⁷ is Bacchius' *Memoirs on Herophilus and the members of his 'House'*.²⁰⁸ The only item of information taken from this

201 Jouanna [1992] 54–56.

202 See Smith [1990] 2–18 and *supra* § 2.

205 *Etym. Magn.* s.v. βιβλιατίγιστος (“a literary Aegistus”), see von Staden [1999a] 156 and n. 28.

206 But see the ‘political’ explanation of this rivalry in Marasco [1996] 452.

207 Von Staden [1989] 486 defines the work as doxographic, but, taking a cautionary view, nothing in our only testimony suggests this: see also von Staden [1999a] 158–160.

208 Ἀπομνημονεύματα Ἡροφίλου τε καὶ τῶν ἀπὸ τῆς οἰκίας αὐτοῦ: on the meaning of *oikia*, see von Staden [1989] 458, 478–479, for whom it is not equivalent to ‘school’ (see Fraser [1972] I 357 and n. 166, IIa 527), but is perhaps more likely to indicate the circle closest to the teacher. Only Callimachus is defined as ἀπὸ τῆς οἰκίας αὐτοῦ by Erotianus (= fr. 7 von Staden). Gal. *De venaesect.* XI 196, 13 ff. K. also speaks of a work by Straton on the *oikia* of Erasistratus, which, however, seems to be centred on his doctrines.

work comes to us from Galen, who derives it from the commentary by Zeuxis on *Epid.* VI. Galen speaks disapprovingly of several episodes relating to the physician Callianax, whose response to the words “I am going to die” uttered to him by a patient consisted in reciting the tragic line “unless you were generated by Latona mother of fine children” (*TGF* adesp. 178), and who responded to the same words of another patient by citing the Homeric line “death was the fate of Patroclus as well, who was far better than you” (*Il.* XXI 107). Zeuxis had gleaned this piece of information from the work of Bacchius: Amneris Roselli has recently demonstrated that the original character of the anecdote was far from having the negative connotation portrayed by Zeuxis and Galen,²⁰⁹ and that it invoked the topos of the *contemptus mortis*.²¹⁰ In actual fact, once the anecdote is cleansed of the deforming filter of the Empirical source, it seems to indicate a link with the ethical-philosophical tradition of biographies like that of Diogenes the Cynic,²¹¹ a forerunner of the *Chreiai* genre, which had the aim of illustrating the coherence between the life and the doctrine of the character in question by narrating episodes of a person’s life but, above all, ‘highly revealing’ sentences uttered by the character. The *Chreiai* arose from the model of Xenophon’s *Apomnemonemata*, and it is no coincidence that the latter work bears a title similar to that of Bacchius. It is thus a bio-ethical text, ‘internal’ to the school, highlighting the bond linking the Herophilean *milieu* to the contemporary philosophical culture and interpreting in its own manner the identity of βίος and τέχνη (parallel to that between philosophical doctrine

209 Roselli [2009] 69–74, who believes that the analogous anecdote of a rough answer by Herophilus to the philosopher Diodorus Cronus (T15, von Staden) may also derive from the same work by Bacchius. This seems probable if one considers that Sextus (*Pyrr.* 2.245) also quotes it as a lovely ‘reminiscence’ (ἀπομνημόνευμα) of Herophilus. Fraser [1972] 11a 533 (n. 204), remarks “The third century work of Bacchius . . . seems to have been a memoir of his own teacher, and not a historical work in the same sense” (*scil.* like Heraclides’ work on the Empirical school).

210 The aim of these quips of preparation for death, which can be seen as belonging to the tradition of spiritual exercises, could also reveal a τέχνη ἀλμπίας, like that attributed to Antiphon (87 A 35 DK: note that the source, Plutarch, speaks of an application of this *techne* to the sick (see Pendrick [2001] 30–31, 95, 241), based on different philosophical premises compared to the consolatory *ethos* that was to gain great popularity in the Roman era.

211 Fragments of a biography of Diogenes are attested in a papyrus, PVindob G 29946, dated to the 3rd century BC, and they attest to its circulation in Egypt during the age of Bacchius: see G. Bastianini in *CPF* [1992] 99–143.

and life, so characteristic of the Hellenistic schools) which would later become a conventional feature of the encomium of a physician.²¹²

Doxography as a manner of dealing with a scientific problem by starting from analysis of the earlier theories has Aristotelian roots: the Aristotelian doxography on the causes of disease, preserved in Anonymus Londiniensis,²¹³ makes extensive use of the diairetic method and draws on well-known Aristotelian categories.²¹⁴ Its character is positive, tending to highlight certain elements as “foreshadowing”, in an implicit history of scientific author-oriented ‘progress’. However, this kind of doxography has no continuity in what is known so far about the Hellenistic schools. Rather, it is closer to the tradition of Theophrastus’ *Physikai doxai*, later incorporated into Aëtius, than to the knowledge derivable from available evidence on the doxography of the medical schools.

In this regard, a growing importance of ‘doxography’ with apologetic or proreptic purposes can be observed for the Hellenistic period, and the following typologies can be listed:

a) works with a predominantly polemical intent, among which Herophilus’ *Against common opinions* and Andreas’ *On false beliefs* can be included. In the Empiricist school, we have knowledge of an analogous work, Serapion’s *Against the schools (haireseis)*,²¹⁵ which seems to have been the first to use the term *hairesis* in the sense of a community that shares a body of doctrines. Works displaying a polemical approach are assumed to have contained a defense of a given author’s position against other positions, but nothing indicates that they may have represented a systematically historiographic approach.²¹⁶

b) a historiography apparently internal to the Herophilean school only. It would appear that the historiographic genre was not cultivated by the Empirical school, apart from the work by Serapion of Alexandria cited here above, while the idea that Heraclides of Tarentum wrote a treatise on the Empirical School, *περὶ τῆς ἐμπειρικῆς ἀλρέσεως*,²¹⁷ should be abandoned. In contrast, at no time

212 Von Staden [1997a] 157–172.

215 Frr. 1 and 144 Deichgräber.

216 An extensive discussion in von Staden [1999a] 144–149; 157–158; 160–163.

217 This information, derived from the interpretation of Deichgräber [1930] 37 concerning a passage from Gal. *Libr. Propr.* in the Müller edition (*Scr. min.* II 115), is today superseded by the new edition of Boudon-Millot [2007a] II.3, p. 163, 16–17, which reconstructs, on the basis of the Arabic translation, two different titles of Galenic works ‘*Synopsis of the works of Heraclides*’ and ‘*On the Empirical school*’.

in the history of the Herophilean school was there such a heavy concentration of works of this kind as at the end of the 1st century BC: comprehensive works covering physiological and pathological theories with their dual purpose, apologetic and protreptic. Such works include that of Apollonius Mys (1st century BC–1st century AD), of Heraclides of Erythrae (1st century BC) and of Aristoxenus (1st century BC–1st century AD), all titled *On the school of Herophilus*. The common source is Galen's treatise *Diff. puls.*,²¹⁸ in which they are presented as a homogeneous group, apparently concentrated around debate on sphygmology. In von Staden's view, the cause of such a concentration lay in the "growing insecurity of this school within the world of medicine".²¹⁹

A clear-cut definition of the work *Opinions* (Ἀρέσκειντα) by Alexander Philaethes (1st century BC–1st century AD), the title of which seems to imply a doxographical character, cannot easily be given. However, the only source of the title is *De puls. diff.* IV 4 (from Aristoxenus?),²²⁰ in a passage where Galen speaks of Alexander's double definition of the pulse, adding that Alexander, convinced he had some persuasive arguments on the theme, described them in his work. Nothing suggests that there was a comparison among opinions but this may be the result of a cut in the information provided by Galen or in the source he was using. It is nevertheless certain that it was a text containing a number of arguments, and this is not in contrast with what emerges from the text of Anonymus Londiniensis, where Alexander Philaethes' name almost always appears in conjunction with Asclepiades of Bithynia,²²¹ and Alexander very likely constitutes the source for the knowledge of Asclepiades. The material presumed to derive from Alexander is set in a context with a marked dialectical approach. It may be a coincidence, but when Anonymus for the first time cites the two authors polemically, taking up a stance against them, the sentence is introduced by the expression (XXIV 27) καὶ γὰρ ἀρέσκει ἡμῖν. If the source was the work *Opinions*, it is conceivable that rather than being constructed in the form of a doxography of an Aristotelian type, similarly to that on the causes of disease preserved in the first part of the text of Anonymus,²²² it was drawn up according to the *thesis* method, where a propo-

218 10, VIII 746, 9 ff. K. Galen seems to have used the text of Aristoxenus as his direct source, although he mentions this author only rarely (von Staden [1999a] 170–176).

219 Von Staden [1989] 541, cp. 457.

220 VIII 725, 17–726, 12 K. = Heraclides fr. 39 Guardasole. See von Staden [1999a] 165; von Staden [1989] 532–539.

221 An. Lond. XXIV 31, XXXV 22, 54; XXXIX 1 (Manetti [2011a]).

222 Von Staden [1999a] 186, also finds it "puzzling" that the ancient sources are silent on the subject of doxographic or historiographic treatises within the school of Erasistratus as opposed to the evidence of such activity among Herophileans and Empiricists.

sition is stated and arguments for and against are put forward.²²³ But all this remains undemonstrated.

Finally, the *Vita Hippocratis* attributed to Soranus records a treatise *On the hairesis of Hippocrates* by an Ischomachus (*CMG* IV, p. 175, 9–12), who cannot be precisely dated. As far as we know, only Galen speaks of a ‘Hippocratic hairesis’: this suggests rather a late redefinition of the Hippocratic heritage, dating perhaps between the 1st century BC and the 1st century AD.²²⁴

Within the framework of exegetic activity in the sphere of medicine outlined so far, one element is conspicuous by its absence: there is no trace of any exegetic or doxographic or historiographic activity whatsoever in the tradition headed by Erasistratus,²²⁵ the great physician who was a contemporary of Herophilus, even though he enjoyed continuous reception at least until the age of Galen.

4 Medicine and Culture in the Roman Empire up to Late Antiquity

By the imperial age, the schools of medicine had become distributed among the centers of ancient tradition such as Cos and Cnidos, Alexandria and Pergamon and other cities such as Corinth, Smyrna, Laodicea, Ephesus, and above all Rome, where the innumerable opportunities attracted a growing number of physicians eager to build up a brilliant career.²²⁶ In this context, the concept of a school should not be taken as meaning a *hairesis* (*i.e.* an organization associated with a specific doctrinal approach) properly speaking:²²⁷

223 The text bearing the title “*Diktyaka*” by Dionysius of Aege, which we know from Photius’ *Library* (185, 211), has a strongly dialectical structure (each of the chapters is devoted to demonstration of the truth of a given argument, immediately followed by its confutation), was previously considered by H. von Arnim to be the work of a physician of the Hellenistic age, but in actual fact it is difficult to date the text in question (most recently, von Staden [1999a] 177–187, with the previous bibliography).

224 It is not necessary to suppose that Ischomachus lived after Galen (von Staden [1999a] 185 n. 119). Soranus’ text is not certain (Ἰστούμαχος in the mss.), but if the correction by C. Keil is accepted, we must take into account that an Ischomachus is also quoted twice in Erotianus’ *Lexicon* (p. 47, 1 and 103, 15 N.), which thus gives us a *terminus ante quem*.

225 Already von Staden [1999a] 186 ff.

226 Although Greek physicians were present in Rome from as early as the 2nd c. BC, and Asclepiades of Bithynia had built up a great following between the 2nd and 1st c. BC, the opportunities opened up by the new Imperial structure changed the situation, cf. Nutton [2004], chapters 11 and 12.

227 On the concept of *hairesis*, see von Staden [1983].

rather, it indicated the educational background that could be acquired by working in the entourage of celebrated physicians in the various cities. The great physicians, the famous anatomists such as Marinus and Quintus, in Alexandria or Rome, offered not only practical training but also lectures devoted to exegesis of the Hippocratic texts. Knowledge of the rudiments of medicine also formed part of the general cultural background of the Roman ruling class, which provided patronage for the career of this or that physician.²²⁸ Within this context the Methodical school (above all of Thessalus in Rome during the age of Nero), which claimed to be able to train a physician in six months,²²⁹ certainly appeared to be a drastic innovation, but it did not succeed in changing the high-level professional education that included a guided reading of the ancient medical texts, especially those of Hippocrates. Exegesis was often entrusted only to oral lectures or, if it was communicated in written form, it probably did not have a vast circulation beyond the medical *milieu*. Galen reports on the comments of Quintus, who had not left any written testimony, but also on the difficulty of tracing Numisianus' written commentaries. Therefore, when Galen asserts that he wrote the first commentaries for himself or upon the request of some friend, his statement can be considered substantially trustworthy.²³⁰

Apart from the *Lexicon* of Erotianus (and a few works of Soranus), the entire Hippocratic exegesis produced in the first two centuries is known to us through Galen. He is thus the pivotal element of our knowledge, a by no means neutral filter of information concerning the physicians who had preceded him. This implies that it is vital to bear in mind his own position, on the basis of which he awarded Hippocrates an exceptional role in the history of medicine, as the founder of the dogmatic school, reinterpreted above all in the light of the humoral theories of *De natura hominis*. It would appear that a tradition of exegesis for other 'ancient' medical authors never rose to prominence, as compared to the renown of Hippocrates.²³¹ For example, Galen has knowledge of different copies of Diocles, which present variants of the text,²³² and he states

228 See Johnson [2010] 74 ff. about the reading communities at Rome in Galen's times.

229 See Tecusan [2004] fr. 150 (= *Dign. Puls.* I 1, VIII 770 K), cp. 155, 203.

230 On Quintus and his school, Manetti-Roselli [1994] 1580–1589; Grmek-Gourevitch [1994] 1491–1528; on the scanty circulation of the commentaries of Numisianus, for ex. *De ordine libr. suor.* 3.6 Boudon-Millot; on the composition of his commentaries, cf. *Gal. Libr. propr.* 9.1–6 Boudon-Millot. See also Sluiter [1999].

231 On the works Galen devoted to the exegesis of authors other than Hippocrates, see *infra* § 4.1.2.

232 Fr. 188 van der Eijk, on variants of Diocles' *Matters of health*.

that Diocles' *On things in the surgery* circulated in his own times under various titles. Yet Galen seems to be fairly untroubled by this circumstance and is not prompted to devote special attention to the problem.²³³ He is far more concerned about safeguarding the correct transmission of the recipes, which he sets out several times in the pharmacological treatises,²³⁴ where, however, his interest is primarily of a practical order.

4.1 *The First Two Centuries of the Empire up to Galen*

4.1.1 The Authenticity of the 'Hippocratic Works', the Editions and the Lexicons

The number of works attributed to Hippocrates increased slowly over time, but the first attestation of a list of 'authentic' works is not found until Erotianus' (1st c. AD) *Lexicon of Hippocrates*, by which time the concept of criticism designed to examine the authenticity of works had become well established. It is a very extensive list, presenting the *definitely* (βεβαίως) Hippocratic works according to a precise theoretical organization, grouping together first of all the works of semeiotics, then the works on nature and causes, and finally the therapeutic works, themselves divided traditionally into surgical and dietetic. A mixed group made necessary by the classificatory difficulties should also be included among the therapeutic works.²³⁵ Lastly, the final part is devoted to the state of the art. This structure reflects the organization of contemporary medicine and offers a systematic framework vastly different from the list ascribable to Bacchius. There is an evident gap between Erotianus and the sources pertaining to the Hellenistic situation, and with regard to the remainder we derive information above all from Galen. Some scholars argue that Galen wrote a work devoted to examination of Hippocrates' authentic and spurious works,²³⁶ but this is uncertain, whereas Galen explicitly mentions in

233 Fr. 160a van der Eijk. For a putative problem of interpretation of the text of Herophilus, see T39 von Staden = Gal. *Dign. puls.* I 3, VIII 954 K.

234 See *infra* in this paragraph.

235 The list was evidently authoritative and widespread, as shown, for instance, by the fact that Erotianus included the *Prorrhetic* II in it even though he was convinced of its lack of authenticity, saying that he would demonstrate it elsewhere (p. 9, 8 N): Roselli [2000] 180 recalls the order in which information on a disease is given in the technical-therapeutic treatises. It is remarkable that Erotianus, during the course of the work, adopted a different order of reading.

236 Mewaldt [1909], updated by Boudon-Millot [2008], who quotes Ḥunain ibn Ishāq's *Risala* (82); doubts on the Galenic authorship of the work have been raised by Smith [1979] 169 n. 85, shared by Manetti-Roselli [1994] 1555 n. 95. On the overall discussion of the issue, Boudon-Millot [2008] 79 ff.

his commentary on *Epid. II* that the question had been discussed previously.²³⁷ The list given by Erotianus contains *Oath*, cited for the first time deferentially just a few years earlier by Scribonius Largus in his preface,²³⁸ and *Law*, neither of which were ever mentioned by Galen. But more generally, Erotianus bears witness to the persistent uncertainty of some titles (as also testified by Galen's *Glossary*) and also some absences (e.g. *De carnibus*, *De victu*, *Praecepta*, *Epistulae* ecc.).²³⁹ From as early as the beginning of the Alexandrian period, the quantity and variety of works attributable to Hippocrates must have resulted in the need to assess their authenticity, but virtually our only source allowing a glimpse of the protracted question is represented by Galen. Three categories of authenticity are widely employed by Galen and had probably been already employed before him: the most genuine texts by Hippocrates, the genuinely Hippocratic texts (such as those written by close associates, for instance by his son Thessalus or his son-in-law Polybus) and the spurious ones.²⁴⁰ The considerable divergences in doctrine and type of writing were addressed firstly by setting the works in the framework of the biography and *genos* of Hippocrates. Thus there had been some proposals to attribute *On joints* and *On fractures* to Galen's grandfather, Hippocrates the son of Gnosidicus; similarly the group of *Epidemics II*, IV, VI, with its characteristic as a collection of personal notes, had prompted the suggestion that it was a re-elaboration by Thessalus, the son of Hippocrates, of material derived from his father;²⁴¹ Dioscorides (early 2nd c. AD) had proposed identifying the author of *On diseases II* as Hippocrates, son of Thessalus, grandson of the great Hippocrates.²⁴² In parallel with this search for authorship, attempts were made to identify sections regarded as spurious within 'authentic' works, as in *On the nature of man* and *On regimen in acute diseases*, or in *Coan prenotions* which was regarded as a blend of authentic material derived from other Hippocratic texts (*Aph.*, *Prog.*, *Epid.*), with spurious additions.²⁴³ Extremely useful information can be gleaned from the distinction often drawn by Galen—but certainly predating him—between

237 *In Hipp. Epid. II*, CMG V 10.1, p. 310, 41.

238 *Comp. praef.* 5, p. 2, 20–25 Sconocchia.

239 Some doubts concerning the absences may be due to variations in the titles: some of the absent works may have been cited with a different title; cf. for the complete list Anastassiou-Irmer [1997] I, 508–509.

240 Flemming [2008] 341–342.

241 Gal. *Diff. resp.* VII 825, 2–5 K.; 854, 12–855, 7 K.; Gal. *In Hipp. Acut.*, CMG V 9.1, p. 135, 8–10; cf. *In Hipp. Fract.* XVIIIB 324, 1 K.; on *Epidemics* see *Diff. resp.* VI 891, 2–4 K etc.

242 For *Morb. II* see *In Hipp. Epid. VI*, CMG V 10.2.2, p. 55, 16 ff.

243 *On the nature of man*: Gal. *In Hipp. Nat. hom.*, CMG V 9.1, pp. 3, 11; 7, 15–8, 32; 9, 7 etc., see Anastassiou-Irmer [2001] II 1, 358; *On regimen in acute diseases*: Ath. 57c, Gal. *In Hipp.*

works composed for publication (*Epid.* I, III), unfinished works (*Off.*) and notes designed for private use (ὑπομνήματα, *Epid.* II, VI). Naturally, some works were judged as entirely spurious (*Epid.* v, VII, *Gland.* and *Prorrh.* I for Galen).²⁴⁴ Some ancient attributions, such as the attribution of *Nat. hom.* and *Octim. partu* to Polybus²⁴⁵ and that of *On breaths* to Hippocrates, are treated in a differentiated manner by Galen, according to whether or not the work in question hampered the construction of ‘his idealized and updated Hippocrates’. Thus the work *On the nature of man* formed the mainstay of Galen’s representation of Hippocrates: accordingly, Galen decidedly rejects its attribution to Polybus, and in the case of *Octim. partu.*, a marginal work in his framework, he cites Polybus as merely one among the possible hypotheses, whereas with regard to *On breaths*, which he cites several times, he veils it in a sort of silent censorship, ignoring it throughout his long exegetic activity.²⁴⁶ But overall, the set of works attributed to Hippocrates, can at the time of Galen still be depicted as a circle at whose centre there stand the ‘most genuine’ works, with the others radiating outwards from the central core, gradually decreasing in authoriality with increasing distance from the centre. This explains why some works that are absent from Erotianus’ list (*e.g. De victu*) or considered spurious by Galen (*Morb.* I) are nevertheless glossed in the lexicons of the two authors.

The lexicography of the imperial age and subsequently of late antiquity endeavoured to provide a systematic account of the immense erudition accumulated in the previous centuries through work which, in that earlier period, had focused directly on documents. Now attention was directed to drawing up lexicons of a monumentally large nature, starting from a huge array of previous works (for instance the lexicon of Pamphilus, organized by themes and by alphabetical order within each theme), or collections representing a new genre

Acut., CMGV 9,1, p. 277, 3–5; *Coan prenotions*: Gal. In *Hipp. Epid.* III, CMG V 10,2,1, pp. 13, 5 ff., 62, 7 ff.

244 In *Hipp. Art.* XVIII A 379, 6–14 K; In *Hipp. Prorrh.* CMG V 9,2, p. 13 27 ff., 67, 29 ff. and *passim*.

245 Cited both by Aristotle in *Hist. an.* III 3, 512b12–513a7, and also in the doxography of Anonymus Londiniensis (see *supra*); *De octim. partu* is cited, in Aët. doxographer, Ps. Plut. and in Clem. Al. as being by Polybus, in what seems to be a peripatetic doxographic tradition: Anastassiou – Irmer [1997] I, 374–378. In these works no connection between Polybus and Hippocrates is mentioned: Smith [1979] 219–222 maintains that Polybus was inserted only later into the Hippocratic authorship as Hippocrates’ son-in-law.

246 The text of *Flat.* is reduced essentially to two sentences of generic gnomic content, cited in an anonymous manner: namely treatment through contraries, which is much cited, *Flat.* 6 (VI 92, 10–11 L), and the difference between individual constitutions (*ibid.* 98, 7 L: see Anastassiou-Irmer [2001] II 1 281–287). Another silent omission is that on *De morbo sacro*, which is close to *Aër*: Anastassiou-Irmer [2001] II 1 340–341, [2006] II 2, 224–230.

organized only by theme (Pollux). At the same time, work was also devoted to producing epitomes and extracts (Vestinus and Diogenianus). Little by little the function of lexicons underwent substantial change, becoming increasingly independent of the texts from which they drew their origin. The work of Erotianus, who lived in Rome at the time of Nero, basically represents a trend towards conservation of the Hellenistic tradition, whereas the *Hippocratic Lexicon* of Dioscorides, the editor of Hippocrates during the age of Hadrian, seems to be influenced by a new perspective. Galen's *Hippocratic Glossary* also represents a new and independent tool, with its rigorous alphabetical order. The medical and Hippocratic materials would later be partly incorporated into the *Onomasticon* by Pollux (2nd c. AD) and in the *Lexicon* of Hesychius (5th–6th c.).²⁴⁷

Erotianus' work²⁴⁸ has come down to us in a mutilated and drastically revised version: it has been alphabetized and abridged, but it is nonetheless the main source for the history of Hippocratic lexicography. In its original structure the *Lexicon* presented the glosses in the same order as the flow of the text, thereby once again bearing witness to the role of glossography as a direct support for text exegesis. His main source is Bacchius' *Lexeis*, but he also makes use of lexicons of a later date.²⁴⁹ Erotianus' *Lexicon* begins with an extensive introduction, of an apologetic nature, in which he outlines the history of Hippocratic glossography (emphasizing the role of grammarians in addition to that of physicians), and defends Hippocrates against the charge of intentional obscurity. In this perspective, he places Hippocrates among the ancient authors on a par with Thucydides and Herodotus.²⁵⁰ His exegetic aim thus focuses on 'obscure' expressions rather than common words, similarly to the approach that would later be adopted by Galen in his *Glossary*, but the linguistic material Erotianus has gathered together is vast and extremely varied. At the end of the proem he gives the list of works by Hippocrates, thereby perhaps testifying to the

247 Wellmann [1931] 46; Degani [1995] 505–527; most recently Perilli [2006] 174–175. In this volume, see Dubischar § 2.2.3 and Tosi § 1.1 and 2.1.

248 Ilberg [1893], Nachmansohn [1917], Grensemann [1964] and [1968], Jouanna [1989], cf. also Smith [1979], Manetti [1999b]; Irmer [2007]; Perilli [2008].

249 Wellmann [1931] 29 ff. The fragments of Erotianus edited by Nachmansohn, traceable in scholium form in the Hippocratic mss. M and R, are sometimes of certain Erotianean ascendancy, such as fr. 8 and 60 (101, 8; 116, 3 N.), but sometimes they are closer to Hesychius or to one of the sources of the latter: additionally, they sometimes derive from commentaries by Galen or from other sources (Perilli [2008] 38–39): see the case of Metrodorus, cited in the lemma δέτρρον (fr. 19, 105, 10–14 N.), who, if he is the pupil of Sabinus, clearly cannot have been mentioned by Erotianus (Anastassiou-Irmer [1997] I, 225).

250 Manetti [1999b].

vulgata of the dogmatic school. But it is difficult to attribute specific characters to Erotianus that would distinguish him from those taken from his sources; moreover, the fact that he frequently uses a rather generic formula to indicate the existence of text variants, with wording such as “in some manuscripts” or οἱ δὲ γράφουσιν,²⁵¹ does not mean we can assume that he had these copies at his disposal, because the item of information in question could derive from his sources, *e.g.* from Bacchius. In actual fact, what he seems to regard as most relevant is the purely linguistic aspect, in particular with regard to the different meanings of a given word.

Dioscorides (1st–2nd c. AD) is cited in Galen’s *Hippocratic Glossary* as the author of a *Lexicon of Hippocrates* composed of many books, and he is criticized for having attempted—and failed—to explain the entire range of vocabulary (*lexis*) used by Hippocrates and also for explaining the clear words rather than merely the ‘glosses’. Galen’s criticism is revealing in the sense of showing that Dioscorides’ *Lexicon* did not only address language problems but also concerned itself with *Realien*: for instance, it provided the identification of all the plants mentioned by Hippocrates, on the basis of lexicons or specialized texts such as those of Sextius Niger, Pamphilus and Dioscorides of Anazarbus, and it also identified all the cities and heavenly bodies. It was thus an encyclopedic tool for an understanding of the Hippocratic texts, in all their intricate facets. It would probably have had a preface in which Dioscorides explained his stance as a *grammatikos* and his intention to explain the whole *lexis* of Hippocrates. He may also have given information on the authenticity of the Hippocratic works (not unlike the procedure observed in Erotianus’ preface): for it seems highly likely that his attribution of *De morbis* II to the grandson of the great Hippocrates sprang from a context of this kind.²⁵² It is not clear what kind of order was imposed in Dioscorides’ *Lexicon*, but one may surmise, on the basis of a polemical comment by Galen, that it was alphabetical.²⁵³

251 Cf. Nachmanson [1917] 500–504.

252 On his boastful claim to be *grammatikoteros*, cf. *infra* n. 287; for the attribution of *De morbis* cf. *supra* n. 242; probable mention of the Hippocratic genealogy in Gal. *In Hipp. Nat. hom.*, CMG V 9,1, p. 58, 11.

253 Gal. *Gloss. XIX* 68, 4–7 K; already Smith [1979] 162, Manetti – Roselli [1994] 1630, n. 382: this is presumed to have been an alphabetic ordering based only on the first letter. It is possible that the *Lexicon* of Dioscorides contained the information on the Hippocratic place of each gloss.

Today we know that Galen's *Glossary* is one of his early works.²⁵⁴ It testifies for the first time to the imposition of a rigorous alphabetical order, in the modern sense, which takes into account not only the initial letter but also the order of letters in the whole word, and also of subsequent words in the case of composite *lemmata*.²⁵⁵ Thus it was not destined to function as an aid to a reading of the Hippocratic text, but it must instead have been intended for an independent use, as suggested both by the alphabetical order and by the absence of references to the Hippocratic places (with the marked percentage of unlocalizable *lemmata*).²⁵⁶ Its general character also explains the decision to include *lemmata* from works regarded as spurious. Galen draws mechanically on the material he had available, and sometimes derives his exegesis from broader contexts, e.g. commentaries.²⁵⁷ The redaction is poor from the linguistic-stylistic point of view and also as regards the content; this has led to the suggestion that it may have been a rough draft, or a remainder of short records, like the notes he jotted down upon reading the Empiricists, or possibly it may have been the product of a collection of short entries drawn up by another writer to whom Galen had assigned the task, reserving for himself the composition of the proem and the polishing of the overall text, which he then never carried out.²⁵⁸ Galen asserts that he will restrict himself to an explanation of the 'glosses', the latter being taken to signify words that have fallen out of use, or words reflecting Hippocrates' deliberate manipulation of common usage. The work is explicitly addressed to beginners.²⁵⁹ Here we will mention

254 After the discovery of *De indolentia*, 35 (Boudon-Millot – Jouanna [2010] 12, 14–17) in which it is stated that Teuthras, the intended recipient of the *Glossary*, died in Rome in the first great plague (165–166 AD), its composition should be dated to the period of Galen's first stay in Rome. On the general characteristics of his manner of doing lexicography, Skoda [2001].

255 Perilli [1999]; Perilli [2000a]; Ilberg [1888], on the other hand, considered it to be a later intervention by a scrupulous copyist.

256 Perilli [2006] 176, ascribed the lack of interest in the lemma and in its form to the intention that it should, precisely, be a tool for general use.

257 The contradictions with his commentaries can be explained because he draws directly on his sources, such as the encyclopaedic lexicon of Pamphilus (1st c.) or the *Lexicon* of Dioscorides: Perilli [2006] 178–179.

258 On the readings of the Empiricists, see Deichgräber [1930] 415, 14–16. On the mechanical selection of material derived from Erotianus in the gloss *κάμμαρον* (XIX 107, 14–108, 5 K.), see Perilli [2006] 189–192. His mention of this in *Libr. propr.* is likewise very cursory, and in fact the work is placed in the appendix to the section on Hippocrates, without awarding it any special emphasis at all: 9.13, pp. 161, 20–162, 3 Boudon-Millot.

259 *Gloss. XIX* 65, 6–13 K, 67, 17–68, 4 K.

only *en passant* the works of a lexicographic nature that Galen devoted to Attic vocabulary (in alphabetical order), or to the language of Eupolis, or Cratinus etc., all of which are lost (*Libr. propr.* 20).

A rather different typology, closer to the thematic collections and the *Onomastica*, is found in a work by Rufus of Ephesus (80–150 ca.) and in that of Soranus of Ephesus (second half of 1st c.–first half of 2nd c.).²⁶⁰ These are not lexicons devoted to the exegesis of authors, but technical terminological repertoires destined for use by physicians; however, they do imply a comparative approach to anatomical terminology, which also takes into account the literary sources and an ancient branch of knowledge like etymology. In Rufus' work *On the names of the body's parts*, which is extant, the layout of the anatomical lexicon is organised *a capite ad calcem* and citations of ancient authors (Homer, Aristotle, Epicharmus, Empedocles, Sophocles, Zeno the Stoic), are utilized, certainly by making use of lexicographic sources.²⁶¹ In contrast, Soranus' work *Etymologies of the body of man*²⁶² is lost and barely reconstructible, although numerous fragments are preserved in later *Etymologica* and other *Lexicons*.²⁶³

After the work of Bacchius of Tanagra, the first mention of an edition of Hippocrates is a reference to two 'complete' editions, the second of which was drawn up not long after the first, during the era of Hadrian, namely the edition of Artemidorus Capito and that of his relative Dioscorides,²⁶⁴ on both of which we have specific evidence given by Galen. It was noted earlier in this paper that during the previous centuries innumerable copies of the Hippocratic texts must have been made, but the general practice, whether it was a question of *scriptorium* or a personal initiative, consisted in producing a copy that was correct with respect to the model, followed by only occasional checking of a second manuscript.²⁶⁵ Galen, on the other hand, often speaks of comparisons among various different manuscripts, not only in the commentaries

260 For the biography of the two physicians, Hanson – Green [1994] 981–988; Sideras [1994] 1085–1088.

261 For ex. the citation of Hom. *Od.* 9.373–374 (141, 6–12 Daremberg), with the associated commentary, may have an erudite origin and the citation of Epicharmus (143, 10–12) presupposes recourse to a specific lexicographic tradition. See also the etymology of the cultural epithet of Εἰλειθυία Ἀμνιάς (229, 1–3), traced back to the Empedoclean use of ἄμνιον.

262 Hanson – Green [1994] 1021–1023.

263 Also independently in *De natura hominis* by Meletius, cf. Hanson – Green [1994] 1021–1023.

264 Ilberg [1890], Manetti – Roselli [1982] liii–lv; Manetti – Roselli [1994] 1617–1633, Roselli [2012a] and [2012b]. For the complete edition of Hippocrates, see Gal. *In Hipp. Off.* XVIII B 631 K; *In Epid.* VI, CMG V 10.2.2, p. 415, 17–21.

265 Cf. *supra* § 3.1.

on Hippocrates, but particularly in the pharmacological works. With regard to the latter category, he seems to have made comparisons repeatedly among two or more of his sources. But his main concern essentially focused on the practical aspects of the recipes, the exactness of the quantities indicated in the recipes, which every physician must learn to evaluate. Thus he rarely takes a position with regard to variants in recipes, but when he does, his assessment is based not on textual elements but on his own professional experience.²⁶⁶ In short, he did not devote in-depth attention to drawing up a correct 'edition' of these works.

Galen states that he often also composed various works for private use, either for himself or to give them to a friend or pupil, and sometimes also for more general circulation. In the case of private use of such works, this presumably implies a conception of writing as an 'exercise', an essential part of one's cultural and educational training,²⁶⁷ while the second typology reveals a fairly common characteristic, namely the semiprivate circulation of texts or, in some sense, their circulation through personal channels of communication.²⁶⁸ In Galen's perspective, the difference between works destined for private use versus those intended for publication consisted not so much in a different degree of composition or polishing of the text as, rather, in determining whether his intended public was a single individual or an 'average' reader. Thus what was relevant was the nature of the intended reading public.²⁶⁹ Texts composed for friends lacked an indication of the author and a title, as compared to published

266 Totelin [2009] 84–91. On the transmission of Galen's pharmacological texts, see von Staden [1997c] 66–71; von Staden [1998b] 82–87. In *De indolentia* 31–37 Galen clarifies the value and the difficulty of the accumulation of materials in this type of text, relating how he came into possession of ancient parchment codexes of recipes. Scribonius Largus *Comp.* 97, speaking of the recipe of Paccius Antiochus, delivered to the emperor in written form only after Paccius' death and thereafter available in the public libraries, confirms Galen's description, underlining the precious nature of such texts.

