Preface

During the second half of the Twentieth century, studies on Alexandrian philology and more generally on the history of erudition, exegesis and grammar in the cultural panorama of the ancient world experienced a renewed period of great flowering, which continues unabated in these opening decades of the Twenty-first century. In comparison to the state and tendencies of studies and research on this field in the first half of the last century, today the picture appears radically changed. Undeniably, the breakthrough was achieved by the celebrated work of Rudolf Pfeiffer, whose book was published in Oxford in 1968 and exerted great influence on studies of the ancient world, gradually leading to a general change in the approach to this very broad field. The research themes springing from Pfeiffer's work have progressively grown in importance and presence in the current panorama of classical studies, and now rest on different cultural foundations and orientations compared to the manner in which they were considered and treated, albeit with abundance and attention, in classical philology during the Nineteenth and the first two-thirds of the Twentieth century.

As new and adequate working tools are devised and editions of texts become available, the effort to construct solid bases for research in this sector is acquiring more concrete form, while studies and essays continue, at the same time, to shed light in greater depth on a number of themes that are relevant for the study of ancient literary civilization. One significant element of this evolutionary process has involved a reappraisal of the role of ancient scholarship, which is now considered as one of the most important features characterising the cultural horizon of antiquity. No longer is ancient scholarship regarded merely as a question of erudition, defined in terms of the different trends and positions and constituting a potentially useful but essentially ancillary science, knowledge of which was held to serve mainly as a source of fragments of lost works and information of a historical and antiquarian nature. Rather, the new approach can on the one hand be seen as forming part of movement towards a positive reassessment, which by now seems well consolidated, of the postclassical historical phases of ancient Greek culture, from the Imperial to the Byzantine age; on the other hand, it can rightly be described as one of the important components of a definitive transition away from the aestheticizing and intuitionist tendencies of the misguided and often a-historical classicism

* English translation by Rachel Barritt Costa.

that characterised a great part of the Twentieth century. Undoubtedly, much remains to be done in these directions, but we hope that this *Companion* can make a substantial contribution and will represent a meaningful step forward in this ongoing process.

The modern definition “ancient scholarship” encompasses numerous phenomena that belong to the literary civilization. The term “scholarship” refers first and foremost to all written works that aim specifically and directly to provide an interpretation of the literary works on various levels. Thus in this sense it refers in the first place to the different forms of commentary on the texts and to exegetic treatments of a monographic nature. But one immediately realizes that “scholarship” also covers many other genres: *in primis* the impressive phenomena of lexicography and linguistic-grammatical studies, which can and must be expanded to include by no means accessory materials, such as biography, paremiography, mythography, studies on metrics, not to mention investigations into the form of the ancient book, with the peculiarities represented specifically by phenomena of graphic layout linked to scholarly activity. Moreover the vast field of rhetoric must also be taken into account from a variety of perspectives, nor should one overlook the reflections on poetics, which stand mid-way between philosophy and scholarship *stricto sensu*. Indeed, Aristotle’s *Poetics* focused specifically on the poetry of earlier centuries (first and foremost Homer), to which the Alexandrians would later devote themselves with a profusion of effort and means. The Alexandrian philologists (and not only those among them who were poets in their own right) could hardly have neglected theoretical thought on poetry: it would be absurd, I believe, to imagine that Aristarchus had no ideas of his own on poetics. Furthermore, it is immaterial to point to the fact that only very scanty evidence on theoretical and epistemological questions can be traced in the philological-exegetic fragments that have come down to us: such fragments are not only just a tiny portion of the original works, but they also stem from works of quite a different kind composed for a notably different purpose. The kind of research and treatises on the poets and their works that was widespread in peripatetic circles, as well as the thought expressed by Aristotle in the *Poetics*, form the concrete intellectual and cultural precedent of the scholarship of the Hellenistic age, and made a crucial contribution that encouraged a fresh approach to literature, *in primis* poetry. It was through this new vision that poetry became a privileged object of investigation and interpretation, of care and conservation, although it was not long before the prose genres (above all historiography and oratory) likewise became the object of study and investigation.

The resulting picture is that of a comprehensive panorama, populated by a wide variety of remarkably diverse products, from treatises displaying profound critical-literary insight to the most unadorned and bare collections

of erudite materials, although a substantial homogeneity of interests and fields of application endured throughout the centuries, from the Hellenistic age right up to the Byzantine era. However, there is a fundamental element that is common to the entire range of this variegated archipelago: namely, that the overwhelming majority of the contents present in works classifiable as “scholarship” derive essentially and materially from the immense store-house consisting of literary and linguistic phenomena. That is to say, the contents of “scholarship” depend crucially on the overall body of works composed by the authors of literature and on the phenomenon of language as the common tool utilized for their creation. Thus on the one hand we have, in the actual and direct sense, the edition, conservation and interpretation of texts (i.e. ecdothics and exegesis), while on the other we have the study of language phenomena (grammar, lexicon, rhetoric), that is to say, a focus on the tool of literature. But the two spheres are organically linked: an understanding of the texts is indispensable in order to utilize them for purposes of describing and explaining linguistic and rhetorical phenomena, but at the same time an understanding of linguistic and rhetorical phenomena is indispensable for a good and satisfactory exegesis of the texts themselves.

The element shared by all such works is that their subjects and arguments are built on a previous subject and argument: the text is constructed on another text, the importance and authoritative nature of which is known and recognized. A very general definition of such works could be “text on a text” or “text about a text”. One need only think of the enormous literature produced on Homer over the centuries to gain an eloquent picture of what we are conveying. But illustrious and grandiose examples are also to be found in philosophy (suffice it to mention the quantity and value of the commentaries on Plato and Aristotle), in science (the *Corpus Hippocraticum* and Galen) and in religion (the case of the *Bible* is emblematic). Even more than in other sectors of the literary civilization, scholarship can be identified as a cultural phenomenon in which literature grew directly on literature and drew its nourishment from itself, increasing over the course of history by virtue of its necessary and inescapable reference not only to the texts that were the object of interpretation but also to previous exegetic products. Particularly important is the relation holding between such activity of commenting and interpreting literary works and the reference canon: the influence is reciprocal because scholarship on the one hand certainly reflects an acquired canon, since it deals with the things that belong to it, while on the other hand scholarship itself contributes to shaping and consolidating the canon, exerting a non secondary influence on the image a culture acquires over time.

The considerations put forward so far on ancient scholarship prompt the introduction of another highly significant distinction, despite the difficulties

and epistemological uncertainties with which the path is certainly strewn. In the first place, a commentary and its arguments can have an aim that could be defined as philological-grammatical-historical, namely that of an exegesis designed to explain the intrinsic and genuine content of the text properly speaking, and to discover what it really meant and what it sought to express in its authentic and original linguistic and historical-cultural context. In this perspective, scholarship appears as a science that is independent with regard to its ends, and its exegetic aim is important and valid in its own right and not as part of an overarching purpose. The objective is to explain the text without any other motive than that of correctly reconstructing and preserving historical evidence, which has its own intrinsic value. But in a different perspective, a commentary starting out from an authoritative text may present an interpretation that seeks above all to put forward the interpreter's own arguments, focusing on specific doctrinal points, often with the ideological intention of "enlisting" the author who is the object of analysis. The interpreter utilizes the work as a starting point, not infrequently seeking to unveil meanings that may have remained implicit or even "hidden", and if necessary putting forward the possibility of uncovering important meanings the author did not consciously intend to include. Ultimately, in some cases this may go as far as implying that it is legitimate to attribute to the author meanings that are generated and motivated only by the cultural and critical history that has been built up around the work during its reception.

What we have here is a polarity which comes to the fore throughout the history of the exegesis of texts which are recognized as important. It must be underlined that this is, strictly speaking, a theoretical distinction, an intellectual tool helpful in understanding phenomena through abstract categories, whereas pure and distilled exemplars are a far rarer occurrence in concrete reality. Rather, it is more usually the case that the balance is tipped more or less decidedly towards one of the two aspects, but without the other being necessarily absent or excluded, as it may perhaps make itself felt in the facts and results more than in the declarations and intentions. There should thus be clear recognition that the boundaries between the two approaches are not clearly demarcated, sometimes labile, and above all debatable and debated: this, in essence, is the history of scholarship, with all its multifaceted aspects and all its many-sided fields of activity. The concrete contrapositions and intersections between the two modes of critical discourse and the attendant polemics give rise to the irregular and multiform evolution of the reception of the great works and the great authors.

The exegete stands in contrast to the "mere ordinary person" and is seen as the one who is capable of understanding the work in question, the one who

has the cultural and intellectual tools to perform the interpretation; furthermore, exegetes claim for their own work—and indeed for themselves—the right to extract all kinds of meaning from a text and to construct their own line of argument, focusing on what they regard as useful and important to develop. An exegete not only enjoys great freedom (which can go as far as arbitrary discretion), but also wields potentially enormous cultural influence. So powerful can this influence be that an exegete can sway widely held opinions and shape general attitudes, all the more so if the text under consideration is recognized as a highly authoritative work and the interpreter enjoys great authority. The critical currents linked to philosophical, political and religious ideologies belong to this general and generic framework, in which even the most blatant anachronisms may be present and are in effect admitted. History right up to the modern times is studded with manifestations of this attitude and these cultural operations, and each of us must decide individually whether to consider them acceptable or not, useful or not, and to what extent, in the history of the reception of an author.

One fundamental element in this perspective, as mentioned at the outset, is that the investigations on the philology and erudition of the ancients no longer have an exclusively or predominantly ancillary value, and are no longer considered essentially or only as a repository of fragments of lost works, antiquarian curiosities, historical information or potential aids to modern philology. Ancient erudite and philological-grammatical production, in a word “ancient scholarship”, has acquired an independent meaning of its own, inasmuch as it is now seen as an expression and manifestation of a precise intellectual sphere and as an important aspect of ancient civilization. The exegetic observations and the erudite knowledge of the ancients are no longer considered as of benefit only for the information that can be gleaned about a work the ancient scholars are interpreting or a phenomenon they aim to explain. Rather, today ancient scholarship can and must be perceived as useful and interesting for what it reveals about the ancient scholars themselves, i.e. about the ideas, intellectual attitudes and culture of which they are an expression in the many different historical macrocontexts in which ancient scholarship developed, over the centuries ranging from the Hellenistic kingdoms to the Roman empire and right up to the Byzantine millennium. Studies on ancient philology are and must be rooted in a historical-cultural perspective, capable of highlighting the encounters among diversified historical situations and their reciprocal influence.

Yet even today one still too often notes the tendency to discuss the data of ancient philology and grammar on the basis of the principle of what is “right” or “wrong” from the point of view of modern science; in other words, the

tendency to try to gauge how far the ancients had drawn close to the “correct” interpretation and to what extent they missed the point, whether they were good or bad philologists, with regard to their textual choices as well. These are evaluations that distort the historical perspective and lead to mistaken use and inappropriate evaluation of the available testimonies and evidence. Moreover, too often the criterion for selection of materials considered worthy of interest and study remains based essentially on what appears to be useful or useless for the specific purpose of interpreting today the ancient author who is the focus of attention, according to our criteria and for our own ends. In other words, too often the body of knowledge represented by ancient scholarship is viewed as potentially interesting and significant only when it is of aid in solving a problem of modern scholarship. But this is a drastically limited and reductive viewpoint. Instead, everything that *is of no aid* in specifically interpreting Homer or Pindar or Aristophanes from our own point of view, *is of the greatest aid* in interpreting Zenodotus, Aristophanes of Byzantium, Aristarchus, and in understanding their cultural context and their intellectual milieu. This revised perspective is making an important contribution to the undeniable progress in the general historical vision of the ancient world: the products of scholarship have begun to be subjected to investigation for the purpose of discerning the critical principles, the ideas on literature and language, the interests, the thought of the scholars themselves in their own cultural context. This approach must be further consolidated and must become the norm, resulting in heightened awareness that knowledge of the intellectual history of one’s own discipline has an essential value. This is the best and most elevated form of “utilitarianism” to be attributed to the history of philology: namely, the mission of prompting militant philology to enter into a dialogue with itself and with the history of its own objectives and methods, its successes and failures: for viewing oneself through the mirror of epistemological self-observation is the high road that will build a solid foundation to guarantee the scientific legitimacy that philology, like all the sciences, constantly pursues.

The first idea of composing this book dates back to 2007, when the three Editors began to reflect on the possibility of putting together a *Companion to Ancient Scholarship* and to consider what might be the most appropriate structure for a production of this kind. In-depth discussion developed around the ideas and orientations outlined in this preface, although the focus of the original proposal naturally underwent adjustment, adaptation and corrections as work progressed. Firstly, as has already been made clear, a historical outline was an inescapable requisite (Part 1. *History*: this section constitutes the only up-to-date systematic compendium of history of ancient scholarship from the origins up to the Byzantine age). Secondly, it was crucial that the historical

outline should be accompanied by specific treatment of several aspects of the discipline that are of fundamental importance in this field, including the problems linked not only to the sources of our knowledge of ancient scholarship but also to the typology of works belonging to the extensive sphere embodied by the concept of scholarship (Part 2. *Disciplinary profiles*). Thirdly, we felt it was vital to include a group of treatments that would examine the relation holding between theoretical elaboration in the field of scholarship and grammar and the concrete application of theories to literary texts and language (Part 3. *Between Theory and Practice: 3.1 Scholarship, 3.2 Grammar*). In this framework we made the decision to add a section whose title, *Philological and Linguistic Observations and Theories in Interdisciplinary Context*, seeks to bring to light the presence of elements and attitudes of a philological-exegetic character, and involving language problems, in works and treatments belonging to literary genres that are distinct from scholarship itself, even if scholarship is understood in the broad sense. Several fields were investigated from this perspective, with results we believe to be interesting and original.

Naturally, we are fully aware that not all the themes and subjects touched upon here in these introductory pages are represented in this—far from small—*Companion*, but this is due to the wealth of information and complexity of the scientific framework, both from the historical point of view and in terms of the typology of the contents and works.

No more than a passing mention can be made of an aspect that can easily be imagined and which was to a great extent inevitable, such as problems in finding the authors for the various different subjects of the project, cases in which a proposal was declined or severe delays were encountered. Difficulties of this kind are frequent in works of such length and complexity, and resulted in a much longer time frame for the production than had originally been planned. Consequently, the book has been composed over a period of more than five years. In presenting it now in its final printed form, sincere and heartfelt thanks must be expressed to two scholars who have devoted great effort to ensuring that the final stages were brought to completion: Lara Pagani (who is also one of the authors of the book), and her co-worker Martina Savio.

Franco Montanari
Stephanos Matthaios
Antonios Rengakos

List of Contributors

Eleanor Dickey

is Professor of Classics at the University of Reading in England and a Fellow of the British Academy. She was educated at Bryn Mawr and Oxford and has published more than eighty scholarly works, including books on Greek forms of address, Latin forms of address, ancient Greek scholarship, and the Colloquia of the Hermeneumata Pseudodositheana.

Markus Dubischar

is Associate Professor of Classics at Lafayette College. He is the author of *Die Agonszenen bei Euripides: Untersuchungen zu ausgewählten Dramen* (2001) as well as of *Auxiliartexte: Studien zur Praxis und Theorie einer Textfunktion im antiken literarischen Feld* (Habilitation, LMU Munich 2007). He has also published articles and book chapters both on Greek tragedy and on knowledge transmission in Greco-Roman antiquity.

Oliver Hellmann

is *außerplanmäßiger Professor* at the Department of Classical Philology at Trier University. His main fields of interest are Greek Epic and ancient natural science and its tradition, especially biology. He is the author of *Die Schlachtszenen der Ilias* (2000).

Richard Hunter

is Regius Professor of Greek at the University of Cambridge and a Fellow of Trinity College. His most recent books include *Critical Moments in Ancient Literature* (2009), (with D. Russell) *Plutarch, How to Study Poetry (De audiendis poetis)* (2011), *Plato and the Traditions of Ancient Literature* (2012) and *Hesiodic Voices: Studies in the Ancient Reception of Hesiod's Works and Days* (2014). Many of his essays have been collected in *On Coming After: Studies in Post-Classical Greek Literature and its Reception* (2008).

Casper C. de Jonge

is Assistant Professor of Ancient Greek Language and Literature at Leiden University. His research focuses on Greek and Roman rhetoric and literary criticism. His publications include *Between Grammar and Rhetoric. Dionysius of Halicarnassus on Language, Linguistics and Literature* (Leiden/Boston: Brill 2008). The Netherlands Organisation for Scientific Research (NWO) awarded

him research grants for two projects: *The Sublime in Context* (2010–2013) and *Greek Criticism and Latin Literature* (2014–2018).

Jean Lallot

formerly *maître de conférences* in Greek linguistics at the École Normale Supérieure, Paris, is now emeritus. He has translated and commented upon Aristotle's *Poetics* and *Categories* (in collaboration, 1980 and 2002). In the domain of Alexandrian grammar, he has published translations of Dionysius Thrax's *Techne Grammatike* and of Apollonius Dyscolus' *Syntax* (Paris 1989 and 1997, both with commentary). In 2014, the French Academy awarded him the Georges Dumézil prize for a collection of 22 papers published under the title *Études de grammaire alexandrine* (2012).

Walter Lapini

is Professor of Ancient Greek at the University of Genova. His researches concern classical historiography, 5th century BC theatre, and philosophical authors, especially the Presocratics.

Raffaele Luiselli

M.A. and Ph.D. in Classics, University of London, is Lecturer in Papyrology at the University of Rome "La Sapienza". His publications include editions of papyri from several European collections and studies on Greek letters on papyrus. In 2011 he has reedited the papyrus evidence for the practice of commentary and annotation as exercised on the *Phaenomena* of Aratus.

Daniela Manetti

is Professor of Classical Philology at the University of Florence. She has published editions of ancient Greek medical texts (Hippocrates *Epidemics* VI, Anonymus Londiniensis *De medicina*, Hippocratic papyri) and many essays concerning the history of ancient Greek medicine.

Stephanos Matthaios

is Assistant Professor of Ancient Greek at the Aristotle University of Thessaloniki. He has published a monograph and a series of articles on ancient scholarship and linguistics. He is co-editor of the volume *Ancient Scholarship and Grammar* (De Gruyter, 2011; together with F. Montanari and A. Rengakos) and associate editor of the *Encyclopedia of Ancient Greek Language and Linguistics* (EAGLL; Brill, 2014).

Claudio Meliadó

is Researcher of Ancient Greek at the University of Messina. His interests mainly concern Greek epic, Hellenistic poetry and ancient scholarship. He has published « *E cantando danzerò* » (2008), in which he reedited *P.Lit.Goodspeed 2* with translation and commentary, and is preparing the first critical edition of the *Scholia* to Aelian's *Historia animalium*.

Fausto Montana

is Professor of Ancient Greek at the University of Pavia, Department of Musicologia e Beni Culturali in Cremona. He is a member of the Italian staff of the *Année Philologique* and coeditor of the *Lessico dei Grammatici Greci Antichi* on line. His research interests include Attic comedy, the history of ancient Greek scholarship, and Byzantine scholiography, with special focus on exegesis to drama and historiography. He re-edited and commented on all known papyrus exegesis on Aristophanes' comedies for the *Commentaria et lexica Graeca in papyris* (2006; 2012²), and is the author of *The Making of Greek Scholiastic Corpora* (in *From Scholars to Scholia*, eds. F. Montanari and L. Pagani, 2011) and coeditor of the collection of papers *The Birth of Scholiography. From Types to Texts* (2014).

Franco Montanari

is Professor of Ancient Greek at the University of Genova. He is the author of the Greek-Italian dictionary, to be published by Brill as *Brill's Dictionary of Ancient Greek*. He has published monographs and articles and co-edited volumes on Homer, Ancient Greek scholarship and Greek papyri, including *Brill's Companion to Hesiod* (2009; with A. Rengakos and Chr. Tsagalis).

Roberto Nicolai

is Professor of Ancient Greek at the University of Rome "La Sapienza" and the editor of the journal "Seminari Romani di Cultura Greca". He has published several articles on historiography, geography, epic and tragic poetry, and two monographs: *La storiografia nell'educazione antica* (Pisa 1992) and *Studi su Isocrate* (Roma 2004).

Anna Novokhatko

is Assistant Professor of Classics at the Albert-Ludwigs-Universität of Freiburg (Germany). Her research interests include Sicilian and Old Attic comedy, the symbiosis of Classics and the digital humanities, the history of Greek and Roman scholarship with special attention to the development of linguistic

and textual-critical vocabulary. She is currently preparing a monograph on the development of Greek scholarship before Plato based mainly on the philosophical, rhetoric and comic fragments of the 5th century BCE.

René Nünlist

is Professor of Classics at the University of Cologne and a co-founder of the Basel commentary on the *Iliad* (2000–). His most recent book is *The Ancient Critic at Work: Terms and Concepts of Literary Criticism in Greek Scholia* (2009, pbk. 2011).

Lara Pagani

is Research Fellow of Ancient Greek at the University of Genova. Her main interests concern ancient Greek scholarship and grammar, Homeric studies, Greek lexicography and the reflection on language in ancient Greece, literary papyrology. She is co-editor of the encyclopedia *Lessico dei Grammatici Greci Antichi (LGGA)*, rédacteur of *L'Année Philologique*, member of the lexicographical project *Poorly Attested Words in Ancient Greek (PAWAG)* and of the *équipe* which accomplished the third edition of *GI—Vocabolario della lingua greca* (2013). Her publications include a critical edition with commentary of the fragments of Asclepiades of Myrlea (2007).

Filippomaria Pontani

is Associate Professor of Classical Philology at the University of Venice “Ca’ Foscari”. While primarily concerned with issues of manuscript transmission, he is currently editing the ancient and medieval scholia to Homer’s *Odyssey* (Rome 2007–2010). He has published extensively on Greek and Latin texts (Sappho, Simonides, Pindar, Callimachus, Lucilius, Catullus, Virgil, Petronius etc.), and on Byzantine, humanist and modern Greek literature (Politian’s *Greek epigrams*, Roma 2002; *Poeti greci del Novecento*, with N. Crocetti, Milano 2010), focusing *inter alia* on the rise of ancient grammar and scholarship, on rhetoric, geography, on Homeric allegories, and the literary facies of ancient myths.

Philomen Probert

is University Lecturer in Classical Philology and Linguistics at the University of Oxford, and a Fellow of Wolfson College. She has written *A New Short Guide to the Accentuation of Ancient Greek* (Duckworth 2003), *Ancient Greek Accentuation: Synchronic Patterns, Frequency Effects, and Prehistory* (OUP 2006), and *Early Greek Relative Clauses* (OUP 2015).

Ineke Sluiter

is Professor of Greek at Leiden University. She has published widely on the history of ancient and medieval thought. Her most recent book (with Rita Copeland) on this topic is *Medieval Grammar and Rhetoric. Language Arts and Literary Theory, AD 300–1475*, Oxford 2009.

Pierre Swiggers

is Professor in the Faculty of Arts at the University of Leuven (KU Leuven) and Research Director of the Flemish Fund for Scientific Research (FWO). His historiographical research focuses on the evolution of grammatical description and grammar teaching, of logic and philosophy of language, and sign theory, in Classical Antiquity as well as in later periods.

Renzo Tosi

is Professor of Ancient Greek at the University of Bologna. His main interests concern ancient lexicography, ancient and modern proverbs, Greek theatre, Thucydides and the history of classical philology. He wrote *Studi sulla tradizione indiretta dei classici greci* (1988), *Dictionnaire des sentences latines et grecques* (2010²), *La donna è mobile e altri studi di intertestualità proverbiale* (2011), *I carmi greci di Clotilde Tambroni* (2011).

Stefano Valente

is Researcher at the Institut für Griechische und Lateinische Philologie at the University of Hamburg (DFG-project: “Wissenschaft und Naturphilosophie in der byzantinischen Welt: Das Physiklehrbuch des Nikephoros Blemmydes”). His research interests include Greek and Byzantine scholarship and lexicography as well as Greek palaeography. He is the author of *I lessici a Platone di Timeo Sofista e Pseudo-Didimo. Introduzione ed edizione critica* (2012) and of *The Antiatticist. Introduction and Critical Edition* (2015, forthcoming).

Alfons Wouters

is Professor Emeritus of the Faculty of Arts of the University of Leuven (KU Leuven). His research focuses on grammatical papyri and on the evolution of grammatical theory and grammar teaching in Classical Antiquity. He is co-founder, with P. Swiggers, of KU Leuven’s “Centre for the Historiography of Linguistics”.

In order to understand the establishment and dissemination of the idea and practice of scholarship the contemporary researcher has to examine a number of interrelated questions. What do we mean by scholarship? In which contexts did scholarship emerge? Which institutions supported the development of philological thought? Which elements in society were engaged in 'scholarship' in a broad sense? What was status of scholars, amateur or professional? And who formed their audience?

In this presentation of pre-Alexandrian scholarship a whole spectrum of approaches related to the understanding, reconstruction and interpretation of literature, and also interest in the origins, structure and functions of language, will be examined.¹ Needless to say, no definition of the subject should be considered sufficient: this is a work in progress and delimiting and differentiating scholarship from other activities constitutes an integral part of its development. The dynamics involved in this process, dynamics which lead to what would later be thought of as scholarship in a narrower Alexandrian sense, studies in grammar and the editing of classical texts,² will be the focus here.

The paper will consist of a number of sections. The first focuses on the social environment: what was the relation between 'scholars' and society? And what portion of society could read and write, in other words was able to understand the scholarly texts in the particular ways this knowledge implies? And, more generally, what was the relationship of society with the written text?

The second section deals with education and the dominant educational paradigm within Greek society. When, where and how could one learn reading and writing? What was the official status of educational institutions and libraries which supported the development of scholarly thinking? Who accessed these institutions? It is only in the context of these earlier sections that the origins of Greek scholarship, the focus of the third section, can be understood.

The third section will deal with the three main streams of pre-Alexandrian scholarship: Homeric criticism, linguistic studies, and stylistics. The Homeric text was the main source used for analysing the Greek language (though other

1 On the tasks of scholarship as understood in Ancient and modern thought, see the appendix on the art of philology in Gentili [1990] 223–233.

2 See Montana and Montanari, this volume.

poets were also quoted and discussed) and thus linguistic and stylistic studies dealt with Homeric examples. Nonetheless, distinguishing the three main branches remained important. One branch led to the criticism, emendation, interpolation and editing of the Homeric text by the classical philologists of Alexandria, a second led to the development of Greek (and later Roman) linguistics, mainly grammar and semantics, a third led to literary and aesthetic criticism.

1 Social Premises and Conditions Leading to the Establishment of Scholarship in Pre-Alexandrian Greece

Pierre Bourdieu noted: “Inquiring into the conditions of possibility of reading means inquiring into the social conditions which make possible the situations in which one reads (and it is immediately clear that one of these conditions is the *scholé*, leisure in its educational form, that is the time of reading, the time of learning how to read) and inquiring also into the social conditions of production of *lectores*. One of the illusions of the *lector* is that which consists in forgetting one’s own social conditions of production, and unconsciously universalising the conditions of possibility of one’s own reading. Inquiring into the conditions of the type of practice known as reading means inquiring into how *lectores* are produced, how they are selected, how they are educated, in what schools, etc.”³

1.1 *Reading and Writing in Archaic Greece*

There is insufficient information to ascertain the level of literacy in Archaic Greece. Only from the 5th and even more so from the 4th centuries BC can literary and at times epigraphic evidence of literacy and illiteracy in everyday life be found. Even when evidence does exist, only limited conclusions can be drawn. Oral poetry was characteristic of the Archaic period. The first evidence for versions of the Greek alphabet stems from the middle of the 8th century BC, in all probability arriving as variations on the Phoenician (North Semitic) syllabic script.⁴ In comparison to Ancient Egypt, books were not considered sacred. Writing was not the domain of a priestly caste but was open to everybody (though reading remained a largely élite activity in Antiquity).⁵

3 Bourdieu [1990] 95.

4 On the origins of the Greek alphabet, see more in Havelock [1982] 77–88; Thomas [1992] 52–73 and Willi [2005] with updated bibliography.

5 For the sociological context of ancient reading, see Johnson [2000]. Cf. Johnne [1991] 47, Nilsson [1955] 11–16. See the useful selection of examples of abecedaria from the late 8th

In the cultural milieu of Archaic Greece, poetry was a public medium. Vases, bronze, lead, clay, leather, oyster shells and bones, metals, wooden and wax tablets of the 8th century BC from all over Greece host inscriptions, suggesting some knowledge of writing.⁶ The vases preserve traces of epics.⁷ Writing was used in the 7th century for the composition of texts, but these texts were still intended for performance, most of them to musical accompaniment. During the 6th century choral, lyric, rhapsodic, and cultic poetry continued to be performed in public. According to later sources, texts and copies of texts circulated from the Archaic period.⁸ Although there is no evidence for a reading culture at this time, the essential precondition for its existence, elementary literacy, may still be posited from public inscriptions, legal scripts, coins or graffiti.⁹

Vase painting reveals that Homeric texts were known in Athens at least from the 7th century BC. At the end of the 6th cent. BC a broader use of written Homeric texts is observed. Versions of these texts, recited at rhapsodic agons, were probably presented in various places, oral and written narration therefore simultaneously coexisting. These versions survived to a certain extent as Homeric texts from Argos, Chios, Crete, Cyprus, Sinope and other places and perhaps were used by Zenodotus and Aristarchus from Samothrace (the so-called *ἐκδόσεις κατὰ πόλιν*).¹⁰ The Panathenaic performances which fixed the attribution of the two epics to Homer constitute an important part of this story. From 522 BC the *Iliad* and the *Odyssey* were recited every four years by rhapsodes at the Great Panathenaea.¹¹ Reading and writing was connected with learning the epic (and sometimes lyric) texts by rote, above all those by

century BC until the 4th century AD, used for practicing the alphabet, in Lang [1976] 6–7; cf. SEG XLVII 1476 (Cumae; ca. 700–690 BC); SEG LVII 672 (Histria; 5th/4th cent. BC) for an evaluation of the argument that specific abecedaria were the work of schoolboys. I am grateful to Benjamin Millis for this reference.

Homer. The inscriptions on the rolls painted on vases are of poetic, for the most part epic texts.¹²

1.2 *Literacy in Athens*

Coins and inscriptions on stone and vases suggest that writing became increasingly widespread. The relation to the spoken word seems gradually to have been changing. In Athens, the stream of public documents concerning politics, administration, trade and finance begins in the late 6th century, rising to a flood in the 4th century BC. The relation between social progress and the use of literacy has been the subject of scholarly attention.¹³ Athenian literacy was more widespread than that in most other parts of Greece;¹⁴ literacy in Athens and all over Greece was covered a range of abilities in the sense that it spanned the gamut from elementary literacy, including the capacity to write down one's name (the practice of *ostracismos* started at the end of the 6th century BC in Athens whereas *petalismos* in Syracuse dates from the middle of the 5th century BC¹⁵) and locating a name on a list, to philological interpretation of difficult literary texts. Despite this gamut, the overall rise of general literacy undoubtedly increased the proportion of the population that served as the potential audience for literary analysis.

As democracy developed, literate officials and members of the council of citizens were required for the creation of written records. However, the sources make little of the practical uses of education. Aristophanes' *Knights* (424 BC) provides important evidence on the relationship between literacy and democracy: the sausage-seller, forced to be a politician, claims no knowledge of music or gymnastics, and only little knowledge of letters. His collocutor reassures him that an ignorant man is needed to govern the state.¹⁶ Scenes of the oracle-speaker (Ar. *Av.* 959–991), the inspector (Ar. *Av.* 1021–1034), and the decree-seller (Ar. *Av.* 1035–1055) in Aristophanes' *Birds* (414 BC) are partly inspired by concerns about literacy and its significance for political power.¹⁷ Democracy also nurtured public rhetoric, and thus the writing that was required for the composition of public speeches.¹⁸

The increasing attention paid by society to poets can also be observed in other media. Vase painting can be considered as a source of evidence for literacy during the pre-classical and classical age: for instance, vase paintings suggest that reading was a collective activity.¹⁹ In the first half of the 5th century BC the sculptures of poets appeared.²⁰ A new step in the relationship of the author and his audience may be signalled by the depiction of a solitary reader in the 2nd half of the 5th century BC.²¹

A recent archaeological find provides important evidence on the literary life in Athens in the second half of the 5th century BC: the tomb of a poet and musician (perhaps of Ionian origin) excavated in 1981 in Athens (Daphne) is dated to 430/420 BC. It contained the bones of a young person in his or her early 20s. The remains of a lyre, a harp and a tube of an *aulos* with mouthpiece, a writing case with a bronze stylus and a bronze inkpot, fragments of the oldest known Greek papyrus roll and five wooden writing tablets (πολύπτυχα) were discovered. It has been suggested that the papyrus might have contained a poetic text because some morphological forms and mythical names point to poetic diction.²² The tablets correspond to the picture from the Douris cup where a teacher holds an open book consisting of three tablets bound together. On the papyrus fragments and the *polyptycha* the script used is the Ionic alphabet, with η and ω for long [e:] and [o:]. Although this alphabet was not officially adopted in Athens until 403/2 BC, it was in frequent use in public and epigraphic texts in Attica in the second half of the 5th century.²³

1.3 *Writing and the Development of New Media*

From the second half of the 6th century BC a novel medium requiring writing appeared: the earliest prose scientific texts. Following on from the Persian wars, Ionian natural philosophy shifted to Athens. The first philosophers whose writings survived are Anaximander and Anaximenes of Miletus.²⁴ Medicine developed in Cos and Cnidos in the form of scientific texts. Beginning from

21 For silent reading, see E. fr. 369 TrGF, Ar. *Ran.* 52–53, the famous tombstone of a young man with a book-roll from Grottaferrata; see also Johnne [1991] 53–54 and Johnson [2000] 593–600 with further bibliography.

22 See West [2013] 82. On the content and date of this tomb, see Pöhlmann [2013] 12–14; on the writing of tablets and, in particular, papyrus, see Pöhlmann-West [2012]; West [2013].

23 West [2013] 76.

24 Them. *Or.* 26, 317a–c; D. L. 2, 2; Clem. Al. *Strom.* 1, 78.

the middle of the 5th century BC, a considerable corpus is attributed to Hippocrates and also to his environment.²⁵ Prose composition was less appropriate for oral performance; therefore the increasing use of prose favoured the circulation of books.

Lyric poetry also reveals interest in reading and writing. Writing is praised; Pindar exclaims in his tenth *Olympian* that the Olympic victor's name should be read aloud, "where it is written down", in his mind (Pind. *Ol.* 10, 1–3). Drama, the new medium of civic performance, supported writing to a considerable extent: texts had to be written down for memorisation by the actors.²⁶ In the *Prometheus Bound*, Prometheus lists his contributions to human progress, including "combinations of letters, which enable all things to be remembered."²⁷ Athenaeus quotes Euripides, Agathon and Theodectas who all depict an illiterate character on stage attempting to describe the shapes of the letters that make up the name Theseus.²⁸ In a fragment from the tragic poet Achaëus, a satyr reads a name written on a cup.²⁹ Palamedes claims to have created syllables and to have invented letters for reading and writing in Euripides (Eur. fr. 578 TrGF); Theseus praised written laws (Eur. *Supp.* 433–437); and Sophocles in his satyr play *Amphiaraos* presented a character dancing out the shapes of letters.³⁰ Drama thus depicted literacy on stage, transferring letters from writing into a live performance.

The broadening of literacy suggested by these passages interacted with a highly accomplished oral culture, which continued to develop in parallel with the written culture.³¹ Thus, in the 5th century BC oral communication was sustained and extended. In Athens theatres were built as places for mass communication, especially for the new medium and industry of drama.³²

25 See Pöhlmann [1994] 20–21; Lloyd [1991]; on the connection of literacy with Hippocratic epistemology, see Miller [1990] and Althoff [1993].

26 On the metaphor of 'writing in the mind' see examples from tragedy in Svenbro [1993] 180–182.

27 Aesch. *PV* 460–461; cf. Gorg. *Pal.* 30. On Plato's interpretation of Prometheus' myth and its connection with the invention of language in the dialogue *Protagoras*, see Gera [2003] 127–147.

28 Eur. fr. 382 TrGF, Agatho fr. 4 TrGF, Theodect. fr. 6 TrGF, Ath. 10, 454b–e; on intertextual relationship between these passages, see Slater [2002] 123–124.

29 Achae. fr. 33 TrGF, Ath. 11, 466e–f; cf. ἀναγνώσσει ('to have read and compared') in Cratin. fr. 289 PCG; cf. Alexand. Com. fr. 272 PCG.

30 Soph. fr. 121 TrGF, Ath. 10, 454f.

31 The level of audience comprehension may perhaps be gauged through the use of recited literary texts in Aristophanes' *Birds* in 414 BC or his *Frogs* in 405 BC; cf. Revermann [2006] 120; Slater [1996]. On the literary consciousness of Euripides' audience, see Marshall [1996].

32 For more, see Goldhill [1999]. On dramatic and literary contests, see Wright [2012] 31–69.

Drama created the environment for important interactions between ‘letters’ and their audience. As the Great Dionysia choruses were composed of Athenian citizens (2–4% of the male adult citizen population were recruited every year), collaboration between actors and spectators helped foster comprehension of the dynamics of theatrical production. Participation in the chorus, even if only on one occasion, must have altered the participant’s/spectator’s understanding of any given play, while broadening the expectations for others.³³

Drama reflected increasing literacy and vivid intellectual discussions.³⁴ A number of comedies of this period satirise sophistic ideas. In 423 BC at the City Dionysia festival, Aristophanes’ *Clouds* lost to both Cratinus’ comedy on comedy *Pytine* and Ameipsias’ *Konnos*. In Ameipsias’ *Konnos* the chorus consisted of *φροντισταί* and Socrates was represented, suggesting a certain degree of overlap with the plot of *Clouds* (Ameipsias fr. 9 PCG). The teaching of grammar and music, and also the opposition between urban erudition and rural ignorance, suggest an overlap between the *Clouds* and Eupolis’ *Aiges*.³⁵ In 421 BC in his *Kolakes* Eupolis depicted Protagoras as an intellectual parasite and an *alazon*.³⁶ The comic poet Plato wrote the comedy *Sophistai* mocking contemporary intellectual discourse.³⁷

Comedies with literary content, or at least explicit allusions to poets and their work, as also instances of interaction between comedy and other genres are abundant. Often the plays bore poets’ names (*e.g.* Aristophanes’ *Poiesis*, *Proagon*, *Gerytades*, Phrynichus’ *Mousai*, Cratinus’ *Archilochuses*, Telecleides’ *Hesiods*, Ameipsias’ *Sappho*, Pherecrates’ *Kheiron* and *Krapataloi* (Aeschylus in the underworld), Plato’ *Skeuai* and *Poietes*, Strattis’ *Kinesias*, Alcaeus’ *Komodotragoidia*).³⁸ All these and many other fragments reveal a certain horizon of expectations that marked the audience of the last quarter of the

33 On the chorus as an educational institution in Archaic and Classical Greece, see below § 2.1.1. Cf. Pl. *Leg.* 654a–b: the uneducated man (*ἀπαιδευτος*) has no chorus-training (*ἀχόρευτος*), whereas the educated man (*πεπαιδευμένος*) is sufficiently choir-trained (*ικανῶς κεχορευκῶς*); Revermann [2006] 107–115.

34 On Euripides’ embodiment of the contemporary intellectual developments, see Egli [2003].

35 Eup. frs. 4, 17, 18 PCG, see Storey [2003] 69–71.

36 Eup. frs. 157, 158 PCG.

37 Pl. Com. *Sophistai* fr. 143, 145 PCG, cf. also Soph. P. Oxy. 1083, fr. 1.

38 On Aristophanes’ *Frogs* see below, § 3.4.2. On intellectual discourses presented in the Old comedy, see also Zimmermann [2011] 694, 696–701.

5th century BC. The audience was capable not only of recognising, but also of evaluating intellectual trends.³⁹

Evaluation of the level of literacy in 5th century Greece requires caution, however. As the majority of texts belong to the 4th century, the backdating of widespread literacy to the 5th cent. remains problematic.⁴⁰ From the end of the 5th century BC reading and writing became a regular part of Athenian education.⁴¹ The first evidence on the book trade and literacy in Athens and in other parts of Greek world comes from the end of the 5th century BC.⁴² The readership remained élite, but it was situated in a large number of cities.

1.4 *Alphabet Reform and the Increasing Role of Grammata*

In 403 BC the Greek alphabet was reformed. The 24 letters were a mixture of the local Attic alphabet and the East Ionic alphabet, which was increasingly preferred during the 5th century BC and was officially adopted for public use in Athens at the suggestion of Archinus in the archonship of Eucleides in 403–402 BC.⁴³ The comic poet Callias wrote this noteworthy event into his *Grammatikē Tragōidia* (or *Grammatikē Theōria*) probably written after 403 BC. Here a chorus of twenty-four women represent the new alphabet, a lesson concerning the pronunciation of new letters and witticisms based on letter-combinations

39 On the relationship of Old comedy with intellectual movements of the time, see Zimmermann [1993a], Carey [2000], Whitehorne [2002]; on the level of competence of the audience, see Revermann [2006]. Vase painting also seems to confirm the comic or satirical use of images of intellectuals as also of sophistic trends. Here grotesque features and aesthetic deformities render the perversity of novel ideas visually. For the caricature of a sophist on a red-figure *askos* and a so-called Aesop on a red-figure cup, both around 440 BC, see Zanker [1995] 40; see also Whitehorne [2002].

40 On a certain increase in literacy at this time, see Nieddu [1982] 235; Harris [1989] 114–115; Morgan [1999] 50–51.

41 Cf. Ar. *Ran.* 1114; Dem. *De Cor.* 258; see also Kleberg [1967] 3–10; Revermann [2006] 120.

42 Books must have been sold on the market in late fifth-century Athens. On the useful discussion of Old comedy's evidence for literate culture, see Slater [1996]. An Eupolis' fragment refers to a place "where books are for sale" beside garlic, onion and incense stands: Eup. fr. 327 PCG, Poll. 9, 47; cf. Ar. *Av.* 1288–1289; Pl. *Ap.* 26d; Arist. fr. 140 Rose; see also a word βιβλιοπώλης for 'bookseller' which appears in comedy of this time: Theopomp. Com. fr. 79 PCG; Nicopho fr. 10, 4 PCG; Aristomen. fr. 9 PCG; Poll. 7, 211. On reading of books by Anaxagoras in Athens and on the price of a book sold in the agora see Pl. *Ap.* 26d–e; *Phd.* 97b; on books found in merchant cases in Thrace, see Xen. *An.* 7, 5, 14; on vase painting with cyclic epic from the 5th century BC in Olbia on the Black Sea, see Vinogradov [1997]; see further Morgan [1999] 58–59; Harris [1989] 49–52.

43 Theopomp. Hist. 115, fr. 155 FGtHist; Olymp. Hist. 94, 2; see more in Platthy [1968] 7; Pfeiffer [1968] 30; on the Homeric text in the Attic alphabet, see West [2001a] 21–23.

being incorporated into the play.⁴⁴ According to Svenbro: “The idea of such a play could arise only in the mind of someone to whom the *grammata* already seem autonomous and to whom their vocalisation no longer constitutes a necessary condition for their deciphering”.⁴⁵ Despite the persistence of debates on the chronology and genre of the play, as well as on its attribution to Callias,⁴⁶ the readiness of the audience to accept such jokes constitutes a clear marker of societal attitudes to literacy.⁴⁷

The alphabet remained significant. At a somewhat later date the comic character Sappho is made to ask a riddle involving a female who bears children that are voiceless. The children can however converse with people at a distance. The correct answer is a letter (feminine ἡ ἐπιστολή) bearing *grammata* within it.⁴⁸

1.5 *Literacy as an Instrument in Learning*

Prose manuals and treatises on a wide assortment of subjects (such as philosophy, economics, rhetoric, science, geography, cooking or horse-riding) served as vehicles for the transmission of knowledge, often setting out standards appropriate for their task: the requirement of investigation, precision in selecting a topic, methods for analysing sources and attention to technical details. Reportedly, Sophocles wrote a treatise on the chorus in tragedy, Agatharchus examined the painting of scenery, Polyclitus dealt with the proportions of the human body, Ictinus composed an account of the construction of the Parthenon, and a certain Menaecus a cookbook.⁴⁹

Further evidence of societal interest in literacy is provided by Isocrates and Plato. Isocrates emphasised the importance of learning to read and write and, accordingly, the actual reading of literature as elements in a rhetorical training (Isoc. *Antid.* 259–267). Thus, in the view of Isocrates, reading and writing contributed to cognitive changes in a student’s approach to learning. Literacy (γράμματα) constituted a necessary preliminary for λόγος, i.e. “reasoned

44 Call. Com. test. *7 PCG; Ath. 7, 276a; 10, 448b; 10, 453c-e; Clearch. fr. 89a Wehrli. See Gagné [2013].

45 Svenbro [1993] 186.

46 Pöhlmann [1986] 55–57; Slater [2002] 126–129; Zimmermann [2011] 732–734.

47 It should not be considered a coincidence that the words γραμματικός (and ἀγράμματος) denoting knowledge (or ignorance) of the alphabet appear for the first time at this time: Xen. *Mem.* 4, 2, 20; cf. ἀναλφάβητος Nicoch. fr. 5 PCG.

48 Antiph. fr. 194 PCG. See Konstantakos [2000] 161–180, Gagné [2013] 315–316.

49 See e.g. Pl. *Minos* 316e; *Symp.* 177b, *Phdr.* 266d, 268c; *Grg.* 518b; Isoc. *Hel.* 12; Xen. *Mem.* 4, 2, 10; Xen. *Oec.* 16, 1; Vitruv. 7, pr. 11–12; more in Demont [1993], Cambiano-Canfora-Lanza [1992] 379–491; Cambiano [1992]; Casson [2001] 23.

discourse”.⁵⁰ Xenophon considered literacy an aid to aristocratic domestic management (Xen. *Oec.* 9, 10). Niceratus, a character in Xenophon’s *Symposion*, had a father who made him learn the whole of the *Iliad* and *Odyssey* by rote, with a view to his “becoming a good man” (Xen. *Symp.* 3, 5). For Aristotle, literacy and drawing were useful for life (Arist. *Pol.* 8, 1337b23–27). Literacy was also appraised as valuable for household management, financial, political and other affairs.⁵¹ Literacy was therefore posited as the basis for education.

1.6 *Intellectual Environment as Reflected in 4th Century BC Sources*

From the 4th century BC comedy provides further evidence for the prevailing intellectual climate and the horizon of expectations of the Athenian audience. Aristophanes’ *Assemblywomen* (392 BC) has often been interpreted as a parallel to the 5th book of Plato’s *Republic* (with perhaps a common earlier source). Plato and his Academy are also reflected in plays by Epicrates, Amphis, Theopompus, Alexis, Anaxandrides.⁵² Comic characters show some acquaintance with Platonic vocabulary.⁵³ Pythagoreanism and Cynic philosophical concepts, both characteristic trends for the first half of the 4th century BC, were also represented on stage.⁵⁴ As before, comedies were given the titles of poets, examples being Hesiod, Archilochus and Sappho. These poets were discussed in a comic dramatic context.⁵⁵ Similar developments were reflected in the medium of sculpture. An Attic marble relief from the mid 4th century BC shows a seated comic poet holding a roll and a slave mask.⁵⁶ Statues and busts of the philosophers Socrates, Plato and Aristotle, the orator

Aischines, the historian Thucydides, the 4th century tragic poet Astydamas and the 5th century tragedians Aeschylus, Sophocles and Euripides appeared.⁵⁷

The literary, archaeological and epigraphic evidence reveals that by the middle of the 4th century BC some Greek authors moved from Athens to Macedon, a factor that contributed to the prestige of tragedy, particularly Euripidean tragedy.⁵⁸ Macedon had extended its dominance over Greece and attracted intellectual talent from Athens and elsewhere. Greek authors thus served Macedon's rise to cultural prominence and political hegemony.

1.7 *The Supremacy of Written Text*

A crucial change which was to influence the establishment of scholarly philology over the course of the following centuries occurred during the 4th century BC: the centrality of oral performance was gradually supplanted by the written text.⁵⁹ Aristotle worked with the written text, preferring it to the oral; reading drama was deemed equal to viewing it, for it was reading that “makes the quality of the play clear”.⁶⁰ Aristotle speaks of writers of speeches such as Chaeremon and dithyrambic poets like Licymnius whose works are meant for reading (ἀναγνωστικοί).⁶¹ Oral performance was losing efficacy as the medium for literary communication.

Aristotle's methodology reveals the extent to which the role and concept of writing had altered. Writing was no longer seen as a novelty to be discussed, admired or ridiculed, no longer staged as oral communication, as was the case, for example, with the Platonic dialogues; rather, writing was now understood as a tool for philological analysis, as an achievement in its own right.

57 Zanker [1995] 46–79 with figures and further bibliography; Cambiano-Canfora-Lanza [1992] nn. 1–13. On other representations of philosophers, even on coins, see references in Whitehorse [2002] 30. On the erection of statues and establishment of the literary canon, see Wilson [1996] 315–317 and Scodel [2007] 147–149.

58 For more, see Revermann [1999–2000] 454–467 and Moloney [2014]. For the hypothesis that the pseudo-Euripidean tragedy *Rhesus* was written for a Macedonian performance context, see Liapis [2009]. On the reception of tragedy in Athens in the 4th century BC, see Wilson [1996] and Easterling [1997] 212–219; on the reception of Euripides in Magna Graecia, see Allan [2001]. On dramatic performance outside Athens in the 4th century BC, see Csapo-Goette-Green-Wilson [2014] 229–390.

59 Pinto [2006] 51. On Isocrates' knowledge of written texts, see Pinto [2006] 57–70.

60 Arist. *Poet.* 1462a11–13, cf. 1450b18–19, 1453b6 on the relationship of text with performance. On the gradual reduction of musical sections from dramatic plays from the 5th to the 4th century BC and on the transmission of the text in a libretto-form, see Pöhlmann [1994] 23–25.

61 Arist. *Rh.* 3, 1413b12–16.

Extensive reading and references to earlier texts are clearly evident in Aristotle's writings (cf. Arist. *Top.* 105b). More than thirty philosophers and poets are cited in the *Metaphysics*; a stream of quotations from tragic, comic and epic poets, from orators and also from rhetorical treatises are cited in the *Rhetoric*. Heraclitus is considered an author who is "difficult to punctuate" (Arist. *Rh.* 1407b); other passages discuss problems of word-division, accent and punctuation in terms of the written text.⁶²

An important step towards the supplanting of oral by written texts was the introduction of a law establishing official editions of the authorised texts of the three tragedians Aeschylus, Sophocles and Euripides. This was instigated by the Athenian statesman and orator Lycurgus in 330 BC. A transcript of their work was to be placed in the public archive and the city's secretary was to read it aloud to potential actors; bronze statues of the three poets were to be erected in the theatre of Dionysus.⁶³ Lycurgus' law was grounded on elite literary culture and not on oral theatrical performance. The significance of the written form of the three tragedians was marked by the erection of their statues in the theatre "as a material intervention in social memory".⁶⁴ The transcript would later serve as the source for editions of the tragedians by the Alexandrian scholars.⁶⁵

A range of developments in the period from Homeric times up to the end of the 4th century BC resulted in increasing attention being accorded to the written text, combined with a gradual reduction in the prominence accorded to oral performance. Thus the most important preconditions for the development of Alexandrian textual philology, and, in particular, the greater stability it acquired through being fixed in the written form, were established in pre-Alexandrian Greece.

62 E.g. Arist. *Soph. El.* 166b, 177b, 178a, see Knox [1989] 166–167. Note also that these elements belong to philological scholarship in its Alexandrian sense (see Montana in this volume).

63 Plut. *Mor.* 841f; Paus. 1, 21, 1–2. On Lycurgus and his programme, see Mossé [1989], Scodel [2007] 149–152, and Hanink [2014] 60–91.

64 Scodel [2007] 150. On Lycurgus in the context of the conservation of classical texts in the 4th century BC, see also Battezzato [2003] 10–12, 14–19 and Hanink [2014] 60–74.

65 Ptolemy III later borrowed the official Athenian copy for the library in Alexandria, and never returned it, cf. Gal. *comm.* 2, 4 in Hippoc. *Epidem.* 3; Pfeiffer [1968] 82; see also Montana in this volume. However, it is clear that although Lycurgus' legislation guaranteed the survival of all texts referred to, it could nonetheless not prevent small interpolations and variants. See Scodel [2007] 151–152.

2 Social Institutions that Assisted in the Development of Scholarship

2.1 Education

2.1.1 Education in Archaic Greece

Little evidence for pre-classical Greek education survives. Archaic culture probably included various forms of oral education for the social élite: instruction within the family, encounters with mythic and religious traditions in choruses and acting at festivals, not to mention rites of passage as a form of education.⁶⁶ Social forms for the association of younger and older men included drinking-parties where poetry was recited (*συμπόσιον* and *ἐταίρια*) and athletic competitions (*ἀγῶνες*), forms that often promoted paederastic relationships. Musical activity in Sappho's 'circle' could also be considered an educational experience, and choral practice remained one of the central components in the *paideia* of young men.⁶⁷

Elementary schooling was conducted in private houses (*διδασκαλεία* or *παλαίστρα*) with secondary schooling in public buildings such as the *γυμνάσιον*, which was primarily a venue for physical training and was, for the most part, financed privately.⁶⁸ As education in Greece remained private until the Hellenistic period, and as teachers had to be paid by parents, wide-ranging education remained an élite affair, though a considerable part of the population of Athens (with regional differences posited for the rest of the Greek world) received a basic training in reading and writing.⁶⁹

In pre-classical Greece physical and musical education were central. Musical training consisted of all activities overseen by the Muses, including poetry (Pl. *Resp.* 376e). Cithara players and physical trainers were the two types of teacher in this early form of education (cf. *Ar. Nub.* 961–1023). Literacy and the beginnings of Greek grammar (metric and prosody) were taught as music lessons, the borders between music and letters being indeterminate.⁷⁰ This educational programme was probably available only to boys; there is

66 For Alcman's *Parthenion* from 7th century BC Sparta, see Calame [1997].

68 Lynch [1972] 32–37.

69 Beck [1964] 72–94.

70 Cf. the teaching scene in Aristophanes' *Clouds* where metre and rhythm (*Ar. Nub.* 638–656) and also grammar are taught (*Ar. Nub.* 638, 658–693); Morgan [1999] 50–53.

no evidence for the organised education of girls up until Hellenistic times.⁷¹ However, girls from wealthy families received an education at home.⁷² Red-figured Attic vases show girls and women reading and reciting poetry from the middle of the 5th century BC.⁷³

2.1.2 Schools as Formal Institutions

It is unclear whether organised schooling was known in Athens in the 6th century. Aeschines maintained that laws governing the operation of elementary schools were ratified during the archonship of Solon in 594 BC.⁷⁴ A later tradition holds that the Spartan poet Tyrtaeus was a schoolmaster at Athens.⁷⁵ Schools probably existed as formal institutions at the very least in Ionia from the beginnings of the 5th century BC. A disaster is referred to in a school on wealthy Chios while pupils were being taught γράμματα in 494 BC (Hdt. 6, 27); a school in Mytilene is mentioned (Ael. *VH* 7, 15) as well as a calamity in a school on Astypalaea in 496 BC (Paus. 6, 9, 6–7); in 480 BC the Troezenians provided schooling for Athenian children (Plut. *Vit. Them.* 10); and a massacre occurred in a school in the Boeotian town of Mycalessos in 413 BC (Thuc. 7, 29). According to a later source, schools were believed to have already existed in the 6th century BC: Charondas of Catana is said to have written a law stipulating that the city should provide salaries for teachers, and teachers should teach the sons of citizens to read and write.⁷⁶

The historicity of state regulations for the establishment of schools in the early 5th century BC has been questioned due to the lack of clear direct literary evidence.⁷⁷ However, vase paintings provide significant evidence of school practices towards the end of the 6th and the early 5th centuries BC in Attica. The earliest school scene is an Attic red figured cup from Vulci (Munich

71 Euripides' Phaidra is the only woman who can write (Eur. *Hipp.* 856–881); see Pl. *Resp.* 452a–b for Plato's proposal to educate girls, see further Lodge [1950] 287–308, Beck [1964] 85–88, Baumgarten [2006] 98–100.

72 Cole [1981] 224–230.

73 See Immerwahr [1964] 24–28; on the earliest representation of a reading woman on an Attic white ground *lekythos* dated 460–450 BC, see Immerwahr [1973] 146–147. On epigraphic evidence of literate women in Archaic Greece, see Steinhart [2003].

74 Aeschin. *In Tim.* 9–12; see Beck [1964] 92–94; Too [2001] 118; Knox [1989] 159.

75 Paus. 4, 15, 6; *sch. Leg.* 629a.

76 Diod. Sic. 12, 12, 4; 13, 3–4. Chronological errors point to the unreliability of Diodorus' evidence (Diodorus transferred the legendary legislator from the 6th century to the colony of Thurii founded in 444/443 BC). See Harris [1989] 98. However, this remains valid evidence for the significance of universal education as attested in later sources.

77 Harris [1989] 57–59; Robb [1994] 183–184 and 207–208.

2607, around 520 BC, Euergides-painter), followed by an Attic red-figured cup from Spina (Ferrara T45CVP, around 500 BC) and also a cup with a geometry lesson (Louvre G318, around 500 BC). Other examples include a professional writing lesson presented on an Attic red-figure cup (Basel BS465, around 490 BC) with a teacher; tablets are open on his knees as he improves or deletes a text, his pupil waiting.⁷⁸ The famous Attic red-figure kylix painted about 490–485 BC by the artist Douris represents recitation, a flute lesson and a writing exercise as distinct aspects in the school curriculum;⁷⁹ the writing exercise may be a student's home assignment in epic composition.⁸⁰ A fragment of a red-figure cup by the Akestorides painter probably depicts the study of poetry (Getty Museum 86 AE 324, around 460 BC), perhaps a young man with a roll preparing for a recitation of epic.⁸¹ From the first half of the 5th century ever more red-figure vases illustrate school scenes and also the daily activities of the young, frequently depicting writing tablets and the use of the stylus.⁸²

2.1.3 Philosophical and Medical 'Schools'

The institutionalisation of schooling ran parallel to a number of other intellectual trends. Philosophers voyaged to Athens from the western coast of Asia Minor, Sicily and Southern Italy in the 6th and the first half of the 5th century BC. They functioned as separate persons, not as collective bodies, although some gathered groups of enthusiastic supporters. As Thales, Anaximander and Anaximenes were all originally active at Miletus, where they sought to explain the principles (*ἀρχαί*) controlling the processes of the universe, the later philosophical tradition banded them together as a 'Milesian school'. Anaximander was considered Thales' student and Anaximenes' teacher.⁸³ Pythagoras had a hierarchically structured congregation of students studying music and mathematics, fervent adherents of the wisdom of Orphic books and rites. Already from the outset these practices embodied an early form of schooling, and later Pythagoreans of the late 5th and 4th century built on them to develop their pedagogical methods.⁸⁴ However, the Pythagorean school was a centre of esoteric knowledge with its mysteries, oaths and rites, probably parodied in Aristophanes' *Clouds* (Ar. *Nub.* 143, 254–266; cf. Pl. *Tht.* 155e,

Symp. 209e), thus permitting a clear separation from other forms of schooling which, subject to payment, were open. Centres of practical medical advice and healing and also of methodology and the formation of medical theories were established in Cos and Cnidos at about this time.⁸⁵

2.1.4 Literate Education

From the second half of the 5th century literate education began to differentiate itself from music.⁸⁶ Training in music however remained important as seen in a number of comedies where a music teacher is represented.⁸⁷ Literate education is also discussed in Aristophanes' comedy *Clouds* (423 BC). In the debate of the two speeches, the *Kreitton Logos* asserts that in "the old days" gymnastics and the teaching of the lyre teachers were sufficient for the young, whereas they had now both been superseded by the reading of Euripides (Ar. *Nub.* 889–949, 961–983). The passage, the first clear differentiation between physical training, music and letters in education (cf. also Ar. *Eq.* 987–996), is structured around a clear conflict among aspects which, at this stage, had come to be seen as separate components of a standard education. The Aristophanic Euripides symbolically ejects music from education⁸⁸ to focus on an innovation, the written text.⁸⁹

Increasing literacy was also associated with the diminishing importance of physical training.⁹⁰ Verbal skill was characterised as "wrestling", an alternative form of competition.⁹¹ The evidence therefore suggests that important changes in the educational paradigm should be dated to the last quarter of the 5th century BC.

85 On the mistaken backdating of the term 'school' for ancient medical writings, see Smith [1973].

86 Morgan [1999] 46–48; cf. Quint. *Inst.* 1, 10, 17; *sch. Dion. T. Grammatici Graeci* 1, 3, 490, 5.

87 The musician and music teacher Lamprus was mocked by Phrynichus (fr. 74 PCG), Konnos was known as Socrates' music teacher (Ameipsias' comedy *Konnos* frs. 7–10 PCG; Pl. *Euthd.* 272c, *Menex.* 236a), Cleon in Aristophanes' *Knights* featured a music teacher (Ar. *Equites* 987–996), Eupolis' *Aiges* included a teacher of music and grammar (Eup. frs. 17, 18 PCG), and Plato apparently wrote a comedy which included Pericles' music teacher (Pl. *Com. fr.* 207 PCG). On the function of musical education in Classical Athens, see Murray-Wilson [2004].

88 Cf. also Euripides versus Aeschylus and Simonides in Ar. *Nub.* 1361–1376.

89 On Euripides' connection with books, cf. Ar. *Ran.* 943, 1409.

90 Ar. *Nub.* 412–419, *Ran.* 52–54, 1114; Pl. *Menex.* 94b–c, *Prt.* 326c–d; *Euthd.* 276a, *Resp.* 376e, *Leg.* 764c–e, 795d–e, *Isoc. Antid.* 266–267, see further Morgan [1998] 9–14, Morgan [1999] 51–52.

91 O'Regan [1992] 11–17, 38–39.

2.1.5 Sophistic Education

Such changes should be set in relation with the sophists who established educational institutions.⁹² Although the sophists remained élitist in the sense that they taught privately, usually in aristocratic houses, they championed the interchange of opinions and ideas, and the development of arguments in public space. Social attitudes towards intellectual process were therefore advanced.⁹³

Sophists taught natural science, meteorology, astronomy, mathematics, geometry, rhetoric, literary criticism and grammar. Many sophists, such as Protagoras, Gorgias, Prodicus or Hippias, wrote prose treatises. Written texts constituted a significant part of their educational programmes, thereby contributing to a broadening of literacy and to a growing book culture.⁹⁴ However, the oral background still constituted the backdrop for these innovations, with written texts being employed for memorising and recollection. School children and also orators, trained by sophists, were required to learn by rote.⁹⁵ Written texts were a challenge due to the lack of divisions between words and an absence of accents and punctuation, obstacles that persisted up until the time of the Alexandrian scholars.

Old comedy offers a complex picture of tensions in the educational paradigm during the second half of 5th century BC (Aristophanes' *Daitales*, *Clouds*, *Wasps*, Ameipsias' *Konnos*, Eupolis' *Kolakes*, *Aiges*, Callias' *Grammatikē Tragōidia*). Aristophanes' *Daitales* (427 BC) which dealt in part with the generational gap in educational practices, has only survived in fragments. An older man asks a younger one the meaning of certain Homeric words, and the younger man provides a reply, and then enquires into the meaning of a number of obsolete and old-fashioned words from Solon's tablets (Ar. fr. 233 PCG). Solon's tablets were basic Athenian law; accordingly, whatever else the passage implies, the interpretation of words served an important purpose for law and in public life. In *Knights* Aristophanes mocked the usage of educational discourses and the distinction between technical and general tuition (Ar. Eq. 1235–1242).

The change in educational models took place within the context of shifts in the intellectual climate that were seen as a challenge to traditional values. Socrates became a symbol of these changes, combining an educational

92 Such as the outlandish φροντιστήριον staged in Aristophanes' *Clouds*, see Tomin [1987]; cf. Pl. *Lach.* 178a–180a.

93 On sociological approaches to such sophistic activities, see Tenbruck [1976] 63–74.

94 Ar. fr. 506 PCG, Pl. *Symp.* 177b, Xen. *Mem.* 2, 1, 21; D. L. 9, 52. See also above § 1.4 n. 45.

95 Pl. *Prt.* 325e, *Leg.* 811a; Xen. *Symp.* 3, 5; cf. Thomas [1992] 92–93; cf. also LSJ for ἀναγιγνώσκειν meaning 'know again, recognise' (sc. written characters).

paradigm with forensic rhetoric, natural philosophy and science.⁹⁶ By the end of the 5th century BC the term ‘school’ came to denote a separate place. Approximately at this time the expression διδασκαλείον in the sense of ‘school-building’ is first used.⁹⁷ An alternative expression for “going to school” was usually εἰς διδασκάλου “to the teacher’s” or a similar form.⁹⁸

2.1.6 The Concept of Education in the 4th Century BC

By the early 4th century BC the educational programme in Athens and other parts of Greek world had become more firmly established. From this point on, education was systematically discussed, often in the context of political, ethical and philosophical developments that constitute elements in the polis complex.⁹⁹ Thus, in Old comedy, linguistic and literary issues were depicted as essential elements in the polis’ life. Learning provided the intellectual and moral density that sustained the polis ideal, even in the context of a discordant reality. Knowledge based on literacy within the context of meeting the needs of the democracy, while also improving upon it, was therefore taught in increasingly formal (always élitist) educational institutions.¹⁰⁰

Plato’s dialogue *Protagoras* (dramatic date in the 430s, but written in the 390s BC) provides the *locus classicus* for the education of the Athenian boy (Pl. *Prt.* 325c–326e). An elementary education consisted of three subjects: grammar, music and gymnastics, each taught by a separate teacher.¹⁰¹ Having learnt the alphabet, pupils began to study the epic poets.¹⁰² The copying of selected texts as exercises in writing, and also in reciting, was typical, hence the first lines of famous works became more recognisable and widely quoted. From the very beginning students worked intensively with poetic texts, and

96 On Socrates’ relationship to intellectual innovations, see Woodruff [2011].

97 Also as a training room for choral singing; for διδάσκαλος as a ‘chorus trainer’, see Antipho *De Choreut.* 11; Adesp. fr. 515a TrGF, Th. 7, 29; Aeschin. *In Tim.* 9.

98 E.g. Ar. *Eq.* 1235, Pl. *Alc. I* 109d, 110b, *Prt.* 326c, *Grg.* 514c.

100 Harris [1989] 96–102; Morgan [1999] 46.

101 Cf. also Pl. *Clitopho* 407b-c, *Chrm.* 159c; on drawing as a further discipline see Arist. *Pol.* 1337b; Stob. *Flor.* 98; on the low status of the teacher of letters in society see Beck [1964] 111–114; Harris [1989] 98. Aischines’ father was apparently a teacher-slave in Athens, cf. Dem. *De Cor.* 129, 258, 265; *De Fals. Legat.* 249 providing evidence for schooling in late 5th century Athens.

102 On the method of learning letters, see Pl. *Pol.* 277e–278a, 285c, *Prt.* 326d; on reading poetry, see Pl. *Prt.* 325e.

the schoolwork they were expected to carry out involved explanations of linguistic and stylistic peculiarities and also a knowledge of mythology.¹⁰³ Lines from literature were used for some of the first writing exercises.¹⁰⁴ Numeracy also constituted a part of *γράμματα*; thus the ordinary Athenian citizen was taught to calculate as well as to write.¹⁰⁵

By the beginning of the 4th century the first higher educational institutions had been established. This reflected a trend towards increasing specialisation in the educational process.¹⁰⁶ Schools of rhetoric, previously practiced by the sophists, were accorded official status. Isocrates, who studied alongside the sophists and was known as Gorgias' student, founded the first school of rhetoric in Athens, around 390 BC. Isocrates himself did not deliver his speeches orally, but his speeches circulated as written texts (Isocr. *Panath.* 10). The introduction of something approaching a methodical education (age of pupils, duration of courses, quantity of material to be studied etc.) is linked to the name of Isocrates; his school became a model for the promotion of the teaching of rhetoric in Greece and in other states.¹⁰⁷ He taught alone, as both a teacher and director of a school; therefore, after his death, his school ceased to operate.

It was around 387 BC in Athens that Plato established his philosophical school, the *Academeia*. This was a rival to Isocrates' school of rhetoric, both schools constituting two branches of study, although the archaeological evidence on the literate or educational practices of the 5th and 4th centuries is too poor to provide reliable evidence.¹⁰⁸ It is known, however, that an introductory training course was compulsory before students could enter Plato's Academy. The Academy focused on teaching but also promoted research into ethics, philosophy, logic, mathematics and others fields, such as astronomy, biology, and political theory. It formed a complex system, where alongside Plato, the head of the school, a number of others also taught, such as Speusippos, Xenocrates and Aristotle. At first, the Academy was financed by Plato's financial resources, then through various donations, in marked contrast to the sophists who taught

For the so-called 'Academy inscriptions', which, so it was claimed, were schoolboys' writing tablets from the 5th or 4th century BC though they almost certainly belong to the 19th century AD, see Lynch [1983] and Threatte [2007].

for a fee. Common symposia in the tradition of the Pythagorean cults aimed at fostering a collegiate atmosphere. Plato discussed the educational principles of the Academy in many of his writings, especially in his *Republic* and the *Laws*, in the context of the possibility that a society could be ruled by reason.¹⁰⁹ A number of important markers for the development of criticism and scholarship were laid down at this time. Plato's school reinforced the sophistic predilection for disputes with *pro* and *contra*, dialectic being an art that was held to stimulate independent thought. Exercises in the distribution and definition of material were also practiced.¹¹⁰

Other disciples of Socrates, many of them close to sophistic circles, also worked on establishing schools for a secondary education. Thus, according to ancient tradition, one of Socrates' senior students Antisthenes may have founded a school at the Cynosarges gymnasium in Athens. The school was supposedly intended for illegitimate children.¹¹¹ There is also some further epigraphic evidence on educational practices from the middle of the 4th century BC.¹¹²

A number of 'minor schools' founded by Socrates' disciples further developed and interpreted Socrates' ideas. By the beginning of the 4th century BC Socrates' student Euclides of Megara had founded the so-called Megarian school which focused on dialectic questioning. This school is mentioned by Aristotle (the Megarians: οἱ Μεγαρίκοι), although it seems the school had no set location (members resided in various places).¹¹³ The philosopher in the barrel Diogenes of Sinope, influenced by Antisthenes, established the Cynic 'school' which emphasised the agreement of virtue with nature. Aristippus from Cyrene, another student of Socrates, returned to the practice of teaching for a fee. He and his followers, the so-called Cyrenaic school, interpreted

Socrates' concept of pleasure.¹¹⁴ Phaedon of Elis and his pupils in conjunction with Menedemus of Eretria and his followers were conventionally called the school of Elis and Eretria (Ἡλιωκὴ and Ἐρετριακὴ αἵρεσις). They discussed for the most part the good and the truth, denying any real difference between them.¹¹⁵ With the exception of Plato's Academy, there is no evidence that the Socratic 'schools' functioned as formal institutions with a specific educational programme. Rather they were characterised by the relationship between the teacher and a circle of pupils who viewed him as an authority.

Aristotle, who studied in the Academy (around 367–357 BC) and then worked and taught there (357–347 BC), was invited to the court of Philip II in Pella as teacher of Alexander (343–340 BC). In 335/334 BC Aristotle, with Alexander's financial support, founded his own philosophic school at the sanctuary Lyceum in Athens. This location had been used as a place of philosophical and rhetorical debates by Socrates, Protagoras, Prodicus, and Isocrates as well as the rhapsodes.¹¹⁶

Like Plato, Aristotle believed that education should be provided by the state, for otherwise fathers would spend money only on providing musical education and gymnastics for their sons.¹¹⁷ Aristotle connects the idea that the education should be universal for citizens with the name of Phaleas of Chalcedon.¹¹⁸ The principles upon which Aristotle's institution functioned are presented on a number of occasions in his work.¹¹⁹ Though generally following the Academy, Aristotle's educational programme was in many respects different from Plato's; for example, he adopted Isocrates' method and taught rhetoric.¹²⁰ Further, relations between members of the school were supposed to be based on cooperation, rather than dialectical confrontation.¹²¹ Thus Aristotle's teaching was fixed through the composition of treatises in scientific prose, as opposed to the dialogues characteristic of Plato; the empirical principle was thus set in contrast to dialectical learning.¹²² Aristotle included many

elements that would characterise later Alexandrian scholarship in his methodology, such as the systematic collection of previous literature and analysis of information and sources.¹²³ In the Lyceum a number of disciplines were distinguished from philosophy, and philosophy became one subject among others. This differentiation of school disciplines was an important step leading to the later separation of philology.

Under Athenian law, metics such as Aristotle were not permitted ownership of land; therefore he had to rent the necessary facilities for his school. After Aristotle's death in 322 BC, Theophrastus continued Aristotle's programme of research and teaching in the Lyceum. When Demetrius of Phalerum assumed the leadership of Athens in 317 BC, Theophrastus purchased a plot of land and founded the school of the *Περίπατος*.¹²⁴ Theophrastus is reported to have had two thousand students. Following his death in 288/6 BC Theophrastus stipulated that after his death—which occurred in 288/6—the school would be bequeathed to ten “fellows” (*χοινωνοὺντες*) whom he authorised to select a new director; however his successors apparently treated the *Peripatos* as their own private property.¹²⁵

With the rise of Macedon the aims of literate education changed. Literate education fed the socio-political instruments of the Hellenistic state system, creating a sense of common cultural identity among different peoples. The language of administration throughout the Hellenistic world was Greek. With the help of this model of education avenues were opened for the young (both Greeks and non-Greeks) to become integrated into the ruling system.¹²⁶

Two more philosophic schools were established in Athens towards the end of the 4th century BC. Having studied in the Academy, Zeno from Kition founded the *Stoa* in 308 BC. Epicurus founded his *Kepon* in 306 BC. At the end of the 4th century BC Aristotle's student Eudemos founded a philosophical school in Rhodes, which later became a significant centre of scholarship and rhetoric.¹²⁷ Other educational and research institutions appeared in many parts of the Greek world, *e.g.* in Antioch, Byzantium, Heraclea on the Pontus, Ephesos, Smyrna, Tyrus.¹²⁸

This short overview of history of educational institutions in Greece should serve as a reminder of the essential social framework in which scholarship

could flourish. The establishment of the *mouseion* and the library, two state institutions founded by Ptolemy I in Alexandria in 300 BC, constitute a culmination of this process.¹²⁹

2.2 *Libraries and Archives*

According to later Ancient tradition, the early tyrants were known collectors of books. Libraries or book collections did not exist as public institutions: rather, from the first moment of the appearance of books, wealthy people started collecting them, thus establishing private libraries. There may have been a library at Miletus which supported the studies of Greek natural philosophy at the time of the tyrant Thrasybulus at the end of the 7th century BC.¹³⁰ The library of Peisistratus is mentioned in various later sources. The tyrant Polycrates of Samos was interested in poetry. He invited poets such as Ibycus and Anacreon to court, and is said to have possessed a collection of books.¹³¹

It is important to note that book collections and archives were located in many small cities throughout Greece, not only in Athens. Examples include the library of Hieron in Syracuse (Ath. 5, 207e–f), the book collection in Salmydessus in Thrace (Xen. *An.* 7, 5, 14), Heraclitus' book deposited in the temple of Artemis in Ephesus (D. L. 9, 5–6; Tatianus *Ad Gr.* 3, 12 Schwartz), and a private book collection in Aegina (Isoc. *Aegin.* 5).¹³² At Cos and at Cnidos, where medicine flourished, there may have been collections of medical books.¹³³

Archives were also a system for the collection of written texts, particularly official documents. From the Old Orient and Egypt onwards, archives and libraries were traditionally connected with shrines and temples.¹³⁴ The first public building in Athens where records of the council and assembly were kept was the Μητροῶν (from the shrine of the Mother of the Gods located there), established at the end of the 5th century BC.¹³⁵ Little is known on the filing of documents and access to them. The assistants of the secretary of the council worked with these documents, the public slave serving as a clerk. An average citizen would not have been able to locate a document without assistance. In

any case the Μητροῶν marked an important shift in social relationships to the written text: this was the first official collection of documents, thus fostering an archival mentality that was to be characteristic of the later archives and libraries of Hellenistic times.¹³⁶

Towards the end of the 5th century BC a number of libraries belonging to private persons are mentioned. Euripides was believed to have a book collection.¹³⁷ Xenophon reports that Euthydemus had a large collection of writings. Indeed, Euthydemus is supposed to have boasted that he would continue “collecting books until he had as many as possible”, including not only poetry and philosophy but also all the works of Homer.¹³⁸ Plato’s Academy must also have had a library. According to various later sources, Plato bought the three volumes of the Pythagorean philosopher Philolaus.¹³⁹ The first reference to a public library relates to Pontic Heraclea in Bithynia, established before the middle of the 4th century BC by the tyrant Clearchus who studied with Isocrates and Plato in Athens.¹⁴⁰

Fourth century BC comedy provides further information on libraries. In Alexis’ *Linos* Heracles is told by his teacher Linos to select any book from a vast collection of papyrus rolls (Orpheus, Hesiod, tragedy, Choerilus, Homer, Epicharmus and others), and Heracles chooses a cookery book by a certain Simos.¹⁴¹ The earliest use of the word βιβλιοθήκη meaning, in all probability, ‘book-case’ (LSJ) comes from this time. Pollux asserts that the comic poet Cratinus the Younger used this word in his play *Hypobolimaïos*.¹⁴²

It is likely that small technical libraries circulated in the 4th century BC. For instance, Isocrates mentions a seer who had a book collection on mantic art and left this collection to his friend, who used it for practicing the art himself.¹⁴³

136 For epigraphic and literary evidence referring to the city archive Μητροῶν and for the establishment of archives in the context of the interaction between oral and written culture, see Thomas [1989] 38–45 with further bibliography and Shear [1995].

However, the first systematic library with an extensive archive was established at Aristotle's school.¹⁴⁴ This is probably the reason why Aristotle was known in later Antiquity as the first collector of books.¹⁴⁵ The books of Aristotle's school were left to the physician Diocles, and this collection perhaps served as an example for the libraries at Alexandria and Pergamum.¹⁴⁶ However, the quality of the school's library may have declined after Theophrastus' death in 287 BC, with the apparent loss of many of Aristotle's works to Neleus of Scepsis.¹⁴⁷

By the end of the 4th century BC the fundamentals for the creation of a library such as Alexandrian had been met: works on a wide diversity of issues were obtainable, archives and scriptoria existed for keeping copies and copying in multiple ways, and the copies were sold.¹⁴⁸ The decree of Lycurgus ordering fixed written versions of the works of Aeschylus, Sophocles and Euripides played an important role in the process of establishing public libraries, as these texts could then be referred to as reliable versions.¹⁴⁹

3 Philological Approaches in Pre-Alexandrian Greece

Though poets frequently commented on their own use of language, such self-referential deliberations should not be equated with the theoretical study of philology.¹⁵⁰ This section will focus on textual criticism and the growth of theoretical writing that consciously engaged with philological concepts and methods.

Philological ideas developed for the most part in three not necessarily clearly distinguishable directions: textual criticism, linguistics, and stylistics.

144 On Aristotle's archival studies in the form of lists of the victors at the Olympic games (Ὀλυμπιονίκαί), at the Pythian games (Πυθιονίκαί, Πυθιονικῶν ἐλεγχος), of victories in the dramatic contests of the Dionysia (Νίκαί Διονυσιακαί) and of the performances of plays at the Dionysia (Διδασκαλίαι, D. L. 5, 26), see Blum [1991] 23–43. On Aristotle's library, see Blum [1991] 52–64 and Pinto [2013] 90, n. 21.

145 Strab. 13, 1, 54: "Aristotle was—to the best of our knowledge—the first to have collected books and to have taught the kings in Egypt how to put a library together". See Jacob [2013] 74–76.

146 Platthy [1968] 89, cf. also Lapini in this volume.

147 Strab. 13, 1, 54; Jacob [2013] 66–74. See also Canfora [1999] 17–20, Battezzato [2003] 22–25, and Montana in this volume.

148 For an overview of the first Greek libraries up till the end of the 4th century BC, see Blanck [1992] 133–136. For the Alexandrian library, see Montana in this volume with further bibliography.

149 See above § 2.1.2. See also Battezzato [2003] 12–14.

150 For early Greek observations on poetry, see Lanata [1963]; Grube [1965] 1–12; Nagy [1989].

Attempts to explain etymology, questions of grammar and studies in semantics will be considered components in the linguistic field, whereas Homeric studies and also studies of a number of other poets including exegesis, criticism and hermeneutics will be considered as components of textual criticism.¹⁵¹

3.1 *Observations on Language in the Archaic Period*

Language requires self-referential observations, and so, like children toying with words, early poets naturally practiced linguistic games.¹⁵² The main linguistic object of attention for early epic poets was the relationship between name and denominated object. Proper names in epics are often eloquent, containing explicit etymologies. It was not the reconstruction of the root of a particular word that interested the epic poet, but rather the search for an explanation of the naming-motif. Emphasis was placed on the name as a reflection of character. Thus, the name “Odysseus” in Homer was felt to be related to the passive participle ὀδυσσάμενος (“odious”), in accordance with one of Odysseus’ characteristics, “to be wroth against, to be hated”.¹⁵³ In another passage his name is explained somewhat ambiguously: “wrath” is again mentioned here (*Od.* 1, 62), but Odysseus is also called ὀδυρόμενος (“lamenting”), this being a further characteristic (*Od.* 1, 55). There are various examples of double naming, when one person is called by different names. In *Il.* 1, 402–406 one of the Hecatoncheires is called Βριάρεως by the gods (denoting his power) and Αἰγαίῳν by men (after the Aegean Sea where he lives). Thus names are used to indicate the perspective of the speaker. The use of different names reflects the (in)capacity of words to fully convey the object or person described.¹⁵⁴

In Hesiod the nature of the denominated object is similarly denoted by the name.¹⁵⁵ For Aphrodite four etymologies are provided for four different names (*Hes. Theog.* 195–200). Both men and gods call her Aphrodite but on each occasion one particular aspect of the goddess’ nature is stressed.¹⁵⁶

151 See Hunter and Nünlist, this volume.

152 For a list of etymologies and wordplays practiced in the early Greek poetry and Aeschylus, see Lendle [1957] 117–121; for epic and lyric poetry and tragedy, see also Woodhead [1928] 9–43. On a discussion of ancient etymology in general, see Herbermann [1991], and also Sluiter in this volume.

153 *Od.* 19, 407; cf. *Soph. fr.* 965 TrGF.

154 Cf. below Pl. *Cra.* 391d–393b on Homer’s understanding of correctness of names; see more in Schmitter [1990] 16–19 with further bibliography.

155 Cf. the explanation of the name Cyclopes in *Hes. Theog.* 144–145, or Pegasus in *Hes. Theog.* 281–283.

156 See Schmitter [1990] 20, where the selection of different names for a given object according to the perspective has been termed ‘the phenomenon of ‘perspectivity’. See more in Schmitter [1991b] 61–64 and Schmitter [2000] 347–350.

3.2 *The Origins of Homeric Criticism*

Epic poetry was recited from memory and performed in a type of competition, and the rhapsodes were active in competitive performances, or agons. With the introduction of writing in Greece during the course of the 8th century BC the rhapsodes kept to texts.¹⁵⁷ The first exegesis originated from these reciters inasmuch as rhapsodes clarified the material they performed, first of all by explaining rare or unknown epic words or phrases (γλῶσσαί).¹⁵⁸ Homeric text was the basic text employed in education, its use becoming ever more important for the learning of reading and writing.¹⁵⁹ By the same token, the principal subject of interpretation was also Homer. A scholium on Pindar provides information regarding the Chian Homeride Cynaethus and his associates (the last third of the 6th century BC), who are said to have composed many of the lines and to have inserted them into the Homeric texts.¹⁶⁰ In the later tradition Solon and Peisistratus are credited with reading and criticising the Homeric text. Solon was praised for his abilities in illuminating Homer, whereas Peisistratus is reported to have edited a line out of the Hesiodic corpus and inserted it into the Homeric text.¹⁶¹

Early evidence of poetic criticism of Homer comes from the second half of the 6th century BC. The lyric poet Stesichorus of Himera wrote palinodies where he denied Homeric and Hesiodic accounts of the story of Helen and of the Trojan war; Helen, he claimed, did not go to Troy but remained in Egypt, whereas her phantom alone appeared at Troy.¹⁶² The rhapsode Xenophanes of Colophon both explained and criticised epic poetry.¹⁶³ Xenophanes believed that “all men always have learnt” from Homer, but he also faulted Homer and

157 See above § 1.1. On the *Homeridai* see also Burkert [1987] 49; West [2001a] 15–17; Graziosi [2002] 208–217.

Pl. *Phdr.* 243a; on Stesichorus' relationship to Homeric texts, see Willi [2008] 91–118, Grossardt [2012] 43–78, and Cassio [2012] 255–259; on Stesichorean performance, see Burkert [1987] 52–53; for the further tradition of rationalising Homer, cf. Pind. *Nem.* 7, 20ff.; Hdt. 2, 112–120; 4, 32; Thuc. 1, 1–22, cf. Richardson [1992a] 31–32.

163 D.-K. 21 A1, 11, 19, B 2, 10–12, 14–16.

Hesiod for their attribution of “everything that among men is to be reproached: stealing, adultery and cheating each other” to the gods.¹⁶⁴

The first allegorical readings of Homer belong to approximately this time. Allegorical interpretations were practiced by Pherecydes of Syros who regarded the Homeric gods as representations of cosmic forces. He wrote a prose theogony and cosmogony with allegorical passages, while also incorporating explanations in etymological terms (Pherec. D.-K. 7 A9).

In the last quarter of the 6th century BC, Theagenes of Regium, in South Italy, was credited with being the first to write a text on Homer’s life and poetry.¹⁶⁵ Theagenes discussed Homer’s historical background (Theag. D.-K. 8 A1), and dealt with textual criticism, problems of interpretation, and the allegorical exegesis of Homer’s poems. In fact, he offered an allegorical interpretation of the theomachy in *Iliad* 20 and 21, viewing it as both the conflict of physical elements in natural science and as a clash of moral values.¹⁶⁶ As a result of these studies, Theagenes was regarded by the later authors as the initiator of γραμματική τέχνη, by which they meant the knowledge of εὖ γράφειν (“to write beautifully”) and of ἔλληγνισμός meaning correctness in the usage of Greek.¹⁶⁷ Theagenes quoted a Homeric line (*Il.* 1, 381) with a rhapsodic variant, also found in the Cypriot and Cretan editions.¹⁶⁸

Little is known about Onomacritus, a compiler of oracles, who lived at the court of the tyrant Peisistratus. The Homeric scholia depict him as having made a number of interpolations into epic texts; he was also an industrious collector, as well as a forger of purportedly older oracles and poems. Herodotus reports that Onomacritus was hired by Peisistratus with the aim of compiling the oracles of Musaeus and then banished from Athens by Peisistratus’ son Hipparchus.¹⁶⁹

Γλώσσαί, part of the exegetical practice of the rhapsodes, were used in schooling perhaps in the form of lists with rare words. A number are found on papyri. These words were discussed by teachers and students during

readings of Homer (cf. Ar. fr. 233 PCG). The first Homeric-Attic dictionaries, which formed the basis of the so-called D-scholium (from their attribution to Didymus) and as a result of later Homeric commentaries, had their origins in these lists. The interpretations of Homeric words sometimes required a knowledge of the religious and historical background as well as of the Homeric language.¹⁷⁰

3.3 *Early Linguistics*

Surviving fragments of Heraclitus of Ephesus include early approaches not only to Homeric criticism but also to semantics. Heraclitus adopted a critical attitude towards Homeric poetry (D.-K. 22 A22), Homer and Archilochus (D.-K. 22 B42) and Hesiod (D.-K. 22 B57), as well as belittling the philosophical authority of Homer and Hesiod (D.-K. 22 A22, B40, 56, 106). Though Homer was considered wiser than all other Greeks, it was his ignorance that Heraclitus chose to emphasise.¹⁷¹ Despite characterising Hesiod as the teacher of the vast majority of people, Heraclitus had no qualms about criticising him for the crudeness of his cosmology (D.-K. 22 B57). It was the content of Homer and Hesiod's work, not the manner in which they write, that lay at the centre of Heraclitus' attention.

Heraclitus' considerations on language are noteworthy and constitute an important contribution to early Greek linguistics; he deals with the meaning of *ὀνόματα* as a means of learning the nature of things. His most famous principle is that of the *λόγος*, with the multiple meaning of this term (D.-K. 22 B1). The *λόγος* as 'rule' and 'reason' rules natural processes. This use of *λόγος* exploits the inherent ambiguity between word and object represented. A word is a sign, and what is signified is typically an object, and the only way to indicate what is signified is to use the word.¹⁷² Thus Heraclitus is presented through his pupil Cratylus in Plato's dialogue as a supporter of the thesis of rightness of words (*φύσει*—thesis). Heraclitus is said in Plato to believe in the capacity of words to reflect the *οὐσία*, the unchangeable essence of things.¹⁷³ By contrast, in the extant fragments Heraclitus shows no belief in human ability to comprehend reality through words. A name might on occasion point to the oneness of the contraries; overall, however, names express only one aspect of reality and

170 See Latacz [2000] 4; Ford [2002] 70.

171 D.-K. 22 B56, cf. Pythagoras' punishment of Homer and Hesiod on the ground of their mendacity concerning the gods, cf. Hieron. fr. 42 Wehrli.

172 See Modrak [2009] 640–641; De Jonge-Ophuijsen [2010] 486–487.

173 Pl. *Cra.* 401c–d.

thus cannot be considered a secure source for the perception of true being.¹⁷⁴ Another enigmatic fragment reflects the one-sidedness of a perspective under which a name refers to an object: “one thing, the only truly wise, does not want and wants to be called by the name of Zeus” (ἐν τὸ σοφὸν μόνον λέγεσθαι οὐκ ἐθέλει καὶ ἐθέλει Ζηγὸς ὄνομα, D.-K. 22 B32).¹⁷⁵ Heraclitus was the first who understood that a word or text could have several valid meanings; arguably, this was, for Heraclitus, not a result of “conventional association”, but rather of “the nature of words as motivated signs”.¹⁷⁶

Heraclitus’s contemporary Parmenides of Elea wrote in verse, and separated the world of reliable truth from that of opinion or judgment.¹⁷⁷ In Parmenides’ poem the goddess marks the shift from truth to opinion by distinguishing between her own truthful speech (πιστὸν λόγον) and the fraudulent order of her words (κόσμον ἐμῶν ἐπέων ἀπατηλόν, D.-K. 28 B8, 50–53). In another fragment, the names of things are based on convention and on the arbitrariness of people, and the multiplicity of things is a deceit of human receptive organs. People made up ὀνόματα and misleadingly gave signs (σήματα) to them, each of which received a different name (τοῖς δ’ ὄνομ’ ἄνθρωποι κατέθεντ’ ἐπίσημον ἐκάστωι D.-K. 28 B19, 3).¹⁷⁸

Both Heraclitus and Parmenides affirmed that ὀνόματα mirror reality only in part. Parmenides further maintained the unity of language and thought, positing a division within this unity based on the distinction between ‘right’ and ‘wrong’ ways of thinking. For Heraclitus, however, the separation of thought from language was a condition for attaining knowledge.¹⁷⁹

Empedocles of Agrigentum also reflected on the meanings of names (D.-K. 31 B8; 15; 17, 21–24; 105), and his arguments are comparable to Parmenides’ concept of the arbitrariness of names (D.-K. 31 B9). Empedocles adopted a cognitive approach to language which he saw as fundamental to order (D.-K. 31 B15, 1–4). In his perspective, the theory and practice of language were closely related to the perception of knowledge.¹⁸⁰

174 Schmitter [1990] 23, cf. D.-K. 22 B23.

180 D.-K. 31 B2; 4; 133; for Empedocles’ linguistic approaches, see Willi [2008] 254–260.

Concepts of naming were broadly distributed among intellectuals in the middle of the 5th century BC. A treatise of this period, falsely attributed to the physician Hippocrates and revealing the influence of Protagoras' ideas, gives prominence to the question of the status of names.¹⁸¹ The author of the treatise argues that essences are prior with respect to names. The priority of the existential level can be found in another pseudo-Hippocratic treatise *On the nature of man*, written around 400 BC perhaps by Polybus. Four different names for four body humours (blood, yellow bile, black bile, and phlegm) were posited, corresponding to four distinct entities in reality.¹⁸²

Not only the effects and causes of natural phenomena but mathematical and abstract scientific problems were also investigated. In fact, investigation could even be thought of as a fashion. Cadmus and Palamedes, associated with discovery and linguistic development, were the subject of Euripides's plays.¹⁸³ Among others, Herodotus made observations on language, for the most part noting similarities between languages spoken in different parts of his world.¹⁸⁴

3.4 *Theatre as a Space for Philological Exercise*

3.4.1 Epicharmus

As a Sicilian intellectual Empedocles of Agrigento was anything but isolated. With the western Greek world flourishing during the first quarter of the 5th century BC, the court of the tyrant of Syracuse Hieron hosted a variety of poets, including Simonides, Pindar, Bacchylides, Aeschylus and Epicharmus. Epicharmus' comic fragments provide important evidence for the rhetorical and literary background in Sicily of this period. His comedies embody meta-epical and meta-dramatic reflections (frs. 97, 98, 161 PCG), literary criticism in his engagement with Xenophanes (fr. 143 PCG) or Aeschylus (fr. 221 PCG), and linguistic observations in his criticism of rhetoric (frs. 136, 144, 145 PCG). The first formal treatises of rhetoric, by the legendary Corax and Tisias, also belong to this period of the Sicilian acme.¹⁸⁵ Epicharmus' comedy includes attacks on intellectuals, thus recalling Aristophanes' *Clouds*; however, the extent to which

the cultural climate in Sicily in the first third of the 5th century BC mirrored Athens of the second half of the 5th century BC remains an open question.¹⁸⁶

3.4.2 Athenian Drama

The theatre was a critical space for the interaction of discourses.¹⁸⁷ Euripides' characters and choruses speculate on the function of poetry and other literary and rhetoric questions.¹⁸⁸ Linguistic theories were employed, parodied and interpreted in Old comedy. The methods of literary criticism were staged through the representation of competitive dialogue between comic writers and also between genres.¹⁸⁹ In effect, comedy is the only surviving source from the 5th century where the tensions between genres and literary polemics are clearly drawn. Criticism was introduced into the plot, as in the scenes with Euripides in Aristophanes' *Acharnians* (Ar. *Ach.* 393–489), or in the plot of the *Women at the Thesmophoria* or of the *Frogs* as a whole; Protagoras' and Prodicus' vocabulary and theories were similarly interwoven into the plot of the *Clouds*. There are many other examples. The integration of such discourses into the plot reproduced ideas about literature and linguistics current at the time in novel, at times grotesque or absurd, ways.

Comedy thus served as a new form of the critical staging of polemics between rivals and genres. As fragments reveal, this interest went far beyond the Aristophanic corpus.¹⁹⁰ Iambic and lyric poets were also parodied in comedy.¹⁹¹ One of the primary targets of comic writers of the 5th century was tragedy (cf. the Aristophanic coinage *τρογυφδία* for 'comedy' in Ar. *Ach.* 499–500 with the statement "what is right, comedy also knows"). Contemporary and earlier tragic writers were parodied at great length and thus interpreted through Old comedy.¹⁹² Such criticism provided an exegesis and new understandings of the tragic texts, while simultaneously reflecting and contributing to the

186 For a detailed analysis of Epicharmus' criticism in the literary context, see in Willi [2008] 162–192 and Rodríguez-Noriega Guillén [2012].

187 On 'transgressions' of genres in Athenian theatre, analysed by Plato and Aristotle, see Nagy [1989] 66–67.

188 More on Euripides as critic, see Wright [2010].

189 See a recent thorough study on the topic in Biles [2011] and Bakola-Prauscello-Telò [2013].

190 See more in Conti Bizzarro [1999], Silk [2000], Wright [2012]. On the self-representation of the comic poet and the allegory of comedy in Cratinus' *Pytine*, see Rosen [2000].

191 E.g. Stesichorus in Ar. *Pax* 796–816, Archilochus and Anacreon in Ar. *Av.* 967–988, 1373–1374, Alcmán in Ar. *Lys.* 1248–1320, Zimmermann [1993b], Zimmermann [2000]; on the parody of dithyrambic poetry in Aristophanes, see Zimmermann [1997].

establishment of a set style and canon in literature. Thus, although Euripides was quoted and parodied regularly, some ‘inferior’ poets like Morsimos or Melanthius were only represented through pejorative descriptions.¹⁹³

One of the programmatic works of Greek criticism is Aristophanes’ comedy *Frogs*, produced on stage in 405 BC. Dionysus, the god of theatre, presides over a contest between Aeschylus and Euripides with the purpose of determining which of the two was the superior dramatist.¹⁹⁴ The two tragic poets stand opposite each other and submit specimens of their art; they sing, they harangue, and their failings are characterised, visualised and (even) analysed. Finally, a weighing scale is brought to the stage, whereupon each of the two poets lays down a line on the balance. In the meantime, Dionysus has come to favour Aeschylus; though he had sworn that he would take Euripides to the world of the living, he replies with an allusion to a Euripidean line (*Ar. Ran.* 1477). It is Aeschylus who returns, resigning his tragic throne to Sophocles for the duration of his absence.¹⁹⁵

3.5 *The Rise of Homeric Criticism: Exegesis and Grammar*

By the second half of the 5th century BC the Homeric text, and a range of grammatical questions usually discussed on the basis of the Homeric text, had become the subject of thorough research. Three exegetical techniques are evident in these studies: glosses (Homeric words, for which Attic equivalents had to be found), paraphrases,¹⁹⁶ and *ὑπόνοια* or explanations of the ‘underlying sense’.¹⁹⁷ Herodotus’ statements on the Cyprian poems, which in his opinion do not belong to Homer, and his discussion of attribution of lines to Homer, serve as evidence for the diffusion of Homeric criticism at this time (*Hdt.* 2, 117; 4, 32).

Protagoras is known as the first to have formulated grammatical distinctions attributable to semantic issues. He reflected on the *ὀρθοπέπεια* (“correct use of

193 Kaimio-Nykopp [1997]; Wright [2012] 162.

194 On the intertextual relationship of this contest in Aristophanes’ *Frogs* with the *Certamen Homeri and Hesiodi*, see Rosen [2004].

195 On the role of the *Frogs* in the history of literary criticism, see Woodbury [1986] and Halliwell [2011] 93–154 with further bibliography. On other comedies with literary themes and on the overall climate fostering literary discussions in Athens of the last quarter of the 5th century BC, see above § 1.3.

196 E.g. Socrates’ paraphrase of Simonides’ poem in *Pl. Prt.* 338e–348a; cf. also *Pl. Resp.* 392c–394b.

197 See Sluiter [1997b] 166–168; on the word *ὑπόνοια* in earlier Greek to mean ‘allegory’, see Richardson [2006] 64–65.

words”) which he considered to be important in the composition of speeches.¹⁹⁸ He distinguished the genders of the noun (τὰ γένη τῶν ὀνομάτων) according to the biological difference between male (ἄρρενα), female (θήλεα) and inanimate (σκεύη) things.¹⁹⁹

The key-word in the linguistic theories put forward by Protagoras (as in the views held by his follower Prodicus) was ὀρθότης (“correctness”), as Plato relates.²⁰⁰ Aristophanes reacted to these ideas in the *Clouds*, with the portrayal of Socrates teaching Strepsiades the gender of nouns, the word ὀρθῶς appearing on a number of occasions.²⁰¹ Protagoras, who criticised Homer’s linguistically incorrect use of biological distinctions,²⁰² He differentiated between four types of discourse, which he called “foundations” (πυθμῆνας λόγων ἐκάλει Πρωταγόρας ὁ φιλόσοφος τὰς τῶν λόγων διαιρέσεις): prayer (εὐχολή), question (ἐρώτησις), answer (ἀπόκρισις), and order (ἐντολή).²⁰³ He censured Homer’s addressing the Muse in the imperative (ἐπίταξις),²⁰⁴ and he also interpreted Homer, though the papyrus evidence for this is not entirely clear: Protagoras believed that the battle of Achilles with the river Scamander was intended to form a transition from Achilles’ previous deeds to the theomachy (D.-K. 80 A30).

The Homeric text was interpreted allegorically by various intellectuals of this time (many of these were Ionians, hence the naming of Plato’s Ion and his originating from Ephesus).²⁰⁵ Anaximander of Miletus (FGrHist 9), Metrodorus of Lampsacus and Stesimbrotus of Thasus claimed to interpret the ὑπόνοια in Homer.²⁰⁶ Metrodorus, Anaxagoras’ pupil, treated the *Iliad* as an allegorical representation of his own scientific theory and cosmology. He was the first who “studied Homer’s physical doctrine”,²⁰⁷ and interpreted the gods as parts of the human body. He then extended this ‘natural’ explanation from the gods to the heroes, with Agamemnon serving as an allegory for the upper air, Achilles for the sun and Helen for the earth (D.-K. 61 A3, A4). He had a clear

207 D. L. 2, 11 = D.-K. 59 A1.

interest in grammar as can be seen in his interpretation of the problematic lines *Il.* 10, 252–253.²⁰⁸

Stesimbrotus was known for emending the Homeric text.²⁰⁹ There is no direct evidence that Stesimbrotus propounded allegorical interpretations of the Homeric text, but allegorical discourse was current during this time. Stesimbrotus had a variety of other interests, mainly in the field of mythology and the mysteries. He wrote a treatise *On rituals* (107 frs. 12–20 FGrHist), with a mixture of allegories, etymological explanation and philology similar to that found in the Derveni papyrus.²¹⁰ Stesimbrotus is also mentioned in Homeric scholia in connection with problematic passages in the Homeric text.²¹¹ Stesimbrotus' explanations reveal an interest in cultural differences between the Greek world and other lands, and also in epic vocabulary, poetic techniques, all combined with detailed textual criticism. Additionally, Stesimbrotus is known as the teacher of the earliest editor of the Homeric text, Antimachus of Colophon (107 test. 5 FGrHist).

Hippias of Thasus was likewise known for emending the Homeric text, as in *Il.* 2, 15 and *Il.* 23, 328.²¹² Anaximander of Miletus, whose interests were akin to those of Stesimbrotus, is known for having written an exegesis of Pythagorean symbols, where he provided metaphorical interpretations of rituals.²¹³ Pythagorean discourses current at the time may have provided the framework for his interpretation of epic texts.²¹⁴ A certain Glaucon, mentioned in Plato (*Pl. Ion* 531d) and Aristotle (*Arist. Poet.* 1461a34–1461b3) may also have been engaged in Homeric interpretation.²¹⁵

Prodicus of Ceos probably belonged to a younger generation than Protagoras. He was known in connection with his attention to τῶν ὀνομάτων ὀρθότης (“linguistic correctness”), a concern that was linked to Protagoras' linguistic theories.²¹⁶ Prodicus presented three principles: 1) no two (or more)

208 D.-K. 61 A5 = Porph. *Quaest. Hom.* ad *Il.* 10, 252; cf. *Arist. Poet.* 1461a25, see Richardson [2006] 66–68; Janko [2009] 52–53.

words should have the same meaning (near synonyms); 2) no one word should have more than one meaning or connotation (homonyms); 3) the etymology of a word should match its meaning, or at least should not contradict it.²¹⁷ Plato mentions that Prodicus dealt mainly with lexicography and synonymy,²¹⁸ distinguishing between synonyms by explaining differences in their semantic load.²¹⁹ Prodicus took part in the aforementioned discussion concerning the allegorical treatment of poetry. Like Protagoras, he used myths for the popular promotion of his ideas, and identified gods with physical objects such as bread (Demeter), wine (Dionysus), water or fire.²²⁰

Prodicus' contemporary Democritus showed an intense interest in linguistic and literary matters. Like his teacher, the atomist Leucippus, Democritus thought that language products are not a result of necessity, but of casual invention and connection. Democritus' linguistic observations should be understood in the context of his universal philosophical system.²²¹ In Proclus' commentary on Plato's *Cratylus*, Democritus is said to believe that the relation between names and things is arbitrary. His argument was fourfold: ἐκ τῆς ὁμωνυμίας, "from homonym", ἐκ τῆς πολυωνυμίας "from the multiplicity of names", ἐκ τῆς τῶν ὀνομάτων μεταθέσεως "from the change in names", and ἐκ δὲ τῆς τῶν ὁμοίων ἐλλείψεως "from the deficiency of similar items".²²² Democritus apparently compiled a Homeric dictionary explaining rare and ancient words Περὶ Ὀμήρου ἢ Ὀρθοεπειῆς καὶ γλωσσέων, a D-scholia form of dictionary. This seems to place him in the mainstream of linguistic and Homeric discussion of his time.²²³

The sophist Hippias of Elis combined scholarly and scientific knowledge. He investigated the antiquities (ἀρχαιολογία) from mythological, historical and geographical points of view. Cataloging and listing were his preferred forms.²²⁴ Hippias listed the poets Orpheus, Musaeus, Hesiod and Homer, a canon

which Plato may have subsequently used.²²⁵ Arguably, Hippias introduced the classical opposition of nature and convention (φύσει—νόμῳ, cf. Pl. *Prt.* 337c). He also discussed Homeric questions (86 B9, B18 D.-K.) and examined language together with music, distinguishing the importance of letters, syllables, rhythms and scales.²²⁶

Glaucus of Rhegium may have written his treatise on the ancient poets and musicians at this time, though information is scarce.²²⁷ The traditional Greek unity of word and music was maintained, but the emphasis appears to have shifted from music to language.²²⁸

Combining the roles of scholar and poet, Critias foreshadowed the Alexandrian model. He wrote elegies, but was also known as a collector of learned material, incorporating it into his verse (D.-K. 88 B9, 44). Another pupil of Stesimbrotus, Antimachus of Colophon, also combined these roles, and, as a result, he is regarded as a forerunner of Callimachus. Antimachus continued the tradition of the cyclic epic in Greece in the early 4th century BC. He made an edition of the Homeric text,²²⁹ emending and writing comments on the Homeric poems (he composed a book on Homeric problems 107 frs. 21–25 FGrHist). He also ornamented his own poetry with glosses and aetiologies.²³⁰

A number of philosophers authored material related to scholarly discussions of this time. Thus Socrates' disciple Antisthenes (see above § 2.1.6) was known for his Homeric criticism;²³¹ he wrote various treatises that addressed Homeric subjects and was concerned with Homeric interpretation, mainly with the *Odyssey*, but also to a certain extent with the *Iliad*. He interpreted the lines on Nestor's cup metaphorically. His famous interpretation of the word πολύτροπος (*Od.* 10, 330) reveals linguistic analysis and an understanding of context.²³² Antisthenes dwelt on literature, ethics and politics, but his primary interest was language. He adopted Socrates' view that the process of

definition was fundamental for language and, more generally, for knowledge. He further argued that a thing could not be represented in language by any utterance other than its name.²³³ Following Socrates, Antisthenes examined questions of ethics, connecting investigations to language (cf. ἀρχὴ παιδείσεως ἢ τῶν ὀνομάτων ἐπίσκεψις, “the beginning of education is the study of names” fr. 160 Giannantoni).

3.6 *Gorgias and the Beginnings of Stylistics*

One of the most significant figures for intellectual life in the Greek world of the second half of the 5th century BC was the Sicilian rhetorician and stylist Gorgias from Leontini. His primary aim was rhetorical education,²³⁴ and he created a new style in prose as a part of his rhetorical programme. This style, intended for oral communication, borrowed the persuasive elements of language such as metaphors, antithesis, isocola, parisa and homoeoteleuta from poetry,²³⁵ with immediate emotional effect.²³⁶ Gorgias studied these persuasive elements systematically. Considerations of poetry that go back to the 6th century BC, were repackaged and used by Gorgias for practical and pragmatic reasons.

Continuing in his teacher's footsteps, Gorgias' student Isocrates wrote a panegyric to λόγος.²³⁷ His λόγος aimed at rational persuasion.²³⁸ Another student of Gorgias, Alcidas of Elea also taught rhetoric and wrote scholarly texts. A number of points made by Alcidas became associated with Gorgias, such as Alcidas' focus on the ability of rhetoric ability to persuade (*sch.* Hermog. w. 7, 8); the need for the *narratio* of speech to be clear, magnificent, concise and plausible;²³⁹ the treatment of the following speech acts: φάσις (“affirmation”), ἀπόφασις (“negation”), ἐρώτησις (“question”), προσαγόρευσις (“address”)

233 Aristotle was especially interested in Antisthenes' views on language, such as Antisth. frs. 150 (=Arist. *Metaph.* 1043b), 152 (=Arist. *Metaph.* 1024b), 153 (=Arist. *Top.* 104b) Giannantoni. For Antisthenes on language (frs. 149–159 Giannantoni), see Brancacci [1990] especially 43–84, and Prince [2009] 80–82.

234 Pl. *Menex.* 95c; *Grg.* 459b–c.

235 On possible Empedoclean influences on Gorgias' use of figures, see Diels [1976], Classen [1976] 229.

236 The term ψυχαγωγία goes back to Gorgias, cf. *Gorg. Hel.* 9–10, 13, 15, Pl. *Phdr.* 261a7–8; 271c–272b; *Isoc. Nic.* 49, see Classen [1976] 226–230. See also Schmitter [2000] 359–360; de Jonge-Ophuijsen [2010] 489.

237 *Isoc. Nicocl.* 5–9, see Pfeiffer [1968] 49–50.

238 For Isocrates' educational aims, see above § 1.5. On Isocrates' praise of Homer, see Apfel [1938] 245–246.

as influenced by Protagoras.²⁴⁰ Alcidamas argued against Isocrates' practice of drafting and revising speeches, and supported his own students' abilities in improvisation.²⁴¹ Alcidamas compiled a collection, called the *Μουσεῖον*, of traditional stories on poets, such as Archilochus and Sappho, and philosophers, including Pythagoras and Anaxagoras. He also composed a treatise that starts with an argument between Homer as improviser and Hesiod as a poet who worked in an 'Isocratean' way.²⁴²

3.7 *Plato and Scholarship*

3.7.1 Plato's Approach to Linguistics

By the end of the 5th century BC, intellectuals were aware of the poetic, rhetorical and philosophical potential of language. 'Meaning' was located in the relationship between words and things, and also in the formulation employed by the speaker in the act of expression.²⁴³ Plato's thoughts on language were first developed in the dialogue *Cratylus*, one of the most important texts of ancient linguistics. The central issue of the dialogue is the relationship between names and reality, in addition to the correctness of names as a precondition for knowledge. Socrates discusses the issue with two interlocutors, Hermogenes and Cratylus (the second being, in all probability, a follower of Heraclitus). Hermogenes represents the thesis of the conventionalism of names (ξυνηγήκη-, or νόμω-thesis, Pl. *Cra.* 384c–d, 433b–439b) whilst Cratylus adopts naturalism (the φύσει-thesis) (Pl. *Cra.* 383a–b, 386e–390e, 427e–433b).²⁴⁴

The naturalist view held that names are correct either because they capture the nature of their referents or because they are meaningless sounds that fail to refer to nature. Cratylus argues for names as camouflaged descriptions that pick out their referents by correctly describing them. The conventionalist view makes the correctness of names purely a function of convention. Words may be crafted correctly or incorrectly. Both models were based on the method of imitation: either language imitates reality or language imitates a thought. Socrates developed these two models, stressing their common characteristic (Pl. *Cra.* 386a–387d, 434e): namely, they no longer contain a global understanding of the word, but distinguish between the material and mental dimension.

240 Sud. 2958 s.v. Πρωταγόρας; D. L. 9, 54.

241 ἀντοσχεδιάζω 'to extemporise' Alcidi. *Soph.* 3–4; Isoc. *In Soph.* 9.

242 Arist. *Rh.* 1398b10; cf. *Rh.* 1406a–b; see Pfeiffer [1968] 50–51; on the connection of Alcidamas' *Μουσεῖον* with the *Certamen Homeri et Hesiodi*, see Richardson [1981].

243 See Sluiter [1997b] 177.

244 On the opposition of nature and convention in the philosophical debates, see Heinemann [1945].

A correct name was held to indicate the nature of the thing named (Pl. *Cra.* 425b), acting as a verbal representation of its referent in syllables and letters (δήλωμα συλλαβαίς και γράμμασι πράγματος ὄνομα εἶναι, Pl. *Cra.* 433b).²⁴⁵

Plato's understanding of language should be approached within the conceptual framework of his philosophy. Plato expanded the relationship between model and copy to cover language, language being a copy or an imitation of reality.²⁴⁶ The relationship between names, knowledge and reality is discussed in Plato's *Seventh Letter* (a significant text for the development of linguistics, whether it is spurious or, more probably, original). Plato distinguished between name (ὄνομα), definition (λόγος) and image (εἶδωλον), all of which contribute to knowledge (ἐπιστήμη). Name is what is uttered (ὁ νῦν ἐφθέγγεθα); definition is constituted by nouns and verbs (ἐξ ὀνομάτων και ῥημάτων συγκείμενος), image is physical: it is painted and then effaced and honed and then deleted (τὸ ζωγραφούμενον τε και ἐξαλειφόμενον και τορνευόμενον και ἀπολλύμενον). The fourth level is knowledge, reason and true opinion regarding these objects (ἐπιστήμη και νοῦς ἀληθῆς τε δόξα περι ταῦτ' ἐστίν). Knowledge is neither vocal nor physical but is something that exists in souls (οὐκ ἐν φωναίς οὐδ' ἐν σωματικῶν σχήμασιν ἀλλ' ἐν ψυχαίς ἐνόν; see Pl. *Ep.* 7, 342a–344d). A name is thus a basic notion of philosophical analysis for Plato.

These reflections on language are further developed in Plato's dialogues *Theaetetus* and the *Sophist*. In both dialogues, thinking (διανοεῖσθαι) is understood as a conversation of the soul with itself. It involves questioning, answering, affirming and denying.²⁴⁷ Thus a structural link between language and thought is affirmed.

In the *Theaetetus* the definition of knowledge (ἐπιστήμη) as true judgment combined with 'rational explanation' (λόγος) is discussed (Pl. *Th.* 201c–202b). This 'rational explanation' is understood as verbalised thought.²⁴⁸

In Plato's dialogues a distinction is formulated between "noun" (ὄνομα) and "phrase, verb" (ῥήμα), a problem which seems to have been discussed in

245 On the approach to language in the dialogue *Cratylus* with further bibliography, see Rijlaarsdam [1978], Baxter [1992], Williams [1994], Sedley [2003b], Del Bello [2005] 66–82, de Jonge-Ophuijsen [2010] 491–492, and Diehl [2012]. On the multiplicity of names, cf. Socrates' student Euclides of Megara who claimed that the good (τὸ ἀγαθόν) is one but can be given various names (πολλοῖς ὀνόμασι καλούμενον) such as intelligence, god, or reason (D. L. 2, 106).

246 See Sluiter [1997b] 177–188.

247 Pl. *Th.* 189e–190a, *Soph.* 263e–264a.

248 For contemporary research on the relationship of language and thought in the *Theaetetus*, see Annas [1982], Denyer [1991] 83–127, and Hardy [2001] 267–288.

Athens in conjunction with the development of grammatical terminology.²⁴⁹ The same terms *ὄνομα* and *ῥήμα* are used in the *Sophist* (Pl. *Soph.* 261c–262e). The discrepancy between an indication with the function of signifying action (*ῥήμα*) and an indication signifying those who act (*ὄνομα*) constitutes an essential feature of grammatical codes.²⁵⁰

Another important point first found in the *Theaetetus* is further developed in the *Sophist*: the falsehood involved in speaking and thinking. Words must be combined in a meaningful way, only names and verbs united together compose discourse (*λόγος*), and the crucial function of language consists in *λέγειν* “speaking”, or creating meaningful propositions capable of truth-value, and not in artless *ὀνομάζειν* “naming” (Pl. *Soph.* 262a–d). The issue of falsehood is discussed not at the level of individual words, but at the syntagmatic level. The internal link between speaking and thinking is formulated in the *Sophist*: thought (*διάνοια*) is equivalent to *λόγος*, *λόγος* being defined as “the stream which flows through the mouth in vocal utterance” (Pl. *Soph.* 263e).²⁵¹

3.7.2 Plato’s Approach to Literature

Plato’s writing also contributed to the establishment of certain normative issues in the analysis of the text and literary criticism. Plato returned to the question of divine inspiration, referred to in the poetic tradition;²⁵² that is to say, whether poets rely on *τέχνη*, “skill”, or on *θεία δύναμις*, “inspiration”.²⁵³ Plato developed an image of the poet as divinely inspired, an image that was transmitted through Roman writers such as Cicero and Horace and became a *topos*, influencing later literary theories.²⁵⁴

Plato’s approach to literature remains within the framework of his wider philosophy. In the *Apology* and in the *Ion* the relationship of language and thought is discussed in the context of poetic craft. In the *Apology* Socrates expects the poets to be able to interpret their own work, asking them “what they were saying” in the sense of ‘what they meant’ (Pl. *Ap.* 22b). Thus the difference between words and the additional level corresponding to the exegesis of these words is stressed as an element in interpretation. In the *Ion* some

249 Pl. *Th.* 206c–d; cf. also *Cra.* 421d–e, 425a, 431b–c and Aeschin. *In Ctes.* 72.

251 On the philosophy of language in the *Sophist*, see Mojsisch [1986] and Borsche [1991] 152–158; on the function and meaning of language mainly in Plato’s dialogues *Cratylus*, *Theaetetus*, and in the *Sophist*, see Rehn [1982] and Bostock [1994].