267 On the composition of works as an 'exercise', Gal. *Libr. propr.* 2.4; 3.7; 14, 9 Boudon-Millot: they include the first commentaries on Hippocrates, *On Crises* and *Difficulties in breathing* (9.1) and the commentaries on Aristotle (14.14).

268 Similarly in *De indolentia* 21, speaking of the fact that if the fire had broken out two months later, all his works would have had two copies one in Campania, and the other sent to his friends in Pergamon for delivery to the public libraries (διπλὰ γὰρ ἐγγέγραπτο πάντα τὰ πρὸς ἔκδοσιν ἤδη), Galen shows that he entrusted the circulation of his works to personal channels: see, quite recently, Dorandi [2012].

269 This conceptualization was also very useful to him in the distinction between published and unpublished writings, enabling him to identify and justify the 'incomplete' texts of Hippocrates, cf. Gurd [2011] 171–174.

works, and on occasion this favored their appropriation by dishonest persons. Essentially, his works *πρὸς ἔκδοσιν* “for publication” differed from those composed *οὐ πρὸς ἔκδοσιν* “not for publication” only in the approach to the content, and the term *ἔκδοσις* seems to limit itself to a generic indication of “publication, circulation”.²⁷⁰ However, Galen did undertake a form of ‘correction’ when some of his texts which he had circulated among friends were returned to him during his second stay in Rome,²⁷¹ and on each of these he set the title with the wording ‘for beginners’ before authorising their broader circulation. But this does not mean he was unaware of the substance of critical editorial work, as he explains in detail in *On the avoidance of grief (De indolentia)* 14, where he relates that he drew up a personal edition of many texts of philosophers and physicians, pointing out that the process of restructuring and revision includes correction of the readings, elimination of the superfluous, integration of what is missing and, in particular, the insertion of punctuation, which he specifically praises for its helpfulness in aiding text comprehension.²⁷² In this passage the term *ἔκδοσις ἐμὴ* (“my edition”) is used with the specific meaning of a philologically correct ‘edition’ even if it is not intended for publication but simply done for its own sake. In contrast to his custom when speaking of his own texts (whether intended for circulation or not), here the term *ekdosis* is used in the technical sense of the fruit of critical philological work (which does not, *per se*, imply collation of manuscripts). Galen shows himself to be an accomplished editor—rather more so, indeed, than in his commentaries—and seems to have written a new ‘fair copy’ as the product of his work.

An activity similar to that described by Galen in *On the avoidance of grief* probably underlies the two editions by Artemidorus and Dioscorides, which

270 Dorandi [2007] 103–127, and [2012]; Roselli [2012a]. For Galen’s use of the difference between a ‘published’ work and one that is ‘not for publication’ within the context of his specific project of self-characterization, see Gurd [2011], Dorandi [2012].

271 *Libr. propr.* 1.1 B.-M. However, Gurd [2011] 176–180, underlines that it was a question of correction of mistakes, whereas elsewhere he never admits a veritable work of revision; the distinction between works composed for publication and those not for publication was used by Galen to construct the image of his own work as a stable expression of his doctrine, which he regarded as never having need of revision, thereby revealing a close affinity with the attitude of the rhetoricians of the Second Sophistic.

272 P. 6, 8–18 Boudon-Millot – Jouanna [2010] *ὅσα μετὰ τὴν ἐπανόρθωσιν εἰς καθαρὸν ἔδαφος ἐγγράπτω μοι βιβλία τῶν ἀσφαλῶν μὲν, ἀμαρτημένων δὲ κατὰ τὰς γραφὰς ὅσον ἐμοῦ προηρημένου ἔκδοσιν ἐμὴν ποιήσασθαι, τῶν γραφῶν εἰς ἀκρίβειαν ἐκπεποιημένων ὡς μήτε τι περιττεύειν ῥήματα μήτε ἐλλείπειν, ἀλλὰ μηδὲ παραγραφῆν ἀπλῆν ἢ διπλῆν, ἢ κορωνίδα προσηκόντως τιθεμένην ἐν μέσῳ βιβλίων· τί δὲ λέγειν περὶ στιγμῆς ἢ ὑποστιγμῆς ὡς οἶσθα τοσοῦτον δυναμένας ἐν ἀσάφεσι βιβλίοις ὥστε προσέχοντα τὸν νοῦν αὐταῖς ἐξηγητοῦ μὴ δεῖσθαι.*

he defines as the most widespread and authoritative 'editions'²⁷³ of his time, although on numerous occasions he classifies these two editors as being among those who have no scruples about changing the 'ancient' text to solve difficulties.²⁷⁴ On this point the criticisms voiced by Galen, who aspired to be looked upon as the perfect commentator, as the one and only interpreter capable of understanding Hippocrates, can in no way be verified.²⁷⁵ Since Galen frequently treats the two editions in a common interpretive perspective with regard to the meaning of a given passage, in the past they were too often treated almost as if they were the outcome of a joint undertaking. Today it is clear that the two editions were independent,²⁷⁶ although it does appear from Galen that in some cases they shared a 'short' version of the text, in the sense that certain text segments were absent from both texts, and these were segments Galen himself suspected of being later insertions. Furthermore, they seem to have had in common a noticeable attention to language and an interest in reconstructing the original dialect of the Hippocratic text: this awareness of dialect features had been lost over time but its revival is in tune with the tendency observed in Hadrian's era towards a resurgence of interest in archaic culture.²⁷⁷ What is certain is that Galen used these editions more systematically only in his mature phase: citations of these two editions are rare in the group of the first Hippocratic commentaries, and give the impression of being later insertions.²⁷⁸ Then from a certain moment onwards he had one or

273 Galen uses the term ἔκδοσις κατὰ + acc, but in some cases he refers to them with the term ἀντίγραφα, probably alluding to the exemplars available to him, cf. Roselli [2012a] and [2012b]. On Artemidorus and Dioscorides, see also Ilberg [1890], Smith [1979] 234–140, Manetti-Roselli [1994] 1617–1633, Hanson [1998] 44–46.

274 Gal. *In Hipp. Epid. VI*, CMG V 10,2,2, p. 415, 17–21; *In Hipp. Nat. Hom.*, CMG V 9,1, p. 13, 19–24; For their textual innovations, cf. for ex. Gal. *Gloss. XIX* 83, 8–15 K; *In Epid. VI* CMG V 10,2,2, p. 4, 15–17; 314, 18–24 etc. A more favorable judgment by Galen emerges from the later commentary on *Aër*: (Jouanna [1996] 145 n. 278).

275 With regard to what Galen may have meant by 'ancient readings', cf. *infra* n. 355. On the affinity of some reading of Artemidorus and Dioscorides to the parallel edition of *Coac.* in comparison to *Prorrh.*, which could demonstrate that their readings originated from antiquity, in contrast to Galen's view, Roselli [2012b] 25–26.

276 Cf. the conclusions of Anastassiou – Irmer [2001] II 1, 483 and Roselli [2012b] 17.

277 Short versions: Gal. *In Hipp. Aph.* XVIII A 59–61 K; *In Prog.* CMG V 9,2, p. 243, 13; 326, 15–17; but omissions are also reported for each of the two. On questions of dialect, see *In Epid. VI*, CMG V 10,2,2, pp. 6, 13–14; 483, 28–30; for grammatical questions *In Hipp. Prorrh.* CMG V 9,2, p. 122, 24–28.

278 Roselli [2012b] 18 nn. 16, 20.

the other edition at hand, or possibly both:²⁷⁹ he definitely was able to take a close look at Dioscorides' edition—he describes its physical characteristics—but he only rarely dwells on any physical condition of Artemidorus' edition; consequently, the Artemidorean edition is harder to characterize.²⁸⁰ In only one case does Galen mention, ambiguously, a particular reading given by Artemidorus, saying that it was introduced by ἴσως, but it is not clear if this was a variant inserted in the margin or included in the text.²⁸¹ The impression one derives from Galen is that Artemidorus' text was more 'eccentric' as compared to the standard he would consider to be authoritative. For instance, several times Galen points out that Artemidorus is the only one whose text differs from that of all the other witnesses,²⁸² but this naturally is the fruit of Galen's own point of view. In another couple of cases Artemidorus seems to have endeavored to regularize certain constructions, for instance by reconstructing narrative nuclei within *Epidemics*, but elsewhere he appears to be concerned mainly with producing a reasonably meaningful text.²⁸³ In such cases Artemidorus seems to have drawn up a 'fair copy' which simply contains the text he had chosen.

Dioscorides' edition, on the other hand, offers an example of an erudite edition, certainly drawing inspiration from the model of the Alexandrian Homeric editions. The text is equipped with critical signs,²⁸⁴ and is structured into parts which sometimes bear subtitles; the punctuation is marked in a

279 Roselli [2012b] 23, points out that all the citations concerning the *Prorrhetic* belong to the third and last book of the commentary.

280 Probably one should exclude the hypothesis put forward by Smith [1979] 236 n. 82, who suggested that Galen had mainly used the edition of Artemidorus, which is said to have incorporated the results of Dioscorides' work; rather, what Galen says concerning the material appearance of Dioscorides' edition would appear, if anything, to suggest the opposite, namely that he mainly used the edition of Dioscorides, who was in the habit of putting variants in the margin and in one case seems to have annotated precisely the variant of Artemidorus, see *infra* and n. 288. But there is no conclusive proof.

281 Gal. *In Hipp. Prorrh.* CMG V 9, 2, p. 131, 21–132, 2. Elsewhere, ἴσως in the marginal annotations introduces an explanation, not a variant: see McNamee [2007] 208 (notes referring to Callim. *Coma Berenices*), 333 (notes referring to Pind. *Pae.*).

282 Gal. *In Epid. VI*, CMG V 10, 2, 2, pp. 176, 19; 309, 13; 395, 39 ff.; 500, 31.

283 *In Epid. II*, CMG V 10, 1, pp. 158, 4; 233, 20 ff. Alessi [2012] considers it a useful case to demonstrate that the medieval mss. of *Epidemics II* depended on the edition of Artemidorus, but the question remains doubtful.

284 He uses the *obelos* for expunctions: Gal. *In Nat. hom.* CMG V 9,1, p. 58, 7; *In Epid. VI*, CMG V 10,2,2, p. 283, 19 app. For the features of Alexandrian ἔκδοσις see Montana § 2.4 and Montanari § 1, in this volume.

careful and orderly manner, and it has marginal additions, double readings²⁸⁵ and also an indication of accents,²⁸⁶ at least in cases of ambiguity. These characteristics are definitely appropriate for one who cherished the ambition of being *grammatikoteros*.²⁸⁷ At times he mentions his sources (a variant found in two manuscripts) and in one case he seems to have inserted a marginal variant (which coincides with the text of Artemidorus), introducing it with ἴσως.²⁸⁸ Taken together, these features prompt the suggestion that Dioscorides' edition was not a text copied *ad hoc*, εἰς καθαρόν ἔδαφος like the one mentioned in *On the avoidance of grief*,²⁸⁹ rather, one feels that he may have modeled it on the ancient Homeric editions, building it up through the stratification of a long-term study, and that it probably constituted a 'school' exemplar, available for consultation in some library in Rome rather than a copy destined to the market.

The erudite character of this work by Dioscorides can be perceived even more clearly from the direct citation of his *Lexicon* in Galen's *Glossary* or from its indirect citation in the commentaries. Thus when Galen attributes to Dioscorides an explanation of his own textual choices, he is very probably drawing the information from the *Lexicon*. However, there remain a few rare cases that suggest the presence of brief annotations by Dioscorides

285 Marginal additions and multiple readings: Gal. *In Hipp. Prorrh.*, CMG V 9, 2, p. 176, 12–18; *In Epid. VI*, CMG V 10, 2, 2, p. 180, 9–12; 480, 40–43; signs of punctuation: *In Epid. VI*, 415, 23; small titles: *In Epid. III*, CMG V 10, 2, 1, p. 110, 2.

286 This item of information can be derived from Galen's *Glossary*: it seems evident to me that where Dioscorides offers a reading, with a specific accent, of an ambiguous lemma (περισπόμενος, δξύτόνωος), one should conclude that there was a corresponding sign in his edition: *Gloss. XIX* 120, 15–121, 2, 148, 8–9, 154, 9 K.

287 *In Hipp. Epid. VI*, CMG V 10, 2, 2, p. 83, 18–20: an ambition of this kind could be expressed by Dioscorides only in a preface to his *Lexicon*, cf. Roselli [2012a] 72 and *supra* in this paragraph.

288 *In Hipp. Epid. VI*, CMG V 10, 2, 2, p. 232, 20 ff., cf. *supra* n. 280. Another element that may perhaps be traced back to his *diorthosis* is an interlinear correction in a passage of the *Prorrhetic*. The variant he presents here is ἐπίσκληρον as compared to the lemma ἐπίσκληρος, but Galen then specifies that he added *supra lineam* a lambda between colons: this was a fairly common sign in the activity of the *scriptoria*, which restores the correct text, cf. *In Prorrh.*, CMG V 9, 2, p. 154, 9–16: see the discussion on the text and the possible interpretations in Roselli [2012a] 73–75, where, however, a scribal correction is suggested, and Roselli [2012b] 25–26.

289 I interpret the expression as 'a fair copy', not as 'sur une base saine' like Boudon-Millot – Joanna [2010] 6: see Manetti [2006], Garfalo-Lami [2012] 15, Roselli [2012a] 66.

in the margin of the text.²⁹⁰ Among the criteria of his working method, certain aspects can clearly be noted, such as attention to grammatical problems, recourse to Homeric exegesis and to literary references (Pindar), and a taste for rare words.²⁹¹

4.1.2 Hypomnemata and Syngrammata

Exegetic activity on Hippocrates, insofar as it can be reconstructed, was particularly intense in the 2nd century AD, but this may simply be due to the fact that Galen, our main source, was most familiar with the history of the period closer to his own time. For the earlier period, Soranus of Ephesus (*floruit* 98–138) is credited in late sources with a commentary on *Aphorisms* and a commentary on *On the nature of child*, but there are serious doubts with regard to the reliability of this information.²⁹² A contemporary of Soranus, Rufus of Ephesus (ca. 80–150), who was active both in his native city and in Egypt,²⁹³ was considered by Galen to be one of the recent commentators who was best acquainted with and best understood the Hippocratic texts, together with Sabinus,²⁹⁴ his younger contemporary. Testimony of their work remains in numerous citations in Galen's commentaries. But, as mentioned above, almost all of the well known physicians, who enjoyed a great following among the students flocking from many parts of the Mediterranean, engaged in teaching activity based on reading the Hippocratic texts. Galen himself assiduously studied under the guidance of great masters from his earliest youth onwards, first in Pergamon (Satyrus and Stratonicus, perhaps Aiphicianus), then in Smyrna (Pelops, per-

290 *In Hipp. Epid. VI*, CMG V 10, 2, p. 190, 23: in the case of *Epid. VI* 4.1 he added an *ἐκ* before *τούτου λαπασσομένου*, saying that he implicitly took it to be *χρόνου* or took it as *μετὰ ταῦτα*. This impression seems to be confirmed by the case of the commentary on *Epid. II* 2,14, where Galen (*In Epid. II*, CMG V 10,1, p. 222, 39–41) seems to imply that Dioscorides had a marginal note saying that the passage was in contrast with the previous one and was not self-sufficient: cf., for a similar case in *Aër*, Anastassiou – Irmer [2001] II 1, pp. 43–44. The hypothesis put forward by Ihm [2002a] 70, who suggests that it may only have been a case of punctuation, is not convincing. On the problem of whether Artemidorus and Dioscorides were *also* commentators, which in my view is to be excluded, cf. also Roselli [2012b] 17, see Anastassiou – Irmer [1997] I xxvi, who refers the reader to Ihm [2002a] 70 and 84. The definition 'commentator' appears only in the Arabic tradition (comm. on *Aër*: and Ibn abi Usaibi'a).

291 See the gloss *ἀπεβρήσσετο*, XIX 83, 11 K; *τροφιῶδες*, XIX 147, 4 K and *In Hipp. Prorrh.* CMG V 9.2, p. 134, 21.

292 Hanson – Green [1994] 1019–1021.

293 Sideras [1994] 1085–1088.

294 *De ordine libr. suor.* 3,11 Boudon-Millot.

haps Aiphicianus); later, during his many journeys, he sought out the teachers of his own teachers, that is to say, the school of Quintus. Quintus was a pupil of Marinus, a famous anatomist who lived in Alexandria two generations before Galen and revived anatomical studies after a prolonged period of decline. Galen read Marinus' work on anatomy, of which he composed an epitome, but he acquired indirect knowledge of at least Marinus' commentary on *Aphorisms*.²⁹⁵ Quintus, Marinus' pupil, who was active in Rome, had a fairly large school, but left no written works.²⁹⁶ Galen explicitly mentions that he sought as teachers the most famous pupils of Quintus: Numisianus, Satyrus, Pelops, Aiphicianus, Lycus,²⁹⁷ endeavoring to become personally acquainted with them or at least with their works.²⁹⁸ The picture that emerges from these passages in Galen reveals that much of their exegesis was oral, sometimes set down in the form of notes or short records by pupils for subsequent transmission, or occasionally written down by the teacher and made available to the pupils themselves.²⁹⁹ The difficulty involved in the circulation of these few written texts, and in actually locating them, was extreme. The basic infrastructure underlying Galen's Hippocratic exegesis resided in this store of materials he had accumulated over the years, which derived from a 'school-room' exegesis. This approach tended to adapt to different doctrinal orientations³⁰⁰ and generally corrected the text at hand wherever the latter diverged from contemporary medical knowledge,

295 See Manetti – Roselli [1994] 1580; Grmek-Gourevitch [1994] 1493–1503.

296 On Quintus, *In Hipp. Epid. VI*, CMG V 10, 2, 2, p. 412, 33–34; Grmek-Gourevitch [1994] 1503–1513.

297 On Aiphicianus, see Moraux [1983].

298 Galen travels to Corinth to search for Numisianus, and then to Alexandria, where he discovers that Numisianus has died; Galen then approaches Numisianus' son, Heraclianus, in order to try to obtain access to Numisianus' writings, but he is unsuccessful in this attempt (Grmek – Gourevitch [1994] 1513–1518); but he does succeed in reading some texts by Lycus, against whom he writes polemically in the commentary on *Epid. III* (CMG V 10, 2.1, p. 14, 4 ff.) and above all in *Against Lycus*, after having read Lycus' commentary on *Aph.* On all these figures, Manetti – Roselli [1994] 1580–1593; Grmek – Gourevitch [1994] 1519–1523..

299 Already Flemming [2008] 336. See the testimony of Galen on the readings of his teacher Pelops and of Numisianus in *In Hipp. Aër.* (Anastassiou – Irmer [2001] II 1, 44–46, in particular 45, 24–26): Galen distinguishes between the oral tradition of the commentaries of Pelops and Numisianus and the writing of the *Eisagogai* for Pelope's pupils. See also Anastassiou – Irmer [1997] I, 394.

300 Quintus' orientation seems to have been empirical (*In Epid. I*, CMG V 10, 1, p. 17, 3 ff.), but Aiphicianus shows Stoic tendencies (*De ordine libr. suor.* 3.10 B.-M.), while Lycus shows training in dialectics (Manetti – Roselli [1994] 1582–1585). Furthermore, it would appear that Lycus' exegetic attitude was open to utilization of all the texts of the *Corpus* (among

though it did not disregard the techniques of literary exegesis (choice of variants, comparison with other Hippocratic texts, use of grammatical or rhetorical concepts, etc.).³⁰¹

Rufus of Ephesus,³⁰² as far as we know, wrote commentaries on *Prorrhetic*, *Epidemics* II and VI, *Aphorisms*³⁰³ and *Airs waters places*.³⁰⁴ Galen held him in good esteem, judging that among the recent commentators Rufus was one who tended to preserve the ancient reading.³⁰⁵ In actual fact, it would seem from the cases cited by Galen that Rufus was a very learned commentator who made use of the commentaries drawn up by the Empiricists (Zeuxis for example) and also of ancient doxographic sources.³⁰⁶ Rufus carefully mentions the variants, discussing them with a view to establishing their medical significance, and does not hesitate to make corrections, displaying considerable ability in making conjectures.³⁰⁷

Sabinus,³⁰⁸ the teacher of Stratonicus of Pergamon, was active in Alexandria; he appears to have been the most “Hippocratic” of the commentators, in that he shares some of the fundamental doctrines of Hippocrates such as the humoral theory and that of *apostasis*.³⁰⁹ His work is thus an ‘internal’ exegesis, which seeks to give an orthodox interpretation within a teleological vision of

which the *Prorrhetic* and *Coan prenotions*), without ordering them into a hierarchy of the most ‘authentic’, in contrast to the practice generally adopted by Galen.

301 Manetti – Roselli [1994] see n. 299: in particular 1592

302 Manetti – Roselli [1994] 1600–1606; Sideras [1994], Ullmann [1994].

303 For the discussion of the commentary Rufus wrote on *Aph.*, see Sideras [1994] 1077–1253, Ullmann [1994] 1306; most recently, Fischer [2002] 311–313 (an observation of Rufus on *Aph.* 4.37 contained in Lat. A).

304 The commentary by Galen on *Aër*: confirms the existence of a commentary by Rufus (Anastassiou – Imer [2001] II 1, 30), denied by Sideras [1994] 1009 n. 154 (with previous bibliography).

305 Gal. *In Hipp. Prorrh.* CMG V 9, 2, p. 73, 10. *In Hipp. Epid. VI* CMG V 10, 2, 2, p. 174, 12 etc.

306 Gal. *In Hipp. Epid. VI* CMG V 10, 2, 2, p. 122, 7 ff., cf. 119, 12 ff.

307 See Gal. *In Hipp. Prorrh.* CMG V 9, 2, p. 73, 7–20, where in the commentary on *Prorrh.* I 59a he corrects the transmitted reading οὔρα δὲ πέποινα by changing it into οὔρα δ’ ἐπίποινα, thus showing consideration of the similarities in the writing: the text is incongruent since it defines ‘cooked’ urine as a negative symptom, whereas this cannot be accepted, given that coction is considered to be a positive process in physiological processes.

308 Manetti – Roselli [1994] 1607–1614.

309 On the self-styled Hippocrateans, Lloyd [1993] 401 n. 14. The list of Hippocratean commentators must include the author of a commentary on *Oath*, known from Arabic sources, ascribed to Galen (see *infra* n. 346): if Nutton [2012] is right in his suggestion that it could also be a work by a contemporary of Galen, like Satyrus, then it should be dated between 70 AD and 250 AD.

natural processes. Sabinus' known works include commentaries on *Epidemics* II, III, VI, as well as on such works as *On the nature of man*, *Aphorisms*, and perhaps also *Airs waters places*.³¹⁰ Gellius quotes Sabinus' commentary on *De alimento*.³¹¹ Sabinus offers an intensive reading of the Hippocratic text, working on the assumption that every word conveyed a conscious medical communication. He thus tends to over-interpret the biographical-documentary data, in order to connect the pathologies to the stories pertaining to the individual patients.³¹² Furthermore, since he lived in Alexandria during the age of Hadrian, it should be no cause for surprise to note that he also drew up an erudite commentary which makes use of many ancient authors, above all philosophers,³¹³ and also applies techniques of literary analysis (with discussion of variants). He engaged in critical assessments of authenticity with the customary methods: observing contradictions between the classification of fevers in *Nat. hom.* 15 as compared to that in *Epidemics* I and *Aphorisms*, he concludes that the book was spurious and attributes it to Polybus (an attribution already traceable in antiquity, cf. *supra*).³¹⁴ This reveals that Sabinus' Hippocratism was fluid, not yet focused on only one reference text, as was to be the case later with Galen in *On the nature of man*.

Galen (ca. 129–216), who was brought up in Pergamon, travelled extensively in order to acquire high-level professional training, reaching the apex of his career when he was called to the court of Emperor Marcus Aurelius. His itinerary from Pergamon, via Smyrna, Corinth, Alexandria and then to Rome and Italy, with other journeys throughout his long life, was similar to that of many successful intellectuals. He relates numerous aspects of his life and has left us two biobibliographical works, in which he details his wide-ranging production. In the recently rediscovered *On the avoidance of grief*, he also describes his activity in Rome as a writer and intellectual and tells us how he sought out, consulted and acquired books for his personal library, how he studied and

310 Galen does not cite Sabinus in the commentary on *Aph.*, but it can be surmised from his polemical tract *Adversus Iulianum*, CMG V 10, 3, p. 39, 12–40, 4, that Julianus wrote polemically against Sabinus' exegesis of *Aphorisms*. Also Steph. Ath., *In Hipp. Aph.* I 1, CMG XI 1.3.1, p. 30, 11 ff., says that Sabinus considered *Aphorisms* to be authentic. Apparently a new fragment of Sabinus comes from Galen's commentary on *Aër*: (Anastassiou-Irmer [2001] II 1, 48 n. 1) and concerns the explanation of *kedmata* (*Aër*: 22), which, nevertheless, could also derive from Sabinus' commentary on *Epid.* VI (*Epid.* VI 5.15).

311 NA III 16.

312 See the passages analyzed in Manetti-Roselli [1994] 1608–1609.

313 *In Hipp. Epid.* III CMG V 10, 2, 1, p. 25, 4–9; *In Epid.* VI CMG V 10, 2, 2, p. 137, 21 ff.; *In Nat. hom.* CMG V 9, 1, p. 15, 17 ff.

314 *In Nat. hom.* CMG V 9.1, p. 87, 18–88, 11.

corrected them, exploiting the vast wealth of materials available in the capital's public or private libraries, and how he devoted attention to conserving and reproducing his own works.³¹⁵ Today we have a clearer idea of the day-by-day working routine that lay behind his literary production, which was impressively wide-ranging.³¹⁶ In *On my own books* he mentions many works devoted to exegesis, not only of Hippocrates but also of Erasistratus, Asclepiades of Bithynia, Plato, Aristotle, Chrysippus, Epicurus and of schools such as the Empiricists, but it is not always clear what type of writings were involved. Some of his production consisted of epitomes and *synopsis* of works by authors he was studying, according to a practice that was common as part of the training of all intellectuals of his era, and which also encompassed the activity of writing commentaries as a personal exercise.³¹⁷ The transition from writing as a study activity (εἰς γυμνάσιον, γυμνάζων), for personal use, to that destined to publication (πρὸς κοινὴν ἔκδοσιν), with regard to writings on Hippocrates, arose later, and sprang from polemical necessities, to counter other interpretations.³¹⁸ Similar reasons certainly lay at the root of Galen's commentary in three books on the first book of *On fevers* by Erasistratus, as well as the commentary on the treatise *On the pulse* by Archigenes and that on the *Introduction* and the *Kefalaia* of the empiricist Theodas.³¹⁹ Their specific form is not always clear but with regard to the text on Archigenes it is explicitly said that it contained both exegesis and assessment (ἐξήγησίν τε καὶ κρίσιν). Similarly, with regard to the writings on authors such as Herophilus and Asclepiades we may surmise that they were polemical treatments, or at best "external exegetical endeavours".³²⁰ It should be underlined that no trace remains of exegetic

315 See Boudon-Millot – Jouanna [2010].

316 Here I do not talk of Galen's works of a grammatical and erudite nature, which are described in *Libr. propr.* 20, *Indol.* 20, 23–24.

317 He wrote a *synopsis* of the Platonic dialogues in 8 books (of which there remains, in an Arabic translation, that of the *Timaeus*), a *synopsis* of the works of Heraclides of Tarentum (*Libr. propr.* 12.3), but also of his own works (*Synopsis on Pulses*). On the other hand, the epitome of the lexicographic work of Didymus (*Indol.* 24) is presented as a text that is of use to whoever wishes to use Attic. He wrote commentaries on Aristotle, as an exercise, upon the request of friends or for a limited circulation and expert readers (*Libr. propr.* 14.9 Boudon-Millot).

318 Manetti – Roselli [1994] 1557–1569.

319 *Libr. propr.* 8.6; 10.1; 12.1 Boudon-Millot.

320 Flemming [2008] 331. It is very likely that the works devoted to specific doctrines of physicians such as Asclepiades, Herophilus, Menodotus and Serapion took the form of the *syngramma* rather than that of the continuous lemmatic commentary, see Ihm [2002a] 117–121.

activity of this type conducted on physicians other than Hippocrates, except in these works by Galen.

The passage from *Diff. puls.* 4.10 (VIII 746, 9–13 K.): “But should someone wish either to know firsthand what the authors have said concerning these things or to turn to commentaries (ὑπομνήματα), let him read the seventh book of the Erythraean’s work *On Herophilus’ hairesis*, the twenty-ninth book of Apollonius’ and the thirteenth of Aristoxenus” suggests that ὑπομνήματα coincides here with the works of Heraclides of Erythrae, Apollonius and Aristoxenus, which were certainly not commentaries. Galen’s rather free use of the term *hypomnema* can be explained if one bears in mind his reasons for writing these works. In particular, the authors of the texts *On Herophilus’ hairesis* devoted considerable effort to rewriting and clarifying, with terminological refinements, that which the predecessors had stated rather obscurely; analogously, Galen was likewise spurred to compose treatises which he viewed as a form of rewriting of the Hippocratic texts³²¹—for example *On the elements*, *Difficulties in breathing*—and it was only later that he proceeded to write actual commentaries on Hippocrates.³²² In other words, for Galen the substance of exegesis could be construed as giving rise to different “literary forms”:³²³ for instance it could take the form of treatises on a given subject (the above cited *syngrammata*, but also other works such as his composition *On the doctrines of Hippocrates and Plato*,³²⁴ in which he aimed to build a system of coherent doctrines by starting out from the works of Hippocrates), or of ‘running commentaries’, such as those on Hippocrates, or alternatively of discussions focusing on specific passages (*Against Lycus* and *Against Iulianus*) or on individual words (like the *χόνδρος* in *On Regimen in acute diseases according to*

321 See Gal. *Diff. puls.* 4.3 (VIII 724, 1–5 K.) and von Staden [1999a] 176. The following works can be defined as *syngrammata*, likewise carrying out an exegesis of the Hippocratic texts: *On the elements according to Hippocrates*, *On Hippocrates’ anatomy*, *Difficulties in breathing*, *Against Lycus*, *Against Iulianus*, *On ‘coma’ according to Hippocrates*, *On crises*, *On critical days*, *On regimen in acute diseases according to Hippocrates*, and also *That Hippocrates claims the same opinion in his other books as in On the nature of man* (*Libr. propr.* 9.12 Boudon-Millot).

322 On Galen’s commentaries, Smith [1979] 123–176; Manuli [1983]; Lloyd [1993]; López Férez [1992]; Potter [1993]; Debru [1994]; Manetti – Roselli [1994]; Mansfeld [1994] 148–176; Sluiter [1995]; von Staden [1995]; Manetti [1998] 1209 ff.; Ferrari [1998]; Hanson [1998]; Sluiter [1999]; Vallance [1999]; von Staden [2002]; Ihm [2002a] and [2002b]; Strohmaier [2002]; Manetti [2003]; Flemming [2008]; Manetti [2009]; von Staden [2009].

323 Von Staden [1998b] 72–73, Flemming [2008] 324–332.

324 On the presentation of Hippocrates and Plato as generally agreeing and the problems involved, see Manuli [1983]; Lloyd [1993] 407 ff.

Hippocrates, and *κῶμα* in *On koma according to Hippocrates*), but it could also take the form of lexicographic tools (his *Hippocratic Glossary*). In *On my own books* 9 where he presents his exegetic works on Hippocrates, Galen includes *Difficulties in breathing*, which, however, does not have the form of a continuous commentary, but is instead explicitly presented by him as a ‘new’ exegesis, never addressed by his predecessors even if the latter were “Hippocratic”.³²⁵ He devotes the first book to demonstration of the theory in a systematic form, while the other two focus on exegesis of the Hippocratic texts. At the beginning of book 11³²⁶ he cites a definition of exegesis as ἀσαφούς ἐρμηνείας ἐξάπλωσις, “the unfolding of an obscure expression”, attributing it to ‘one or other of the ancients’. Such a definition, based on the metaphor of ‘unfolding’, provides a good illustration of the form of rewriting, with translatability of the language and doctrinal integrations, which constitutes the type of exegesis commonly applied in the literary and philosophical tradition,³²⁷ both in continuous commentaries and in treatises. This passage shows some affinity with the expressions used in Erotianus’ *Lexicon*, which often makes use of the verb ἐξάπλωω³²⁸

325 Galen asserts that although numerous writers addressed the respiratory function, none dealt with anomalous breathing, even though Hippocrates wrote important things in *Epidemics*: cf. VII 764, 11 ff. K. ἐξηγητικά τε γραφόντων ὑπομνήματα τῶν συγγραμμάτων αὐτοῦ, τὸν περὶ δυσπνοίας οὐδεὶς τελέως ἐπεξήλθε λόγον. ἀλλ’ ἡμεῖς τὰ τε καθ’ ἕκαστον εἰρημένα τῶν βιβλίων εἰς ταῦτὸν ἀθροίσωμεν ἅπαντα, καὶ δεῖξωμεν ὡς κἀν τούτοις ὁ ἀνὴρ πολὺ δὴ τι ὑπὲρ τοὺς ἄλλους ἔστιν . . . οὐ γὰρ . . . μόνον ἐξηγεῖσθαι τὴν Ἱπποκράτους γνῶμην, ἀλλὰ καὶ τὰς οἰκείας ἀποδείξεις τῶν δογμάτων προσθεῖναι.

326 VII 825, 3–826, 4 K. ὅδε μὲν ὁ λόγος ἐξήγησις ἔστι τῶν ὑφ’ Ἱπποκράτους περὶ δυσπνοίας εἰρημένων . . . ἔστι μὲν οὖν ἐξήγησις ὡς πού τις τῶν παλαιῶν εἶπεν, ἀσαφούς ἐρμηνείας ἐξάπλωσις· ἡμεῖς δ’ οὐ τοῦτο μόνον εἰκόκαμεν δράσειν, ἀλλ’ ὅτι καὶ ἀληθῶς ἔχει πάντα τὰ περὶ δυσπνοίας ὑπ’ αὐτοῦ γεγραμμένα, μαρτυρήσειν, οὐ μὴν ἀπόδειξιν οὐδὲν αὐτῶν ἐν τῷδε τῷ γράμματι, ἀλλ’ εἰς τὸ προηγούμενον τούτου βιβλίον ἀναπέμψειν, ἐν ᾧ χωρὶς ἀποδείξεως οὐδὲν εἴρηται. Cf. on ἐξάπλωσις also *Ars*, I 305, 5–8 K., where Galen lists a series of words synonymous with διδασκαλία, alluding to ancient uses.