252 See Nagy [1989] 24–29 and Maehler [1963].

253 See Plato’s principal passages on the topic in Murray [1996] 235–238.

254 For further discussion of inspired poets in Plato, see Büttner [2011].

crucial methodological points for Homeric criticism are discussed. Socrates defines the skill of the rhapsode in the same terms as the skill of a scholar or critic: “to understand (ἐκμανθάνειν) the thought (διάνοια) of the poet as well as the words”, for “the rhapsode must interpret the thought of the poet to his audience” (Pl. *Ion* 530b–c). In the *Ion* the role and qualification of the interpreter (Pl. *Ion* 539d–e) as well as the character and potential of literary exegesis are further discussed on a theoretical level.²⁵⁵ In the *Gorgias* poetic skill is compared with rhetoric. Like the orator, the poet does not want to improve his audience, but to please.²⁵⁶ The distinction between the word and its interpretation is discussed in the *Phaedrus*, which includes a critique of writing. Plato asserted that written words (λόγοι) cannot engage in dialectic directly; they always denote “one and the same” (ἔν τι σημαίνει μόνον ταῦτόν ἀεί, Pl. *Phdr.* 275d).²⁵⁷

The relationship to poetry in Plato’s dialogues is ambivalent, and was much discussed among ancient scholars.²⁵⁸ For Plato, poetry’s role is ethical and not aesthetic.²⁵⁹ Plato nonetheless praised Homer in his *Republic* (Pl. *Resp.* 607c–d) and used the Homeric text for his linguistic theories (Pl. *Cra.* 391c–393b). As had been noted by ancient stylists, Plato’s writing was particularly poetic and he transferred the flows of Homeric verse into his prose.²⁶⁰

Plato also provides a mass of information on poetic interpretative practice at the end of the 5th cent BC. In the *Ion*, poetry is understood as theatrical performance, and thus it can be evaluated in terms of its effects, without regard to the means employed to achieve them. In the *Protagoras* where the sophistic exegesis of a Simonides’ poem is criticised, a slightly differentiated approach to poetry is evident.²⁶¹ The reader is encouraged to understand the poem in order to evaluate the correctness of its interpretation; the traditional view of the poet as a teacher is however criticised.²⁶² In the *Hippias Minor* Socrates discusses the interpretation of Homer with the sophist (Pl. *Hp. Mi.* 365c–d). In all three dialogues Socrates is presented as unsatisfied by the level of exegesis provided by the sophists: the literary critic should not think of poetry as the

258 Halliwell [2011] 155–159.

259 For Plato’s hostility to poetry and the written word, see Pl. *Phdr.* 275d–277a.

260 Ps.-Long. *Subl.* 13, 3–4; cf. Richardson [1992a] 34–35; on Homeric criticism in Plato, see Apfel [1938] 247–250.

261 Pl. *Prt.* 338–348a; Simon. fr. 542 Page.

262 On this methodology, see Tsitsiridis [2001].

opinion of the author, since the poet only imitates words and does not necessarily mean what he says. Thus a crucial distinction is drawn between performance per se and the proper understanding of what is performed.²⁶³

If in Plato's earlier dialogues poetry is understood as theatrical performance, in the middle and later dialogues a further important function of poetry is considered: poetry as imitation. The theory of mimesis is explored in the 3rd and in the 10th books of the *Republic*.²⁶⁴ The image of the mirror was used for the description of the relationship between a work of art and nature (Pl. *Resp.* 596d–e). This characterisation of art as imitation, which is at a third degree from reality, led Plato to judge poetry as less than serious (Pl. *Resp.* 602b). If myths are to have worth, they should contain some moral truth, a truth only philosophers can perceive. For Plato, poetry harms its audience through the empowerment of non-rational parts of the soul, and its status as mimesis prevents it from providing knowledge.²⁶⁵

Plato returned to the question of allegorical interpretation, which had been discussed since the time of Pherecydes of Syros²⁶⁶ and was to be developed further by Chrysippus and Crates among many others.²⁶⁷ Plato considered allegorical interpretations of the Homeric theomachy.²⁶⁸ However, rationalistic allegorical interpretation ran contrary to Plato's principle idea that posited the divine inspiration of poets.²⁶⁹

In the *Laws*, emphasis is placed on the importance of poetry in the educational and cultural life of citizens. Only one who is morally worthy should be permitted to compose poetry.²⁷⁰ A number of critical theories are put forward in the *Laws*. The origins of poetry and music are traced back to the effect of a specifically human sense of rhythm; harmony is traced to the cries and motion of infants, and the permanent desire to please the crowd spoils artistic production and leads to 'theatrocracy' instead of an aristocracy of taste (Pl. *Leg.*

263 See Ferrari [1989] 99–104.

264 Pl. *Resp.* 392c–398b and 595a–608b.

265 On the theory of mimesis in Plato, see Ferrari [1989] 108–141, Belfiore [2006], Halliwell [2002] 37–150.

269 On allegory as an exegetic possibility in Plato, see Tulli [1987]. For more on Plato and allegories in Homeric criticism, see Richardson [1992a] 35 with further bibliography.

270 Pl. *Leg.* 719c, 829c–e.

700a–701d). Plato stressed the need to keep the different genres fixed, objecting to excessive appeals to the emotions (Pl. *Leg.* 800d).²⁷¹

3.8 *Scholarly Thinking in the 4th Century BC*

The 4th century BC (see above the discussion in § 1.7) was characterised by the increasing role of the written text, and subsequently by more frequent textual criticism. This is reflected for example in the development of a terminology for discussing texts: ζήτημα (“question”), πρόβλημα (“problem”), ἀπόρημα (“puzzle”) or λύσις (“solution”). As Malcolm Heath put it: “Posing problems and suggesting solutions came to be an activity of cultured leisure”.²⁷²

Heraclides of Pontus, a prolific Academic associated with Speusippus, lost the scholarchate to Xenocrates after Speusippus’ death (339/338 BC) and established his own school in Heraclea on the Pontus. As ascertained by later sources, he also kept up relations with the Aristotelian school, a feature which explains his specific literary interests.²⁷³ His oeuvre included books dealing with logic, cosmology, physics, ethics, politics and religion, and also encompassed investigations into music (frs. 109–115B Schütrumpf), poetry and the poets (fr. 1(88) Schütrumpf), various treatises on Homer²⁷⁴ and on the three tragedians (fr. 1(88) Schütrumpf), three books on material in Euripides and Sophocles (fr. 1(87) Schütrumpf)²⁷⁵ and others. In his Collection (Συναγωγή) Heraclides may have discussed the mythical and historical genealogy of musicians, the invention of music and poetry and musical modes.²⁷⁶ He also had some interest in language, as a title of a book called Περὶ ὀνομάτων suggests (fr. 1(87) Schütrumpf).²⁷⁷ In his *Homeric solutions* (Λύσεις Ὀμηρικαί in two books) Heraclides criticised Homer’s treatment of certain episodes and pointed out some ‘inconsistences’ in the Homeric text, proposing ‘solutions’ of his own.²⁷⁸

271 For more detail on literary criticism in Plato, see Grube [1965] 46–65; Else [1986] 3–64; Ferrari [1989]; Murray [1996]; Ford [2002] 209–226; Halliwell [2011] 155–207 with further current bibliography.

272 See Heath [2009] 252–253 with further bibliography.

273 Podlecki [1969] 115–117; Wehrli [1983] 523–529; Montanari [2012d] 353.

274 Frs. 96–106 Schütrumpf. See Heath [2009] 264–271.

275 This work perhaps treated the plots of tragedies. Cf. Dicaearchus below § 3.10.

276 See Podlecki [1969] 115; Barker [2009]. On the connection of the Συναγωγή to the writings of Glaucus of Rhegium, see Wehrli [1969^{2e}] 112. On the links between music and the metric quantity of poetry, see Pl. *Resp.* 617d.

277 Wehrli [1969^{2e}] 117–119.

278 Frs. 99–104 Schütrumpf, see Heath [2009] 255–263. On the triviality of Heraclides’ judgments, see Gottschalk [1980] 136.

Heraclides' *Homeric solutions* should be interpreted in the context of the 4th century debates on Homeric criticism, in which Aristotle and other contributors were involved; they therefore constitute a key for understanding Aristotle's studies of Homer.²⁷⁹

Xenocrates, an academic philosopher of the 4th century BC, appears to have been an exegete and commentator on Plato's writings. He attempted to systematise the philosophy laid out in Plato by dividing it into the three disciplines of physics, ethics and logic.²⁸⁰ He wrote 31 books addressing the question of language entitled *Περὶ μαθημάτων τῶν περὶ τὴν λέξιν*, analyzing the relationship of sounds, letters and syllables.²⁸¹

Isocrates' student Cephisodorus wrote at least one didactic work on rhetoric.²⁸² He also composed an apology for Isocrates against attacks by Aristotle in four books. Here he argued that Isocrates' work as a logographer was of no great importance and that immoral aphorisms could be found in the works of other authors as well. He attacked Aristotle (*Κατὰ Ἀριστοτέλους*, also in four books) for not considering the collection of proverbs to be a worthwhile activity.²⁸³ He was also known for his criticism of Plato.²⁸⁴

Further evidence for scholarly work in the 4th century BC comes from the Derveni papyrus (around 340–330 BC), a carbonised papyrus roll found in 1962. This is a prose allegorical commentary on an Orphic poetic theogony (a type of book mentioned by Plato in *Resp.* 364c and by Euripides in *Hipp.* 954), perhaps produced in the circle of the philosopher Anaxagoras during the second half of the 5th century BC. The form of allegorical exegesis as a method of explanation is known from the 6th century BC (see above). The Derveni papyrus with its inclusion of critical vocabulary, methodology and literary and linguistic inquiries therefore represents a stage in the development of a universal knowledge of science, theology and scholarship.²⁸⁵

279 See Heath [2009] 254. On Heraclides as a Philodemus' source, see Janko [2000] 134–138.

284 Dion. Hal. *Pomp.* 1, 16; Num. in Euseb. *Praep. evang.* 14, 6, 9–10. Another Isocrates' student, the historian Theopompus, wrote a *Καταδρομή τῆς Πλάτωνος διατριβῆς* (Theopomp. 115 test. 7; 48; fr. 259 FGrHist).

285 For more on the methodology of criticism in the Derveni papyrus, see Henry [1986] and Obbink [2003]; on the vocabulary of criticism in this text, see also Lamedica [1991], Lamedica [1992].

Comic production during the 4th century BC also provides material concerning poetry criticism, self-referentiality being a characteristic of the genre of comedy. The comedy of this period inherited a range of common topoi on criticism from Old comedy. However, to a certain extent it was an altered form of comedy. In the 4th century BC it was the carefully structured plot of the comedy that was emphasised. The partial differentiation of comedy from political life should also be noted.²⁸⁶ An important example is Antiphanes' comedy *Poiesis*, in particular fr. 189 PCG (perhaps from the late 4th century BC). The speaker, representing comic poetry and playwrights, complains about the difficulty of writing a comedy as compared to a tragedy; the comic poets have to look for new names and plots for each play, while the tragic poets write down myths known to the audience before the actors utter a single word. It is interesting to note that the poet is discussing the structure and composition of his play, and uses vocabulary from critical analysis. In the lines 19–21: *κάπειτα τὰ διωκημένα πρότερον, τὰ νῦν παρόντα, τὴν καταστροφὴν, τὴν εἰσβολὴν* ("what happened before, the present situation, the catastrophe, the opening of the play"). According to a later source, construction of the plot was a central focus for the poets of Middle comedy.²⁸⁷ This fragment can also be discussed in the context of contemporary and later criticism of tragedy, and can usefully be examined in terms of the opposition between comedy and tragedy and the function of tragedy in the 4th century literary canon.²⁸⁸

As in Old comedy, the interweaving of contemporary discourses on criticism with the work and thoughts of the comic poet himself helped to foster novelty. Only fragments from Middle comedy survive and thus the plot cannot be reconstructed; fragment 189 PCG thus remains significant primarily as a reflection of contemporary discourses inquiring into the role and function of the comic genre.

3.9 *Aristotle as a Scholar*

3.9.1 Linguistic Studies

In contrast to Plato, Aristotle wrote no work that dealt with linguistic problems per se. However in several treatises he developed questions relevant to language, which had also been present in Plato's dialogues. As in Plato, so too

286 See Konstantakos [2004] 25–26, 54.

287 See references in Konstantakos [2004] 27.

288 For more see Konstantakos [2004] 11–13, 21–30, 54; on further criticism of comedy by Alexis, Xenarchos, Philippides and other comic poets of the 4th century, see Konstantakos [2004] 30–35.

in Aristotle, linguistic observation should be always considered in framework of his philosophy as a whole.²⁸⁹

Aristotle was interested in the functions of language both as a natural phenomenon and as a rational tool. His work analyses the art of language in terms of linguistic structures. In this perspective, logic, rhetoric, and poetic are seen as based on the natural properties of words, which are dictated by biological organs, as well as by conventional meanings, the latter being dependent upon human desires.²⁹⁰ Aristotle's physiological and psychological works focus on the acoustic and phonetic aspects of language. His *Poetics* and *Rhetoric* concentrates on the pragmatic aspects of language. However, he dealt with the subject of language most extensively in his *Organon*—his writings on logic. In the first work of the *Organon*, the *Categories*, Aristotle supplied a system of logico-semantic classification;²⁹¹ at the very beginning of the treatise he discusses the notions of homonyms, synonyms, and paronyms.²⁹²

Aristotle also discussed the nature of the linguistic sign in the treatise *On interpretation*, which dealt with the relationship between language, thought and reality, and drew a distinction between semanticity and truth or falsehood. He differentiated between the terms ὄνομα (“name”), ῥῆμα (“predicate”), ἀπόφασις (“negation”), κατάφασις (“affirmation”), ἀπόφανσις (“predication”), and λόγος (“statement-making sentence”),²⁹³ asserting that ὄνομα has no reference to time whilst ῥῆμα signifies ‘time’ and “is a sign of something said about something else” (ἔστι δὲ τῶν καθ’ ἑτέρου λεγομένων σημείον). In discussing sentences, he made a further distinction, based on the truth criterion: every sentence has meaning by convention (κατὰ συνθήκην); when a sentence expresses either truth or falsity, it constitutes a proposition (ἀποφαντικὸς λόγος). Aristotle presents a hierarchy of symbolic relationships; writing is symbolic of spoken language, and spoken language is symbolic of the affections in the soul. The concept of conventionality is emphasised by Aristotle in his definition of the ὄνομα.²⁹⁴ Whereas for Plato the relationship between thought and speech was built on the model of copying, for Aristotle language was symbolic:²⁹⁵ he described names as symbols of things.²⁹⁶ Through the use of language, both

written and spoken words were, in his view, meaning-bearers. In particular, he maintained that the word is the bearer of meaning, whilst the sound bears no intrinsic relation to the mental content associated with the sound, or to the external referent of the word.²⁹⁷

In chapters 19–22 of the *Poetics*, Aristotle considered a more multilayered semantic classification. He differentiated between various forms of speech (τὰ σχήματα τῆς λέξεως; Arist. *Poet.* 1456b9) such as command, prayer, narrative, threat etc. He also analysed the components of speech (τῆς λέξεως τὰ μέρη; Arist. *Poet.* 1456b19) such as element (στοιχεῖον, *i.e.* letter), syllable (συλλαβή), connective (σύνδεσμος), noun (ὄνομα), verb (ῥῆμα), conjunction (ἄρθρον), inflection (πτῶσις), statement (λόγος).²⁹⁸

The pragmatic aspect of speech is also discussed in chapters 1–12 of the 3rd book of *Rhetoric*, where he considers the choice of words and their composition into sentences (σύνθεσις). Aristotle stressed grammatical correctness, thus foreshadowing the study of grammar in Stoic philosophy (Arist. *Rh.* 1407a). Rhythm in prose and forms of periodic style were also examined (Arist. *Rh.* 1408b–1410a).

Furthermore, Aristotle reflected on language from physical, biological and psychological points of view. In the treatises *On the soul* and in the *History of animals* his attention focuses on the scientifically oriented description of sound-production: ψόφος as “sound”, φωνή as “the capacity for articulated sound-production”, and διάλεκτος as “language”.²⁹⁹ Semanticity is significant for Aristotle, hence his distinction between meaningless and meaningful sound (σημαντικὸς ψόφος, Arist. *De An.* 420b32), φωνή being defined as the latter.³⁰⁰

3.9.2 Aristotle's Homeric Criticism

Aristotle's role in the history of ancient Homeric criticism is worth emphasising. His *Homeric problems*³⁰¹ offer a compilation of and a reflection upon the previous tradition of Homeric criticism until his time.³⁰² The twenty fifth

297 On the function of language in the treatise *On interpretation*, see further Arens [1984] 24–57; Hennigfeld [1994] 71–94; Sedley [1996]; Sluiter [1997b] 188–195; Modrak [2001]; Whitaker [1996]; De Rijk [2002] 190–357; on Aristotle's notion of meaning as discussed in his *Posterior Analytics*, see Charles [2000] 23–178.

302 See Heath [2009] 255–263 on the detailed analysis of Heraclides' and Aristotle's observations on Homeric problems. Heath argues that at two points Aristotle responded

chapter of the *Poetics* is a summary of this subject. Aristotle took up a position against critics of Homer such as Zoilus of Amphipolis (nine books of the *Κατὰ τῆς Ὀμήρου ποιήσεως Against Homer's poetry*),³⁰³ arguing that poetry is not subject to the same criteria as the other arts and sciences (Arist. *Poet.* 1460b13–15). Moreover, he considered the historical background and realia: Achilles' pitiless handling of Hector's body is compared with a later Thessalian practice (fr. 166 Rose). If a particular feature seemed historically incredible, Aristotle explained it as an idealisation. In his *Homeric problems* he also dealt with allegorical exegesis, apparently interpreting the number of Helios' cows in reference to the days of the lunar year.³⁰⁴

Aristotle replied to the Homeric 'questions' of those who attacked Homer in a systematic manner. Firstly he focused on Homer's artistic goal (τὸ τέλος τῆς τέχνης): Achilles' pursuit of Hector was impossible in practice, but the dramatic effect was remarkable (1460b23–26). Secondly, Aristotle stressed linguistic points such as the use of loan words (γλῶτται), metaphor (μεταφορά), explanation through punctuation (διάρρησις) or linguistic usage (τὸ ἔθος τῆς λέξεως). For instance, he pointed out that gods do not drink wine, but Ganymede "poured wine for Zeus" (*Il.* 20, 234), in which case the verb οἰνοχεύω might be considered as linguistic usage or alternatively a metaphor in this context (Arist. *Poet.* 1461a9–32). Through such exegetical interpretations Aristotle once again pre-figured Alexandrian scholarship.³⁰⁵

3.9.3 Aristotle's Theory of Literary Criticism

The six books of the *Homeric problems* and the three books of the early dialogue *On poets* (both surviving in fragments) were the two principle works in which Aristotle expressed his ideas on literature.³⁰⁶ The *Poetics*, which was originally meant for internal use in school,³⁰⁷ is the first extant philosophical treatise on dramatic theory (not fully preserved, the second book on comedy having been lost since late antiquity). After initiation into linguistic theory,

to Heraclides and at one point they both responded independently to an earlier scholar. See also Blum [1991] 21–23.

307 Halliwell [1989] 149.

logic, the theory of science and rhetoric, pupils were taught subjects suitable for the composition and interpretation of poetry.

Aristotle considered “contemplation” (θεωρία), “action” (πράξις) and “making” or “production” (ποίησις) to be the fundamental human actions.³⁰⁸ He regarded poetry not as ποίησις but rather as a form of θεωρία (Arist. *Poet.* 1448b 4–17); his arguments also embodied the concept that generality is inherent in the particular and therefore not abstract.

In discussing the historical evolution of poetry, Aristotle built on the already existing canon while emphasising the history of separate genres.³⁰⁹ In his view, tragedy and comedy originated in earlier serious and also light poetry:³¹⁰ thus *Margites* had the same relation to comedy as the *Iliad* and the *Odyssey* to tragedy (Arist. *Poet.* 1448b37–1449a2). In his assessment of the concept and φύσις of genre, Aristotle examined the evolution of comedy and tragedy and also the distinction between epic poetry and tragedy (Arist. *Poet.* 1449a7–1449b22). His judgment of poetry was determined by the character and aims of a particular genre and form (epic poetry, tragedy, comedy, dithyramb, music for aulos and lyre, Arist. *Poet.* 1447a).

Poetry is placed by Aristotle among the visual arts, music and dancing, in other words, within a more general concept of artistic imitation of life (μίμησις) as proposed by Plato and then developed further by Aristotle himself.³¹¹ The first four chapters of the *Poetics* establish principles for this concept (see also chapter 25). Imitation, which in Aristotle's view came naturally to people from their childhood onwards, is discussed as poetic μίμησις, in the sense that a poet reveals how a person's character is realised in a given situation (Arist. *Poet.* 1448b).

The poet's task is defined by Aristotle as depicting the kinds of things that could happen and are possible either in accordance with probability or necessity (οὐ τὸ τὰ γενόμενα λέγειν, τοῦτο ποιητοῦ ἔργον ἐστίν, ἀλλ' οἷα ἂν γένοιτο καὶ τὰ δυνατὰ κατὰ τὸ εἰκὸς ἢ τὸ ἀναγκαῖον). This is in contrast to the historian, who depicts events which actually occur (Arist. *Poet.* 1451a36–39).

Aristotle believed that the emotional influence of poetry comes from the nature of the action described. He distinguished between the actions of superior characters who follow serious goals, represented in Homer, the actions of

308 Arist. *Metaph.* 1025b18–1026a3; 1064a16–1064b6; *Eth. Nic.* 1140a1–23; 1140b4–7.

309 For the preexisting canon, see above § 3.5.

310 On the opposition of tragedy and comedy already in Old comedy but also in discourses contemporary to Aristotle, see the reflection in Middle comedy such as Antiph. fr. 189 PGG. See above § 3.4.2, 3.8.

311 Cf. Pl. *Resp.* 392d–403c.

usual characters (“similar to us”), represented in the works of the minor tragic poet Cleophon, and the actions of inferior characters, represented by the composers of parody such as Hegemon of Thasos and Nicochares (Arist. *Poet.* 1448a1–17). This constitutes for Aristotle the principle difference between comedy and tragedy: tragedy aims to imitate characters superior to those actually existing, whereas comedy aims to imitate inferior figures (ἐν αὐτῇ δὲ τῇ διαφορᾷ καὶ ἡ τραγωδία πρὸς τὴν κωμωδίαν διέστηκεν· ἡ μὲν γὰρ χεῖρους ἢ δὲ βελτίους μιμείσθαι βούλεται τῶν νῦν, Arist. *Poet.* 1448a15–17).

The main section (Arist. *Poet.* 1449b24–1456a31) of the *Poetics* discusses tragedy: its essence, plot, structure, characters, emotional impact (κᾶθαρσις accomplished through pity and fear), style and language. Aristotle further discusses the epic genre (Arist. *Poet.* 1459a16–1460b5) and makes a comparative assessment of the two genres, tragedy and epic, (Arist. *Poet.* 1461b26–1462b19).³¹²

Aristotle’s *Rhetoric* is one of the most important works on Greek rhetorical theory and stylistics (the other two extant theoretical treatises of the 4th century BC are the anonymous *Rhetoric to Alexander* and Alcidas’ *On the sophists*). Theoretical and practical engagement with the language is central to Aristotle’s *Rhetoric*, in particular his discussion of ways to appeal to the audience and its emotions and his discussion of style (λέξις). Aristotle refined and developed the division of rhetoric into three genres (already found in Gorgias): deliberative, forensic, and epideictic rhetoric (ὥστ’ ἐξ ἀνάγκης ἂν εἴη τρία γένη τῶν λόγων τῶν ῥητορικῶν, συμβουλευτικόν, δικανικόν, ἐπιδεικτικόν).³¹³ Ethics, he argued, should bear a relation to rhetoric (countering Plato’s criticism that rhetoric was uninterested in truth). Aristotle also provided a systematic overview of stylistic virtues, his discussion of metaphor in the 3rd book of his *Rhetoric* proving to be a significant influence on later stylistic and cognitive studies.³¹⁴ Metaphor in Aristotle is considered on the level of learning, its cognitive function being part of the dynamic process of communication.³¹⁵

Aristotelian principles of analysis were to become a seminal influence for Alexandrian scholarship—both in a narrow sense in terms of the scrupulous editing of classical texts, and also in a broader sense as a methodology for linguistic and literary criticism.³¹⁶

312 On the main principles of Aristotle’s literary criticism in the *Poetics*, see Grube [1965] 70–92, Halliwell [1989], Dale [2006], Bernays [2006], Schmitt [2008], and Halliwell [2011] 208–265.

3.10 *Early Peripatetic Scholarship*

Few fragments of the early Peripatetics survive. It is however clear that they treated a variety of fields such as biology, physics, logic and ethics, and also rhetoric, grammar and Homeric and literary criticism. Aristotle's school traced the origins and development of musical forms, the early poets and musicians, and studied the history of literature, reconstructing the lives of the authors. Literary works were thus regarded as a source of information and at the same time as an object for interpretation, exegesis, and commentary. In particular, peripatetic scholars showed an interest in Homer, with detailed textual criticism of individual lines.³¹⁷

Like other early Peripatetics, Aristotle's successor Theophrastus had wide-ranging interests, including rhetoric and stylistics. Theophrastus wrote treatises bearing such titles as *Παραγγέλματα ῥητορικῆς*, *Περὶ ποιητικῆς*, *Περὶ προθέσεως καὶ διηγήματος*, *Περὶ σολοικισμῶν*, *Περὶ τέχνης ῥητορικῆς*, *Περὶ λέξεως*, *Περὶ μουσικῆς*, *Περὶ μέτρων*, *Περὶ κωμωδίας*.³¹⁸ Following in Aristotle's footsteps, Theophrastus discussed different kinds of poetry, but parted company from his teacher in his addition of mime to the three traditional forms of dramatic poetry.³¹⁹ As Aristotle had done before him, he distinguished three kinds of rhetoric (deliberative, judicial and epideictic),³²⁰ and divided speech into parts. He also discussed the structure of rhetorical arguments, probably incorporating recent developments in hypothetical syllogistics to make the case for a five-part analysis of deductive reasoning.³²¹ Theophrastus also extended the Aristotelian triple division of good style into four qualities: correct Greek (*ἑλληνισμός*³²²), clarity, aptness and ornament.³²³ Theophrastus also appears to have analyzed the sentence according to its internal structure, and in his studies on diction, he insisted on loose prose rhythm and discussed the metrical foot *paeon*.³²⁴ He preferred the final *kolon* in a sentence to be longer than the preceding one, a subject in which he appears to have gone beyond the limits

Aristotle's influence can be seen in later anecdotes such as the testimonies collected by Platthy [1968] 124–129.

320 Fr. 671 FHSg. Cf. *Rhet. Alex.* 1421b6–7; *Arist. Rh.* 1, 3, 1358b6–8. In all probability the division was current in the rhetorical discourse of the 4th century BC. See Fortenbaugh [2005] 171.

321 Frs. 111a–e, 112a–c, 674 FHSg. On the discussion of early peripatetic syllogistic, see Barnes [1985] and Fortenbaugh [1998].

322 See Pagani, this volume.

323 See fr. 684 FHSg = Cic. *Orat.* 79. See Fortenbaugh [2005] 266–273. Cf. § 3.5 above.

324 Fr. 703 FHSg = Demetr. *Eloc.* 41; frs. 702, 704 FHSg = Cic. *Orat.* 218, 192–194; see further Fortenbaugh [2005] 327–335.

of Aristotle's thought, as the topic was only briefly touched on in Aristotle.³²⁵ On the other hand, Theophrastus shared Aristotle's concern with metaphor, to be used in order to elevate diction, but he apparently put forward the idea of avoiding exaggeration in metaphor. This was perhaps a sign of the *syntheia* concept, with actual language usage serving as a criterion in Hellenistic thought.³²⁶ In general, the mean (μεσότης) in style, rhythm and structure was of great importance for Theophrastus as well as for other peripatetics.³²⁷

The writings of another of Aristotle's disciples, Phaenias of Eresus, who corresponded with Theophrastus, have only partly survived, but the titles indicate both historical and philosophical content. He also wrote a treatise *On the poets*.³²⁸

Aristotle's student Eudemos of Rhodes, another scholar who kept up a correspondence with Theophrastus and also founded a school on Rhodes, continued many of Aristotle's ideas, with particular emphasis on logic and natural philosophy. In the surviving parts of Eudemos' *Analytics* (frs. 9–24 Wehrli) the author is almost always mentioned together with Theophrastus and can be presumed to have followed most of Theophrastus' innovations concerning syllogistic figures.³²⁹ Eudemos' *Περὶ λέξεως* (frs. 25–29 Wehrli) in two or more books was perhaps more oriented towards logic than the topics of the same name by Aristotle (Arist. *Rh.* 3, 1403b–1404b) and Theophrastus, which both dealt with the stylistic aspects of language. However, a number of Arabic sources provide evidence that Eudemos' did indeed take an interest in style as well.³³⁰

Theophrastus' pupil and friend Praxiphanes of Mytilene was considered by ancient sources to have been the founder of a new approach to grammar that included the critical exegesis of texts.³³¹ Praxiphanes engaged in further development of Aristotle's linguistic reflections, discussing the interpretations of poets as put forward by Plato and Isocrates. He also addressed a wide range of themes: poems, numbering in Plato's *Timaeus* 17a, complementary particles,

literary criticism and rare words; additionally, he wrote a commentary on the *Odyssey*, and offered an interpretation of Sophocles.³³²

Aristotle's interest in drama was widely shared among the early Peripatetics. One of his students, Dicaearchus from Messene, composed works on musical contests and dramatic productions³³³ (and also on the lyric poet Alcaeus).³³⁴ Dicaearchus' summaries of the plots (ὑποθέσεις) of the dramas of Sophocles and Euripides were an important source for later scholars (frs. 112–115B Mirhady). Dicaearchus wrote on musical practices and dancing (frs. 72–74, 96–98 Mirhady); furthermore, he discussed and criticised the Homeric text, while dealing with questions of performance, textual variations and ethics (frs. 92–95 Mirhady).³³⁵

Chamaeleon of Heraclea Pontica worked on drama and composed a book about satyr plays, and also wrote on Thespis, Aeschylus, and comedy. He studied, among other things, the *Iliad*, the *Odyssey*, Hesiod, Alcman, Sappho, Stesichorus, Lasus of Hermione, Pindar, Simonides and Anacreon.³³⁶ Chamaeleon's interests were oriented towards historical and literary research, combining literary scholarship with the genre of biography.³³⁷

Megaclides of Athens was known as an interpreter and critic of Homer (active around 300 BC). He composed two or more books that dealt with Homer,³³⁸ perhaps commenting on Homer's choice of dialect, and wrote on the *Shield of Heracles* which he considered to be have been written by Hesiod (Hyp. 1 in Hes. *Scut.*).³³⁹

Together with Megaclides, another Peripatetic critic (Megaclides' younger contemporary) Andromenides was often quoted in Philodemus' work *On poems*. Both Megaclides and Andromenides were important sources for Philodemus.³⁴⁰ Andromenides studied stylistics and poetics and divided the art of poetry into the creator of the poem, the composition, and arrangement

340 On Andromenides' work, see Janko [2000] 143–154.

of the material in verse.³⁴¹ He developed a theory of sound, and was interested in glosses and word-choice, specifying criteria for word-choice such as appropriateness with respect to content, originality, onomatopoeia, and phonetic beauty.

Another student of Aristotle's, Aristoxenus from Tarentum, was known primarily as a music theorist. He composed three books entitled Ἀρμονικὰ στοιχεῖα, where he elaborated on the basic ideas of the ἀρμονικὴ ἐπιστήμη and criticised his predecessors (Epigonus, Eratocles, anonymous harmonists and Pythagoreans).³⁴² Some excerpts from his Ῥυθμικὰ στοιχεῖα confirm that metre had begun to be subsumed under the concept of musical rhythm, a process which first appeared in dramas of the 5th century BC. In his writings on musical theory Aristoxenus discussed the origins, development and characteristics of the modes and the adaptation of the modes for use by the tragedians (frs. 69–93 Wehrli).³⁴³ He also composed a number of philosophical biographies (on Pythagoras, Archytas, Socrates, Plato), a treatise on the dithyramb poet Telestes and a work *On the tragic poets*.³⁴⁴ Some extant fragments from his lost writings on the subject of choruses or tragic dance reveal an interest in drama, including discussion of the dances appropriate to various dramatic genres (frs. 103–112 Wehrli). In texts probably intended for teaching courses, Aristoxenus laid the foundation for the never completed Περὶ μέλους ἐπιστήμη.

In addition to music, the Peripatetics continued to regard rhetoric and stylistics as subjects of great importance, as revealed by the work of an early peripatetic scholar and politician, Theophrastus' pupil Demetrius of Phalerum.³⁴⁵ Demetrius was a prolific writer and exceeded in the quantity of his books and the number of lines composed almost all the Peripatetics of his time.³⁴⁶ Among much else, he contributed to the study of language, rhetoric and poetry, dealt with orthography,³⁴⁷ wrote on oral singers,³⁴⁸ Homer, composed a dialogue or a speech Ὀμηρικὸς in one book, two books on the *Iliad* and

four books on the *Odyssey*,³⁴⁹ a book on the comic poet Antiphanes,³⁵⁰ and also on prose writers, such as his criticism of Plato's style.³⁵¹ He made a critical analysis of the Homeric text, discussing the problems of the line *Il.* 2, 409.³⁵² This is the oldest source to have believed that this line is spurious, an opinion that would later be supported by some of the Alexandrian grammarians.³⁵³ He also commented on *Od.* 23, 296, a line which engendered further discussions in Alexandria.³⁵⁴ Demetrius of Phalerum is a good example of direct continuity between pre-Alexandrian and Alexandrian scholarship: in effect, he moved to Alexandria after 297 BC and worked there at least until 283 BC when Ptolemy II came to power, a period which coincided with Zenodotus in his prime.³⁵⁵

While this is indeed a story of increased literacy, with institutional development and thematic differentiation culminating in Alexandrian scholarship, this overall picture of progress should not be viewed as either inevitable or triumphant. The performative criticism embodied in Old comedy, to cite but one example, was largely lost *en route*. By the end of the 4th century BC, however, institutions supporting the development of scholarship had been largely established, together with the idea of a scholarly programme having linguistic studies and textual, stylistic and interpretative analysis at its core. Methodological, theoretical and practical approaches to philological analysis had already been developed by the time of philological scholarship began to flourish in the Alexandrian age.

1 Preliminaries

1.1 *Court Poetry and Scholarship in Hellenistic Societies*

It is helpful to start by recalling some aspects, self-evident though they may seem, of the social context in which the surviving literary culture of the ancient Greek world evolved during the Hellenistic age (3rd–1st centuries).¹ A critical debate has arisen between diametrically opposed views: the traditional assumption of the duality of Hellenistic poetic culture, in contrast to an interpretation that argues in favor of its cohesive unity. The former depicts a twofold manifestation of cultural creativity: a high/learned literature, linked to urban royal courts, mainly bookish and designed to be recited, and a low/popular production, predominantly performative, thus including music and

* English translation by Rachel Barritt Costa.

1 If not otherwise stated, all dates are BC.

song;² whereas the latter emphasizes the cohesion of poetic culture deriving from its social pervasiveness, contending that this was sustained by a great number of public festival competitions, civic or religious ceremonies and private symposia.³ However, although appraisal of these issues is currently still fraught with controversy, a significant portion of the extant Greek poetry of this period can, by virtue of its characteristics of court literature, be regarded as the learned expression of fairly narrow elites. These elites were composed of select social groups living in urban centers of the traditional Greek world as well as of predominantly ethnic Greek minorities ruling over Hellenized non-Greek East-Mediterranean areas (Egypt, Asia Minor, Near East) subject to Macedonian-rooted monocratic dynasties, and eventually came to include the most educated circles of the Roman aristocracy. It is therefore no cause for surprise, in terms of social history, that a derived and intellectualized activity such as the professional study of literature—*i.e.* philology, which sprang up towards the beginning of the 3rd century—first arose and long remained as a minimal niche and ultimately became the self-referential expression of a Greek elitarian culture, in striking contrast to far less cultured and widely non-Greek backgrounds.⁴

Hellenistic scholarship was undoubtedly a most exceptional cradle of ideas and culture for militant intellectuals and poets of the age (who not infrequently were scholars in their own right); and, in the long run, such a phenomenon inevitably had a strong impact on the poetics, reception and transmission of Greek literary texts. Yet it cannot be overlooked that the highly specialized

2 *E.g.*, with varying emphasis, Hardie [1983] 15–36; Zanker [1987] 1–37; Bing [1988]; Gentili [1988] 174–176; Fantuzzi [1993] and in Fantuzzi-Hunter [2004] 1–41; Hunter [2003].

3 Cameron [1995], especially 44–103; cf. Falkner [2002] 343–344; Krevans-Sens [2006] 192–194; Pretagostini [2009]; Acosta-Hughes – Stephens [2012]. For the discussion stimulated by Cameron's monograph see Knox [1996]; Griffiths [1997]; Zanker [1997]; Green [1998]; Lehnus [1999]; Bing [2001]. Although within a reiteration of the dual view, Fantuzzi [2010] argues for some mutual influence between genuinely ritual-performative and learned-fictionalized (Callimachean and Theocritean) religious poetry.

4 On the multifaceted society of, for instance, Hellenistic Alexandria and the relations between its components (Macedonian/Greek citizens, ruling in a foreign land; Egyptian natives; selected Greek intellectuals, juridically *xenoi*, constituting the entourage of the court, according to the typology suggested by Fraser [1972] 1.60–92), see Lewis [1986]; Stephens [2010]; Vandorpe [2010] 171–173; Del Corso [2014]. For cultural implications in the times of Ptolemy II: Stephens [2003]; McKechnie-Guillaume [2008]. The debate on the Ptolemaic policy of intercultural integration has been revived by the discovery of monuments that seem to reinforce the idea of an Egyptizing attitude of the rulers: Empereur [2004]; Goddio-Claus [2006]; Manning [2009]; Weber [2010b].

studies and the finest achievements of scholarship effectively remained unavailable to the majority and exerted a low direct incidence on the average culture of their heterogeneous social contexts, except for the symbolic meaning externally attached to learning by its sponsors (royal courts), since this was mainly a propagandistic component aimed at rendering forced Hellenization more palatable in the eyes of non-Greek natives. Admittedly, Greek papyri from Egypt provide some evidence concerning the influence of scholarship on 'lower' culture, for instance with respect to the reception of a number of philological achievements in Greek schoolrooms, such as the standardizing of literary texts (both in the sense of choice of authors or 'canons' and also of textual uniformization) and reliance on learned exegesis for drawing up commentaries at some level of ordinary Greek education. But the influence of erudite culture on the educational training of a little section of the population can hardly be mistaken for a close interaction between scholarship and society *tout court*. Rather, "scholarship was surprisingly unaffected by social conditions";⁵ and although it can certainly be acknowledged as an outstanding chapter of ancient Greek history as far as cultural quality in itself is concerned, in sociological terms it appears to have been a collateral or quite marginal phenomenon that only faintly reflected and was reflected by the actual uses, trends and mentalities of the composite world within or beside which it developed.

Separateness and inequality between mass culture and the Hellenized learned elite was ultimately the outcome of various intertwined and partly planned transformations that affected the Greek world, such as the mutation and, in the event, the decrease or loss of political autonomy by the *polis*, as well as the mix of Greek and non-Greek populations within the same communities in the areas of most recent Hellenization. The first half of the 3rd century experienced the transition from a general picture of a large number of relatively small Greek *poleis* formally independent, ruled over by regimes which were in varying degrees isonomic and participative, to unusually vast monocratic entities marked by the scaling down of collective involvement of people in State/civic power and by an increasingly verticalized social structure. In the Hellenistic kingdoms outside Greece, the character of these collectivities was slowly becoming ethnically composite and in fact was predominantly non-Greek. These mutational processes were undoubtedly gradual and differentiated, but inexorable and with significant effects on the system of poetic communication.⁶ In the classical autarkic *polis*—though even it was not devoid

5 Wilson [1969] 370.

6 Overall, on the gradualness and complexity of the political and social transition: Graham-Shipley-Hansen [2006]; Strootman [2011] and [2013] 39–40; Wiemer [2013]; some case studies

of elements of social and cultural imbalance—the existence of a number of public and quasi-public occasions fulfilling pragmatic functions had ensured that organicity ruled between the community and political, philosophical, and literary discourse: namely, between orator and assembly, playwright and civic body, poet and audience, and so forth. Each of these performers and related addressees conventionally shared, or were expected to share to some degree, the same skill in their common code of communication. During the first decades of the Hellenistic Age, however, this order imploded, albeit little by little, and, symmetrically, Greek culture was in a sense projected outwards as a result of the forced Hellenization of non-Greek peoples and of the areas conquered by Alexander the Great, which were soon organized into monocratic structures. Inexorably, the modes and mechanisms of poetic communication once tailored to the free and virtually all-Greek *poleis* underwent a process of drastic reshaping. Until then Greek ‘literature’ had been the natural expression of unquestionable Greek identities, whereas now it paved the way for ruling Greek minorities to gain and perpetuate cultural and social prestige in foreign lands. Given these premises, it is legitimate to recognize in this search for status an essential driver of both Hellenistic high poetry and professional scholarship.⁷

Certainly, even during the Classical Age on the Greek mainland the literary system had already begun to undergo a process of transformation, for instance in Athens by the late 5th century (as deplored, among others, by Plato), and the elements of continuity should not be underestimated. In the end, however, the political mutation imposed on the Hellenized world by Alexander and his heirs, and its social consequences, dramatically and irreversibly affected the traditional modes of Greek poetic composition, performance and reception, with an impact on a wide range of features such as the context, occasion and function of poetry, the public role of poets, the composition of audiences, the skill in rhythmic, metrical and musical rules as shared by authors, performers and their addressees, with consequent adaptation of traditional poetry, still performed, to new tastes, needs and occasions, and so forth. This far-reaching upheaval had repercussions on the transmission of works and the related scholarship, and affected aspects involving the availability and actual understanding of oral and written records of ancient texts and music, the material

in van Nijf-Alston-Williamson [2011]. The ‘peer polity interaction’ between *poleis*, leading to networks of peer communities, is stressed as a major fact of continuity from Archaic to Hellenistic Age by Ma [2003].

7 Merkelbach [1981] 29–30; Bing [1988] 128–135; Nagy [1998].

and ideal relevance of the book, scholars' interest and proficiency in the metrical and musical features of ancient works.⁸

The separateness of the elite body of Greek scholars from the heterogeneous social bodies subject to Hellenistic monarchic powers can also be perceived by looking at their respective approaches to and reception of literature. One stream of current debate focuses precisely on the dynamics of musical and textual reception and transmission in the late 4th and early 3rd century, and on the closely related question of the actual skills and methods of Hellenistic scholars in these matters. Many scientists and learned Greek personalities (very often poets) were selectively summoned from their cities or countries to join small protected communities under royal patronage, as an organic intelligentsia and court entourage that would assure ideological cohesiveness. Such communities were positioned at the very tip of the social pyramid, far removed from its base, to a greater extent than had ever been the case before over the prolonged span of Greek history. The goal these scholars cultivated in their pursuit of literature differed from the quest for enjoyment and entertainment that had traditionally stirred ordinary audiences: rather, this learned elite was mainly called upon to respond to a demand for ethnic and political self-identification. In undertaking this task, they devoted great attention firstly to retrieving, riddling and collecting reliable books in royal institutions, and secondly to the aim of in-depth understanding and explaining of the actual text: *i.e. reading*, unraveling obscurities, emending corruptions, and discussing the textual surface and the value of ancient *written* works as such. This commitment resulted in taking a new special care of text transmission and, on the other hand, in apparently disregarding or overshadowing aspects concerning aural reception and performance that had played such a crucial role in the original conception of these works.⁹

A similar attitude is mirrored in an anecdote referred to by the 1st century Latin writer Vitruvius to illustrate the enormous book-oriented culture accumulated roughly a century earlier by Aristophanes of Byzantium, librarian-in-chief and one of the greatest scholars in Hellenistic Alexandria. The anecdote also has the virtue of offering a vivid portrayal of the relation that must have held between learned and popular reception of current poetry. Vitruvius relates that king Ptolemy (which Ptolemy was involved remains unspecified) designated Aristophanes together with another six judges to be the assessors in a competition of poets who were to be called upon to perform their works before

8 For a sketch of changes in poetic communication from 5th to 3rd century see Fantuzzi in Fantuzzi-Hunter [2004] 17–26.

9 Cf. Nagy [1996] 150.

a popular audience. While the other six took the public's reaction into account in forming their judgment, Aristophanes expressed the opposite evaluation (*eum primum renuntiarī iussit, qui minime populo placuisset*) and unmasked the fallacy of the criterion adopted by his colleagues. What Aristophanes demonstrated was that precisely the poet who had not been favorably received either by the audience or by the other judges was actually the only one to have performed an original poem of his own, whereas the remaining competitors had recited works that were not their own creation:

relying upon his own memory, he produced a great amount of scrolls from certain bookcases and, comparing them with the recited works, he compelled the poets to confess that they stole them

*fretus memoriae certis armariis infinita volumina eduxit et ea cum recitatis conferendo coegit ipsos furatos de se confiteri.*¹⁰

According to this picture, written records secured in libraries as well as cultural memory guaranteed by institutionalized scholarship organic to absolute power were conceived and felt (by the latter) as entities to which a primary and authoritative role was ascribed; consequently scholars and books embodied the faculty of exerting judgment and control from above on choices of current poets/performers and the common taste of ordinary audiences.¹¹ This points to a representation of scholars' aims and manner of working as divorced from contemporary compositive/performative trends as well as from the taste and skill of audiences, even contemplating—should the necessity arise—competition with or *against* accepted tastes.

The peculiarity of this reception of poetry is acutely desecrated as useless, eccentric and abstruse as late as the 2nd century AD by Lucian. In the *Vera historia* he satirically exploits his own anti-intellectualistic attitude, by imagining that he himself met Homer and asked him for an opinion on the long-standing wrangles among some notorious Alexandrian philologists over the genuineness or otherwise of several points of his poems:

I asked moreover whether the expunged lines had been written by him, and he answered that they were all of his own! Then I understood how

10 Vitruvius, *De arch.* 7 *praef.* 4–7; Ar. Byz. test. 17 Slater.

11 See Nagy [1996] 227–228 (where Vitruvius' passage is quoted as an evidence “on the negative attitude of Alexandrian scholars concerning the performance of poetry”) and [1998] 209–211.

great was the pedantry of the grammarians such as Zenodotus and Aristarchus.¹²

For all these reasons, the actual musical, orchestric and metric interests and competence of the Hellenistic (Alexandrian) scholars are central subjects of present-day critical debate. According to a recent reassessment, despite the contrast within critical opinion between radical skepticism¹³ versus wide-ranging trust¹⁴ there might still be scope for a middle way: the possibility of episodic and non-standardized contacts and exchanges between the pragmatic-performative and the strictly textual tradition of poetic songs (for instance between *Bühnenexemplare* and *Lesetexte* in the theatrical field) that may have taken place in Alexandrian scholarship from the early 2nd century onwards, with the aim of restoring their alleged original metrical display or colometry.¹⁵ In this perspective, the features connected with poetic performance, although more probably in contemporary adaptations than in its original context, seem to have interested the Hellenistic scholars, if anything, with regard to the contribution such features were expected to give to the textual constitution and metrical understanding and layout of a verse work. Hence this line of inquiry likewise leads to an image of scholarship as at least partially divorced from the concrete expectations of the surrounding society, not unlike the anecdotal sketch provided by Vitruvius and the fictitious satirical picture invented by Lucian.

To conclude on this point, although many aspects of continuity between late Classical and early Hellenistic Age have legitimately been stressed with regard to the modes of poetic performance and reception, the very different political backgrounds, the functional distinction between 'high' and 'low' culture operating in the increasingly multi-ethnic and strongly hierarchical societies of the Hellenistic kingdoms, and finally, as we will see in greater detail further on, the growing specialized professionalization of philology within and in the service of royal institutions seem to be sufficient historical reasons to

12 Lucian, *Ver. hist.* 2.20: see Nesselrath [2002]. "Pedantry" translates ψυχρολογία, lit. "coldness of mind". A comparable attitude dismissing philological activities is displayed by the Latin Stoic philosopher Seneca, *Ep.* 88.39; see most recently Braswell [2013] 36–38.

13 Upheld by von Wilamowitz and taken up again, among others, by Pfeiffer [1968] 181, Pöhlmann (most recently [2007]), and Parker [2001].

14 Fleming-Kopff [1992], followed among others by Gentili-Lomiento [2003], especially 7–11.

15 Prauscello [2003] and [2006], building on some positions maintained *e.g.* by Dihle [1981] 37–38, Falkner [2002], and Fantuzzi in Fantuzzi-Hunter [2004] 27–28 n. 101. Subsequent discussion: Lomiento [2007]; Prauscello [2007]; E. Ch. Kopff in Gentili-Lomiento [2008] 13–17; Tessier [2009] and [2010a].

confirm the view of court poetry and scholarship of the time as exclusive and elitarian entities. And while this does not go so far as to imply that poets and scholars were living and working in an ‘ivory tower’, it certainly seems to point in this direction.¹⁶

1.2 *Historiographic Pattern*

Germane to our subject is also an inquiry into how far a historical reconstruction of Hellenistic scholarship is actually possible at present. The available primary sources consist of sub-literature products, mainly via later (Byzantine) revisions, compendia or genuine reworkings such as scholia, lexica, grammatical treatises and paroemiographic collections, roughly mirroring the main ‘genres’ of the Hellenistic learned culture.¹⁷ Furthermore, we have a growing quantity of direct testimonies of ancient erudition thanks to papyrological finds. In spite of various intrinsic and non-negligible defects of this evidence, due above all to the fact that many of the finds came about quite by chance, in a discontinuous manner and almost exclusively from Egypt, increasing insight has been gleaned into the approaches and the concrete procedures through which the scholars and their more humble analogues, the Greek school teachers, worked on literary texts between the Hellenistic Age and the eve of the Byzantine Period.¹⁸ The nature of all these subliterate products, as working tools, encouraged users and ‘consumers’ to lower the threshold of inhibition *vis-à-vis* the feasibility of text manipulation for personal reasons and for

16 *E.g.* Fraser [1972], especially 1.305–312, with an extensive following, up to Rihll [2010] 410–411 (concerning Alexandrian science and technology) and Strootman [2010] 44–45. Against the idea of Hellenistic poetry and scholarship as an ‘ivory tower’: Pfeiffer [1968] 97–98 (a passage after which—significantly—in page 103 one finds the anachronistic and exaggerated view of the Ptolemaic Library as an open-access institution); cf. Nicolai [1992] 294–296; more vigorously Cameron [1995] 24–70, according to whom (29) “Modern critics have simply rationalized this [Victorian] prejudice [of alleged artificiality and lack of inspiration] against the postclassical, arguing that Hellenistic poets composed for a different audience and in a different way” (but, of course, claiming that a work was destined for a narrow audience and that it was a written composition does not *per se* involve an assumption of artificiality).

17 Montanari [1993b] 235–259; Dickey [2007]; Porro [2009]; Montanari [2012b]; Dickey and Dubischar, this volume. On the debated relation between ancient exegesis and Byzantine scholia: Maehler [1994]; Montana [2011a]; Montana-Porro [2014]. For an outline of the lexicographical and etymological tradition, from antiquity up to the Byzantine era, see Alpers [2001].

18 For this documentation see McNamee [2007] and the issues of *Commentaria et lexica Graeca in papyris*, Berlin-Boston, in progress. On education in Hellenistic and Roman Egypt: Morgan [1998]; Cribiore [2001].

ideal as well as practical purposes. Thus testimonies and fragments surviving through exegetical and erudite works of various kinds and times are ultimately individual and highly selective outcomes of repeated and stratified idiosyncrasies. It follows that since the available documentation is so lacunose, composite and fluid, today the stoical inquiry into learned literature must be chiefly oriented towards reducing the naiveté of some apparently simplistic *vulgatae*, so that more detailed and nuanced reconstructions, rooted first and foremost in fresh and up-dated reliable editions of textual fragments, can be provided for such a complex and valuable cultural experience.

From this point of view, even the general perspective which constituted the traditional mainstay of the ancient and modern historiography calls for due caution: that is to say, the idea that the path of Hellenistic scholarship can be traced linearly and statically as a chain of *diadokhai* ('successions'), defined positively by cultural descent or filiation according to the teacher-disciple line, and negatively on the basis of polemical relationships nourished by drastic and non-reversible disputes, must be called into question. For while the line of successions is a standard of ancient historiographic accounts (suffice it to recall the structure in terms of *diadokhai* of the political and military successions to Alexander the Great or of the series of the scholarch philosophers) formally shaped in the archaic genealogical manner, some recent in-depth examinations of specific cases have exposed this representation as a simplified picture of more complex historical facts. In other words, possibly intertwined and multiple-branching cultural and professional relations within intellectual society have invariably been represented as uni-linear chains on the basis of stereotyped polar criteria such as loyalty vs rivalry, continuity vs opposition. To obtain a more credible historical mapping of the intellectual profiles and the relational network, two fields of further investigation are open to students: the evidence displaying the relationship of disciples with teachers and of 'minor' with 'major' grammarians (relations which the ancient sources often typically represent as a spiritless and servile attitude on the part of those who found themselves in an ancillary position, *i.e.* alignment with the dominant positions and endorsement of the polemical causes of the major philologists); and the testimonies on a variety of critical discussions between leading personalities and related 'schools', generally adduced or seen as episodes of intellectual rivalry and cultural/ideological conflict.¹⁹

19 Historical overviews of Hellenistic scholarship: Gräfenhan [1843–1850], Susemihl [1891–1892], Sandys [1921³], Pfeiffer [1968], and Fraser [1972]. Reassessments concerning different spheres of ancient scholarship in Montanari [1994a]; Montana [2012c].

1.3 *Scholarship and Knowledge*

As a preliminary step, one further aspect should be taken into account. In the eyes of the modern scholar, the most customary and regular expression of the ancient exercise of the philological method and techniques is to be found in the activity of editing, studying and commenting on literary—above all poetic—works. The alliance between Hellenistic scholarship and poetry can ultimately be described as a metapoietic or self-reflecting procedure that radiated bidirectionally. Intellectual activity involving the application of philological means to poetry not infrequently coexisted with the incorporation of philology *within* poetry, so that critical interpretation and poetry tended to merge. The poets themselves, becoming experts and editors both of their own poetic works and of those created by others, can legitimately be recognized as *scholar poets*, inasmuch as they were endowed with historical-philological skills, retrospectively oriented towards understanding the poetry of past ages and the cultural heritage, while at the same time also embracing a historical-pragmatic vision, prospectively aimed at (re-)constructing and establishing a new poetry substantially valid for their own time.²⁰ It is therefore hardly surprising that Rudolf Pfeiffer saw in poetry the breeding ground of ancient scholarship.²¹

Yet it is important to be aware that philology and literature are by no means fully overlapping categories, nor are they genuinely comparable with each other: on the contrary, the former is not even a genre that has clearly defined contours within the literary system.²² Rather, it is essentially a kind of methodical approach springing from a rational attitude. A more fine-tuned assessment is called for, in order to distinguish the tradition which, during the Hellenistic Age, gradually became shaped into a “separate intellectual discipline” involving studies on literature²³—it is this discipline that will be our chief concern here—from the more general underlying critical and analytic impulse that proves to have been common to several branches of knowledge. In effect, the connection between poetry and philology was *only one aspect* of the intellectual productivity officially encouraged and sponsored by the Hellenistic rulers. Such a recognition prompts a possible reversal of the narrow view that considers literature as a privileged *habitat* of scholarship: in its place, one may

20 Fantuzzi in Fantuzzi-Hunter [2004] 25–26.

21 Pfeiffer [1968] *passim*, e.g. 3 and 88, with some criticism by Wilson [1969] and Rossi [1973].

22 Sluiter [2000a], especially 199: “we have to conclude that there is no recognition of ‘secondary literature’ as a separate genre in ancient eidography (the description of genres) before Callimachus, and even then it is doubtful”.

23 Pfeiffer [1968] 3.

identify a vision of scholarship as an expression of an intellectual *habitus* (attitude) of a rationalist or scientific kind.²⁴ Oriented (not unlike the Aristotelian approach) towards natural and factual matters, both on the synchronic plane of theoretical reflection and in the diachronic perspective of historical reconstruction, this attitude increasingly spread, from the 4th century onwards, throughout different cultural fields extending well beyond the confines of textual philology, such as historiographic, geographic and antiquarian inquiry, as well as all the range of genuinely scientific research.²⁵

It is precisely this rational approach that seems to constitute the common and unifying ingredient of the cultural activity of some multifaceted figures of the Hellenistic era, whom we struggle to constrain in a clear and univocal manner within the categories of knowledge familiar to us.²⁶ Recognizing that Hellenistic scholarship embodies the application to literature of an approach that had wide validity for every branch of learning, that is to say for knowledge *tout court* and even for potentially encyclopedic culture, ultimately means reviving the Peripatetic inner imprint of its genetic code.²⁷

2 Alexandrian Scholarship to 144 BC

2.1 *Traces of Scholarship Outside Alexandria in the Early Hellenistic Age*

It is worth asking whether, in the framework of the Hellenistic kingdoms, one can legitimately speak of major networks of learned scholarship other than Ptolemaic Alexandria (with which we will be concerned first of all, in the following pages) when considering the period between the death of Alexander the Great and the middle of the 2nd century.

The mist shrouding from view the literary community that flourished at the very beginning of the Hellenistic Age on the Aegean island of Cos, of which

24 Rossi [1973] 115 identifies the core of philology as ‘*ansia di ricerca*’ (research anxiety); and, for instance, Russo [2004] 223 claims that “the Hellenistic linguistic notions . . . constitute an important aspect of the scientific revolution” and “Stoic semantics [opening up the Hellenistic path of observation and systematic definition of linguistic phenomena] is none other than an aspect of the same revolution in thought that led also to science”.

25 Romano [1993] 377, equating Vitruvius’ encyclopedic horizon to the ‘polycentrism’ distinctive of the Hellenistic culture, effectively describes the latter as “la crisi dei grandi sistemi di sapere in cui ogni scienza o arte riproduce al suo interno, in piccolo, una enciclopedia”. Cf. Romano [1987] 50; Montanari [1993a] 632–635; Bonanno [2000] 211–212; this volume, section III.3.

26 *E.g.*, about ‘scholar historians’: Montana [2009c]; cf. Dettori [2000a] 49 with n. 159, 50–52.

27 Fraser [1972] 1.313–316; cf. Montanari [2012d]; Hatzimichali [2013b]; below, § 2.2.

the poet and grammarian Philitas seems to have been the most important representative, has by no means been dispelled.²⁸ Here poets such as (possibly) Theocritus of Syracuse and Hermesianax of Colophon also dwelt for a while, and Theocritus himself as well as Callimachus offer deferential acts of homage to Philitas in their most important poems.²⁹ Ptolemy I Soter (“the Saviour”), the founder of the royal house of Hellenized Egypt who reigned from 305 to 283, chose Philitas as a tutor to his son,³⁰ who was born on the island in 309/8.³¹ Philitas presumably returned to Cos before the foundation of the Alexandrian royal Library, but he was also one of the teachers of the Ephesian Zenodotus,³² who was later appointed as the first librarian by Ptolemy. Philitas owes his place in the history of scholarship to his authorship of a word collection known as *Ἄτακτοι γλῶσσαι* or simply *Ἄτακτα*, perhaps “non-(alphabetically-) arranged unusual words”, only fragments of which remain, so that the title, content and nature of this work are still under discussion.³³ A special interest in Homeric glosses as well as dialectal (not only literary) words is undeniable. It is not possible to state with precision whether and how Philitas conceived of these two spheres of activity as related; but it is notable that Aristotle in the *Poetics* (21.2, 1457b 1–7), undoubtedly referring back to a more ancient practice, singled out among the body of λέξεις (“words”) the subcategory of γλῶσσαι, “unusual words” (in a relative sense, diachronic as well as diatopic, in comparison to the common use of a defined speaking community) also adopted as a stylistic feature in poetry (Homeric examples are quoted in 25.6, 1461a 10–16), among which dialectal words constitute a special type. This connection can ultimately be seen as one of the premises for an interest in dialectology among

-
- 28 Editions of testimonies and fragments of Philitas: Dettori [2000a] (only grammatical); Sbardella [2000] (only poetic); Spanoudakis [2002]. The definition ποιητῆς ἄμα καὶ κριτικῆς is by Str. 14.657: Philit. test. 2 Dettori = test. 11 Spanoudakis. On Philitas' scholarship: Pfeiffer [1968] 88–92; Dettori [2000b].