327 The tradition current at the time was that of ‘creative reinterpretation’, which cannot be defined as a specific feature of Galen’s exegesis, cf. Lloyd [1993] and Mansfeld [1994] 155–161: on this, already Manuli [1983]; Ferrari [1998]. On the adjusting of Hippocratic thought to the contemporary opinion of his day in order to demonstrate “the permanence of Hippocrates’ truth”, see von Staden [2002] in particular 126 ff.; Flemming [2008]. For the same reason it is an oversimplification to see Galen’s Hippocratism merely as a defensive weapon in his polemics with his rivals (Lloyd [1993] 412) or as “rhetorical gloss” or “ideological patina” (Smith [1979] 175).

328 Erotian. 29, 10 ff.; 33, 14 ff.; 34, 13 N. The affinity was noted by Mansfeld [1994] 149–150. On the use of the verb in Galen’s commentaries, see *Elem.* I 484, 2–4 K.; *In Hipp. Aph.* xviiB 677, 13–15 K. and von Staden [2002] 118 and n. 31.

and seems to share the same idea of exegesis. As Galen explains in the same passage, exegesis includes a verdict on the truth of the doctrines but not the 'demonstration', which he has concentrated into the first book.

It may be helpful to cite a passage from *De tremore* in which Galen, citing *Ti.* 85d where he points out a mistake made by Plato, comments: "it is not opportune now to investigate whether what Plato said is true, because I have the intention to explain and give a judgment on what is said in the *Timaeus* in another work".³²⁹ The treatise is not the place for discussion on the truth of Plato's doctrines, and Galen refers the reader to the commentary on the text in question. The *Commentary on the Timaeus of Plato*, which is the first of the lemmatic commentaries written by Galen, is therefore programmatically devoted *also* to a verification of Platos's medical doctrines.³³⁰ These texts precede the season of Hippocratic exegesis, which begins with *Difficulties in Breathing*,³³¹ written in a mixed form, as we have seen, and is then developed with continuous commentaries. His decision to embark on a systematic commentary of the Hippocratic treatises was also the natural outcome of a career that was now solidly established on the professional plane. Having reached the height of his career, Galen could take a broader perspective on his teaching activity, which had so far probably been limited to oral work³³² as a continuation of the activity of his own teachers. Moreover, the society of his time possessed prestigious models of commentaries of the great authors of the past in the literary and above all philosophical field; accordingly, the writing of commentaries represented the crowning achievement of his intellectual stature as a physician-philosopher.³³³

329 VIII 630, 10–13 K. περί μὲν οὖν τῆς ἀληθείας ὧν εἶπεν ὁ Πλάτων οὐ πρόκειται νῦν ἐπισκοπεῖσθαι, μελλόντων γε ἡμῶν ἐν ἑτέροις ὑπομνήμασιν ἐξηγεῖσθαι τε ἅμα καὶ κρίνειν ἃ κατὰ τὸν Τίμαιον εἶπεν.

330 The commentary on the medical doctrines of the *Timaeus* is not presented with the formula *hypomnema eis* like the others in *Libr. propr.* 16.1, however, it has the form of the lemmatic commentary (see Schröder [1934]). On the characteristics of this commentary, which shares many methodological elements with the Hippocratic commentaries, see Ferrari [1998] with previous bibliography. This notwithstanding, the assessment of the doctrines coexists with an 'indulgent' attitude on the part of Galen. Galen also composed a compendium of the *Timaeus* (Kraus-Walzer [1951]): on the relationship between compendium and commentary in Galen's project, see Rashed [2009] 95 ff.

331 For the chronology, cf. Bardong [1942].

332 For traces of oral teaching in Galen's commentary on *Aēr.*, see Strohmaier [2004] 5. The aporetic structure of the school commentary is visible in the commentary on *Acut.*, see Manetti-Roselli [1994] 1543.

333 Flemming [2008]. On the Aristotelian commentaries as a form of philosophical expression, see Lapini § 2.5, in this volume.

The great variety of forms and methods of exegetic literature accounts for the need Galen soon felt to define the specific task of the commentary in comparison to other forms of writing. In the proem to the commentary³³⁴ on Hippocrates' *Fractures* he states that the exegesis of a text consists in explaining the obscure passages and *not* in giving a demonstration of the correctness of what is asserted in the text, although he was fully aware that it was normal practice among commentators to pass judgment on the author.³³⁵ But Galen is at pains to distinguish the different planes of exegesis: it is the task of a treatise on a specific subject to evaluate the doctrine, the *gnome*, whereas the commentary fulfils the task of explaining first and foremost the *lexis*, the expression, and only then can the second stage, that of explaining the doctrine, be addressed. He admits the possibility of introducing a certain amount of demonstration within the commentary, but this must not go beyond the appropriate measure. His concern for measure is constant and reveals the rhetorical character of the Galenic approach. Galen adopts the attitude of a literary critic: the commentary has its own measure and its own *prepon*. But he goes even further in seeking to distinguish the task of a commentary on a scientific text from that on a literary work.³³⁶ While remaining within the mainstream tradition of Alexandrian Homeric commentaries (see *infra*), he endeavored to counteract the tendency towards the accumulation of erudition and argued that grammatical analysis should be functional to the 'utility', the core of medical teaching. And although he declared Hippocrates to be an 'ancient author',³³⁷ who could to a certain extent be assimilated to Homer and thus should be examined with critical tools similar to those of the Homeric commentaries, he asserted that Hippocrates' communicative intent was different from that of Homer, Thucydides or Ctesias, inasmuch as his intentions were appropriate

334 Gal. *In Hipp. Fract.* XVIII B 318, 1–322, 2 K. The passage in *In Hipp. Aph.* XVIII B 561, 4–562, 10 K, where Galen seems to attribute to the commentary the additional task of the demonstration can actually be seen as referring to a specific polemic against Lycus and does not contradict the position expressed here. On the variety of forms, see the overview in Sluiter [2000a].

335 Mentioning his work *On exegesis*, he addresses the definition of obscurity, which is both a question in its own right and also stands in relation to the user of the ancient text (Manetti-Roselli [1994] 1557–1559). The classification of the different types of obscurity was already a subject treated by philosophical exegetic tradition: on obscurity and its forms, see Cic. *Fin.* 2.15 in Ferrari [1998] 17–18. On this theme, Manuli [1983] 472; Manetti – Roselli [1994] 1532, 1558, 1607; Mansfeld [1994] 135, 148–154, von Staden [2002] 110–114.

336 Manetti – Roselli [1994] 1559; Manetti [1998] 1211.

337 Manetti – Roselli [1994] 1533.

to a scientific discourse.³³⁸ That is to say, by adjusting its tone to its object, a scientific commentary must explain that which is obscure, and must do so in such a manner as to ensure utility for the art itself, without wasting time in sophistic debates. For example, a commentary can be classified as sophistic if it is written to flaunt erudition. Therefore historical and antiquarian matters, etymologies,³³⁹ sophistic disquisitions on words will be left aside, in favor of selecting problems that are relevant for the *techne*. However, Galen does not always remain true to his intentions, especially in his later commentaries on *Epidemics* II and VI (this may to some extent have been due to the particular difficulties encountered in these texts, but also to Galen's evolution towards a more 'philological' type of commentary).³⁴⁰ Despite this he largely accomplishes his aim, above all by referring the readers of his commentaries to his monographic studies and, conversely, by incorporating within his treatises some references to his commentaries, where detailed exegesis was available.³⁴¹ Moreover, since the legitimation of Hippocrates was more or less taken for granted, Galen felt he no longer need be rigidly bound by the duty to demonstrate the correctness of the doctrine.³⁴²

By virtue of his profound knowledge of grammar and rhetoric,³⁴³ when Galen seeks to reduce the scope of erudite elements in scientific commentaries he also achieves the result of endowing the commentary with cultural traits that led to strong awareness of its nature as a 'genre'.³⁴⁴ In his commentaries he brought into play elements of consciously studied literary composition, in

338 Gal. *Diff. resp.* VII 850–852 K.; *In Hipp. Art.* XVIII A 729, 1–8 K.; *In Epid. VI*, CMG V 10, 2, 2, p. 141; *De comate*, CMG V 9, 2, p. 188. See Manetti – Roselli [1994], Manetti [1998]; Sluiter [1995]; von Staden [2002].

339 For the historical details, see for. ex. *In Hip. Epid. VI*, CMG V 10, 2, 2, p. 177, 12–16. On the use of etymologies, which Galen programmatically rejects (*In Art.* XVIII A 395, 3 ff.; *In Fract.* XVIII B 363, 3 ff. K.), but practices to a certain extent in the commentaries, see Manetti [2003] 202–215.

340 See for ex. *In Epid. II*, CMG V 10, 1, 1, p. 230, 12–19; the text is so corrupt that Galen feels he should record and explain the most ancient readings locatable in the previous commentaries of Zeuxis, Herakleides, Bacchius and Glaukias.

341 For ex. *In Epid. I*, CMG V 10, 1, p. 116; *Placit.* IX 1.15, CMG V 4, 1, 2, p. 542, 25–27.

342 It is remarkable that in the commentary on *Prorrhetic*, which he considers spurious, Galen is polemic against those commentators who maintain that exegesis must be confined to justifying an author's text, although patently false: *In Prorrh.* CMG V 9, 2, p. 52.

343 Manetti – Roselli [1994]; Sluiter [1995]; von Staden [2002]; Manetti [2003] and [2009]; Nutton [2009].

344 Cf. *supra* n. 139: caution should be exercised in using this term, but Galen is the author who came closest to a reflection on the 'genres' of the secondary literature, in his reflection on the function and the reading public of his commentaries and his treatises.

which proems featuring a strongly methodological and doctrinal orientation were combined with detailed exegesis and with questions of a more general nature. The measure embodied in the commentary did not merely concern length but also a harmonious proportion among its internal elements, *i.e.* among the various parts of the commentary and also among the different exegetic elements. Fairly substantial digressions on certain themes are found, as well as the insertion of small monographic sections, anecdotes and above all autobiographic elements, which fulfill both a stylistic and ideological function.³⁴⁵

The commentaries on Hippocrates' *On joints, On fractures, Aphorisms, Prognostic, Epidemics I, II, III, VI, In the surgery, On regimen in acute diseases, Prorrhetic, On the nature of man, Airs waters places* have come down to us in a more or less complete form, while those on *On wounds, On wounds in the head, On humours, On nutriment* are lost.³⁴⁶ Apparently Galen also planned commentaries on *Diseases of women, On the nature of child* and *Eighth Month Child*,³⁴⁷ but probably did not carry out the project.

The explanatory criteria Galen presupposes and applies—albeit not always coherently—in his commentaries are those common to a long exegetic tradition that began in the Alexandrian age: the tools of philology were part of

345 Manetti [1998] 1212 f.

346 The commentary on *Airs, waters, places* is preserved only in an Arabic translation: for an outline of the tradition, see Jouanna [1996] 133–148, with previous bibliography, and also Strohmaier [2002] and [2004]. The commentary on *Alim.* preserved in an anonymous papyrus, PFlor. 115, has been proposed by Manetti [1985] and [1995] as a possible fragment of the lost commentary by Galen. Quite recently Bos-Langermann [2009] published the introduction to Galen's commentary on *Alim.* by Sergius of Res'aina (see *infra*), but not the text of the commentary; for the fragments preserved by 'Ali ibn Riḏwān, see Garofalo [2012b], for those of the commentary on *Hum.* see Garofalo [2011]. There is an allusion to a commentary on *De genitura* in the commentary on *Aēr*: cf. Anastasiou-Irmer [2001] II 1, 301; Ihm [2002a] 104. The authorship of the commentary on *Oath* known from Arabic sources (Rosenthal [1956]) would appear to be dubious (Jouanna [1991]; Ihm [2002a] 106–107), even if there are some 'hippocratic' and 'galenic' features (Nutton [2012]), cf. *supra* n. 309.

347 For *Diseases of women* see Ihm [2002a] 108–109; for *On Nature of the child*, which Galen considers authentic, cf. Anastasiou – Irmer [2001] II 1, 45, 12–16; Ihm [2002a] 110–111; on *On the fetus of eighth months*, see Ihm [2002a] 111: perhaps identifiable with *On the fetus of seven months*, preserved in an Arabic translation, cf. Ihm [2002b] 318. On the ambiguity of *hypomnema* and the exegetic character of these writings in Galen, Ihm [2002b] 316–317. An exegetical work about *On diseases I–III* or *On affections* is ambiguously alluded to in Galen's commentary on *Regimen in acutes diseases* (CMG V 9.1, pp. 198, 237), cf. Ihm [2002a] 92 and 107–108.

the intellectuals' common stock-in-trade. In *De libris propriis* Galen outlines an evolution in his manner of composing a commentary, pointing out that the variation in his approach partly depended on changes in working conditions (availability of books) between the moment when he first composed the early commentaries for a select circle of friends and the later period when he wrote those destined to publication. Additionally, his approach was to a certain degree also shaped by his new motives for writing (the aim of counteracting other interpretations). A gradual development in his thought can be perceived in his commentaries, which from a certain moment onwards begin to cite earlier commentators much more frequently, probably because he had the opportunity of consulting a number of Empiricist commentators (Zeuxis, Heraclides of Tarentum) during his second stay in Rome, and was able to take a look at the two editions of Artemidorus and Dioscorides.³⁴⁸ The general principle of which greatest use was made in the exegesis of authors is contained in the formula of 'explaining Homer with Homer': an author should be interpreted on the basis of his works. This was an internal principle, which Galen states explicitly for the first time in *Diff. Puls.* in connection with the correct manner of interpreting Herophilus, mentioning the method used in Homeric criticism.³⁴⁹ He then returns to the question shortly thereafter, in *Dign. puls.*, again in reference to Herophilus, defining the principle as νόμος τῆς ἐξηγήσεως.³⁵⁰ Elsewhere, Galen also makes use of a different comparison to define this principle, namely that of the actor. For instance, in the commentary on *Epid.* III he speaks appreciatingly of the way the Empiricists conduct themselves when commenting upon Hippocrates: "like in a play, acting in a manner that appropriately portrays the character involved".³⁵¹ Since he regarded Hippocrates as an 'ancient' author, he also pursued the issue beyond this statement, not only quoting from other Hippocratic works but also collecting 'parallels' from ancient authors, to elucidate obscure and ambiguous words and passages.³⁵² A wide range of lexicons, repertories or specialized treatises were

348 Manetti – Roselli [1994] 1617 ff.

349 Gal. *Diff. puls.* VIII 715, 11–716, 6 K. where he compares *Il.* 23.171 and *Od.* 22.110–111; *De comate sec. Hipp.* (VII 646, 3–8 = CMG V 9,2, p. 182, 23 ff.); Manetti-Roselli [1994] 1557–79; Mansfeld [1994] 148 ff.; Hanson [1998] 46–49. For the formula of 'explaining Homer with Homer', see Montana § 2.4, in this volume.

350 *Dign. puls.* VIII 958, 6–8 K.

351 *In Epid.* III, CMG V 10,2,1, p. 17, 2: the Empiricists applied this criterion to the interpretation of Herophilus, Erasistratus or Asclepiades as well (p. 21, 28–22, 2). The motif was used later, inverted, also by David (= ps. Elias) *In Arist. Cat.*, CAG XVIII 1, p. 222, 27 ff.

352 On the construction of the figure of 'ancient' Hippocrates, see Sluiter [1995], Manetti [2003]; Galen was not devoid of a sense of history, though—naturally—his viewpoint

at his disposal and Galen himself had written many works on the language of ancient comedy. More and more frequently he displayed a keen interest in manuscript variants and in interpolations, as well as in questions of authenticity and authorship.³⁵³ He was aware of the limits of an interpretation that has a stochastic character and cannot emend all the corrupted elements;³⁵⁴ this notwithstanding, he proposed several explanatory models for the process of text composition and transmission, drawing extensively on the scriptorial practice of his day. In this framework, Galen put forward interesting reflections on the typology of the errors he found himself dealing with, and he came close to formulating a criterion like that of the *lectio difficilior*. In his later commentaries he became respectful of the tradition he characterized as ‘ancient’, to the point of opting to preserve ancient readings even if they were *apithanoi*.³⁵⁵

4.1.3 Biography and Doxography

Hippocrates’ biography was already consolidated in the early imperial age, but a new general work on the history of ancient physicians is attested, Soranus’ *Lives of the Physicians, Schools and Writings* or *Successions of Physicians*, in 10 books.³⁵⁶ It seems to indicate a work organizing its material according to the schools. One may suppose that it followed established Hellenistic and Roman models for biographical narrative, but we have no knowledge of its content.³⁵⁷

reflected the culture of his time; thus the suggestion that he had little awareness of diachronicity would seem to be an oversimplification, Manuli [1983] 475.

353 This is influenced to a large extent by the quality of the texts on which the commentary is being composed: thus from the fourth section onwards of the commentary on *Aph.*, emphasis is placed on philological problems, as in the commentaries on the difficult texts of *Epid.* II and VI, whereas in *In Hipp. Epid. I* some passages are not even mentioned or supplied with a commentary because they are considered completely clear, and explanations are restricted to the obscure expressions. Finally, it is quite natural that Galen awards considerable attention to the issue of the authorship of *Nat. hom.* and to its spurious parts, given the ideological importance of this text in his vision.

354 *In Hipp. Off.* XVIIIB 715 K; *In Epid. II*, CMG V 10, 1, p. 221, 9 ff; 275, 41 ff.: see López Férez [1992].

355 On the *lectio difficilior*, see *In Epid. VI*, CMG V 10, 2, 2, p. 121, 17–22; Hanson [1998] 48; Ferreri [2005]; also, the still useful collection of material in Bröcker [1885]. Over time Galen was able to form an idea in his own mind of what the ancient tradition was like, basing his interpretation essentially on the Empiricist commentaries and on those of Rufus, see Manetti-Roselli [1994] 1633–1635; on nevertheless maintaining the ancient variants, *In Epid. VI*, CMG V 10, 2, 2, p. 121, 12 ff.

356 *Suid. s.v.*: Βίοι ἱατρῶν καὶ αἰρέσεις καὶ συντάγματα, also known by the alternative title τῶν ἱατρῶν διαδοχαί.

357 Kind [1927] 1116–1117; Hanson – Green [1994].

All that can be read is a *Vita Hippocratis* ascribed to Soranus in some manuscripts of the *Corpus Hippocraticum*, which is probably a very mutilated excerpt from Soranus' fuller work.³⁵⁸ Contrary to the general title of Soranus' work, the *Vita Hippocratis* makes no reference to Hippocrates' writings or doctrines, if not in a skeptical tone,³⁵⁹ well suited to the detached manner in which Soranus generally refers to Hippocrates. Soranus was certainly a well educated physician with an interest in grammar (cf. *supra*), but the Methodical school, of which he was the representative, had rejected *en bloc* the long tradition of Dogmatic medicine. Therefore it is in a sense paradoxical that Soranus devoted attention to the history of medicine, biography and doxography. This may well have been an instrument of self-assertion, even if there is too little evidence for it to be judged as purely an exercise in confutation (a 'hamartography').³⁶⁰ Confirmation of a polemical attitude can be gained from the fragments of the treatise *On the Soul*, in 4 books, quoted extensively by Tertullian, which critically reviewed the opinions of philosophers.³⁶¹ Soranus' *Aitiologoumena* is referred to by Caelius Aurelianus³⁶² as a work on the causes of diseases, perhaps a broad-based doxographical exposition, but it remains dubious, and nothing precise can be said about its nature.³⁶³ The interest in biography, on the other hand, was consistent with the culture of the 1st–2nd century AD, when antiquarianism was widely practiced.

A later source, but difficult to date, is the so-called Anonymus Parisinus and his work *On acute and chronic diseases*.³⁶⁴ He writes about each disease

358 It was included by J. Ilberg in his edition of Soranus, CMG IV 1927, 173–178: there is also a life in *Suidas* (η 564), a garbled Latin version (Schöne [1903]) and a verse biography composed by Johannes Tzetzes in his *Chiliades* (vii 986). All of these are likely to rely to some extent on the Hippocratic *Bios* by Soranus of Ephesus, according to Deichgräber [1933] 147 and recently Pinault [1992]; Hanson-Green [1994] 1010–1018 (see former bibliography): *contra* Edelstein [1935] 1294–1295. *Suidas* and the Latin life also contain the list of Hippocratic writings.

359 13, CMG IV, p. 177, 19–25.

360 See Mansfeld [1994] 180; van der Eijk [1999c] 397–452, in particular 448; 'hamartography' in Smith [1979] 224–225: biography and lexicography acted as a preparation for the study of the real opinions and writings (in order to refute them).

361 See the new edition by Podolak [2010].

362 *Tard.* I iii 55 (= *CML* VI 1.1, p. 460, 17–20); see Wellmann [1901] 140–155.

363 Hanson-Green [1994] 1034–1035. The numerous doxographic traces scattered throughout the *Gynaecia* treatise and in the work of Caelius Aurelianus point to the existence of a structured doxography: Cael. Aur. *Cel.* I xiv 105–xvi 165; II xxix 225–xl 234, *Tard.* II i 55–62, see van der Eijk [1999c].

364 Date uncertain: *terminus post quem* suggested by the quotation of Mnaseas (40–60 AD). Edited by Garofalo [1997]; on the history of the criticism, see Garofalo [1992]. The

according to the same pattern: first the causes, then its symptoms and finally its treatment. The section on causes often contains doxographical reports of only four ancient physicians, Hippocrates, Diocles, Praxagoras and Erasistratus, all representative of the Dogmatist tradition, sometimes referred to collectively as “the ancients”. The author reports their views in a non-evaluative manner: “His attitude seems, on the whole, reconciliatory rather than divisive”.³⁶⁵ His reluctance to commit himself to the causal explanations of the ancients might be seen as consistent with a Methodist attitude, combined with a didactic purpose. Anonymous’ sources are unknown.³⁶⁶

4.2 *After Galen: Reduction and Fusion of Genres (3rd–7th c.)*

Whereas Galen devoted considerable effort (despite his *souplesse* in using the term *hypomnema*) to defining the function of the different genres of exegesis on which he had worked (the difference between *hypomnema* and a scientific treatise, the *hypomnema* and its proper extension, adjustment of the tone and cultural adaptation to fit the intended public, the exegetic value of his *syngammata* on Hippocrates etc.), in later centuries the philological activity linked to teaching activity with focus on the Hippocratic texts and then also on those of Galen underwent several changes. First and foremost, there was a reduction in the forms of writing devoted to text exegesis, and subsequently a blurring of the boundaries between the different forms. Thus the exegetic texts were no longer immediately classifiable in terms of the categories utilized so far in scholarship on medical texts (*hypomnemata*, *syngammata*, lexicons).

The role of Hippocratic lexicography, which was by now well integrated into general lexicons,³⁶⁷ was absorbed into the commentaries, within the part devoted to text *lexis*. Commentaries in the sense of works specifically destined to the continuous exegesis of a text now formed no more than a particular aspect of overall education (the aspect aiming more generally to provide a ‘liberal’ education than to give practical professional training), alongside with forms of mediation that served the function of a fast-track learning route.

authorship has been variously attributed, now to Herodotus the physician belonging to the Pneumatic school, now to Soranus, now to Themison: see van der Eijk [1999b] 295 ff., with the previous bibliography.

365 Van der Eijk [1999b] 314; for the conclusions 325–331.

366 It is possible that he relies on a medico-doxographical tradition with regard to the question of the so-called “affected parts”, see van der Eijk [1999b] 322–23. Further traces of a doxographic tradition on Hippocrates in Stobaeus (Jouanna [2010]) and in papyri (Marganne [2010]). See also, for the doxographic elements in Celsus, von Staden [1999b].

367 On the presence of Hippocratic material in Hesychius, via Diogenianus, and the influence of the lexicons of Rufus and Soranus on Pollux, see Perilli [2006].

Another development in the 4th century that reveals the changing perspective is the work of Oribasius, who had been trained in Alexandria and then became the personal physician of the emperor Julian. Oribasius constructed a great medical encyclopedia, only partially preserved, which was based on the technique of selecting passages from previous authors and then reorganizing them by theme.³⁶⁸ Thus paraphrases and summaries played an increasingly significant role, where more or less literal citations tended to merge with reworked and interpretive segments, without any apparent solution of continuity, and were often preferred because, in particular, Galen's works "were too complex and disorganized, too lengthy and physically unwieldy, for the purpose of the average educated man, let alone the busy, peripatetic, medical practitioner".³⁶⁹ Indeed, even Galen himself had begun not only to compose summaries of his own works as well as those of others, but also to write introductory texts, condensing more complex treatises.³⁷⁰ Finally the scholia, that is to say, the texts transcribed for exegetic purposes as an accompaniment to a work by Hippocrates or Galen, often occupying the margins of a codex, were formulated, at least in the case of Galen, according to the same technique as adopted by Oribasius in utilizing his sources, *i.e.* by using passages taken from the source author, sometimes simply reordered and juxtaposed, as a means of explaining and completing the annotated text.

From the death of Galen in the early decades of the 3rd century, up to the end of the 5th century, surviving evidence of medical exegesis is very scanty, and even the papyrus witnesses from Egypt concerning Hippocrates and Galen offer few traces of philological work or commentaries. The papyrus codex PRyl. 530, dating from the 3rd–4th century, has been revealed by a recent revision to contain a copy of *Aphorisms*, interspersed with paraphrase-commentaries.³⁷¹ This evidence is of particular value because its editorial characteristics suggest that it could be defined as a 'commented edition':³⁷² for instance, the text is clearly separated from the commentary through signs and indentations and there is, as far as can be perceived from a reading of the text,

368 On the role of Oribasius in the development of Galenic Hippocratism, see Temkin [1932] 38; cf. Orib. *Coll.* I 1, CMG VI 1.1, p. 4, 15–18.

369 Lieber [1981] 170.

370 Garofalo [2000b] 14–15, for the synopsis of *De methodo medendi*; Galen presents *De musculorum dissectione* as an abregé of his larger anatomical work (*Libr. propr.* 4.1 B.-M.). Galen was also in the habit of writing summaries of other authors' texts (for ex. Marinus' *Anatomy*, *Libr. propr.* 4.9, of Lycus, 4.34; of Heraclides, 12.3, of Platos' dialogues, 16.2); for Plato's dialogues see Kraus-Walzer [1951], see *supra* n. 317.

371 D. Manetti-R. Luiselli in *CPF* [2008] 180–197.

372 According to the definition of Montanari [2006a] 11–14.

an apparent quantitative balance between the authorial text and the interpretive paraphrase. The relationship between the text and the commentary—the latter being simple and of a paraphrastic nature, independent of Galen—is one of strong integration, with a manner of realization that foreshadows phenomena attested at a later date. Furthermore, this testimony is valuable in that it fills a gap in our sources, which otherwise provide us with only two names for this period: Philagrius and Magnus of Nisibis.³⁷³

Philagrius,³⁷⁴ who is known mainly from *Suidas* and from the *excerpta* of Oribasius, was active between the 3rd and 4th century in Thessalonica; and, in addition to many other works, he also composed a commentary on Hippocrates, though nothing is known of its nature. Magnus of Nisibis,³⁷⁵ a pupil of Zeno of Cyprus together with Oribasius around 370, was *iatrosophistes*, i.e. a professor of medicine; he was active in Alexandria, where he gained considerable popularity and prestige on account of his dialectical powers, but he faced accusations of lack of professional competence. He composed a commentary on *Aphorisms*, which is cited a few times by Cassius Felix.³⁷⁶

A page of Hippocrates' *Aphorisms* is also preserved on a rather well made parchment codex that has come down to us, PAnt. 28, thought to date from the 5th century, and characterized by the presence of small sub-titles in the margin, which may, albeit minimally, be suggestive of its possible use as teaching material.³⁷⁷ It is not until the 6th century, with PAnt 183,³⁷⁸ that one finds a copy of *Aphorisms* supplied with marginal scholia derived from different materials, revealing contacts with the exegetic activity of the school of Alexandria which was flourishing during that same period. In fact Alexandria became the main centre of philosophical, but also grammatical and medical studies from

373 On these and the later authors, Overwien [forthcoming].

374 *Suidas* φ 295 (ὕπομνηματικὸν εἰς Ἴπποκράτην); Temkin [1932] 30 (he dates it to the first half of the 4th c. AD), Nutton [2000] 779; for the Arabic sources, Sezgin [1970] 154–156; see now Matino [1999].

375 Temkin [1932] 41; Nutton [1999b] 698.

376 Cassius, *De medicina* 29.1, 76.3 Fraise, twice quotes the text of *Aphorisms* followed by Magnus' exegesis (*secundum expositionem Magni iatrosophistae*). Cassius, *archiater* of Carthage in the first half of 5th century, reveals his close connection with the Alexandrian context, see also his quotations (39, 44) of Galen's *De locis affectis* (with the title of *Diagnostike*, used by the Alexandrians): cf. for ex. Steph. Ath. *In Hipp. Aph.* III 5, CMG XI 1.3.2, p. 38.15; V 27, CMG XI 1.3.3, p. 96.8, Ioh. Alex. *In Hipp. Epid.* VI, CMG XI 1.4, p. 58.11). On these aspects see Palmieri [2007] with the previous bibliography.

377 Andorlini [2000] 41; Andorlini [2003] 20–24; text and commentary in *CPF* [2008] 77–82.

378 Andorlini [2000] 42–43; Andorlini [2003] 24–26; text and commentary in *CPF* [2008] 79–86.

roughly the end of the 5th c. onwards when, after the death of Proclus (485), the Athens school faced a severe crisis.

During this period there arose a gradual unifying tendency among the higher education systems of philosophy, grammar, rhetoric and medicine.³⁷⁹ In all disciplines, as a result of the influence of the philosophical teachings of the school of Ammonius, educational activity became systematized and was organized according to precise course plans. The outcome was an exegetic method well adapted to classroom practice, profoundly influenced by Aristotelian logic, as testified by the use of the syllogistic method in the development of arguments (to clarify textual difficulties), the differentiation between ‘substance’ and ‘accident’, recourse to the four philosophical causes forming part of the Aristotelian framework, the ἀπορία/λύσις procedure of commenting, the διαίρεσις (division of a subject into a series of subdivisions and complementary definitions).³⁸⁰

As far as the field of medicine was concerned, the ‘classics’ were read and commented in a certain order, and this was the case both for Hippocrates and Galen.³⁸¹ There was a flowering of introductions to the works, which organize the discussion according to eight traditional points:³⁸² the subject of the book, its usefulness, its authenticity, its title, its place in the curriculum, subdivision, the branch to which it belongs (physiology, etiology or diagnostics), the teaching method.

The construction of a *curriculum* should not be taken as implying a fixed and exclusive ‘Canon’, even though it is commonly referred to by this term. It arose from the practical requirements of teaching and was a process that developed from the early 5th century onwards, continuing to evolve further until the 7th century, and even beyond this period in the Arabic environment. Among the works of Hippocrates and Galen, those chosen for educational

379 That medicine was studied on the higher levels together with other disciplines such as grammar, rhetoric, logic, philosophy, etc., is a recurrent phenomenon in the centuries immediately following Galen as well: Marasco [2010]. Cf. Lamberz [1987] 1–20.

380 For ex. Westerink [1964]; Duffy [1984]; Wolska-Conus [1992]; Roueché [1999]; Ieraci Bio [2003]; a general overview in Pormam [2010].

381 This phenomenon is parallel to the formation, in the school of Ammonius, of a philosophical curriculum based on an ordered selection of works: in order to reach the level at which Plato was studied the program began with Porphyry’s *Isagoge* and then continued with the works of Aristotle’s *Organon*; see Hadot [1987] 120–122.

382 On the development of the *prolegomena* to the authors, in particular of the *octo capitula*, see Richard [1950]; Mansfeld [1994] (the first three chapters).

purposes were texts considered (by the Alexandrians, not always by Galen)³⁸³ to be appropriate for beginners. The works were then organized into groups that were divided by degree of background knowledge required, and were to be read in class, in a specified order under the guidance of the teacher.³⁸⁴ Works that were not included in the so-called Canon were by no means excluded, but it was left up to the individual students to peruse them in greater depth subsequently. Our most authoritative source is Ḥunain's *Risala (Report)*,³⁸⁵ which describes Alexandrian educational practice.

I list here below the structure of the curriculum of Galenic studies:³⁸⁶

Collection I (*Medicine for beginners*): 1. *De sectis*; 2. *Ars Parva*; 3. *De pulsibus ad tirones (Small Pulse)*; 4. *Ad Glauconem (B. 11)*; 5. Collection II (*Anatomy for beginners*):³⁸⁷ *De ossibus, De musculis, De nervis, De venis, De arteriis*; 6. *De elementis secundum Hippocratem*; 7. *De temperamentis*; 8. *De naturalibus facultatibus*; 9. Collection III (*The book of causes*): *De differentiis morborum, De causis morborum, De differentiis symptomatum, De causis symptomatum*; 10. *De locis affectis*; 11. Collection IV (*Great pulse, only 4 books*):³⁸⁸ *De differentiis pulsuum, De dignoscendis pulsuum, De causis pulsuum, De praesagitione ex pulsibus*; 12. *De febrium differentiis*; 13. *De crisis*; 14. *De diebus decretoriis*; 15. *De sanitate tuenda*; 16. *De methodo medendi (only the last 8 books)*.³⁸⁹

383 While *De sectis* is the first work also recommended by Galen (*De ordine libr. suor.* 2.4 p. 92, 7 ff. Boudon-Millot) for those who do not have have a background in philosophy and dialectics, for the others the order suggested by Galen does not coincide precisely with that of the Canon although the latter is clearly inspired by Galen.

384 It should be underlined that all the texts that have come down to us reveal a strong link with oral teaching, and even their title often makes it clear that they derive from notes prepared for an oral lesson (for the formula ἀπὸ φωνῆς cf. Richard [1950]).

385 The text of Ḥunain ibn Ishāq, who was the head of a school of translators in Baghdad in the 9th century, is available in a German translation in Bergsträsser [1925].

386 For the variations in the different Syriac and Arabic sources, see Iskandar [1976]; Lieber [1981] in particular 173; Strohmaier [1994]; Boudon-Millot [2007a] cxiv–cxxvi. The ‘Canon of the 16 works’ is described by Iohannes Grammatikos (see the following note).

387 Iohannes Grammatikos (see *infra*) in the *Prologue* of his *Overview of the works of Galen's Canon* (transmitted only in Arabic) puts the *Anatomy* in sixth place after *Nat. fac.* in agreement with other Arabic sources, perhaps correctly, cf. Garofalo [2000a] 146 n. 36; Garofalo [2003b] 207–208.

388 Lieber [1981] 174: “According to Hunayn... the Alexandrians made a great mistake in limiting their reading to the first book of each section”.

389 *De sanitate tuenda* was subsequently added: Iskandar [1976]; Lieber [1981].

The curriculum is thus composed of 12 groups or 'courses' required for the training of a doctor, from general and theoretical knowledge to therapy. Since Ḥunain says that the works of the Canon were translated into Syriac by Sergius of Res'aina (d. 536), it seems clear that the curriculum was already in force in the 5th century. In fact knowledge of elements of the Canon is already found in the work of Cassius Felix (dated about 447 AD), suggesting that the beginning of this process goes back to the first half of the 5th century.³⁹⁰

Later Arabic sources add that the Alexandrians chose to prescribe a reading of Galen prior to that of Hippocrates, of whom 4 treatises were selected: *Prognostic, Aphorisms, On regimen in acute diseases, Airs waters places*.³⁹¹ The order Galen-Hippocrates clearly reveals that the former provides a key background for a reading of the Hippocratic medical tradition, thereby definitively establishing that Hippocratic Galenism that was to prove so enduring both in eastern and western medieval medicine.³⁹² It is worth noting, however, that the curriculum of studies focusing on the works of Hippocrates is attested with variants in the Greek and Arabic sources.³⁹³ The following list is reconstructed both from Palladius and Stephanus (see *infra*): *Aphorisms, On the nature of man, On the nature of child, On liquids, On nutriment, Prognostic, On regimen in acute diseases, On joints, On fractures, Airs waters places, Epidemics, On women's diseases*,³⁹⁴ but the list (and the order) differs from that given by other Greek and Arabic sources.³⁹⁵ The ordering criteria, whereby priority was awarded to study of phenomena according to nature, which were then

390 Sergius introduced, it would appear, some modifications in the Canon. Stephanus of Athens (*infra*) cites the 16 works, cf. Westerink [1985] vii–viii, Wolska-Conus [1994] 42 n. 34. For Cassius Felix, see *supra* n. 376.

391 'Ali ibn Riḍwān in Lieber [1981] 172–174; for the variants of the Hippocratic Canon, which reached a total of 12 works, see nn. 393–395.

392 Cf. Ioh. Alex. *In Gal. De sectis*, 2ra48–49 Pritchett [1982], who asserts that Hippocrates is too difficult for beginners; Temkin [1932] 32–34, points out that the rise of the pre-eminent role of Galen can be dated as early as Oribasius and his medical encyclopedia; cf. Temkin [1973] 62 ff. In contrast, on the hypothesis of a western Hippocratism free from the influence exerted by Galen, see Beccaria [1959] and [1961].

393 Iskandar [1976] 235–238, 249. Ibn abi Usaibi'a cites the same works in a different order, adding *De morbis muliebribus* and *Officina medici*; cf. Duffy [1997] 9–11. On the variants of the Canon of Hippocrates, see Irmer [1987].

394 Palladius *In Hipp. Fract.* 18, 5–20, 5 Irmer and Steph. Ath. *In Hipp. Prog.* CMG XI 1.2, p. 30, 31–32, 37; cf. Anastassiou-Irmer [2012] III, 439–440, but see also the following pages (441–457) for all the lists of Hippocratic writings. See first of all the reconstruction in Iskandar [1976] 235–258. Cf. also Bräutigam [1908] 43–44.

395 On the order that can be reconstructed from the commentary by Stephanus on *Aph.*, see Westerink [1992] 11–12; Bräutigam [1908] 43–44: "Iusiurandum, Aphorismi, Prognostica,

followed by those against nature, are common to the Canons of Hippocrates and Galen.³⁹⁶

The names of those said to have contributed to shaping the Canon are found only in the Arabic sources. For Galen, we have from 4 to 7 names, depending on the source: Stephanus, Gesios, Angilawus, Marinos, to whom can be added Theodosius, Palladius and Iohannes the Grammarian.³⁹⁷

On some of these names, only uncertain information is available,³⁹⁸ but there are others for whom a few texts have come down to us. A recent study has made it possible to attribute the commentary on Epidemics VI preserved in a Syriac translation (possibly by Sergius of Res'aina) to Gesius of Petra,³⁹⁹ a pagan physician of great renown who, at the end of the 5th century, studied at Alexandria under the tutorship of the teacher Domnus.⁴⁰⁰ The commentary on *Epid. VI*, of a lemmatic type, draws on Galen, because Galen was regarded as having absolute authority: it is "in a certain sense a supercommentary, a commentary on Galen's commentary".⁴⁰¹ But Gesius adds further material, which often suggests a comparison with the commentary by Iohannes Alexandrinus (see *infra*), although in the case of Gesius the versions are longer and therefore independent. The exegetic approach typical of late antique Alexandrian commentaries can already be seen in Gesius, for ex. the division of teaching into lectures (*praxeis*), each composed of a general discussion (*theoria*) and an explanation of the text (*lexis*). This new work extends the list of those on which

Regimen acutorum, De fracturis, De capitis vulneribus, Epidemia, De humoribus, Officina medici, De aeribus, aquis, locis, De natura hominis, De foetibus".

396 Irmer [1987] 170–172 (on Hippocrates); Garofalo [2000a] 144–146 (the prologue of Iohannes Grammatikos on the sequence of Galen's works); Overwien [forthcoming].

397 The following are still useful, although in need of updating: Meyerhof [1930]; Temkin [1932] 51 ff. See also Garofalo [2003b] 203–208.

398 For the otherwise unknown Theodosius, see Meyerhof [1930] 397 n. 3, most recently Ihm [2002a] 213; for Marinos (who is not the pupil of Proclus), Ihm [2002a] 165; for the identification of Anquilaos (or Aqilaus?), Sezgin [1970] 160; Temkin [1935] 421 n. 82 (with Agnellus), Wolska-Conus [1996] 47 ff. (with Asclepius); for an overview Ihm [2002a] 73–74; finally Irvine-Temkin [2003] (with Angeleuas, cited by Stephanus of Athens). For Iohannes the Grammarian, often confused by the Arabic sources with Iohannes Philoponus, and by modern scholars sometimes with Iohannes Alexandrinus, see Ihm [2002a] 138–154. The most recent survey of the problem of identification is in Pormann [2003] 248–252.

399 Kessel [2012a] in particular 98–99; on Gesius see also Temkin [1932] 73–74; Nutton [1984] 6–7; Duffy [1984] 23; Wolska-Conus [1989] 50–55; Nutton [1998b]; Watts [2009].

400 Almost nothing is known of him: Ihm [2002a] 85–86.

401 Kessel [2012a] 98. For Gesius as the possible source of an Arabic commentary on Prognostic, see Jooisse-Pormann [2012].

information is already available,⁴⁰² such as a commentary on Hippocrates' *Aphorisms*, cited by Stephanus of Athens,⁴⁰³ and commentaries on Galen's *On elements according Hippocrates* and *De foetuum formatione*.

The so-called 'Alexandrian Canon' of the works of Hippocrates (12) and of Galen (16) has not been preserved materially in any manuscript (with the possible exception of the codex Ambr. G 108 inf., see *infra*), but it has left a profusion of traces in the Greek, Latin, Syriac and Arabic speaking world.

The Greek commentaries on Galen that have come down to us are often fragmentary, such as the group of commentaries on Galen's *De sectis*: PBerol 11739 A (7th c.),⁴⁰⁴ which preserves the beginning of the *Prolegomena* to the commentary, and another two fragmentary commentaries, attributed to Archelaus and Palladius (6th c.) in later mss.⁴⁰⁵ The *Prolegomena* of PBerol is a general introduction to the art of medicine, which has the features characteristic of many other *Prolegomena philosophiae* datable between the 5th and 6th century, and it has textual affinities not only with the fragments of Palladius and Archelaus but also with the Latin commentary of Agnellus on *De sectis* (vedi *infra*).⁴⁰⁶ In contrast to these fragmentary pieces of evidence, the commentary by Stephanus of Athens on Galen's *Ad Glauconem* is complete.⁴⁰⁷ A commentary by Iohannes Alexandrinus (6th c.) on Galen's *De sectis* survives in a Latin translation.⁴⁰⁸

The texts relating to Hippocrates are more numerous: commentaries by Palladius (6th c.) on Hippocrates' *Epidemics* VI,⁴⁰⁹ *On fractures*⁴¹⁰ and *Aphorisms*

402 Wolska-Conus [1989] 50–54 and [1996] 47–48. In Pal. lat. 1090 commentaries on *De sectis* and on *Ars medica* are attributed to Gesius. Additionally, a commentary by Gesius on *De temperamentis* has been reconstructed (Garofalo [2003b] 205, with previous bibliography).

403 *In Hipp. Aph. II* 53, CMG XI 1.3.1, p. 256, 3–8.

404 See most recently Manetti [1995], with previous bibliography.

405 Baffioni [1954] and [1958]; for a comparison among the commentaries on *De sectis*, Manetti [1992].

406 Temkin [1935] 405–414; Manetti [1992] 216–224.

407 Dickson [1998].

408 Pritchett [1982]; for the commentary on *De sectis* see also Palmieri [1989] 34–42; Goel-Mayer-Staub [2000] 201–222. In the Latin commentary on *De sectis*, the proem, which seems to be independent of the commentary itself, is attributed to him in only one manuscript. On the problems of identification of Iohannes Alexandrinus, see Garofalo [1999] 189–193.

409 Today, this still remains available only in Dietz [1834], II, 1–204.

410 Edited by Irmer [1977]; on the relations between parallel redactions of Palladius and Stephanus, Irmer [1975].

(partially preserved in Arabic);⁴¹¹ commentaries by Stephanus of Athens (6th c., second half)⁴¹² on Hippocrates' *Aphorisms*, *On fractures* and *Prognostic* have also come down to us.⁴¹³ A commentary by Iohannes Alexandrinus on *Epidemics* VI is extant, transmitted partially in Greek as marginal scholia (but complete in the Latin version),⁴¹⁴ and a commentary, mutilated, on *De natura pueri* (which was likewise a work belonging to the Canon).⁴¹⁵ Furthermore, in the past few decades the fragments of anonymous commentaries traceable back to the same cultural *milieu* have been identified in various manuscripts:⁴¹⁶ although the texts are generally independent from one another, they reveal great basic homogeneity. Fundamentally they are influenced by the exegetic approach of the school of Ammonius, displaying familiarity with philosophical themes on levels ranging from a passing acquaintance to in-depth knowledge, and reflecting the same teaching practice. They always presuppose a certain order of reading of the works, whether Hippocratic or Galenic, and the order generally corresponds to that of the Canon. The substance of this commenting activity is derived from Galen, who was the constant reference point, even though this was not always made explicit. As well as the division into lectures (*praxeis*),⁴¹⁷ other typical elements of Alexandrian medical scholasti-

411 Magdelaine [2003]; see also Duffy [1997] 9, n. 4: the commentary has been reconstructed partly also through the citations of *Aph.* by Palladius himself in the commentary on *Epid.* VI. For the reconstruction, these citations were examined comparatively with the commentary on *Aph.* of Stephanus, who quite probably used Palladius systematically, under the name of Galen or of "the recent commentator": see Wolska-Conus [2000]. A probable testimony of Palladius' commentary on *Prognostic* is identified in the summary of this text forming part of a work by al-Ya'qubi, see Overwien [2011].

412 He has been identified, by Wolska-Conus [1989], with the philosopher Stephanus of Alexandria; but see also Roueché [1990]; Westerink [1998²] 19–23.

413 The commentary on *Aphorisms* is edited by Westerink [1985–1995]; for the commentary on *Fract.*, see Irmer [1977], for the commentary on *Prognostic*, Duffy [1983].

414 Duffy [1997] 13: the Greek *excerpta* were inserted as *marginalia* in the text of the *Ephodia* in the codex Vat. gr. 300 (12th c.), written in the Reggio Calabria area; Pritchett [1975] for the Latin version. In the commentary on *Epid.* VI Iohannes mentions many commentaries he had composed on other works of the Canon (Bräutigam [1908] 51).

415 The commentary on *Nat. puer.*, edited for the first time by Dietz [1834] II, 205–235, was re-edited by Duffy [1997].

416 Fragments of anonymous commentaries on *Epid.* VI in Duffy [1997] 119–125, in Roselli [1999] and Ieraci Bio [2012]. In the work of 'Ali ibn Riḏwān, segments of two commentaries on *Mul.* 1–11 have been identified, one falsely attributed to Galen, the other attributed to an Asclepius, Ullmann [1977]; lastly, the fragment of the commentary on *Praecepta*, in the scholium of ms. vat. Urb. gr. 68, was analyzed by Bräutigam [1908] 54 ff.

417 However, it is not present in the commentary by Stephanus on Gal. *Ad Glauconem*.

cism include discussion, in the first lecture, of the *octo capitula* (see above), the frequent repetition of basic information (anatomical, physiological, therapeutic), the tendency to using *diairesis*⁴¹⁸ and the use of the problem and solution approach (*ἀπορία-λύσις*).

For all the authors mentioned in this survey, who essentially survive only in their works (or in fragments, like Archelaus),⁴¹⁹ it is extremely difficult to reconstruct the outline of a biography and a corresponding chronology.⁴²⁰ Palladius and Stephanus certainly taught in Alexandria,⁴²¹ just as the name Iohannes Alexandrinus leads back to the same city. But in all other respects their figures are evanescent. The relative chronology would appear to suggest that Palladius was earlier than Iohannes, and that both preceded Stephanus.⁴²² The personality of Stephanus of Athens is somewhat more clearly defined: dating from between 550 and 650, he is often defined as a ‘Philosopher’ and identified, not without controversy, with Stephanus of Alexandria, a commentator of two of Aristotle’s works.⁴²³ If the identification is accepted, Stephanus,⁴²⁴ born in Athens, would have arrived in Alexandria between 567 and 572.⁴²⁵ He cites Asclepius (twice by name, several times as “the commentator of this work”),

418 On the *diairesis*, Duffy [1984]; Mansfeld [1992] 326–331; Ieraci Bio [2003] 11–13; Ieraci Bio [2007].

419 For the discussion of a series of hypotheses, see, most recently, Manetti [1992] and [1995].

420 Bräutigam [1908] 35–46, dates them all to the period 550–650 AD, but on the basis of stylistic features he considers Palladius to be earlier than Iohannes. An internal element helpful in dating Iohannes is his allusion to his teacher as “Triseudemon maximus noster sophista”, who is likely to be identifiable with Gesius (Duffy [1997] 12, and Kessel [2012b]): this would date him to the first half of the 6th c.

421 Bräutigam [1908], 36

422 Bräutigam [1908] 38; Wolska-Conus [1989] 82 ff.; Irmer [1977].

423 Wolska-Conus [1989], who also identifies Stephanus with Pseudo-Elias, the author of the *Prolegomena philosophiae*. The argument put forward by Wolska-Conus is shared by Roueché [1990] 108–128, although Roueché believes that some doubts still remain.

424 I set aside the commentary and the figure of Theophilus, who, according to Westerink [1985] 17–19, is probably one of the revisors of the work of Stephanus: he is identified with the Theophilus who was the addressee of some letters written by Photius, designated as Protospatharius, datable to the 9th c. With regard to Theophilus’ commentary see Magdelaine [1988] 273–284. However, the chronological relation between Stephanus and Theophilus remains controversial, cf. Wolska-Conus [1994] (T. dated to the 9th–10th c.), Lamagna [2003] 67–68. The commentary attributed to Damascius in some manuscripts has been shown to be a late anonymous abridgement of Galen’s commentary, see Magdelaine [1996] 289–306.

425 Wolska-Conus [1989] 5–89: however, this identification is contested by Lautner [1992] 519–522.

and one may presume that Asclepius was his tutor.⁴²⁶ It may be possible, through Stephanus' citations, to gain an—extremely cautious—idea of the approach probably adopted in his commentary. Asclepius is defined as “the commentator of Hippocrates, who explains Hippocrates from Hippocrates”⁴²⁷ and he is often set in opposition to Galen by Stephanus, but this is not sufficient to define him as the representative of an exegetic strand that was a rival of the more common Galenic Hippocratism, since the same principle (“the law of exegesis is to interpret Hippocrates with Hippocrates”) was stated explicitly several times by Galen himself.⁴²⁸ Iohannes Alexandrinus and Stephanus⁴²⁹ sketch three or four points that summarize the aims of exegesis: 1) textual clarity; 2) the ancient author's thought; 3) the advantage or utility that can be obtained therefrom (this only in Stephanus); 4) discrimination between truth and falsehood. At the root of this approach stands once again Galen, who, however, tended to see the last of the four points as extraneous to the commentary (cf. *supra*):⁴³⁰ but the change in perspective arose from the need to reconcile the form of teaching based on the Hippocratic texts with a teaching methodology that would provide genuine professional training. This also explains why the *hypomnema*, while maintaining its lemmatic structure, began to show greater emphasis on a series of theoretical treatments concerning individual themes (sometimes also accompanied by small subtitles) that were relatively unconnected to the passage forming the object of the commentary: this was a format that served to provide students with a systematic doctrinal training, and it often went beyond the commentary, taking up themes addressed by Galen in specific treatises. Thus what Galen had deliberately left out of the commentary, referring readers explicitly to his scientific treatises, is in the end

426 Westerink [1985] 20–21, despite still nursing some doubts, is inclined to favor this interpretation; a much more decisive position is taken by Wolska-Conus [1996], who identifies Asclepius as the common source of Stephanus and Theophilus (see *supra* n. 416) and tries to reconstruct the character of Asclepius' exegesis. But it is not correct to generalize on the basis of certainly selective citations of Stephanus. One should also keep in mind the commentary on Hippocrates' *Mul.* attributed to 'Asclepius', who can be identified with Asclepius, a professor of medicine who was a fellow student of Asclepius of Tralles, a commentator of Aristotle, at the school of Ammonius, see Ullmann [1977].

427 *In Hipp. Aph.* v 27, CMG XI 1.3.3, p. 94.3–5: ὁ μέντοι Ἀσκληπιὸς ὁ ὑπομνηματιστὴς τοῦ Ἱπποκράτους ἐκ τῶν Ἱπποκράτους τὰ Ἱπποκράτους ἐξηγούμενος.

428 Wolska-Conus [1996] 42–47; [2000] 65–66; for Galen, see *supra*, § 4.1.1.

429 Ioh. Alex. *In Hipp. Epid.* VI, CMG XI 1.4, p. 28, 14–18; Steph. Ath. *In Hipp. Aph. Prooem.* CMG XI 1.3.1, p. 32, 20–25.

430 Duffy [1984] 22–23; see Wolska-Conus [1996] 42–47, but also the previous articles [1992] 77–86 and [1994] 33–42.

reintroduced, integrated into the commentary on the text, sometimes prevailing over the part dedicated to the *lexis*.⁴³¹ In this perspective it is easier to understand why these commentators only occasionally preserve some elements of textual criticism: they may effectively quote different text variants, but such readings are typically already known from Galen⁴³² and textual criticism is only a residual feature in medical exegesis. Moreover (again following along the path laid out by Galen) Iohannes Alexandrinus declares that he has made a rigid selection in discussion of variants, limiting himself to those that were ἀληθεστέρα: however, at times two variants may both be “true”.⁴³³ Stephanus, however, sometimes mentions different readings not known from Galen, but he contents himself with quoting the variants and explaining each of them.⁴³⁴

The most concrete evidence of the Canon in the Greek tradition can be traced in the *diabaseis* of ms. Vind. med. gr. 16.⁴³⁵ This codex contains a series of schematic representations (as if they were diagrams) of a selection of Galen's works, bearing the title ἀρχὴ σὺν θεῷ τῶν διαίρέσεων πασῶν τῶν Γαληνείων πραγματειῶν, ἀρχόμενος ἀπὸ τοῦ περὶ αἱρέσεων, τελευτῶν δὲ εἰς τὴν θεραπευτικὴν “I begin, with the favour of God, some *diabaseis* of all the works of Galen, starting from the book *On Schools* and ending with the book *Therapeutics*”. The initial and final work coincide with the first and last work of Galen's Canon, although the codex contains schematic outlines of only two groups of works (cf. *supra* the First and the Third Collection), in the same order as the Canon. It is interesting also to note the use of the title of *De pulsibus ad tirones* as

431 As far as Stephanus is concerned, see Wolska-Conus [1992] 15 ff.

432 For ex. Steph. Ath. *In Hipp. Aph. III* 14, CMG XI 1.3.2, p. 96.3; *III* 18, p. 114.13 etc.; *In Hipp. Prog.*, CMG XI 1.2, p. 48.2, 282.26, for a case derived explicitly from Galen, *In Hipp. Aph. IV* 77, CMG XI 1.3.2, p. 420.36 ff., for an implicit derivation, *III* 18, *ibid.* p. 112.34 ff. Magdelaine [1988] 271 admits the possibility of personal readings and points out that these observations appear only in the *non* epitomized section of the commentary. A list of cases is also given in Wolska-Conus [1996] 41 n. 113.

433 Ioh. Alex. *In Hipp. Epid. VI*, CMG XI 1.4, p. 28, 10–17, see Gal. *In Epid. VI*, CMG V 10.2.2, p. 3, 11–4, 25 = Ioh. Alex. *In Hipp. Epid. VI*, p. 7, 43–48 Pritchett [1975]. For a case of variants both of which are true, see Ioh. *In Hipp. Epid. VI*, CMG XI 1.4, p. 94, 12 ff.

434 See Steph. Ath. *In Hipp. Aph. V* 37, CMG XI 1.3.3, p. 116, 8–10: διττὴ γραφὴ φέρεται τοῦ παρόντος ἀφορισμοῦ . . . καὶ δεῖ ἑκατέραν γραφὴν τῇ πρεπούσῃ ἐξηγήσει ἀρμόσασθαι καὶ ἀποδοῦναι (“we must give each of the two readings its appropriate and fitting interpretation”); cf. *In Hipp. Prog.*, CMG XI 1.2, p. 282, 26–30. With regard to a negative judgment on a variant, a judgment which, however, derived from previous commentators; *ibid.* p. 152, 8. Variants are also annotated by Palladius, cf. *In Hipp. Epid. VI* (= II 187, 8–12 Dietz, on *Epid. VI* 7.5.1, 52 Manetti-Roselli), where he also records several variants unknown to Galen, but he explains all of them without taking up any specific position.

435 Studied by Gundert [1998]. On further attestations of *diabaseis*, Ieraci Bio [2007].

Small Pulse (σφυγμικάριον) and of the Third Collection as *The Book on Causes*.⁴³⁶ In the *diabaseis*, faithfulness to the Galenic text is variable: Galen's words are often reproduced in a fairly precise manner at the beginning, but then the degree of faithfulness tends to wane progressively. Certain types of information are omitted, some parts are simplified or reordered, but sometimes additions have been made by including material which is not contained in the source text, above all examples and analogies, designed to clarify specific factual elements or to render more explicit certain aspects of which Galen made only a passing mention. The content has affinity both with the Alexandrian exegetic tradition and also, in certain cases, with the *Summaria Alexandrinorum* that were transmitted through Arabic, and finally with the scholia to Galen in ms. Yalensis 234⁴³⁷ (see *infra*). In this process of interpretation of the Galenic text and of completion and systematization of the materials, there exists no clear dividing line between the text and the commentary: unlike commentaries in which the text is cited in the lemmata, the Galenic text and the explanatory material are linked in the condensed layout of ms. Vind. med. gr. 16, or rather, merged in an overall abridged version, which is effectively a rewriting. Such a technique is strongly evocative of the *summaria* of the Arabic tradition, of which the *diabaseis* are the stemmatic form.⁴³⁸

Although the Mediterranean world was gradually undergoing a cultural and language-based division between the Greek and the Latin area, Alexandrian medical culture still maintained close contacts with Italy,⁴³⁹ not only by virtue of a presumed medical 'school' in Ravenna in the 6th century but also on account of the presence within Italy of Greek materials deriving from Alexandria. The hypothesis of a medical school in Ravenna, based on Latin but structured according to the teaching model predominant in Alexandria, springs from a famous essay by Beccaria.⁴⁴⁰ His starting point was the examination of the codex Ambr. G 108 inf., dating from the 9th century, which reproduces an exemplar composed in Ravenna in the 6th century. Doubt has been cast on this idea of an autonomous 'Latin' school, or rather, it has been suggested that not

436 See Gundert [1998] 136–138.

437 Gundert [1998] 113–144; for a specific case, in the *Synopsis* by Iohannes of *Caus. morb.*, see Garofalo [2000a] 141, with regard to the *hegemonikon*.

438 Overwien [2013] considers both the *diabaseis* and the *summaria* to be texts designed as an accompaniment for the lessons held by Alexandrian iatrosophists, the structure of such texts being functional to memorization.

439 And with Latin Africa, cf. *supra* the case of Cassius Felix (n. 376).

440 Beccaria [1959] and [1961], followed many years later, after Beccaria's death, by the publication of the last part—incomplete—of his research, Beccaria [1971]. Palmieri [1991], [1993], [1994].

every Latin translation should be placed in Ravenna.⁴⁴¹ However, the presence and influence in Italy of a certain number of texts clearly derived from the Alexandrian exegetic tradition remains undeniable.⁴⁴²

The 5th–6th century saw the beginning of the first Latin translations of Greek medical texts (Oribasius, Rufus of Ephesus, Hippocrates), which, as early as the studies of Mørland,⁴⁴³ were putatively set in the context of Ravenna on the basis of internal information emerging from the translator of Oribasius. With regard to Hippocrates, there remain translations of *Aphorisms*, *Airs waters places*, *Prognostic*, *On regimen*, *On women's diseases*, *On weeks*, almost all of which concern works contained in the Canon (see *supra*). By far the most widely read and copied work⁴⁴⁴ is *Aphorisms*, which gradually took on the value of a handbook for general use but also of a treatise acting as an introduction to the study of medicine. But the Latin version of *Aph.* rarely appears in isolation; it is more frequently placed at the beginning of the commentary or even merged with the latter: for instance, two different commentaries on *Aphorisms* have been preserved, with lemmata that are based on the same translation and which are testified by a greater number of manuscripts. This same translation of *Aph.* also seems to be presupposed by the Latin commentaries on Galen of the codex Ambr. G 108,⁴⁴⁵ and these commentaries certainly date from the 6th century (see *infra*).

The ancient commentary on *Aph.* (Lat. A) is attributed to Oribasius⁴⁴⁶ in some manuscripts of the 11th century and later;⁴⁴⁷ it offers (in some mss.) a general prologue (showing an affinity with the *Prolegomena philosophiae*) on the parts of medicine, and then proceeds to the commentary on *Aph.* with

441 For a bibliographic overview see Palmieri [2002].

442 For ex. the scholia containing the commentary by Iohannes Alexandrinus on *Epid.* VI, in the cod. Vat. 300 (Magna Graecia origin). In general see Manetti [1992]; on the origin of the manuscripts containing the Hippocratic translations from a given area of Northern Italy, Beccaria [1959] 7, taken up again by Palmieri [1981] 210. But the traces of the presence, in southern Italy, of other medical texts, such as the commentaries on *Aph.* by Stephanus and Theophilus (Magdelaine [1988] 284–286) should not be omitted; on the role of southern Italy, see Vazquez-Buján [1982–83] and in general Irigoin [1969] 53.

443 Mørland [1932].

444 Beccaria [1961] 5 ff.: the most ancient codex is Mutin. Archivio Capitolare O.I.11, VIII–IX cent.; Müller-Rohlfen [1980] xxii ff., Fischer [2002].

445 Beccaria [1961] 22.

446 The commentary was edited in 1533 by the humanist Winter von Adernach under the name of Oribasius (Fischer [2002] 212 and 293–295).

447 Beccaria [1961] 30–31: cf. Fischer [2002] 287 ff. A fragment, in another codex, of the ancient Pseudo-Oribasian commentary was identified by Haverling [1995].

discussion of the *octo capitula*, which has some points of resemblance to the introductory parts of Stephanus' commentary. It can be described as an erudite commentary, which at times seeks to make certain themes clear to beginners in a manner different from Galen. Although the commentary must evidently be based on an Alexandrian tradition,⁴⁴⁸ no conclusion as to specific dependencies can be drawn. The second commentary (Lat. B), defined by Beccaria as being of a much later date,—although study is still in progress⁴⁴⁹—is testified by ms. Bern. 232 of the 10th century and by two later but independent and more complete manuscripts. It has no prologue and seems to contain an abridged and simpler commentary.⁴⁵⁰

Finally, ms. Ambr. G 108 inf., of the 9th century, preserves not only a first section, with Hippocratic works, composed of the Latin versions of *Prognostic*, *On weeks* and *On airs waters and places*,⁴⁵¹ but also important testimony in the form of a 'block' of commentaries on the First Collection of Galen's Canon (in the same order), namely *De sectis*, *Ars medica*, *De pulsibus ad tirones*, *Ad Glauconem*, attributed to lecture notes of Agnellus 'iatrosophist' (*ex vocem Agnelli*) written down by his pupil Simplicius in Ravenna, as declared in the *subscriptio* to the first three texts.⁴⁵² Agnellus' Galenic commentaries bear witness to a unitary course of the overall set of εἰσαγωγαί, to be read and explained according to the prescribed order. The form of Latin used is strongly overlaid with Greek traits and the texts clearly bear the hallmarks of the Alexandrian commentaries: the division into lectures (*actiones/praxeis*), the tendency towards *diairesis*, the mention of groups of Galenic works with the titles of the Canon (*Anatomy*, *On causes*, *Diagnostics* etc.). The commentary on *De sectis* offers many close parallels with that attributed to Iohannes Alexandrinus.⁴⁵³

The reception of Greek medicine in the Arabic context after the conquest of Egypt was extensive and profound. Through the Arabic sources the great gaps in the Greek tradition can to some extent be bridged. Galen was widely translated and utilized, to the point that the lemmata of his commentaries

448 Fischer [2002] 291 ff.

449 Fischer [2002] 279–280: Klaus-Dieterich Fischer is planning a critical edition.

450 Ann Hanson proposed seeing an affinity of Lat. B with the exegesis of *Aph.* represented by PRyl. 530 (see *supra*), but the research is still in progress.

451 Palmieri [1981] 204–211 on the transmission of these texts, partly also present in other mss. On Pal. 1090, a later witness (15th c.) of the texts of the Ambrosianus, that attributes the commentary on *De sectis* to Gesius, see Palmieri [1989] 27–46.

452 On his identity, an open problem, see Palmieri [2001] 237–246 with previous bibliography. For *De sectis* Palmieri [1981], [1989]; *Ars medica* Palmieri [1993], [1994], [2003]; for *De pulsibus* Palmieri [2005], [2007].

453 See most recently Nutton [1991] 511 ff.

became the almost exclusive source of the Arabic translation of the work of Hippocrates; however, traces of two commentaries on Hippocrates' *Mul.* 1–11 are known through the reports given by Ali ibn Riḍwan:⁴⁵⁴ 1) attributed to Galen, pseudepigraphical, datable between the 3rd and 6th century; 2) attributed to Asclepius, identified with the physician of this name, a study companion of Asclepius of Tralles, who was a philosopher and commentator of Aristotle's *Metaphysics* and a pupil of Ammonius.⁴⁵⁵

The Arabic tradition also provides information concerning works on Galen attributed to a Iohannes Grammatikos,⁴⁵⁶ often identified with the Neoplatonic philosopher John Philoponus. Criticism has long distinguished these two figures and has identified a physician named Iohannes Grammatikos distinct from Philoponus.⁴⁵⁷ Three works by Iohannes Grammatikos have come down to us: a commentary on *De pulsibus ad tirones* (*Small pulse*), one on *De elementis* and another on *De temperamentis* (but it should be noted that Iohannes Grammatikos is thought to be distinct from the cited Iohannes Alexandrinus who was a commentator of Hippocrates and of Galen's *De sectis* (see *supra*). The Iohannes now kept separate from Philoponus also wrote a *Digest* of all the works of Galen's Canon.⁴⁵⁸ Iohannes' synopsis of *De pulsibus* has been shown to be an epitome of his own commentary, which has come down to us. It can therefore be surmised that Iohannes Grammatikos is very likely to have adopted a similar procedure for the other works, and one may find in this line of reasoning a confirmation of the close complementarity of the two text typologies.

Gotthard Strohmaier has recently proposed that the author known as "Iohannes Grammatikos" who composed a commentary on book XI of Galen's *De usu partium*, transmitted in an Arabic codex, should be identified as being John Philoponus, the Neoplatonic philosopher. The text, which is a remnant of a commentary on the entire work, is written in the form of

454 Ullmann [1977] 245–262, but Overwien [2005] 204 ff. shows that other commentaries were also used, for ex. that of Palladius on *Aph.* The picture could undergo further change with the systematic study of the Syriac and Arabic translations dating from earlier than Ḥunain, as pointed out recently by Oliver Overwien (*Colloque Hippocratique*, Paris 8–10 November 2012).

455 Asclep. *In Arist. Metaph.*, CAG VI 2, p. 143, 31 f.

456 A commentary on *De antidotis*, under the name of Iohannes Grammatikos, in a Cairo ms., is also known (Pormann [2003] 248 and n. 42).

457 Bräutigam [1908] 50; Meyerhof-Schacht [1931] 1–21; Sezgin [1970] 157–160.

458 Cf. Garofalo [2000a]; Garofalo [2003b] 207–208: it is one of the sources of Galen's 16-work Canon.

a condensed explanatory paraphrase, without lemmata.⁴⁵⁹ John Philoponus' competent knowledge of the Galenic texts had already been demonstrated,⁴⁶⁰ but this constitutes a further piece of evidence pointing to the close connection between medicine and philosophy in the Alexandrian environment of the school of Ammonius. It also highlights the importance of the reception of Galen in his role as a philosopher.⁴⁶¹ We know that Asclepius, a professor of medicine, attended Ammonius' courses and that the members of the school of Ammonius were favorable to the use of references to medicine, in particular to Galen, but information on any specific exegetic activity is problematic.⁴⁶² Accordingly, if confirmed, the identification of a commentary by John Philoponus on a work of Galen's not included in the Canon but definitely of philosophical importance is of major significance.⁴⁶³ The question is still highly controversial, as there are other medical texts attributed to John Philoponus that reveal an approach in which medicine and philosophy are merged, but whose authenticity is doubtful.⁴⁶⁴

But the most important Arabic texts that bear witness to the Galenic Canon are the so-called *Summaria Alexandrinorum*, describable as digest-commentaries, possibly by more than one author, translated from Greek by Ḥunain and his *entourage*.⁴⁶⁵ They take a number of different forms, from very short précis to digest-commentaries longer than the original work, like that on *Ad Glauconem*.⁴⁶⁶ Rather than servile compendia, they are a genuine reworking and abridgment of the text with the aim of creating a handbook for students

459 Strohmaier [2003]; the commentary is also cited by Ibn abi Usai'bia, *ibid.* 110 n. 13.

460 Todd [1977] 118–120; Todd [1984] 106 ff.

461 Todd [1977] and [1984]: with a better examination of the testimonies, Roueché [1999]. See also Manetti [1995] 30–31, Perilli [2000b] 100–116.

462 Perilli [2000b] 101, who cites the passage of Asclepius' commentary taken from the lessons held by Ammonius on Aristotle's *Metaphysics*. Asclepius of Tralles was perhaps also the author of a commentary on *Aph.* and on *Mul.* I (Ihm [2002a] 73–76), cf. *supra*. On the doubtful information of commentary writing attributed to philosophers who were exponents of the Alexandrian school (Damascius, David, Elias), see most recently Ihm [2002a] 79–81 and 86.

463 For ex. Westerink [1964] and [1990] x–xliii.

464 Cf. for ex. Schiano [2003].

465 Garofalo [1999] 187. It is by now accepted that these were translations from Greek and not material elaborated by the Arab authors, cf. already Peterson [1974] 113–115; Garofalo [1994] 333; Garofalo [2003b]. Some codices of the *Summaria* are reproduced anastatically by Sezgin [2001].