- 32 *Suda* ζ 74: Philit. test. 10 Dettori = test. 15 Spanoudakis.
- 33 Tosi [1994b] 146–149; Dettori [2000a]; Spanoudakis [2002]; Tosi, this volume. P.Hibeh 172, a fragmentary papyrus roll dated ca. 270–230, contains a poetic *onomastikon* (collection of nouns) arranged by groups or ‘families’ of terms linked not by semantic affinity, but by formal features. One could wonder if this was the grouping method also adopted in Philitas' *Atakta*: Turner [1955]; Pfeiffer [1968] 91–92; Tosi [1994b] 148–149; Dettori [2000a] 192–194. Nicolai [2000a] argues that ἄτακτοι in the title could, instead, mean “not canonical in the rhetorical use” or some such indication.

early Hellenistic grammarians and experts of poetry.³⁴ Philitas' method of lexical explanation seems to have been characterized by a more thorough critical approach than the elementary glossography displayed by exegetes collectively and anonymously quoted as γλωσσογράφοι, "glossographers", later often criticized by the Alexandrian scholar Aristarchus according to the scholia to Homer.³⁵ Philitas' approach loosened the stricture that bound lexicology to the limited and specific requirements of explanation for individual occurrences in a given literary passage or context by means of one-for-one word substitutions, thus allowing scope for the scholar's and poet's pursuit of more general linguistic and stylistic aims. The association of poetry and erudition, as well as the relationship of the first two Ptolemies with Philitas, point to the latter and to 3rd century Cos circles as the immediate antecedents and interlocutors of Alexandrianism. One would wish to obtain more extensive knowledge on this area.

In addition to the rather sketchy information available for Cos, we do have some knowledge on the culture that flourished in the context of Hellenistic Rhodes. After Alexander's death, the island regained its freedom and independence from Macedonian domination and gradually reinforced its role as an essential commercial and banking partner of the great Hellenized kingdoms and especially of Egypt. The lively culture flourishing on the island during the 4th-2nd centuries emerges from the long list of intellectuals of every branch who are known to have been working there.³⁶ As far as the 3rd century is concerned, the list includes three Peripatetics: Eudemus, Aristotle's direct pupil at Athens,³⁷ and Hieronymus,³⁸ both natives of Rhodes, and Theophrastus' disciple Praxiphanes of Mytilene.³⁹ While Eudemus' interests were oriented predominantly towards the history of science, Hieronymus and Praxiphanes

34 The rise of systematic study of dialects dates to the early 3rd century (Sosibius Laco) in the view of Pfeiffer [1968] 202 n. 2. On the relation between literary and spoken languages in ancient dialectology see Cassio [1993a], [1993b], [2007], and [2008] 5–7 and 29–31. As for dialectology in the ancient exegesis to Homer, some stimulating observations can be read in Montanari [2012a].

35 On γλωσσογράφοι: Dyck [1987] (with edition of the fragments); cf. Tosi [1994b] 152–155.

36 Mygind [1999]; cf. Bringmann [2002].

37 Edition of testimonies and fragments of Eudemus: Wehrli [1969²b]. See Mygind [1999] 254 (No. 2); Bodnár-Fortenbaugh [2002].

38 Editions of testimonies and fragments of Hieronymus: Wehrli [1969²d] 9–44; White [2004]. See Mygind [1999] 255 (No. 7).

39 Editions of testimonies and fragments of Praxiphanes: Wehrli [1969²c]; Matelli [2012a], [2012b]. On his life and works: Mygind [1999] 263 (No. 33); Martano-Matelli-Mirhady [2012].

became specialized in the history of literature and culture.⁴⁰ Praxiphanes, who may have been a teacher of Aratus and Callimachus,⁴¹ “was the first to be called *grammatikos* in today’s acceptance” according to an ancient testimony and possibly played a significant part as *trait d’union* between the Aristotelian thought on language and the first steps of grammatical approach at Alexandria (description of parts of speech).⁴² He is known for some scholarship on Homer, Hesiod and Sophocles.⁴³ One century later, the Alexandrian scholar Aristarchus held some of Praxiphanes’ opinions in great esteem, on the one hand sharing his skepticism about the authenticity of the proem of Hesiod’s *Works and Days* and, on the other hand, interpreting with merely stylistic reasons a typical Homeric feature, the reversal of the natural order in question-answer sequences (*deuteron proteron*, “the second first”), which instead Praxiphanes, commenting on *Odyssey* 11.163–203 (the dialogue between Odysseus and the shade of his mother Anticleia), explained on ethical, *i.e.* psychological, grounds.⁴⁴ Additionally, in his work *Περὶ ποιημάτων*, following a line clearly laid out in the sphere of the Peripatus, Praxiphanes focused on problems of literary criticism.⁴⁵ Aratus and Callimachus appear to have been involved in a polemic with him about poetics, testified by Callimachus’ work *To or Against Praxiphanes*.⁴⁶ This was also the period in which the poet

-
- 40 With regard to this aspect of Hieronymus’ interests and activity: Martano [2004] (on the inauthenticity of [Hesiod]’s *Shield*); Mirhady [2004] (on Isocrates’ style); Matelli [2004], especially 307–309.
- 41 Thus in a debated source (Callim. fr. 460 Pfeiffer = Praxiph. fr. 7 Matelli) that convinces Cameron [1995] 209–213.
- 42 Clem. Al., *Strom.* 1.16.79.3; Praxiph. fr. 10 Wehrli = fr. 9A Matelli ὠνομάσθη δὲ γραμματικός, ὡς νῦν ὀνομάζομεν, πρῶτος. See Matelli [2012b], especially 31–40 and 248–253.
- 43 Praxiph. fr. 20 Wehrli = fr. 25 Matelli = CPF 86 2T (Homer); fr. 22a–b Wehrli = 28A–B Matelli (Hesiod); fr. 23 Wehrli = fr. 29A–C Matelli (Sophocles).
- 44 On Aristarchean reception of Praxiphanes’ opinions: Matelli [2009]. Particularly on the proem of Hesiod’s *Works and Days*: Montanari [2009a] 316–322; Matelli [2012b] 306–315. On Homeric ‘reverse order’: Lunden [1999d]; Nünlist [2009a] 326–337, especially 332–333; Matelli [2012b] 294–298.
- 45 Praxiph. fr. 12 Wehrli = fr. 27 Matelli (quoted by Phld., *On poems* 5.2). There are some differences of opinion as to whether Diogenes Laertius was referring to this same work when (3.8) he cites a text in which Praxiphanes described a discussion by Plato and Isocrates “on poets” (περὶ ποιητῶν): Praxiph. fr. 11 Wehrli = fr. 22 Matelli; Vallozza [2012] is in favor of maintaining the two works distinct. Overall, on literary historiography and criticism within the Peripatus: Montanari [2012d].
- 46 Callim. fr. 460 Pfeiffer = Praxiph. fr. 16 Wehrli = fr. 11 Matelli. The name of Praxiphanes apparently figures among the critics (“Telchines”) of Callimachus’ poetry who are listed in the so-called *scholia Florentina* to the *Aitia* (*PSI* 11.1219, fr. 1, *ad* Callim., *Aitia* 1, fr. 1

Sim(m)ias lived on the island of Rhodes: like his contemporary Philitas, he compiled a collection of glosses in three books.⁴⁷ The island is described on more than one occasion as a haven for Greek intellectuals in times of crisis at Alexandria: according to some sources, such was the case as early as around 245 for the great Alexandrian poet and librarian Apollonius, henceforth called Rhodius, and more certainly a century later for other Ptolemaic scholars forced or persuaded by political difficulties to abandon Egypt. In effect, in the second half of the Hellenistic Age, after having concluded a definitive alliance with Rome (164) Rhodes enjoyed a new era of cultural achievements, the outstanding features of which were represented by prestigious schools of rhetoric and philosophy.⁴⁸

The royal cities of Macedonian Pella and Seleucid Antioch on the Orontes in the early 3rd century guaranteed hospitality to numerous literary figures and intellectuals, among whom the didascallic poet Aratus of Soloi is remembered in ancient biographic accounts for having been concerned with the textual criticism of both of the Homeric poems.⁴⁹ But this seems an isolated case, on which it would be desirable to acquire further knowledge, and it appears to bear no direct relation to the coeval rise of scholarship in Alexandria. Although Antioch did at a certain point boast a ‘public’ library, the headship of which was bestowed on the poet Euphorion of Chalcis in the time of king Antiochus III the Great (223–188), its repository could in no way compete with the gigantic store of books in the Ptolemaic capital.⁵⁰

Pfeiffer = fr. 1 Massimilla); Praxiph. fr. 15 Wehrli = fr. 10 Matelli = CPF 86 4T; cf. Massimilla [1996] 62–63; Manetti-Montanari [1999]; Matelli [2012b] 253–259. A certain skepticism with regard to Praxiphanes’ involvement in the polemic to which Callimachus refers is expressed by Lefkowitz [1981]; Cameron [1995] 213, 220 and 376–377.

47 Mygind [1999] 271 (No. 65); Di Gregorio [2008].

49 Pfeiffer [1968] 121 with n. 4. Aratus’ work is qualified as a *diorthōsis* (i.e., as we shall see below, a textual revision preliminary to, and performed for, the purposes of a critical edition) in two ancient *Lives*: I, 8 Martin διώρθωσε δὲ καὶ τὴν Ὀδύσσειαν; III, 16 Martin καὶ τὴν Ὀδύσσειαν δὲ διώρθωσε καὶ καλεῖται τις διόρθωσις οὕτως Ἀράτειος ὡς Ἀριστάρχαιος καὶ Ἀριστοφάνειος. τινὲς δὲ αὐτὸν εἰς Συρίαν ἐληλυθέναι φασὶ καὶ γεγενῆσθαι παρ’ Ἀντιόχῳ καὶ ἀξιῶσθαι ὑπ’ αὐτοῦ ὥστε τὴν Ἰλιάδα διορθώσασθαι.

50 Sources collected by Platthy [1968] 170–173 (Nos. 166–173), whose No. 166 = Euph. test. 1 van Groningen = test. 1 Acosta-Hughes – Cusset (by *Suda* ε 3801): ἦλθε πρὸς Ἀντιόχον τὸν Μέγαν ἐν Συρίᾳ βασιλευόντα καὶ προέστη ὑπ’ αὐτοῦ τῆς ἐκεῖσε δημοσίας βιβλιοθήκης, “(Euphorion) went to Antiochus the Great, king of Syria, and was put by him at the head of the local public library”—a testimony defined by Acosta-Hughes – Cusset [2012] xvi “une des rares attestations qui nous soient restées de patronage de cour concernant les

Of the wonderful long-standing Athenian culture, above all the philosophical sphere prospered and was highlighted by the developments of the Academy and the Lyceum or Peripatus and enlivened by the foundation of the Stoa and the Epicurean Garden. We will see shortly that the Peripatus exerted a special influence on the conception of the Alexandrian cultural institutions. And some explanations of Homeric passages which can be found in fragments of Stoic thinkers such as Zeno and Chrysippus, where they are intended to clarify grammatical phenomena or support philosophical (theological and cosmological) doctrines, could have inspired or, in turn, have been influenced by the highly specialized scholarship that was rising in Alexandria during that period.⁵¹ Moreover, apart from a few private collections of books, such as those set up by Euripides and by Aristotle in their day, the foundation of a new library in Athens must be traced back to the Ptolemies themselves, as an image-building operation which, through evergetic homage to the *polis*, aimed at sharing its prestige and in some sense becoming its heirs, taking possession of its undisputed cultural primacy.⁵²

Finally, the learned culture of the city of Pergamum in Asia Minor reached its acme in the 2nd century, substantially as an aemulation of the Ptolemaic institutions by the kings of the enterprising Attalid dynasty; and Rome—where the first steps towards philo-Hellenism in some sectors of high culture date to the second half of the 3rd century—did not begin to exert a significant role in this historical framework until the 2nd/1st century. For this reason, both of these seats of learning will be dealt with in a later section of this chapter.

Thus, within the Hellenized world of the 3rd and first half of the 2nd century, apart from just a few localized centers (Cos, Rhodes) and some isolated personalities who may have acted as early forerunners or contemporary

Séleucides, et du souhait, chez ces derniers, de promouvoir les Lettres". As a scholar poet, Euphorion's focus of interest included, among other things, poetic-musical history, which he examined in works entitled *On the Isthmian Games* and *On the lyric poets* (fr. 65–68 and 69 Acosta-Hughes – Cusset). On a putative *damnatio memoriae* of Alexandria in Euphorion's poetic work, as a consequence of imperialistic rivalry between Seleucids and Ptolemies, see Magnelli [2013]. Overall on Hellenistic Antioch: Downey [1963]; Pack [1993].

51 Long [1992] 48–49.

52 Book collections in 4th century Athens: Pinto [2013]. Epigraphic testimonies on the Athenian *Ptolemaion* are collected by Platthy [1968] 110–112 (Nos. 28–35). About Hellenistic Athens: Ferguson [1911]; Habicht [2000]; Shipley [2000] 108–152. That 3rd century 'libraries' were rather institutionalized book collections, then thought of as libraries by subsequent generations of scholars, is contended by Hendrickson [2014]. In this chapter, however, the traditional naming of 'library / -ies' will be conventionally maintained.

competitors and sources of inspiration, Alexandrian scholarship under the Ptolemies shines as a leading center in its field, whereas a description in terms of a polycentrism of seats of learning and great public libraries should more properly be reserved for the period from roughly the middle of the 2nd century.⁵³

Two major events exerted a lasting effect on the historical line of Alexandrian philology. Firstly, the scaling down of the imperial ambitions of the Ptolemaic Crown, in the wake of the loss of the overseas dominions in the final decades of the 3rd century. In the second place, the political turning point marked by Ptolemy VIII Euergetes II's reprisals upon his accession to the throne in 145/144 after a severe crisis within the royal dynasty. This led on one hand to an impoverishment of the segment of the population represented by intellectuals from Greek areas, who in the previous decades had been the main reservoir of scientific and literary talents for the Ptolemies' cultural policy, and on the other to a diaspora of scholars departing from Alexandria, with the effect of a widespread insemination of scholarly interests and methods outside the Ptolemaic capital. We will adopt this latter historical reorientation in the tide of events as the watershed in our survey.

2.2 *Culture and Royal Patronage in Early Ptolemaic Egypt: The Museum*

The outstanding character of Alexandrian philology during the early Hellenistic Age was due first and foremost to its origin as the product of a successful large-scale planned cultural policy and personal patronage by the Ptolemaic (or Lagid) royal house.⁵⁴ The latter was formally constituted in 305 by Ptolemy son of Lagos,⁵⁵ one of the members of the high Macedonian aristocracy who as generals fought alongside Alexander the Great in his military campaigns and who, after the death of the king, battled with one another for imperial power (and thereafter were called *διάδοχοι*, "successors"). The initial steps taken by the first Ptolemies in their cultural enterprise appear to have been closely linked to

53 (Fresh) editions of fragments of early Hellenistic scholarship are especially needed in order to establish a more definite frame, as invoked among others by Dettori [2000b] 183–184.

54 On Ptolemaic patronage: Fraser [1972] 1.305–312; Murray [2008]. On cultural and ideological implications of the relationship between power and literature in Ptolemaic Egypt: Merkelbach [1981]; Weber [1993]. Historical overviews of the period: Bevan [1968]; Shipley [2000] 192–234; Thompson [2003]; Adams [2006] 38–43; Manning [2009]; Vandorpe [2010].

55 For a profile of Ptolemy see Ellis [1994].

the Peripatus.⁵⁶ Although this has been disputed,⁵⁷ today it is corroborated by rather plentiful direct and indirect evidence, ideally starting from the personal Macedonian roots of Aristotle and his aforementioned close relations with the kings Philip II and Alexander the Great.⁵⁸ According to Strabo, writing in the Augustan Age, Aristotle “was the first to collect a library and taught the kings of Egypt the planning of a collection of books (βιβλιοθήκης σύνταξιν).”⁵⁹ Given that the philosopher died in 322, we are compelled to draw from this statement that the Ptolemies deliberately *chose* the criteria of the Aristotelian private library for their own book collection. Ptolemy I established contacts with a number of Greek intellectuals, and sought to persuade them to move to Alexandria as preceptors of his son (a mention of Philitas was already made above). Among such intellectuals was the Peripatetic Theophrastus, who declined the invitation,⁶⁰ and Theophrastus’ pupil and future scholarch Strato of Lampsacus, named ὁ φυσικός (“the scientist”), who, persuaded by a sizeable fee, accepted.⁶¹ The king was also successful with Demetrius of Phalerum, himself a disciple and friend of Theophrastus and personally active in the field of literary criticism.⁶² Exiled from Athens after the seizure of the town by Demetrius Poliorcetes in 307, Demetrius of Phalerum took up residence firstly in Boeotian Thebes and later, after the death of Cassander (297), in the Ptolemaic capital,⁶³ perhaps

56 Selectively: Turner [1962] 140–141, 144 and [1968] 106–107; Bevan [1968] 124; Momigliano [1968]; Wilson [1969] 368–369; Fraser [1972] 1.314–315 and 320; Rossi [1976] 111–115; Blum [1977] 27–134; Arrighetti [1987]; Canfora [1993] 11–16 and [1999]; Nicolai [1992] 265–270; Montanari [1993b], 259–264; Richardson [1994]; Erskine [1995] 39–40; Nagy [1996], especially 187–206, and [1998] 189–206; Montanari [2000a].

57 Pfeiffer [1968], while not totally rejecting a link (*e.g.* 103–104), rules out the initial Peripatetic matrix of Alexandrian philology, preferring to stress the role of Philitas.

58 An inclination of Alexander towards the foundation of libraries and translation of books into Greek is argued by Canfora [1993] 18–19.

59 Str. 13.608.

60 Diog. Laert. 5.37: Fortenbaugh-Huby-Sharples-Gutas [1992] 20–21, No. 1.

under the protection of Eurydice, Cassander's sister and the first wife of Ptolemy I.⁶⁴ He is said by ancient sources to have influenced the king's cultural policy, assisting him in the initial constitution of a royal Library and possibly providing him with the inspiration to found the Museum, or Shrine of the Muses, a cultural institution apparently moulded upon the Platonic and Aristotelian schools at Athens. The testimony of the 2nd/3rd century AD writer Athenaeus suggests that king Ptolemy II Philadelphus (283–246) bought from Neleus of Scepsis, a pupil of Theophrastus, the books constituting the private library of Aristotle⁶⁵ and it is those very works that may have made up the original fund of books of the Alexandrian Library.⁶⁶ However, again according to Strabo, the Aristotelian esoteric ('internal') writings, composed for specialized discussion within the Peripatus, did not become known to the general public until they were published in the second half of the 1st century.⁶⁷ The two testimonies can be reconciled by assuming that Neleus sold to Ptolemy the books owned by Aristotle except for the collection of Aristotle's own works.⁶⁸ While the full historical reliability of these testimonies may be open to doubt, they do at least document the ancient sensation of a strong connection—indeed a genetic link—between the Peripatus and the Ptolemaic cultural policy.

In fact an Aristotelian imprint appears from the internal structure and the activities themselves of the Museum. Describing the royal palace-complex in the Brucheion, the northeastern quarter of Alexandria, Strabo tells us:

The Museum is part of the royal quarter and it has a cloister⁶⁹ and an arcade and a large house in which is provided the common meal of the men of learning who share the Museum. And this community has common funds, and a priest in charge of the Museum, who was appointed previously by the kings, but now by Caesar.⁷⁰

FGrHist 1026 fr. 75); Dem. Phal. fr. 69 Wehrli = fr. 1 Stork-Ophuijsen-Dorandi. On Ptolemy's advances see Fraser [1972] 1.314–315. On Demetrius in Alexandria: Williams [1987] 90–91.

64 The connection is highlighted by J. D. Morgan *apud* Nagy [1996] 196 with n. 30 and 198 with n. 38.

65 Ath. 1.3b.

66 Blum [1977] 109–134; Canfora [1999]; Tanner [2000].

67 Str. 13.609.

68 We will return in detail to the question later, § 3.2.

69 In Greek *περίπατον*, a word emphasized by Nagy [1998] 198, by arguing that “[t]his physical feature is also a notional feature metonymically linking the Museum to the Lyceum”.

70 Str. 17.794, translated by Fraser [1972] 1.315.

According to this testimony, and to other surviving evidence, the organization of the Museum is shown to have been strongly influenced by the Academic and Peripatetic models. They were essentially permanent institutions which gathered together communities focusing on religious worship of the Muses, sharing intellectual activities and enjoying common dinners (συσσίτια).⁷¹ However, some major differences are worth underlining: the Ptolemaic Museum was physically incorporated into the royal palace, actually being a ‘property’ of the sovereign,⁷² and it had little of the twofold dimension—not only internal or introflexed, but public or acroamatic as well—so typical of both of the main philosophical Athenian schools. The Alexandrian Museum must have been open to no more than a few pupils, selected to be trained to work within the Ptolemaic institutions.⁷³ But ultimately, the “scientific attitude to literature and to all branches of natural study” displayed in the Museum with an inclination to encyclopedism is an unmistakable Peripatetic feature.⁷⁴

Thus in Alexandria the cultural gap between the prominent learned men patronized by royal power and the overall body of inhabitants was becoming increasingly pronounced. This fits well with what is known about the exclusive and intellectualized poetry favored by the majority of the learned men of the Museum (scholar poets), and it would seem to have been the target of some polemical verse addressed against Alexandrian thinkers by the 3rd century poet Timon of Phlius:

71 Str. 13.608–609; Diog. Laert. 5.51–57. See Fraser [1972] 1.312–316; Canfora [1993] 11–16. Lynch [1972] 121–123, on the contrary, minimizes the importance of these similarities. On the long-lasting debate concerning the alleged religious character (*thiasoi*) and juridical status of both of the philosophical schools in classical Athens see Natali [2013] 78–90, whose conclusion is that (86) “the principal purpose of the establishment of the philosophical schools was not the cult of the Muses but was something else, the implementation of the ideal of the theoretical life” as envisaged especially by Aristotle in terms of *συνφιλοσοφείν*. It was not before the 1st century that these schools became institutions juridically self-standing, according to Maffi [2008]. Luzzatto [2008], especially 151, rather stresses the influence exerted on the Alexandrian institutions by the Isocratean pattern of culture (*φιλοσοφία* in classical, still encyclopedic acceptance: see below, n. 76). Unfortunately the treatise *On the Museum at Alexandria* by the grammarian of the Augustan Age Aristonicus is lost.

72 As underscored by Canfora [1993] 15.

73 Fraser [1972] 1.318.

74 The quotation is from Fraser [1972] 1.305. The connection is confirmed by proven Peripatetic influences on interests, concepts and methods of militant Hellenistic scholarship: see e.g. Meijering [1987]; Richardson [1992a] and [1994]; Montanari [1994a]; Schironi [2009b]; Cadoni [2010]; Montanari [2012d]; Hunter and Nünlist, this volume.

πολλοὶ μὲν βόσκονται ἐν Αἰγύπτῳ πολυφύλῳ / βιβλιακοὶ χαρακίται ἀπείριτα
δηριόωντες / Μουσέων ἐν ταλάρῳ

in the populous land of Egypt many are they who get fed, / cloistered
bookworms, endlessly arguing / in the bird-coop of the Muses.⁷⁵

Athenaeus, introducing the quotation of these lines, says that Timon is ridiculing “philosophers” of the Museum because they are like valuable birds fed in a coop.⁷⁶ Regardless of whether the metaphor Μουσέων ἐν ταλάρῳ is interpreted as “in a closed birdcage”, namely an entity secluded from the external world or a zoo,⁷⁷ or as “in a bird-coop” of a farm where delicacies for the table are fattened,⁷⁸ in either case “these birds are unfledged, confined to the nest, unable to nourish themselves, and thus dependent on their parent-bird”.⁷⁹ Contentious rivalry and inept seclusion seem to be closely combined in this confined environment. The imagery recalls the quarrelsome ambience portrayed in some of the prominent works by Callimachus, the great poet and scholar who likewise worked in the Museum during the first half of the 3rd century.⁸⁰

It has been argued that Peripatetic influence is not sufficient to completely explain the origin and specificity of the Alexandrian Museum. Intuitively, the organicity of the institution with the newborn royal power may suggest that an interest in culture was exploitable in several ways. On the one hand, in general terms the patronage of Hellenistic kings resumed and institutionalized the inclination of archaic and classical Greek aristocracies towards private patronage over intellectuals and artists in order to obtain personal prestige.⁸¹ On the other, one may perceive in the Lyceum-shaped Museum a response to the political needs of the first Ptolemy, whose main concern, immediately after his installation, lay not only in self-legitimation both as a Greek sovereign and as the true heir of Alexander (the relation of the latter with Aristotle being

75 Tim. Phl., *Silli*, SH 786 = fr. 12 Di Marco, quoted by Ath. 1.22d, here in the translation by Fraser [1972] 1.317.

76 The term φιλόσοφοι could well have represented, in its Isocratean wide (encyclopedic) acceptance, the official denomination and cultural profile of the learned members of the Alexandrian Museum: Luzzatto [2008] 147–154, with scrutiny of sources.

77 Di Marco [1989] 142–143.

78 As suspected by Fraser [1972] 2.471 n. 88, and argued by Cameron [1995] 31–32; cf. Clayman [2009] 93.

81 Nagy [1998].

well known)⁸² and of Alexander's imperial project, but also in bestowing on the Greek ruling minority of Egypt a cultural link with the past and present of Hellenic culture: a project he cultivated by summoning scientists and scholars from throughout the Greek world to serve in his Museum. With all likelihood Ptolemy I and at least both of his immediate successors aimed at leadership (or monopoly) of Greek culture as a means of displaying their (claimed) political leadership over the Hellenized world.⁸³ Ultimately, this provides insight into the reason why in ancient Alexandria scholarship was "central to a political elite".⁸⁴

This also appears to be the most satisfactory explanation of the fact that the cultural policy of the first Ptolemies was widely cosmopolitan within the Greek world, displaying a marked preference for learned men drawn from Greek regions and cities that boasted a long-standing and impressive tradition. There is some evidence of intense talent-scouting and a campaign for recruitment and transfer of intellectuals promoted by Soter and Philadelphus.⁸⁵ The advances of Ptolemy I to Theophrastus and Demetrius of Phalerum, as well as the choice of Philitas and Strato for the post of royal tutors, reveal the special attention devoted to the Greek intelligentsia (philosophers, scientists, and poets). One cannot impute wholly to chance the telling circumstance that the main 3rd century intellectuals (many of whom, if not all, were poets) recruited as scholars by the Lagids came from areas which had long been seen as defining the boundaries of the Greek landscape, though apparently with the absence of Western Hellas:⁸⁶ Alexander Aetolus (also linked to the poetic circle patronized by the Macedonian king Antigonus Gonata at Pella), Lycophron of Chalcis, Zenodotus of Ephesus, Eratosthenes and Callimachus, both of whom were from Cyrene. Thus the cosmopolitan philo-Hellenism inscribed in the cultural policy of the first Ptolemies can be traced back at least in part to the internal political situation of Egypt, which at that time was subject to forced Hellenization, as well as to the ambitions of imperial power nourished throughout an entire century by the Lagid dynasty.⁸⁷

82 Ellis [1976] 161–162, argues that the young Ptolemy son of Lagos was also a pupil of Aristotle at Mieza in about 342, among the Macedonian royal Pages of Alexander; cf. Ellis [1994] 4 and 61. About Pages: Heckel [1992] 237–298; Strootman [2013] 45–46.

86 We lack any positive evidence about a philological activity of Theocritus of Syracuse at Alexandria.

87 Erskine [1995] 45. On the thalassocratic policy pursued by the first Ptolemies: Buraselis-Stefanou-Thompson [2013]. For an instance of poetry mirroring Ptolemies' imperial ambitions see Bing [2005] (Posidippus of Pella).

The factors highlighted by research so far—interest in knowledge; traditional dynastic patronage; self-promoting power or imperial ideology in a Macedonized-Hellenized world—were undoubtedly intermingled and jointly contributed to inspiring the conception of the Alexandrian Museum. Factual, mental and symbolic aspects coalesced to produce an outstanding cultural entity. Moreover, even granted that the Greek intellectual community working in the Museum was primarily intended to serve propagandistic purposes, it was at the same time designed to be, and was in fact, neither static nor simply decorative, but lively and pro-active in the endeavor to provide open and unceasingly substantive research in a number of branches throughout the sciences and literature. In other words, the Aristotelian epistemological methodology and systemic/encyclopedic grid can be said to have been cloned at Alexandria not merely because such aspects were exploitable by power, but also, or perhaps rather, as a comparatively effective and therefore consciously and positively preferred means of knowledge.

2.3 *Making the 'Universal' Library*

A great Library was needed in the service of the activities of the Alexandrian Museum.⁸⁸ The model, apart from the Aristotelian influence, may have been previous collections of writings in tombs, temples, and royal buildings of the ancient Near East and Egypt.⁸⁹ Unfortunately, ancient writers have left no documentation either on the exact topography of the Library within the Brucheion, the royal quarter of the city, or its physical and operative links with the Museum. Ptolemy II—undoubtedly implementing and fulfilling an intuition of his father—equipped the royal quarter with such a facility, allegedly aided at first by positive assistance from Demetrius of Phalerum.⁹⁰ It is impossible to determine the extent of a putative role played by Demetrius, and one cannot rule out that it may have been a fanciful invention to ennoble the foundation of the Library.⁹¹ In favour of an actual role of Demetrius, it has been noted that he is said to have embraced the cult of Sarapis, newly introduced

88 The modern critic literature on the Alexandrian Library has impressively increased. Selectively: Parsons [1952]; Canfora [1990]; El-Abbadi [1992²]; the essays collected in MacLeod [2000], especially Barnes [2000], and in El-Abbadi – Fathallah [2008]; Berticosta [2010].

89 Haikal [2008], who claims (54) that the Ptolemaic royal Library “must have been the equivalent of the *pr md3t pr* ‘3 or ‘House of Books of the [Pharaonic] Royal Palace’ with its scribes”. Cf. Pedersén [1998]; Potts [2000].

90 Dem. Phal. fr. 17, 66, 67, 188, 199, 201, 202 Wehrli = fr. 58A-66 Stork-Ophuijsen-Dorandi. See especially Fraser [1972] 1.314; Canfora [1993] 12–13.

91 Honigman [2003] 88–91.

by the Ptolemies possibly in order to promote integration between Greeks and Egyptians.⁹² This may accord with the existence of another library, called “daughter” and “outer”, in the temple of Sarapis or Sarapeum built perhaps by Ptolemy I and later restored by Ptolemy III Euergetes I (246–221) in the Alexandrian quarter of Rhacotis.⁹³ However, whether or not Philadelphus was the founder of the great Library, and even though wholly sharing the ambitious project of his father, as soon as he came to the throne he dismissed Demetrius, who was charged with having supported a different heir to the kingship: for Demetrius had advised Soter to bestow the kingship on one of his sons by his first wife Eurydice, intuitively because she was Cassander’s sister,⁹⁴ but the king, on the contrary, had chosen his son by his second wife Berenice, princess of Cyrene.⁹⁵

It is known that the Library was directed by a librarian-in-chief. A list of the librarians of 3rd and 2nd centuries is provided by a papyrus found at Oxyrhynchus, to which we will return later. Some librarians, such as Zenodotus, Apollonius Rhodius and Aristarchus, are said also to have worked as tutors to the royal family and therefore with all probability this function was appointed by the king himself.

The Library was apparently designed from the very beginning as the venue for collecting the works of all times written in (or else translated into) Greek. Our fullest source concerning the Library, the *Prolegomena de comoedia* by the Byzantine writer John Tzetzes (ca. 1110–1185), states that the books (papyrus rolls or *volumina*) collected were “all the ones of the Greeks and of all other peoples and also of the Jews”;⁹⁶ this hyperbolic statement probably referring to translations into Greek of particularly important foreign works, as was the case for Jewish Law. The collection grew throughout the Hellenistic Age, reaching some hundred thousand books. Tzetzes gives the figures of 400,000 “mixed” (σμμυγείς) and 90,000 “unmixed” (ἀμμυγείς) rolls⁹⁷—a single work often being

92 Ellis [1994] 55–56. On the new cult of Sarapis: Tac., *Hist.* 4.83–84; see Fraser [1972] 1.246–249; Stambaugh [1972], especially 6–13; Pfeiffer [2008]; Bergmann [2010].

93 On the ‘daughter’ Library: Pfeiffer [1968] 102; Fraser [1972] 1.323–324; El-Abbadi [2008].

94 Nagy [1996] 198.

95 Diog. Laert. 5.78 (Hermipp. fr. 69 Wehrli = *FGrHist* 1026 fr. 75): Dem. Phal. fr. 69 Wehrli = fr. 1 Stork-Ophuijsen-Dorandi. Demetrius may have worked together with the first Ptolemy when the son of the latter was only associated with the royal power (285–283): e.g. Canfora [1999] 15. Collins [2000] 82–114 believes that Demetrius was genuinely the first to hold the position of head of the Library under the reign of Soter.

96 John Tzetzes, *Prolegomena, Prooemium* II (X1a II, 32.16–17 Koster).

97 John Tzetzes, *Prolegomena, Prooemium* II (X1a II, 32.9–11 Koster): Dem. Phal. fr. 58B Stork-Ophuijsen-Dorandi (cf. fr. 67 Wehrli). The *Scholium Plautinum* (Vat. Lat. 11469, f. 181r),

constituted by more than one roll⁹⁸—and the books reached the number of about 700,000 according to the 2nd century AD Latin writer Aulus Gellius.⁹⁹ In the same period, again as described by Tzetzes, the Library in the Sarapeum contained 42,800 rolls.¹⁰⁰

It is legitimate to imagine that the making of such a large and remarkable amount of books, though gradual over time, was planned by the first Ptolemies as the common goal of a specialized team of learned personalities working on what must, intuitively, have been at least a three-stage task: firstly, retrieval of copies; secondly, textual checking and emendation of the material in order to (re)establish authenticity, general reliability and correctness; and finally, critical re-editing of texts and drawing up commentaries together with study of the collected works by successive generations of learned men within the Museum. The second and third stages of activity will be described in the next section; here we will address the first stage.

Of interest in this regard is some traditional information, or rather stories, about the Ptolemies' book acquisition strategy, which consisted in importing, copying, and translation. Some sources, perhaps reflecting Ptolemaic propaganda itself, depict this process as a series of anecdotes about the kings' bulimia towards books, with particular reference to the second and the third Ptolemy. Their predilection for conspicuously flaunting the acquisition of available books could be interpreted as an 'imperialist' attitude.¹⁰¹ Many rolls were regularly purchased at the renowned book markets of Athens and Rhodes¹⁰² and one source attests that Philadelphus launched an impressive call for books "to all the kings and rulers of the earth" in order to obtain texts of every genre.¹⁰³ Other books were acquired through what might be termed (in a modern perspective) more questionable ways of appropriation, for example by commandeering all books coming into the town harbors by ship from abroad, and then returning copies to the legitimate owners instead of the originals.

a humanistic Latin annotation derived from Tzetzes, quotes Callimachus as the source for these numbers, but wrongly, as it seems: Parsons [1952] 108–112; Koster [1961]; Pfeiffer [1968] 48 n. 19, 175 n. 86, 184, 213–214.

98 Usually the adjective *συνμιγείς* is taken here to mean "containing several works" (e.g. Lloyd-Jones [1990] 27) or "compound" (e.g. Turner [1968] 102). In the opinion of Canfora [1993] 24 it designated the roll "che, insieme con altri, concorre a formare un'unica opera" [which, together with others, contributes to forming a single work].

99 Gell. 7.17.3.

100 Extreme skepticism with regard to these figures is expressed by Bagnall [2002].

101 Erskine [1995] 45.

102 Ath. 1.3b.

103 Epiphani. Schol., *De mensuris et ponderibus*, PG 43.252.

These rolls formed a fund called ἐκ πλοίων, ‘from ships’. A similar trick is attributed to Ptolemy III, who is said to have borrowed some precious rolls from the city of Athens, after depositing a sizeable security of 15 silver talents for the loan: these were none other than the rolls that had been created at the behest of Lycurgus during the political leadership of the latter (338–326) in order to establish an official and authorized text of the tragedies of Aeschylus, Sophocles and Euripides. Ptolemy then apparently commissioned a costly copy of the books and sent these new copies back to Athens instead of the originals, forsaking the deposit.¹⁰⁴ The anecdote is a telling revelation of the value attributed to the Athenian exemplars in the eyes of Ptolemy, who evidently was well aware of the process of text corruption that frequently affected copies, and it is representative of the so-called ‘Alexandrian ideology’, eager to possess canonical texts of ancient literature(s).¹⁰⁵

Another important chapter in the story of early Ptolemaic voracity for books—whether the tradition is reliable or whether it is no more than a constructed myth—is represented by translations into Greek of relevant works written in different languages, such as those forming part of the Chaldaic, Egyptian, and Roman heritage;¹⁰⁶ a translation of the Zoroastrian *corpus* is also attested to by Pliny the Elder.¹⁰⁷ To this end, many “expert men” are said to have been engaged by the Ptolemies, “aware of their language as well as of the Greek one”.¹⁰⁸ Obviously, translation into Greek can be seen as part and parcel of the Hellenization (in the sense of the symbolic appropriation and subduing) of foreign cultures.¹⁰⁹ Furthermore, the philological relevance of translation is also worth noting: the process of transposition from one

104 Both of the stories on books “from ships” and the Athenian rolls of the tragic poets can be read in Gal., *In Hippocratis librum III epidemiarum* 2.4, 17/1.606–607 Kühn: Aeschylus test. 146 Radt = Sophocles test. 157 Radt = Euripides test. 219 Kannicht. See Wenkebach [1936] 79–80; Platthy [1968] 118–119; Fraser [1972] 1.480–481; Battezzato [2003] 19–22; Scodel [2007].

105 Nagy [1996] 201–205, who sees the seminal act of this Ptolemaic project as residing in the acquisition of the alleged Aristotelian ‘edition’ of the *Iliad* owned by Alexander (Plut., *Alex.* 8.2); cf. Honigman [2003] 43–44. A skeptical opinion in this respect is maintained by Sanz Morales [1994] 22–39.

109 Erskine [1995] 43; cf. Canfora [1993] 21; Gruen [2006]; and more generally, on the attitude of Greeks towards foreign cultures, Momigliano [1975]. On Hellenization as a translation

language to another implies textual analysis, understanding and interpretation, *i.e.* functions closely comparable to emending and commenting on literary texts—both of which were typical activities of criticism undertaken in the Alexandrian Museum.

One of the most notable Ptolemaic achievements in this sphere is said to have been the translation from Hebrew into Greek of the Jewish Law (Torah), *i.e.* the first five books of the Bible or Pentateuch, by a selected commission of 72 Jewish elders. This was the core of the Greek translation of the *Old Testament* known as *Septuaginta* (LXX). The episode is the main narrative in the anonymous, and largely fictional, composition known as *Letter of Aristeeas to Philocrates*, which should more properly be called *Book of Aristeeas*. This work seems to have been composed in Alexandria around the middle of the 2nd century for an audience of highly educated Jews, as an aetiology of the LXX translation and designed to defend its accuracy and sacredness despite the poor quality of contemporary manuscripts, the text of which had undergone serious deterioration. The intellectual approach inspiring the *Book* may have been influenced by textual criticism on Greek works (chiefly the Homeric poems), in which the Museum excelled during this period, reaching results such as the highest achievements of Aristarchus.¹¹⁰ It is also worth recalling that possibly in the same period, namely the central decades of the 2nd century, Aristoboulos was composing, very probably in Alexandria, and dedicating to the king an exegetical work written in Greek in which some difficult passages of the *Old Testament* were explained, partly by resorting to allegoresis, thereby foreshadowing a method later abundantly displayed in Biblical exegesis by Philo of Alexandria.¹¹¹

The first person narrator in the *Book*, a court official of Ptolemy (the Philadelphus, as it seems) called Aristeeas, gives a report on his journey in Judaea as an envoy to Eleazar, High Priest of the Hebrews at Jerusalem, where his mission was to obtain the most authoritative exemplar of the Jewish Law from which to draw a reliable Greek version for the royal Library in Alexandria.

of Egyptian patterns and a means for their appropriation by the Alexandrian court and elite see Koenen [1993].

110 Thus the most recent comprehensive study on the topic, Honigman [2003], especially 119–143. On the dating of the *Book* see, therein, 128–130. On the extensive success and tradition of this work: Canfora [1996].

111 On the interaction between Jewish Biblical interpretation and Hellenistic scholarship: Siegert [1996]; Niehoff [2011]. On the Jewish community of Hellenistic Alexandria and relevant ancient representations: Fraser [1972] 1.54–58; Gruen [1998], [2003], [2006] and [2010]; Kovelman [2005].

Grafted into his narrative are several lengthy digressions shaped around the plot of the biblical *Exodus* and regarding the history of Judaism and the Graeco-Egyptian Jewish community up to the liberation from slavery by Philadelphus.¹¹² As an antecedent of the embassy, reference is made near the opening of the work to a conversational exchange—whose historicity is in fact mostly rejected as quite improbable—between Ptolemy II and Demetrius of Phalerum. Let us read the actual account given by the ancient writer.¹¹³

[9] When Demetrius of Phalerum was made head of the king's library, he was furnished with large sums of money to collect, if possible, all the books in the world. He started buying (them) and having (them) transcribed, and he brought the king's project to completion, as far as lay in his power. [10] In fact, when asked in our presence just how many tens of thousands of books there were, he said: "More than twenty, sire. Within a short time, I will fill up the remainder so as to bring the total up to 500,000. It is reported to me that the law books of the Jews too deserve to be transcribed and included in your library." [11] "Well, then," (the king) said, "what is keeping you from doing that? For everything you need has been put at your disposal." Demetrius said: "A translation is needed. For in the Jews' country they use their own special characters, just as the Egyptians (use their own) writing system: accordingly they also have their own special spoken language. They are supposed to use the Syrian language, but that is not true; (their language is a) different type."

Invited by the king to show some suggestions for transcription of the books of the Jewish Law, Demetrius drew up a memorandum in which he noted that

[30] . . . these are put in Hebrew characters and language, and have been recorded in written signs¹¹⁴ rather carelessly and not as well as is possible, as is reported by the experts. For they have not received a king's provident care. [31] It is fitting that these books too be available to you, in an

112 The relevance of this second theme is underscored by Kovelman [2005] 131.

113 *Book of Aristeeas* 9–11, 30–31, 38–39, 301–303, here in the translation by Stork-Ophuijsen-Dorandi [2000] 112–117 (their Dem. Phal. fr. 59), except for §§ 38–39 (not included in that edition).

114 More precisely "have been transcribed" (σεσήμανται), with reference to Hebrew copies made on the basis of the original or official Torah: Zuntz [1959] ([1972] 133–135); Honigman [2003] 48.

accurately established text, because this code of laws is both quite philosophical and uncontaminated, being as it is, so to speak, of divine origin.

Ptolemy endorsed Demetrius' suggestion. In his letter to Eleazar, after an account of the emancipation of the Jewish captives, he put forward the request in the following terms:

[38] Now since I am anxious to show my gratitude to these men and to the Jews throughout the world and to the generations yet to come, I have determined that your law shall be translated from the Hebrew tongue which is in use amongst you into the Greek language, that these books may be added to the other royal books in my library. [39] It will be a kindness on your part and a regard for my zeal if you will select six elders from each of your tribes, men of noble life and skilled in your law and able to interpret it, that in questions of dispute we may be able to discover the verdict in which the majority agree, for the investigation is of the highest possible importance. I hope to win great renown by the accomplishment of this work.¹¹⁵

Eleazar agreed and sent the books together with the 72 selected elders, who, as can be read near the final part of the *Book*, were taken to the small island of Pharos off the coast of Alexandria. There, working with great zeal, they achieved their task in 72 days under Demetrius' supervision.

[301] Three days later Demetrius took them along with him, passed along the seven stades' dam in the sea, which led to the island, crossed the bridge, and proceeded to the northern part, where he established working sessions in a house prepared for that purpose near the beach, excellently furnished and located in a very quiet spot. There he invited the men to accomplish the translations, anything they might possibly need for their work being at their command. And they accomplished each (of the translations), achieving agreement among themselves through discussion. [302] The (text which was) produced through agreement was thus written out in a fitting manner under the direction of Demetrius. [303] The sessions lasted until the ninth hour; after that they broke up to take care of their bodily needs.¹¹⁶

115 The translation of §§ 38–39 is by Andrews [1913].

116 The story is summarized by posterior sources, among which very succinctly John Tzetzes, *Prolegomena, Prooemium* II (XIIa II, 33.2–3 Koster): Ptolemy obtained the Greek trans-

An impressive critical debate has arisen concerning the ideal and religious implications that underlie LXX and also concerning the genre, aim, audience, and historical reliability of the *Book of Aristeas*.¹¹⁷ Whatever the answer to these questions, as far as our specific topic is concerned the *Book* provides non-negligible evidence on (a later perception or recasting of) the Ptolemaic Hellenocentric interest—extending between the 3rd and mid-2nd century—in books representative of non-Greek cultures as well as in related philological translations apparently carried out with the same accuracy and skill that habitually characterized editions of texts.¹¹⁸

The life of both the Library and Museum, which continued throughout the Hellenistic Age, is from our perspective identified with the body of knowledge on the work of many personalities of Alexandrian scholarship—with which we will be concerned later.

The post-Hellenistic history of the Library and the circumstances of its end are still under debate. According to ancient sources it was accidentally destroyed, but more probably only diminished, by the torching of the Egyptian fleet anchored in the Eastern Harbor of Alexandria, when the blaze spread to the shore in the days of the Alexandrian War fought by Julius Caesar in his pursuit of Pompey (48/47).¹¹⁹ However, the scholars operating in Alexandria during the Augustan Age such as Didymus, Theon, and Tryphon, must still have been able to avail themselves of a fairly extensive repository of books in the city for their studies;¹²⁰ and when Strabo, who was visiting Alexandria in about the year 25, briefly describes the site of the Museum (though without mentioning the Library), he makes no reference to a relatively recent fire or destruction within the Brucheion. Therefore, it is widely agreed that the Library substantially survived at least until the days of the emperor Aurelianus, who in 273 AD attacked Alexandria where he aimed to defeat Firmus, an ally of Zenobia the

lation “of the Jewish *Bible* through seventy-two Hebrew interpreters expert in both languages”.

117 Honigman [2003] 105–118. In the steps of Erskine [1995], she argues (117) that the acquisition of the LXX and its incorporation into the Library could have served political purposes in the 3rd century dispute between the Ptolemies and the Seleucids for the control over (Judaea in) Coele-Syria. In her opinion, the 2nd century author of the *Book* is chiefly concerned with the (good) quality and consequent reliability of the Greek translation of the LXX, in order to build up a ‘charter myth’, *i.e.* an apologetic validation for it through a narrative. Collins [2000], on the other hand, attempts a reappraisal of the overall historicity of the *Book*; cf. Niehoff [2011].

118 Cf. §§ 30–31 of the *Book*, quoted above; see Zuntz [1959]; Honigman [2003] 44–48.

119 Cherf [2008]; Bäbler [2010].

120 Fraser [1972] 1.334–335. Cf. Hatzimichali [2013a].

queen of Palmyra.¹²¹ In contrast, the tradition which attributes the destruction of the Library to ‘Amr ibn al-‘Ās upon the order of the Caliph ‘Umar at the time of the Arab conquest of Alexandria (641 AD) can be credited with only very scanty historical reliability.¹²² Furthermore, the definitive destruction of both the main libraries of the city, probably in the 3rd and 4th centuries AD, by no means implied a cessation of the intense Alexandrian cultural life, above all in the philosophical and scientific fields, which continued at least until the Arab conquest and even beyond.¹²³

2.4 *Philology for Books, Books for Philology*

Understandably, the gigantic influx of rolls into the Library involved a number of severe problems. The completely anarchic copying and circulation of ancient handwritten works in antiquity provides the most self-evident and natural explanation of the need for an activity complementary to book retrieval, which was to be undertaken by the scholars working in the Library. It involved the search for unequivocalness and authenticity, mainly by checking textual reliability and, if necessary, emending the copies, in order to establish the correctness, true form and authorship of works. Moreover, if the 2nd century AD physician and scholar Galen is to be believed, the bibliophily or bibliomania itself of the Ptolemies (and later of the Attalid kings of Pergamum) can be suspected of having been one of the main causes of widespread forgery of works.¹²⁴

Ancient sources use the term διόρθωσις (*diorthōsis*) to describe the “emendation” of texts that is carried out with the aim of restoring them to the high-

121 Canfora [1990]; cf. Lloyd-Jones [1990] 29; Ellis [1994] 56–57; Empereur [2008].

122 Lewis [2008]; Quassem [2008]. On the contrary, Mojsov [2010] maintains the old view that an active and crucial role in bringing about the final downfall of the Library was played by religious fanaticism, first Christian and then Arab, between the 5th and 7th century AD.

123 Majcherek [2008]. On the destruction of the ‘daughter’ library in 391 AD, as an outcome of the attack on the Sarapeum by the mob instigated by the Bishop Theophilus, see El-Abbadi [2008]. The notion of the Alexandrian Library has been and is usually exploited, and abused, as the standard myth of both universal written culture and book burning: e.g. Polastron [2004]; Raven [2004].

124 Gal., *In Hippocratis de natura hominis* 15.105 Kühn πρὶν γὰρ τοὺς ἐν Ἀλεξανδρείᾳ τε καὶ Περγᾶμῳ γενέσθαι βασιλεῖς ἐπὶ κτήσει παλαιῶν βιβλίων φιλοτιμηθέντας, οὐδέπω ψευδῶς ἐπεγέγραπτο σύγγραμμα, “in fact, before the Alexandrian and Pergamene sovereigns launched into the race for book acquisition, there existed no falsely attributed works”. Similar statements were made with regard to the *corpus* of Aristotle’s writings by various late antique commentators, quoted by Fraser [1972] 2.481–482 n. 151. On *Echtheitskritik* in ancient philology see Bühler [1977] 49–53.

est possible original quality by removing errors, interpolations or forgeries. The result was the *ἐκδοσις* (*ekdosis*), the “edition”, that is to say, placing the alleged good text of a work at the disposal of others.¹²⁵ The concept of emendation needs to be defined more precisely. The ordinary task of the διορθωτής (*diorthōtēs*), a scribe with the function of “corrector”, within a *scriptorium* was to emend scribal mistakes he himself or another scribe might have made while copying a text; he would perform the emendation by comparing the text with its antigraph or by resorting to his own skill. In contrast, as far as the philological *diorthōsis* was concerned, it was designed to restore the highest possible degree of authentic correctness—not of a single copy, but of a literary work in its own right. Naturally, each of these tasks involved its specific premises and purposes and was confronted with problems of different kinds.¹²⁶

Whether for scholarly *diorthōsis* the Alexandrians restricted themselves to text interventions inspired by their personal culture and insight—in a word, by conjecture—or whether they genuinely resorted to comparison or collation of different copies of the same work, is still a subject of debate. The sphere that provides the most helpful clues for evaluating this aspect is ancient scholarship on Homer. Here the comparison among copies is not only clearly attested, albeit in an episodic and discontinuous manner, but it was in a sense inescapable and forced by the atomization of the textual tradition of the poems at that time, represented as they were by a number of local (πολιτικάι or κατὰ πόλεις) and individual ‘editions’ (κατ’ ἄνδρα, as, for instance, that provided by the epic poet Antimachus of Colophon, living in the 5th/4th century).¹²⁷ Furthermore, there is no reason to suppose that the *diorthōsis* of the Alexandrian scholars refrained from making use of this possibility, since it was an integral component of the standards of the more humble task of the *diorthōtēs* of scribal errors. These and other similar facts seem to suffice to claim that the philological principle of the collation of handwritten witnesses was in a sense already in action in Hellenistic Alexandria.¹²⁸

125 Montanari, this volume.

126 Nickau [1977] 10–11; cf. Montanari [2009b] 151, [2009d], [2011b], and [forthcoming]; Rengakos [2012] 248.

127 On ancient ‘editions’ of Homer: West [2001a] 50–72; Pagani-Perrone [2012]. The efforts by van der Valk [1963–1964] to dismiss as scholars’ conjectures the variant readings quoted as from the *politikai* editions in the Homeric scholia have been rendered fruitless by Citti [1966]; cf. Rengakos [1993] 74 n. 5; Nagy [1996] 147; Haslam [1997] 69–74.

128 Nagy [2004] 87–109; Montanari [2009b], especially 159–161; Rengakos [2012]; Conte [2013] 44–50; Montanari [forthcoming]; cf. e.g. Battezzato [2003] 25, with respect to the Alexandrian scholarship on classical tragedy. In the opinion of West [1998–2000] 1.VI–VIII and [2001a] 36 and 67–72, on the contrary, this procedure did not appear before

More frequently, one can recognize textual interventions apparently prompted by conjecture, based upon the evaluation of aspects internal to the work under edition. The Alexandrian scholars had developed various editorial criteria based on clues pointing to suspected corruption with respect to the content, such as inconsistency and inappropriateness (the latter in accordance with the principle of ἀπρέπεια, “unsuitableness”, whose roots are Aristotelian),¹²⁹ repetitions, eccentric passages not in harmony with a particular writer’s usage. Thus there arose the praecept “Ὅμηρον ἔξ’ Ὀμήρου σαφηνίζειν, “to explain Homer by Homer”, which was generally taken to mean that apparent obscurities and problems in the text should be solved first and foremost by seeking an answer in the poetic and stylistic choices typical of a given author¹³⁰—a view also consistent with the Aristotelian concept of poetics as an autonomous, self-standing, and self-justifying sphere.¹³¹ This highlights one of the most significant features of the Alexandrian scholars’ manner of proceeding: the interaction between textual criticism and literary interpretation.¹³²

Another point under discussion today is the practical nature of Alexandrian scholars’ approach to emendation and therefore the material characteristics of the *ekdosis*. With all likelihood, this consisted not so much in preparation of a new corrected copy containing the constituted text, but rather in inserting corrections together with brief related explanations directly into an already existing book, chosen as a working copy; the editor would then put forward his line of reasoning in greater depth orally before the circle of his pupils (as was probably the case for Zenodotus, in the early 3rd century) or by writing them in a *hypomnēma* (ὑπόμνημα, lit. “memory aid”), that is, a “commentary”, arranged on a separate roll. The extensive and erudite *hypomnēma* began to acquire importance not before the first half of the 2nd century through the work of Aristarchus. In the procedure Aristarchus devised, the link between main text and comment was accomplished by a system of marks or critical “signs” (σημεῖα): the same sign was set at the left of the line concerned, in the copy of the literary work, and at the beginning of the related annotation in the

the 2nd century (Callistratus of Alexandria, Crates of Mallos at Pergamum, and especially Didymus in the 1st century).

- 129 On the aesthetic and critical category of τὸ πρέπον (“the convenient”): Pohlenz [1933]; van der Valk [1963–1964] 2.11–35; Schenkeveld [1970] (with subsequent assessments by Lundon [1998], [1999a], and [1999b]); Nickau [1977] 183–229.
- 130 Quoted by the 3rd century Porphyry, *Quaestiones Homericae* 1.11 (56.3–4 Sodano). On the debate concerning the (Aristarchean?) authorship of the maxim, begun with Pfeiffer [1968] 225–227 and Wilson [1971], see Porter [1992] 70–85; Montanari [19970] 285–286.
- 131 Porter [1992], especially 70–71 and 74–75.
- 132 Montanari [2004].

autonomous commentary.¹³³ While the *hypomnēmata* were syntagmatic commentaries, or explanations word by word or phrase by phrase in the order in which they occurred in the commented text, the *syngrammata* (συγγράμματα) were monographs focusing on a specific topic. These *syngrammata* are also defined as περι-literature, or critical works “on” / “strictly concerning” a point of the text or a single question, taking the name from an usual feature of their titles, plausibly traceable to a Peripatetic usage.¹³⁴ A further typical tool of Hellenistic scholarship was the compilation of collections of terms (γλῶσσα, “unusual words” of literary use, and, with a more inclusive perspective, λέξεις, simply “words”) which were believed to need explanation, in the age of a more and more standardized Greek language (*koinē*).¹³⁵ It is worth noting that the first steps in glossography, literary dialectology (*i.e.* study of literary words or languages based on specific dialectal identities distinguished by geographic provenance) and grammar taken by the 3rd century Alexandrian scholars also seem to be primarily connected to the need for understanding, emendation, attribution of archaic and classical works and providing a commentary on them, although one cannot exclude an episodic but progressively self-standing interest in spoken dialects and language.¹³⁶

In the Greek world the activity of commenting was rooted in the ancient art of problem-solving, which experienced uninterrupted development in the time intervening between the exegetic practices of the rhapsodes in the Archaic Age and the text analyses carried out by sophists, philosophers and other intellectuals in the Classical Age; and discussions on the Homeric texts, attested to for the 6th-5th century, culminated in the next century with the ‘edition’ of the *Iliad* drawn up by Antimachus.¹³⁷ Over the time span covering the development of Alexandrian scholarship, a chiefly ecdotic philology seems to have prevailed during the 3rd century, above all with figures such as Zenodotus and Aristophanes of Byzantium, while in the first half of the 2nd century the

135 Pfeiffer [1968] 198.

136 Such an interest is well attested, alongside and in connection with the work on literary languages, in the late Hellenistic and Imperial Age: Pfeiffer [1968] 202; Cassio [1993b], especially 81 with n. 24.

137 *E.g.*, especially on Homer, Richardson [1975], [1992a] and [2006]; West [2001a] 3–32; Cassio [2002]; Novokhatko, this volume.

ekdosis was often accompanied by great learned commentaries such as those composed by Aristarchus. This evolution may have been partly due to the progressive stratification of the critical work and to the accumulation of a body of philological knowledge within the Museum, but it can plausibly also be attributed to the special and previously unheard-of practical organizational requirements arising at the very outset of the Library's constitution: namely, given the massive and heterogeneous stock of books collected therein, it was vital first of all to establish order in the great quantity of works and manuscript witnesses and—a circumstance that must have been a quite frequent occurrence—proceed to the *reductio ad unum* or disambiguation of texts transmitted non-univocally by two or more different exemplars purchased for the Library. It is thus no cause for surprise to learn that Ptolemy II's plan for the initial activities in the Museum required the project to be the teamwork of scholars specialized in literary genres and bibliography. Nor can it be overlooked that the temporary predominance of editing as compared to commenting, perhaps ascribable to the mentioned practical reasons, exactly mirrors what has become a non-reversible principle of modern philological methodology, namely the availability of a critically constituted text as an indispensable prerequisite for a well-founded understanding of a literary work. On the other hand, as modern experience likewise teaches, literary interpretation and textual criticism were reciprocally intermingled and their interaction resulted in a fertile continuous exchange. This awareness reached full maturity with Aristarchus. The comment served the function of encouraging debate on textual problems and was oriented towards investigating and seeking to understand the origin of a reading, offering arguments for or against the text constitution choices made in the edition (with focus on constitution of the text). The constituted text helped to explain aspects of the literary work that were felt to be intrinsically obscure for reasons of content or style (here the focus was on the meaning of the text as it had been constituted, namely the literary text in itself).