466 Garofalo [1994]; Pormann [2004]. However, there are also summaries of works not belonging to the Canon, see Savage-Smith [2002].

(the diairesis method is the most prominent feature): some materials are suppressed, but one also notes that certain parts have been shifted to different positions, or there may be additions, or the use of figures (diagrams),⁴⁶⁷ as mentioned earlier in connection with the *diairesis* of ms. Vindob. gr. 16.⁴⁶⁸

In conclusion, mention should be made of a phenomenon that is quantitatively important at least for Galen, namely the scholia conserved in some manuscripts, which represent the final outcome of the reception of exegesis on the works of Galen. So far two groups of scholia have been identified, which, however, represent a rather fragmentary situation:

- a) *Scholia Parisina*, preserved in ms. Par. gr. suppl. 634, 12th c., *sch. ad De elementis, De temperamentis, De naturalibus facultatibus, De sectis, Ad Glauconem*.⁴⁶⁹
- b) *Scholia Yalensia*, preserved in ms. Yalensis 234 (14th c.),⁴⁷⁰ but also in Par. gr. 2147 (16th c.) and in Marc. App. v 9:⁴⁷¹ *sch. ad De naturalibus facultatibus, De locis affectis, De elementis, Ad Glauconem*.

They represent a sort of ‘zero degree’ of commenting.⁴⁷² The authoriality of the exegete has disappeared, as they represent a constant conflation of various different Galenic materials,⁴⁷³ and numerous clues seem to point to their dependence on the Alexandrian exegetic context.⁴⁷⁴ The utilization of selections of authorial material reorganized by theme forms part of a teaching tech-

467 For the attestation of the diagrams in the Greek manuscript tradition of various authors, see Ieraci Bio [2003] 17 ff.

468 According to Garofalo [2003a] and [2003b], they are likely to have derived from a Greek model that was the base-text of the *Tabulae* of the Vindob. gr. 16 (*supra*); on the affinities between Arabic summaries and the *Tabulae*, see also Pormann [2004] 19–21.

469 Helmreich [1910]; the *scholia* on *De sectis* and *Ad Glauconem* have been published by Garofalo [2008].

470 Published by Moraux [1977]; to these should be added the scholia to *De inaequali intemperie*, which show an affinity in their approach, and which are preserved in ms. Philips 4614 (= Yale Beinecke Library 1121): Garcia Novo [1999] proposes a datation between the 3rd and 6th century.

471 This manuscript was added by Perilli [2000b] 92 ff.

472 The function of these collections is not completely clear: Overwien [forthcoming] expresses doubt as to whether they were genuinely utilized for teaching purposes.

473 On the scholia, see Manetti [1992] and most recently the articles by Lorusso [2005] and [2010], with careful examination of the codex Par. gr. suppl. 634. But the other collection of scholia reveals analogous characteristics.

474 Manetti [1992], Lorusso [2005] 45 and n. 10, and in particular [2010].

nique that goes back to Oribasius and should by no means be considered as a mere 'epitomization'. The merger of different texts presupposes in-depth, detailed and vast knowledge of a far broader Galenic *corpus* than that which has come down to us, so much so that the material in question has allowed the individuation of some notable fragments of lost works. But the operation of selection, which reflects the intelligence and ability of the compiler, tends to be concealed behind the texts chosen, even though the compilation is based on an exegetic principle explicitly drawn from Galen himself: "explaining Hippocrates by Hippocrates". This was a principle which, in turn, was applied to the great Galen—a destiny that would certainly not have displeased him. Here exegesis, once defined by Galen as 'mimesis' of the commented author performed by an actor-commentator, reaches its crowning and paradoxical achievement.⁴⁷⁵

475 In particular Moraux [1977] III 168–171 and p. 57. For the mimetic aspect of exegesis, according to Galen, *supra* § 4.1.2.

Hellenistic Astronomers and Scholarship

Raffaele Luiselli

- 1 *Editorial and Exegetical Activities*
- 2 *Source Criticism*
- 3 *Manuscript Collation*
- 4 *The Evaluation of Variants*
- 5 *Emendation*
- 6 *Interpreting the paradoxis*
- 7 *Some Final Observations*

Science and scholarship enjoyed impressive connection in the Hellenistic period. Eratosthenes of Cyrene (c. 285–c. 194 BC) represents a striking example of an intellectual combining these widely differing spheres of activity;¹ as Pfeiffer has remarked, “he seems to have been the first scholar and poet who was primarily and truly a scientist”.² On a smaller scale, other figures are known to have dealt with scientific as well as scholarly issues. One topic, for which we have plenty of material in the scholia, concerns grammarians and commentators discussing scientific matters as they take the trouble to elucidate passages of literature involving questions relevant to the exact sciences. It is beyond the scope of this chapter to investigate such material. My aim will be, instead, to assess evidence of a text-critical as well as exegetical attitude shown by those who were concerned not so much with the arts subjects as, rather, with the phenomena of nature. Some scientists did tackle problems posed by the wording of individual writings; and on occasion they did so at length, although, not surprisingly, their scholarly interest appears to have focused on the scientific textbooks of their predecessors. This chapter will concentrate on the individuals who were known in antiquity as astronomers; and it will focus on the second century BC when, to quote Otto Neugebauer, “astronomy becomes a real science in which observable numerical data are made the decisive criterion for the correctness of whatever theory is suggested for the description

1 Pfeiffer [1968] 152–170, and Montana in this volume. The bibliography on Eratosthenes is vast, but to date there is no reliable modern collection of all his fragments.

2 Pfeiffer [1968] 152.

of astronomical phenomena".³ A prominent figure in this crucial phase of the history of astronomy is Hipparchus of Nicaea,⁴ and it is to his critical attitudes that the greater part of this chapter will be devoted.

1 Editorial and Exegetical Activities

In addition to many an essay on matters of astronomy, Hipparchus wrote a monograph on the *Phaenomena* of Aratus (first half of the third century BC)⁵ which happens to be the only one extant of his output.⁶ There he treats a variety of topics, including the relation between Eudoxus (first half of the fourth century BC)⁷ and Aratus (1.2.1 ff.), and the simultaneous risings and settings of constellations (2.4–3). The title given to Hipparchus' work in some of the extant manuscripts runs as follows: Τῶν Ἀράτου καὶ Εὐδόξου Φαινομένων ἐξήγησις (*Exegesis to the Phaenomena of Aratus and Eudoxus*).⁸ In the technical language of Hellenistic scholarship the word ἐξήγησις seems to have been used of an individual interpretation of a particular passage or word; a set of such interpretations may or may not have been part of a running commentary.⁹ Hipparchus' work is exegetical in nature inasmuch as it deals with a primary text, on specific points of which it offers notes of varying extent and complexity. But it is not a line-by-line commentary. In particular, it lacks all distinguishing

3 Neugebauer [1975] 1.4.

4 For general information on Hipparchus, see Toomer [1978], Jones [2008], and Toomer in Hornblower-Spawforth [2003] 708. Cf. also Rehm [1913] and Montana in this volume; see also Broggiato [2012]. For discussion of Hipparchus' achievements in mathematical astronomy, see Neugebauer [1975] 1.274–343.

5 This hexameter poem (Φαινόμενα) is preserved in its entirety in several manuscripts which are seldom older than the fourteenth century. It has most recently been re-edited by Martin [1998], and Kidd [1997]. For the exegetical material relevant to the poem, see Jean Martin [1976] (ancient scholia found in medieval manuscripts), Luiselli [2011] (commentaries and annotations in papyrus rolls), and Di Maria [1996] (Achilles). For further bibliography, see Erren [1994].

6 The standard edition is Manitius [1894]. For discussion of various topics, see Nadal and Brunet [1989]; Nadal and Brunet [1984].

7 Hipparchus focuses on two prose treatises by Eudoxus, named *Mirror* (Ἔνστρονον) and *Phaenomena* (Φαινόμενα), of which we possess a few fragments gathered from references by Hipparchus himself. These fragments are collected by Lasserre [1966], to which reference is made throughout in this chapter. On Eudoxus, see Toomer in Hornblower-Spawforth [2003] 565–566; on his astronomical theories, see especially Neugebauer [1975] 2.675–683.

8 See Manitius [1894] viii, xi, xii, 280.

9 Pfeiffer [1968] 223.

features of a work of systematic exegesis, where words and lines picked out for comment from the primary text are cited verbatim and are followed by explanatory material;¹⁰ where such lemmata are used, they are linked by connecting phrases (e.g. ἐξῆς δὲ φησι, “Thereafter he says”) to what precedes.¹¹ Instead the work bears the main hallmarks of a treatise.¹² Hipparchus not only takes on a variety of topics but also cites passages from Aratus’ *Phaenomena* insofar as they are serviceable for the purposes of his discourse, without strictly following the order in which they appear in the poem. Moreover he ends his references to the *Phaenomena* at line 729 (2.3.37) because he is not concerned with the calendrical material and the forecasting of weather changes, on which lines 758–1141 of Aratus’ poem focus. It is significant that Hipparchus refers to an individual book or section within his work as a σύνταγμα (3.1.1a). In his usage, at least, this word must mean ‘dissertation’ as he calls Eudoxus’ monographs συντάγματα, ‘essays’.¹³ As has been observed, such treatises “were also interpretations, though in a form different from that of the ὑπομνήματα [*i.e.* running commentaries]”.¹⁴ Therefore, if the reading ἐξήγησις in the manuscript-transmitted title of Hipparchus’ work is sound, it must be taken to have a loose significance. Yet its very presence in that title looks suspiciously like a sign of late reworking.¹⁵ As it happens, two more titles are in evidence: one of Aratus’ extant lives, the so-called ‘Vita III’, speaks of a work being written “against Aratus and Eudoxus” (ἐν τοῖς πρὸς Εὐδοξὸν καὶ Ἄρατον);¹⁶ and the *Suda*-entry for Hipparchus cites him as having written “on the *Phaenomena* of Aratus” (περὶ τῶν Ἀράτου Φαινομένων).¹⁷ Either title suggests an essay.¹⁸

10 On the characteristics of these commentaries, see e.g. Dorandi [2000], and Del Fabbro [1979]. They are called ὑπομνήματα by modern scholars, and would no doubt have been given the same designation in antiquity; see *P.Amh.* II 12, *P.Oxy.* XXXI 2536. However, as S. West [1970] 291 has pointed out, the word ὑπόμνημα “is used of a wide range of literary productions, from rough jottings to the history of Polybius”.

11 Cf. Hipparch. 1.8.14, 1.8.18, 1.10.1–10, 1.10.19–21.

12 Martin [1956] 27.

13 Hipparch. 1.2.3, 1.3.10, 1.6.1, 1.8.6–7, 2.3.12, 2.3.29–30. For the differences between ὑπόμνημα and σύγγραμμα/σύνταγμα, see Montana and Dubischar in this volume.

14 Pfeiffer [1968] 213.

15 Manetti [1995] 23–24 provides evidence for the use of ἐξήγησις in the titles of late (especially sixth-century AD) scholarly writings to mean a set of notes on particular points of interest. Cf. also Manetti [1992] 212.

16 Arat. Vita III, ed. Jean Martin [1974] 17.9–10 (right-hand column). Cf. *apud Eudoxum et Aratum* in the Latin translation of this passage, ed. Jean Martin [1974] 17.9–10 (left-hand column), reprinted from Maass [1898] 149.22–150.1.

17 *Suda* ι 521, ed. Adler [1931] 2.657.26.

18 Cf. the extant titles of Aristarchus’ monographs, which include works of polemics (πρός) as well as treatises ‘on’ (περὶ) particular subjects: see Pfeiffer [1968] 213.

The question then is, was Hipparchus' work written 'against' (πρός) or 'on' (περί) Aratus (and Eudoxus)? Jean Martin has argued for the former.¹⁹ But Hipparchus in his prefatory letter to Aischrion (1.1.2) informs us of his intention to write 'on' (περί) the *Phaenomena* of Aratus; like the *Suda*, he does not mention Eudoxus. He also tells us that he aims to point out both the positive and the negative aspects of Aratus' poem (πᾶν καθόλου τὸ καλῶς ἢ κακῶς λεγόμενον <ἐν> αὐτοῖς ὑποδεικνύων).²⁰ In other words, what he intends to write is primarily not a work of polemics, but an essay. His words are consistent with the information provided by the *Suda*; and a περί-titled monograph on the *Phaenomena* of Aratus compares well with the titles of a number of lost scholarly works that were concerned with individual texts of particular authors.²¹ Unfortunately we know nothing about their format and appearance.²²

At 1.1.3 Hipparchus refers to Attalus of Rhodes as a mathematical astronomer of his own time (ὁ καθ' ἡμᾶς μαθηματικός). Attalus too is known to have done much work on Aratus' *Phaenomena*, of which we possess only a few remnants.²³ In one of these fragments, where his own words are cited verbatim by Hipparchus, Attalus asserts that he has produced both a revised text (βιβλίον διωρθωμένον) and an interpretation (ἐξήγησις) of Aratus' poem.²⁴ We will consider each in turn. But before discussing their nature and format, it is important to point out that Attalus' distinction between a διόρθωσις or edited text and an ἐξήγησις or exegetical exposition has a parallel in an A scholion to *Iliad* 2.192 which is attributable to Didymus.²⁵ There, as Pfeiffer has observed, "the recensions of the text and the commentaries stand side by side neatly distinguished".²⁶ Martin West agrees, arguing convincingly that while referring in the above scholion as well as elsewhere to edited texts and commentaries by his predecessors, Didymus envisages two different products of scholarly activity.²⁷ This suggests that Attalus is likewise referring to two separate

19 Martin [1956] 27 n. 1.

20 Cf. also Hipparch. 1.1.4.

21 Cf. the titles collected by Leo [1904] 258 n. 2 (= Leo [1960] 2.391 n. 3).

22 In this connection, it must be observed that Didymus' *On Demosthenes* (Περὶ Δημοσθένους) is cast in the form of a ὑπόμνημα, but it is debatable whether in effect the work is best considered a commentary or a monograph; see Harding [2006] 13–20. For a typology of philological writings, see Dubischar in this volume.

23 These fragments are collected by Maass [1898] 3–24, to which reference is made throughout in this chapter. Cf. Kidd [1997] 18; Martin [1956] 22–27; Maass [1898] xi–xv.

24 Fr. 1.12–13, ed. Maass [1898] 3 (= Hipparch. 1.3.3) τὸ τε τοῦ Ἀράτου βιβλίον ἐξαπεστάλακαμέν σοι διωρθωμένον ὑφ' ἡμῶν καὶ τὴν ἐξήγησιν αὐτοῦ.

25 *Sch.* A (Did.) Hom. *Iliad* 2.192b, ed. Erbse [1969] 1.222.

26 Pfeiffer [1968] 216.

27 West [2001a] 50–75. He cites the *Iliad* scholion under discussion on p. 50 n. 14.

products of scholarship, of which one, viz. the exegesis, was intended to accompany the other, viz. the edition. There is further evidence in support of this conclusion. Hipparchus offers no fewer than 13 verbatim quotations from Attalus' exegesis,²⁸ of which some are very extensive—much longer than the blank space above, below or to the right of each column in second-century BC manuscripts could accommodate, and much longer than extant *marginalia* in the papyri of Hellenistic date.²⁹ The probability must be that Hipparchus took those quotations not from the material penned in the margins of an edited text of Aratus' *Phaenomena*, but from a prose text. This in turn suggests that the edition and the exegesis were truly two distinct entities. Taken together, however, they are likely to have formed a set of scholarly texts, to which Attalus prefixed a preface. A verbatim quotation from the latter as cited by Hipparchus shows that the preface, which Hipparchus calls *προοίμιον*, was meant to introduce the edition as well as the exegesis.³⁰

What was this exegetical work? Was it a monograph, like Hipparchus', or a running commentary? It is hard to tell. Hipparchus four times provides interesting, yet inconclusive, evidence:

- (i) In 1.7.1–3 he cites lines 303–310 of Aratus' *Phaenomena*. He then continues: *περὶ δὲ τούτων ὁ Ἄτταλος προενεγκάμενος αὐτίκα γράφει ταυτί*, "Immediately after citing these verses, Attalus writes the following". This sentence introduces a verbatim report of Attalus' interpretation.³¹
- (ii) In 1.8.8–10 Hipparchus cites lines 367–385 of Aratus' *Phaenomena*. Next comes the following sentence: *ταῦτα δὲ προενεγκάμενος ὁ Ἄτταλος ἐπιφέρει*, "After citing these verses, Attalus adds". The verb *ἐπιφέρει* introduces a verbatim report of Attalus' interpretation.³²
- (iii) In 1.3.9–10 Hipparchus writes: *προεκθέμενος γὰρ τὰ ἐπὶ τοῦ θερινοῦ τροπικοῦ ποιήματα, ἐπιφέρει ταυτί*, "After recording the verses on the tropic of Cancer [that is, lines 497–499 of Aratus' *Phaenomena*], he [Attalus] adds the following words". The words in question constitute Attalus' interpretation, which Hipparchus reports verbatim.³³

28 They are found in Maass' collection of Attalus' fragments as nos. 11, 12, 14, 15, 17, 18, 20–25, 28.

29 Width of intercolumnar space and of upper and lower margins in the Ptolemaic papyri: Johnson [2004] 119, 133, and Blanchard [1993]. Marginal comments in papyrus rolls from Egypt: McNamee [2007], and *CLGP* (in progress); annotations in the papyrus copies of Aratus' *Phaenomena*: Luiselli [2011].

30 Hipparch. 1.3.3 (= Attal., fr. 1.10–13, ed. Maass [1898] 3).

31 Attal., fr. 14, ed. Maass [1898] 10.

32 Attal., fr. 17, ed. Maass [1898] 13–14.

33 Attal., fr. 21, ed. Maass [1898] 17.

- (iv) In 2.2.36–42 he cites *Phaenomena* 597–606 on the rising of the Maiden. He then makes a few comments on these lines, stating that Aratus followed Eudoxus. He also gives a summary account of Attalus' opinion on line 606. Hipparchus then continues as follows (2.2.41): ἐκθέμενος γὰρ τῶν προειρημένων στίχων τοὺς ἐσχάτους [ρ'] ἐπιφέρει ταυτί, "After picking out the last of the afore-mentioned verses, he [Attalus] adds the following words". Again the phrase ἐπιφέρει ταυτί introduces a verbatim report of Attalus' explanation.³⁴

All these passages suggest that in Attalus' work each explanation was preceded by a verbatim quotation of the relevant verses of Aratus' *Phaenomena*. It follows that the text consisted of a series of lemmata and explanatory notes. This format is characteristic of a running commentary (ὑπόμνημα), but there is evidence to show that it could also be adopted in a treatise (σύγγραμμα, σύνταγμα). As we have seen, Hipparchus in his monograph makes occasional use of short phrases to connect quotations from Aratus' *Phaenomena*, which he adduces for discussion, to that which precedes.³⁵ So far as I can see, there is nothing that can establish whether Attalus did or did not use connective units of utterance before each quotation from Aratus' poem. Therefore, it remains unclear whether his exegesis was cast in the form of a commentary or of a monograph.

It appears from Hipparchus' report in 1.8.8–10 that some of the lemmata in Attalus' work were extensive—much longer than the lemmata found in papyrus commentaries published to date. Perhaps one might compare a special category of papyri which is characterized by lengthy lemmata, accompanied by comparably long interpretations.³⁶

We now move on to Attalus' editorial activity. His wording in the preface (fr. 1), βιβλίον . . . διωρθωμένον ὑφ' ἡμῶν, suggests that Attalus did consciously revise a text of the *Phaenomena* of Aratus.³⁷ The format and appearance of such a διόρθωσις are a vexed topic. Recent scholars maintain that we should envisage a base text of a literary work on which the 'editor' or 'corrector' (*diorthotes*) recorded all variant readings and emendations by entering them in the blank

34 Attal., fr. 25, ed. Maass [1898] 20.

35 I do not take into account here Didymus' *On Demosthenes* as the nature of this text is a question that has given rise to much controversy; see n. 22 above and Montana in this volume.

36 On such texts, see especially Montanari [2006a] 11–14. For a further text, probably an amateurish one, see Luiselli [2011] 119–126.

37 On this meaning of διόρθωσις, see West [2001a] 33, 50, Pfeiffer [1968] 216, and also Rosato [1999] 116–117.

space between the written columns (the intercolumnium), and/or at the top and bottom (that is, in the upper and lower margins).³⁸ Hellenistic book-production supports this view. Therefore, where Attalus says that he has produced a corrected copy of Aratus' poem (τό τε τοῦ Ἀράτου βιβλίον . . . διωρθωμένον ὑφ' ἡμῶν), it is likely that he is thinking of an existing copy of the *Phaenomena* which he marked with his own corrections. There is evidence in support of this conclusion. In 2.3.21–23 Hipparchus gives a verbatim report of Attalus' interpretation of lines 712–714 of Aratus' *Phaenomena*.³⁹ As we shall see, Attalus advances a conjecture in line 713. First he writes οἰόμεθα δεῖν γράφεσθαι τὸ ποίημα τὸν τρόπον τοῦτον, "We think the verse should be written as follows", then he cites lines 712–714 in the emended form. It follows that his conjecture is unlikely to have been put into the text of these lines as cited by Attalus himself as a lemma for his comment. This in turn has far-reaching implications for the topic under discussion. First, the quotations from the *Phaenomena* which Attalus prefixed to his exegetical notes did not constitute the edition proper of the poem as they did not contain a διωρθωμένον text. Secondly, Attalus' chosen base-text of the *Phaenomena*, from which he is likely to have taken all unemended quotations which he cited as lemmata in the course of his exegetical work, did not incorporate any corrections; besides being adduced for discussion in his ἐξήγησις, all corrections must effectively have been recorded in the blank space between the written columns (or in the upper and lower margins) of the copy of the *Phaenomena* which Attalus used as a base text for his critical activity. This emended copy of Aratus' poem Attalus made available to the reader.⁴⁰ This implies an intention to publish (and circulate) his work, limited though such an initiative may have been.⁴¹

Taken together, the two products of Attalus' philological activity constitute a major scholarly enterprise. Inasmuch as διόρθωσις (textual criticism) and ἐξήγησις (explanation) represent two distinct activities within the domain of ancient γραμματικὴ or scholarship,⁴² Attalus may well be viewed as a scientist who was (or intended to be) truly a scholar.⁴³ His work takes us straight to the world of second-century BC Alexandrian scholarship. So far as we know,

38 Montanari [2011b] 2–3; Montanari [2009d] 403–404; Montanari [2002a] 120–121, 125; West [2001a] 39; Montanari [1998d] esp. 4–9. See also Montana and Montanari in this volume.

39 Attal., fr. 28.21–39, ed. Maass [1898] 23.

40 Attal., fr. 1.12–13, ed. Maass [1898] 3 (= Hipparch. 1.1.3) τό τε τοῦ Ἀράτου βιβλίον ἐξαπεστάλακαμέν σοι διωρθωμένον ὑφ' ἡμῶν.

41 On publication of literary works in Graeco-Roman antiquity, see Dorandi [2007] 83–101.

42 Schenkeveld [1994] 265.

43 For a different view, see Martin [1956] 27.

it is with Aristarchus (c. 216–c. 144 BC) that the scholarly genre which we call ὑπόμνημα was first exploited on a large scale; as Pfeiffer has written, Aristarchus' predecessors "had, with very few exceptions, abstained from writing commentaries on the texts they edited".⁴⁴ As we have seen, the nature of Attalus' exegetical work is beyond secure determination, yet it is significant that his interpretive efforts focused on a poem which he edited in a revised form.

Besides Attalus and Hipparchus, the text of Aratus' *Phaenomena* was dealt with by Diodorus of Alexandria in the first century BC. There is evidence to suggest that he was an astronomer, and a well-known scientist in antiquity although he is a rather shadowy figure because of the dramatic loss of his writings.⁴⁵ It seems as though Aratus was a major target for study and discussion by the leading astronomers of the Hellenistic age. Much attention will, consequently, be devoted in the next paragraphs to selected, yet remarkable, aspects of the early history of the textual transmission of the *Phaenomena*.⁴⁶

2 Source Criticism

The debt of Aratus' hexameter poem to the prose works of Eudoxus was as favourite a topic for discussion in antiquity as it is nowadays.⁴⁷ Hipparchus discusses it at length in his extant monograph, and claims to have conclusively proved it. As has been observed, he may well have overstated his own merits in settling the case.⁴⁸ Yet his demonstrative method is noteworthy. Hipparchus sets the words (λέξεις) of the texts side by side (1.2.1–22), and notes their similarities. In doing so he calls attention to the existence of agreements in error between those texts. This point is illustrated, to take one example, by an observation which Hipparchus makes on the position of the Kneeler on the celestial sphere. This constellation, which today is named Hercules, was thought to have a foot close to the Dragon's head.⁴⁹ While identifying the foot in question with the left one, Hipparchus notices (1.2.6) that it is the Kneeler's right

48 Hunter [2008] 1.153–154.

49 In order to understand this descriptive language, the reader should keep in mind that all constellations were viewed in antiquity as figures of which individual parts pictorially represent individual stars or star-groups.

foot that both Eudoxus (fr. 17) and Aratus (lines 69–70) place over the Dragon's head. In his opinion, this inaccuracy is a mild one;⁵⁰ but apparently it is of a type sufficient for Hipparchus to establish a connection.

Another example is provided by a remark on the position of Cepheus in relation to the Little Bear. According to Eudoxus (fr. 33) and Aratus (lines 184–185), the tip of the Bear's tail, that is to say the star α UMi, forms an equilateral triangle with the feet of Cepheus, which are represented by the stars κ and γ Cep. Hipparchus finds fault with this view since he says (1.2.12) that the distance between the feet of Cepheus is shorter than the distance between each foot and the Bear's tail. The implication of the observations discussed thus far is straightforward. Factual errors common to *comparanda* are meaningful for establishing a link between them. The aim of Hipparchus is to emphasize the significance of patterns of agreement in error as markers of close relationship between the texts compared (cf. 1.2.6).

3 Manuscript Collation

The fragmentation of Attalus' work has no doubt obliterated much evidence that would otherwise have allowed the determination of the main characteristics of his editorial activity. He is known to have made conjectures on Aratus' *Phaenomena*.⁵¹ Did he also make collations of a plurality of different manuscripts? Modern scholars disagree over the attitude of the Alexandrians of the third and second centuries BC to the particular aspect of textual criticism which we call *recensio*. Whether and to what extent they took the trouble to search for, and make use of, diplomatic evidence in compiling their text of Homer is in dispute. Some scholars believe that manuscript collation was by no means a widespread practice in the time of Zenodotus, Aristophanes, and Aristarchus; others are of a different opinion.⁵² As we will see in a moment, close scrutiny of Hipparchus' words enables the determination of what Attalus is likely to have done with the text of Aratus.

50 Cf. Hipparch. 1.4.9 ἐπὶ δὲ τοῦ Ἐνγόνουσι παρεωρακέναι μοι δοκοῦσιν ὅ τε Εὐδοξος καὶ ὁ Ἄρατος, ἀλλ' οὐ διημαρτηκέναι, εἰπόντες τὸν δεξιὸν πόδα ἐπὶ μέσης τῆς κεφαλῆς τοῦ Δράκοντος κείσθαι ("as regards the Kneeler, it seems to me that both Eudoxus and Aratus were inattentive, yet not quite wrong, when they say that the right foot lies over the centre of the Dragon's head").

51 We shall discuss this aspect later on in this chapter.

52 See e.g. West [2001a] 36–38, and Montanari [2002a] 126–135. Cf. also Montanari [2011b] 14, Montanari [1998d] 2, and Montanari in this volume.

Although Hipparchus was not concerned with editing the *Phaenomena*, he cites selected variant readings in the course of his monograph. In particular, he sometimes reports that the existing copies of the poem are divided between two readings (cf. 1.9.1, 2.3.32), or share readings emended by Attalus (cf. 1.4.9, 2.3.9, 2.3.19). Unfortunately he fails to attribute individual identities to his sources. He refers to them vaguely (e.g. ἐν μὲν τισιν ἀντιγράφοις . . . ἐν δέ τισι, “in some of the manuscripts . . . in others”, at 2.3.32; or ἐν πᾶσι τοῖς βιβλίοις, “in all manuscripts”, at 1.4.9), without specifying where he found each reading. Thus the question must first be asked: did he have access to a plurality of different manuscripts, or did he derive the relevant information on readings from the margins of an annotated copy of the *Phaenomena*? On closer inspection, it appears that wherever Hipparchus cites instances of disagreement amongst extant manuscripts, he also cites Attalus’ choice between the transmitted variants; and wherever Hipparchus reports on cases of manuscript agreement, he also adduces Attalus’ conjectures for discussion. This suggests that all readings known to Hipparchus were also known to Attalus. It follows that Hipparchus may well have derived all pieces of information on readings from Attalus’ work.⁵³

There is no reason to believe that Attalus himself inherited all readings that were known to him from the exemplar which he used as a base-text for his critical revision of Aratus’ *Phaenomena*; this assumption would project further back a collating plan that could conceivably be attributed to Attalus’ initiative. In none of the cases in which Hipparchus reports on manuscript readings do his words make it clear whether his use of indications such as “in some of the manuscripts” also stems from Attalus’ work; but it may well have been so. It is to be regretted that we cannot assign numerical values to vague words such as “some” and “all”. As a result, we cannot tell whether Attalus collected several copies of Aratus’ poem, or just kept an eye on a couple of extra copies besides his chosen base-text of the *Phaenomena*. We should also very much like to know where and from whom he obtained his manuscript sources, and how old these were. There is in addition a question of method: did Attalus make extensive (if not systematic) collations, or did he check the readings of manuscripts whenever he thought it advisable to do so? There is simply no way to tell.

4 The Evaluation of Variants

We now focus on the diagnostic skill of Attalus and Hipparchus. We will begin by examining the criteria by which variant readings were judged. First and

53 Cf. Martin [1956] 28.

foremost, let us consider what Aratus has to say on the belt of Perseus (*i.e.* the star α Per) in lines 712–714:

αὐτὴ δὲ ζώνη καὶ κ' ἀμφήριστα πέλοιτο
ἢ Κριῶ λήγοντι φαίνεται ἢ ἐπὶ Ταύρω,
σὺν τῷ πανσυδίῃ ἀνελίσσεται.⁵⁴

But it may be questioned whether the belt itself is visible at the end of the Ram's rising or with the Bull, during whose rising he emerges entirely.⁵⁵

Most editors print the second half of line 712 as καὶ κ' ἀμφήριστα πέλοιτο. Hipparchus (2.3.32) knows of two variants: one is πέλοιτο, the other πέλονται. He reports that each of these readings is given by some of the manuscripts available.⁵⁶ Attalus is said to have accepted πέλονται.⁵⁷ Hipparchus instead argues for πέλοιτο on the ground that (a) the optative is congruent with κ' (*i.e.* κε),⁵⁸ and (b) it is ordinary practice to associate a neuter plural (ἀμφήριστα) with a singular verb.⁵⁹ His observation on the optative shows remarkable connections, in the spheres of theory and terminology, with the grammatical research of contemporary Alexandrian scholarship. The doctrinal aspect concerns the optative and the particle κε (epic and Aratean for ἄν): Aristarchus, the famous grammarian, seems to have regarded them as complementary;⁶⁰ and Hipparchus is aware of a link between them, describing it, as he does, in terms of concord (καταλλήλως λέγεται). Perhaps the model for his utterance is to be sought in the technical jargon of second-century BC scholarship,⁶¹ in consideration of the fact that in the realm of textual criticism the use of

54 Ed. Kidd [1997] 124.

55 Transl. Kidd [1997] 125.

56 Hipparch. 2.3.32 διχῶς δὲ γραφομένου, ἐν μὲν τισιν ἀντιγράφοις... 'πέλοιτο', ἐν δὲ τισι... 'πέλονται' ("this is written in two ways—πέλοιτο in some of the manuscripts, πέλονται in others").

57 Attal., fr. 28.24 and 82, ed. Maass [1898] 23, 24 (= Hipparch. 2.3.21 and 32).

58 Hipparch. 2.3.32 τῷ γὰρ ἄν συνδέσμῳ τὸ 'πέλοιτο' καταλλήλως λέγεται ("πέλοιτο is rightly constructed with the particle ἄν"). Kidd [1997] 419 suggests (correctly in my opinion) that "it was probably natural for Hipparchus to use the prose particle [*i.e.* ἄν in place of κε] in his comment".

59 Hipparch. 2.3.32 οὐδὲ γὰρ περισπᾶσθαι δεῖ διὰ τὸ πληθυντικῶς ἐκφέρεσθαι τὸ 'ἀμφήριστα'. σύνηθες γὰρ ἔστι τὸ σχῆμα τοῦτο τῆς ἐκφορᾶς ("nor should one be worried as ἀμφήριστα is expressed in the plural, for this form of expression is customary").

60 Matthaios [1999] 367–368, 579.

61 See Pagani and Lallot in this volume.

κατάλληλος to convey the notion of congruence between two elements in a sentence or clause is encountered in a papyrus commentary on the *Odyssey* of Homer which seems to preserve remnants of Aristarchean exegesis.⁶² In addition to this peculiarity of vocabulary, the terminological interest of Hipparchus' words lies in his use of σύνδεσμος ('conjunction') for ἄν / κε. On present evidence, Aristarchus seems to have been the first to name the particles σύνδεσμοι,⁶³ and may well have adopted the term σύνδεσμος for κε (ἄν) though this usage is attested for later grammarians.⁶⁴ An influence of scholarly language can also be detected in Hipparchus' perception of the so-called 'schema Atticum' as a characteristic of Hellenistic Greek. While the editorial disagreement between πέλοιτο and πέλονται in line 712 of Aratus' *Phaenomena* parallels the dispute amongst Alexandrian scholars about whether a plural or a singular verb should be associated with a plural subject in Homer,⁶⁵ there is much correspondence between, on the one hand, Hipparchus' advocacy of the use of a singular verb with a neuter plural as a feature of the ordinary language of his own days (σύνηθες γάρ ἐστι), and, on the other hand, the surviving fragments of Hellenistic commentaries on Homer where this element of incongruence in number is ascribed to συνήθεια (customary usage).⁶⁶

Hipparchus' approach to the vagaries of manuscript-transmitted texts is revealed by yet another example, which involves a disputed reading in a section where Aratus mentions the four celestial circles, that is to say, the tropics, the equator, and the ecliptic. Recent editors print lines 467–468 of the *Phaenomena* in this fashion:⁶⁷

αὐτοὶ δ' ἀπλατέες καὶ ἀρηρότες ἀλλήλοισι
πάντες, ἀτὰρ μέτρῳ γε δύο δυσὶν ἀντιφέρονται.

the circles themselves are without breadth and fastened all to each other,
but in size two are matched with two.⁶⁸

62 *PSI* XV 1464, lines 26–27 in the improved edition by Lunden [2011b] 7; on κατάλληλος, see Lunden's commentary on p. 16.

63 Matthaios [1999] 566.

64 Matthaios [1999] 579.

65 On this topic, see Matthaios [1999] 382–384. Cf. also Lunden [2011b] 14–15.

66 See ἡμῖν συνήθως in *sch. A*^{im} (Ariston.) Hom. *Iliad* 2.135a, ed. Erbse [1969] 1.210, and Matthaios [1999] 382–383. The 'schema Atticum' is most strictly followed in Attic. Koine Greek of the Hellenistic period is less consistent, although it tends to respect the rule when non-personal neuters are involved; see Mayser [1934] 2/3.28–30 (§ 151).

67 Martin [1998] 1.28; Kidd [1997] 106.

68 Transl. Kidd [1997] 107.

Hipparchus (1.9.1) reports the existence of two variant readings in line 467, δ' ἀπλατέες and δὲ πλατέες. Attalus is said to have preferred πλατέες (“broad”) in view of a scientific theory put forward by some unnamed astronomers, whom he calls ἀστρολόγοι.⁶⁹ Hipparchus instead pleads for ἀπλατέες (“without breadth”) on the basis of two arguments, of which one is scientific in nature and the other literary. The scientific justification is intended to challenge the rival theory: unlike the authorities invoked by Attalus in support of his choice, students of mathematical astronomy (μαθηματικοί) believe the celestial circles to have no breadth; and Hipparchus thinks their views are correct inasmuch as the circles are notional lines.⁷⁰ The literary aspect of Hipparchus' argumentation calls attention to Aratus himself. Examination of a number of passages of the *Phaenomena* where the celestial circles are dealt with suggests to Hipparchus that Aratus in line 467 must be taken to agree with the leading figures of mathematical astronomy (1.9.9–13);⁷¹ Hipparchus cites in evidence lines 513–514 on the equator, lines 497–499 on the northern tropic, and lines 541–543 and 553–558 on the ecliptic. In method this argument is reminiscent of an interpretive principle adopted within the mainstream tradition of Hellenistic scholarship. Aristarchus appears to have based his approach to the textual criticism of the Homeric poems on the assessment of Homeric usage.⁷² He is even credited with a famous precept, “Ὀμηρον ἐξ Ὀμήρου σαφηνίζειν (“elucidate Homer from Homer”).⁷³ It means that Homer's own words are regarded as the best guide to the understanding of individual readings and passages of the Homeric poems. Because of its value to both textual criticism and exegesis the criterion

69 Attal., fr. 20.7–12, ed. Maass [1898] 16 (= Hipparch. 1.9.1). For information on the theory in question, see Kidd [1997] 349–350.

70 Hipparch. 1.9.6–8. The point is made clear in 1.9.6: καθόλου τε οἶμαι τοὺς μαθηματικούς ἅπαντας τοὺς εἰρημένους <κύκλους> ἀπλατεῖς ὑποτίθεσθαι . . . οὐδὲ γὰρ ἐπινοῆσαι δυνατόν ἐστι τούτους πλάτος ἔχοντας· τὸ γὰρ ἴδιον ἐκάστου περιουσιακῆν καὶ ἀπλατῆ γραμμῆν ἔχον θεωρεῖσθαι συμβέβηκεν (“on the whole I think the mathematicians suppose all the said <circles> . . . to be without breadth; nor is it possible to see them as having breadth, for, as it happens, each of them is considered to be characterized by a notional line which is without breadth”).

71 In 1.9.9 Hipparchus is very clear about this: ὅτι δὲ καὶ ὁ Ἄρατος τοῖς μαθηματικοῖς ἀκολούθως ἀπλατεῖς αὐτοὺς νοεῖ ὑπάρχοντας, μάθοι ἂν τις ἔκ τε τοῦ περὶ τοῦ ἰσημερινοῦ λέγειν (“Aratus, too, in accordance with the mathematicians thinks of them as being without breadth; one could learn this from what he says on the equator”).

72 West [2001a] 37.

73 On the Aristarchean origin of this maxim, see Montanari [19970] 285–286, and Montana in this volume; for doubts, see Wilson [1997a] 90. For discussion of the principle, see Porter [1992] 70ff. Schäublin [1977] 224–227 detects parallels in the juridical and rhetorical traditions.

compares well with modern *usus scribendi*.⁷⁴ Hipparchus' interpretive method is similar, for he explores Aratus' usage with the purpose of determining what Aratus himself might have said in the controversial passage under discussion. In other words, Hipparchus is explaining Aratus from Aratus.

5 Emendation

We now move on to another kind of diagnostic activity, viz. conjectural criticism. We know of several conjectures made by astronomers on the text of Aratus. In principle, they emended what seemed scientifically untenable. Attalus of Rhodes is a case in point. The aim of his work on Aratus, including the *διόρθωσις* proper, is to show how "Aratus is in tune with the phenomena of nature".⁷⁵ A similar attitude is revealed by Diodorus of Alexandria in the first century BC. Let us consider lines 254–255 of Aratus' *Phaenomena*, ἀγγι δέ οἱ σκαίης ἐπιγουνίδος ἤλιθα πάσαι / Πληιάδες φορέονται ("near his left thigh-muscle all in a cluster the Pleiades move").⁷⁶ The muscle in question belongs to Perseus; it is the star ε Per. Hipparchus (1.6.12) blames Aratus for representing it as close to the Pleiades. Diodorus is cited in a scholion on this passage as having conjectured ὑπογουνίδος ("the part under the knee", "tibia") in place of ἐπιγουνίδος.⁷⁷ As Kidd has written, paraphrasing the scholion, Diodorus has made an attempt "to 'correct' the error noted by Hipparchus by shifting the reference to a position farther down the leg".⁷⁸

Hipparchus shows a more conservative attitude towards the transmitted text of Aratus. On the one hand, he offers no conjectures of his own on previously unemended passages; and, on the other hand, he defends the *paradosis* against emendations by other scholars. Observance of the "intention" (βούλημα) of the poet represents an important criterion by which Hipparchus argues in favour of the transmitted text. For example, let us return to the Kneeler and the position of his foot over the Dragon's head. Aratus in lines 69–70 has the following words: μέσσω δ' ἐφύπερθε καρήνω / δεξιτεροῦ ποδὸς ἄκρον ἔχει σκολιοῖο Δράκοντος, "he (*i.e.* the Kneeler) has the tip of his right foot above the mid-point of the tortuous Dragon's head".⁷⁹ Attalus conjectured μέσσου . . . καρήνου in place of

74 Tosi [1997a] 223 n. 4.

75 Attal., fr. 1.17–21, ed. Maass [1898] 3 (= Hipparch. 1.3.3). Cf. Martin [1956] 24.

76 Transl. Kidd [1997] 91, revised.

77 Jean Martin [1974] 203.9–10.

78 Kidd [1997] 276.

79 Transl. Kidd [1997] 77.

μέσσω . . . καρῆνῳ under the influence of the prepositional use of ἐφύπερθε with the genitive.⁸⁰ Hipparchus dismisses this emendation as a conjecture violating the intention (παρὰ τὸ βούλημα) of Aratus.⁸¹

Another example is provided by a remark of Aratus on the rising of the Water-pourer, who is named Aquarius in modern astronomy. Lines 693–694 of the *Phaenomena* in the edition by Kidd [1997] 122 run as follows:

Ἴππος δ' Ὑδροχόοιο μέσον περιτελλομένοιῳ
ποσσὶ τε καὶ κεφαλῇ ἀνελίσσεται.

When the waist of the Water-pourer rises, the Horse
with feet and head comes coursing up.⁸²

Hipparchus (2.3.6–7) cites both lines in the above form but reports that Attalus has altered the transmitted version of line 693⁸³ by emending the manuscript reading μέσον to νέον.⁸⁴ Hipparchus defends the *paradosis*: “the intention (βούλημα) of the poet, and also the phenomenon”, he says, “escape the notice of Attalus and of the others”.⁸⁵ In addition to this statement, Hipparchus seems to appeal to the authority of manuscripts against the proposed conjecture.⁸⁶

There is yet another example. Let us return to the belt of Perseus, on which Aratus focuses in lines 712–714. Hipparchus (2.3.19) observes that the transmitted reading λήγοντι in line 713 is likely to be an error because it does not conform to the way Aratus introduces the Zodiacal rising of constellations.⁸⁷ He also states that Attalus recognized the error and emended λήγοντι to

80 Attal., fr. 6.4–6, ed. Maass [1898] 6 (= Hipparch. 1.4.9). Cf. Kidd [1997] 204.

81 Attal., fr. 6.4–5, ed. Maass [1898] 6 (= Hipparch. 1.4.9).

82 Transl. Kidd [1997] 123.

83 Attal., fr. 27.22–24, ed. Maass [1898] 22 (= Hipparch. 2.3.9) ἀναγκαῖον οὖν εἶναι δοκεῖ μοι μὴ μετατιθέναι τὸν στίχον, ὡς ὁ Ἄτταλος ὑποδεικνύει, ἐν πάσι γε δὴ τοῖς ἀντιγράφοις οὕτως αὐτοῦ γραφομένου (“Therefore, I think it necessary not to alter the line as Attalus indicates, since it is written in this way in all manuscripts”).

84 Attal., fr. 27.8–10, ed. Maass [1898] 21 (= Hipparch. 2.3.7). In fact all extant manuscripts of the poem give νέον, whereas other sources provide evidence for either μέσον or νέον; for further information, see the apparatus criticus in Martin [1998] 1.42.

85 Hipparch. 2.3.7 λανθάνει δὲ τὸν τε Ἄτταλον καὶ τοὺς ἄλλους τὸ βούλημα τοῦ ποιητοῦ, τάχα δὲ καὶ τὸ φαινόμενον. For discussion of the point at issue, see Kidd [1997] 413.

86 See the passage cited above, n. 83. Cf. Martin [1956] 28.

87 Hipparch. 2.3.19 ἐξ ἀρχῆς γὰρ πάντων τῶν ζωδίων τὰς ἀρχὰς ἐπὶ τῆς ἀνατολῆς ὑποτίθεται, καὶ οὐχὶ μεσοῦντα ἢ λήγοντα (“from the beginning, he places the beginnings of all constellations on the eastern horizon, not the middle or end of them”).

ἀνιόντι.⁸⁸ Hipparchus (2.3.20) accepts this conjecture as a possibility but suggests an alternative, λήγουσα, making it agree with ζώνη (“belt”) in line 712. In short, both Attalus and Hipparchus agree on the need for emendation; and they do so on inspection of Aratus’ usage. But there is a difference between them. According to Attalus, whose words are cited verbatim by Hipparchus, his own emendation is designed to bring Aratus into conformity with himself as well as with the astronomical data.⁸⁹ Attalus lays special emphasis on the latter: “if the passage is written in this way [*i.e.* the way Attalus has emended it]”, he says, “the phenomena will be saved, and the poet’s explanation of the belt might appear both competent and accurate”.⁹⁰ For Hipparchus, the key factor to emendation seems to have been the observance of Aratus’ usage.

Close examination of what a poet intends to say (βούλημα) is a criterion linked to the method, which we discussed in the preceding section, of assessing variant readings on the basis of the poet’s own usage, so far as this can be determined from the context, or from the work in its entirety.⁹¹ In other words, it seems as though Hipparchus used the same basic criteria in choosing between transmitted variants as well as in his approach to conjectural criticism. These criteria are reminiscent of Aristarchean scholarship.

Perhaps this debate among Hellenistic astronomers is echoed by Achilles, the third-century AD grammarian, when he reports in a passage of *On interpretation* (Περὶ ἐξηγήσεως) that astronomers (ἀστρονόμοι), grammarians (γραμματικοί), painters (ζωγράφοι), and geometers (γεωμέτραι) all spoiled Aratus’ poem with “readings” (γραφαί) and interpretations (ἐξηγήσεις) of their own, which they contributed at will (πρὸς τὸ βούλημα τὸ ἴδιον).⁹² Hipparchus would in all probability not reckon himself among these people.

88 Hipparch. 2.3.20–21 = Attal., fr. 28.15–17, 25, ed. Maass [1898] 22–23.

89 Attal., fr. 28.21–22, ed. Maass [1898] 23 (= Hipparch. 2.3.21) ἡμεῖς μέντοι καὶ ἐπὶ τούτῳ τῷ τε ποιητῇ συμφώνως καὶ τοῖς φαινόμενοις ἀκολουθῶς οἰόμεθα δεῖν γράφεσθαι (“we think we should write here in a way that is both concordant with the poet and consistent with the phenomena”).

90 Attal., fr. 28.36–39, ed. Maass [1898] 23 (= Hipparch. 2.3.23) τοῦτον τὸν τρόπον γραφομένου τοῦ ποιήματος τὰ τε φαινόμενα σωθήσεται καὶ τὰ περὶ τῆς ζώνης ὁ ποιητῆς οὐ μόνον ἐμπείρως ἀλλὰ καὶ ἀκριβῶς ἐξηγούμενος ἂν φαίνοιτο.

91 Cf. Porter [1992] 73–74; Schäublin [1977] 223–225, 226. Of course both principles represent important criteria in modern textual criticism; see *e.g.* West [1973] 48.

92 Achill. *De Inter.* 3.1, ed. Di Maria [1996] 63.21–23 = Jean Martin [1974] 33.10–13.

6 Interpreting the paradosis

Evidence on Hipparchus' understanding of grammar has been discussed elsewhere in this chapter. There is evidence to show that other astronomers resorted to grammar in order to solve textual problems.

Aratus in lines 21–23 of the *Phaenomena* has a brief remark on the axis of the cosmos. In the edition by Kidd [1997] 72, 74, his words run as follows:

ἀλλὰ μάλ' αὐτως
ἄξων αἰὲν ἄρηρεν, ἔχει δ' ἀτάλαντον ἀπάντη
μεσσηγὺς γαῖαν, περι δ' οὐρανὸν αὐτὸν ἀγινεῖ.

the axis, however,
just stays for ever fixed, holds the earth in the centre
evenly balanced, and rotates the sky itself.⁹³

The transmitted reading in line 23, οὐρανὸν αὐτόν, makes excellent sense and is also accepted by Jean Martin in his 1998 Budé edition. Yet there is another reading attested from antiquity, namely οὐρανός; and much controversy arose over the next word.⁹⁴ The latter is not likely to have been equipped with the breathing and the accent in the autograph of the *Phaenomena* as well as in many of the subsequent copies. According to tradition, it is Aristophanes of Byzantium (c. 257–c. 180 BC) who must be credited with the invention of lectional aids πρὸς διάκρισιν τῆς ἀμφιβόλου λέξεως (“for the purpose of determining an ambiguous word”).⁹⁵ Many scholars have doubted the truth of this tradition,⁹⁶ yet on present evidence there is no denying the fact that the innovation was slow to catch on, for inspection of the papyrus copies of verse texts that circulated in Ptolemaic Egypt suggests not only that the accents and breathings came into use from the second century BC,⁹⁷ but also that copyists who adopted them did so desultorily and most often very sparingly. People in the third century BC read texts without accents; and accentuation was often a

95 For the relevant sources, see Lameere [1960] 91 n. 3, and Laum [1928] 100–102. See also Montana in this volume.

96 See Slater [1986] 170 no. 427 with further references. Cf. also Pagani-Perrone [2012] 114–115, and Mazzucchi [1979b] 145–147.

97 Cavallo-Maehler [2008] 20; Turner-Parsons [1987] 11–12.

matter of interpretation.⁹⁸ Such being the state of affairs, it is not surprising that doubts should have arisen as to the orthography of the pronoun in line 23 of Aratus' poem.⁹⁹ An ancient note, which has been preserved in the margins of some of the medieval codices of the *Phaenomena*, reports the existence of a debate on this issue between grammarians and astronomers. Let us cite the scholion in full:

πολλή και διάφορος ἐνταῦθα ζήτησις περὶ τὴν γραφὴν ἐγένετο τοῖς μαθηματικοῖς και γραμματικοῖς. οἱ μὲν γὰρ γραμματικοὶ ἀγνοήσαντες εἶπον “περιάγει ὁ οὐρανὸς τὸν ἄξονα”. ἔστι δὲ τοῦτο τῶν ἀτοπωτάτων. εἰ γὰρ ἀκίνητον αὐτὸν ἀπεδώκαμεν, [και] αὐτοῦ τοῦ Ἄρατου ἀντικρυς εἰπόντος “ἀλλὰ μάλ’ αὐτως ἄξων αἰὲν ἄρηρεν”, πῶς αὐτὸν φασὶ περιάγεσθαι; ἀλλ’ οἱ μὲν μαθηματικοὶ τὸ αὐτὸν δασύνουσιν, ἴν’ ἦ ἑαυτὸν. ὁ δὲ λόγος “περὶ δὲ τὸν ἄξονα ἄγει και στρέφει ὁ οὐρανὸς ἑαυτὸν”.¹⁰⁰

Here the astronomers and the grammarians had extensive and differing inquiries about the reading. The grammarians said from ignorance: ‘the sky rotates the axis’. But this is a crowning absurdity, for if we have defined the axis as motionless (Aratus himself openly says: ‘The axis, however, stays for ever fixed’), how can they say that it rotates? Instead the astronomers aspirate αὐτὸν in order that it may become ἑαυτὸν. The sense is this: ‘the sky moves and revolves round the axis’.

Neither the grammarians nor the astronomers (μαθηματικοί) can be identified. The interpretation of the grammarians is said to be scientifically ungrounded; and as the ancient commentator remarks, it is at variance with what Aratus himself has just said in the preceding lines (21–22). The astronomers have a different approach. Their αὐτὸν (= ἑαυτὸν) introduces a linguistically weak expression which, as Kidd puts it, “is an obvious corruption, a clumsy way of expressing what would normally be done by the middle voice”.¹⁰¹ But the proposed solution is grammatical in nature.¹⁰²

7 Some Final Observations

As we have seen, both Attalus and Hipparchus exhibit intriguing connections with second-century BC Alexandrian scholarship, especially with Aristarchus. Were they influenced by him, or by a pupil of his?¹⁰³ This is difficult to ascertain. Attalus' work was produced shortly before Hipparchus' monograph; the date of the latter can approximately be guessed on the basis of the time of the stellar observations recorded in the catalogue, which seem to have taken place c.140 BC.¹⁰⁴ It is likely that both works were written in Rhodes,¹⁰⁵ where Hipparchus spent his later career, from 141 to 127 BC.¹⁰⁶ But did Attalus and Hipparchus dwell in Alexandria before 144 BC, when Ptolemy VIII came to power? On present evidence, the question defies solution as we know nothing about Attalus' biography, and little about that of Hipparchus. As Toomer has written, "the statement found in some modern accounts that he [*i.e.* Hipparchus] also worked in Alexandria is based on a misunderstanding of passages in the *Almagest* referring to observations made at Alexandria and used by or communicated to Hipparchus",¹⁰⁷ and it is doubtful whether his knowledge of the richness of the Alexandrian library, as recorded by Strabo (2.1.5), should be taken to suggest an awareness of the library's fame, or a direct acquaintance with the book-shelves.¹⁰⁸ As it happens, it was to the island of Rhodes that young Dionysius Thrax, a pupil of Aristarchus who was himself a grammarian and an author of treatises and commentaries,¹⁰⁹ fled from Alexandria in consequence of the diaspora of the Alexandrian scholars in the time of Ptolemy VIII.¹¹⁰ Was he the one (or was it another member of the Aristarchean school) who influenced Attalus and Hipparchus? There is simply no way to tell.

On the Interface of Philology and Science: The Case of Zoology¹

Oliver Hellmann

- 1 *Talking Humans—Talking Animals?—Ancient Biological Concepts of Speech and Communication in Humans and Animals*
- 2 *Working on Zoological Texts: Re-using, Organizing, Editing, and Commenting on Zoological Data*
 - 2.1 *Zoology and the Alexandrian Philologists*
 - 2.2 *Andronicus of Rhodes: A Decisive Edition of Aristotle?*
 - 2.3 *Commenting on Aristotle's Zoological Works*
- 3 *Epilogue*

At the beginning of the third book of his work *On the Characteristics of Animals*, Aelian² reports a story about communication between lions and humans. If lions enter the houses of humans because of hunger, he was told, men and women react in different ways. Whereas men drive off the beast immediately, women try to persuade it using words demanding self-control. They argue like this:

Are not you ashamed, you, a Lion, the king of beasts, to come to my hut and to ask a woman to feed you, and do you, like some cripple, look to a woman's hand hoping that thanks to her pity and compassion you may get what you want?—You who should be on your way to mountain haunts in pursuit of deer and antelopes and all other creatures that lions may eat without discredit. Whereas, like some sorry lap-dog, you are content to be fed by another.³

 - 2 *Ael. NA* 3.1. For an interpretation of this chapter cf. Hellmann [2008] 190–192.
 - 3 *Ael. NA* 3.1: σὺ δὲ οὐκ αἰδέῃ λέων ὦν ὁ τῶν ζώων βασιλεὺς ἐπὶ τὴν ἐμὴν καλύβην ἰών, καὶ γυναικὸς δεόμενος ἵνα τραφῆς, καὶ δίκην ἀνθρώπου λελωβημένου τὸ σῶμα ἐς χεῖρας γυναικείας ἀποβλέπεις, ἵνα οἴκτω καὶ ἐλέω τύχῃς ὦν δέη; ὄν δέον ἐς ὀρείους ὀρμῆσαι διατριβάς ἐπὶ τε ἐλάφους καὶ βουβαλίδας

The lion, it seems, accepts these arguments, since it moves away in shame. For Aelian, this behavior is no surprise.

Now if horses and hounds through being reared in their company understand and quail before the threats of men, I should not be surprised if Moors too, who are reared and brought up along with Lions, are understood by these very animals.⁴

Aelian's conclusion makes it quite clear that his opinion is not *communis opinio*. He even gives some special reasons for the lion's communicative abilities: it has been in contact with humans for a longer period of time. In his eyes, this seems to be a necessary condition for the ability to communicate, while difference in species does not seem to be decisive—at least in mammals.⁵

This episode may be seen as just a part of the ongoing ancient debate about the communicative abilities of animals. This debate was not limited to the scientific field of zoology, it was part of the philosophical discussion of *logos*—in its double sense of reason and speech—in animals, which was analyzed masterly by Richard Sorabji about 20 years ago.⁶

The present study will focus on ancient biological texts.⁷ In the first part, I will try to provide some insights into the ancient physiological concepts of speech and animals' ability to communicate with humans as well as with individuals of their own species. From a broader perspective, the question is one of language and speech as a topic of ancient biology.

But this is just one aspect of the interrelation between biology on the one side and philology and linguistics on the other. The second aspect is the work of ancient textual scholarship on biological material. Several Alexandrian scholars worked on biological texts or created works with biological content. Andronicus of Rhodes edited Aristotle's biological texts for ancient readers,⁸ and Byzantine authors created voluminous commentaries for a better under-

καὶ τὰ λοιπὰ ὅσα λεόντων δειπνον ἔνδοξον. κυνιδίου δὲ ἀθλίου φύσει ἀγαπᾶς παρατραφῆναι. (Transl. Scholfield).

4 Ael. NA, 3.1: εἰ δὲ ἵπποι καὶ κύνες διὰ τὴν συντροφίαν ἀπειλούντων ἀνθρώπων συνιάσι καὶ καταπτήσσοσι, καὶ Μαυρουσίους οὐκ ἂν θαυμάσαιμι λεόντων ὄντας συντρόφους καὶ ὁμοτρόφους αὐτοῖς ὑπ' αὐτῶν ἐκείνων ἀκούεσθαι. (Transl. Scholfield).

5 Since all species named are mammals.

6 Cf. Sorabji [1993].

7 This category is not without problems, of course. While there may be no question that Aristotle's *History of animals* is a biological text, Plutarch's *De sollertia animalium* may be classified as a philosophical work too.

8 See Montana in this volume.

standing of Aristotle's works.⁹ Philology had to deal with biological matters in a lot of different ways. A few cases, which may be seen as characteristic examples, shall be presented in the second part of this paper. In a wider sense, Aelian may be seen as a kind of philologist too. He is re-writing a story that he borrowed, as we know, from Juba II, King of Mauretania.¹⁰ Aelian did not do any biological fieldwork, he worked on the texts of others.

1 Talking Humans—Talking Animals?—Ancient Biological Concepts of Speech and Communication in Humans and Animals

Although we do find scattered information about physiological aspects of language in various authors before Aristotle,¹¹ it was the Stagirite who gave us the first detailed physiological concept of speech in humans and animals.¹² In his great collection of zoological data, the *History of Animals*, an entire chapter (4.9) is dedicated to the voice (*phone*). Aristotle first carefully distinguishes voice (*phone*), sound (*psophos*), and articulated speech (*dialektos*). A necessary condition to utter voice is the possession of a *pharynx*, Aristotle's term for the modern larynx and windpipe.¹³ "Hence", Aristotle concludes, "those that have no lung, do not utter any speech".¹⁴ Although there may be a great variety of animal sounds, in animals without respiratory system those sounds cannot, according to Aristotle, be classified as voice. The singing of a cicada may be used as an example.¹⁵ Further organs are needed to articulate speech—that is, to have *dialektos*—most importantly, a tongue, as *dialektos* is clearly defined in the typical Aristotelian manner as "the articulation of the voice by means of the tongue".¹⁶ The tongue must have specific capacities to perform this action: it has to be able to move freely.¹⁷ Beside the tongue, lips and teeth play a role too. According to Aristotle, tongue and lips produce consonants as one part of

9 See Pontani in this volume.

10 Cf. Wellmann [1892] esp. 406.

11 See the full discussion in Ax [1986] 59–118.

12 There are several detailed studies on Aristotle's analysis of language, see esp. Ax [1978] and [1986], Zirin [1980], Labarrière [2004] and Fögen [2007].

13 Cf. Kullmann [2007] 515–517.

14 *Hist. an.* 4.9,535a30: διὸ ὅσα μὴ ἔχει πλεῦμονα, οὐδὲν φθέγγεται.

15 Cf. *Hist. an.* 4.9,535b6–9.

16 *Hist. an.* 4.9,535a30–31: διάλεκτος δ' ἢ τῆς φωνῆς ἐστὶ τῇ γλώττῃ διάρθρωσις.

17 *Hist. an.* 4.9,535b1–3: διὸ ὅσα γλώτταν μὴ ἔχει ἢ μὴ ἀπολελυμένην, οὔτε φωνεῖ οὔτε διαλέγεται.

dialektos,¹⁸ and the front-teeth are seen as important for articulation especially in men.¹⁹

Subsequently, these definitions are used by Aristotle to distinguish the major zoological genera. Cephalopods and Crustacea produce absolutely no sounds, insects and fishes produce sounds only, the oviparous quadrupeds such as frogs, birds and the viviparous animals with four feet, *i.e.* mammals, have voice (*phone*), *dialektos* is restricted to men and some kinds of birds.²⁰

In our context, these birds are of special interest. One may note right away that lips and teeth may not be seen as a *sine qua non* for articulated speech, since birds do not have these organs. But the situation is more complex if one takes into account that Aristotle considers the beak of the birds as a kind of supplement for the lips and teeth in *Parts of Animals* 2.16.²¹ We may leave this problem aside and return to Aristotle's line of argument in the *History of Animals* that concentrates on the tongue. "The genus of birds emits voice, and especially those have articulated speech whose tongue is broad and those which have a fine tongue."²² Tongues of this kind can be found especially in little birds, particularly the song-birds: "The smaller (birds) have a great variety of tones and are more talkative than the larger ones."²³ Furthermore, Aristotle carefully notes differences in voice according to sex, and declares that birds speak and sing especially in the mating-season and when they fight.²⁴ These statements give a good impression of how Aristotle combined theoretical concepts with detailed observation.

The key role of the tongue is emphasized in the *Parts of Animals*, too, in a passage where Aristotle deals with the different functions of that organ.

And that is why among the birds those most able to pronounce articulate sounds have broader tongues than the others. Those of the four-footed animals that are blooded and live-bearing have little vocal articulation. This is because they have a tongue that is hard, undetached, and thick. Some of the birds, however, are quite vocal, and those with crook-talons

18 Cf. *Hist. an.* 4.9,535a32–b1.

19 *Part. an.* 3.1,661b13–15.

20 Cf. *Hist. an.* 4.9,535b3–536b8 with Zirin [1980] 346 and Ax [1986] 127–128.

21 *Part. an.* 2.16,659b21–27.

22 *Hist. an.* 4.9,536a20–22: τὸ δὲ τῶν ὀρνίθων γένος ἀφήσι φωνήν· καὶ μάλιστα ἔχει διάλεκτον ὅσοις ὑπάρχει μετρίως ἢ γλώττα πλατεία, καὶ ὅσοι ἔχουσι λεπτήν τὴν γλώτταν αὐτῶν. Cf. also 2.12,504b1–3.

23 *Hist. an.* 4.9,536a24–25: πολύφωνα δὲ ἐστὶ καὶ λαλίστερα τὰ ἐλάττω τῶν μεγάλων.

24 Cf. *Hist. an.* 4.9,536a22–32.

have broader tongues. The smaller ones are quite vocal. And though all also use their tongue to communicate with one another some do so more than others, so that in some cases they even seem to be learning from one another.²⁵

The important point here is that some birds not only have the physiological apparatus to utter articulated speech, but that they also use this ability to communicate (*pros hermeneian*), that is, they use it in the same manner as human language. And that is not all: they also seem to be able to learn this kind of language.

We may finally take a look at *De Anima*, a work that is not biologic in the strict sense, though it may be classified as belonging to natural science. In his discussion of the five senses, Aristotle deals with hearing (*akoe*) in *De anima* 2.8. In this context we find a definition of the term voice (*phone*) that is of special interest for the present discussion. Having pointed out before that *phone* in its true sense is solely the sound of an animate being (*empsychou*),²⁶ Aristotle gives his physiological definition:

Hence voice consists in the impact of the inspired air upon what is called the windpipe under the agency of the soul in those parts. For, as we have said, not every sound made by a living creature is a voice (for one can make a sound even with the tongue, or as in coughing), but that which even causes the impact, must have a soul, and use some imagination (*phantasia*); for the voice is a sound which means something (*semantikos*)...²⁷

The important point here is the connection between voice and meaning: the voice has to be *semantikos*, otherwise it is to be taken as a mere sound, like coughing. Are animals able to produce such meaningful voices? The answer

25 *Part. an.* 2.17,660a29–b1: Διὸ καὶ τῶν ὀρνίθων οἱ μάλιστα φθειγγόμενοι γράμματα πλατυγλωττότεροι τῶν ἄλλων εἰσίν. Τὰ δ' ἕναιμα καὶ ζωτόκα τῶν τετραπόδων βραχεῖαν τῆς φωνῆς ἔχει διάρθρωσιν· σκληρὰν τε γὰρ καὶ οὐκ ἀπολελυμένην ἔχουσι καὶ παχεῖαν τὴν γλώτταν. Τῶν δ' ὀρνίθων ἔνιοι πολύφωνοι, καὶ πλατυτέραν οἱ γαμψώνυχοι ἔχουσιν. Πολύφωνοι δ' οἱ μικρότεροι. Καὶ χρώνται τῇ γλώττῃ καὶ πρὸς ἐρμηνείαν ἀλλήλοις πάντες μὲν, ἔτεροι δὲ τῶν ἐτέρων μᾶλλον, ὥστ' ἐπ' ἐνίων καὶ μάθησιν εἶναι δοκεῖν παρ' ἀλλήλων. (Transl. J. Lennox.).

26 Cf. *De an.* 2.8,420b5–6.

27 *De an.* 2.8,420b27–33: ὥστε ἡ πληγὴ τοῦ ἀναπνεομένου ἀέρος ὑπὸ τῆς ἐν τούτοις τοῖς μορίοις ψυχῆς πρὸς τὴν καλουμένην ἀρτηρίαν φωνὴ ἐστίν. οὐ γὰρ πᾶς ζῶου ψόφος φωνή, καθάπερ εἴπομεν (ἔστι γὰρ καὶ τῇ γλώττῃ ψοφεῖν καὶ ὡς οἱ βήττοντες) ἀλλὰ δεῖ ἔμψυχόν τε εἶναι τὸ τύπτον καὶ μετὰ φαντασίας τινός· σημαντικός γὰρ δὴ τις ψόφος ἐστὶν ἡ φωνή.... (Transl. W.S. Hett).

must clearly be yes, if one takes into account Aristotle's statement in *Parts of Animals* 2.17 about communication among birds.²⁸

From the physiological perspective animals are completely capable of articulate speech in Aristotle's eyes. There is no absolute difference to men here, the difference is one of degree, not of kind.²⁹ But terminology deserves careful attention at this point! In all the texts cited above, Aristotle never used the term *logos*.³⁰ *Logos* is restricted to men, as is stated clearly in *Politics* 1.2 and *Generation of Animals* 5.7—a biological work!³¹ For Aristotle *logos* is more than articulated speech with some meaning:

And why man is a political animal in a greater measure than any bee or any gregarious animal is clear. For nature, as we declare, does nothing without purpose; and man alone of the animals possesses speech. The mere voice (*phone*), it is true, can indicate pain and pleasure, and therefore is possessed by the other animals as well (for their nature has been developed so far as to have sensations of what is painful and pleasant and to signify those sensations to one another), but speech (*logos*) is designed to indicate the advantageous and the harmful, and therefore also the right and the wrong; for it is the special property of man in distinction from the other animals that he alone has perception of good and bad and right and wrong and the other moral qualities, and it is partnership in these things that makes a household and a city-state.³²

Only man uses this kind of *logos* with its political and ethical function. “What birds are capable of is not λόγος with which to communicate τὸ σύμφερον καὶ τὸ

28 See above n. 25. Ax [1978] 256 n. 38 refers as further evidence in the biological writings to *Hist. an.* 536a13ff., and 608 a17ff. (which he declares “unecht”).

29 This was discussed in detail by Labarrière [2004] 46–49, cf. also Ax [1978] 257–258.

30 Cf. Ax [1978] 259.

31 See *Pol.* 1.2,1253a7–18 and *Gen. an.* 5.7,786b17–22.

32 *Pol.* 1.2,1253a7–18: διότι δὲ πολιτικὸν ὁ ἄνθρωπος ζῶν πάσης μελίττης καὶ παντὸς ἀγελαίου ζῴου μᾶλλον, δῆλον. οὐθὲν γάρ, ὡς φαμέν, μάτην ἢ φύσις ποιεῖ· λόγον δὲ μόνον ἄνθρωπος ἔχει τῶν ζῴων. ἢ μὲν οὖν φωνὴ τοῦ λυπηροῦ καὶ ἡδέος ἐστὶ σημεῖον, διὸ καὶ τοῖς ἄλλοις ὑπάρχει ζῴοις (μέχρι γὰρ τούτου ἢ φύσις αὐτῶν ἐλήλυθεν, τοῦ ἔχειν αἰσθησιν λυπηροῦ καὶ ἡδέος καὶ ταῦτα σημαίνειν ἀλλήλοισι), ὁ δὲ λόγος ἐπὶ τῷ δηλοῦν ἐστὶ τὸ συμφέρον καὶ τὸ βλαβερόν, ὥστε καὶ τὸ δίκαιον καὶ τὸ ἀδίκον· τοῦτο γὰρ πρὸς ἄλλα ζῴα τοῖς ἀνθρώποις ἴδιον, τὸ μόνον ἀγαθοῦ καὶ κακοῦ καὶ δικαίου καὶ ἀδίκου καὶ τῶν ἄλλων αἰσθησιν ἔχειν, ἢ δὲ τούτων κοινωνία ποιεῖ οἰκίαν καὶ πόλιν. (Transl. H. Rackham).