In the diachronic and typological dynamics of collecting, emending, editing, and explaining ancient works within the Library and Museum, another remarkable circumstance deserves to be pointed out. As far as is known from currently available documentation, it can be inferred that the attention of the first scholars and their royal patrons focused overwhelmingly on archaic and classical poetry. Therefore both prose writers and Hellenistic literature may appear to have been excluded from the immediate horizon of early Hellenistic philology until the 1st century, when Alexandrian scholars such as Asclepiades of Myrlea, Didymus, Artemidorus of Tarsus and his son Theon devoted a great portion of their attention to these fields. But this impression is almost certainly misleading.

Traces of an interest in prose literature by the earliest Alexandrian scholars are not lacking.¹³⁸ Historians and orators are quoted in some fragments of the *Λέξεις* (*Lexeis*, or *Words*, a lexicographic collection) compiled by Aristophanes of Byzantium in the second half of the 3rd century. The remnants of a papyrus scroll preserve a fragment of a *hypomnēma* composed by Aristarchus to Herodotus' *Histories*¹³⁹ and some sources testify an intervention of *anagnōsis* ("reading", in the meaning of "word division") in a passage from Herodotus by the grammarian Hellanicus, Aristarchus' contemporary.¹⁴⁰ Moreover, the late 2nd century Dionysius Thrax, a pupil of Aristarchus, defines the *grammatikē* as "empirical knowledge of what is mostly said by poets and prose writers";¹⁴¹ and one may well wonder whether the commentaries on the Attic orators composed in the late 1st century by Didymus might not actually constitute a beginning rather than (as for most of Didymus' philology) the final culmination of previous lines of research.¹⁴² Furthermore, we have some examples of exegetic activity performed on texts of scientific literature with a pragmatic intent but without excluding a linguistic and lexical interest. The Medieval tradition has preserved a quite elementary commentary, of a scientific-pragmatic nature, by Apollonius of Citium (1st century) on a medical writing of Hippocrates, *On joints*.¹⁴³ And the 1st century AD grammarian Erotianus, introducing his *Collection of Hippocratic words*, puts forward an argument designed to assert the stylistic value of Hippocrates' prose, in which he claims that

many of the learned persons, not only physicians but also grammarians, devoted their attention to explaining (the works of) this man and to translating his words into a more common linguistic usage.

138 Nicolai [1992] 271–275; Irigoin [1994] 50, 54, and 88 (discussion with D. M. Schenkeveld).

139 P.Amh. 2.12 (2nd century AD): we will return to this when treating Aristarchus. As regards papyrus evidence of exegesis on Greek prose authors: McNamee [2007] 117–125, Dickey in this volume.

140 *Schol. Soph., Phil.* 201 (357 Papageorgius) and *Suda* ε 3753; Hellanic. fr. 5 Montanari, concerning Hdt. 2.171.2; cf. F. Montanari [1988] 52.

141 Dion. Thrax, *Tekhnē grammatikē* 1 (cf. Sext. Emp., *Math.* 1.57).

142 Apart from fragments (Schmidt [1854]), we have the remnants of a 2nd century AD papyrus scroll, P.Berol. 9780 (Mertens-Pack³ 339), which contain parts of Didymus' *On Demosthenes* concerning Dem. 9–11 and 13: a work based on a pre-Didymeian Alexandrian edition of the Attic orator, in the view of Luzzatto [2011].

143 Editions: Schöne [1896]; Kollesch-Kudlien [1965].

In support of this argument, Erotianus then appends a long list of Hellenistic authors of Hippocratic lexicography.¹⁴⁴ Other remnants of scholarship on prose writers—attested to by papyrus commentaries datable no earlier than the 2nd and 3rd centuries AD—may possibly be traced back to more ancient *hypomnēmata*, but they mainly reflect a late- and post-Hellenistic paramount interest in formal and rhetorical patterns as a means of promoting authoritative compositional models.

We can infer from this evidence that an independent and genuinely philological attention to prose did exist, but at the same time we can argue that this interest apparently arose slightly later than the studies in poetry, perhaps—this is a mere hypothesis—starting from the observation of linguistic affinities and intertextuality between the two literary spheres. For some examples display a sort of role reversal between prose and poetry: what the interpreters normally invoked as an *explicans* is taken as the *explicandum*, i.e. the prose work, usually quoted as a source of information, becomes the object of a comment in that it is explored in its own right, as a literary product; and, on the other hand, what normally acted as the *explicandum* now serves as an *explicans*, that is to say, some poetic parallels are adduced to explain prose passages. This is true of the scanty fragments of Aristarchus' above-mentioned commentary on Herodotus, or the anonymous *hypomnēma* on Thucydides' book 2 attested to by a fragmentary papyrus copy of the late 2nd century AD (P.Oxy. 6.853), in which parallels from Homer, Pindar, Euripides and Callimachus are quoted. In a similar way, Aristarchus' pupil Ammonius (2nd/1st century) investigated the Homeric features traceable in Plato's works (*Περὶ τῶν ὑπὸ Πλάτωνος μετενηνεγμένων ἐξ Ὁμήρου, Plato's loanwords from Homer*), possibly in the footsteps of his teacher.¹⁴⁵ Symptomatic of the custom, by then deeply ingrained, of reading the great prose writers against the background of Homeric poetry is the fact that the penetrating author of the treatise *On the sublime* (Augustan Age?)¹⁴⁶ underscored the epic patina of Platonic style, rhetorically wondering whether “only Herodotus was most Homeric”.¹⁴⁷ In this light, it may not be purely on the basis

144 Erotian., *Vocum Hippocraticarum collectio, praef.* 4–5 Nachmanson.

145 Cf. Phot., *Lex.* η 51 ~ *Suda* η 100, where Aristarchus compares Homer and Plato in relation to use of forms of the past of the verb ἡμί, “to say”. From this and other indications, Schironi [2005] 427–428 derives the hypothesis of an Aristarchean *hypomnēma* to Plato, based on an edition drawn up by Aristophanes of Byzantium. The evidence, however, remains shaky.

146 For the disputed dating: Mazzucchi [2010a] XXXIII–XXXVII.

147 *On the sublime* 13.3. Cf. the elegiac inscription from Halicarnassus (2nd/1st century BC), firstly edited by Isager [1998], where in l. 43 Herodotus is defined τὸν πεζὸν ἐν ἱστορίαισιν Ὁμηρον (“the prose Homer in the realm of history”, as translated by Lloyd-Jones [1999] 3);

of personal idiosyncrasy that Bacchius of Tanagra (3rd century) in his own Hippocratic lexicon explained some medical words by means of poetic parallels drawn, according to Galen (2nd century AD), specifically from the *Lexeis* of his contemporary Aristophanes,¹⁴⁸ moreover, under the influence of such models, Galen himself drew up a pragmatic work (*πραγματεία*) containing a selection of words “from the whole of ancient comedy”, apparently conceived as nothing short of a comprehensive reference book helpful in interpretation of traditional medical terminology.¹⁴⁹ Formal contacts with poetry, prompted by language-related observations of aid in lexicographical and dialectological investigations, thus seem to have played a significant role in the Alexandrian approach to prose works and may have been a valid incentive and starting point for philology on prose writers.¹⁵⁰

With regard to the philological study of early Hellenistic (thus roughly contemporary) literature, new perspectives have come to the fore thanks to recent debates. Although Quintilian expressly attests to the exclusion of contemporary authors from the range of poets *in numerum redacti* (i.e. ‘chosen’ for philological study),¹⁵¹ one should not underestimate the fact that the Alexandrian scholars did take them into consideration and made use of them in their inquiries. As a matter of fact, at least two well known fragmentary papyri both datable to the late 3rd/early 2nd century attest to some exegetical activity on contemporary poetic compositions; namely the anonymous elegy “on the oyster” and some poems of the third book of Callimachus’ *Aitia*.¹⁵² Additionally, the question has been raised of whether Aristarchus’ recourse to parallels drawn from Callimachus’ works with the aim of interpreting Homeric passages

likewise, according to Dion. Hal., *Pomp.* 3, Herodotus composed his work in a varied manner, “inasmuch as he was a fan of Homer” (ποικίλην ἐβουλήθη ποιῆσαι τὴν γραφὴν Ὀμήρου ζηλωτῆς γενόμενος). See Pfeiffer [1968] 224; Boedeker [2002]; overall, on Herodotus’ reception in Hellenistic Age: Murray [1972]; Priestley [2014].

149 Gal., *De indolentia* 23b Boudon-Millot – Jouanna.

150 Rosén [1962] 231; Pfeiffer [1968] 224 with n. 6; Montana [2009c] 166–170. Nicolai [1992] 186–197 and 265–275 emphasizes the continuity of an interest in prose literature from the Peripatus to the early Alexandrian scholars.

151 Quint., *Inst.* 10.1.54 *Apollonius* (scil. *Rhodium*) *in ordinem a grammaticis datum non venit, quia Aristarchus atque Aristophanes, poetarum iudices, neminem sui temporis in numerum redegerunt.*

152 Respectively P.Louvre inv. 7733 verso (firstly edited by Lasserre [1975]; *SH* 983–984) and P.Lille 76d+78abc+82+84+111c (firstly edited by Meillier [1976]; *SH* 254–265 = Callim. fr. 148, 151, 150, 152, 143, 153 Massimilla). On both as testimonies of early Hellenistic exegesis on contemporary poets see Montanari [2002c] 74–77.

was not simply exploitable for purposes of explanation, and thus as an exegetic tool involving only a second-degree interest in the quoted author, but whether, on the contrary, it presupposed knowledge and an investigative approach of a philological type also intrinsically pertaining to the work adduced as a parallel.¹⁵³ The Hellenistic scholarly reception of Menander's plays provides another small series of good examples. Aristophanes of Byzantium's avowed admiration for the theatrical *mimēsis* of Menander is one among other concrete clues suggesting that he took a philological interest in this author.¹⁵⁴ Two generations later, in the 2nd century, the multiskilled Apollodorus, Aristarchus' pupil, included biographical notes on Menander in his *Chronicle*, also stating the total number of Menander's works: the incorporation of this type of information is representative of the typically Alexandrian interest in ascertaining the authenticity and compiling catalogues of literary works.¹⁵⁵ In addition, we have some evidence concerning a commentary on Menander's *Kolāx* composed by the 2nd/1st century Rhodian Timachidas—who was also the author of a commentary on the poem by Eratosthenes entitled *Hermēs* (we will return to this later). Lastly, an analogous perspective of a critical-exegetical approach on quasi-contemporary poetry is detectable with regard to an astronomical work in three books on the *Phenomena* of Aratus and on his scientific source Eudoxus of Cnidus, that was composed around the mid-2nd century by the geographer Hipparchus of Nicaea and which has come down to the present day intact through the direct Medieval tradition. This work was intended to emend the conceptual errors of Aratus' poem, given the wide-ranging acclaim and diffusion of the latter, and to refute some favourable interpretations of the *Phenomena* advanced by an earlier commentator, Attalus of Rhodes: this decidedly scientific and pragmatic character of Hipparchus' writing has been the real reason of its survival.¹⁵⁶

Thus we have reached the third stage in the scholarly task required by the Museum and the Library: interpretation. From the time of the foundation of these Ptolemaic institutions up to the middle of the 2nd century, Alexandrian

153 Montanari [1995a], raising the question; Rengakos [2000], answering essentially in a negative way; Montanari [2002c], relaunching his thesis especially as far as Callimachus, Aratus, and (in the footsteps of Fantuzzi [2000]) Apollonius Rhodius are concerned.

154 Montana [2007].

155 Apollod., *FGrHist* 244 fr. 43.

156 Edition of Hipparchus' writing: Manitius [1894]; see Fraser [1972] 1.422–423. More information on this subject by Luiselli, this volume. In the same 2nd century, an interest in Aratus' poem is documented in the works of the Pergamene scholars Crates of Mallos (in the fragments of his Homeric exegesis 50, 65, 131–133 Broggiato) and Zenodotus of Mallos (fr. 5–6* Broggiato): on both see below, §§ 3.1 and 3.2 respectively.

scholarship grew in complexity, intricacy and sophistication, finally evolving into a structured discipline with its own tradition of studies. Overall, disregarding the finer points, it can be stated that after devoting their efforts mainly to retrieval, emendation (*diorthōsis*) and cataloguing of books, the scholars found themselves in the ideal condition of having at their disposal a vast array of material which had to some extent been critically edited (*ekdoseis*): thus they were now in a position to fulfill the philological task, namely improvement on previous results, the possibility of creating further editions and commenting on the works in view of new critical or aesthetic evaluation. In sum, scholarship having begun in the form of work on a mass of books in order to obtain reliable copies, these copies in turn became the field for scholarly study on the form and content of literary works themselves. As in an uninterrupted chain, each scholar could no longer abstain from engaging in dialogue with his predecessors and making further material for debate and critical comparison available for the next generations.

Once scholarship arrived at this stage, its influence on circulating books and textual transmission grew accordingly. It has been pointed out, for instance, that Homeric papyri discovered in Egypt and dated to the middle of the 2nd century, in the age of the authoritative editions and commentaries by Aristarchus, show some corresponding stabilization and standardization of the text of the poems with respect to the number and sequence of lines.¹⁵⁷ However, somewhat paradoxically, no sooner had this progression reached its peak than it came to a dramatic, although temporary, halt on account of the dynastic crisis in the year 145/144, which resulted in the end of the Aristarchean curatorship of the Library, the diaspora of many scholars and the drastic scaling down of the Museum. These circumstances and the general line of development outlined so far must be taken into account if one aims to obtain a comprehensive understanding of the intellectual achievements of Alexandrian scholarship.¹⁵⁸ It is now time to meet the personalities of this history.

2.5 *Librarians' Diadokhē and Learned Community*

A variety of ancient testimonies provide us with information about the *diadokhē* or succession of the Alexandrian librarians, unfortunately not without puzzling inconsistencies. An Oxyrhynchus papyrus datable to the 2nd century AD (P.Oxy. 10.1241), containing a historical and mythological chrestomathy,

157 West [1967]; cf. Pfeiffer [1968] 109–110 and 215; Nagy [1996] 187–206; Haslam [1997] 64–69 and 84–87; West [1998–2000] LVII.

158 On the divergent general evaluation by modern critics see Montanari [2004] and [2009b] 160 n. 32.

gives this by no means irreprehensible list at the end of its damaged first column and in its second column (ll. 1–21):

[Ἀπολλώ]||ν[ι]ος Σιλλέως Ἀλεξανδρεὺς | ὁ [κ]αλούμενος Ῥόδιος Καλλι[ι]μάχου
 γνώριμος· οὗτος | ἐγένετο καὶ διδάσκαλος τοῦ | ⁵πρώτου βασιλέως· τοῦτον |
 δ[ι]εδέξατο Ἐρατοσθένης, | μεθ' ὃν Ἀριστοφάνης Ἀπελλοῦ Βυζάντιος καὶ
 Ἀρίσταρχος· εἶτ' Ἀπολλώνιος Ἀλεξαν¹⁰δρεὺς ὁ <ε>ἰδογράφος καλούμεινος·
 μεθ' ὃν Ἀρίσταρχος Ἀρι|στάρχου Ἀλεξανδρεὺς ἄνω|θεν δὲ Σαμόθραξ· οὗτος καὶ
 | διδ[ά]σκαλος [ἐ]γένε[το] τῶν | ¹⁵τοῦ Φιλοπάτορος τέκνων· | μεθ' ὃν Κύδας
 ἐκ τῶν λοχοφ[ό]ρων· ἐπὶ δὲ τῷ ἐνάτῳ | [[β]α]σιλεῖ ἤκμασαν Ἀμμώ[νι]ος καὶ
 Ζηνό[δοτος] καὶ Διο²⁰[κλ]ῆς καὶ Ἀπολλό[δ]ωρος γραμμ[α]τικοί.

... [Apollo]||nius, Silleus' son, of Alexandria, named Rhodius, Callimachus' pupil; he also was the teacher of the first king. He was succeeded by Eratosthenes, after whom came Aristophanes, Apelles' son, of Byzantium, and Aristarchus. Then Apollonius of Alexandria, nicknamed "the classifier". After whom Aristarchus, Aristarchus' son, of Alexandria but originating from Samothrace; he too was a teacher of (Ptolemy IV) Philopator's sons. After whom Kydas from the lanciers. Under the ninth king, the grammarians Ammonius and Zeno[dotus] and Diocles and Apollodorus flourished.¹⁵⁹

This fragment, although in some respects constituting vital evidence, presents a number of indisputable mistakes and also raises some problems of consistency, both internal as well as with other sources. For instance, it is not fully in agreement with several biographic entries on Hellenistic scholars given in the Byzantine encyclopedic lexicon *Suda* of the 10th century (entries traceable back to the lost *Onomatologos*, a dictionary composed by Hesychius of Miletus in the 6th century AD) and with other learned sources closely linked to the textual tradition of the classical authors.¹⁶⁰ With regard to the specific issue of the *diadokhē* of the Librarians, granted that Zenodotus must have been the first scholar cited in P.Oxy. 10.1241 at the lost beginning of the list, the most tricky problem is the repetition of the name of Aristarchus before Apollonius "the classifier" as well as after him. Very briefly, this circumstance has been explained in opposite ways: some have seen the first reference to Aristarchus

159 See van Rossum-Steenbeeck [1998] 323 (No. 68).

160 On the problems of chronology: Pfeiffer [1968] passim; Fraser [1972] 1.330–333; Blum [1977] 182–187. The list is rather "a catalogue of grammarians in their capacity as διδάσκαλοι to the future Ptolemies" in the view of Murray [2012] (§7).

as an inappropriate advance mention and have adopted the sequence Eratosthenes-Aristophanes-Apollonius “the classifier”-Aristarchus;¹⁶¹ others have explained the repetition as a clue pointing to a scribal mistake and have conjecturally placed Apollonius “the classifier” between Eratosthenes and Aristophanes.¹⁶² The question is not crucial for our present purposes; but since a choice must necessarily be made, we will endorse the first solution, which, if anything, seems to offer a somewhat more economical explanation of this inconsistency in the papyrus list.

Before giving an overview of the personalities who directed the Library, an important aspect should be made clear. Certainly the librarian-in-chief must always have played a fundamental role in characterizing the cultural policy of the Library, since he was in close and direct relation with the approach favored by the Ptolemaic court, to which he was accountable for the organization of the institution. In this sense, therefore, the librarians’ history is a history of the Library. But one should not be misled into conceiving of this framework in an overly rigid and simplified manner. It is imperative to bear in mind that the Ptolemaic cultural institutions were a gathering place for a remarkable quantity of intellectuals, who each contributed, with greater or lesser intensity, to characterizing Alexandrian Greek culture and learning. Suffice it to recall that Callimachus, perhaps the most significant personality of Hellenistic Alexandrian culture, was indeed active within the Library yet, it would appear, he never held the post of librarian. The librarians’ *diadokhē* thus constitutes a convenient and linear scaffold of historiographic description, handed down to us by the ancient tradition, behind which we must however endeavor to recognize a far more complex historical background of intellectual experiences and relations.

The massive need for *diorthōsis* of literary copies collected in the early days of the royal Library inspired from the very beginning an activity simultaneously conducted by different scholars working in different branches, with a clear-cut subdivision of the areas of scholarship based on literary genre.¹⁶³ Ptolemy II had to find suitable means, pecuniary as well, to persuade two Greek poets, Alexander Aetolus and Lycophron of Chalcis, both at a certain time guests at the Macedonian court in Pella and included among the renowned authors of

161 Pfeiffer [1968], *e.g.* 172 with n. 2; Fraser [1972] 1.332.

162 Blum [1977] 185–186.

163 John Tzetzes, *Prolegomena, Prooemium* I (XIa I, 22.1–23.7 Koster) and II (XIa II, 31.1–32.4 and 33.22–25 Koster); cf. *Anonymus Cramerii* II (XIC, 43.1–4 and 17–19 Koster). Alexandrian awareness of genres and literary systems is one of the manifestations of continuity between Classical and Hellenistic culture, according to Rossi [1976] 110–111.

tragedies known as the Pleiad,¹⁶⁴ to devote themselves to revising and emending (διορθοῦν, *diorthoun*)¹⁶⁵ copies of ancient Greek dramatic texts held in the Library at Alexandria. Alexander dealt with tragedy and satirical drama, Lycophron with comedy, both apparently benefiting from help offered by Eratosthenes of Cyrene (a later librarian). Lycophron was also the author of a treatise *On comedy* in at least 9 books,¹⁶⁶ in which he sought to give an explanation of comic words used by playwrights of the *arkhaiā* (5th century)¹⁶⁷ and also, it seems, of that which was becoming to be called the *mesē* (4th century).¹⁶⁸ This work marked the beginning of a line of inquiry that was to have an authoritative following in the subsequent generations of scholars concerned with comedy. The *diorthōsis* of other poetry including Homeric works was undertaken by Zenodotus of Ephesus, the first head librarian. Callimachus of Cyrene was entrusted with drawing up a repertory of a number of literary authors and works collected in the Library, a task that was to be carried out by means of a gigantic bio-bibliographical compilation, the *Pinakes* or *Tables*. According to this picture, at the beginning of Alexandrian philology equal teamwork among the Museum community seems to have prevailed over individuality and leadership. It is only a conjecture, albeit rather plausible, that the common objectives the group was set by the royal patron acted as a unifying factor in planning the work and in the pioneering definition of a critical methodology by individual scholars—although this by no means averted occasions of quarrel and rivalry.

As we have seen, the first scholar who took up the post of librarian, Zenodotus of Ephesus (ca. 330–260), was a pupil of Philitas of Cos and is said to have been

164 Testimonies and fragments in *TrGF* I, respectively 100 and 101 Snell. On Alexander in Philadelphus' service: Magnelli [1999] 10–11; cf. Montanari [2009c] 412. On these figures as both poets and scholars: Lowe [2013].

165 It is wrong to interpret διορθοῦν in the passage of Tzetzes as “to put in right order”, as some have done in the wake of the *scholium Plautinum* (above, n. 97), which recites *poeticos libros in unum collegerunt et in ordinem redegerunt*: Pfeiffer [1968] 106–107.

166 Editions of the fragments: Strecker [1884] 2–6 and 23–78 (all known fragments, including many hypothetical or dubious); Rutherford [1905] 417; Bagordo [1998] 35–36 and 150 (No. 63; only three fragments of sure attribution).

167 Lyc. fr. 85 Strecker = 63 fr. 3 Bagordo (cf. Pherecrates, fr. 101 Kassel-Austin).

168 Lyc. fr. 13 Strecker = 63 fr. 1 Bagordo: Antiphanes, test. 8 Kassel-Austin. The threefold division *arkhaiā*, *mesē* and *neā* is traceable back to Callimachus and Aristophanes of Byzantium (Nesselrath [1990] 28–187, especially 186–187; cf. Sidwell [2000] 255–256), rather than to Aristotle (as in the opinion of Janko [1984] 247–250, based on *Tractatus Coislinianus de comoedia* 18: *contra* Nesselrath [1990] 147–149; cf. Halliwell [1987] 87 n. 2 and [2000³] 273–274; Preßler [1999] 161–162 n. 618).

a poet and grammarian, as his teacher was before him.¹⁶⁹ Zenodotus also followed in the steps of Philitas by succeeding the latter as the tutor of the royal family and compiling a collection of *Glōssai*, which however, in contrast to that of Philitas, appears to have been alphabetically ordered: this introduced a criterion which, though apparently achieving some immediate success,¹⁷⁰ would be widely adopted in later lexicography.¹⁷¹ One cannot exclude that another collection known by the title of *Ἐθνικαὶ λέξεις* (*Dialectical words*)¹⁷² attributed to a Zenodotus, hypothetically identifiable with the Ephesian, actually coincided with a special section of the *Glōssai*, with which, unlike Philitas, he sought to build up a body of dialectal lexicography considered as a field in its own right.¹⁷³

Only a few fragments survive from his *diorthōseis* of Hesiod and Pindar, and perhaps Anacreon,¹⁷⁴ while the Medieval scholia to Homer allow us to gain greater insight into his activity on the *Iliad* and *Odyssey*.¹⁷⁵ The interventions that have come down to us illustrate quite clearly the practice of emending the Homeric text, a practice which, one may surmise, was ineluctable when the editor found himself facing the challenge of the great amount of copies that had made their way into the Alexandrian Library, often with fairly divergent texts. The papyri prior to the mid-2nd century confirm the instability of the text—particularly with regard to the number of lines—that the first Alexandrian editor found himself having to deal with.¹⁷⁶ To address this difficulty, the philological method devised by Zenodotus on the one hand plausibly availed itself

169 He is described as ἐποποιός, “writer of verse”, by *Suda* ζ74 (cf. *SH* 853), but this statement—which could be an autoschediasm moulded on the profile of his teacher Philitas—is generally regarded as suspicious by modern critics.

170 Neoptolemus of Parion in Mysia, known as a poet and glossographer (γλωσσογράφος, test. 1 and fr. 12a Mette) possibly living in Zenodotus’ days, composed a work *On Homer’s glosses* (*Περὶ γλωσσῶν Ὁμήρου*) in no less than three books, that seems to have been an alphabetical glossary containing explanations based on etymology: Mette [1980] 14 and 21–22; cf. Cassio [1987–1988]. Parts of an alphabetical lexicon are preserved in P.Hibeh 175, datable to ca. 260–240.

171 Zenod. fr. 1 Pusch (*schol. Hom., Od.* 3.444b1 Pontani). Cf. Pfeiffer [1968] 115 with n. 2, 195; Tosi [1994b] 151. In the view of Latte [1925] 154 and 162–171, the collection of words in question should not be taken as belonging to this Zenodotus, but to a younger namesake; cf. Blum [1977] 166–167.

172 Pusch [1890] 175.

173 Nickau [1972a] 40–43; Tosi [1994b] 152.

174 Pfeiffer [1968] 198–200; Nickau [1972a] 38–39. For Hesiod: Montanari [2009a] 332–335.

175 Düntzer [1848]; van Thiel [2014] (for the *Iliad*).

176 Cf. above, n. 157.

of comparison (collation) among the variants present in the different copies,¹⁷⁷ while on the other it aimed to identify content-related inconsistencies within the text (such as repetitions, and alleged contradictions and indecorousness), with the aim of singling out the non-authentic lines and purging them of the impurities, either by deleting (οὐ γράφειν, *ou graphēin*, meaning “not to write”, *vel similia*)¹⁷⁸ or more frequently marking them as deserving to be expunged (ἀθετεῖν, *athetein*). The critical sign (σημεῖον, *sēmeion*) adopted by Zenodotus to mark expunction (ἀθέτησις, *athetēsis*) was the *obelos* (ὀβελός, literally “spit”), a short horizontal stroke written in the margin on the left of the line concerned. One should not overlook the significance of the scholar’s firm resolve to record the philological doubt, *i.e.* the condition intermediate between either accepting a text handed down by tradition or rejecting it outright. Thus the editor did not shy from leaving a trace of his negative judgment, yet without precluding the possibility for other critics to form an opinion of their own and make an independent decision. This was a system which embryonically prefigured the apparatus of modern critical editions.¹⁷⁹

What material form of *ekdosis* is likely to have been compatible with the above described characteristics? The most widely shared reconstruction is that which holds that the scholar did not draw up a fresh version of the text, but instead based himself on an already existing copy he regarded as fairly reliable, and then inserted his corrections into this text and made an annotation of the *sēmeia*.¹⁸⁰ There is no positive evidence that Zenodotus composed any written explanation of his textual interventions. The hypothesis that Zenodotus provided his edition with many marginal notes aimed at explaining his textual preferences¹⁸¹ seems partly contradicted by the fact that the later grammarians had to reconstruct and interpret Zenodotus’ choices.¹⁸² It can reasonably be assumed that he actually annotated some explanations in the margins of his *ekdosis* of Homer, while many of his carefully formulated

177 Strong skepticism in this respect and a radical disparagement of the Zenodotean *diorthōsis* are put forward by West [2001a] 33–45 and [2002].

178 οὐκ εἶναι, οὐ φέρεσθαι, αἴρειν, περιαιρεῖν, περιγράφειν: cf. Nickau [1977] 1–30.

179 Cf. Pfeiffer [1968] 115.

180 Pfeiffer [1968] 110; Nickau [1972a] 30–31; Nagy [1996] 119–152; West [2001a] 33–45 and [2002] (Zenodotus’ working copy was a 4th century Ephesian rhapsodes’ text); Montanari [2009b] 143–154, [forthcoming] and this volume. That Zenodotus’ *ekdosis* consisted, on the contrary, in a new copy of the poems, in which the chosen variants were incorporated in the text, while doubtful lines were marked with the *obelos* and lines held to be false were eliminated *tout court*, is the opinion of Haslam [1997] 73; Rengakos [2012] 248–251.

181 As in the opinion of van Thiel [1992], [1997] and [2014] 1.8.

182 Nickau [1977]; cf. Montanari [1998a], [1998d], [2002a], and [2009b]; Rengakos [2012] 251.

arguments for or against some readings present in his edition were laid out in other writings such as, for example, the *Glōssai*.¹⁸³ Furthermore, we know that he took care to express his own interpretations in purpose-composed monographic writings: for instance, an epigraphic source seems to attest a work of Zenodotus on the problem of the actual number of days of the Trojan War involved in the narrative of the *Iliad*.¹⁸⁴ This notwithstanding, reconstruction of Zenodotus' interventions and arguments already constituted a serious problem even in antiquity, if the 2nd century Alexandrian grammarian Ptolemy nicknamed Epithetes (Ἐπιθέτης, *i.e.* the "Opponent", for the critical stance he adopted against Aristarchus)¹⁸⁵ devoted an entire work to reconstructing and, it seems, defending the readings of Zenodotus' edition (τὰς Ζηνοδότου γραφὰς ἐκτιθέμενος) so strongly opposed by Aristarchus.¹⁸⁶ Ultimately, we must interpret this apparent lack of a genuine comment as a silent clue pointing to the still largely oral character of this ecdotic/exegetic practice and of the related transmission within the Museum.¹⁸⁷

The notable diffusion and widespread acclaim of Zenodotus' editions become clear if one reflects that they were taken into consideration by the epic poet Rhianus of Crete in performing his own *diorthōseis* of the Homeric poems in the second half of the 3rd century,¹⁸⁸ and that they exerted some influence on the poetic works of Callimachus and Apollonius of Rhodes. Moreover, the fact that a monograph by Apollonius called into question some editorial choices made by Zenodotus is an incontrovertible demonstration of the high regard enjoyed by this *ekdosis* among the Alexandrian poets and scholars.¹⁸⁹ In

183 Nickau [1972a] 39–40; Montanari [1993b] 266; Tosi [1994b] 151.

185 Ptol. Epith. test. 1 Montanari.

186 Ptol. Epith. test. 2 = fr. 1 Montanari, with F. Montanari [1988] 83–85. Ptolemy's Homeric scholarship included a work *On the Iliad* (Περὶ Ἰλιάδος; test. 3 and fr. 2–5 Montanari) and a *hypomnēma* on the *Odyssey* (test. 1 Montanari, cf. Pontani [2005b] 54–55).

187 Montanari [2009b] 154. A similar problem arises for Aristophanes of Byzantium, who composed numerous and important *ekdoseis* but, as far as we know, no *hypomnēmata*: it can plausibly be suggested that the explanations of Aristophanes' ecdotic choices were gathered together (and discussed) in the *hypomnēmata* written by his disciple Callistratus (see below, § 3.2).

188 More than forty textual readings from Rhianus' editions are attested to in the scholia to Homer: edition by Leurini [2007]; see La Roche [1866]; Mayhoff [1870]; Aly [1914]; van der Valk [1949] 107–108; West [2001a] 56–58; Esposto [2008]. On Rhianus poet and "scholar" (γραμματικός according to *Suda* ρ 158): Castelli [1994], with further bibliography.

189 Pfeiffer [1968] 139–140 and 146–148; Rengakos [1993] 49–87 and 169–170, [1994], [2001], and [2002a]; Montanari [1995a] and [2002c] 59–64.

this context it is worth reporting a story concerning Timon of Phlius, whom we mentioned earlier as a detractor of the Alexandrian Museum. In response to an inquiry by the poet (and scholar) Aratus as to which was the best available text of Homer, Timon advised him to prefer “the old copies” (τοῖς ἀρχαίοις ἀντιγράφοις) rather than the “already corrected” (τοῖς ἤδη διωρθωμένοις), the latter expression alluding to the Zenodotean *diorthōseis*.¹⁹⁰ This anecdote—apart from attesting to Timon’s skeptical attitude towards the aims and methods of philology¹⁹¹—is another telling clue of the contemporary fame, ill fame in this case, of Zenodotus’ editions and therefore of the novel approach they represented in comparison to the several previous ‘*ekdoseis*’ of the poems.

Among Zenodotus’ Alexandrian pupils, Agathocles of Cyzicum is worth citing for his somewhat unusual intellectual profile.¹⁹² Starting from an intuition suggested by Carl Müller and substantially shared by Felix Jacoby, this 3rd century grammarian is identified with the author by the same name of a work on local history, *On Cyzicum* (*Περὶ Κυζίκου*). Jacoby noted the pervasive similarity of proficiency and interests that runs throughout the seven historiographic fragments and the four of philological content which pertain to Homeric interpretation.¹⁹³ Of the latter group of fragments, one derives from a miscellany entitled *Ἰπομνήματα* and is quoted in a scholium to Apollonius Rhodius’ *Argonautics* in relation to the location of Hephaestus’ forge: a subject well according with author’s interests in local history and which suggests a learned-antiquarian approach of the *Ἰπομνήματα*.¹⁹⁴ Of the other three grammatical fragments, all transmitted without the title of the work to which they belonged, one quotes a Pergamene gloss, testifying to an interest in dialectology consistent with Zenodotus’ teaching;¹⁹⁵ and two show Agathocles’

190 Diog. Laert. 9.113 (= Tim. Phl. test. 1 Di Marco). See Pfeiffer [1968] 98; Fraser [1972] 1.450 with 2.650 n. 22. One could legitimately wonder whether this anecdote is obliquely lampooning the *diorthōseis* of the Homeric poems performed by Aratus himself (see above, n. 49).

191 Clayman [2009] 213–214, at the same time (107–108) claiming that Timon was aware of the Zenodotean philology from a comparison of Tim. Phl., *Silli*, *SH* 804 = fr. 30 Di Marco with its Homeric model *Il.* 3.150–152: in l. 152 Timon seems to have preferred the Zenodotean and more unusual reading δένδρει against δένδρέω, which later on the contrary was chosen by Aristarchus.

192 *Suda* π 3035 attests to the chain teacher-pupil Zenodotus-Agathocles-Hellanicus-Ptolemy Epithetes.

193 *FHG* IV 288 (n.); *FGrHist* 3b *Kommentar* 372; cf. F. Montanari [1988] 15–19. Editions: *FGrHist* 472; F. Montanari [1988] 26–30 (text) and 31–42 (comment).

194 *Schol.* Ap. Rhod. 4.761–765b: Agathocl. fr. 8 Jacoby = test. 4 and fr. 8 Montanari.

195 Agathocl. fr. 10 Jacoby = fr. 10 Montanari.

inclination to solve by way of allegorical interpretation the cosmological problems posed by Homeric poetry, foreshadowing the hermeneutic approach endorsed in the next century by the Pergamene scholar Crates of Mallos.¹⁹⁶ Thus historiography and scholarship on the one hand, as well as Zenodotean textual philology and allegorical interpretation on the other, both appear as paired terms jointly and fruitfully operating in the same scholar, and encourage us to move towards a less schematic vision of the intellectual patterns of the Hellenistic culture.¹⁹⁷

As regards Callimachus of Cyrene (ca. 310–240), no ancient source states that he effectively held the post of librarian, if one excepts the unreliable *Scholium Plautinum*,¹⁹⁸ and there is no suggestion that he drew up editions of literary works or commentaries on them. He should be recalled here mainly for his *Tables of persons eminent in every branch of learning, together with a list of their writings* (*Πίνακες τῶν ἐν πάσῃ παιδείᾳ διαλαμψάντων, καὶ ὧν συνέγραψαν*), or, briefly, *Tables*, in 120 books.¹⁹⁹ This was in fact a great critical ‘catalogue’ of poetic and prose works collected in the Library. It was apparently structured by genres and, within each genre, by alphabetical order of the writers, and was designed to inventory information on the identity, biography and literary production of the authors in order to discuss and solve problems of authorship and genuineness. Accordingly, it constituted at the same time an invaluable guide and historical database of Greek literature.²⁰⁰ The possible intentional selectivity of the *Tables* can be inferred from the participle *διαλαμψάντων* (“eminent”, literally “brilliant” or “shining”) in the title, very likely indicating that not all the known authors and works would figure in the repertory²⁰¹—nor perhaps in the Library itself. It appears that the repertory gave the title, opening words, and extension of each recorded work; and many questions concerning

196 Agathocl. fr. 9 and 11 Jacoby = fr. 9 and 11 Montanari. Montanari argues that the three fragments of Homeric scholarship belonged to the *Υπομνήματα*; furthermore he publishes, albeit with reservation on the authorship, a possible new fragment identified by H. J. Mette (*Fragmentum dubium*). On Crates see below, § 3.1.

197 Montana [2006b] 208 and [2009a] 177–178.

198 See above, n. 97. The assumption that Callimachus held the post of librarian is defended by Blum [1977] 177–191.

199 *Suda* κ 227.

200 The fragments are edited by Pfeiffer [1949–1953] 1.344–349 (fr. 429–453). Most detailed study: Blum [1977]; cf. Pfeiffer [1949–1953] 1.349 and [1968] 127–131; Fraser [1972] 1.452–453. With regard to the influence of the pinacographical (Callimachean) criteria on the standardization of book titles in antiquity: Caroli [2007] 61–79.

201 Canfora [1993] 24.

authenticity²⁰² or problems with titles²⁰³ were addressed. One can assume, for instance, that a Callimachean epigram referring to the poetic value of the epic poem *The capture of Oechalia* disputably attributed to Creophylus of Samos, and so implicitly decreeing its admissibility into the Library, could be associated to this activity of critical cataloguing.²⁰⁴ Furthermore, Callimachus is known to have written at least two other *Pinakes* on more sectorial fields, the *Table and inventory of the dramatic poets in chronological order and from the beginning*,²⁰⁵ for which the author is likely to have drawn on the Aristotelian *Didaskaliai*, and the *Table of glosses and writings (?) of Democritus*, probably concerning lexical innovations introduced by the philosopher.²⁰⁶ A specific interest in lexicology and the inclination towards a classifying method may perhaps have been a feature of a collection of *Dialectical nouns* (*Ἐθνικαὶ ὀνομαστικά*), apparently shaped as an *onomastikon*, i.e. a writing that, unlike Zenodotus' *Glōssai*, placed in succession lists of words not ordered alphabetically, but grouped according to a semantic affinity or kinship. At least the presence of a section concerning names of fish is adequately attested to.²⁰⁷ As already mentioned, the work *To or Against Praxiphanes* criticized the aesthetic theories of this pupil of Theophrastus²⁰⁸ and must have contained appreciations in the sphere of literary criticism, since Callimachus expressed within it a favorable judgment towards the poetic quality and scientific information embodied by the astronomical poem of his contemporary Aratus.²⁰⁹

It is widely known that Callimachus used to great advantage the impressive cultural background he had acquired through his activity within the Library, boldly opening up new perspectives in contemporary poetry as well as displaying erudite and antiquarian implications in his sophisticated poems, mainly and programmatically in the *Aitia*.²¹⁰ An instance of this tendency can be seen in the final part of the love elegy on Acontius and Cydippe, where the digression concerning the historical-antiquarian source employed (Xenomedes, the 5th century author of a local history on Keios) is an emblematic illustration of

202 E.g. Callim. fr. 442 and 451 Pfeiffer.

203 E.g. Callim. fr. 448 Pfeiffer.

204 Callim., *Epigram* 55 Gow-Page = 6 Pfeiffer. The assumption is by Cameron [1995] 399–401.

205 Callim. fr. 454–456 Pfeiffer; 23 fr. 1–5 Bagordo.

206 Pfeiffer [1949–1953] 1.350.

207 Callim. fr. 406 Pfeiffer. Pfeiffer [1968] 135; Tosi [1994b] 149–150 and this volume.

208 Praxiphanes may have been among Callimachus' teachers (see above, n. 41).

209 Callim. fr. 460 Pfeiffer = Praxiph. fr. 16 Wehrli = fr. 11 Matelli. On Praxiphanes see above, § 2.1.

210 Rengakos [1993] and [2002a]; Tosi [1997a]; Montanari [2002c] 59–64. Cf. Acosta-Hughes – Stephens [2012]; Harder [2013].

this attitude.²¹¹ But in particular, Callimachus' greatest and most long-lasting contribution to the developments of scholarship consists in having revived the Peripatetic tradition of learned antiquarian and paradoxographic studies, thereby enhancing this field through a new and decisive impulse in the context of the Hellenistic Ptolemaic institutions.²¹² An eloquent testimony of this innovative drive is seen in the *Pinakes*, which can be considered as marking the birth of the genre of learned biography placed at the service of the understanding of literary works, and as pointing to the Alexandrian evolution of Peripatetic biography.²¹³ A similar development can also be noted in the variety of approaches favored by Callimachus' most talented pupils: Hermippus of Smyrna specialized in biography, Philostephanus of Cyrene in geography, and Ister, perhaps himself from Cyrene, in Attic antiquities.²¹⁴

Another great poet, who is likewise said to have been a pupil of Callimachus,²¹⁵ Apollonius of Rhodes (ca. 300–220), was born in Alexandria²¹⁶ and was appointed by Philadelphus to succeed Zenodotus at the head of the Library and as a royal tutor entrusted with the task of educating the future king Ptolemy III Euergetes.²¹⁷ At a certain point, Apollonius resigned or was forced to resign from his position and moved to the island of Rhodes. This circumstance is

211 *Aitia* 3, fr. 75-53–77 Pfeiffer = fr. 174-53–77 Massimilla, with the comment by the latter ([2010] 376–392).

212 Pfeiffer [1968] 134–136; Fraser [1972] 1.453–456.

213 The most significant extant example of Peripatetic biography is the *Life of Euripides*, in dialogue form, by Satyrus of Callatis (P.Oxy. 9.1176), who belonged to the next generation after that of Callimachus, edited by Arrighetti [1964] and Schorn [2004] (F 6; commentary: 181–347). On the highly disputed spheres of the origins, characteristics and typology of ancient biography see Momigliano [1993]; Arrighetti [1987] and [1994]; and the essays collected in Erler-Schorn [2007].

214 On the three Callimacheans: Jacoby [1954] 618–627; cf. Pfeiffer [1968] 150–151. On Hermippus: Bollansée [1999a] and [1999b] (edition of the fragments); the list of Aristotle's writings in Diog. Laert. 5.21 goes back to the Peripatetic Aristo of Ceos (Moraux [1951] 237 ff.) more probably than to Hermippus (Düring [1956]; cf. Tanner [2000] 83–86). On Philostephanus: Capel Badino [2010]. On Ister: Fraser [1972] 1.511–512; Jackson [2000]; Berti [2009] and [2013].

215 Chiefly P.Oxy. 10.1241, quoted at the beginning of this section, and *Suda* α 3419; Callim. testt. 11a–19a Pfeiffer.

216 Str. 14.655; P.Oxy. 10.1241; *Suda* α 3419.

217 The biographical entry in the *Suda* is wrong in placing Apollonius' librarianship after that of Eratosthenes (διάδοχος Ἐρατοσθένους γενόμενος ἐν τῇ προστασίᾳ τῆς ἐν Ἀλεξανδρείᾳ βιβλιοθήκης, "being successor of Eratosthenes in the direction of the Alexandrian Library"), merging information concerning the poet with that on his homonymous nicknamed "the classifier": Pfeiffer [1968] 141–142; Fraser [1972] 1.330–332; Blum [1977] 184–187.

explained, in two less than accurate *Lifes*,²¹⁸ as due to the hostile reception of a public recitation of a draft (*proekdosis*) of his major literary work, the epic poem *Argonautics*. Only later, according to one of these biographies, did he return to Alexandria, achieving the long-awaited success with his final edition of the poem. However, the reliability of this account is regarded with some suspicion, and it seems preferable to view Apollonius' departure from Alexandria in relation to the accession to the throne of the third Ptolemy in 246 and, possibly, also in connection with the fact that the new king favoured Eratosthenes, a scholar who is said to have been a pupil of Callimachus. Eratosthenes was a native of Cyrene like Callimachus, and this happened also to be the homeland of the new queen Berenice.²¹⁹

Our primary surviving evidence of Apollonius' scholarship resides precisely in the *Argonautics*, in which historical and literary learning, undoubtedly encouraged by the wide availability and use of books in the Library, coexists and intermingles with intertextual emulation and interpretation of Homeric poetry.²²⁰ As an instance of this, we may recall that in the last line of the *Argonautics* (4.1781 ἀσπασίως ἀκτὰς Παγασηΐδας εἰσαπέβητε, "you happily landed at the Pagasian coast") the poet apparently alludes to *Od.* 23.296 (ἀσπασίοι λέκτροιο παλαιοῦ θεσμὸν ἔκοντο, "they (Odysseus and Penelope) happily regained full right of possession of their old bed"), thus perhaps indicating that in his opinion the latter marked the true end of the Homeric poem, as indeed later assumed by such authoritative scholars as Aristophanes of Byzantium and Aristarchus.²²¹ Effectively, in tackling Homeric problems Apollonius found himself in disagreement with textual and interpretive solutions previously adopted by the first librarian and editor of the poems, and he gathered together his own observations in a writing *Against Zenodotus* (Πρὸς Ζηνόδοτον). Evidently the Zenodotean edition had risen to the status of a reference text within the Library and offered much material to the lively intel-

218 Edited by Wendel [1935] 1–2. See Mygind [1999] 272 (No. 69).

219 Due emphasis should be assigned to the circumstance: Pfeiffer [1968] 141–142; Cameron [1995] 214–219.

220 Erbse [1953]; Rengakos [1993], [1994], [2001] and [2002a]; Fantuzzi [2000].

221 *Schol. M^aVX Hom., Od.* 23.296 Dindorf, speaking of τέλος τῆς Ὀδυσσεΐας, it is unclear whether in the meaning of 'actual end' (so e.g. Rossi [1968] and [1976] 114 n. 3) or in the (Aristotelian) sense of narrative 'fulfillment' (Gallavotti [1969]; Erbse [1972] 166–177); cf. Eust., *Od.* 1948.49. On the question see Pfeiffer [1968] 175–177; Richardson [1994] 21–22; Pontani [2005b] 36, 49. Montanari [2012d] 345–347 underscores that Demetrius of Phalerum had already highlighted the relevance of this line for the economy of the *Odyssey*, because it marks the recomposition of the conjugal σωφροσύνη (Dem. Phal. fr. 193 Wehrli = fr. 145 Stork-Opuijsen-Dorandi).

lectual dialectics of its members and to further research and interpretation. Apollonius also worked on Archilochus, to whom he devoted a monograph (*Περὶ Αρχιλόχου*),²²² and on Hesiod, defending the authenticity of the *Shield of Heracles* while rejecting that of the *Ornithomanteia*, which in the ancient tradition followed l. 828 of the *Works and Days*.²²³ Apollonius' considerable interest in archaic epic poetry, and in iambic poetry closely linked to the latter, is an attitude consistent with his original creativity within the epic genre. His attention to epics both by poetic emulation (in the *Argonautics*) and, at the same time, by scholarly concerns can also be seen in his quotation—recovered from a fragmentary work of Homeric scholarship (*BKT* III 8439)—of a verse of Antimachus of Colophon, the author considered by modern critics as a forerunner of Alexandrianism during the Classical Age.²²⁴

Eratosthenes of Cyrene was born around 275 according to the *Suda*,²²⁵ or earlier if one is to believe that he listened to the lessons held in Athens by the philosopher Zeno of Citium²²⁶ (the founder of the Stoic school, who died in 262/1), and he is said to have reached the age of eighty.²²⁷ Therefore his life covers a large part of the 3rd century. Cyrene and Athens were the places where he received his training, and Alexandria constituted the frame that shaped his intellectual maturity.²²⁸ In Cyrene he had as his teachers the grammarian Lysanias and the poet Callimachus, and in Athens the Stoic Aristo of Chios as well as the Platonist Arcesilaus; his pupils in Alexandria included Aristophanes of Byzantium.²²⁹ It is generally agreed that Eratosthenes was appointed librarian in 246, after Apollonius, when Ptolemy III Euergetes came to the throne; Ptolemy's wife, the Cyrenean princess Berenice, may possibly have been influential in the choice of a personality originating from her own homeland. Although it is not attested explicitly, the suggestion that at the same time as his librarianship Eratosthenes may also have fulfilled the task of tutor of the prince, the future Ptolemy IV, cannot be ruled out.²³⁰

226 Str. 1.15; Eratosth. *FGrHist* 241 test. 10. Pfeiffer [1968] 154 with n. 3, gives little credence to this suggestion.

227 *Suda* ε 2898; Ps.-Luc., *Macrobian* 27.

228 A sketch of Cyrene as a center of Hellenic culture is provided by Fraser [1972] 1.786–789; Montanari [1993a] 636–638.

229 Again *Suda* ε 2898.

230 Pfeiffer [1968] 154–155.

A scholar and scientist, and also apparently a poet of some acclaim,²³¹ in an organic synthesis that calls to mind the Peripatetic model (although his culture lacks a systematic structure comparable to Aristotelian thought), Eratosthenes understandably rejected as too limiting the epithet *γραμματικός*, “skilled in letters”, that is to say, a sectorial expert in literature,²³² and preferred to define himself as *φιλόλογος*, “man of knowledge” or “man of learning” endowed with an encyclopedic culture.²³³ Germane to this point is his definition of *γραμματική* as “a complete mastery (*ἔξις*) in letters”, namely in written compositions.²³⁴ His open and broad-based approach to many branches of learning earned him a series of polemical and humoristic nicknames, such as “pentathlet”, “new Plato”, and “Beta”, *i.e.* “Second” with the malicious insinuation that he failed to excel in any of the numerous fields of knowledge in which he was competent.²³⁵

Within the boundaries of linguistic and literary research, Eratosthenes compiled lexicographical works, among which two *onomastika* entitled *Ἀρχιτεκτονικός* and *Σκευογραφικός* perhaps connected with studies on comedy,²³⁶ and he also composed two books of *Γραμματικά*, probably a miscellaneous writing.²³⁷ Following in the steps of Lycophron, he wrote a treatise *On the old comedy* (*Περὶ τῆς ἀρχαίας κωμωδίας*), in no less than 12 books:²³⁸ the extant fragments, in which Pherecrates, Cratinus, Aristophanes, and Eupolis are quoted

231 Poetic fragments: Powell [1925] 58–68; Lloyd-Jones – Parsons [1983] 183–186 (fr. 397–399); Lloyd-Jones [2005] 48–49. The author of the writing *On the sublime* expresses *en passant* a far from hostile judgement on the elegy entitled *Ērignonē* (*Subl.* 33.5: Eratosth., *Erig.* test. 1 Rosokoki; see the comment by Rosokoki [1995] 76). The short poem *Hermēs* gained the honor of a commentary by the 2nd/1st century Rhodian Timachidas (cf. Powell [1925] 58–59 and below) and had a very favorable reception over the next centuries (*e.g.* Agosti [2008]).

232 See Pfeiffer [1968] 156–159.

233 Cf. Suet., *Gram. et rhet.* 10 (Eratosth. *FGrHist* 241 test. 9): (*L. Ateius*) *philologi appellationem assumpsisse videtur, quia sic ut Eratosthenes, qui primus hoc cognomen sibi vindicavit, multiplici variaque doctrina censebatur.*

234 *Schol. Vat.* to Dion. Thrax, in *GG* 1/3.160.10–11 Ἐρατοσθένης ἔφη ὅτι γραμματική ἐστὶν ἔξις παντελῆς ἐν γράμμασι, γράμματα καλῶν τὰ συγγράμματα. On this definition see Matthaios [2011a]; cf. Pagani [2011] 17–18 with n. 3; Swiggers and Wouters, this volume (section 11.2).

235 *Suda* ε 2898.

236 Eratosth. fr. 17 and 60 Strecker, and Strecker [1884] 13 = 43 fr. 21–23 Bagordo.

237 Clem. Al., *Strom.* 1.16.79.3.

238 Fragments collected by Strecker [1884] and Bagordo [1998] 127–136 (No. 43). In fr. 25 Strecker = 43 fr. 2 Bagordo, Eratosthenes explicitly criticizes Lycophron because the latter “is ignorant” of the meaning of a neologism coined by the comic poet Cratinus (Ἐρατοσθένης τὴν λέξιν ἀγνοεῖν φησι Λυκόφρονα κτλ): see Montana [2013].

(to whom the comic poet Plato can be added, if a statement by Eratosthenes about this author's career, found in a papyrus commentary, is to be assigned to the same work),²³⁹ point to an interest in the language of the playwrights and the features of the classical Attic dialect, explicitly also as a function of the debate on the authenticity of the plays.²⁴⁰ Additionally, his writings highlight an attention to the chronology of authors and works and to questions involving performance and other issues generally related to the world of comic drama. For instance, in a fragment Eratosthenes contests the authenticity of the *Miners* (*Μεταλλεῖς*) attributed to Pherecrates, applying the dialectological criterion with a strictness that some have seen as a forerunner of much later Atticism.²⁴¹ In another passage Eratosthenes confutes the story about Eupolis allegedly murdered by Alcibiades during the navigation towards Sicily in the year 415:²⁴² such an event, of dubious historical reliability, had risen to the status of a fundamental node in the debate on comic *parrhesia* and on its presumed limitations in the evolution of comedy between 5th and 4th centuries, with consequences on reconstruction of the transformations and on periodization of the comic genre.²⁴³ In yet another fragment Eratosthenes corrects Callimachus, who in his *Table* on the dramatic poets had thought he perceived a mistake in the Aristotelian *Didaskaliai* concerning the reciprocal chronology of Aristophanes' (first and second) *Clouds* and Eupolis' *Marikas*.²⁴⁴ It was possibly when discussing the poetic models underlying some comic passages

239 P.Oxy. 35.2737 (Ar. fr. 590 Kassel-Austin = Aristophanes 27 CLGP = Eratosth. 43 fr. 18 Bagordo), Fr. 1, Col. II, ll. 10–17; see the comment by Montana [2012a] 174–177; cf. Perrone [2010] 91. A second quotation from Eratosthenes has been hypothesized by W. Luppe in l. 31 of the same column of the papyrus: Montana [2012a] 179.

240 The playwrights attested to in the fragments show that ἀρχαία κωμῳδία of the title stands roughly for what we precisely mean by 'Archaia': Pfeiffer [1968] 161; Nesselrath [1990] 176–180 and 181 n. 93; Bagordo [1998] 38.

241 Eratosth. fr. 93 Strecker = 43 fr. 5 Bagordo, cf. fr. 46 Strecker; another attribution is treated in fr. 149 Strecker = 43 fr. 17 Bagordo. On Eratosthenes' tendency to Attic purism when treating Attic comedy see Tosi [1994b] 168–171.

242 Eratosth. fr. 48 Strecker = *FGrHist* 241 fr. 19 = 43 fr. 12 Bagordo. Cf. Duris, *FGrHist* 76 fr. 73. The sources of the episode are discussed by Storey [2003] 56–60 and 379–381.

243 Nesselrath [1990] 178–179 and [2000] 237–240: the debate set up a contrast between the Alexandrian or 'literary' approach to comedy (Eratosthenes) and the Peripatetic or 'political' approach (e.g. Platon., *Diff. com.* 21–23 Perusino, who identified the reprisal against Eupolis as the watershed between *arkhaiā* and *mesē*: cf. the comment by Perusino [1989] 14–15 and 48–49).

244 Eratosth. fr. 97 Strecker = 43 fr. 14 Bagordo; cf. Callim. fr. 454 Pfeiffer. See Storey [2003] 61.

that Eratosthenes addressed specific problems posed by lyric texts.²⁴⁵ It had been shown as early as in Lycophron's work on ancient comedy that this genre could provide highly fertile and stimulating material for the study of language; Eratosthenes' *syngramma*, with its composite and lively character and the tendency to purism in evaluating the literary use of the Attic dialect, exerted an undeniable influence in this direction, representing an important source for later lexicographers and paroemiographers.²⁴⁶

Eratosthenes' training in philosophy was further enhanced by his studies on the history of thought, one of the fruits of which was the work *The philosophical schools* (*Περὶ τῶν κατὰ φιλοσοφίαν αἱρέσεων*). But the field in which he particularly excelled among his contemporaries was that of science, which had been strongly promoted by the Ptolemies since the very outset of their cultural enterprise, that is to say, since the time when the Soter invited to Alexandria the Peripatetic Strato of Lampsacus, ὁ φυσικός. Eratosthenes engaged in intense activity in the sectors of chronology, geography, mathematics, astronomy and musical theory, earning high esteem, as eloquently testified by the fact that Archimedes of Syracuse dedicated to him his own treatise *On the mechanical theorems*.²⁴⁷ We will limit ourselves here to mentioning some aspects of Eratosthenes' scientific achievements that are most significant for the present topic.

In the *Chronographies* (*Χρονογραφίαι*) Eratosthenes established the relative chronology of some historical events and set key dates for the period between the mythical past and the death of Alexander the Great in 323, such as the fall of Troy in the year 1184/3, the 'return of the Heraklids' 80 years later, and the first Olympian Feasts in 776/5. He unified the dating system, adopting the list of Spartan kings up to 776/5 and, starting from this date, the four-yearly succession of the Olympiads, the universal effectiveness of this chronological system being guaranteed by the pan-Hellenic character of these Feasts and Games. Furthermore, within this grid, overcoming the localistic limitations of previous annalistic records, he arranged and concatenated events that concerned the entire span of Greek history.²⁴⁸ In the next century, on the basis of

245 Eratosth. fr. 136 Strecker = *FGrHist* 241 fr. 44 = 43 fr. 16 Bagordo, on the genre of Archil. fr. 324 West; fr. 101 Strecker, on the popular song *PMG* 735 Page, assigned by Eratosthenes to the poet Lamprocles.

246 Tosi [1994b] 187–189. On the possible impact of Eratosthenes' exegetical approach to ancient comedy in later scholarship, see Montana [2013].

247 On Eratosthenes in the context of Hellenistic science: Fraser [1972] 1.409–415. Especially on his role in musical theory: Creese [2010] 178–209.

248 Edition of the extant fragments: *FGrHist* 241 fr. 1–3 and 9–15.

this work Apollodorus of Athens composed his own *Chronicle*, which in turn became one of the sources of the Christian chronography on which depends a large part of our knowledge of ancient chronology. In another work, entitled *The Olympian wins* (*Ὀλυμπιονόμοι*), Eratosthenes drew up a list of winners of these competitions, achieving an improvement over earlier attempts.²⁴⁹

His masterwork is considered to be the *Geography* (*Γεωγραφικά*), originally in three books, many fragments of which are preserved by Strabo, the geographer writing in the Augustan Age.²⁵⁰ One of the novel elements in this work as compared to analogous previous compositions certainly consisted in its marked broadening of horizons and geographic knowledge, as a consequence of the immense conquests made by Alexander the Great. Another innovative aspect, so characteristic of this author, was the application of a scientific attitude to the subject of his investigations. His belief, expounded in his history of the discipline, that the setting of the Homeric poems was the fruit of imagination and was not traceable to real places—for it was his conviction that the aim of poetry is “to capture the soul” rather than “to learn”—draws on a traditional line of thought mocked by Stoic thinkers.²⁵¹ Famous in this regard, and emblematic of his attitude, is the sarcastic statement that

a man might find the places of Odysseus’ wanderings if the day were to come when he would find the leatherworker who stitched the goatskin of the winds.²⁵²

Opinions such as these could seem to bear some affinity with Plato’s disparagement of the educational value of poetry, especially epic poetry; but Eratosthenes’ main focus seems not so much to concern philosophical or ethical truth as, rather, scientific epistemology; he aimed to clear the field of the

249 *FGrHist* 241 fr. 4–8 and 9–15. Hippias of Elis, in the 5th century, drew up a *List of the Olympian winners*.