βλαβερόν, ὥστε καὶ τὸ δίκαιον καὶ τὸ ἄδικον, but rather the mere communication of information.”³³

Aristotle’s successors in the field of biology did not share his interest in the physiological basis of speaking in humans and animals. Some years ago James Lennox dealt in an important article with “the disappearance of Aristotle’s biology” in the Hellenistic era, describing the phenomenon as a “Hellenistic mystery”.³⁴ Core of the mystery is the abandonment of Aristotle’s research program. This program cannot be analyzed in detail here, but can be outlined in just one sentence as based on definite methodical principles and structured around a collection of facts and the following search for causes, especially in view of the interdependence of form and function.³⁵

Like others before him, Pliny the Elder, whose encyclopedic work deals extensively with zoological matters,³⁶ was not very interested in this kind of causal explanation. At one point of his work he states this openly: “But our purpose is to point out the manifest properties of objects, not to search for doubtful causes.”³⁷ Accordingly, in his *Natural History* we find several amazing stories about animals comprehending, imitating or even speaking human language,³⁸ but the physiological causes of these phenomena are widely neglected. Elephants are described as “nearest to man in intelligence” and therefore understand the language of their native country.³⁹ “They are also believed to understand the obligations of another’s religion”, as Pliny records “in so far as to refuse to embark on board ships when going overseas before they are lured on by the manhout’s sworn promise in regard to their return.”⁴⁰ While this anecdote is related to show that elephants understand foreign religious customs, it implies that the elephant is able to comprehend the (verbal) promise. Another story told by the consul Mucanius reports an elephant who

33 Zirin [1980] 344, who notes, that the term *dialektos* is not used in this passage.

34 Lennox [2001] 110–125.

35 See Kullmann [1990], [1998] 55–115 and Lennox [2001] 1–109. For the influence of the Aristotelian scientific pattern on Alexandrian scholarship cf. Montana, Nünlist, and Lapini in this volume.

36 Cf. Plin. *NH* 7–11.

37 Plin. *NH* 11.8: *nobis propositum est naturas rerum manifestas indicare, non causas indicare dubias*. (Transl. Rackham). Cf. Lennox [2001] 115.

38 The material has been collected by Fögen [2007] 53–57.

39 Plin. *NH* 8.1: *Maximum est elephants proximumque humanis sensibus, quippe intellectus illis sermonis patrii...* (Transl. Rackham).

40 Plin. *NH* 8.3. *alienae quoque religionis intellectu creduntur maria transitori non ante naves conscendere quam invitati rectoris iureiurando de reditu*. (Transl. H. Rackham).

learned the Greek alphabet and even wrote some sentences.⁴¹ We hear about lions that show *clementia* by refusing to attack human suppliants, though there was a dispute, as Pliny remarks, whether this kind behavior is caused by the natural disposition of the animal or simply by chance. As in the case of Aristotle, animals that imitate human speech or speak like humans can be found especially among birds.⁴² Parrots are marked out first for their ability to speak (*sermocinantes*). “It greets its masters and repeats words given to it.”⁴³ A certain kind of magpie is said to talk even “more articulately” (*expressior*).⁴⁴ In this context Pliny inserts a physiological observation, taken, as one may assume, from Aristotle: “All the birds in each kind that imitate human speech have exceptionally broad tongues, although this occurs in almost all species.”⁴⁵ Yet physiology is abandoned immediately after this remark, and Pliny adds further amazing stories of speaking thrushes, starlings and nightingales, ravens and crows.⁴⁶ It is rewarding to take a closer look at Pliny’s diction here. While he sometimes uses verbs describing human speech as *sermocinari* or *loqui*, other formulations like *humanas voces reddere*, *sermonem imitari* or *verba exprimere* give the impression that the sounds uttered by these birds cannot be interpreted as use of language in the strict sense. But a clear answer to this question is not to be found in the text.

In his work *On the Characteristics of Animals*, Aelian reports several instances of animals that possess remarkable communicative abilities too. One case, the story about lions in Mauretania, has already been mentioned at the beginning of this study. There are several further species that are capable of understanding human speech, most prominently elephants who follow the vocal instructions of their trainers. Not only do they comprehend the language spoken by the Indians, but they can learn Greek as well!⁴⁷ The bird called *asterias* that lives in Egypt understands human speech as well,⁴⁸ as do dogs

41 Plin. *NH* 8.6.

42 Cf. Plin. *NH* 10.117–124. Stories about speaking animals in other genera can be found in Pliny’s work, too, but Pliny has his doubts about them; cf. Fögen [2007] 54.

43 Plin. *NH* 10.117: *imperatores salutat et quae accipit verba pronuntiat*. (Transl. H. Rackham).

44 Plin. *NH* 10.118–119.

45 Plin. *NH* 10.119: *latiores linguae omnibus in suo cuique genere quae sermonem imitantur humanum, quamquam id paene in omnibus contingit*. Vgl. Arist. *Hist. an.* 2.12,504b1–3.

46 Plin. *NH* 10.119–124.

47 Cf. Ael. *NA* 2.11, 4.24 (συνιάσι γὰρ ἐλέφαντες καὶ γλώττης ἀνθρωπίνης τῆς ἐπιχωρίου), 11.14, 11.25 (Greek).

48 Ael. *NA* 5.36. The species cannot be identified with certainty. It is sometimes identified with the Bittern (cf. Thompson [1966] 57, who is sceptical about this), or with a starling (cf. Scholfield [1958] 329).

and horses.⁴⁹ Even sows attend the call of the swineherd.⁵⁰ Several species seem to be able to speak, namely birds. The raven is described as the bird that has “the largest variety of voices” (*polyphotonatos*); after training, it is able to emit human voice.⁵¹ Jays and parrots are also able to imitate the human voice,⁵² and the francolin utters sounds “clearer and more articulate than any child” and reacts to the maltreatment of deportation from Lydia to Egypt and the subsequent famine, which killed many inhabitants of Egypt, with the proverb “Three curses on the accursed.”⁵³ This story implies that these birds not only imitate voices but really speak with an intelligent verbal reaction to their situation! So the reader may be inclined to assume that Aelian is willing to grant the faculty of speech at least to some kinds of animals. This would be in full accord with his general thesis, stated clearly in the prologue and the epilogue, that animals possess a huge number of human virtues and that they even surpass humans in some of these.⁵⁴ But his position on this point does not seem to be clearly defined.⁵⁵ From the beginning of his work onwards, he contrasts man (*anthropos*) and animals without reason / language (*aloga*). The elephant with its communicative abilities as mentioned above is none the less called an unarticulated animal (*zoon anarthron*) in opposition to man, the *zoon logikon*,⁵⁶ and even the so called “Dog-heads” (*kynokephaloi*), who are able to understand the Indian language and have a lot of habits in common with men—for example they keep goats and sheep and drink their milk—are none the less classified as *aloga*.⁵⁷ And Aelian gives his reasons for this classification as follows:

I have mentioned them along with brute beasts, as is logical, for their speech is inarticulate, unintelligible, and not that of man.⁵⁸

49 Ael. *NA* 3.1.

50 Ael. *NA* 8.19.

51 Ael. *NA* 2.51: ἦν δὲ ἄρα ὀρνίθων πολυκλαγγότατος τε καὶ πολυφωνότατος· μαθὼν γὰρ καὶ ἀνθρωπίνην προῖησι φωνήν.

52 Ael. *NA* 6.19 and 13.18, 16.2; the *Corocotta* (perhaps *Hyaena crocuta*) is said to imitate human speech (*NA* 7.22), too, but Aelian is sceptical about this and classifies this story as fabulous (μυθῶδες).

53 Ael. *NA* 15.27.

54 Cf. Ael. *NA*, Prologue and Epilogue with Hübner [1984] esp. 157–163.

55 Cf. Kindstrand [1998] 2966–2968.

56 Ael. *NA* 2.11.

57 Ael. *NA* 4.46 with Gera [2003] 185–187.

58 Ael. *NA* 4.46: μνήμην δὲ αὐτῶν ἐν τοῖς ἀλόγοις ἐποιησάμην, καὶ εἰκότως· ἔναρθρον γὰρ καὶ εὔσημον καὶ ἀνθρωπίνην φωνὴν οὐκ ἔχουσιν. (Transl. Scholfield)

All in all, Aelian's position is not without contradiction. On the one hand, he denies reason (*logos*) in animals in accordance with the Stoic doctrine; on the other, he illustrates their intelligence and virtue throughout his work.⁵⁹

It was Plutarch who vehemently advocated the idea of *logos* in animals. His work entitled *Whether Land or Sea Animals are Wiser* is not limited to the question posed in its title but may be interpreted as defending rationality in animals against the Stoics.⁶⁰ "In the course of Plutarch's defense of animal rationality, scarcely any argument employed in ancient discussions for or against its existence fails to appear."⁶¹ Right in the middle of the dialogue Plutarch deals with the ability of birds to speak and learn:

As for starlings and crows and parrots which learn to talk and afford their teachers so malleable and imitative a vocal current to train and discipline, they seem to me to be champions and advocates of the other animals in their ability to learn, instructing us in some measure that they too are endowed both with rational utterance (*logos prophorikos*) and with articulate voice.⁶²

The terminology of this passage makes it quite clear that Plutarch is dealing with the Stoic doctrine here.⁶³ In another story he tries to demonstrate that birds possess "inner reason" (*logos endiathetos*) too. A certain barber in Rome, he claims to have heard from eyewitnesses, had a jay "with a huge range of tones and expressions, which could reproduce the phrases of human speech and the cries of beasts and the sound of instruments."⁶⁴ When a rich man was buried accompanied by the sound of many trumpets, the jay heard this music and as a result uttered no sound anymore. So people suspected that he had been poisoned by rivals or deafened by the musical instrument. But neither of these suppositions was true, since the bird after an "inner retreat" (*anachoresis eis heauto*) started to use his voice again. Now, however, it imitated only the

59 Cf. Kindstrand [1998] 2967–2968.

60 A detailed discussion may be found in Newmyer [2006] 30–47.

61 Newmyer [2006] 33.

62 Plut. *De soll. an.* 972F–973A: Ψᾶρες δὲ καὶ κόρακες καὶ ψιττακοὶ μανθάνοντες διαλέγεσθαι καὶ τὸ τῆς φωνῆς πνεῦμα τοῖς διδάσκουσιν εὐπλαστον οὕτω καὶ μιμητὸν ἐξαρτῦναι καὶ ῥυθμίζειν παρέχοντες ἔμοι δοκοῦσι προδικεῖν καὶ συνηγορεῖν τοῖς ἄλλοις ζώοις ἐν τῷ μανθάνειν, τρόπον τινὰ διδάσκοντες ἡμᾶς, ὅτι καὶ προφορικοῦ λόγου καὶ φωνῆς ἐνάριθρου μέτεστιν αὐτοῖς. (Transl. Helmbold).

63 For the stoic doctrine see Dierauer [1977] 199–252, esp. 234–235 and Fögen [2007] 49–53.

64 Plut. *De soll. an.* 973B–C: . . . πολυφώνου καὶ πολυφθόγγου κίττης ἔτρεφεν, ἢ καὶ ἀνθρώπου ῥήματα καὶ θηρίων φθόγγους καὶ ψόφους ὀργάνων ἀνταπεδίδου, . . .

melody of the trumpet it had heard before. As Newmyer pointed out, “it was the period of silence and inner meditation on part of the jay that proved, for Plutarch, that the “uttered reason” of birds is prompted by “inner reason” (*logos endiathetos*) that inspires and guides the utterance.”⁶⁵ Therefore, in Plutarch’s eyes, birds possess both kinds of *logos* differentiated by the Stoics.

2 Working on Zoological Texts: Re-using, Organizing, Editing, and Commenting on Zoological Data

2.1 *Zoology and the Alexandrian Philologists*

By the time when scholars in Alexandria began their work at the *mouseion*,⁶⁶ biology had been established by Aristotle as a distinct field of research and huge masses of biological data were available mainly in Peripatetic scripts. Beside their work on poetic texts, some scholars in Alexandria worked on this biological material, explaining and re-writing biological texts and using them to create new forms of literature. The poet and scholar Callimachus, well known for his poems, wrote a work *On Birds* (*Peri orneon*), of which several fragments survived (fr. 414–428 Pfeiffer).⁶⁷ From these fragments, we can trace the outline of some kind of catalogue of birds. Several instances show a special interest in onomatology and the differentiation of species, sometimes held to be identical, since they had names nearly identical—as the *porphyron* and the *porphyrus* of fr. 414—or were similar in appearance and belonged to the same genus as different kinds of doves (fr. 416) or falcons (fr. 420).⁶⁸ Two fragments deal with etymological questions (fr. 417 and 418). But Callimachus’ work was clearly not limited to nomenclature. Several texts listed in Pfeiffer’s edition show very well that biological details were treated at least in some cases, such as reproduction and parturition (fr. 427), body size (fr. 421), color (fr. 418) and voice of birds (fr. 418 and 421). Of special interest in this context is fr. 415, a passage of Athenaeus’ *Sophists at Dinner*, book 9. After a detailed description of the partridge (*perdix*) attributed to Aristotle⁶⁹ including information about habitat, classificatory description of feet, duration of life in both sexes, ethological observations, character, sexuality and parturition, Athenaeus

65 Newmyer [2006] 46.

66 See Montana in this volume.

67 For a discussion of the fragments of this work see Martinez [2001]. Cf. also Witty [1973], esp. 242, Blum [1977] 194 and Asper [2004] 47–51, esp. 48; see also Montana in this volume.

68 Cf. also fr. 418, 422, and 427.

69 Cf. Arist. fr. 346 R³.

remarks: “the same information Callimachus records in his (book) *On birds*”.⁷⁰ Unfortunately, we do not know, if this remark refers to the entire description. If this were the case, we could deduce that at least in some cases Callimachus integrated detailed descriptions in his work. But Athenaeus’ words could also refer specifically to the final sentence. Even then one could postulate that Callimachus treated sexuality and parturition.⁷¹ And there is another important point to observe here: Callimachus owed some of his material to Aristotle for his work *On Birds*. This fact has long been noticed,⁷² and may be proven with several further fragments,⁷³ though, as Martínez has pointed out,⁷⁴ there are significant differences in some cases. For this reason it seems quite obvious that Callimachus used other material, too. The arrangement of data in Callimachus’ work, which according to Pfeiffer consisted of one book,⁷⁵ seems to have been by species, since fr. 427, quoted verbatim in a scholion to the *Iliad*, shows that every lemma opened with the name of the species.⁷⁶ Just as other prose-works *On Birds* too came from a “desire to collect and organize information, much in the Peripatetic tradition”. In the context of Hellenistic Alexandria the view was Panhellenic: “Callimachus, from his position within the vast collection of material in the Ptolemaic library, looked at the Hellenic world more holistically, in terms of how various components, both natural and institutional, could be organized and understood.”⁷⁷

One can easily imagine that Callimachus’ *On Birds* was of great benefit to the philological and poetical work at the *mouseion*. His information on the sea-bird *krex*, thought to be an ill omen when people get married, could have been easily used, as Markus Asper convincingly argued,⁷⁸ in *Akontios and Kydippe* or the *Propemptikon* (fr. 400 Pfeiffer). Traces of its reception, as is apparent in the extant fragments, show three main fields of usage: 1. Writings with zoological content, here the work of Athenaios,⁷⁹ 2. Lexica, such as Hesychius,⁸⁰

70 Callim. fr. 415: ... τὰ αὐτὰ ἱστορεῖ καὶ Καλλίμαχος ἐν τῷ Περὶ ὄρνέων.

71 Cf. Martínez [2001] 60.

72 Cf. e.g. Susemihl [1891] 367 and Herter [1931] 403.

73 Callim. fr. 416, 420, 421, 427 (with Pfeiffer’s commentary: Callimachi verba nil nisi excerptum ex Aristot. esse apparet).

74 Martínez [2001] 64. Cf. Callim. fr. 416 and 420.

75 Pfeiffer [1949] 344.

76 The quotation begins with the name *Asterias*: ἀστεριάς, ὁ δ’ αὐτὸς καλεῖται ὄκνος· οὔτος οὐδὲν ἐργάζεται. ... A second lemma, *Leukos*, follows: λευκός· οὔτος ἀνωδύτως ἐν ἀμφοτέροις ἀπαλλάσσεται. Cf. Pfeiffer [1949], 344, commentary to Fr. 428, Witty [1973].

77 Both citations Gutzwiller [2007] 62.

78 See Asper [2004] 48.

79 fr. 414–418.

80 fr. 419; cf. fr. 414, 416, 417, 423.

3. Scholia.⁸¹ As one might expect, the majority in this field derives from the scholia to the *Birds* of Aristophanes.⁸² Apart from his work *On Birds*, Callimachus dealt with fishes, too. In the article on *Kallimachos* the Suda-lexicon lists a work *On the Change of Name of Fishes* (*Peri metonomasias ichtyon*).⁸³ This text was probably part of a larger work entitled *Local Nomenclature* (*Ethnikai onomasiiai*).⁸⁴ We have just one fragment from Athenaeus that lists local names of several kinds of fish.⁸⁵ As far as we can see, the scope of this work was limited to onomatological questions.⁸⁶

Callimachus' successor in Alexandria, Aristophanes of Byzantium also dealt with onomatology in the animal kingdom.⁸⁷ A section of his great lexical work entitled *Lexeis* was dedicated to the study of names of different ages (*Peri onomasias helikion*). In this work, humans were dealt with at the beginning (fr. 37–90 Slater) followed by domestic animals (fr. 91–171) and wild animals (171–219).⁸⁸ To receive an impression of the work, we may take a look at the fragments on the names of young children. The first name is *brephos*, explained as “the child, right after birth”,⁸⁹ the next one *paidion*, defined as the “child, nursed by the nurse”⁹⁰ and so on. In the section on domestic animals, the material was organized according to the pattern: herdsmen, herd, old, middle-aged, and young animals.⁹¹ Further information was added at the end, as the first fragments on the goat (*aix*) demonstrates:

aipolos: The herdsman of the goats; *aipolion*: the mass (sc. of goats); and the full-grown (are called) *tragoi* and *ixaloi*. The next age *chimaroi*; the youngest (of the goats) *eriphoi*. The poet in the *Odyssey* calls the full-grown *progonoi*, those after them *metassai*, the (goats) even younger *ersai*.⁹²

81 fr. 424–428.

82 fr. 424–426.

83 *Suid.* 227 s.v. Καλλιμαχος, vol. 3, p. 19 Adler.

84 Cf. Pfeiffer [1968] 135.

85 fr. 406.

86 Animals were also treated in Callimachus' *Collection of Wonders*, cf. fr. 7, 8, 16, 25, 26, 27, 43 Giannini.

87 See Montana in this volume.

88 Cf. Nauck [1848b] 339 and the disposition of the fragments in Slater [1986] 28–71.

89 fr. 37 Slater: βρέφος· τὸ ἄρτι γεγονός.

90 fr. 38 Slater: παιδίον· τὸ τρεφόμενον ὑπὸ τῆς τήτθης (l. τίτθης).

91 Cf. Callanan [1987] 85 and Slater [1986] 39 on fr. 91–171, who gives a slightly different pattern excluding the middle-aged animals: “pastor, grex, seniores, iuniores, alia”.

92 fr. 91–99 Slater: αἰπόλος ὁ τῶν αἰγῶν νομεύς. (92) αἰπόλιον δὲ τὸ πλῆθος (sc. αἰγῶν). (93.94) καὶ οἱ μὲν τέλειοι, τράγοι καὶ ἴξαλοι. (95) ἢ δὲ ἐχομένη ἡλικία χίμαροι. (96) τὰ δὲ νεώτατα

Then follow further names for goats of different ages.⁹³ One can easily imagine that this treatise would have been of use chiefly for philological research. Accordingly, Eustatius used it frequently for his commentaries on the Homeric epics. In addition, the definitions were used in the lexicographical tradition.

Another work of Aristophanes was dedicated to zoology. The Alexandrian scholar worked out an *Epitome* of Aristotle's zoological writings in four books.⁹⁴ Parts of this work along with some zoological information from other authors have been preserved in a Byzantine collection put together under the patronage of the emperor Konstantinos Porphyrogenetos.⁹⁵ In this collection, excerpts from Aristophanes are combined with texts from Aelian, Timotheus and further authors. The first book, which, according to the editor Spyridon Lambros, is excerpted entirely from Aristophanes,⁹⁶ can be regarded as a general introduction. At the beginning, zoological names of animal groups are explained to the reader beginning with the cartilaginous fish (*selachia*) (§§ 1–27). After this, a section dealing with copulation, pregnancy and birth (§§ 28–97) is followed by a heterogeneous collection of singular properties of animals and man (§§ 98–155). Books 2–4 were dedicated to the treatment of separate animal species. The topic of book 2 is viviparous animals, books 3 and 4—know lost—dealt with oviparous animals, beginning with fish, followed by birds.⁹⁷ This macrostructure is explained in the important introductory section of book 2 (§ 2–3), which comes from Aristophanes. In this context, the reader is also informed that viviparous animals will be treated in separate groups according to the form of their feet. In the first section, animals that have toes (*polyschide*) are discussed, followed by cloven-hooved animals (*dichela*) and animals with a single hoof (*monycha*).⁹⁸ With this structure Aristophanes preserves Aristotle's 'scientific' zoological classification, as Wolfgang Kullmann has pointed out.⁹⁹

(sc. τῶν αἰγῶν) ἔριφοι. (97–99) ὁ δὲ ποιητὴς ἐν Ὀδυσσεΐα (ι 221) τὰ μὲν τέλεια προγόνους καλεῖ, τὰ δὲ μετὰ ταῦτα μετάσσης, τὰ δὲ ἔτι νεώτερα ἔρσας.

93 Frr. 100–104 Slater.

94 Beside the zoological writings known to us, material from some of Aristotle's lost works, as for example the anatomical atlas *Anatomai* and probably other Peripatetic scripts were used by Aristophanes. It is likely, that this material was incorporated in a zoological collection *Zoica* that circulated under the name of Aristotle.

95 Edition: Lambros [1885]. For interpretation cf. the contributions in Rursus 7 [2012] that were published after completion of this article.

96 Cf. Lambros [1885] Praefatio xvi.

97 For the reconstruction of the content of books 3 and 4 cf. Lambros [1885] viii–ix; de Stefani [1904] 425–426 and 441; Kullmann [1999] 186.

98 Ar. Byz. *Epit.* 2.2, p. 36.8–9 Lambros.

99 Kullmann [1999] 191–192.

The microstructure in the treatment of each single species is explained right at the beginning of book 2:

In this composition, the second in number, after giving the name of the animal, I will try to place under this heading how many parts the proposed animal has, then I will [speak] about its mating and how many months it is able to be pregnant, and concerning its birth, what kind of young and how many [of them] it is able to bear. In all cases [I will explain] the life of the animal named in the heading, what its character is like, and how many years it is able to live.¹⁰⁰

This arrangement of topics: name, parts, reproduction, life, character, and duration of life, is still following Aristotle's paths. One may compare the overall structure of the *History of Animals*: Books 1–4: “parts”, *i.e.* anatomy, 5–7: reproduction, 8: life, 9: character. What is new in Aristophanes' *Epitome* is the arrangement by single species. Aristotle's biology was not focused on single species. He examined differences and attributes in animal groups. This may be seen in the differentiation of homogenous parts (*omoiomere*) and unhomogenous parts (*anomoiomere*) as the basic structure for research in the first books of the *History of Animals*. As the largest groups in the examination, blooded animals (*enaima*) and bloodless animals (*anaima*) are treated separately. Single species are marked out only as examples or if they possess singular characteristics. Aristophanes' rearrangement therefore is fundamental and has major consequences. This may become clear, if we take a closer look at an animal description by Aristophanes.¹⁰¹

The leopard has saw-like teeth and (feet with) toes. For it has five toes on the front paws and four on the hind paws. It moves its legs cross-cornerwise. It has two breasts. When dissected it has all other parts similar to the dog, but it has a rough tongue like a file, a lung with four lobes and a stomach like a pig's. Regarding conception and birth, everything is

100 Ar. Byz. *Epit.* 2.1, p. 35.18–36.3 Lambros: Ἐν τῆδε τῇ συντάξει, τὸν ἀριθμὸν οὐσῆ δευτέρᾳ, πειράσομαι, προγράφων περὶ οὗ ἐστὶν ὁ λόγος ζώου ὄνομα, προσυποτάσσειν τούτῳ ὅσα τὸ προταχθὲν ζῶον μόρια κέκτηται, εἶτα περὶ τῆς ὀχρείας αὐτοῦ καὶ πόσους κύειν δύναται μῆνας, περὶ τε τῆς ἐκτέξεως ποῖα καὶ πόσα ὑπομένει τίχτειν βρέφη· ἐπὶ πᾶσι δὲ τίς ὁ βίος τοῦ προγραφέντος ζώου καὶ ποῖον τὸ ἦθος καὶ πόσα δύναται ζῆν ἔτη. Cf. Kullmann [1999] 187 and De Stefani [1904] 431–432.

101 I deal with the leopard in Aristophanes in a more detailed manner in Hellmann [2010] 566–570.

similar to the dog. The female is more courageous than the male. It is said that after eating along with other herbs by mistake the so-called leopard's bane (*pardaliagches*) it becomes healthy, when it eats man's excrements, whence its hunters put excrements in their traps. In Asia there are leopards, in Europe there are none at all. It is a characteristic property of the leopard to move the top of the tail while the tail itself does not move.¹⁰²

As one can immediately observe, the sequence of topics corresponds to the announcement made at the beginning of the second book. Yet both here and in other species, some points are missing. In the case of the leopard for example, we do not find information about the duration of its life. Presumably, the reason for this is not textual transmission or excerption, but simply the fact that Aristotle does not deliver such information.

If we take a look at the description as a whole, we instantly recognize that this is not a full description as may be found in a modern biological handbook.¹⁰³ We get no information, to mention just a few points, about the animal's size, its external appearance or its extraordinary physical abilities in hunting. On the contrary, the overall impression is that isolated details on a single species were collected and put together. And this is what seems to have happened. In the opening section of book two, Aristophanes declares that his goal is to collect the information of single speeches "so that you need not go through Aristotle's treatise on animals which is divided into many parts, but you can have the entire enquiry about each single animal brought together."¹⁰⁴ On the one hand, he achieved his goal, since the information we get does come from Aristotle¹⁰⁵ and it is assembled at one point. On the other hand, he missed the

102 Ar. Byz. *Epit.* 2.245–251, p. 90.12–91.6 Lambros: "Ἔστι μὲν ἡ πάρδαλις καρχαρόδους καὶ πολυσιδής· καὶ γὰρ πενταδάκτυλος ἐκ τῶν ἐμπροσθίων, ἐκ δὲ τῶν ὀπισθίων τετραδάκτυλος. (246) πορεύεται δὲ κατὰ διάμετρον. (247) ἔχει δὲ μαστοὺς δύο. (248) ἀνατμηθεῖσα δὲ τὰ μὲν ἄλλα ἔχει ὅμοια κυνί, γλῶσσαν δὲ ἔχει τραχείαν καὶ ρινώδη, πνεύμονα ἐπτάλοβον καὶ κοιλίαν ὑεῖαν, κύησιν καὶ ἔκτεξιν πάντα ὅμοια κυνί. (249) Ἔστι δὲ ἡ θήλεια ἀνδρειότερα τοῦ ἄρρενος. (250) λέγεται δὲ <ὅτι> ὅταν καταφάγη μὴ γνοῦσα σὺν ἄλλοις φυταρίοις τὸ παρδαλιαγχῆς λεγόμενον βοτάνιον, ἀνθρωπεῖαν κόπρον φαγοῦσα ὑγιάζεται· ὅθεν οἱ θηρευόντες αὐτὰς τὴν κόπρον κατὰ τῆς ἐνέδρας τίθεισιν. (250a) Γίνονται δ' ἐν τῇ Ἀσίᾳ παρδάλει, ἐν δὲ τῇ Εὐρώπῃ οὐδ' ὄλωσ γίνονται. (251) Ἴδιον δ' ἔχει ἡ πάρδαλις τὸ κινεῖν τὸ ἄκρον τῆς οὐράς αὐτῆς ἀκίνητούσης.

103 I tried to show this point in detail in Hellmann [2006].

104 Ar. Byz. *Epit.* 2.1, p. 36.3–5 Lambros: "... , ἵνα μὴ διηρημένην ἐν πολλοῖς τὴν ὑπὸ Ἀριστοτέλους περὶ ζῴων πραγματεῖαν ἐπιπορεύῃ, συνηγμένην δὲ ὁμοῦ πάσαν τὴν ἐφ' ἐνὶ ἐκάστῳ ζῴῳ ἱστορίαν ἔχῃς.

105 The Aristotelian parallels are noted in the edition of Lambros [1885] 90–91. According to Lambros § 251 may be taken from Timotheus.

target, since he failed to provide a brief account of Aristotle's biological works. And this can be regarded as the chief goal of an epitome. To make this point clearer, we take closer look at Aristotle. As I already mentioned,¹⁰⁶ Aristotle's biology is divided into a collection of facts and a subsequent search for causes. In Aristophanes' *Epitome* this research program is lost. We do get facts but no causes. Aristotle's goals are lost almost entirely from sight. Aristophanes does not tell us that according to Aristotle the cause for the saw-like teeth is the fact that the leopard is carnivorous¹⁰⁷ and that these teeth can be used for fighting.¹⁰⁸ We are not informed that Aristotle explained that the five toes of the front paws are used in a similar fashion to a human hand.¹⁰⁹ Aristotle's biological material is *decontextualized* by Aristophanes. The research program as the primary context carefully developed by Aristotle is not presented to the reader by Aristophanes. But he creates a new context, he *recontextualizes* the material. Yet this recontextualization centered on a disposition by species creates a new form of biological treatise that cannot be used as a substitute for Aristotle. So what could be the use of this new form of a biological text? With its clear structure, this kind of text could be used as a kind of reference book or lexicon in the *mouseion* and in many other contexts. One has to admit that it does provide quick information. The problem is that this information is not of great value for those who try to understand Aristotle's biology. A different kind of goal could be taken into consideration, too, to entertain an audience not so much interested in scientific biology, as one eager to hear or read interesting data that was at least in parts unknown and astonishing. But here we enter the realms of speculation. What we can say for sure is that Aristotle's *Epitome* did find a lot of readers in different fields. The *Epitome* seems to have been used, either directly or via intermediate sources, by Aelianus, Plutarch, Plinius, Oppian, Artemidorus as well as the authors of scholia and lexica, e.g. the *Suda*. Though, as we have seen, the *Epitome* is not able to replace Aristotle's biological texts functionally, it was nonetheless used as a substitute for Aristotle by many ancient readers.

And this fact may be seen as another sign of the demise of scientific biology as established by Aristotle, which began as early as in the later generations of the Peripatetic school.

106 See above § 1.

107 Cf. *Hist. an.* 8.5, 594 a 25–26. This point is mentioned in *Ar. Byz. Epit.* 1.6 p. 2.12–13, but not in the description of the leopard.

108 Cf. *Part. an.* 3.1,661a 34–b6.

109 Cf. *Part. an.* 4.10,687b29–688a8.

2.2 *Andronicus of Rhodes: A Decisive Edition of Aristotle?*

The “zoological” works of Callimachus and Aristophanes demonstrate very well that at least some of Aristotle’s biological writings were used in Ptolemaic Alexandria. Considering the aims of the Alexandrian library and its close relations to the Peripatetic school, this fact is definitely no surprise. It has to be stressed at this point, since it contradicts the famous story about the fate of Aristotle’s library in the Hellenistic era as related by Strabo and Plutarch.¹¹⁰ According to this story, shortly after the death of Theophrastus, Aristotle’s esoteric works were not available for research for a long period of time, which, according to Strabo, explains why the later Peripatetics could not pursue any serious philosophy. Of course, modern research has shown that this simple argument cannot by itself explain such a complex phenomenon as the decline of the Peripatetic school in the Hellenistic era. What makes the story interesting in our context is that in its conclusion, we learn about several efforts to edit Aristotle’s works. The main point of Strabo’s story can be recapitulated as follows: When Theophrastus died, Neleus of Scepsis came into possession of Aristotle’s and Theophrastus’ books; he took them to his hometown in the Troad; his successors hid them under ground in some kind of a tunnel,¹¹¹ where they were damaged; later, the books were sold to a man called Apellicon of Teos, who tried to repair the damage and published an edition that was full of errors. This edition does not seem to have been a great success, since Strabo is our only witness for it.¹¹² After Apellicon’s death, his library was brought to Rome by Sulla after his capture of Athens. Some time later, a certain Tyrannion worked on the material. As Barnes rightly remarks, “Plutarch does not say that Tyrannio published an edition, and neither does Strabo.”¹¹³ What Strabo says is that certain booksellers induced some scribes to make copies and that these were full of mistakes. Further information about these copies is missing. Nonetheless, they can be seen as an edition of sorts.¹¹⁴ Strabo’s report ends here, but Plutarch offers some further information. According to him, Andronicus of

110 Strab. 13.1.54; Plut. *Vit. Sull.* 26. There is a mass of literature on this story, see Düring [1957] esp. 412–425, Moraux [1973] 1–94, Barnes [1997], Wilker [2002]; see also Montana and Lapini in this volume.

111 Cf. Barnes [1997] 2 with n. 3. Others have spoken of a cave or cellar.

112 Cf. Barnes [1997] 12.

113 Barnes [1997] 19.

114 Cf. Barnes [1997] 19.

Rhodes obtained copies of Tyrannion's scripts, "published them, and drew up the lists now current."¹¹⁵

I do not want to enter into the ongoing debate about the credibility of Strabo's and Plutarch's account or any of its elements.¹¹⁶ The most interesting point for our purpose is the edition of Andronicus of Rhodes mentioned by Plutarch, since it is the only edition about which we can also learn from other sources.¹¹⁷ According to Plutarch the edition included "most of Aristotle's works" that were part of Sulla's library.¹¹⁸ Further information about Andronicus' editorial practice is found in Porphyry's *Life of Plotinus*, in a passage, where Porphyry talks about his own edition of the works of Plotinus:

Since Plotinus had entrusted to me the task of arranging and emending his books . . . I decided first of all not to allow them to remain in a random chronological order as they had been issued; but following the example of Apollodorus of Athens and Andronicus the Peripatetic, of whom the first collected (the works of) the comic writer Epicharmus into ten volumes and the other grouped the writings of Aristotle and Theophrastus into treatises, bringing together those on related subjects, in the same way I grouped the fifty-four books of Plotinus I had into six Enneads.¹¹⁹

Porphyry states clearly that Andronicus is responsible for some rearrangement of Aristotle's works. The question is: what kind of rearrangement? According to the traditional view, Andronicus created at least some of our modern

115 Plut. *Vit. Sull.* 26: λέγεται . . . τὸν Ῥόδιον Ἀνδρόνικον εὐπορήσαντα τῶν ἀντιγράφων εἰς μέσον θεῖναι καὶ ἀναγράψαι τοὺς νῦν φερομένους πίνακας. (Transl. Perrin).

116 A critical examination may be found in Gottschalk [1987] 1083–1088. Some of his results were criticized by Barnes [1997], 6 with n. 28, 8 with n. 38.

117 Scholars disagree about the place and date of Andronicus' work. While some believe that he prepared his edition in Rome in the second half of the first century BC (cf. e.g. Düring [1957], 421 followed by Flashar [2004] 181, Barnes [1997] 24), others believe that it was written in Athens in the first half of the first century BC, cf. e.g. Moraux [1973], 45–58 and Gottschalk [1987] 1093.

118 Plut. *Vit. Sull.* 26.

119 Porph. *Plot.* 24: Ἐπεὶ δὲ αὐτὸς τὴν διάταξιν καὶ τὴν διόρθωσιν τῶν βιβλίων ποιῆσαι ἡμῖν ἐπέτρεψε, ἐγὼ δὲ κάκεινῳ ζῶντι ὑπεσχόμην καὶ τοῖς ἄλλοις ἐταίροις ἐπηγγειλάμην ποιῆσαι τοῦτο, πρῶτον μὲν τὰ βιβλία οὐ κατὰ χρόνους ἕασαι φύρδην ἐκδεδομένα ἐδικαίωσα, μιμησάμενος δ' Ἀπολλόδωρον τὸν Ἀθηναῖον καὶ Ἀνδρόνικον τὸν Περιπατητικόν, ὃν ὁ μὲν Ἐπίχαρμον τὸν κωμωδιογράφον εἰς δέκα τόμους φέρων συνήγαγεν, ὁ δὲ τὰ Ἀριστοτέλους καὶ Θεοφράστου εἰς πραγματείας διείλε τὰς οικείας ὑποθέσεις εἰς ταῦτ' ὅσα συναγαγῶν· οὕτω δὲ καὶ ἐγὼ νῦν ἔχων τὰ τοῦ Πλωτίνου βιβλία διεῖλον μὲν εἰς ἕξ ἐννεάδας. (Transl. Gottschalk [1987] 1089).

Aristotelian *pragmateiai* from shorter isolated texts and established a *corpus* of Aristotelian writings.¹²⁰

As we know, Andronicus' edition was accompanied by a monograph, the so-called *Pinakes*, in five books at least.¹²¹ This work contained biographical material,¹²² Aristotle's will and a catalogue of Aristotle's writings that included information on their length and cited their beginnings at least in some cases. It dealt with the arrangement of the *corpus* of Aristotle's works and discussed their authenticity, as in the case of the *De Interpretatione*, which, according to Ammonius, he believed to be spurious.¹²³ Besides, we know that Andronicus wrote a commentary on the *Categories*.¹²⁴

The catalogue of Aristotle's writings found in Diogenes Laertius¹²⁵ certainly antedates the edition of Andronicus and includes only a few works of Aristotle with the same title and in the form we know them today. Contrary to this, the catalogue of Ptolemy preserved in Arabic sources¹²⁶ presents in its middle section all the main Aristotelian works we know and is for that reason believed to be later than Andronicus. Based on a comparison of these catalogues scholars have put forward the idea that Ptolemy's list reflects Andronicus' work on Aristotle's text. So Ptolemy's list seems to give further evidence to support Porphyry's statement on Andronicus.¹²⁷

Due to this broad engagement in Aristotelian studies Andronicus has been given a position of first rank in the history of the Peripatetic school. Just two quotations may illustrate this:

Andronicus performed his task well. He not only established the form and canon of Aristotle's writings which, with comparatively slight modifications, we still use today, but initiated a way of doing philosophy which was to predominate among Aristotelians to the end of antiquity and to spread to the adherents of other schools. (Hans B. Gottschalk)¹²⁸

120 Cf. *e.g.* Gottschalk [1987] 1089–1091.

121 The material may now be found in Barnes [1997] 24–66 (with critical revision).

122 Some scholars have argued for a whole biography, see *e.g.* Barnes [1997] 26.

128 Gottschalk [1987] 1097.

Mit der Ausgabe des aristotelischen Corpus durch den Rhodier Andronikos beginnt zweifellos eine neue Epoche in der Geschichte des Aristotelismus. Ohne das Vorhandensein eines zuverlässigen und verhältnismäßig leicht zugänglichen Aristotelestextes wäre die Tätigkeit der Kommentatoren, die schlagartig kurz vor der Zeitwende einsetzt, beinahe undenkbar gewesen. Es ist eben das Verdienst des Andronikos, diese Wiederbelebung der aristotelischen Studien angeregt, ja überhaupt ermöglicht zu haben. (Paul Moraux)¹²⁹

This evaluation of Andronicus' work was called into question by Jonathan Barnes some years ago. In a detailed analysis he tried to show that Andronicus' role had been strongly exaggerated.¹³⁰ We cannot go through all of his arguments in detail, but a few points can be listed here. The large works of the ancient commentators on Aristotle do not refer to Andronicus in their textual discussions: the Aristotelian corpus evolved gradually, it was no invention by Andronicus; the renaissance of Aristotelian studies in the first century was not initiated by Andronicus, since the renaissance of Platonism shortly before did not depend on a new edition and a new arrangement of its works either.¹³¹

While one could surely agree that such a complex phenomenon as the renaissance of Aristotelian studies cannot be explained solely as a result of the emergence of a new textual edition and that the comparison of Andronicus' edition with the monumental work of Bekker in the 19th century, which some scholars have made, is certainly anachronistic, Andronicus' achievements as editor and commentator of Aristotle were probably downplayed a little bit too much by Barnes. Dealing with Barnes' thesis Hellmut Flashar rightly pointed out that Andronicus was a scholar of high renown from Rhodes, one of the centers of Peripatetic research. And it is well attested that he made an edition, in which he put together isolated texts to produce *pragmateiai*.¹³²

Be that as it may, regarding the scope of the present study, we should take a closer look at the edition of the great biological treatises. In Diogenes Laertius'

129 Moraux [1973] 45.

130 Barnes [1997].

131 Barnes [1997] 29, 64, 66.

132 Flashar [2004] 181: "Andronikos war ein anerkannter Gelehrter, der schon in seiner Heimat Rhodos, einem Zentrum peripatetischer Gelehrsamkeit, mit der Philosophie des Aristoteles vertraut wurde. Es ist gut bezeugt, dass Andronikos in Rom auf der Grundlage der vorbereitenden Tätigkeit des Grammatikers Tyrannion eine Ausgabe besorgt hat (Plutarch: *Vita Sullae* 26), in der er (erstmalig) Einzelschriften zu Pragmatien zusammengefasst hat (Porphyrios: *Vita Plotini* 24) ...".

list of Aristotle's works we find a work *On Animals* in 9 books (no. 102), which is commonly believed to be an edition of *History of Animals* 1–9, and a separate treatise *On Sterility* (no. 107), which has been regarded as identical with *History of Animals* 10.¹³³ Since in Ptolemy's list we find a zoological work in 10 books (no. 48),¹³⁴ most scholars have argued that Andronicus added the last book to the *History of Animals* and possibly gave it its title following Aristotle's own references.¹³⁵ According to Friederike Berger, who has recently analyzed the textual history of the *History of Animals*, Andronicus did even more. To the original edition in 7 books, she believes, he added 3 more (books 8–10¹³⁶).¹³⁷ If one accepts this, the question arises, what treatises might be hidden behind Diogenes Laertius' title *On Animals*. Berger assumes that this title subsumes the *Progression of animals* and some books of the *Parts of Animals* and the *Generation of Animals*.¹³⁸ But this assumption raises further problems. As Peter Beullens rightly remarked in his review: "It is difficult to understand how the nine books under the title Περὶ ζώων in Diogenes Laertius' list could refer to a jigsaw collection (*De Incessu Animalium* in three books [!], *De Partibus Animalium* 2–4, and *De Generatione Animalium* 1–3)."¹³⁹ So it seems more plausible that *On Animals* refers to *History of Animals* 1–9, as argued above, and that Andronicus worked on a *History* that already included nine books.¹⁴⁰ We know even less about the other biological treatises. It is obvious that *De Partibus Animalium* 1 had a special function in Aristotle's biology, as it served as an introduction to the zoological writings dealing mainly with questions of methodology.¹⁴¹ At the beginning, it might have been an independent work and was later added to our *Parts of Animals* by Andronicus, as Düring remarked: "We possess a treatise which probably received the title, the external form and the disposition which it now has by Andronicus."¹⁴² But we have no further evidence for this, and Aristotle could well have combined *Parts of Animals* 1 with

133 Cf. e.g. Moraux [1951] 107, Lennox [2001] 115. Balme [1991] 3–4. For a different view see Lord [1986] 155, who sees *On animals* as a combination of *Part. an.* and *Gen. an.*, and Berger [2005] 6–7, who votes for *IA, Part. an.* 2–4 and *Gen. an.* 1–3.

134 Its Greek title is restored by Düring [1951] 297 as περὶ ζώων ποιοτήτων (= ἱστοριῶν) ι'.

135 Cf. e.g. Balme [1991] 4, Flashar [2004] 253.

136 8–10 in the 'traditional' order of Theodore Gaza, 7, 8 and 10 according to the manuscripts.

140 Cf. Flashar [2004] 253.

141 Cf. Kullmann [1998] 101–115, who called it a "propädeutische Schrift".

142 Cf. Düring [1943] 5–37, citation: 8.

the other books of this treatise himself.¹⁴³ In the case of *Generation of Animals* the last book (5) is of a special character.¹⁴⁴ It deals with secondary characteristics such as hair-colour, whereas the first four books discuss the genesis of animals and their parts, as signified by the title. As in the case of *Parts of Animals* 1 this book may have been an independent treatise, as Hellmut Flashar has presumed.¹⁴⁵ But again, we do not know who added it to the remaining material and created our *Generation of Animals*. All in all as with Aristotle's works as a whole, we cannot definitely determine what contribution Andronicus made to the textual constitution of the three main biological works. There are signs that he edited at least the *History of Animals* as we know it today—but there is no definite proof.

2.3 *Commenting on Aristotle's Zoological Works*

The revival of Aristotelianism in the first century BC was the starting point of a long tradition of commentaries on Aristotle's treatises.¹⁴⁶ Andronicus' commentary on the *Categories* has already been mentioned, and he was followed by further Peripatetics and adherents of other schools, especially Neoplatonists, who filled thousands of pages with paraphrases, explanations and discussions of Aristotle's doctrines. But not all of Aristotle's writings attracted the interest of the commentators in the same measure. It is an astonishing fact that we have virtually no commentaries on the biological works from the time of Andronicus to the end of antiquity.¹⁴⁷ There are only two exceptions: (1) The philosophical compendium of Nicolaus (of Damascus?) and (2) a kind of Epitome of Aristotle's zoology by Themistius. Nicolaus' compendium dealt with Aristotle's natural philosophy including the biological writings at the end (Books 8–13). According to Paul Moraux Book 8 summarized the *History of Animals*, 9 *Parts of Animals*, 10 *On the Soul*, 11 *On Sense* and *On Dreams*, 12 *Generation of Animals* 1–4, 13 *Generation of Animals* 5, *On Longevity* and possibly *On Plants*.¹⁴⁸ Fragments of this book survived in a Syriac translation. Unfortunately, only the fragments of books 1–5 have been published so far,¹⁴⁹

143 Cf. Flashar [2004] 252.

144 Cf. Liatsi [2000] 13–25.

145 Cf. Flashar [2004] 256.

146 For a general overview see Sorabji [1990].

147 Cf. Gottschalk [1987] 1100. Of course, this statement does not hold for the *de Anima*, but this work is not a biological treatise in a strict sense.

148 See Moraux [1973] 466 and Drossaart Lulofs [1969] 11, for testimonies of the biological books: 12–13. *De Plantis* is now believed to be an independent work, cf. Drossaart Lulofs-Poortman [1989] 17–21 and Herzhoff [2006] 104.

149 Drossaart Lulofs [1969].

and therefore no description of his work on biology can be given here. A short quotation from Drossaart Lulofs can however provide an impression of its general character: "... it is certain that the aim of his *Compendium* was to give a brief survey of a large part of Aristotle's works which was generally left aside by others. . . . Its most conspicuous merit was its faithful adherence to Aristotle's own opinions: Nic.'s deviations were few, and they were certainly not dictated by conflicting views of other schools."¹⁵⁰ Since Nicolaus stands nearly alone with his biological interests, his historical and cultural context is of special interest. Traditionally, the author of the *De philosophia Aristotelis* has been identified as Nicolaus of Damascus, who lived from about 40 BC to 10 AD.¹⁵¹ Drossaart Lulofs supposed that the compendium "was written at Rome in the years around the beginning of our era".¹⁵² Recently, Silvia Fazzo has challenged this traditional setting and argued that the author of the compendium was not Nicolaus of Damascus, but a Peripatetic called Nicolaus, who lived probably in the fourth century AD.¹⁵³ If she is right—and her thesis surely deserves consideration—Nicolaus' engagement in biology would have to be placed in the context of the 4th century, and we would have no work on the biological treatises until that date. In this case, Nicolaus would not be alone in the 4th century in his interests. Themistius dealt with zoological matters, too. An abridged version of Aristotle's zoological writings made by Themistius was being handed down in an Arabic translation by Iṣḥāq ibn Ḥunain. Its Arabic title *Ġawāmi' kitāb Aristātālīs fī ma'rifat ṭabā'i' al-ḥayawān* could be translated as *Collection of Aristotle On the Knowledge of the Natures of Animals*.¹⁵⁴

At the beginning of the 6th century, we hear that Boethius intended to deal with Aristotle's biological material. In his commentary on Aristotle's *De Interpretatione* he declares that he intends to translate into Latin and commentate on all of Aristotle's works available to him.¹⁵⁵ But, unfortunately, he was not able to fulfil this plan, since he was murdered in 525 or 526, and therefore we have no zoological works from his hand.¹⁵⁶

So, as far as I can see, Nicolaus and Themistius were the only authors who actually worked as commentators or epitomizers on Aristotle's biological

156 Cf. Sorabji [1990] 19 with n. 88.

writings from the first century BC to the end of antiquity.¹⁵⁷ Not one of the large group of Neoplatonists dealt with the *History of Animals* or *Parts of Animals*. Why? The answer lies hidden in the Neoplatonic classification of Aristotle's writings and the corpus of Aristotle's works read by these Neoplatonists. We can see this, if we take a look at the introductions in Aristotle's philosophy found in a number of commentaries on Aristotle's *Categories*. These introductions are structured by means of ten questions about how to study Aristotle. In our context, the second and third questions are of primary concern: 2. How can Aristotle's works be classified? 3. Where should one start to study Aristotle's works? With regard to classification, three groups of works were differentiated by the commentators: the *particular writings* (*merika*), the *general* (*katholou*) and the *intermediate* (*metaxy*). If we take Simplicius as an example, the *particular* writings are defined as those that are addressed to one person and written about particular things.¹⁵⁸ The *general* writings are subdivided into *hypomnematic* writings, which the author put together for personal reminding, and *systematic writings*, i.e. dialogues and *autoprosopa*, in which the author speaks in his own person. The *autoprosopa* include theoretical writings, such as the *Metaphysics* and *Physics*, practical writings, such as the *Grand Ethics* and the *Politics*, and instrumental writings (*organika*), such as the *First Analytics*, *Categories* and the *Rhetoric*.¹⁵⁹ There is no general definition for the *intermediate* writings (*metaxy*), instead the *History of Animals* and *Plants* are presented as examples "that do not deal with particular things altogether, since they deal with animal species."¹⁶⁰ As Ilsetraut Hadot has shown in her commentary, it is not only the *History of Animals* that was thought to belong to this group, but all the other biological treatises, too.¹⁶¹ In accordance with this classification, Philoponus gives the *Generation of Animals* as an example for this group instead of the *History of Animals*.¹⁶² This classification has important

157 For the *De anima* the situation is different, of course, due to its philosophical impact. Cf. the useful synopsis on the ancient commentaries in D'Ancona Costa [2002], 250–251, especially for mentions in Arabic sources. The *Commentary on Generation of Animals* that was attributed to Ioannes Philoponus (ed. Hayduck, CAG 14.3) in reality is a work of Michael of Ephesus.

158 Simpl. *in Cat.* p. 4.10–12 Kalbfleisch. See Hadot [1990] 64–66 and 63–64 on the ten questions.

159 Simpl. *in Cat.* p. 4.14–5.2 Kalbfleisch.

160 Simpl. *in Cat.* p. 4.12–13 Kalbfleisch: τὰ δὲ καὶ μεταξύ, ὡς αἱ Περὶ ζώων καὶ φυτῶν ἱστορίαι, οὐ περὶ μερικῶν οὐσαί πάντη τινῶν· περὶ γὰρ εἰδῶν εἰσι ζώων.

161 Cf. Hadot [1990] 69–70 and 85–86.

162 Io. Philop. *in Cat.* p. 3.26–28 Busse. But cf. Moraux [1973], 74 n. 45 who thinks that this may be a confusion of facts.

consequences, since the Neoplatonist commentators were not interested in these *intermediate* writings.

Leur caractère « particulier » est encore trop prononcé et leurs sujets sont trop enracinés dans la matière et ce qui est sensible et périssable pour qu' ils puissent avoir une portée philosophique au sens platonicien. Ce n'est donc probablement pas un hasard, si nous ne possédons aucun commentaire d'un auteur néoplatonicien qui porte sur ce genre d'écrits.¹⁶³

If we now move on to the third question about how to study Aristotle, the Neoplatonists prefer to begin with logic.¹⁶⁴ After this one may advance to ethics, followed by physics in the third position.¹⁶⁵ The commentators Ammonius, Philoponus, Simplicius and Olympiodorus give five titles of physical works: *Physics*, *On the Heavens*, *On Generation and Corruption*, *Meteorology* and *On the Soul*. As Ilsetraut Hadot has rightly pointed out, these five works seem to be the only five in the field of physics that were incorporated in the Neoplatonist educational program. The biological works were not part of this program, since they belonged—in contrast to the physical works just mentioned—to the *intermediate writings*.¹⁶⁶

For these works outside the educational canon, one can easily imagine, there was no great demand for commentaries to aid the readers.

As far as we know, readers of Aristotle had to wait until the Byzantine era for commentaries on his biological works. It was Michael of Ephesus,¹⁶⁷ who undertook the task of commenting on Aristotle's biology. His undertaking was part of a larger project in the philosophical circle of the Byzantine princess Anna Comnena (1083–after 1148). As R. Browning has shown in his analysis of

163 Hadot [1990] 70, cf. 89.

164 Cf. Simpl. *in Cat.* p. 5.3–6.5 Kalbfleisch.

165 Cf. Hadot [1990] 85 with n. 101, who refers to Ammon. *in Cat.*, p. 6.4–8; Olymp., *Proll.* p. 9.9–13, Simpl. *in Ph.* I, p. 5.29–31.

166 Cf. Hadot [1990], 85, who notes that David in contradiction to the division of works enumerates all physical treatises including biology. "Si David (Élias) s'efforce, pour sa part, d'énumérer la presque totalité des traités physiques d'Aristote, c'est parce que, à partir de maintenant, il suit une division péripatéticienne de ces écrits, sans s'apercevoir qu'il range ainsi sous la rubrique des écrits physiques deux traités qu'il a auparavant classés, à titre d'exemples, dans les écrits intermédiaires: l' *Histoire des animaux* et le traité *Des plantes*. Cf. David (Elias), *in Cat.* p. 115.21–116.14 Busse.

167 See Pontani in this volume.

her funeral oration by George Tornikes, it was Anna Comnena, who encouraged Michael's work on Aristotle, as Tornikes states himself:¹⁶⁸

I myself have heard the philosopher from Ephesus blame her as the cause of his blindness, because he had worked night after night, without sleep, commanded by her to write commentaries on the works of Aristotle; the use of candles had caused drying of the eyes.¹⁶⁹

The philosopher of Ephesus is, with all probability, Michael. Accordingly, his work has to be dated to the middle of the 12th century AD.¹⁷⁰

Michael of Ephesus commented on a wide range of Aristotelian works. I limit myself to name those of biological content with their number in the series of the *Commentaria in Aristotelem Graeca: Parts of Animals* (CAG 22,2 ed. Hayduck), *Generation of Animals* (CAG 14,3 ed. Hayduck),¹⁷¹ *Parva Naturalia* (CAG 22,1 ed. Wendland), *Movement of Animals* (CAG 22,2 ed. Hayduck) and *Progression of Animals* (CAG 22,2 ed. Hayduck). The last two treatises are available in an excellent English translation with introduction and notes by Anthony Preus, who points out that Michael's commentaries are "the only surviving Greek commentaries on these treatises".¹⁷² Apart from the works just mentioned, Praechter has called attention to an ancient list of exegetes of Aristotle, according to which Michael commented on the *History of Animals* too.¹⁷³ This work has not come down to us, and it has to be noted at this point that it is not listed in Michael's own overview of his work.¹⁷⁴ All we can say is that Michael seems to have had a *History of Animals* at hand that included nine books.¹⁷⁵ If we can trust his words at the end of his commentary on the *Parva Naturalia*, he was eager to obtain as many of Aristotle's works as he could. If Aristotle was not available, he consulted the works of Theophrastus.¹⁷⁶

168 Browning [1962].

169 Georgius Tornikes *Or.* 14, p. 283 Darrouzès: Ἐγὼ δὲ καὶ τοῦ ἐξ Ἐφεσίων ἡκηκόειν σοφοῦ ταύτη τῆς τῶν ὀφθαλμῶν ἀβλεψίας τὴν αἰτίαν προσπεριρίπτοντος, ὅτι παννύχους σχολάσειεν ἀϋπνίαις ἐπὶ ταῖς τῶν Ἀριστοτελείων, κελευούσης αὐτῆς, ἐξηγήσειν. ὅθεν τὰ ἐλλύχνια τοῖς ὀφθαλμοῖς διὰ ξηρασίαν παθήματα. (Transl. cited from Preus [1981] 10).

170 See Preus [1981] 10–11 against Praechter, who argued, that the commentaries were written before 1040.

171 The commentary was wrongly attributed to Ioannes Philoponus, cf. above n. 157.

172 Preus [1981], citation: 1.

173 Cf. Praechter in Sorabji [1990] 52 with n. 71.

174 Cf. Mich. Eph. in *Parv. nat.* p. 149.8–16 Wendland and Praechter [1906] 864 with n. 3.

175 Cf. Mich. Eph. in *Part. an.* 2, p. 25.10–11 Hayduck.

176 Mich. Eph. in *Parv. nat.* p. 149.7–8 Wendland.

As Browning rightly emphasized, “Michael of Ephesus was breaking entirely new ground in his commentaries on the zoological and anthropological works and on the *Rhetoric* and the *Politics*.”¹⁷⁷ While there are signs that he was interested in natural science and biological matters from his youth,¹⁷⁸ with his selection of works for commentary he surely attempted to fill the gaps left by his predecessors.¹⁷⁹

In his work, Michael seems to have cooperated with Eustratius, who commented on the *Organon* and the *Nicomachean Ethics*. Since Eustratius wrote commentaries on the *Nicomachean Ethics* 1 and 6, and Michael dealt with the other books of this work, it seems plausible that they coordinated their efforts.¹⁸⁰

In his commentaries Michael's perspective was not limited to a single work, but he was trying to demonstrate interconnections within Aristotle's writings. An impressive example is the beginning of his commentary on *Parts of Animals*, where he points to parallels with the *Nicomachean Ethics*.¹⁸¹ Before starting his line-by-line commentaries, he tends to inform his readers about the overall structure of the work and the main topics of the following section. A good example is the beginning of his commentary on the second book of the *Parts of Animals*:

in the first (book) he spoke on how the student has to be. That he has to be educated and that one has to speak first about the common properties of all animals and then about the individual properties of each kind, in order that one may not be forced to talk many times about them. (He said) that one had to observe the phenomena about animals first and then search for their causes, and (he spoke on the question) in how many ways necessity (was used). After reprehending the divisions of Plato, he now is about to talk about causes. (For the information) of which and of how many parts (each of the animals) consists, he says, one has to search the work *On the History of Animals*, where he determines in nine books the things concerning all animals, but the causes of these parts and how each of these is positioned according to nature, must be looked at (now).¹⁸²

178 Cf. Praechter [1906] 863–864.

179 Gottschalk in Sorabji [1990] 68 n. 67.

180 Browning [1962] 6–7.

181 Mich. Eph. in *Part. an.* 1, p. 1.3–13 Hayduck. Cf. also *In IA.* p. 170.28–34 Hayduck.

182 Mich. Eph. in *Part. an.* 2, p. 25.3–13 Hayduck: «Εἰπὼν» ἐν τῷ πρώτῳ, ποταπὸν δεῖ εἶναι τὸν ἀκροατὴν, ὅτι πεπαιδευμένον καὶ ὅτι δεῖ πρώτα περὶ τῶν κοινῆ πάσι τοῖς ζῴοις ὑπαρχόντων

In addition to this, there are cross-references that demonstrate thematic connections with other Aristotelian works and Michael's commentaries on them.¹⁸³ On several occasions supplementary examples are used to illustrate Aristotle's line of argument. In the commentaries on the *Progression of Animals* he even uses a diagram to illustrate Aristotle's difficult description of the different ways of flexing the joints. Since we have a direct reference to the diagram within the text, we may confidently believe that this diagram is not a later addition.¹⁸⁴ But in general Michael tries to explain Aristotle by extensive paraphrases and line by line commentary.

There are signs that Michael's commentaries originated from oral lectures. Praechter has called attention especially to a phrase in his *Commentary on Parts of Animals*, where Michael comments on Aristotle's discussion of the function of fins in swimming. To illustrate his comment Michael starts here with a comparison "As if this door was the fish...". Obviously, he must have been pointing at the door of the lecture-room in the original context and left this deictic remark in his text.¹⁸⁵

By Michael's times, commentaries on Aristotle had a long tradition, and it was especially the great Peripatetic commentator Alexander of Aphrodisias who was widely read and used by him. As Antony Preus pointed out: "The work done by Michael of Ephesus is continuous with work done by Alexander of Aphrodisias in the years 190–210 (approximately), so much so that when Michael quotes verbatim from Alexander (as he often does) one cannot easily distinguish what is Michael and what is Alexander."¹⁸⁶ Now, as far as we know, Alexander did not comment on the biological works of Aristotle,¹⁸⁷ but nonetheless, Michael refers to him on several occasions¹⁸⁸ and even copies a long

εἰπεῖν, εἴθ' ὕστερον περὶ τῶν ἰδίων ἐκάστω, ἵνα μὴ πολλάκις περὶ αὐτῶν ἀναγκάζοιτο λέγειν, καὶ ὅτι δεῖ τὰ φαινόμενα περὶ τὰ ζῷα θεωρῆσαι πρῶτον, ἔπειτα καὶ τὰς αἰτίας τούτων ζητεῖν, καὶ ποσαχῶς τὸ ἀναγκαῖον, ἔτι τε καὶ τὰς τοῦ Πλάτωνος διαιρέσεις μεμψάμενος, νῦν περὶ τῶν αἰτιῶν μέλλει ἐρεῖν. ἐκ τίνων οὖν, φησί, μορίων συνέστηκε καὶ πόσων ἕκαστον τῶν ζῴων, ζητητέον ἐν τῇ πραγματείᾳ τῇ Περί ζῴων ἱστορίας, ὅπου ἐν ἐννέα βιβλίοις τὰ περὶ πάντων τῶν ζῴων διαλαμβάνει, τὰς δὲ αἰτίας τούτων καὶ καθ' ὃν τρόπον ἐτάχθη ἕκαστον παρὰ τῆς φύσεως ἐπισκεπτέον.

183 Examples in Praechter [1906] 880.

184 Mich. Eph. in *IA* p. 164 Hayduck. The reference to the diagram is p. 164.13–14: θεωρεῖσθω δὲ ταῦτα ἐκ τῆς ὑπογραφῆς. Cf. Preus [1981], 141 and 178–179, Stückelberger [1993] 138.

185 Mich. Eph. in *Part. an.* 4, p. 96.5 Hayduck: ὥσπερ γὰρ εἰ ἦν ἡδε ἡ θύρα ἰχθύς... Cf. Praechter [1906] 903–904.

186 Preus [1981] 2–3.

187 Cf. the useful overview of his work by Sharples [1987].

188 See the indices in the CAG editions of Wendland and Hayduck.

passage from Alexander's introduction to *De Sensu* in his introduction to the *Commentary on the Parva Naturalia*.¹⁸⁹

With Michael's set of commentaries, readers of Aristotle's biology finally had an aid at hand. William of Moerbeke probably used them for his Latin translation and Albert the Great seems to have known them too.¹⁹⁰

Although Michael's commentaries are the most complete in Greek that have come down to us, he was not the only one who was engaged with Aristotle's biological work. Georgios Pachymeres (1242–ca. 1310), the Byzantine historian, who held several important public and ecclesiastical offices,¹⁹¹ wrote an exegetical compendium of Aristotle's philosophy in 12 books.¹⁹² In this *Philosophia* he dealt with the *Parts of Animals* (book 6), *On the Soul* (7), *Parva Naturalia* (8) and *Generation of Animals* (9).¹⁹³ One may note again that *History of Animals* is not included in the commentary-canon. In his comments on Aristotle's texts Pachymeres is following the method of Sophonias. Citing long passages of the original texts he limits himself to putting these quotations together and paraphrasing the passages left out. Only occasionally he adds explanatory notes.¹⁹⁴ On the whole, his texts are often identical or similar to Aristotle's originals, and probably for this reason his text of *Περὶ ἀτόμων γραμμῶν* is found in some early editions instead of the pseudo-Aristotelian original.¹⁹⁵

Another paraphrase of Aristotle's work was written at about the same time by Theodorus Metochites. Herbert Hunger called him "die politisch und geistig führende Persönlichkeit im ersten Viertel des 14. Jh. in Byzanz."¹⁹⁶ In addition to his work on Aristotle, he wrote essays on natural science, a work on astronomy, speeches and even poems. His paraphrase of Aristotle includes the *Parva Naturalia*, *Motion of Animals*, *Progression of Animals*, *Parts of Animals* and *Generation of Animals*.¹⁹⁷ It is currently available only in a Latin translation by Genantius Hervetus from the end of the 16th century,¹⁹⁸ but in this edition the great aitiological works *Parts of Animals*, *Generations of Animals* as well as *Progression of Animals* are unfortunately missing. But the Greek original

189 Starting p. 1.5 as noted in the apparatus by Wendland.

190 Cf. Preus [1981] 14–21.

191 Cf. Hunger [1978] vol. 1, 447–453.

192 Cf. Harlfinger [1971] 345–360 and Hunger [1978] vol. 1, 37.

193 According to Harlfinger [1971] 345 only the first part on logic has been published in Greek, the other parts are available in a Latin translation by D. Ph. Becchius (Basel 1560).

194 Cf. Harlfinger [1971] 347–348.

195 Cf. Harlfinger [1971] 345–347 and Hunger [1978] vol. 1, 37.

196 Hunger [1978] vol. 2, 248 and Lohr [1992] v–xii.

197 Cf. Lohr [1992] ix and Hunger [1978] vol. 1, 38, who does not list *De Generatione Animalium*.

198 Edition: Lohr [1992].

of the *Commentary on De Somno et Vigilia* and the introduction were edited along with the Aristotelian text by Hendrik Drossaart Lulofs.¹⁹⁹ As Theodorus Metochites states in the introduction, his work on Aristotle is intended to be an act of *philanthropia*, an aid for his readers, but valuable for his personal work as well.²⁰⁰ To achieve this goal, he extensively used the commentaries of Michael of Ephesus.²⁰¹ Several sumptuous codices as well as the translation of Gentianus Hervetus are clear signs that Metochites' work was highly esteemed until the 17th century.²⁰²

Due to the scope of the present volume, the focus of this paper was laid on the Greek tradition of Aristotle. It is a matter of common knowledge, of course, that Aristotle was broadly received in the Arabic tradition. I cannot enter into this interesting field here and limit myself to pointing to the fact that there are quite a number of Arabic compendia of Aristotle's zoology by Abū al-Faraj ibn al-Ṭayyib, Ibn Rushd and Moses Maimonides to name just a few.²⁰³

3 Epilogue

The interrelations between philology and biology are manifold, and the number of characteristic examples presented in this paper must therefore be in some way arbitrary. One goal of the selection presented above has been to demonstrate the key-role of Aristotle in the tradition of ancient biology and biological writing. By analyzing language from a biological perspective Aristotle developed a detailed concept of language in humans and animals, which may be seen as much more than a major contribution to ancient linguistics, since it played an important role in the philosophical debate about language as a specific difference of humans.

Aristotle's great biological texts stimulated philologists to enter the field of biology. The mass of material he analysed had to be organised, physiological concepts and aetiological argumentations had to be explained to the readers, all the more so as Aristotle's style does not always make reading his biological

199 Drossaart Lulofs [1943].

200 Cf. Drossaart Lulofs [1943] 11.16 (φιλανθρωπία) and 22–25: ἔδοξα γοῦν βοήθειάν τινα καὶ ῥαστώνην ἐν τούτοις ἀμεργέπη πορίσασθαι, καθόσον οἶός τ' ἂν εἶην, καὶ ὡς ἄρα βέλτιστον ᾤήθη, δι' ὑπομνηματισμῶν ὀριστικῶς εὖ μάλ' ἐπιτέμνων παντὶ τρόπῳ καὶ γυμνῶν τάπόρρητα τοῖς τῶν καλλίστων καὶ μεγίστων ἑρασταῖς, καὶ οὐχ ἥττον γ' ἑμαυτῷ πρὸς τὸ τῆς χρήσεως ἔτοιμον.

201 Cf. Drossaart Lulofs [1943] XXIV and Drossaart Lulofs [1947] LXXVII.

202 Cf. Drossaart Lulofs [1943] XXIII.

203 Cf. Peters [1968] 48, Mattock [1966], Ullmann [1972] 8–10 and Eisenstein [1990] 117–156.

treatises an easy task. There were commentaries that provided assistance to the readers, and it is amazing that not all of Aristotle's zoological works attracted the same interest. We have no commentaries to the voluminous *History of Animals*. The reason for this may lie in its function as 'data-base' for further research. How should one comment on these masses of facts, if almost no research is undertaken to gain additional material or verify the facts? The situation is different for the great aetiological treatises *Parts of Animals* and *Generation of Animals*. There is much to do for commentators, here, but only a few actually engaged in this project. Why? Presumably the sophisticated arguments of Aristotle's aetiology were a challenge not everyone was willing to take. But, more important, potential readers were certainly few, even if the material commented on was by Aristotle. At first glance, it may seem surprising that more commentaries on the *Parva Naturalia* have come down to us.²⁰⁴ A reason for this fact may be detected in their subject-matter. In many cases, they dealt with psychic phenomena, and the *psyche* was always of major concern in philosophical debate.²⁰⁵ *Mutatis mutandis* the same holds true for the *De Anima*, which was conceived as a philosophical treatise and therefore was always part of the commentary-tradition.

204 For reception of the *Parva Naturalia* see now Grellard-Morel [2010].

205 I owe this point to Georg Wöhrle (Trier).