250 The fragments have been edited by Berger [1880]. For a reassessment and a commentary see Roller [2010].

251 Str. 1.15 (Eratosth. fr. I A 20 Berger) ποιητὴν γὰρ ἔφη (Ἐρατοσθένης) πάντα στοχάζεσθαι ψυχαγωγίας, οὐ διδασκαλίας. Eratosthenes’ assertion is quoted and criticized by Strabo in the context of a well-structured defense, of Stoic inspiration, of the truth value of poetry: Halliwell [2002] 269–271. Cusset [2008] 126–127 argues for the positive acceptance of ψυχαγωγία in this context, given the Platonic (Socratic) use of this term as a definition of rhetoric (*Phaedrus* 261a–c and 271c–272b).

252 Str. 1.24 (Eratosth. fr. I A 16 Berger) τότε’ ἂν εὐρεῖν τινα, ποῦ Ὀδυσσεὺς πεπλάνηται, ὅταν εὕρῃ τὸν σκυτέα τὸν συρράψαντα τὸν τῶν ἀνέμων ἄσκόν. Cf. Eust., *Od.* 1645.64 (concerning *Od.* 10.19).

need to base the interpretation of poems on elusive apologetics, which was too easily confutable in historical and factual terms, as apparently was the case with allegoresis.²⁵³ Making use of the vast repository of books in the Library, in the *Geography* he also addressed genuinely historical and chronological questions, for example placing the acme of Homer a century after the capture of Troy and arguing that Hesiod lived at a later date than Homer. Furthermore, Eratosthenes was the first to apply a mathematical method systematically to map-making, even succeeding in devising the conception and design of the network of the earth's meridians and parallels, and in *The measurement of the earth* (*Περὶ ἀναμετρήσεως τῆς γῆς*) he calculated the measure of the earth's circumference using mathematical means, coming up with a figure which, surprisingly, was in error by no more than a few hundred kilometers.²⁵⁴ Works of this nature are considered decisive in having prompted a movement whereby geography, traditionally linked in the Greek world to the spheres of historiography and ethnography, began to be repositioned in the direction of physics and mathematics, thus taking on the aspect of a scientific discipline. At the same time, it is symptomatic that three centuries later the geographer Strabo, albeit expressing himself in a sarcastic vein, used the term *diorthōsis*—a word which, as shown above, formed part of the philological vocabulary—to define Eratosthenes' mathematically based revision of earlier geographic convictions.²⁵⁵

Among Eratosthenes' works, one that offers extremely eloquent insight into the unity and interpenetration of his scientific and philological culture is *Constellations* (*Καταστερισμοί*), which has come down to us via the Medieval tradition in an epitome of a later date. It describes the heavenly constellations, giving an indication of the mythological origin of their names, and one can hardly fail to be struck by an affinity between this theme and the literary creation of Aratus, who in the *Phenomena* had rendered in verse the content of the star catalogue composed by the astronomer Eudoxus of Cnidus.²⁵⁶

In short, the work of Eratosthenes can be regarded as no less than one of the founding pillars of early Hellenistic scientific and methodic thought, and a

253 Pfeiffer [1968] 166–167. Eratosthenes, allowing the Alexandrian mould, admitted scientific erudition in his own poems, but as a feature subject to the psychagogic function of poetry: Cusset [2008].

254 E.g. Russo [2004] 273–277.

255 Str. 1.62 ἐν δὲ τῇ δευτέρῃ πειρᾶται διόρθωσίν τινα ποιείσθαι τῆς γεωγραφίας, “in the second (book) he seeks to make a critical revision of the geography”.

256 Recent commented editions of *Constellations'* epitome: Pàmias i Massana [2004]; Pàmias-Geus [2007]; Pàmias i Massana-Zucker [2013]; see also Santoni [2009].

history of ancient scholarship should recognize in him the true emblem of the union and reciprocal influence of (poetry,) philology and science.²⁵⁷

Endorsing a 'neo-humanist' vision of the birth and nature of ancient scholarship, Rudolf Pfeiffer emphasized the novelty and uniqueness of the figure of Eratosthenes as the driving force behind the convergence of science and philology. Viewing the situation from this standpoint, Pfeiffer was able to deny any direct Peripatetic derivation or imprinting of Alexandrian learning. If, however, the perspective is broadened from single individualities to the ensemble of Ptolemaic institutions and cultural policy, it should be recognized that scientists and scholars were gathered together as a group in the Museum, and that since its very foundation they had been working according to a carefully planned and organic project which in many respects mirrors the multifaceted approach of the Aristotelian school. In such a context, Eratosthenes can in a sense be seen as accomplishing in his own person the synthesis properly belonging to the ordinary nature and structure of the Alexandrian institutions themselves. Furthermore, even if one sets aside the appeal to scholarship and science within Alexandrian poetry designed to achieve realism,²⁵⁸ the blend of philology and science and the mutual exchange of practices and methods can also be perceived in a number of significant personalities within and outside Alexandria.²⁵⁹ In the medical field, for instance, examples include Eratosthenes' contemporary Bacchius of Tanagra, a physician and lexicographer, who was also an editor and commentator of Hippocratic works, and, in the next century, his colleague Zeuxis the Empiricist, who is even credited with commentaries on Hippocrates and was active in ensuring the acquisition of medical writings for the Ptolemaic Library.²⁶⁰ Likewise, the Alexandrian scholar Ptolemy Epithetes, in the 2nd century, was the author of a work on the wounds in the Homeric poems, which seems to stand midway between philology and medicine.²⁶¹ Mention could also be made of Apollodorus of Athens, a pupil of Aristarchus and the true heir of Eratosthenic learning in the 2nd century interchange between Alexandria and Pergamum (see below). Thus

257 Pfeiffer [1968] 152–153, 155–156, 167–168; cf. Jacob [1992]; Tosi [1998a]; Geus [2002]; Cusset [2008].

258 Zanker [1987] 113–131.

259 Mette [1952] 62–64; Montanari [1993a] 635.

260 About Bacchius: Von Staden [1989] 484–500 and [1992]. Other Hippocratic lexica are attributed by sources to Xenocritus of Cos, Philitas' contemporary; Philinus, himself from Cos and the founder of the empirical school of medicine; and the poet Euphorion of Chalcis, on whom see Acosta-Hughes – Cusset [2012] xvi and 100–101 (fr. 49–50). On Zeuxis: Deichgräber [1930] 221 (fr. 343); Von Staden [1989] 481 with n. 4.

261 Ptol. Epith. test. 1 Montanari, with F. Montanari [1988] 81–83 and [1993a] 634.

there is ample justification for asserting that the opportunity for exchange and osmosis between the two spheres on the issues of concepts and methodologies was by no means lacking in Hellenistic and Alexandrian culture: indeed, the claim that such opportunities did exist is fully warranted and, at the very least, it calls for more adequate and in-depth exploration.²⁶²

Aristophanes of Byzantium (ca. 265/257–190/180), Eratosthenes' successor at the head of the royal Library, opens the more mature season of Alexandrian philology. The son of an army officer who had moved from Byzantium to Alexandria, he is said to have been a disciple of Zenodotus (although this suggestion is open to considerable doubt for chronological reasons), as well as of Callimachus and indeed of Eratosthenes himself. The comic poet Machon, Dionysius Iambus and a certain Euphronidas are also remembered among his teachers. Aged 62, Aristophanes became the fourth librarian-in-chief and held this post for fifteen years, until his death. It is during this period that he is supposed to have been imprisoned in Alexandria—assuming that this piece of information genuinely concerns his life and that it is in fact true—for having planned to 'desert' the patronage of Ptolemy V Epiphanes in favor of that of Eumenes II, king of Pergamum from 197, who at the time was intent on founding his own cultural patronage.²⁶³ However, it would not be surprising were the story to turn out to be a forgery, moulded on the traditional picture of a strong rivalry between these two main centers of learning from the beginning of the 2nd century onwards. What is certain is that it implies the idea of jealous and fierce competition between royal powers, even more than between philologists residing in the two different capitals.

Among his activities within the Library, it is worth citing, first and foremost, a contribution in the sphere of pinacographical studies, the work *In addition to* (better than *Against*)²⁶⁴ *Callimachus' Tables* (*Πρὸς τοὺς Καλλιμάχου πίνακας*). This was an updating, and possibly also a discussion or defense of debated issues,²⁶⁵ of the great catalogue arranged by Callimachus fifty years earlier, in which a number of problems concerning the genuineness, attribution and cataloguing of books now needed to be addressed.²⁶⁶ As an instance, Aristophanes' doubts concerning the authenticity of the *Shield* attributed to Hesiod—in agreement

262 Overall, on science in Ptolemaic Alexandria and in the Hellenistic world: Fraser [1972] 1.336–446; Lloyd [1973]; Giannantoni-Vegetti [1984]; Russo [2004].

264 Nauck [1848a] 245–247; Pfeiffer [1968] 133; Slater [1986] 134.

265 Slater [1976].

266 Ar. Byz. fr. 368–369 Slater; cf. Callim. fr. 439 Pfeiffer and Pfeiffer [1949–1953] 1.349 (after Callim. fr. 453); Bagordo [1998] 44–45 and 88 (No. 15 fr. 1–3).

with Hieronymus of Rhodes' opinion and against Apollonius of Rhodes'—can be recalled.²⁶⁷

The editing of poetic texts, however, is the field in which Aristophanes marked a turning point in ancient scholarship. Building on the varied and complex activity of *diorthōsis* concerning epic, lyric and dramatic works carried out in the previous decades, he successfully expanded and enhanced it with his own original contributions, thus assuring that the learned men attached to the Ptolemaic institutions benefited from the availability of new and more homogeneous textual editions of ancient poetry, which would later be acknowledged as indisputably authoritative.²⁶⁸ In his edition of the *Iliad*, with regard to lines of debatable authenticity he adopted an even more cautious and conservative approach than that of Zenodotus, abandoning the practice of not writing the lines whose dubious genuineness had aroused the greatest controversy, and turning instead to systematic utilisation of the *obelos*. Thus many lines eliminated by Zenodotus were maintained or restored into the text, marked by the sign of *athetēsis*. Other innovations moved in the same direction of more painstaking and scrupulous precision in critical-textual work: for example the introduction of two new textual/exegetical *sēmeia*, i.e. the *asteriskos* (ἀστειρίσκος, "little star": ※), to indicate repeated lines, and the pair *sigma-antisigma* (C, ∩) to indicate two consecutive lines having the same content and thus interchangeable. Additionally, remarkable advances were made in the notation of lectional signs, namely those designed to assure a correct reading and word distinction, such as breathings, accents and punctuation.²⁶⁹

As well as focusing on Homer and Hesiod, Aristophanes also took an interest in lyric verse and dramatic poetry. Work on Alcaeus, Anacreon, Pindar is attested to, as well as on Sophocles, Euripides, Aristophanes, and plausibly Aeschylus.²⁷⁰

267 *Argumentum Scuti*; see Montanari [2009a] 336.

268 As regards the prose writers, the supposition of an Aristophanean 'philological' *ekdosis* of Plato's dialogues, based on the evidence of the scholar's preference for an ordering of the philosopher's writings by trilogies instead of tetralogies (attested to by Diog. Laert. 3.61–62), is still an issue of open discussion: for instance, it was championed by Alline [1915] 84–103 and Jachmann [1942] 334–341, but ruled out by Pasquali [1952²] 264–266, Erbse [1961] 219–221 and Pfeiffer [1968] 196–197; more recently it has been revived by Schironi [2005], especially 428–429 and 431–432. In the absence of further evidence, the ancient testimony on trilogies could pertain more to Aristophanes' *Πρὸς τοὺς Καλλιμάχου πίνακας* than to an *ekdosis*: Carlini [1972] 18 ff. and [1977] 353.

269 Pfeiffer [1968] 178–181. Inventory of Aristophanes' Homeric scholarship: Slater [1986] 175–203; van Thiel [2014]. Both Slater (207) and van Thiel (1.19) downsize Aristophanes' role in editing poetic texts, particularly with reference to the Homeric poems.

270 Pfeiffer [1968] 192–194; Wartelle [1971] 143–161; Montanari [2009c].

Furthermore, his strong admiration for the *mimesis* of Menander²⁷¹ accords well with some clues suggesting that he took a philological interest in this author.²⁷² These studies probably made a substantial contribution to defining the canons (τάξεις) of authors and related works (later called ἐγκριθέντες, “chosen”, and πραττόμενοι, “treated” by the grammarians) and to their classification within the appropriate genres. For instance, the canon of the melic poets, as attested to by more than one witness, at a certain time included the following nine: Pindar, Bacchylides, Sappho, Anacreon, Stesichorus, Simonides, Ibycus, Alcaeus and Alcman.²⁷³ This kind of arrangement was to have crucial consequences, both favourable and adverse, for school practice and the transmission of ancient texts in subsequent centuries.²⁷⁴

One important acquisition perhaps owed to Aristophanes, although some doubt has been cast on this matter, is the retrieval or restoration of the metrical layout of lyric works, including the sung parts of drama.²⁷⁵ When the texts of melic poetry were written out, their metrical structure was no longer ignored, as had often been the case, but instead they were regularly divided by *kōla*, i.e. the rhythmic elements gathered together into sequences by the poets in order to form larger metrical units were now distinguished.²⁷⁶ Aristophanes adopted

271 Ar. Byz. test. 7 and 9 Slater = 15 fr. 11–12 Bagordo = Men. test. 83 and 170c Kassel-Austin. See Pfeiffer [1968] 190–191; Cantarella [1969] 189–194.

272 Montana [2007].

273 *E.g.* A.P. 9.184. The definition of the Alexandrian canon was strongly influenced by Peripatetic studies on lyric poetry, in the view of Carey [2011] 453.

274 Pfeiffer [1968] 203–208; cf. Nicolai [1992] 251–265 and 275–296.

275 This assumption, chiefly based on Dion. Hal., *Comp.* 156 and 221, has been contested by Tessier [1995] 1–34.

276 Pre-Aristophanean colometric arrangements of melic texts, although rare, are positively attested to by extant 3rd century papyri (a list of five items including texts of Sappho, Stesichorus, Sophocles and Euripides is drawn up by Pöhlmann [2007] 105 n. 9) or hypothesizable (*e.g.*, with regard to Pindaric poems, Tessier [1995] and D'Alessio [1997]). In particular, some colometric discrepancies in the same verse of Pindar ‘edited’ in two Greek papyri of Imperial Age, P.Oxy. 5.841 (Pindar’s *Paeans*) and P.Oxy. 15.1792 (Pindar’s *Prosodia*), respectively as *Paeon* 6 triad 3 (Rutherford [2001] 301–302 with his comment, especially 336–338) and as a *prosodion*, have been interpreted by D'Alessio as different arrangements hardly both included in the Alexandrian (Aristophanean) edition (as, by contrast, believed by Rutherford [2001] 148), but rather going back to divergent colizations arranged by prior Hellenistic scholars or to performers’ texts with musical notation (a suggestion owed to Liana Lomiento), or else to the 5th century and possibly to Pindar himself, namely as a traditional reflection of two distinct original performative occasions. The latter solution is shared by Prauscello [2006] 84 n. 260 and is not ruled out by Battezzato [2008] 145, while in the view of Tessier [2010a] 13–16 the colometric diver-

this kind of treatment apparently when working on the Pindaric poems, providing them with purpose-designed *sēmeia* for metrical-textual scansion: the *korōnis* (κορωνίς, namely the stylized picture of a “little crow”), inserted in the left margin, divided the compositions from one another; the *paragraphoi* (παράγραφοι), horizontal strokes written to the left of the text, between the lines, distinguished the strophes of a given composition; and, as attested to for the edition of Alcaeus’ poems, the *asteriskos* (instead of the *korōnis*) was introduced to mark the distinction between two poems of different meter.²⁷⁷ Although there are some critical arguments suggesting that when dealing with the colometry of poetic texts the Alexandrian scholars resorted directly to musical scores designed for performance, we are still far from being able to document that such an approach was actually implemented in a standardized and systematic manner.²⁷⁸ What we can positively observe, and at present this must be presumed even for Aristophanes, is some episodic interaction or interlacing between the musical/performative and the textual/bookish tradition.²⁷⁹ As for the text layout and colometry (as well as musical notation?) of the melic sections of classical Attic tragedy, one cannot exclude that Aristophanes may have been significantly aided by the Lycurgan copies of Aeschylus, Sophocles and Euripides held in the Alexandrian Library: and this would provide an even more convincing explanation of the irresistible attraction exerted by these books over king Ptolemy III, who sacrificed a fortune to obtain them.²⁸⁰ But at present this remains a mere hypothesis.²⁸¹

gences could more plausibly give evidence of scores provided with different musical and rhythmic notation which were available to Hellenistic scholars.

277 Heph., *Enkheiridion* 73.16–74.14 Conbruch. See Negri [2004]; further, Porro [1994], especially 222–226.

278 See above, nn. 14, 15, and 276. A skeptical attitude in this respect is maintained by Battezzato [2003] 19 with n. 52; Prauscello [2003] and [2006]. Prauscello has reexamined the scanty available papyrological evidence, focusing on the only two papyri carrying musical notation which, as for the text is concerned, are comparable with the medieval tradition: P.Vind. G 2315 (Eur., *Or.* 338–344) and P.Leid. inv. 510 (Eur., *IA* 1500?–1509 and 784–793), both dating to the first half of the 3rd century. It is worth remembering, with Lucia Prauscello, the telling circumstance that the (fragmentary) musical scores known to date normally display “a general non-colometric disposition of the lineation” and therefore this category seems unlikely to have constituted the usual source of Alexandrian colometry (183). Pöhlmann [2007] 106 mentions some additional epigraphic evidence.

279 Overall, Prauscello [2006].

280 Cf. Fleming-Kopff [1992] 763.

281 Prauscello [2006] 10. Pöhlmann [1991] highlights the lack of evidence of musical notation in the Lycurgan text of the tragic songs. Scodel [2007] points out that the character of

Metrical analysis, besides consideration for the original pragmatic destinations and contexts of the poetic compositions, was closely functional to their classification into groups qualified by affinity, namely genres. The metrical and genre characteristics of the works, as well as their length, represented useful conditions for the editorial organization of the *ekdoseis*, given the usual limits on the storage capacity of one papyrus roll. For instance, the first three books out of nine of the edition of Sappho's poems followed a metrical criterion; among these, book 1 contained all the poems composed in Sapphic strophes, for a total of 1,320 *kōla*. Alcaeus' works were divided into ten books on the basis of content (*e.g.* political, sympotic, erotic)²⁸² or of more generic thematic affinities and to some extent the chronobiography of the author.²⁸³ Pindar's poems were ordered and arranged into 17 books by lyric genres: hymns, paeans, dithyrambs, prosodia and so forth, ending with epinicia (subdivided in turn by the seat of the Games into four books: *Olympians, Pythians, Isthmians, Nemeans*), the only ones that have come down to us through the Medieval manuscript tradition.²⁸⁴

As well as in editions, Aristophanes enshrined the results of his erudite research on ancient poetry in a number of *syngrammata* and other critical tools (apparently he did not compose *hypomnēmata*).²⁸⁵ Thus in the treatise *Περὶ τῆς ἀχρυσμένης σχυτάλης* he scrutinized in detail this pair of words used by the archaic poet Archilochus, which had previously been discussed by Apollonius Rhodius in his *Περὶ Ἀρχιλόχου*.²⁸⁶ The titles of other writings show their exegetic purpose in the field of dramatic (comic) literature: *On characters* (*Περὶ προσώπων*),²⁸⁷ *On Athenian hetaerae* (*Περὶ τῶν Ἀθηνησιν ἑταιρῶν*)²⁸⁸ and, as attested to by Porphyry in Eusebius, *Παράλληλοι Μενάνδρου τε καὶ ἄφ' ὧν ἔκλεψεν ἐκλογαί*, in all likelihood a collection of pairs of poetic passages of Menander and other poets that bore an affinity to one another either by virtue of their meaning or their form.²⁸⁹ As a typical example of an Aristophanean erudite

the Athenian official copy was plausibly above all symbolic and ideological, more than authoritative from a textual and performative point of view.

282 Porro [1994] 5–6, with previous bibliography.

283 Liberman [1999] XLVIII–LXI, especially LVIII–LX.

284 Ar. Byz. fr. 380A and 381 Slater. See Irigoin [1994] 45–49.

285 This possibility, however, with respect to Aristophanes' work on the Homeric poems is inductively argued by Slater [1986] 205–210.

product one may cite his succinct introductions to the plays, or *hypotheses* (ὑποθέσεις, “subjects”), containing information on the first performance, the setting, characters and plot of each work, some elements of which remain, variously transmitted by papyri and Medieval manuscripts.²⁹⁰ The most significant precedent, according to a (debatable) ancient testimony,²⁹¹ is represented by some ὑποθέσεις τῶν Εὐριπίδου καὶ Σοφοκλέους μύθων (“subjects of plots of Euripides and Sophocles”) composed by the late 4th century Peripatetic Dicaearchus of Messana.²⁹² The importance of this genre of literary erudition cannot be underestimated, as it is the outcome of the use and combination of two different and converging critical approaches: on the one hand, Peripatetic antiquarian inquiry into theatre performances (the Aristotelian *Didaskaliai*) as well as into the plots of the plays (μῦθοι, to which Aristotle, in the *Poetics*, assigns a fundamental role for the aesthetic evaluation of works); and on the other, the spirit of reconstruction and erudite rearrangement that characterized early Alexandrian (Callimachean) pinacography.²⁹³ This two-fold approach is recognizable in other Aristophanean areas of research, such as studies on the literary use of proverbs and proverbial features (Aristophanes collected four books of *Non-metrical* and two of *Metrical proverbs*), which were rooted in Aristotelian interest in the tradition of paroemiographic wisdom,²⁹⁴ or the paradoxographic work *On animals* (*Περὶ ζώων*), to a large extent an epitome of various Peripatetic sources.²⁹⁵

The experiences of, among others, Lycophron, Callimachus and Eratosthenes provided a good illustration of the fact that critical study devoted to attribution, text constitution and interpretation of literary works derived great benefit from in-depth observation of the authors’ vocabulary. Aristophanes by no means neglected this feature, which was closely linked to his editorial activity, and he collected the results of his research in this respect in the *Λέξεις* (*Words*), a broad-based lexicographic compilation. It opened with the section *On the*

290 Pfeiffer [1968] 192–196; Meijering [1985]; van Rossum-Steenbeeck [1998]; Montanari [2009c]. This learned type of didascalical *hypothesis* linked to the name of Aristophanes must be kept distinct from the more popular ‘narrative *hypothesis*’ of Euripides’ plays, which circulated widely in Hellenistic and Graeco-Roman Egypt, as attested to by many papyri, on which see e.g. Bing [2011]; Meccariello [2014].

words which are suspected of not having been used by the ancients, apparently a collection of glosses whose antiquity (*i.e.* their belonging to the vocabulary of classical authors) was disputed.²⁹⁶ Some of the sections were arranged according to different semantic areas—probably on the example of Callimachus' *Ἐθνικαὶ ὀνομασῖαι*²⁹⁷—systematically listing Greek words (*e.g.* *Nouns indicating age, Kinship nouns*)²⁹⁸ and providing them with an explanation based on form, dialect, evolution, meanings, literary attestations and so forth. Aristophanes' interest in lexical correctness, in dialects—focus on the latter being traceable back at least to Philitas and possibly Zenodotus, and to Aristophanes' teachers Callimachus and Dionysius Iambus as well²⁹⁹—and especially in the Attic language (although apparently with more moderation and a more open approach than Eratosthenes)³⁰⁰ undoubtedly furnished solid support for the later appreciation of the Attic dialect. This trend would ultimately develop into the preferential and prescriptive literary use of this dialect, or Atticism, from the late 1st century onwards.³⁰¹

His familiarity with lexical phenomena and linguistic uses and anomalies—in literature as well as in the vernacular³⁰²—apparently attracted Aristophanes' attention to the recurrence of certain patterns of inflection. As is known, the first reflections on language can be found in the context of 5th and 4th century philosophy and rhetoric. At the beginning of the Hellenistic Age, Stoic

296 Ar. Byz. fr. 1–36 Slater. According to Slater [1976] 236–237, in this part of the *Lexeis* Aristophanes assumed an 'antipuristic' attitude, directed against those who considered as 'modern' (and therefore less pure) some of the strangest and very rare Greek words. Slater's statement is shared but partially reassessed by Tosi [1994b] 155–162 and 202–205 (discussion with D. M. Schenkeveld).

297 Wendel [1939a] 508; cf. Tosi [1994b] 166–167.

298 Ar. Byz. fr. 37–336 Slater.

299 Dionysius was the author of a work *On dialects* (*Περὶ διαλέκτων*) in which he made use of parallels drawn from spoken languages (Ath. 7.284b).

300 Ar. Byz. fr. 36 Slater, with regard to the Attic use of εὐθύ, shows a less rigid position than that displayed by Eratosthenes in fr. 46 and 93 Strecker also in relation to the attribution of the comedy *Miners* to Pherecrates: Slater [1976] 240; cf. Tosi [1994b] 169 with n. 47.

301 Ar. Byz. fr. 337–347 Slater are labeled as *Ἀττικαὶ λέξεις*. For an assessment and up-dated bibliography on the debated question of the alleged influence of Alexandrian lexicography on later Atticism see Ascheri [2010] 127–128 with n. 10; Tosi, this volume. In particular, on the close relation between Aristophanes' lexicography and the lexicon of the Imperial Age known as *Antiatticista* (so called inasmuch as, although within an Atticistic frame, it offers a moderate view in opposition to the rigorous purism such as that of Phrynichus) see Alpers [1981] 108; Tosi [1994b] 162–166 (who also discusses some objections advanced by Slater [1986] 120); Tosi [1997b].

302 Pfeiffer [1968] 202.

philosophers such as Zeno and Chrysippus had become interested in language processes (etymology), identifying categories and a specialized terminology that would have a parallel in 3rd and 2nd century Alexandrian scholarship,³⁰³ and they had underlined (and legitimated) phenomena of anomaly and current usage (συνήθεια, lat. *consuetudo*).³⁰⁴ This orientation was to exert a strong influence over the 2nd century philologists of Pergamum.³⁰⁵ The convergence of lexical observation and text criticism, which we saw coming into effect in the work of the most ancient philologists, evolved in Aristophanes in the direction of empirical observation and description of formal aspects of language, focusing for instance on certain characteristics of nominal and verbal inflection, with a tendency to emphasize linguistic regularity or analogy.³⁰⁶ As we shall see, this approach was then endorsed and actively applied to literary texts as a pragmatic principle by his pupil Aristarchus. Thus although Aristophanes' interest in this subject-matter seems to have been oriented mainly towards a descriptive approach, essentially aiming at text constitution and interpretation, in actual fact he paved the way towards the establishment of grammar as an independent discipline, starting from the generations of scholars immediately following his own.³⁰⁷

The reflections put forward earlier concerning the position of Aristophanes in the history of Alexandrian scholarship in relation to the activity of *diorthōsis* and *ekdosis* are also relevant for an account of his lexicographic studies, and can usefully serve for a few closing remarks on this scholar. Since his work built on the outcome of earlier scholars' learned enterprises and achievements, his main intellectual merit is that of having undertaken and brought to completion an impressive task of rational structuring, productive utilization and advancement of knowledge which was to be of enormous benefit to the grammarians who came after him. Therefore, he represents a watershed, the culmination of one era and the starting point of another. His capacity to develop specialized and innovative areas of scholarship in virtually the entire range of the philological subjects, tools and methods of the previous genera-

tions of scholars is reminiscent of versatile and intellectually vibrant figures such as Callimachus and Eratosthenes, not by chance mentioned among his teachers by the ancient tradition. At the same time, Aristophanes seems to have been the first among the great Alexandrian scholars to have been integrally and exclusively a grammarian, rather than also a poet or a scientist. This aspect was thenceforth to become a generalized characteristic—despite significant exceptions—and can be interpreted as a definitive step towards the professionalization of textual philology. In addition, since he had received his training in the capital of Hellenized Egypt and had been appointed director of the Library during the period encompassing the definitive downfall of the ambition for imperial power nourished at length by the Ptolemies throughout the 3rd century, Aristophanes marks the interruption of the series of Greek intellectuals summoned from their homelands to Egypt in support of the aims of the Ptolemies' panhellenistic propaganda, and opens the chain of scholars more closely and genuinely attached to Alexandria by birth and/or education.³⁰⁸

Two personalities connected for different reasons with Aristophanes of Byzantium, Euphronius and Callistratus, must be recalled at this point. The first of these two scholars appears to have been a fairly important figure, yet his specific position within the frame of Alexandrian scholarship is hard to define. Information from ancient sources describes him as the author of commentaries on individual plays by the comic poet Aristophanes;³⁰⁹ in some fragments there remain traces of an interest in the literary use of proverbs that was also noted above for Aristophanes of Byzantium and was not unknown to Eratosthenes' *On the old comedy*.³¹⁰ Identification of this Euphronius with the tragic poet of the Pleiad, contemporary with Ptolemy II, and possibly one of the teachers of Aristophanes of Byzantium according to a modern emendation in the relevant entry of the *Suda*,³¹¹ has long been the mainstream

308 For opposite evaluations of Aristophanes' philology see Slater [1976], [1982] and [1986] 205–210 (negative); and Blank-Dyck [1984] (positive).

309 Ar. test. 113 Kassel-Austin. In the scholia to Aristophanes, Euphronius is quoted 27 times (of which 14 in the scholia to the *Frogs*, 9 in those to the *Wasps*). See Pfeiffer [1968] 160–161. The fragments of Euphronius' exegesis to Aristophanes' plays are collected by Strecker [1884].

310 Eratosth. fr. 72, 105 and 114 Strecker. See Tosi [1994b] 189.

311 *Suda* α 3933 (Ar. Byz. test. 1 Slater) testifies that Aristophanes was a pupil Εὐφρονίδα τοῦ Κορινθίου ἢ Σικυωνίου, “of Euphronidas the Corinthian or Sicyonian”, a passage which has been corrected (Slater [1986] 1, cf. Schmidt [1848] 327 n. 53; Nauck [1848a] 2 n. 3) to Εὐφρονίου <καὶ Μάχωνος> τοῦ Κορινθίου ἢ Σικυωνίου, “of Euphronius <and Machon> the Corinthian or Sicyonian” on the basis of a further correction by Bergk in Choerob., *Comm. in Heph.* 241.15–17 Consbruch (Ar. Byz. test. 14 Slater) ἰστέον δὲ ὅτι τοῦτου τοῦ Εὐφρονίου γέγονεν ἀκροατῆς Ἀρίσταρχος ὁ γραμματικὸς, οὐ μόνον Ἀριστοφάνους τοῦ Βυζαντίου

view.³¹² However, Euphronius is not cited in the fragments of Eratosthenes' study on ancient comedy³¹³ and it is hardly plausible that he could have devoted himself to word-by-word commentaries on the comedies before they had been issued in a reliable edition by Aristophanes of Byzantium, especially since it would appear from a scholion to Aristophanes' *Wasps* that Euphronius was able to utilize a copy that included *sēmeia*.³¹⁴ Therefore it seems more likely that this Euphronius should be kept distinct from the poet of the Pleiad and from Aristophanes' teacher and that he was either contemporary with or only a little later than Aristophanes himself.³¹⁵

In the scholia to Aristophanes' comedies, Euphronius is often cited together with a pupil of Aristophanes of Byzantium, Callistratus of Alexandria.³¹⁶ The *floruit* of the latter is thus to be placed in the first half of the 2nd century, when another and more illustrious pupil of Aristophanes, Aristarchus of Samothrace, was also active in the Ptolemaic capital. According to a modern interpretation of an ancient tradition, the two co-disciples seem to have been opposed by a strong rivalry.³¹⁷ Callistratus devoted himself to study and comment on the Homeric poems (whether he provided an edition of his own is still disputed)³¹⁸ and on works of Hesiod, Pindar and several dramatic authors, for all of which he is likely to have utilized the editions freshly drawn up by

(Ἀριστοφάνηος ὁ Βυζάντιος con. Bergk), "it is important to bear in mind that the grammarian Aristarchus was a pupil of this Euphronius, not only of Aristophanes of Byzantium" (Bergk would correct "Aristophanes of Byzantium" to the nominative subject).

312 Strecker [1884] 7–9; Susemihl [1891–1892] 1.281–282; Cohn [1907e]; Pfeiffer [1968] 160–161; Fraser [1972] 2.663 n. 100.

313 As observed by Pfeiffer [1968] 161.

314 *Schol. Ar., Vesp.* 696b (VTAld) (Euphr. fr. 57 Strecker) τὸν θίνα ταραττεις: ἐκ βυθοῦ με κινεῖς, ἀντὶ τοῦ τὴν καρδίαν. Εὐφρόνιος δὲ καὶ σεσημειώσθαι φησιν, ὅτι τὸν θίνα ἀρσενικῶς, ὡς καὶ Ὀμηρος, εἶρηκεν παρόσον καὶ ὁ θίς ἐν βάθει τοῦ πελάγους κείται καὶ τὸ θυμικὸν ἐν τῇ καρδίᾳ, "you cause disruption on the seabed: you trouble me sorely from deep down, thereby indicating the heart. Euphronius says that the locution has been marked by a *sēmeion*, for (Aristophanes) said τὸν θίνα in the masculine, like Homer, since the seabed is located at the bottom of the sea and the seat of feelings (is located) in the heart". This testimony is highlighted by Henderson [1987] LXII n. 18.

315 Such a relative chronology fits well with the mention by Georgius Choeroboscus (see above, n. 311) of Euphronius beside Aristophanes as a teacher of Aristarchus—a testimony usually rejected by modern critics.

316 Collection of fragments: Schmidt [1848].

317 Ath. 1.21c. See Gudeman [1919] 1738.

318 This is a conviction held by West [2001a] 60–61, against the old opinion of Ludwich [1884–1885] 1.45.

his teacher. In the surviving fragments of his Homeric scholarship,³¹⁹ gleaned from the writings *Πρὸς τὰς ἀθετήσεις*, *Περὶ Ἰλιάδος* and *Διορθωτικά*, Callistratus displays a genuinely independent critical approach: sometimes he champions Aristophanes of Byzantium's standpoint, while at other times he opposes his teacher by putting forward an opinion of his own; and, if at times he adopts a position against an Aristarchean choice, on yet other occasions he is in agreement with him. These circumstances refute the well rooted, but simplistic, assumption that Callistratus' work was purely ancillary to the positions espoused by Aristophanes; they also controvert a presumed unyielding reciprocal hostility towards Aristarchus.³²⁰ Among the Alexandrian scholars of early Hellenistic Age, Callistratus is the most quoted in the scholia to the comedies of Aristophanes,³²¹ from which one may surmise that his comments showed a broad spectrum of interests ranging from grammar to lexicology, paroemiography (an interest, as we have seen, of Peripatetic imprint and common to Eratosthenes, Aristophanes of Byzantium, and Euphronius),³²² history, and geography. Since there appears to be no evidence that Aristophanes of Byzantium enshrined in a *hypomnēma* the explanation of his own textual choices, it is tempting to think that they were written down in the commentaries composed by his pupil. Finally, the sources mention under his name a miscellaneous philological collection, entitled *Σύμμικτα*,³²³ and an erudite work *Περὶ ἑταιρῶν*,³²⁴ analogous to that bearing the same title by Aristophanes of Byzantium and very likely a complement to it. This grammarian, therefore, provides a good example of how some rigid and obsolete categories of historiographic description (ancillarity, rivalry) may represent the convenient and easily welcomed outcome of the fossilization of commonplace ideas and thus may sometimes have given rise to mistaken beliefs. Furthermore, the relations holding between Aristophanes of Byzantium, Euphronius and Callistratus, and between the latter and Aristarchus, examined in the perspective adopted here, suggest that intellectual activity in the Alexandrian institutions must in general have been rather more complex and nuanced than that traditionally built on the simple straight line traced by the *diadokhē* of librarians.

319 Edition and study: Barth [1984].

320 For the traditional view see Gudemann [1919] 1747 ('Famulusnatur'); Pfeiffer [1968] 210. For a reassessment: Schmidt [1986]; Montana [2008].

321 Roughly 30 quotations, mainly in the scholia to *Frogs* (10), *Birds* (7), and *Wasps* (6).

322 Tosi [1994b] 189.

323 *FGrHist* 348 fr. 2–6.

324 *FGrHist* 348 fr. 1 = 24 fr. 1 Bagordo.

According to an interpretation of the list of librarians given by P.Oxy. 10.1241, after Aristophanes the royal Library was directed by Apollonius dubbed *ὁ εἰδογράφος* (“the classifier”). He was possibly appointed to the post around 190 and in all probability held it until about 160, when he was succeeded by Aristarchus.³²⁵ Apollonius’ nickname is explained in a late lexicographical source as “classifier (of poetry) by (musical) genres (εἶδη)”.³²⁶ Whether his classifications reflected technical skill concerning musical modes as well as the availability of poetic texts with musical notation³²⁷ is still an open question. Alternatively, they may have been based on a natural inclination of Apollonius himself to focus on musical genres, either by inferring musical modes of the odes from their metrical frame and from references to performance within the poetic texts,³²⁸ or by basing himself on empirical observations, namely by watching and listening directly to sung performances of the works concerned or parts of such works, which in all likelihood were rearrangements moulded on the changing musical features and rules, contexts and occasions of Hellenistic society. That he did have an aptitude for musical appreciation seems to be confirmed, apart from other arguments, by the fact that the same source mentioned above presents Apollonius’ special ability as an unusual natural talent (εὐφυῆς ὤν, “being naturally talented”).³²⁹ Furthermore, if the criterion of classification by ancient *harmoniai* had been based on musical scores that were readily available and on extensive background knowledge and concern—albeit widespread only in the restricted Museum circles—it would be difficult to explain why it did not impose itself as the authoritative mainstream and dominate the entire range of subsequent Alexandrian editions of lyric and dramatic poetry.³³⁰

325 On the problems posed by the list and on Apollonius’ place after Aristophanes see above, at the beginning of this section.

326 *Etymologicum Genuinum* AB s.v. εἰδογράφος = *Etymologicum Magnum* 295.52 ff. This manner of classification was perhaps applied to the Pindaric odes, according to *schol.* Pind., *Pyth.* 2 *inscr.* and 2.31 Drachmann.

327 Thus Fleming-Kopff [1992] 762; Fleming [1999] 25.

328 Most [1985] 100 n. 26.

329 Prauscello [2006] 29–33, summarizing some assumptions of Irigoin [1952] 50, and Fraser [1972] 2.666 n. 126. She also derives from the testimony of Aristox., *Harm.* 2.39 (49.1 ff. Da Rios) that “being able to grasp and recognize the different musical modes does not seem necessarily to entail the ability to write down and then consequently decipher musical diagrams” (31).

330 Prauscello [2006] 33: her argument would be particularly strong if we could succeed in demonstrating that Apollonius was appointed as librarian before Aristophanes of Byzantium, who arranged many authoritative editions of poetry such as the Pindaric odes

The post of head librarian was then assigned to Aristarchus of Samothrace (ca. 215–144), the most brilliant pupil of Aristophanes of Byzantium and the most illustrious personality of the whole of Hellenistic scholarship. He was originally from the island of Samothrace, in the north-oriental Aegean Sea, which at that time was under the rule of the Ptolemies; later he acquired citizenship in Alexandria, where he spent almost all the rest of his life. During the long reign of Ptolemy VI Philometor (180–145) he held the positions of librarian and tutor of the royal House, but in 145/144 his career and life underwent a dramatic reversal, when he suffered the consequences of the dynastic struggle that resulted in the murder of Ptolemy VII and the usurpation of the throne by Ptolemy VIII Euergetes II. The reprisals unleashed by the latter against his predecessor's supporters forced many to flee from Alexandria, and Aristarchus sought refuge on the island of Cyprus, where he died shortly afterwards.

Aristarchus' ecdotic and hermeneutic activity is quite exceptional: not only did his work take into consideration an incredible number of authors of all poetic genres, even—as is documented—embracing prose, but he also exerted enormous influence over subsequent generations of scholars, leaving a lasting memory that lived on in tradition. Following in the footsteps of Aristophanes, who had maintained the tasks and competences of his own scholarship within the perimeter of textual philology, Aristarchus devoted himself to an intense activity of *diorthōsis* and *ekdosis*; he expounded his approach not merely in numerous *syngrammata* focusing on individual topics,³³¹ like Aristophanes before him, but above all in a vast array of *hypomnēmata*, very extensive commentaries wherein text interpretation enjoyed pride of place.³³²

His edition of Homer superseded the previous editions by Zenodotus and Aristophanes, as emerges from the great quantity of his interventions handed

(this possibility is contemplated, together with the opposite case, by D'Alessio [1997] 53 with n. 178). On Hellenistic eidography, especially with respect to the classification of the Pindaric songs, see Rutherford [2001] 90–108 and 152–158, who assumes that (107) “most cases of eidographic indeterminacy arose because Hellenistic classifiers tended to neglect the performance scenario of songs in favour of formal features, and to the extent that they were concerned with performance, they may sometimes have misinterpreted it”.

331 The following dealt with Homeric problems: *Against Philotas*, *Against Comanus*, *Against Xenon's uncommon opinion*, *On the Iliad and Odyssey*, *On the ships at the anchor*.

332 The biographical entry in the *Suda* (α 3892) attributes to Aristarchus “more than 800 books (*i.e.* rolls), only as far as his commentaries”. Nonetheless, “von Aristarch selbst scheint es keine publizierten Kommentare zu Homer gegeben zu haben” in the opinion of van Thiel [2014] 1.8.

down by the Homeric scholia.³³³ A subscription repeated at the end of almost every book of the *Iliad* in the manuscript *Venetus A*,³³⁴ the witness both of *sēmeia* and of the most important family of Homeric scholia traceable back to Alexandrian scholarship, lists their ancient exegetical sources. We thus learn that the *diorthōsis* and the related *hypomnēmata* of Aristarchus formed the object of specialized studies by later grammarians, such as the 1st century *On the Aristarchean diorthōsis* (*Περὶ τῆς Ἀρισταρχείου διορθώσεως*) by Didymus and *On the sēmeia of the Iliad and Odyssey* (*Περὶ σημείων Ἰλιάδος καὶ Ὀδυσσεύσεως*) by Aristonicus, which gathered together the explanations attached by Aristarchus to the *sēmeia* he inserted in his edition of the poems, and, in the Imperial Age, *On the prosody of the Iliad* (*Περὶ ἰλιακῆς προσωδίας*, on metrical problems) by Herodian and *On punctuation* (*Περὶ στίγμης*) by Nicanor.³³⁵ The influence of the Aristarchean edition is also revealed by the fact that, as from the mid-2nd century, it became regarded as the standard version attested to by papyri, or *vulgata*, as far as the number of lines was concerned: from then on, the athe-tized lines, or ‘plus-verses’, of the Homeric poems seem to disappear from the tradition.³³⁶ On the other hand, the fact that many of the textual choices made by Aristarchus and his predecessors were not confirmed in the *vulgata* should cause no surprise. This absence signals that in many cases the philolo-gists did not intervene to carry out concrete modifications of the text they had chosen as the standard ground of their work; rather, they kept details of their

333 Standard editions of the Homeric scholia *maiora* containing Aristarchean scholarship are, for the *Iliad*, Erbse [1969–1988]; for the *Odyssey*, Dindorf [1855] and Pontani [2007–2010] (in progress). Partial collections or editions of Aristarchus’ fragments include Lehrs [1882³]; Ludwich [1884–1885]; Matthaios [1999]; Schironi [2004]; van Thiel [2014].

334 Venezia, Biblioteca Nazionale Marciana, gr. 822 (*olim* 454), of the 10th century.

335 The fragments of these works are edited separately by Schmidt [1854] 112–179 (Didymus); Friedländer [1853] and Carnuth [1869] (Aristonicus); Lentz [1867–1870] 3.2.2.1 22–165 (Herodian); Friedländer [1857²] and Carnuth [1875] (Nicanor). P.Oxy. 8.1086, fragments of an anonymous *hypomnēma* on the *Iliad* (comments on 2.751–827 survive; another scroll, P.Oxy. 65.4451, with comment on *Il.* 1.56–58, is written by the same hand and displays similar features), dated to the 1st century, therefore composed shortly after Aristarchus’ life-time and perhaps earlier than Didymus’ and Aristonicus’, is an intriguing testimony, since it explicitly quotes and apparently endorses a lot of Aristarchean methods (*e.g.* *sēmeia*) and opinions, whose entity, provenance and authenticity are disputed: see Lundon [2001] (with objection by M. Haslam at 839 n. 46), [2002b] and [2011a] 172–174.

336 Bibliography quoted above, n. 157. But the phenomenon may have been due to the fact that “Aristophanes and Aristarchus . . . followed another source or sources more similar to the vulgate”, in the belittling opinion of West [2001a] 36. On the debated concept of *vulgata* of Homer’s text: Haslam [1997] 63.

interventions in specialized learned tools that were of no direct interest or easy availability to ordinary readers and booksellers.³³⁷

On account of several apparent ambiguities in the ancient records, there is some debate as to whether Aristarchus' Homeric scholarship was expressed materially only in one *hypomnēma* which also contained his opinions on the textual setup, or in an *ekdosis* and in a *hypomnēma* as well, in one or more redactions.³³⁸ A fairly plausible reconstruction, which is coherent with the sources, can be established by the following sequence: firstly a *hypomnēma* based on Aristophanes of Byzantium's Homeric edition (cf. *schol.* A Hom., *Iliad* 2.133a ἐν τοῖς κατ' Ἀριστοφάνην ὑπομνήμασιν Ἀριστάρχου); then an *ekdosis* by Aristarchus himself accompanied by a new *hypomnēma* based on this *ekdosis*; finally, further critical-textual interventions carried out by Aristarchus on his own copy/edition of the Homeric text (later known as ἐπεκδοθείσα διόρθωσις, "re-edited *diorthōsis*"), but without his having the time to update his own *hypomnēma* or to compose a new one. Aristarchus' pupil Ammonius gave an account of these last Aristarchean interventions in his work, now lost, *On the re-edited diorthōsis* (Περὶ τῆς ἐπεκδοθείσης διορθώσεως); in another work, *On there not having been more than one edition of the Aristarchean diorthōsis* (Περὶ τοῦ μὴ γεγονέναι πλείονας ἐκδόσεις τῆς Ἀρισταρχείου διορθώσεως), he apparently set himself the task of explaining that the "re-edited *diorthōsis*" had not been concretely composed in the form of a second edition, but had remained at the stage of *addenda et corrigenda* directly annotated in the first edition.³³⁹

337 Cf. Pasquali [1952²] 216–217. *Status quaestionis* by Haslam [1997] 84–87.

338 Pfeiffer [1968] 215–217; West [2001a] 61–67.

339 For this interpretation: Montanari [1998a], [1998d], [2000b] and [2009b] 156–159. Different views have been put forward by West [2001a] 62–63 (both Ammonius and Didymus knew two *ekdoseis* by Aristarchus) and by Nagy [2004] 86 and [2009] 21–33 (there were two Aristarchean *diorthōseis* according to Ammonius, two *ekdoseis* according to Didymus). It is worth noting, however, that in at least two instances Didymus in his *Περὶ τῆς Ἀρισταρχείου διορθώσεως* was referring to Aristarchus' work on the text of the *Iliad* by the plural διορθώσεις: *schol.* A Hom., *Il.* 1.522a¹ αἱ Ἀριστάρχου... διορθώσεις, and *schol.* A Hom., *Il.* 2.192b¹ κὰν ταῖς διορθώσεσιν καὶ ἐν τοῖς ὑπομνήμασιν (*scil.* Ἀριστάρχου). See Montana [2014]. According to Helmut van Thiel, Aristarchus by no means wrote *hypomnemata* and all his interventions were shaped as "Randnotizen" in his working copy of the poem (see above, n. 332); furthermore, (van Thiel [2014] 1.8) "die beiden aristarchischen 'Ausgaben' (αἱ Ἀριστάρχου) wurden nach seinem Tod von einem Schüler kombiniert und publiziert. Der Herausgeber benutzte Aristarchs ursprünglichen Handtext und vermutlich Aristarchs persönliches Exemplar der Ekdosis, in das er zusätzliche Notizen eingetragen hatte, die wiederum nur für ihn verständlich sein mussten"; and, so doing, the "Herausgeber" misunderstood and contaminated the genuine Aristarchean tradition and induced Ammonius to give a clarification (cf. 14). Finally, van Thiel (192, cf. 140) takes διορθώσεις in both of the

This reconstruction could be supported now by the testimony of the recently recovered text *Περὶ ἀλυπίας* (*Avoiding distress*) by Galen.³⁴⁰ In § 13 Boudon-Millot – Jouanna, the Pergamene physician evokes the picture of the damage inflicted on his own personal library and on the holdings of some public libraries in Rome as a result of the great fire that swept in 192 AD. In this context, mentioning books that were not rare but particularly sought-after “due to the exactness of the text (διὰ τὴν ἀκρίβειαν τῆς γραφῆς)”, he recalls “those of Aristarchus, which are the two Homers” (Ἀριστάρχεια, οὔτινές εἰσιν Ὅμηροι δύο). This passage not only incontrovertibly documents the existence of Aristarchean editions of Homer’s *Iliad* and *Odyssey* in late 2nd century AD Rome, but it also reserves another point of interest: in the immediately following lines, although the text is somewhat obscure and is the object of heated debate, it would appear that Galen regarded the value of those lost exemplars as residing precisely in the fact that

within these writings those texts were preserved which, book by book, had been written or transcribed for their own personal use by those of whom the same books bore the names.³⁴¹

Thus one may perhaps surmise that these lost copies contained *addenda* and *corrigenda* dating back to the very eponyms of the rolls and therefore, with regard to the Ἀριστάρχεια (βιβλία), to Aristarchus in person. If so, this could confirm that at the time of Galen a single Aristarchean edition of the two Homeric poems was in circulation, enriched by contributions and corrections that had been added by the philologist himself at a date subsequent to his original edition: therefore, in Ammonius’ words, a re-edited *diorthōsis* (ἐπεκδοθείσα διόρθωσις).³⁴²

Didymean scholia mentioned above as “vermutlich Randnotizen der Hörer und Schüler Aristarchs in ihren Homertexten”.

340 Editions of *Περὶ ἀλυπίας* (*De indolentia*): Boudon-Millot [2007b]; Boudon-Millot – Jouanna [2010]; Kotzia-Sotiroudis [2010]; Garofalo [2012a]. See also Vegetti [2013] 249–303 and Nutton [2014].

341 διασφραζομένων ἐντός (ἐν τοῖς cod.) τῶν γραμμάτων ἐκείνων αὐτῶν, ἀ καθ’ ἕκαστον βιβλίον ἢ ἔγραψαν ἢ ἀνεγράψαντο οἱ ἄνδρες, ὧν ἦν ἐπώνυμα τὰ βιβλία, according to the text given (following in the footsteps of Roselli [2010]) by Garofalo [2012a].

342 See Montana [2014]. On the rich debate sparked by Galen’s passage see—in addition to the contributions by Roselli and Garofalo cited in the previous note—at least Boudon-Millot – Jouanna [2010] 52–54; Stramaglia [2011] 120–129; Manetti [2012b] 14–16; Mazzucchi [2012] 252–253.

For the purposes of textual criticism Aristarchus introduced new critical *sēmeia* in addition to those adopted by his predecessors: the *diplē* (διπλή: >) highlighted a particularly interesting passage, which became the object of erudite exegetic observations and clarifications in the *hypomnēma*; the *diplē periestigmenē* (διπλή περιεστιγμένη, i.e. *diplē* surrounded by dots: >:), signaled disagreement with regard to Zenodotus.³⁴³ Aristarchus' editions of melic poetry appear to have endorsed the colometric layouts introduced by Aristophanes of Byzantium and the relevant signs of scansion—with an exception, it seems, for the meaning of the *asteriskos*, generically used by Aristarchus for separating different compositions without consideration of meter.³⁴⁴

This interaction and continuous exchange between critical text constitution and literary interpretation was given its most characteristic expression in the principle traceable to Aristarchus according to which an author is his own best interpreter, a principle that became consolidated in the tradition in the formulation Ὅμηρον ἐξ Ὁμήρου σαφηνίζειν, “to explain Homer by Homer”. That is to say, an author's distinctive literary *usus* (συνήθεια), drawn from his work(s), was selected as an internal criterion of an analogic type applied to philological analysis and to emendation on the level of language, style and content of the work itself—a procedure that involved an evident risk of circularity, for which due awareness of *hapax legomena* provided a helpful remedial measure.³⁴⁵ Let us consider a couple of examples. At the very beginning of the *Iliad*, according to the text of the *vulgata* it is said that the ruinous anger of Achilles sent many a brave soul hurrying down to Hades, and many others were turned into “a prey for dogs (l. 5) and for *all the birds*”, or οἰωνοῖσι τε πάσι. In the manuscript *Venetus A*, l. 5 is marked with the *diplē periestigmenē*, which indicates a difference of opinion as compared to Zenodotus, but this does not correspond to any explanation in the scholia preserved by this or other manuscripts of the poem. It is Athenaeus (2nd/3rd century AD) who tells us what really happened: Zenodotus, in his own edition, had written οἰωνοῖσι τε δαῖτα, “and *meal* for birds”, but someone (identifiable with Aristarchus on the basis of the *diplē periestigmenē* in *Venetus A*) had rejected this reading and adopted the other, pointing out that in Homer δαῖς is never found in reference to a meal for animals.³⁴⁶ In *Iliad* 1.277 Aristarchus read Πηλεΐδῆθελε(ε)—as a crasis of

343 On the Aristarchean *sēmeia*, see the references quoted above, n. 133, and further at least Pfeiffer [1968] 218; Montanari [19970] 274–281; van Thiel [2014] 1.29–30.

344 The circumstance is attested to with respect to Alcaeus' edition by Heph., *Enkheiridion* 74.11–14 Consbruch; see Porro [1994] 3–4.

345 See above, n. 130.

346 Ath. 1.12e καὶ ἐπὶ μόνων ἀνθρώπων δαῖτα λέγει ὁ ποιητής, ἐπὶ δὲ θηρίων οὐκέτι. ἀγνοῶν δὲ ταύτης τῆς φωνῆς τὴν δύναμιν Ζηνόδοτος ἐν τῇ κατ' αὐτὸν ἐκδόσει γράφει· κτλ., “the poet uses

Πηλείδῃ ἔθει(ε)—instead of Πηλείδῃ θέλ(ε), since he believed he could identify as a Homeric συνήθεια the use of the verb ἐθέλω, trisyllabic, instead of its bisyllabic equivalent θέλω (*schol. Hom., Iliad* 1.277a–c). It is only too easy today, in the light of fundamental concepts that have been critically explored and established as valid such as *Kunstsprache* and oral poetry, to look down one's nose and smirk at Aristarchus' valiant but 'naive' and unnatural attempt at normalizing Homeric diction. Less simple, but more worthwhile, is the endeavor to grasp the significance and the contribution of his critical approach in the context of the long arduous path towards a fuller understanding of the historical and formal complexity of epic poetry.³⁴⁷

In order to engage in the task of text constitution Aristarchus typically had recourse to careful observation of the characters internal to the work in question, thus mustering the powers of meticulous and painstaking interpretation and conjecture. But if the occasion arose he would also proceed to a cautious comparison with a broad range of manuscript witnesses selected for their authoritativeness or reliability. For instance, in a rich and complex Didymean scholium to ll. 423–424 of the first book of the *Iliad* an *excerptum* from his *hypomnēma* is quoted, in which he adduces the testimony of five ancient 'editions' in support of the reading κατὰ δαίτα against μετὰ δαίτα: *schol. A Hom., Iliad* 1.423–4 οὕτως δὲ εὕρομεν καὶ ἐν τῇ Μασσαλιωτικῇ καὶ Σινωπικῇ καὶ Κυπρίᾳ καὶ Ἀντιμαχείῳ καὶ Ἀριστοφανεῖ, "so we found in the editions of Massalia, Sinope, Cyprus, and those by Antimachus and Aristophanes (of Byzantium)"³⁴⁸—where the use of the verb εὕρεῖν, "to found (by searching)", deserves to be stressed.³⁴⁹ With regard to *Iliad* 9.222 where, on the subject of the heroes who arrived at Achilles' tent as ambassadors sent by Agamemnon, it is said that "they satisfied themselves with drink and food", he is again reported by Didymus (*schol. A Hom., Iliad* 9.222b¹) as having noted that this passage is in conflict with the previous ll. 177–178, in which it is said that they had drunk their fill in Agamemnon's tent shortly before. Accordingly, the scholion continues, Aristarchus was tempted to suggest that the expression in l. 222

the word δαίς only for human beings, never for beasts. But Zenodotus, ignoring the meaning of this term, in his own edition writes: etc." In actual fact, δαίς occurs in our text of the *Iliad* (24.43) in reference to the meal of a lion.

347 Overall, on Aristarchean interpretation of Homeric vocabulary: Nünlist [2012b].

348 In his edition, Erbse takes the quoted words to be part of the *excerptum* from Aristarchus' *hypomnēma*; this position is shared, among others, by Rengakos [2012] 245. The opposite opinion is maintained by West [2001a] 70–72 (cf. Führer-Schmidt [2001] 5–6), who is inclined to attribute these words, and the act of collation of different Iliadic testimonies, to the source of the piece of information, namely Didymus, rather than to Aristarchus. See also above, n. 128.

349 Nagy [2004] 87–109.

handed down by tradition, “they satisfied themselves” (ἐξ ἔρον ἔντο), should be conjecturally emended with “straightaway *or* once again they fed themselves” (ἄψ *vel* αἶψ’ ἐπάσαντο)—implying that even though they were already satiated they did not wish to offend Achilles. However, as pointed out in the scholion, Aristarchus exercised extreme prudence and refrained from modifying the text, believing that its genuineness was corroborated by the presence of the suspicious reading in many manuscripts.³⁵⁰

The above example also gives an eloquent illustration of how Aristarchean philology took effect with regard to the content and narrative of the poems. Although more cautiously and with more careful attention to the manuscript tradition than Zenodotus, Aristarchus did not forsake the habit of emending or athetizing the text, introduced by the first librarian: rather, he applied these procedures in a regular manner in cases which he felt would otherwise have resulted in internal inconsistency and moral unseemliness (ἀπρέπεια) from the point of view of the content. In the first book of the *Iliad*, for instance, Aristarchus athetized lines 29–31, included in the threatening apostrophe directed by Agamemnon against the priest Chryses and alluding to the fate of Chryseis at Argos, for in his opinion not only do they blunt the vehement tension of the passage, but it is also “unseemly (ἀπρεπές) for Agamemnon to say such things”.³⁵¹ Thus emendation and *athetēsis* of what appeared to be ‘non-Homeric’ was the analogist internal methodology chosen by Aristarchus to address content problems which his contemporary colleagues at Pergamum were on the contrary in the habit of solving by respecting the transmitted text and justifying the (alleged) defects by means of anomaly and allegorical interpretation. An echo of Aristarchus’ lukewarm (if not hostile) attitude towards systematical allegoresis³⁵² can be perceived in a scholium to the *Iliad*, which reports his doctrine according to which interpreters, when commenting on the

350 ἄλλ’ ὅμως ὑπὸ περιττῆς εὐλαβείας οὐδὲν μετέθηκεν, ἐν πολλαῖς οὕτως εὐράν φερομένην τὴν γραφήν. The same is repeated, more succinctly, in *schol.* 222b² and b³. This case is also adduced, with other instances, by Rengakos [2012] 245 and 247.

351 *Schol.* A Hom., *Il.* 1.29–31 (Aristonicus). On Aristarchus’ *athetēseis*: Lührs [1992]. For the decoding of the dialectics between Aristarchus’ and Zenodotus’ *athetēseis* the ancient grammarians availed themselves of Callistratus’ *Πρὸς τὰς ἀθετήσεις* and other similar works: see Montana [2008] and below.

352 Reassessments by Cucchiarelli [1997], underlining the actual admission of “rhetorical allegory” (μεταφορά) by Aristarchus and the Alexandrian scholars (with regard, for instance, to the interpretation of Alcaeus’ intrinsically allegorical imagery); and by Nünlist [2011], stressing the actual tepidity of this alleged Aristarchean controversy.

poems, should not waste time on “anything else than what is actually said by the poet.”³⁵³

Through his analysis of language together with an exploration of the historical and cultural aspects of the works, Aristarchus thus formulated a definition of a specific Homeric *quid* (τὸ Ὀμηρικόν), distinct from that of later cyclic poets (called οἱ νεώτεροι, “the younger ones”)³⁵⁴ and Hesiodic poetry. On the basis of this organic historical-literary vision, he defended the Homeric authorship of both poems, thus adopting a position which contrasted with a view held by other scholars—among whom Xenon and Hellanicus³⁵⁵—known as χωρίζοντες (*khōrizontes*, “those who separate”), an appellative reflecting their belief that the *Iliad* and the *Odyssey* were works by two distinct authors, with only the first poem belonging to Homer and the second to a younger poet.³⁵⁶

Aristarchus is known to have composed a commentary on Hesiod, where in all probability he shared Praxiphanes’ opinion of the non-authenticity of the poem of *Works and Days*.³⁵⁷ Within the canon of lyric poets that was gradually being determined, he himself produced an edition of Alcaeus and possibly of Anacreon, which superseded those by Aristophanes of Byzantium,³⁵⁸ and drew up a commentary on Alcman, Pindar (with regard to whom the Medieval scholia testify to seventy-odd Aristarchean interventions) and Bacchylides; in addition, he concerned himself with Archilochus, Semonides, Hipponax and

353 *Schol. D Hom., Il.* 5:385 μηδὲν ἔξω τῶν φραζομένων ὑπὸ τοῦ ποιητοῦ; cf. Eust., *Il.* 561.28 ff. ἡ δὲ ἀλληγορία, εἰ καὶ ὁ Ἀρίσταρχος ἤξιου, ὡς προεγράφη, μηδὲν τι τῶν παρὰ τῆ ποιήσεσι μυθικῶν περιεργάζεσθαι ἀλληγορικῶς ἔξω τῶν φραζομένων, κτλ. See Porter [1992] 70–71.

354 Severyns [1928].

355 This Hellanicus, Agathocles of Cyzicum’s pupil as well as Ptolemy Epithetes’ teacher, was already mentioned earlier for an intervention consisting of word division in a passage of Herodotus’ *Histories*: F. Montanari [1988] 52–53; above, n. 140.

356 Proclus, *Vita Homeri* 73–74 Severyns: Hellanic. test. 2 Montanari: γέγραφε δὲ (“Ὀμηρος) ποιήσεις δύο, Ἰλιάδα καὶ Ὀδύσειαν, ἣν Ξένων καὶ Ἑλλάνικος ἀφαιροῦνται αὐτοῦ, “Homer wrote two poems, *Iliad* and *Odyssey*, the latter of which Xenon and Hellanicus strip from him”. On the *khōrizontes*: Kohl [1917]. On Hellanicus and Xenon: F. Montanari [1988], respectively 43–73 and 109–121. Aristarchus wrote a treatise against Xenon (see above, n. 331).

357 See above, n. 44.

358 Hephaestio on the one hand (74.12) contrasts the edition of Alcaeus by Aristophanes of Byzantium with that by Aristarchus, qualified as “the present Aristarchean (*scil.* edition)” (τὴν νῦν τὴν Ἀριστάρχειον; see Porro [1994] 3–4), on the other (68.22) mentions “the present (*scil.* Aristarchean) edition” (τὴν νῦν ἔκδοσιν) of Anacreon, implicitly referring to one older (Aristophanean?) edition of this poet. See Pfeiffer [1968] 185.

perhaps Mimnermus.³⁵⁹ With regard to drama, it is certain that he worked on Aeschylus,³⁶⁰ Sophocles and Ion, and while there is no clear documentation for Euripides, we do have positive evidence that he commented on at least eight comedies of Aristophanes.³⁶¹ Finally, if one takes into account his technique of utilizing parallel passages drawn from works of Callimachus and other post-classical poets when commenting on Homer, then the idea that he may also have focused specific attention on the poetry of his own era becomes something more than an abstract hypothesis.³⁶²

In the preceding pages we touched on the question of the rather scanty evidence of Alexandrian interest in classical prose writers, recalling that some traces can be perceived in the lexicographical research of Aristophanes of Byzantium but that little precise evidence is available at least up to Aristarchus. In a 3rd century AD papyrus (P.Amherst 2.12), the conclusion of a somewhat selective *hypomnēma* on the first book of Herodotus' *Histories* is followed by a subscription in which Aristarchus is mentioned as the author of the comment: Ἀριστάρχου Ἡροδότου ἁ ὑπόμνημα (*Aristarchus' commentary on Herodotus' book 1*).³⁶³ Such an authoritative attribution understandably leads to anticipation of a particularly analytical and erudite commentary, but this expectation is to some extent frustrated, and not merely because of the very minimal size of the fragment. The scanty remnants of the first column include lemmata from no less than three chapters of *Histories* 1 (1.191.6, or 1.183.2, up to 1.194.2);³⁶⁴ and in what remains of the second column, which is the better preserved of the two, four lemmata can be identified, the first of which is drawn from *Histories* 1.194, while the other three are from *Histories* 1.215, with a jump of more than twenty chapters (the greater part of the ethnographic *excursus*

359 Raffaelli [1992]. Some points of view put forward by Aristarchus, when discussing historical questions issued from two Pindaric passages, were refuted by the Pergamene 'scholar historian' Artemon, fr. 1–2 Broggiato. On the negative evaluation of Aristarchus' historical proficiency, widespread in antiquity as well as in modern times, see Broggiato [2014] 16 with n. 21; partial reassessment by Muzzolon [2005] 59–60 (scholarship on Aristophanes) and Vassilaki [2009] (scholarship on Pindar).

360 In *schol.* Theoc. 10.18e (p. 229 Wendel) Ἀρίσταρχος ἐν ὑπομνήματι Λυκούργου Αἰσχύλου, the reading Ἀρίσταρχος (mss. UEAGPT) is preferred to Ἀριστοφάνης (ms. K); Wendel, l.c.; Pfeiffer [1968] 222–223 n. 7; Wartelle [1971] 165 n. 1; Montanari [2009c] 416–417.

361 Muzzolon [2005].

362 Montanari [1995a] and [2002c]; skeptical, Rengakos [2000].

363 Editions: Grenfell-Hunt [1901] 3–4; Viljoen [1915] 17–22; Paap [1948] 37–40. A new edition by myself is forthcoming within the *corpus* of *Commentaria et lexica Graeca in papyris* (CLGP).

364 Montana [2012b].

on the Babylonians and of the description of the Persian subjugation of the Massagetes is not explained). On the other hand, the comment reveals a linguistic-literary perspective of a quintessentially erudite flavor, making use of poetic parallels to illustrate Herodotean expressions. For example, with regard to *Histories* 1.215.1, first one finds an evocation of the battle practices of the (Homeric) heroes (οἱ ἵρῳες), designed to elucidate a reading (ἄμιπποι, “having horses joined in pairs”) that called for explanation on account of its intrinsic difficulty, and possibly also because it represented a variant preferred by Aristarchus instead of the *vulgatum* ἄνιπποι, “not having horses”;³⁶⁵ this is followed shortly afterwards, at the very end of the commentary, by a citation of a passage drawn from Sophocles’ *Shepherds* (fr. 500 Radt), apparently as a merely formal parallel.³⁶⁶

That the comment is characterized by marked sporadicness, while the critical explication includes observations of an erudite-literary type, both characteristics being jointly observable in the space of just a few lines, suggests that this fragment may perhaps be interpreted as a witness of an abbreviated redaction of the original *hypomnēma*.³⁶⁷ The circumstance that the text is penned on the *verso* of a documentary roll, a procedure extensively attested in the Herodotean papyri (especially for the first book of *Histories*), also points in this direction.³⁶⁸ Such a practice has been recognized as the trace of a private utilization that was prompted by an elevated cultural motivation, conceivably linked to an educational context of a fairly good level.³⁶⁹ In short, this piece of evidence, precisely because it is isolated and notwithstanding the reworking of which it seems to be the outcome, is of great intrinsic value and is fully

365 As recognized by Vannini [2009], ἄμιπποι should now be considered as part of the lemma and not of the comment, and therefore as a veritable Herodotean *lectio* upheld by Aristarchus.

366 Π 13–16 σιδῆ|ρῳ| δὲ οὐ|δ’ ἀργύρῳ χρ[ῶ]νται: Σοφοκλήης ἐν Π[οι]||μέσι· οὐ χαλκός οὐ σίδηρος ἄπτε|ται χρός, “they do not use iron nor silver: Sophocles in the *Shepherds* (fr. 500 Radt) (says) ‘neither bronze nor iron enter into contact with the flesh’”.

367 See Pfeiffer [1968] 224; McNamee [1977] 141; Radt [1977] 396 (app.); Del Fabbro [1979] 94 n. 78; Montanari [1993b] 248 and [2013] 6–7; Messeri Savorelli-Pintaudi [2002] 43 with n. 1; Vannini [2009] 93 n. 1; West [2011] 80–81; Montana [2012b]. Paap [1948] 39–40, suggested the jump from 1.194 to 1.215 may be due to a mechanical cause (a lacuna in the model of the papyrus).

368 Six scrolls apart from P.Amh. 2.12: Bandiera [1997] 52.

369 For the Oxyrhynchite area see Lama [1991] 112–113.

sufficient to keep the question of an Alexandrian philology specifically devoted to prose writers wide open.³⁷⁰

The work of editing and interpreting literary texts was supported by, and in a certain sense intimately connected with, investigations into language. We noted earlier that this interactive tendency characterized philology uninterruptedly from the very beginning right up to its more mature season, from Philitas to Aristophanes of Byzantium, taking shape through the collection and study of 'difficult' words (*glōssai*) or even more inclusive vocabulary (*lexeis*). Aristophanes' notes on language, in particular his observation of trends in word inflection, from which there derived the concept and the descriptive principle of regularity or analogy, constituted an embryonic grammatical reflection. Furthermore Aristarchus, whose Homeric exegesis shows he was attentive to problems of dialect (which he approached with the assumption that Homer was Athenian and that Homeric language was basically an old Attic dialect or παλαιὰ Ἀτθίς)³⁷¹ and of linguistic correctness, regularity and coherence (ἐλληνισμός, especially with regard to orthography, nominal and verbal inflection, and prosody),³⁷² seems not to have restricted himself to empiri-

370 Nicolai [1992] 265–275; Montanari [19970] 282–288 and [2013] 30–32; Montana [2009c]; Priestley [2014] 223–229. That Aristarchus also commented on the second book of Herodotus' *Histories* is inferred by Matijašić [2013] from St. Byz. 466.12–13 Meineke Μώμεμφις πόλις Αιγύπτου. Ἡρόδοτος δευτέρῃ (2.163.2, Dat. -φι; 2.169.1, Acc. -φιν). κλίνεται Μωμέμφεως, ὡς Ἀρίσταρχος. The supposition that he realized an *ekdosis* of the *Histories* (Jacoby [1913] 515; cf. Rosén [1962] 211, 231; Hemmerdinger [1981] 154–164) is rejected by Pfeiffer [1968] 225 n. 3; Alberti [1983] 195; Baldwin [1984] 32; West [2011] 79–80; reticent Irigoin [1994] (see 50, 54, 88). The attractive hypothesis that Aristarchus may have commented on Plato's works from a philological and linguistic point of view, as maintained by Schironi [2005] with interesting but not incontrovertible arguments, awaits more solid confirmation.

371 Cf. Proclus, *Vita Homeri* 59–62 Severyns; *Vitae Homeri* 244.13 and IV, 247.7–8 Allen; *schol. A Hom., Il.* 13.197 (Aristonicus). This assumption was put forward in the work *Περὶ τῆς πατριδος, scil. Ὀμήρου*: Davison [1955] 21; Pfeiffer [1968] 228; Janko [1992] 32 n. 53 and 71; Nagy [1996] 151; Heat [1998] 27–28; Cassio [2002] 110; Ascheri [2010] 133–134 n. 31) and it stood in contrast to the belief of a derived Pisistratean (Attic) recension of the Homeric poems in the 6th century, whether this recension was a rather ancient construct (Nagy [1998] 227), or whether it was a recent invention of the Pergamene scholars (West [1983] 249). Some importance must be attached to the observation that in Aristarchus' view the dialectal words different from the Ionic present in the Homeric poetry could be treated as *glōssai* in the Aristotelian sense (words felt as eccentric for diachronic or diatopic reasons): Montanari [2012a].

372 The grammarian Ptolemy nicknamed "the Pindarion", one among the many pupils of Aristarchus, devised a theory that merged together *synētheia*, linguistic correctness and

cal observation of linguistic categories and tendencies. Rather, he appears to have taken a decisive conceptual step towards morphological description and classification and then to abstraction of normative/prescriptive rules, thereby making a transition from empirical to technical grammar.³⁷³ The *Tekhnē grammatikē* that has come down to us under the name of Dionysius Thrax, one of Aristarchus' pupils, could represent a prime testimony of the Aristarchean grammatical vision, were it not for the fact that substantial doubts regarding its authenticity and age prevent it from being used as a reliable witness in this respect (we will return to this below). Nonetheless, the results of extensive systematic inquiries into hundreds of Aristarchean fragments do allow the inference that although Aristarchus unquestionably started out from pragmatically inspired individual observations oriented towards text constitution and interpretation, and built up his work partly by using existing grammatical concepts of philosophical (Peripatetic)³⁷⁴ and rhetorical coinage and relevant previous discussions among philologists,³⁷⁵ he then proceeded to delineate a codification of linguistic categories, in particular concerning the doctrine of the parts of speech.³⁷⁶

As evinced by this promising line of research, there are concrete documentary reasons for believing that important constitutive steps in the shaping of grammatical science had already been taken as early as the first half of the 2nd century, a generation before Dionysius Thrax. The modern discussion centering around the empirical versus technical nature of this grammatical knowledge—*i.e.* having an instrumental and pragmatic character, tending towards the anomalist position, and exploitable to textual criticism, as opposed to having a theoretical character and a validity in itself, tending towards the analogist position, and pertaining to an autonomous discipline or τέχνη³⁷⁷—still

analogy by recognizing the excellence of *hellēnismos* in the Homeric *synētheia*: Sext. Emp., *Math.* 1.202–208: fr. 12 in Boatti [2000]. On ἑλληνισμός, a concept dating back to Aristotle, *Rh.* 1407a 19ff, see Pagani, this volume.

373 Fundamental in this respect are the inquiries mainly of Erbse [1980]; Ax [1982] and [1991]; Matthaios [1999], [2001a], [2002f], [2009a], and [2010b].

374 Matthaios [1999] 623–624; cf. Matelli [2012b] 40, on Praxiphanes of Mytilene as a possible intermediary in this field between the Peripatus and Alexandria.

375 Besides Aristophanes of Byzantium, at least the contemporary of the latter, Comanus of Naucratis, is worth recalling, against whom Aristarchus wrote a *Πρὸς Κομανόν* (allegedly restricted to Homeric scholarship). Commented edition of Comanus' fragments: Dyck [1988b].

376 Matthaios [1999], collecting and studying 225 Aristarchean fragments.

377 A contraposition mirroring the ancient controversy about the epistemological status of grammar (ἐμπειρία vs τέχνη): Matthaios [2011b].

remains open, but it can now base its arguments on a substantial body of critically collected and studied evidence.³⁷⁸

This profile of Aristarchus can be completed with a few concluding considerations. In the context of a general belittling of Alexandrian philology, some critics have expressed an overall negative assessment of this scholar, emphasizing the defects inherent in his conjectural and analogist approach to the Homeric text and pointing to a number of visibly mistaken and debatable textual and interpretive choices. This is a judgment which contains elements of truth, but it fails to award due credit to other aspects, such as Aristarchus' awareness of the importance of the textual tradition or, in more general terms, the historical and cultural background of the scholar. Modern disregard for such aspects of Alexandrian scholarship may lead to an underestimation both of the philological reliability of Aristarchus and his pupils and also of the intellectual and methodological progress they achieved.³⁷⁹ On the other hand, one should guard against an overestimation of Aristarchus' attainments, great though the merits of this scholar may have been. For it is a moot point whether he could have reached the same results without the benefit, as a preliminary starting point, of the enormous work conducted by Aristophanes on literary texts (edition, colometry, antiquarian documentation), vocabulary and language. Admittedly, with regard to the fields of learning to which both of these scholars devoted their efforts, we have far less documentation for Aristophanes than for Aristarchus, but in many cases this is to be ascribed to the fact that their opinions were in agreement on many issues: in short, the assumption that the disciple apparently overshadowed the teacher is possibly a misleading distortion to be imputed to the tradition.³⁸⁰ Therefore, the assessment of the historical role of the two erudites and of their reciprocal relation should be addressed with extreme caution. Finally, it is important to bear in mind a further aspect that ultimately helps us to comprehend the true greatness of Aristarchus: namely, the inspirational nature of his teachings, which produced a wealth of (direct and indirect) disciples who excelled in their fields, to the point that it became customary to speak of an Aristarchean 'school', in reference to at least two generations of scholars after his own.³⁸¹ Some of these

378 Overviews of the question: Swiggers-Wouters [2002c] and [2005]; Pagani [2010a] 105–107 and [2011]; Matthaios [2012] and [forthcoming/b].

379 On this discussion, started in modern times by van der Valk [1949] and [1963–1964], see most recently Montanari [2009a] 318–319, [2009b] 160 with n. 32, and [forthcoming].

380 Richardson [1994] 21.

381 Aristarchus' pupils reached the number of roughly 40, according to *Suda* α 3892. See Blau [1883].

scholars, continuing along the lines laid out by their teacher, played a fundamental role in the development of a number of sectors and disciplines. Since their biographic and intellectual vicissitudes became intertwined with the severe political crisis of 145/144 that risked almost irremediably compromising the learned activity within the Museum—a crisis which we have for this very reason taken as a chronological watershed—we will address these personalities in a later section of this chapter.³⁸²

3 The Spread of Scholarship in the 2nd and 1st Centuries

3.1 *Rise and Zenith of Pergamene Scholarship (2nd Century)*

A city of ancient Mysia in the hinterland of Aeolic Asia Minor, Pergamum began to take on a significant role in the magmatic panorama of the early Hellenistic Age when the diadochus Lysimachus chose it as the place to stash away a sizeable part of his massive hoard of war booty and selected one of his Macedonian officers, a eunuch of half-Greek origin by the name of Philetaerus, to act as the treasurer. As the showdown between Lysimachus and Seleucus—which would take place in the battle of Corupedium in 281—loomed ever closer, Philetaerus took the side of Seleucus, sensing that the latter was likely to emerge victorious. Philetaerus thus succeeded in coming out unscathed of this critical circumstance and in maintaining a front position at Pergamum; he was later even able to cultivate proposals of independence from the Seleucid kingdom. In 263 Philetaerus yielded control of the city to his nephew Eumenes (I) and the latter, in turn, in 241 to his own nephew Attalus. The family aspiration to an independent kingdom was finally crowned with success when, after defeating the Galatians in around 237, Attalus claimed the title of king with the name of Attalus I Soter, subsequently strengthening his position little by little as he wrested vast tracts of land in Asia Minor from the Seleucids. He pursued an active and shrewd foreign policy: while on the one hand he established a

³⁸² Our main source about the dynastic crisis in 145/144 is Ath. 4.184b, who, apparently basing himself on the testimonies of Meneclēs of Barca (*FGrHist* 270 fr. 9) and Andron of Alexandria (*FGrHist* 246 fr. 1), points out that, with the accession of the cruel new Ptolemy, somewhat paradoxically “there was a second renewal of all sorts of learning” (ἐγένετο . . . ἀνανέωσις πάλιν παιδείας ἀπάσης): the king, partly killing and partly banishing the Alexandrian intellectuals loyal to his predecessor, in fact “filled the islands and towns (*scil.* outside Egypt) with grammarians, philosophers, geometers, musicians, painters, trainers, physicians and many other men of skill in different fields; who, compelled by poverty to teach what they knew, produced a great number of celebrated pupils”. On this testimony see Pfeiffer [1968] 252–253; stimulating discussion in Luzzatto [2008] 151–154.

friendly—albeit self-seeking—relationship with Rome, and indeed Pergamum thereafter became a loyal pillar of support for Rome in the turbulent and fluid political and military scenario of the oriental realms, on the other he made overtures to some of the still symbolically prestigious centers of the traditional Greek world, with which he sought to set up special relations. For instance, emulating the evergetism of the Ptolemies, he bolstered his rapport with Athens by the gift of splendid monuments, and distributed largesse to the Apollinean sanctuaries of Delphi and Delos.³⁸³ The members of the emergent Attalid royal house, whose origins had been so unpretentious, now proposed to create for themselves an ideology and an image of their own that would enable them to compare not unfavorably with the other consolidated Hellenistic royal dynasties.³⁸⁴ This explains both their activism in the direction of the *poleis* that were a symbol of Greek classicism, and also Attalus' drive to build up an advanced Pergamene culture, including studies of antiquarian erudition.

This strong-willed thrust towards expanding their power and building up a grandiose public image of themselves was to become a distinctive feature of the entire Attalid dynasty, reaching its climax as early as Attalus' successor, his son Eumenes II (197–159), who continued to cultivate privileged relations with Delphi and Athens. Eumenes enriched these cities, as well as his own, with spectacular monuments, the most famous of which was the magnificent altar of Zeus on the acropolis of Pergamum, reconstructed and adorned with a magnificent frieze; he offered hospitality and means of livelihood to scholars and founded a great Library, which was second only to that of Alexandria.³⁸⁵ Plutarch (1st/2nd century AD) attests that when Marc Antony was libelously accused of having given the Pergamene Library to Cleopatra as a present, it contained 200,000 scrolls.³⁸⁶ Such a vast collection also implied an enormous need for a supply of long-lasting writing material that could be procured at a reasonable cost, which probably explains the preference for appropriately

383 On the Attalids' overtures and close relations established with the Academy and the Peripatus, see Hansen [1971] 396–397. Nagy [1998] 214 prefers to emphasize the competitive attitude of Pergamum towards contemporary Athens more than towards Alexandria.

384 *E.g.* Kosmetatou [2003] 166–173.

385 Collection of ancient testimonies on the Library: Platthy [1968] 159–165 (Nos. 138–153). Penetrating observations concerning the ideology underlying the Pergamene Library are put forward by Nagy [1998]; cf. Nicolai [2000b].

386 Plut., *Ant.* 58.9, speaking of two hundred thousand βιβλία ἀπλᾶ, “single rolls”, *i.e.* without taking account of their reciprocal relation as ἀμιγείς or συμμιγείς (see above, n. 98). While the figure can be credited with some likelihood, the purported gift to Cleopatra has, in contrast, been devoid of credibility since as early as Plut., *Ant.* 59.1; cf. Pfeiffer [1968] 236–237.

tanned and treated animal hides, namely parchment (gr. ἡ περγαμηνή, *scil. διφθέρα*, lit. “the skin from Pergamum”, Lat. *membrana*), rather than papyrus, since the latter had to be imported from Egypt. This circumstance lies at the origin of the ancient legendary tradition which set the invention of parchment in Eumenes’ time (whereas it was actually known long before) as a response to an embargo on papyrus decreed against Pergamum by Ptolemy v.³⁸⁷ With regard to management of the Attalid Library we are far from having a quantity of evidence comparable to that available for Alexandria. For Pergamum we do not even have a transmitted list of the succession of librarians: instead, it is necessary to rely on conjectures and scraps of information, as in the case of a reference to the Stoic thinker Athenodorus of Tarsus, later one of Augustus’ teachers in Rome, who is said to have emended some of Zeno’s philosophical works during his Pergamene librarianship.³⁸⁸

Eumenes II’s cultural enterprises, following in the footsteps of Attalus I, were visibly aimed at self-image-making, as an emulation of Ptolemaic policy, and they implicitly shared a similar ideological and propagandistic target, namely self-accreditation as a prestigious Greek dynasty (precisely because of and despite the Attalids’ more recent, lowly and half-breed origins), together with self-promotion as a leading power in the fast-moving scenario of the Hellenistic kingdoms. By the beginning of the 2nd century, when the Ptolemies were resigning themselves to a scaling down of their imperial ambitions, the Attalids were clever enough to deploy an aggressive bent in wielding their power, and they pursued a determined quest for leadership among the Hellenistic powers. Seeking to portray themselves as worthy competitors or successors of the Ptolemies’ prominence in the Hellenized world, they did not disdain to exploit cultural means.³⁸⁹ It follows that the traditional representation of the relations between the cultural institutions of Alexandria and Pergamum in terms of bitter rivalry³⁹⁰ can ultimately be seen as a projection into the field of learned culture of a wide ranging—and in essence political—competition between royal dynasties. Our difficulty is to establish, case by case, whether this projection corresponded to a situation of genuine intellectual contest and rivalry; and, if so, whether such contests should be interpreted as true opposition between different schools, *i.e.* in a sense as an ‘ideological’

387 Plin., *HN* 13.70. See Pfeiffer [1968] 236.

388 Isidorus of Pergamum by Diog. Laert. 7.34.

389 Erskine [1995] 46–47.

390 *E.g.* *Suda* α 3892 (Ἀρίσταρχος) Κράτητι τῷ γραμματικῷ Περγαμηνῷ πλείστα διημιλλήσατο ἐν Περγάμῳ, “(Aristarchus) was very often opposed at Pergamum by the Pergamene grammarian Crates”.

contrast, or whether, more simply, they represented occasional episodes of disputes on special topics and methods between individuals or small groups. In short, it cannot be excluded that this representation may partly have been the outcome of the broader aim of image-making and competitive self-promotion on the part of both dynasties, and that the official shaping of high culture both instrumentally and in symbolic terms was one of the crucial strategies employed. Evidence suggesting attempts at contact, or even actual contacts, of Alexandrian scholars with Pergamene culture reveals features that contribute to keeping the question open, potentially allowing a glimpse of a more nuanced and dynamic intellectual map.³⁹¹

The same political-cultural line was maintained by Eumenes' brother Attalus II (159–138), while Eumenes' son, who had become king as Attalus III (138–133), in effect voluntarily brought the dynasty to an end by indicating Rome as the heir to the kingdom in his will. Understandably, Mithridates VI Eupator, king of the neighboring small realm of Pontus from 121 to 63, made a determined effort to rein in the expansion of Rome in Asia Minor, nurturing his own hopes of supplanting the Attalids in the role of the leading Hellenistic dynasty of this area. Indeed, for a certain period he did manage to unshackle Pergamum from the control of the advancing Western power, but his hopes were definitively crushed in 64. It is incontrovertible that acquisition of the kingdom of Pergamum by Rome, a watershed which can be seen as the final outcome of a long story of strategic (unequal) alliance, constituted a fundamental step in the path of Hellenization and the spread of scholarship in Roman culture. Under Roman rule, the Pergamene tradition of erudite studies, previously founded and patronized by the Attalids, blossomed anew during the Imperial Age.³⁹²

Attalus I's reign at the end of the 3rd century coincided with a season of antiquarian studies at Pergamum.³⁹³ The versatile Antigonos of Carystus (on the island of Euboea), who seems to have been a sculptor and (Academic)

391 Alexandrian personalities who had, or are thought to have had, affinities or relations with the Pergamene cultural *milieu* were, among others, Agathocles of Cyzicum, Aristophanes of Byzantium (for both scholars see above, § 2.5), Demetrius Ixion, Apollodorus of Athens (see below, § 3.2).

392 Overall, on ancient Pergamum: Evans [2012]. On the Attalid dynasty, ideology, and cultural policy: Hansen [1971]; Virgilio [1993]; Gruen [2000]; Shipley [2000] 312–319; Kosmetatou [2003]. On the Attalid Library as a 'classical model', namely a means of acquiring prestige: Nagy [1998]. On Pergamene scholarship in Imperiale Age: Matthaïos, this volume.

393 Hansen [1971] 397–407.

thinker,³⁹⁴ summoned to court by Attalus, was the author of a work on artists and sculptors, a collection of paradoxographic excerpts drawn from Callimachus' *Παράδοξα*, and biographies of philosophers of his time. In the latter, Antigonus—unlike his contemporaries Satyrus and Hermippus and presumably as a reaction to their biographic method autoschediastically based on literary sources—provided first-hand profiles grounded on direct personal experience.³⁹⁵ The life of Polemo of Ilium, a subject of the Attalids by birth, unfolded not long after this period. Polemo was the author of several learned writings on various topics, among which one may cite his antiquarian periegesis, *i.e.* a description of antiquities and monuments scattered around the Hellenized world in various different places, which was among the sources utilized by the periegetes Pausanias in the 2nd century AD. Similarly to the case of Antigonus' biographies, Polemo's antiquarian research was also based on autopsy, as is testified first and foremost by his special interest in transcribing inscriptions, which earned him the nickname of *στηλοκόπας* (probably "tablet-glutton").³⁹⁶ In the work *On Eratosthenes' stay at Athens* (*Περὶ τῆς Ἀθήνησιν Ἐρατοσθένους ἐπιδημίας*) Polemo criticized the great Alexandrian scholar with an antiquarian eye as regards some information on Athens given in the treatise *On the old comedy*;³⁹⁷ and in *Against Timaeus* (*Πρὸς Τίμαιον*) he was also concerned with problems inherent in Sicilian comedy and indicated Hipponax as "the one who invented parody" (*εὐρετῆς τῆς παρωδίας*), quoting as a proof the four hexameters in which the archaic Ephesian poet ironically distorted the poem of the *Iliad*.³⁹⁸ In the subsequent generation Demetrius of Scepsis (in Troad), who however does not appear to have had particularly close relations with the Pergamene court, followed in the footsteps of his fellow countryman Polemo by concerning himself with Homeric history and the topography of his own homeland in a vast comment on the *Catalogue of the Trojans* (Hom., *Il.* 2.816–877) in thirty books. This work contained some polemical remarks

394 This Antigonus should be regarded as distinct from the 1st century poet(s) by the same name: Dorandi [1999] xvii–xxiii.

395 Edition of the fragments: Dorandi [1999]. On Antigonus' idea of biography: von Wilamowitz [1881]; Pfeiffer [1968] 246–247, cf. 134; Hansen [1971] 397–400; and Dorandi [1999] xxxiii–lxxxii, who argues for the pertinence of Antigonus' lives to "littérature de mémoires" rather than to biography in the strict sense (lxxx).

against his contemporary, the Pergamene scholar Crates,³⁹⁹ and it was widely used later as a source by the Aristarchean Apollodorus in composing his *On the catalogue of the ships* (*Περὶ τοῦ τῶν νεῶν καταλόγου*).⁴⁰⁰ And to conclude this brief survey of the culture that flourished under the reign of Attalus I it is worth recalling the ‘Great Geometer’ Apollonius of Perge, who had received his training in Alexandria from the successors of Euclid and under the influence of Archimedes, and then had come into contact with the Pergamene environment through Eudemus of Pergamum—although the suggestion that the dedicatee, by the name of Attalus, of several books of Apollonius’ fundamental treatise on *Conic sections* should be identified with the ruling king is very unlikely.⁴⁰¹

Pergamene scholarship reached its acme in the first half of the 2nd century, as one of the planned achievements of king Eumenes II.⁴⁰² Unlike Alexandrian culture, which at that time had also risen to its highest degree, the cultural approach of Pergamum shows an almost exclusive inclination to literary studies and significant receptiveness to philosophical inputs. Eumenes invited and welcomed as a guest in the capital the scholar who would become the most illustrious figure in the learned circle of Pergamum, Crates from Mallos in Cilicia (southern Asia Minor). The biographic entry devoted to him in the *Suda* states that he was a “Stoic philosopher”, nicknamed “the Homeric and the Critic” because of his grammatical and literary studies, and “a contemporary of Aristarchus the grammarian in the time of Ptolemy [VI] Philometor”, who reigned from 180 to 145.⁴⁰³ An anecdote concerning Crates’ life is mentioned by the Roman biographer Suetonius: sent by the Attalids on a diplomatic mission to the Senate in about 168, in Rome he accidentally suffered a leg injury and put to use his forced stay in the city by holding a series of lectures, thus effectively transmitting the germ of philology to the Roman cultural establishment⁴⁰⁴—or, more precisely, enhancing a branch of studies which had already for some time been experiencing the development of a tradition of its own in Rome.⁴⁰⁵ Although no definite evidence is available, it is pos-

sible that Crates may have actively contributed to the setting up of the Attalid Library, which during that very period was undergoing a phase of considerable expansion and had recently been equipped with a catalogue (πίνακες) on the model of the Alexandrian Library.⁴⁰⁶

In defining his philological activity, Crates distinguished his position from that of the γραμματικός, “grammarian”, whose task he viewed as embodying the limited perspective of an expert in *glōssai* and the prosody of literary texts (a definition that would seem to refer to the Alexandrian scholars of his day). To describe his own activity Crates preferred to use the denomination of κριτικός, “critic”,⁴⁰⁷ which he saw as expressing a wider and more in-depth organic approach to language and literature, ultimately seeking to provide a critical appraisal of works rather than focus purely on textual details:

he stated that the *kritikos* is different from the *grammatikos* and the former must be an expert in all philosophical knowledge concerning language (πάσης... λογικῆς ἐπιστήμης), the latter instead simply having to explain glosses and give account of the prosody and be knowledgeable about such questions: so that the *kritikos* can be likened to a master builder, the grammarian to a workman.⁴⁰⁸

From this there derived a tripartite division of κριτική, attributed to Crates’ pupil Tauriscus but possibly traceable to the teacher himself and applying a terminology also known from the wider Hellenistic debate on the epistemological

406 The Pergamene *pinakes* are attested to by Dion. Hal., *Din.* 1 and 11 (respectively 297.15–16 and 317.3–4 Usener-Radermacher), and Ath. 8.336e.

407 The use of this word in a technical meaning is prior to that of *grammatikos*: Gudeman [1922a] 1912; Schenkeveld [1968]. Philitas of Cos, as mentioned above (n. 28), was called “poet as well as critic” (ποιητῆς ἄμα καὶ κριτικός) by Str. 14.657.

408 Sext. Emp., *Math.* 1.79; Crates fr. 94 Broggiato. The metaphor exploits the polarization between master builder (ἀρχιτέκτων) and workman (ὕπηρέτης), or higher (intellectual) and lower (practical) *tekhnitēs* (“expert”), which is typical in ancient debate on *tekhnai*, beginning at least with Plato and Aristotle: Romano [1987] 48–49. In the view of Crates, therefore, “the *kritikoi* of Pergamon stand for a more holistic approach to scholarship than the *grammatikoi* of the Library of Alexandria” (Nagy [1998] 187). Crates’ definition of κριτική is comparable to that of grammar ascribed to the Stoic philosopher Chrysippus (3rd century) in a passage, previously unknown and recently discovered in the ms. Riccardianus gr. 62, of the *Prolegomena* to the *scholia Vaticana* to Dionysius Thrax’ *Grammar* (Meliadò [2013]): grammar is “homeland of those who learn” (μητρόπολις μαθητῶν), inasmuch as it “is mother of every form of education involving language” (μήτηρ γάρ ἐστιν πάσης λογικῆς παιδείσεως).

nature of *tekhnai*: the “logical” part (λογικόν), namely concerned with diction and grammatical figures; the “practical” or “empirical” (τριβικόν), regarding dialects and styles; and finally, the “historical” (ἱστορικόν), dealing with “what cannot be methodically organized”, namely myths and historical facts.⁴⁰⁹

A long-standing traditional line of interpretation has attributed great importance to the Stoic influence on Crates’ scholarship, maintaining that in the field of linguistic theory he shared the assumption that superiority should be awarded to custom (συνήθεια), which champions the dignity of different uses or anomaly (ἀνωμαλία), against the Alexandrian tendency to prefer regularity, *i.e.* abstract normative rules or analogy. However, in the current debate the portrayal of the two different views in terms of a sharp theoretical controversy between Alexandrian analogists and Pergamene anomalists, or dogmatic *vs* empirical thought,⁴¹⁰ is mainly regarded as devoid of genuine historical reliability, ultimately to be seen as the outcome of the dichotomic reconstruction of the question provided by the Roman erudite Varro (116–27) in his work *De lingua Latina*. Instead, such a conception is giving way to the picture of a more mobile and intertwined discussion arising from (pragmatic) difficulties, such as how to single out and apply linguistic regularities for the constitution of literary texts and to determine the correctness of language (ἑλληνισμός): this eventually achieved the first steps towards the foundation of grammar as a *self-standing science* or τέχνη (that means, in our present concern, free in essence from philosophical purposes).⁴¹¹ Given this sphere of interest—shared both by Alexandrian and Pergamene scholars—in the definition of ἑλληνισμός, one may ascribe some plausibility to the highly hypothetical attribution to Crates of Mallos, instead of his namesake from Athens, the student of antiquities,⁴¹² of the work *On the Attic dialect* (Περὶ τῆς Ἀττικῆς διαλέκτου), some fragments of which quoted by Athenaeus show a moderately Atticistic attitude.⁴¹³

409 Sext. Emp., *Math.* 1.248–249; Tauriscus fr. 1 Broggiato = Crates test. 20 Broggiato. On Tauriscus, Κράτητος ἀκουστής according to the quoted testimony, and his fr. 1 see Broggiato [2014] 145–153.

410 See Mette [1952]; most recently, Calboli [2011], especially 322–325.

411 Fehling [1956] 264–270; Pinborg [1975] 110–112; Taylor [1987] 6–8; Blank [1994] and [2005]; Schenkeveld [1994] 283–287; Broggiato [2001] XXXIII–XL (with her fr. 102–105). Overviews with further bibliography: Dickey [2007] 6 n. 15; Pagani [2011]. In the opinion of Ax [1991] 289–295, viewing the conflict between analogy and anomaly as a purely academic dispute is an oversimplification, as the issue involves a fairly broad-ranging cultural question which had a bearing on philology (establishing the correctness of the classical texts), instruction (endowing language with rules) and rhetoric.

412 Cf. *FGrHist* 362.

413 See Broggiato [2001] XLII–XLVI (with her fr. 106–121*).

The ancient sources agree in attesting that in the field of literary criticism Crates applied allegorical interpretation. According to a modern commonplace, this was a Stoic device which paved the way for the use of philosophical thought to aid the explanation and understanding of poetry. However, despite Pfeiffer's authoritative statement,⁴¹⁴ it is quite uncertain whether allegoresis was genuinely a standard set up by the first generations of Stoic thinkers, who rather appear to have been interested in the study and interpretation, also in terms of etymology, of divine names and myths transmitted by archaic poetry.⁴¹⁵ Of Crates' activity on the Homeric poems two titles remain, to which a large part of the surviving fragments are to be attributed: the *Διορθωτικά* (or *Περὶ διορθώσεως*), in eight or nine books, were devoted above all to textual criticism, while the *Ὀμηρικά* in all likelihood addressed exegetical questions of a more general character, including aspects of a cosmological and geographical nature.⁴¹⁶ In the *Suda* the first work is defined as *diorthōsis* (in acc. *διόρθωσιν*, a correction of the transmitted *δὲ ὄρθωσιν*), but an edition of the poems by Crates in the Alexandrian acceptance is excluded by almost all the modern critics.⁴¹⁷ It is also debated—but in a sense it may be an idle question—whether these writings were *hypomnēmata* or rather *syngrammata*.⁴¹⁸ The extant fragments frequently show views contrasting with the position of Aristarchus, especially if they are considered in the light of Crates' different exegetical premises, namely the assumption that Homeric poetry can be the basis for cosmological, astronomical and geographic knowledge and investigations, as illustrated in the following instance. In explaining the narrative of Hephaestus falling down from the sky to earth after having been flung down by Zeus, in book 1 of the *Iliad* (ll. 590–593), Aristarchus interpreted the words *πάν ἡμᾶρ* (l. 592), expressing the time of the god's fall, literally as “for all the remaining time of the day”, till evening. Crates, on the other hand, took these words as giving a precise indication of the overall duration of the fall, in the sense of “during a whole day”, *i.e.* the entire span of time required for the sun to cross the sky; moreover, he considered them as useful evidence to calculate the size and the spherical

418 Pfeiffer [1968] 239; Broggiato [2001] XXI.

shape of the universe according to Homeric cosmology.⁴¹⁹ He adopted a similar viewpoint in explaining the shield of Agamemnon briefly depicted in *Il.* 11.32–35 as an imitation of the cosmos (μίμημα τοῦ κόσμου); accordingly, it is possible that the Pergamene scholar should also be credited with an interpretation of the new historiated shield of Achilles, described in book 18 of the *Iliad*, as a cosmological allegory. Unfortunately, however, the tradition concerning this point of ancient Homeric allegoresis is too condensed to allow the original contributions of the individual exegetes to be unraveled, and it is thus not possible to have any certainty that one or both of the transmitted highly detailed allegoreses of the Homeric shields can ultimately be traced back to Crates.⁴²⁰

A few other remnants of Crates' exegesis concerning authors other than Homer (such as the lyric poets Alcman, Stesichorus, Pindar, and the tragic poet Euripides)⁴²¹ possibly originate not from individual writings devoted to these various figures, but from discussions within more general contexts. It has been established, in particular, that some observations concerning the *Phenomena* of the Hellenistic poet Aratus effectively derive from Crates' works of Homeric scholarship.⁴²² The same may hold for a few fragments on Hesiod,⁴²³ among which one is of particular interest, regarding the expunction by Crates of both the transmitted proems of the two Hesiodic poems, while the Peripatetic Praxiphanes and Aristarchus only athetized the proem of *Works and Days*: on the basis of its content and line of reasoning, this fragment could belong to a critical discussion focusing on poetic theories rather than to a commentary devoted to the Hesiodic poem.⁴²⁴ What is known is that Crates addressed questions of poetics, especially with respect to euphony, namely the sound quality, and rhythm of the verse, in a text which is often referred to in the fragmentary treatise *On poems* by the later Epicurean philosopher Philodemus of Gadara.⁴²⁵

419 See Crates fr. 3 Broggiato with her comment (142–144). On Cratetean cosmology: Mette [1936].

420 Crates fr. 12 Broggiato. In contrast to Mette [1936] 30–41, Pfeiffer [1968] 240–241, and Porter [1992] 91–94 (and additionally Halliwell [2002] 274–275; Gutzwiller [2010] 356), Broggiato [2001] 157–164 adopts a cautionary position with regard to the Cratetean authorship of the two allegorical explanations.

421 Respectively Crates fr. 82–84 (lyric poets) and 86–89 Broggiato (Euripides). See Broggiato [2001] XXIV–XXV.

422 Maass [1892] 167–203; cf. Broggiato [2001] XXII.

423 Crates fr. 78 Broggiato, with related comment (and further Broggiato [2001] XXIII).

424 Most recent discussion: Montanari [2009a] 316–322.

425 Broggiato [2001] XXVII–XXXIII (with her fr. 94–101). On Crates' discussions scrutinized by Philodemus in his first book *On poems* (fr. 96*–98* Broggiato) see Janko [2000] 120–189. Cf. Porter [1992] 112–113; Halliwell [2011] 317–319.

It appears quite natural to assume that Crates, as a *kritikos*, directed the results of his textual scholarship towards the aim of genuine “criticism of literary works” (κρισις ποιημάτων), which, in the next generation, the Alexandrian Dionysius Thrax, the pupil of Aristarchus, would recognize as the final part, and the highest achievement, of the *grammatikē tekhnē*. In contrast, we must resign ourselves to the lack of any positive evidence about the possibility that a Crates repeatedly quoted by John Tzetzes for opinions relevant *inter alia* to the “parts” (μέρη) of comedy and the parabasis, subjects which probably formed part of a treatise on ancient drama, may be identified with the Pergamene scholar.⁴²⁶

3.2 *Pluralism and Exchange in Late Hellenistic Scholarship (144–31)*

The generations of scholars immediately following that of Aristarchus and Crates could certainly not disregard the achievements of these great teachers, some of whose research lines they developed further with original contributions of their own. At the same time, they laid the basis for the collection and conservation of the erudite heritage accumulated up to that time by Hellenistic scholarship as well as its transmission to Graeco-Roman culture. But before approaching this issue, a statement of premises is in order.

As we have underlined, the ancient tradition dramatically emphasizes the contraposition between the Alexandrian and Pergamene school, Aristarchus versus Crates and their respective disciples, probably at least in some cases projecting backwards certain concepts and categories belonging to later eras in which such conflicts were really or more operating. However, this picture needs to be re-examined in order to allow for the possibility that the situation may not have been so clear-cut, starting out from the recognition that Pergamene scholarship does not seem to have assumed the characteristics and the solidity of a veritable ‘school’.⁴²⁷ In addition, there is no lack of evidence indicating points of contact and intersection among personalities and experiences of these two main centers of learning. We can once again recall, for instance, the ancient information reporting Aristophanes of Byzantium’s

426 Broggiato [2001] xxv–xxvii (with her fr. 90*–93*). Bagordo [1998] 61 and 116–118 (No. 28), subscribes, albeit cautiously, to the identification of this Crates with the Athenian Academic philosopher of the 1st century, the author of a work *On comedy* (Περὶ κωμωδίας).

427 E.g. Montanari [1993c] 648–649. On scholars mentioned by ancient sources as Crates’ pupils or *Kratēteioi*, see Crates testt. 20–27 Broggiato; Hansen [1971] 418–422; Broggiato [2001] xviii–xix and 137–138; Broggiato [2014]. On Tauriscus, Κράτητος ἀκουστής, see above, n. 409. Broggiato [2014] also includes among Crates’ pupils the scholar historian Artemon of Pergamum (*FGrHist* 569; Pitcher [2007] in *Brill’s New Jacoby*).

intention of taking up a post under Eumenes II;⁴²⁸ or that Crates himself is said to have appreciated some Homeric interpretations of a cosmological and allegorical flavor put forward by Agathocles of Cyzicum, who had been a pupil of Zenodotus in Alexandria.⁴²⁹ In the subsequent period, other significant examples of Pergamene frequentation are offered by some Aristarchean pupils, precisely those who according to the standard representation would arguably have nursed the greatest hostility towards the environment in which Crates was active: we shall soon meet Demetrius of Adramyttion and Apollodorus of Athens; and a further instance is possibly offered by the grammarian Ptolemy of Ascalon, who lived and taught in Rome perhaps in the late 2nd century, rather than in the Augustan Age as often claimed,⁴³⁰ and apparently belonged to the Aristarchean line of scholarship. In his writing *On the doctrine of Crates* (*Περὶ τῆς Κρατητείου αἰρέσεως*) he upheld a Zenodotean reading in the *Iliad* at the same time discarding Aristarchus' choice, possibly under the positive influence of Crates' opinion.⁴³¹

Furthermore, for various reasons, towards the middle of Hellenistic Age the geographic horizons of scholarship broadened and other newly emerging cultural centers began to come to the fore beside Alexandria and Pergamum. Earlier, mention was made of the competition between the Ptolemies and the Attalids in their attempts to become the embodiment of a symbolic continuity with the culture of Athens, partly by making donations to the city in the form of cultural assets, buildings and monuments: in effect, this provided a guarantee that the ancient capital of Greek culture would succeed in continuing to compete in the scenario of the eastern Mediterranean as one of the best equipped, most prestigious and attractive centers of high culture. In this context, we will shortly also take a look at the extremely refined culture that flourished on the island of Rhodes, describing the outcome of an important branch of the Aristarchean school. Moreover, the relentless political and military expansion of Roman power in the Orient explains the increase in the number of Greek grammarians stably settled in Rome by the 1st century. In fact, some of the main political and social transformations that swept through the late Hellenistic Age were due above all to the strategic interference of Rome in the intricate relations among the Hellenistic kingdoms and the resulting

430 West [2001a] 82.

431 *Schol. A Hom., Il.* 3.155b (Nicanor): Ptol. Ascal. p. 64 Baege; Crates test. 19 = fr. 5* Broggiato. Crates' influence is supposed by Düntzer [1848] 134; Baege [1882] 21–22; Blau [1883] 26; Montanari [1993c] 650; Broggiato [2001] 146–147. On Ptolemy's work see below, n. 456.

gradual absorption of the latter under Roman rule. Among the effects of this epoch-making historical transition one may cite, as of particular interest here, a greater circulation of intellectuals and scholars of different imprint and, consequently, greater opportunity for cultural exchange and influence, which to all intents and purposes brought an end to the apparent monopoly, or duopoly, of Hellenistic scholarship.⁴³²

Overall, acknowledgment of the opportunities for close-meshed cultural interaction between the major seats of learning in the late Hellenistic Age, as well as of the expansion of the horizons of scholarship on the eve of and during Romanization, calls for an act of epistemological frankness. Specifically, there should be a willingness to overcome once and for all in our historiographic description the Manichean preconception implicit in the pattern ‘Alexandria vs Pergamum’, which hinders the possibility of fair recognition that, alongside differences of vision and polemical approaches, there were undoubtedly also cultural links and convergences, reciprocal influences, more wide-ranging frequentations and more pluralistic strands of belonging.

A grammarian who apparently adopted the critical line traced by Crates is his fellow countryman Zenodotus of Mallos (2nd or 2nd/1st century), plausibly to be identified with a Zenodotus qualified as *Kratēteios*, “disciple of Crates”, in a Homeric scholium.⁴³³ A work entitled *Against Aristarchus’ expunction of lines of the Poet* (*Πρὸς τὰ ὑπ’ Ἀριστάρχου ἀθετούμενα τοῦ ποιητοῦ*) is ascribable to him:⁴³⁴ this lost monograph, of alleged polemical aim, took shape in the context of a lively debate about the Aristarchean *athetēseis* in the Homeric texts.⁴³⁵ Before Zenodotus, the debate had already seen the contributions of at least two Alexandrians: Callistratus, Aristophanes’ pupil, and Demetrius of Adramyttium (in Mysia), called Ixion, one of the many disciples of Aristarchus, the author of two works of Homeric scholarship entitled *Against* or *On the explanations* (*Πρὸς τὰς ἐξηγήσεις*) and *Against* or *On the athetized lines* (*Πρὸς τοὺς ἠθετημένους, scil. στίχους*).⁴³⁶ In the ancient tradition, this Demetrius was branded as a ‘betrayal’ of his teacher (this is the sense of the nickname Ixion,

432 Jolivet [2010]. On the political and economic background of this cultural transition: Monson [2012].

433 *Schol. ex. Hom., Il.* 23.79b: Crates test. 24 Broggiato = Zenod. Mall. fr. 5 Pusch = fr. 3 Broggiato.

434 *Suda* ζ 275, s.v. Zenodotus of Alexandria: Zenod. Mall. test. 2* Broggiato.

435 On Zenodotus of Mallos: Nickau [1972b]. Editions of the scanty fragments, predominantly pertaining to Homeric scholarship: Pusch [1890] 149–160; Broggiato [2005] and [2014] 107–140.

436 On Callistratus see above, § 2.5. Demetrius also was concerned with the comic poet Aristophanes and possibly Hesiod (for the latter see Montanari [2009a] 341). The fragments have been edited by Staesche [1883] and those pertaining to Homeric scholarship

alluding to the mythic Thessalic king, a prototype of betrayal and lack of gratitude), as if, or so it would seem, he had deserted the Alexandrian school and defected to the ‘enemy’ camp of Pergamum.⁴³⁷ Some possible clues of Pergamene influence can be seen in his interest in etymology, a field typically engaging the attention of Stoic thinkers, and dialectology, a sphere in which Demetrius produced a collection of *Attic words* (*Ἀττικάι λέξεις*) and a treatise devoted to recognizing and describing a specific Greek Alexandrian dialect (*Περὶ τῆς Ἀλεξανδρέων διαλέκτου*).⁴³⁸ However, the Homeric scholia preserve numerous points of agreement between the two scholars, alongside a majority of Demetrius’ arguments against Aristarchus’ *athetēseis*. This makes it possible to mitigate the conventional view of this grammarian as an ‘apostate’ in favor of a profile characterized by a certain degree of independence of opinion and critical thought.⁴³⁹ It is worth adding here that, not unlike Demetrius ‘the betrayer’, his contemporary Dionysius of Sidon is remembered in the Homeric scholia for agreements as well as for divergences with his teacher Aristarchus concerning textual choices in many passages of the Homeric poems.⁴⁴⁰

Another interesting point of contact in the period between Alexandria and Pergamum can be recognized in a parallelism of interests in the field of studies on ancient comedy. The Alexandrian Ammonius, a pupil and successor of Aristarchus at the head of the ‘reformed’ Ptolemaic Library after 144, not only carried out studies on Plato’s Homeric style and on Aristarchean Homeric scholarship, as mentioned earlier, and performed his own inquiries into the Homeric poems, but he also wrote two distinct works on comedy, following in the footsteps of Aristophanes of Byzantium and Callistratus: one about hetaerae (mentioned in Greek comedies) and another concerning the *κωμωδοῦμενοι*, *i.e.* individuals “who were lampooned by comic playwrights”. These writings were designed to distinguish among homonyms, give an elementary prosopography and list mentions of such types of people in the comic

by Ascheri [2003] and, far more inclusively, van Thiel [2014], who (1.10 and 20–22) readily identifies Ixion as the main author of the so-called exegetical scholia to the *Iliad*.

437 *Suda* δ 430 (= Dem. Ix. test. 1 Ascheri) Δημήτριος ὁ ἐπίκλην Ἰξίων. ... ἐπεκλήθη δὲ τοῦτο, ... ὅτι τῷ διδασκάλῳ Ἀριστάρχῳ ἀντήρισεν, “Demetrius called Ixion. ... He received this surname, ... because he opposed his teacher Aristarchus”. See Blau [1883] 19–20.

438 That Demetrius may have been open to solutions of an anomalist type is argued by Ascheri [2010], especially 149–150, according to whom the grammarian upheld a moderate Atticism congruous with the Ptolemaic ambition to assimilate Alexandrian and Athenian cultures and languages.

439 Ascheri [2003] x–xvi, [2004] 337–338, and [2010].

440 For divergences see *e.g. scholl. Hom., Il.* 1.364b², 1.554c, 2.262b. On Dionysius: Montanari [1997i]; Pontani [2005b] 56.

tradition, for the purposes of literary explanation.⁴⁴¹ The same categories (real persons satirized in comedy, among whom parasites and high society courtesans) were taken into consideration during the same period by the Pergamene Carystius, author of a work on stage productions (*Περὶ διδασκαλιῶν*),⁴⁴² and the *Kratēteios* Herodicus of Babylon in a work entitled *Κωμωδοῦμενοι*, two surviving fragments of which, drawn from the sixth book, concern the hetaerae Sinope and Phryne;⁴⁴³ a mention of a second and different staging of Aeschylus' *Persians*, inferable from a statement attributed to Herodicus in a scholion to Aristophanes, may originate from the same work.⁴⁴⁴ The Cratetean definition of the *kritikos* in opposition to the *grammatikos* can be detected by reading between the lines of a satirical epigram by Herodicus designed to stigmatize what he felt to be the pedantic limitedness of views held by the *Aristarkheioi* in the field of linguistic correctness.⁴⁴⁵

The *secessio doctorum* which affected Alexandria in 145/144 undoubtedly acted as one of the involuntary factors of further fruitful intellectual exchange in the late Hellenistic Age. By the irony of fate, at the very time of the Aristarchean apogee many Alexandrian scholars were forced to seek refuge and a new cultural homeland in Pergamum or in other centers of learning beyond Ptolemaic control. Such was the destiny, for example, of the Athenian Apollodorus (ca. 180–110). After receiving his training in Athens at the school of the Stoic philosopher Diogenes of Babylon (or of Seleucia), also one of the presumed teachers of Crates, he moved to Alexandria where he was a disciple and co-worker of Aristarchus. It appears that at the time of Ptolemies' dynastic crisis he fled to Pergamum and then eventually returned to Athens. This intellectual experience provides eloquent evidence of the actual possibility that multiple cultural inputs from major centers of learning of the time (Athens,

441 *FGrHist* 350; Bagordo [1998] 50 and 74–76 (No. 3). See Steinhausen [1910].

442 Bagordo [1998] 57 and 111 (No. 25).

443 Ath. 13.586a and 591c: 55 fr. 1–2 Bagordo = Herodicus fr. 6–7 Broggiato (see her comment, [2014] 78–80). On Herodicus as a *Kratēteios* see Crates test. 25 Broggiato = Herodicus test. 2 Broggiato; Düring [1941]. The identification of Herodicus 'the *Kratēteios*' with his namesake of Babylon, author of the epigram quoted below in the text (see n. 445), is almost generally accepted: Broggiato [2014] 42 with n. 3. Herodicus' chronology is debated, but the second half of the 2nd century is a plausible inference: Broggiato [2014] 42–43.

444 *Schol. Ar., Ran.* 1028e = Herodicus fr. 10 Broggiato, a note conceived in order to explain the reference in l. 1028 of the comedy to king Darius as a character in the *Persians*. Herodicus' fr. 2–5 Broggiato concern Homeric scholarship; it is uncertain to which work they belonged.

445 Ath. 5.222a: *SH* fr. 494 = Herodicus fr. 1 Broggiato; see De Martino [1997]; Manetti [2002]; Broggiato [2014] 59–68.

Alexandria, Pergamum) may converge in the same person, thus belying the conventional picture of sharp conflict and rivalry among these communities of scholars.⁴⁴⁶

An ancient source defines Apollodorus as a “philologist” (φιλόλογος), in the same manner as Eratosthenes,⁴⁴⁷ of whom he was ideally a successor, partly by virtue of his comparable intellectual curiosity, and partly also because he had cultivated fields of inquiry bearing some similarity to those in which Eratosthenes was active.⁴⁴⁸ One of these common fields is chronology. Apollodorus’ *Chronicle* (Χρονικά), dedicated to the Pergamene king Attalus II and composed in iambic trimeters for the sake of memorization, was evidently inspired by Eratosthenes’ work and intended to improve on it. In a chronological grid that extended from the capture of Troy (1184/3) up to the author’s own days and which was based on the list of the Athenian archonts, political and military events were recorded alongside information concerning several branches of human activity and knowledge such as philosophy, art, and literature. It is worth underscoring that the information Apollodorus provided included biographical data on Menander, with an indication of the total number of his plays (105), drawing on the tradition of the *didaskaliai* widely plundered by the Alexandrian scholars.⁴⁴⁹ As far as can be gathered from the very scanty material that has come down to us, the work *On the gods* (Περὶ θεῶν) constituted a perfect synthesis of Apollodorus’ multifaceted personality and a mirror of his composite cultural-biographic background. It was in essence a study of religious history, carried out in a contextual setting of Homeric scholarship and endeavoring to conduct an in-depth analysis of divine names and epithets, even resorting to etymology. Thus the Alexandrian predilection for lexical inquiry and literary interpretation blended with a historical-antiquarian interest and with a methodology that applied hermeneutics by etymology, possibly under Stoic/Pergamene influence.⁴⁵⁰ The work *On the catalogue of the ships* (Περὶ τοῦ τῶν νεῶν καταλόγου), concerning problems posed by the

446 Cf. Fraser [1972] 1.470, though admitting contacts only “on a purely personal level” and excluding “a general dilution of the hostility between the two schools”.

447 Ps.-Scymnus, *Periegesis* 16–49 (with the comment by Marcotte [2000] 151–152): *FGrHist* 244 test. 2.

449 Apollod., *FGrHist* 244 fr. 43. See Pfeiffer [1968] 257.

450 *FGrHist* 244 fr. 88–153. Mention can be made here of the *Library* (Βιβλιοθήκη), a mythographic handbook of the 1st or 2nd century AD, wrongly assigned to Apollodorus by medieval manuscripts (although it may be not completely extraneous to his research on religion and myths). See Wagner [1926²], Carrière-Massonnie [1991], Scarpi [1996], Fowler

catalogue of the Achean army at Troy in the second book of the *Iliad* and, more generally, by the puzzling Homeric geography, offered contributions to this highly specialized and challenging sphere of ancient scholarship, which Eratosthenes, Demetrius of Scepsis, and Aristarchus had previously grappled with.⁴⁵¹ The scope of Apollodorus' literary study also extended to theater: he composed monographic studies on Doric authors of comedy and mime (*On Epicharm*, *On Sophron*) and on the Athenian hetaerae introduced as characters into Attic comic plays (*Περὶ τῶν Ἀθήνησι ἑταιρίδων*).⁴⁵² This had become a typical subject of Hellenistic erudition, having been treated in the previous century by Aristophanes of Byzantium and his pupil Callistratus, and, in the times of Apollodorus himself, by his Aristarchean fellow-disciple Ammonius and the *Kratēteios* Herodicus. Let us conclude this profile by mentioning Apollodorus' studies on vocabulary (*Glōssai*) and etymology, the latter being treated not only in the *On the gods*, but also in a dedicated work of *Etymologies*, which apparently represented an original fusion of Stoic and Alexandrian inputs.⁴⁵³

Slightly younger than Apollodorus, the Alexandrian Dionysius Thrax (ca. 170–90) was able to complete his training at Aristarchus' school just before the diaspora of 144, which led him to move to Rhodes, where he obtained a teaching position.⁴⁵⁴ That he adopted a polemical attitude towards the most representative Pergamene scholar is openly testified to by his *syngramma Against Crates* (*Πρὸς Κράτητα*),⁴⁵⁵ of which a precedent can be perceived in a work bearing the same title composed by the roughly contemporary Alexandrian Parmeniscus.⁴⁵⁶ Dionysius' philological and exegetical activity on the Homeric poems, partly in agreement and partly in contrast with

[2000], Dräger [2005], Meliàdò, this volume; and the bibliographical database ABEL (*Apollodori Bibliotheca Electronica*) at <http://abel.arts.kuleuven.be/>.

451 Str. 8.339 attests to the extensive use of the works of Eratosthenes and Demetrius by Apollodorus. The fragments are edited in *FGrHist* 244 fr. 154–207.

452 *FGrHist* 244 fr. 208–218; Bagordo [1998] 45–46 and 80–84 (No. 10).

453 Frede [1977] 52; Schenkeveld [1984] 348.

454 Mygind [1999] 263–264 (No. 34). Dionysius was the author of a historiographical work on Rhodes (*FGrHist* 512).

455 Dion. Thrax fr. 15 in the edition by Linke [1977]; cf. Crates test. 29 Broggiato.

456 Parmeniscus fr. 2 Breithaupt; Crates test. 28 Broggiato. By contrast, we cannot establish with precision what kind of topics were addressed in the discussions forming the object of the mentioned work *On the doctrine of Crates* composed by Ptolemy of Ascalon: see above, n. 431.

Aristarchus, is widely documented,⁴⁵⁷ and the same can be said—albeit to a lesser extent—for his work on Hesiod and Alcman.⁴⁵⁸ Other extant fragments of Dionysius’ works concern rhetoric and grammatical problems,⁴⁵⁹ which point to a linguistic interest in what constituted one of the long-established spheres of Alexandrian philology. But this also brings up one of the controversial issues in the field of Dionysius’ learning: for the ancient tradition attributes to him a treatise of grammatical content, which the 2nd century AD Sextus Empiricus defines as “precepts” (παραγγέλματα, perhaps the title of a work),⁴⁶⁰ but it probably has very little to do with the work entitled *Grammar* (Τέχνη γραμματική) that has actually come down to us under Dionysius’ name.⁴⁶¹ A fierce and extremely complex debate has arisen in connection with the question of the authenticity of the *Tekhnē*, especially since serious doubt has been cast on the Dionysian authorship of this work, due to objective structural and content-related incongruities.⁴⁶² Only the first paragraph, containing a definition of grammar as “empirical knowledge of what is mainly said by poets and prose writers”⁴⁶³ and a taxonomy of the discipline in six parts, are unanimously held to be genuine,⁴⁶⁴ the rest is regarded as spurious and probably dates to late antiquity, the period to which one can also trace the rich ‘scholia’ (a veritable continuous commentary) and some ‘supplements’ associated with the *Tekhnē*, both preserving a great amount of information on ancient grammatical thought and practice.⁴⁶⁵ The justifiable doubts concerning the authenticity

457 Dion. Thrax fr. 1–47 Linke. For instance, Dionysius (fr. 47) endorsed Aristarchus’ analogist criterion and the assumption of the Athenian origin of Homer.

458 For Hesiod: Montanari [2009a] 341.

459 Dion. Thrax fr. 53–55 Linke.

460 Sext. Emp., *Math.* 1.57.

461 Edition by Uhlig [1883] 1–101; then Pecorella [1962], with commentary. Greek text reproduced in Lallot [1998²], with French translation and commentary; Kürschner [1996], with German translation; Swiggers-Wouters [1998], with Dutch and German (= Kürschner [1996]) translation; Callipo [2011], with Italian translation and commentary.

462 The controversy started with Di Benedetto [1958–1959].

463 Γραμματική ἐστὶν ἐμπειρία τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσιν ὡς ἐπὶ τὸ πολὺ λεγομένων. Sext. Emp., *Math.* 1.57 gives the non-innocuous variant ἐμπειρία ὡς ἐπὶ τὸ πλείστον τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσιν λεγομένων, “empirical knowledge as far as possible of what is said by poets and prose writers”. On the much debated interpretive problem posed by the discrepancy between these passages see the comment by Lallot [1998²] and more recently Ventrella [2004].

464 Overview of the question in Pagani [2010b] and [2011], with exhaustive assessments of the overwhelming bibliography on the topic.

465 The supplements were edited by Uhlig [1883] 103–132, the scholia by Hilgard [1901]; for a recent addition see above, n. 408.

of the greater part of the *Tekhnē* have also been used to deny the existence of grammatical reflections and interests on the part of the Alexandrian scholars belonging to the earlier age (Aristophanes and Aristarchus).⁴⁶⁶ On the other hand, this argument has been countered by pointing out that the question of the genuineness or otherwise of the *Tekhnē* in no way impairs the basic fact that Dionysius was the author of a grammatical treatise: the definition of grammar genuinely attested to by the *Tekhnē* and by Sextus and some documented positions held by Dionysius in matters concerning parts of speech (which reveal signs of Stoic derivation, in particular from Diogenes of Babylon),⁴⁶⁷ as well as the similar achievements traceable to Aristophanes and Aristarchus, are sufficient to provide a sound foundation for the statement that the science of grammar began to burgeon in Alexandria starting at least from the 2nd century, in the form of linguistic observation closely linked to / aimed at constituting and interpreting literary texts.⁴⁶⁸ The new perspectives opened up by research into the actual grammatical knowledge of the 2nd century philologists, jointly with the current state of the discussion concerning Dionysius Thrax, ultimately allow a picture of the achievements of these generations of scholars in terms of first steps and evolution in the gradual process of translating philosophical, rhetorical and philological concepts about language into technical grammar.⁴⁶⁹

Attempts to ascertain the chronology and cultural framework of the grammarian and historian Asclepiades of Myrlea (later Apamea, in Bithynia)⁴⁷⁰ leave us with an *aporia*, partly because the related biographical entry in the *Suda* is of only limited usefulness as it is clearly corrupt or contaminated.⁴⁷¹ The available data allow him to be placed roughly between the second half of the 2nd and the first half of the 1st century. Knowledge of opinions put forward by Dionysius Thrax detectable in the fragments of Asclepiades demonstrate that the latter was either contemporary with or shortly later than Aristarchus'

466 This line of reasoning has been upheld by Di Benedetto, first and foremost in his study of 1958–1959 and then repeatedly ([1973], [1990], [1998], [2000]), and it has been endorsed by *e.g.* Pinborg [1975]; Siebenborn [1976]; Frede [1977]; Taylor [1987]; Law [2003]. The opposite position includes Erbse [1980]; Ax [1982] and [1991]; Matthaios [1999], [2001a] and [2002f].

467 On the influence of Stoic grammar on the Alexandrian post-Aristarchean scholars (Apollodorus and Dionysius), see *e.g.* Schenkeveld [1994] 280–281; Matthaios [2009a] 399.

468 Pagani [2010b].

469 Matthaios [2001a], [2002f] and this volume (with further bibliography). An outline of the theoretical definitions and development of ancient Greek systematic grammar is traced by Pagani [2011]; Seppänen [2014]; see further Swiggers-Wouters, this volume (section II.2).

470 He wrote a *History of Bithynia* (Βιθυνιακά): *FGrHist* 697.

471 *Suda* α 4173; Asclep. Myrl. test. 1 Pagani.

pupil. It cannot be ruled out that Asclepiades may have spent part of his life in Rome and in Spain (Baetica). There is no clear-cut evidence, although it is plausible, that he was a pupil of Crates or that he stayed in Pergamum. Effectively, a Stoic and/or Pergamene influence seems difficult to deny, if one considers the cosmological-allegorical methodology applied to Homeric exegesis in his *syngamma On Nestor's cup* (*Περὶ τῆς Νεστορίδος*), concerning the form, function and sense of this bowl described in *Iliad* 11.632–637, which is interpreted as an allusive image of the sky and of the Pleias constellation in the heavens.⁴⁷² A commentary on the *Odyssey* is explicitly attested to by the sources⁴⁷³ and another on the *Iliad* is arguable from some indirect evidence.⁴⁷⁴ It is particularly significant that, in addition to his work on Homer, he also concerned himself with Pindar, Theocritus and perhaps—though it is uncertain whether in purpose-composed *hypomnēmata* or in monographs devoted to other topics—also with Aratus and Apollonius of Rhodes, thus becoming one among the first exegetes of Hellenistic poets.⁴⁷⁵ Of equally fundamental importance, in the current critical debate on the origins of Greek grammatical science, are the remains of Asclepiades' *Grammar* (*Περὶ γραμματικῆς*), in particular his definition of grammar, clearly polemicizing against Dionysius Thrax, not as “empirical knowledge” but as “*tekhnē* of what is said by poets and prose writers”. By this statement he effectively proclaimed the character of grammar as, in a sense, both scientific and exhaustive, against an idea of this discipline as a conjectural and imperfect intellectual activity. In another fragment Asclepiades proposed a threefold subdivision of grammar, one technical (*i.e.*, systematic description of language), one concerning the *historiai* (namely, philological study of *realia*), and one strictly philological, which to some extent recalls the Pergamene partition conceived by Tauriscus and traceable to Crates.⁴⁷⁶ Finally, we know of a work *On the grammarians* (*Περὶ γραμματικῶν*),

472 Asclep. Myrl. fr. 4–10 Pagani; see Pagani [2007a] 18–23 and her comment, 149–225; Gutzwiller [2010] 356–357.

473 Asclep. Myrl. test. 12 and fr. 3 Pagani; see Pagani [2007a] 16–18.

474 Asclep. Myrl. fr. 1–2 Pagani; see Pagani [2007a] 16.

475 On Asclepiades' actual or presumed work on all of these poets: Pagani [2007a] 24–31; especially concerning Theocritus: Belcher [2005] 192–194 and 199–200 (texts); Pagani [2007c] 287–288 and 298 (texts). A treatise *On Cratinus* by Asclepiades, apparently attributed to him by Athenaeus (cf. Bagordo [1998] 60 and 102–103, No. 20), is generally ruled out: Pagani [2007a] 40 and 218–219.

476 Asclepiades' definition of grammar: Sext. Emp., *Math.* 1.72–74. His subdivision of grammar: Sext. Emp., *Math.* 1.252; see Slater [1972]; Blank [1998] 146–148 and 264–266.

in eleven books, plausibly a collection of biographies and an inventory of works, studies and theories.⁴⁷⁷

Second century Rhodes, where Dionysius Thrax developed his activity, was a lively venue of interchange of learning and cross-fertilization between Athens, Pergamum and Alexandria, on the one hand, and Rome, on the other. The island had experienced a century of prosperous independence, achieved upon the death of Alexander and defended both by taking to arms if necessary (in 305/4 Demetrius Poliorcetes laid siege in vain to the island) and also through a well thought-out policy of balance of power among the greatest Hellenistic monarchies, which was guaranteed by its privileged position as an economic hub of international trading and banking, essential especially for Egypt. At the end of the 3rd century, however, partly due to the crisis that was afflicting the Ptolemaic kingdom at the time, Rhodes (allied with Pergamum) found itself constrained to call upon Rome for aid in order to protect itself from aggression by the Macedonian king Philip V (201). This move definitively opened the floodgates to legitimate interference of Western power in the Greek peninsula and the Aegean sea. A few decades later, after the Roman victory in 168 at Pydna at the end of the third Macedonian war, Rhodes was no longer able to decline the formalization of an unequal and permanent alliance with Rome (164). Despite this, the loss of full freedom did not mark the end of economic and cultural prosperity: on the contrary, at least up to the Roman civil wars, the reassuring protective wing of Rome guaranteed some continuation—albeit without stemming the gradual decline—of the period of affluence.⁴⁷⁸

In this era the island became particularly famous for its schools of rhetoric, headed by personalities among whom the names of Apollonius from Alabanda, known as Rhodius (end of the 2nd century), and Apollonius Molon deserve to be mentioned.⁴⁷⁹ The latter was among the scholars with whom Cicero and Caesar came into contact during their periods of study on the island in the first half of the 1st century.⁴⁸⁰ Philosophy, which in the early Hellenistic Age had blossomed in Rhodes through the presence of such figures as the Peripatetics Eudemus, Praxiphanes and Hieronymus, during the 2nd and 1st centuries saw the development of flourishing schools of Stoic thinkers such as the Rhodian Panaetius, who was a pupil of Crates⁴⁸¹ and also of Dionysius Thrax while the

latter was on the island,⁴⁸² and Posidonius of Apameia.⁴⁸³ Both of these figures were the expression of an eclectic idea of culture, which seems to have constituted an intellectual trend in Rhodes at the time, even for ‘minor’ personalities. This can be observed in the case of the versatile Timachidas of Lindos, the author of an erudite poetic work in hexameters entitled *Banquet* (*Δεῖπνον*, 11 books or more), of a collection of *Γλῶσσαι*, and of commentaries on Euripides’ *Medea*, Aristophanes’ *Frogs* and—taking his place among the pioneers in the field of the exegesis on Hellenistic literature—Menander’s *Kolāx* and Eratosthenes’ *Hermēs* (in at least four books). In addition, he has been identified as one of the citizens of Lindos entrusted with drawing up the highly erudite historical inscription known as the *Chronicle of the temple of Lindos*.⁴⁸⁴

Given the political relations officially established between Rome and Rhodes towards the mid-2nd century, one can easily understand why numerous members of the Roman elite would frequently visit the island to refine their philosophical and rhetorical training. Thus after its by no means insignificant earlier period as an economic hub in the Eastern Mediterranean, when it passed under Roman control Rhodes achieved considerable status as a lively and highly attractive focus of cultural cross-fertilization. It is important to bear in mind that this was indeed the context which Dionysius Thrax adopted as the seat of his work and his chosen *milieu* of cultural learning after abandoning Alexandria. Rhodes became a unique venue that allowed the blending of

482 See Pfeiffer [1968] 232, 245, 270; cf. Nagy [1998] 222–223; Mygind [1999] 256–257 (No. 10). Ath. 14.634c testifies to Panaetius’ admiration towards Aristarchus, whom he defined as a “prophet” (μάντις) capable of penetrating into the real meaning (διάνοια) of Homeric poetry—unless the sentence had an ironical overtone, as Porter [1992] 70 is inclined to think. As far as concerns the ‘Plato of Panaetius’ testified by Gal., *De indolentia* 13 Boudon-Millot – Jouanna, rather than being an ‘edition’ (as argued by Gourinat [2008] 141), it is more likely to have been an exemplar of the Platonic *Dialogues* possessed and annotated by Panaetius (thus Dorandi [2010b] 171; cf. Stramaglia [2011] 125).

483 See Mygind [1999] 257 (No. 12). Edition of Posidonius’ testimonies and fragments: Edelstein-Kidd [1989²]; cf. *FGrHist* 87.

484 *Δεῖπνον*: fr. 1–4 Blinkenberg; *SH* 769–773. *Γλῶσσαι*: fr. 18–32 Blinkenberg. Powell [1925] 58–59. For the *Chronicle*: *StG*³ 725; Blinkenberg [1915]; *FGrHist* 532. On Timachidas see Mygind [1999] 264 (No. 35); Montana [2009c] 179–180. A new edition of all of the extant fragments is being prepared by Thomas Coward.

long-standing traditions of philosophy, rhetoric and philology.⁴⁸⁵ Of particular significance, as far as our topic is concerned, is the possibility this afforded the Roman elite—who were already familiar with Pergamene criticism from the days of Crates' visit to Rome in 168—to enter into contact with one of the most authoritative witnesses and epigones of Aristarchean scholarship. It is a telling circumstance that, around the year 100, L. Aelius Stilo Praeconinus (ca. 150–85) went to the island, where he is supposed to have attended Dionysius' lectures: he was later regarded as the first of the Roman grammarians and is remembered for having adopted the Aristarchean critical *sēmeia* in his scholarly activity on the archaic Latin writers;⁴⁸⁶ moreover, he acquired renown and following among many of his younger contemporaries, such as Varro and Cicero. Finally, we should not omit the names of two rhetoricians and grammarians who were active in Rhodes at the end of the Hellenistic age: firstly, Theodorus of Gadara, who numbered the future emperor Tiberius among his pupils, and secondly Aristocles of Rhodes, a contemporary of Strabo (according to the latter, 14.655c), author of commentaries on Plato's dialogues and a specialist of Hippocratic vocabulary.⁴⁸⁷

Another of Dionysius' pupils in Rhodes,⁴⁸⁸ Tyrannion of Amysus (ca. 100–25), likewise contributed to the dissemination of grammatical thought in Rome, albeit by a different pathway. He had moved to Rome around the year 71, had been one of the teachers of Cicero's son, and found himself having to deal with Aristotle's unpublished writings that Sulla had brought with him from Athens. That Tyrannion belonged to the Aristarchean line of philological descent is well testified by his work *On Homeric prosody* (*Περὶ τῆς Ὀμηρικῆς προσωδίας*), which concerned problems of accentuation within the poems and is often quoted by Herodian in the scholia to Homer. In the case of various other writings there is some doubt as to whether the authorship should genuinely be attributed to him or rather to his pupil Diocles (also known as Tyrannion "the Younger", to distinguish him from his teacher); the reverse is

485 Di Benedetto [1958] 202, argues that great importance should be attached to the contacts in 2nd century Rhodes between rhetoric and grammar, with regard to establishment of the respective tasks and boundaries.

486 *Anecdota Parisina* (ms. Paris, Bibliothèque Nationale de France, lat. 7530), edited by Bergk [1845] = Bergk [1884] 580–612; see also Suet., *Gram. et rhet.* 10, quoted above (n. 233).

487 Theodorus and Tiberius: Mygind [1999], respectively 261–262 and 289 (Nos. 29 and 154); Bringmann [2002] 77. Aristocles: Mygind [1999] 264 (No. 36); Bringmann [2002] 77. 488 *Suda* τ 1184.

also true, for example concerning a Homeric *diorthōsis* attributed to Diocles.⁴⁸⁹ On the other hand, the period Tyrannion and Diocles spent in Rome provides a feasible reason of why one of these two authors wrote a work *On the Roman language*, where—according to the ancient source—it was claimed that Latin “derives from the Greek (language)” (*Περὶ τῆς Ῥωμαϊκῆς διαλέκτου* ὅτι ἐστὶν ἐκ τῆς Ἑλληνικῆς),⁴⁹⁰ a circumstance that can be seen as a true sign of the times.⁴⁹¹ Similarly, Diodorus and Artemidorus, both originally from Tarsus and active in the first half of the 1st century (and known as *Aristophaneioi* in the ancient sources for their allegiance to the interests and methods of the great Alexandrian librarian) are described as experts of language: Diodorus compiled a collection of *Italic glosses* (*Ἰταλικάι γλωσσάι*), while Artemidorus—also to be mentioned for having published the oldest known *corpus* of bucolic poetry, which focused on the works of Theocritus⁴⁹²—composed a treatise *On the Doric dialect* (*Περὶ Δωρίδος*) and a gastronomic lexicon especially rich in comic vocabulary.⁴⁹³ Tyrannion’s contemporary Philoxenus of Alexandria also lived in Rome and was the author of a number of critical works concerning text, prosody and content of the Homeric poems, among which it is worth citing *On the sēmeia in the Iliad* (*Περὶ σημείων τῶν ἐν τῇ Ἰλιάδι*) and a commentary to the *Odyssey*. He also specialized in studies on language. In his work *On monosyllabic verbs* (*Περὶ μονοσυλλάβων ῥημάτων*), diverging from the Stoic etymological doctrine focusing on nouns, he stated that the majority of Greek words derive from monosyllabic verbs which, if lost in everyday use, could be reconstructed via the analogical technique—a theory which exerted great influence on subsequent research in this field. Several titles that have come down to us testify to intense activity in the spheres of lexicography and dialectology, e.g. *On the dialect of the Syracusans* (*Περὶ τῆς τῶν Συρακουσίων διαλέκτου*), *On the dialect of the Lacons* (*Περὶ τῆς τῶν Λακόνων διαλέκτου*), *On the Ionian dialect* (*Περὶ τῆς Ἰάδος διαλέκτου*), *On correctness of the Greek* (*Περὶ ἑλληνισμοῦ*), *On glosses* (*Περὶ γλωσσῶν*), *On glosses in Homer* (*Περὶ τῶν παρ’ Ὀμήρω γλωσσῶν*). But Philoxenus’ name is most closely linked to the work *On the dialect of the Romans* (*Περὶ τῶν Ῥωμαίων διαλέκτου*), in which he claimed, apparently in the steps of Tyrannion/

489 Suda τ 1185.

490 Again Suda τ 1185.

491 Dubuisson [1984]. A comparative approach to Greek and Latin languages is detectable in some etymological observations by the scholar historian Hypsicrates of Amysus, Tyrannion’s coeval and countryman: *FGrHist* 190 fr. 6–7 = fr. 1–2 Funaioli (in Funaioli 1907). The fragments of Tyrannion and/or Diocles are edited by Haas [1977]; see also Dyck [1982b]. On Diocles and the related problem of identity: Montanari [1997h].

492 Pagani [2007c] 286–287.

493 On both grammarians see Bagordo [1998], respectively 60 and 122–123 (No. 33), and 63 and 98–100 (No. 18).

Diocles and on the basis of some alleged affinities of Latin with Aeolic, that Latin is a Greek dialect.⁴⁹⁴ This trend in the dialectological inquiry fits well with the more general growing tendency towards cultural integration of the Roman and Hellenistic elites during the last decades of the Republic; a process which emblematically also included learned-ideological discussions about the descent of Rome from Greece (in competition with the Trojan thesis, particularly upheld by scholars close to Pergamene patronage) and culminated in the assumption of the Roman origin of Homer.⁴⁹⁵

As a matter of fact, the centrality of Rome as a political and military capital of the Mediterranean on the eve of the Principate was rapidly undergoing a transformation into centrality as a new cultural capital, which prided itself on its libraries and its formidable array of scholars in addition to a wealth of opportunities for study, edition, copy and contamination of ancient textual traditions. Indeed, Rome could now justifiably claim to be no less a prestigious protagonist of scholarship than the ancient seats of learning. The most emblematic episode of this new rule of Rome, which eloquently illustrates the intermeshing of political-military and cultural factors, is the earlier mentioned question of the Aristotelian private library, the fate of which we can now examine in its essential traditional lines.⁴⁹⁶ Athenaeus of Naucratis⁴⁹⁷ draw up a long list of figures from Greek history who possessed rich private libraries (a list also including Polycrates of Samos, the Athenian tyrant Pisistratus, Euclid of Athens, Nicocrates of Cyprus, the kings of Pergamum, and the poet Euripides), at the end of which he also mentions “Aristotle the philosopher, <Theophrastus>, and Neleus, who kept watch over the books of both the latter”. Athenaeus adds that

our king Ptolemy [II], called Philadelphus, after purchasing all of them [*i.e.* those books: πάντα . . . πριάμενος] from him [*i.e.* Neleus], had them transported to the fine city of Alexandria together with the books purchased in Athens and Rhodes.

494 Testimonies and fragments concerning Philoxenus are edited by Theodoridis [1976]. The main extant testimony is *Suda* φ 394: Philox. test. 1 Theodoridis. On Philoxenus as a Homerist: Pagani [forthcoming]. On his linguistic theory and its reception: Lallot [1991b]. For *On the dialect of the Romans* see frs. 311–329 Theodoridis.

495 This opinion is attributed by the *Vita Homeri* VI, 251.18–23 Allen, to Aristodemus of Nysa, perhaps the 1st century grammarian and rhetor, who was a son of Aristarchus’ pupil Menecrates and among the teachers of Pompey the Great’s sons in Rome and of Strabo in Nysa (Str. 14.650). See Heat [1998]; Ascheri [2011].

496 Reference-study: Moraux [1973] 3–94.

497 Ath. 1.3a–b.

According to this narrative, therefore, the whole library of the philosopher—implicitly including all of the works composed by the philosopher himself—became part of the Alexandrian Library even before the mid-3rd century, possibly as part of the original fund of books of the rising Ptolemaic institution.⁴⁹⁸

An apparently divergent account of the event is attested to by Strabo.⁴⁹⁹ He testifies that Neleus, who had received the Aristotelian collection of books from Theophrastus, took the entire set of works to his home city, Scepsis in the Troad, and there he left it in turn to his own heirs, an uneducated lot who showed little concern for their care and conservation: on the contrary, his heirs hid them in a ditch when they found out that the Attalid kings, who ruled over the city, were trying to lay in a cache of books for the establishment of their new Library at Pergamum. A few generations later, the descendants of Neleus' heirs sold off the store of books—which were partly damaged by moisture and moths—at a favourable price to Apellicon of Teos (2nd/1st century), “a bibliophile more than a philosopher”.⁵⁰⁰ Apellicon worked on the mangled books that were severely disfigured by lacunae, and produced new copies, but with the text restored in a highly disputable manner; he then published them full of errors (ζητῶν ἐπανόρθωσιν τῶν διαβρωμάτων εἰς ἀντίγραφα καινὰ μετήνεγκε τὴν γραφὴν ἀναπληρῶν οὐκ εὖ, καὶ ἐξέδωκεν ἀμαρτάδων πλήρη τὰ βιβλία). It was for this reason, as underlined by Strabo, that the Peripatetics working later than the era of Theophrastus had access to only a few (Aristotelian) books, and furthermore only those of the “exoteric” (namely “external”, “popular”) type: consequently, scholars' philosophical speculation was of a rather mediocre level and concerned only minor issues. By contrast, Strabo continues, subsequent generations of scholars, who did have access to the books, were able to devote themselves to genuinely philosophical matters and become true followers of Aristotle, but without being able to rely with any great certainty on the doctrines of their teacher, due to the poor textual quality of the published works. “Rome was to a large extent the cause of this”, since, after capturing Athens (in 86), Sulla confiscated Apellicon's library, and had it transferred to Rome, where the philo-Aristotelian *grammatikos* Tyrannion (the pupil of Dionysius Thrax at Rhodes, thus in a sense an ‘Aristarchean’) gained access to the books, but so did

498 Cf. Blum [1977] 109–134; Canfora [1999]; Tanner [2000].

499 Str. 13.609.

500 The purchase of the library by Apellicon and the picture of the latter as an affluent but amateurish figure (furthermore marked out by a mercurial and fickle temperament, ποικιλώτατόν τινα καὶ ἀψίχορον ζήσαντα βίον) are also conveyed by Posidonius, *FGrHist* 87 fr. 36 = fr. 253 Edelstein-Kidd (*apud* Ath. 5.214d).

a number of booksellers, who were able to make a number of copies destined to the book market without paying much attention to textual accuracy.

Thus Strabo's narrative recounts the vicissitude of the Aristotelian library, with an 'Aristarchean' happy ending, which, however, appears to have been somewhat infelicitous inasmuch as the works of the philosopher finally became more widely known but without the due editorial correctness.⁵⁰¹ A supplementary stage in the story and a happier ending in this sense is mentioned by Plutarch in his *Life of Sulla*.⁵⁰² According to Plutarch, in Rome the books of the philosopher underwent a first revision by Tyrannion and finally were published by (the Peripatetic) Andronicus of Rhodes, who also drew up some catalogues (πίνακες) that were still in circulation in Plutarch's time. This 'Aristotelian' ending includes the undeniable advantage of crediting with genuine validity the philosophical work of the Peripatus during the late decades of the Hellenistic Age and thereafter.⁵⁰³

The contradiction inherent in the testimonies of Athenaeus on the one hand, and of Strabo and Plutarch on the other, lends itself to being interpreted as the outcome of different standpoints in the retrospective of how the events unfolded. Firstly, the official Alexandrian tradition could with some justification lay claim to possession of the original—but, as it seems, not integral—library of Aristotle, having purchased it from Neleus. Secondly, after the rediscovery of some important Aristotelian works purloined from the Ptolemaic and Attalid stash of books that had remained hidden from view for centuries, the 'new' Peripatetics of the end of the Hellenistic Age had no qualms about reshaping to suit their own purposes the traditional information concerning the destiny of the whole of Aristotle's library.⁵⁰⁴ The different narratives thus reflect the destinies of two different groups of books, namely, on the one hand those that once belonged to Aristotle and, on the other, some (or all) of Aristotle's own "esoteric" works: the former group was sold by Neleus to Ptolemy II, while the latter collection—or at least a large part of it—remained concealed and inaccessible to those beyond the narrow circle of few specialists⁵⁰⁵ until Sulla brought the books to Rome. This would also explain why there is a lack, in our documentation, of an Alexandrian philological and editorial activity on the writings of none other than the acknowledged ideal inspirer of the foundation

of the Ptolemaic institutions.⁵⁰⁶ This received or built composite picture of the adventurous vicissitude experienced by Aristotle's library emblematically concatenates the best capitals of Classical and Hellenistic culture—Athens, Alexandria, Pergamum, and finally Rome—linking them together in a shared path of ideal empathy and common fate.⁵⁰⁷

3.3 *Alexandrian Scholars in an Augustan World*

We have thus reached the eve of the Augustan era, a period during which a number of important personalities linked to Alexandrian philology, distinguished mainly by the collection and compilation of the fruits of previous research, were still alive and active. Their impressive and wide-ranging work demonstrates that the fire risk which threatened the Library in the days of the Alexandrian War (48/47) did not jeopardize the outstanding heritage of research and learning accumulated during three centuries of Ptolemaic kingship: if anything, the danger acted as an incentive to secure it. In accounting for this last offshoot of Hellenistic scholarship, attention will focus here on four personalities who were particularly noted for their achievements in preserving and harnessing the fruits of previous Alexandrian seasons of philological inquiry: Aristonicus, Didymus, Theon, and Tryphon.

Aristonicus lived and taught in Rome in the time of Augustus.⁵⁰⁸ Although the opposite opinion is also maintained, it cannot be ruled out that he was a little older than his contemporary Didymus or that at least he exerted some of his own philology prior to the latter.⁵⁰⁹ Aristonicus' relevance to the Alexandrian school of philology—to which he also devoted an unfortunately lost monograph *On the Museum at Alexandria* (*Περὶ τοῦ ἐν Ἀλεξανδρείᾳ*

506 Irigoin [1994] 50–53. However, significant exceptions indicate that some of Aristotle's esoteric works were known to the Alexandrians: for instance, as has been seen, erudite Aristotelian writings acted as the source for some of Eratosthenes' inquiries and for Aristophanes of Byzantium's *hypotheses* of the dramatic plays. Furthermore, Aristophanes composed an epitome of Peripatetic sources on zoological problems (*On animals*); nor should one omit to mention the concepts of poetics, rhetoric and Aristotelian literary criticism of which concrete traces remain in the fragments of the Hellenistic exegesis to classical authors (cf. above, n. 74). See Moraux [1973] 12–15 with n. 36.

507 Some symbolic implications are stressed by Nicholls [2011] 131, particularly with reference to the transfer and storing of Greek books from Alexandria and Athens to Roman libraries during the first imperial age.

508 Str. 1.38; *Suda* π 3036 (a biographical entry on Aristonicus' father Ptolemy, he himself a grammarian who lived in Rome). See Jolivet [2010].

509 Firstly Lehrs [1882³] 28; Ludwich [1884–1885] 1.51; Schmidt [1854] 277; West [2001a] 49–50; cf. Pontani [2005b] 62; Razzetti [2010] 60–61.

Μουσεῖω), of an apparently antiquarian nature, later epitomized by Sopater of Apamea⁵¹⁰—and specifically to the Aristarchean line of research is revealed first and foremost through the work *On the sēmeia of the Iiad and Odyssey* (*Περὶ σημείων Ἰλιάδος καὶ Ὀδυσσεύσεως*). This was a detailed interpretation of the critical *sēmeia* inserted by Aristarchus into the text of the poems, of which the compilers of the Homeric scholia (mainly those handed down by the manuscript *Venetus A* of the *Iliad*, but without exclusion of the so-called ‘exegetical scholia’ on the same poem),⁵¹¹ as well as of Byzantine lexica and etymologica, made very extensive use. For this reason, via Aristonicus we are able to reconstruct a great deal of Aristarchean explanations on Homeric *realia*, mythography, poetics, grammatical features, and critical interventions on the text of the poems, particularly with reference to *athēteseis*.⁵¹² An analogous work concerning Aristarchean scholarship on Hesiod’s *Theogony* is attested to.⁵¹³ Aristonicus followed in the steps of Aristarchus by also writing, or so it would seem, commentaries of his own on the Homeric poems⁵¹⁴ and a treatise especially devoted to *Menelaus’ wanderings* (*Περὶ Μενελάου πλάνης*), perhaps a section of his exegesis of the *Odyssey*;⁵¹⁵ he also commented on numerous other poetic works of archaic and classical authors. Scholiastic *corpora* and papyri (where the monogram APN̄ is found in connection with exegetical annotations traceable to Aristonicus)⁵¹⁶ provide a hint of exegetic activity on Pindar’s *Epinicia*⁵¹⁷ and *Paeans*,⁵¹⁸ Alcman’s *Parthenia*⁵¹⁹ and possibly Stesichorus’ *Ilioupersis*.⁵²⁰

Traces of intervention can be read in the Oxyrhynchus papyrus of Sophocles' *Ichneutae*.⁵²¹ Of his treatise *On the dance* (*Περὶ ὀρχήσεως*), a fragment survives concerning contemporary pantomimic adaptations of ancient comic (*kordax*), tragic (*emmeleia*) and satyric (*sikinnis*) dances.⁵²² Discussions on grammatical subjects pertaining to nominal and verbal flection and language use can readily be found in the exegetical fragments; furthermore, the issue of regularity in language, which had already become a well-defined focus of investigation in Aristophanes of Byzantium and Aristarchus, formed the object of an entire work by Aristonicus in six books concerning nominal irregularities (*Ἀσυντάκτων ὀνομάτων βιβλία ἕξ*).⁵²³ It is above all in the field of Homeric exegesis, where there is the greatest number of conserved fragments and which thus allows a comparison with Aristarchus, that evidence can be found to suggest that Aristonicus had a philological personality endowed with some independence, and was capable of putting forward critical observations of his own—more often than he has been credited with by the moderns, in whose estimation he has been overshadowed by the giant figure of Aristarchus.⁵²⁴

Didymus of Alexandria, who lived and worked in the ancient prestigious Ptolemaic capital in the time of Cicero and under Augustus, generated a colossal learned production, which should be considered as the culmination of the long-standing Alexandrian line of textual, exegetical and erudite studies. His indefatigable activity in a multiplicity of fields of philology earned him the nickname of *khalkenteros* (*χαλκέντερος*, “brazen-guts”),⁵²⁵ whereas the label *bibliolāthas* (*βιβλιολάθας*, “book-forgetter”), which he was also known by, refers to the enormous mass of his writings, which took up a number of papyrus rolls varying between 3,500 and 4,000 in the different sources.⁵²⁶ His zeal in collecting, selecting and compiling of the previous works of Alexandrian philology resulted in a wide range of products that were exegetical in essence—commentaries and other writings of criticism and explanation of ancient authors, lexical and grammatical works, *syngrammata* on various topics—in which his overall approach revealed the fundamental imprint of Aristarchean scholar-

ship.⁵²⁷ It is therefore hardly surprising that, although for chronological reasons he could not have known Aristarchus, according to the *Suda* Didymus was called *Aristarkheios*.⁵²⁸

Knowledge of Alexandrian Homeric scholarship is greatly indebted to his *syngramma On the Aristarchean diorthōsis* (*Περὶ τῆς Ἀρισταρχείου διορθώσεως*), in which extracts from the text of the poems established by Aristarchus and the relevant explanations were collected and interpreted.⁵²⁹ Didymus' treatise represented one of the pillars of later Homeric interpretation, and it was incorporated in the scholiastic tradition together with Aristonicus' explanation of the Aristarchean *sēmeia* and other similar writings composed during the Imperial Age by Nicanor and Herodian, as openly attested to by subscriptions in the Medieval manuscript *Venetus A* of the *Iliad*. However, it should not be thought that the revival of Aristarchean scholarship favored by the work of Aristonicus and Didymus met with exclusively positive responses: for their younger contemporary Seleucus, called ὁ Ὀμηρικός, a prolific Alexandrian grammarian who moved to Rome in the time of Tiberius, composed a work in at least three books *Against Aristarchus' sēmeia* (*Κατὰ τῶν Ἀριστάρχου σημείων*).⁵³⁰

These same scholia as well as the lexicographic tradition (Stephanus of Byzantium's *Ethnica* and the *Etymologica*) preserve fragments drawn from Didymus' own commentaries on individual books of the *Iliad* and *Odyssey*, including word explanation and etymology, and content-related questions regarding, among other aspects, mythology and geography. He also devoted *hypomnēmata* to a great quantity of works of post-Homeric poets, such as Hesiod's *Theogony*⁵³¹ and, in the field of lyric poetry, to Pindar's *Epinicia*⁵³² (in

527 The rather old edition of Didymus' fragments by Schmidt [1854], although in need of thorough revision and up-dating, has not yet been supplanted as a whole. A reassessment and a critical catalogue collecting 69 titles of attributed works are provided by Braswell [2013] 40–103.

the scholia to which he is quoted roughly eighty times), *Paeans*,⁵³³ and probably *Hymns*, and Bacchylides' *Epinicia*.⁵³⁴ As far as drama is concerned, his work on Sophocles is well attested,⁵³⁵ traces of which also remain in the Medieval scholia; his name appears in the scholia to Euripides' tragedies and a subscription to the *Medea* in a manuscript points to a commentary by Didymus on this author;⁵³⁶ he also concerned himself with Ion and perhaps Achaëus. The composition of commentaries on Aristophanes' comedies is extensively testified to by Medieval scholia, which preserve more than sixty open mentions of Didymus; it is likewise possible that Didymean *hypomnēmata* were the source from which derived, through reworkings and interventions of a compendary nature, two 2nd century fragmentary papyrus commentaries on unidentified Aristophanean comedies.⁵³⁷ Furthermore he composed *hypomnēmata* on Cratinus,⁵³⁸ Menander,⁵³⁹ and possibly Eupolis.⁵⁴⁰

Among the prose writers, Didymus probably dedicated attention to Thucydides, if one is to give credence to the citations of this scholar in Marcellinus' *Life of Thucydides* (4th? century AD).⁵⁴¹ It would not be altogether surprising if one were to find that Didymus, following in the footsteps of Aristarchus, took an interest in Herodotus, as is conceivably suggested by an admittedly faint trace of evidence detectable in an anonymous commentary attested to by a papyrus scroll.⁵⁴² There can be no doubt, on the other hand, that he concerned himself with the Attic orators, above all Demosthenes, Aeschines, Hyperides, Isaeus. Our main indirect source in this respect is the rhetoric lexicon of Harpocration (2nd century AD), but we are lucky enough to have an exten-

540 Schmidt [1854] 308–310; Storey [2003] 35.

541 Mazzarino [1966] 2/2 466 (hesitatingly scrutinized by Piccirilli [1985] 67–68 and 89–90) argued that the Didymus quoted in §§ 3, 16 and 32 of Marcellinus' *Life* could well be Didymus Claudius, the Greek grammarian presumably active in Rome in the 1st century AD and author of a writing *On the mistakes of Thucydides relating to analogy*, rather than the Chalcenterus. This assumption has been rejected by Arrighetti [1968] 97 n. 94 and [1987] 226–227 n. 202; cf. Porciani [2001] 45 n. 106.

542 P.Oxy. 65.4455 (3rd century AD). See Montana [2009a] 253–254; Braswell [2013] 40 n. 48.

sive papyrus fragment (P.Berol. 9780 of the 2nd century AD) of a work bearing in the colophon the title *Didymus' On Demosthenes* (Διδύμου περὶ Δημοσθένους), which lists a series of lemmata drawn from the *Philippicae* (Speeches 9–11 and 13) accompanied by explanatory notes.⁵⁴³ The peculiar arrangement of the material and its manner of selectively discussing the literary text, with marked emphasis on historical sources and antiquarian erudition (*Sachphilologie*), has raised questions concerning the integrity and the nature of the text that has come down to us: it is unclear, firstly, whether it is the original or an epitome and, secondly, whether we are dealing with a *hypomnēma* or a *syngramma*.⁵⁴⁴ However, these doubts can be dispelled if gaps and presumed omissions in the exegesis are explained with the assumption that Didymus used an Alexandrian edition of Demosthenes' speeches where—in contrast to the collection that has come down to us through the Medieval manuscripts—the *Philippicae* occupied a very advanced position. If this is the case, then it would hardly be surprising that, as he proceeded with the commentary, he avoided reiterating explanations, some of which lengthy and complex, already provided in earlier parts of his own *hypomnēma*.⁵⁴⁵ That is to say, we would be dealing with a Didymean *hypomnēma* in its original *facies*. The unusual circumstance of being able to examine a textual exhibit belonging to the direct tradition explains why it has been used extensively in (even highly divergent) assessments of the quality of Didymus' philology.⁵⁴⁶

Throughout the prolonged period of Alexandrian scholarship, literary exegesis was accompanied by the study of vocabulary, or lexicography. Didymus was no exception in this regard, as he was the author of a comic and a tragic lexicon (λέξις κωμική and λέξις τραγική), both quoted by the lexicographer Hesychius (5th/6th century AD) in the epistle to Eulogius prefatory to his own *Lexicon*. We may gain an idea of the extensive circulation and literary fortune

543 Edited by Pearson-Stephens [1983]; cf. Gibson [2002]; Harding [2006], with commentary. Cf. Braswell [2013] 80 (No. 38).

544 The view that it is (a collection of *excerpta* from) a *hypomnēma* has been expressed by the *editores principes* Diels-Schubart [1904] and, more recently, by West [1970]; Arrighetti [1987] 203–204; Gibson [2002] 13–25 and 51–69. In contrast, the opinion that it is a *syngramma* was put forward by Leo [1904], and it is also supported by Harding [2006] 13–20.

545 Thus Luzzatto [2011], who takes to its extreme consequences a neglected suggestion put forward by Blass [1906] 284–292 (No. 231) and who regards this *hypomnēma* as a tool designed for erudite consultation.

546 The papyrus text, in the opinion of West [1970], is very likely to be the original Didymean *hypomnēma* and thus testifies to the sloppiness of its author. By the same premise, corrected as said above, the work, on the contrary, illustrates the qualified scholarship of Didymus in the view of Luzzatto [2011]; cf. Montana [2009c] 163–166.

of these Didymean tools during Graeco-Roman antiquity from the fact that Galen (2nd century AD) made use of the fifty books of Didymus' comic *lexis* and drew up an epitome of it "in six thousand lines", maintaining that

a work of this kind will be helpful to rhetoricians and grammarians and to anyone who for other reasons wishes to utilize words belonging to Attic dialect that are important for practical utility

as happens in the field of pharmacological terminology.⁵⁴⁷ According to other sources, Didymus also composed special collections entitled *Doubtful language* (*Ἀπορομένη λέξις*), *Figurative language* (*Τροπική λέξις*), *Corrupted language* (*Διεφθορούια* or *Παρεφθορούια λέξις*), *On the different meaning of words* (*Περὶ διαφορᾶς λέξεων*).⁵⁴⁸ He may also have addressed Hippocratic vocabulary.⁵⁴⁹

In the field of grammar some studies are linked to the name of Didymus, such as *Grammatical changes* (*Περὶ παθῶν*), concerning "word pathology", *i.e.* the observation of verbal changes and phenomena which explain deviation from the analogy⁵⁵⁰ (a branch whose beginning is traceable at least to Philoxenus⁵⁵¹ and which could have encouraged the collection and study of dialectal peculiarities).⁵⁵² Additional works, sometimes conjecturally assigned to Didymus of Alexandria rather than to his namesakes, include *On orthography* (*Περὶ ὀρθογραφίας*) and *On the analogy by the Romans* (*Περὶ τῆς παρὰ Ῥωμαίους ἀναλογίας*).⁵⁵³

547 Gal., *De indolentia* 23–27 Boudon-Millot – Jouanna.

548 Attested to respectively by Harp. δ 23 Keaney; an Atticistic glosse of the 6th lexicon of Bekker (334.1); Ath. 9.368b; and *scholl. Ar., Av.* 768 and *Plut.* 388b (see Braswell [2013] 41–42).

549 Schmidt [1854] 24–27.

550 The fragments preserved in the Homeric scholia are drawn from a commentary on Didymus' work by the 2nd century grammarian Herodian: Schmidt [1854] 343–345.

551 Reitzenstein [1897] 187; Blank [1982] 41–50.

552 Cassio [1993b] 85–86.

553 Of these works, the *Suda* assigns the first to a younger Didymus active in Rome (δ 873: on modern discussion see Braswell [2013] 88–89, No. 48) and the second to Didymus Claudius, presumably living in the 1st century AD Rome (δ 874: an authorship safeguarded by Cohn [1903c]; Mazarino [1950] 81; Christes [1979] 66 n. 466; Dubuisson [1984] 61 and [1987] 20 n. 27; Rochette [1997] 61 n. 55; and basically by Braswell [2013] 90–92, No. 50). Both works are included among the genuine production of the Alexandrian scholar by Schmidt [1854] 335–349. Overall, on ancient Greek orthographic treatises: Schneider [1999].

A final group of writings by Didymus consists of monographs of various content, ranging from a study *On the lyric poets* (*Περὶ λυρικών ποιητῶν*), which probably contemplated a classification of lyric poetry by genres with relevant definitions,⁵⁵⁴ to a miscellaneous work (*Σύμμικτα* or *Συμποσιακά*) treating erudite topics in the fictitious frame of a symposial talk; also belonging to this group are specialized collections of paradoxographic materials (*Ξένη ἱστορία*) and proverbs (*Περὶ παροιμιῶν*), the latter being an expansion of the work of the same type composed by Aristophanes of Byzantium that was destined to become the primary source of the whole of the later Greek paroemiographic tradition. We owe to Plutarch⁵⁵⁵ a descriptive account of an antiquarian *Pamphlet against Asclepiades on Solon's axones* (*Περὶ τῶν ἀξόνων τῶν τοῦ Σόλωνος ἀντιγραφῆ πρὸς Ἀσκληπιάδην*), which dealt with a question—the axones or slabs on which the text of Solon's laws was fixed and put on public display—that lay at the origin of a rich ancient discussion starting, it seems, from Aristotle (*Περὶ τῶν Σόλωνος ἀξόνων ε'*) and continuing during the course of the Hellenistic Age: the issue was addressed, among others, by Eratosthenes, Polemo of Ilium, Aristophanes of Byzantium, Apollodorus, Asclepiades the author of *Τῶν ἀξόνων ἐξηγητικά* against whom Didymus polemicized (perhaps to be identified with the scholar of Myrlea), and then ultimately, in the next generation, by Seleucus Homericus (mentioned above for his work against Aristarchus' *sēmeia*).⁵⁵⁶ Finally, a polemical work on Cicero's *De re publica*, attributed to Didymus by Ammianus Marcellinus and which sparked a defense of Cicero by Suetonius, seems quite inconsistent with the methods and objectives of Alexandrian learning and probably should, instead, be assigned to Didymus Claudius.⁵⁵⁷

Didymus' cultural contribution is impossible to quantify with precision due to the fact that much of the erudite material in later lexis and scholia, almost certainly drawn or derived to a large extent from his studies, has come down to us in anonymous form. However, it can be stated that his overwhelming contribution resides in having guaranteed the survival, albeit selectively filtered and re-worked, of the body of critical work of the previous generations of Alexandrian philologists and in having perpetuated their forms, objectives and method. He thereby represents a fundamental *trait d'union* in the transition between Greek philology of the Hellenistic era and Graeco-Roman erudition of the Imperial Age, which then found its way into Medieval lexis, etymologica and scholiastic *corpora*. Seen in this light, the view that the overall feature

554 Grandolini [1999].

555 Plut., *Sol.* 1.1.

556 For a survey see Montana [1996] 207–211.

characterising Didymus' work is its lack of originality, or rather its philological negligence—according to a by no means isolated unfavorable judgment—ultimately implies a misunderstanding of the meaning of this chapter in the history of ancient culture.⁵⁵⁸

The figure of Theon, son of Artemidorus of Tarsus, stands out in the panorama of ancient philology for having taken a particular interest in the works of the Hellenistic poets, and perhaps indeed for being the first philologist to do so in a systematic manner. Certainly, not unlike his predecessors he by no means shrank from undertaking institutional tasks of text criticism and writing out comments. The Oxyrhynchus papyrus of Sophocles' *Ichneutae* testifies to a number of variant readings marked by the statement οὕτως ἦν ἐν τῷ Θέωνος, "thus it was in Theon's (copy/edition)";⁵⁵⁹ and he definitely worked on Homer (the *Odyssey*)⁵⁶⁰ and on some poets of the Archaic and Classical Age (Alcman,⁵⁶¹ Stesichorus,⁵⁶² Pindar,⁵⁶³ and, it would seem, Epicharm⁵⁶⁴ and hypothetically Aristophanes, given his familiarity with the comedies of the latter).⁵⁶⁵ Equally in line with the traditional approach of Alexandrian philology was his collection of *Lexeis*,⁵⁶⁶ including, it would seem, a special section concerning comic vocabulary.⁵⁶⁷ Yet there can be little doubt that Theon reserved special attention

- 561 P.Oxy. 24.2390, a *hypomnēma* on Alcman where a Tyrannion (the grammarian of Amysus? fr. 6i Haas) is also quoted: cf. Alcman fr. 5 Page = fr. 5 Davies.
- 562 P.Oxy. 37.2803: Stesich. fr. S133–147 Page = fr. S133–147 Davies. Cf. McNamee [2007] 373–375.
- 563 Exegetical work at least on *Paeans*, *Olympians* and *Pythians* is attested to by references respectively in P.Oxy. 5.841 (McNamee [2007] 315–343), *schol.* Pind., *Ol.* 5.42a, and P.Oxy. 31.2536 (fragments of a *hypomnēma* with subscription: Theon fr. 38 Guhl). Some aspects of congruence between papyrus annotations and corresponding medieval scholia to Pindar could indicate that Theon's commentary should be dated earlier than that of Didymus, from which the scholia are generally believed to have derived: McNamee [1977] 64–65; Benelli [2013] 619. The reverse opinion is maintained by Deas [1931] 34.
- 564 Marginal notes in P.Oxy. 25.2427, containing fragments of Epicharm's *Pyrrha and Promatheus* (Πύρρα καὶ Προμαθεύς), fr. 113 Kassel-Austin; cf. McNamee [2007] 245–247.
- 565 Bongelli [2000] 281.
- 566 Attested to in the epistle to Eulogius prefatory to Hesychius' *Lexicon*.
- 567 Phryn., *Att.* 355, on *σάπραν*; Hsch. σ 1031, s.v. *σάπραλοι*. Theon is, in addition to his father Artemidorus and Didymus, among the candidates for authorship of some items included in the 2nd/3rd century AD papyrus lexicon P.Oxy. 15.1801, containing mainly comic

for the poets of the early Hellenistic era, which perhaps even became his predominant focus of interest. This interest was not an innovation, if it is true that Aristophanes of Byzantium perceived issues of philological relevance in the plays of Menander and as early as the 2nd century some scholars occasionally drew on their familiarity with the texts of Hellenistic poetry, at least as a reservoir of useful parallels, in commenting on more ancient authors and, finally, Asclepiades of Myrlea devoted some of his work to Theocritus and hypothetically to Aratus and Apollonius of Rhodes. However, Theon's assiduous exegetical production is not only better attested, but it also seems to be distinguished by its broader scope and by the greater—indeed epoch-making—influence it exerted on the later textual and interpretive tradition. There is some positive evidence concerning Theon's work on Theocritus, including plausibly an edition, subsequent to the bucolic *corpus* drawn up by his father Artemidorus,⁵⁶⁸ and definitely a commentary;⁵⁶⁹ it is plausible to assume that significant remains of the latter are preserved in several marginal annotations in Theocritean papyri of Imperial Age and Late Antiquity.⁵⁷⁰ A few fragments survive of Theon's commentary to Callimachus' *Aitia*⁵⁷¹ and there is reason to believe that he also composed a comment on *Hecale*⁵⁷² and *Hymns*.⁵⁷³ The well known subscription at the end of the *Argonautics* of Apollonius of Rhodes in the manuscript Firenze, Biblioteca Medicea Laurenziana, Plut. 32.9 (10th century) attests that the scholia copied there are “drawn from (the

568 *AP*. 9.205 (Theoc., *Epigr.* 26).

569 Orion by *Etymologicum Gudianum* 323.18–21 De Stefani: Theon fr. 1 Guhl.

570 In particular P.Oxy. 2064 (published by Hunt-Johnson [1930]) + 50.3548 (MacNamee [2007] 427–442; see also Meliàdò [2004b]) and P.Antinoe s.n., the so-called ‘Antinoe Theocritus’ (MacNamee [2007] 109–112, and 376–427 for the text; cf. Montana [2011b]; Meliàdò [forthcoming]). See Belcher [2005] 194 and 200 (texts); Pagani [2007c] 288–290 and 298–299 (texts).

571 *Etymologicum Genuinum* AB α 1198 Lasserre-Livadaras: cf. Callim. fr. 383 Pfeiffer = fr. 143 Massimilla, and *Hecale* fr. 45 Hollis = Theon fr. 2 Guhl; *Etymologicum Genuinum* AB β 207 Lasserre-Livadaras: cf. Callim. fr. 42 Pfeiffer = fr. 49 Massimilla = Theon fr. 5 Guhl; *Etymologicum Genuinum* AB α 1316 Lasserre-Livadaras: cf. Callim. fr. 261 Pfeiffer = Theon fr. 6 Guhl.

572 Callim. fr. 261 Pfeiffer, quoted by Theon in his commentary on the second book of the *Aitia* (see previous n.), actually belongs not to the *Aitia*, but to the *Hecale* (fr. 71 Hollis); and Callim. fr. 383 Pfeiffer = fr. 143 Massimilla (also quoted in the previous n.) is cited in a couple with *Hecale* fr. 45 Hollis, possibly by the same Theon. This would denote Theon's familiarity with the Callimachean *epyllion*: Bongelli [2000] 284.

573 Bongelli [2000] 284–290.

commentaries by) Lucillus Tarrhaeus, Sophoclius, and Theon.⁵⁷⁴ And finally, in the lexicon of Stephanus of Byzantium (6th century) and in the scholia to Nicander's *Theriaca*, commentaries by Theon on the latter⁵⁷⁵ and on Lycophron's *Alexandra* are explicitly mentioned.⁵⁷⁶

The importance of Theon's scholarship is comparable to that of Didymus, inasmuch as the body of research built up by both figures at the final turning point of the Hellenistic era proved invaluable for compilatory production of new erudite tools during the Imperial Age and Late Antiquity, whose extreme ramifications are ultimately available to us through the Byzantine lexicographic and scholiographic tradition.

The scholar to whom the last page of this overview is dedicated, Tryphon of Alexandria, stands as another key figure in the transition between the Hellenistic and Imperial Age, this time in the field of the *tekhnē grammatikē* that was to undergo considerable development precisely in the immediately following era. The son of a certain Ammonius, Tryphon was active in Alexandria during the Principate of Augustus,⁵⁷⁷ and there he may possibly have been in contact with Didymus.⁵⁷⁸ He may also have been active abroad: one of his pupils, the grammarian Habron, appears to have received his training in Rhodes before moving to Rome,⁵⁷⁹ and some subjects with which Tryphon was concerned were an object of discussion beyond the Alexandrian environment (for example by the grammarian Philoxenus, active in Rome).

An unresolved question involves the actual relation of Tryphon with some grammatical treatises preserved by the manuscript tradition and associated with his name, although it is likely that they were the fruit of stratifications the final outcome of which has little to do with his original production. Apart

from a number of quite problematic works,⁵⁸⁰ some weight must be given to the fragmentary *Grammar* (*Τέχνη γραμματική*) on papyrus bearing the name of Tryphon in the subscription, perhaps a late-antique reworking of the original, if not the work of a later namesake;⁵⁸¹ consideration should also be given to the work *On tropes* (*Περὶ τρόπων*), i.e. rhetorical figures used in poetry, which enjoyed wide circulation and underwent several adaptations in the Byzantine era.⁵⁸² A late redaction of this work, wrongly attributed in modern times to the 12th century Byzantine erudite Gregory of Corinth, is also preserved in the Medieval tradition.⁵⁸³

Among the works that have not come down to us, of which only the title is known, mainly thanks to the *Suda*, or of which we have only indirect knowledge and a few fragments, some dealt with particular applications of the analogist theory (e.g. *On analogy in monosyllabic words*; *On analogy in the flexions*), while others more specifically addressed matters of orthography (*Orthography and its problems*, which later served as a model for the grammarian Herodian) and prosody (*Attic prosody*; *The ancient reading*, which became the model for Herodian's *The prosody of the Iliad* subsequently used in the compilatory production of the Homeric scholia).⁵⁸⁴ These works availed themselves of a wealth of literary examples from authors above all of the Classical Age, and also made use of comparison among the dialects employed in the different genres.

Dialectology was a sphere explored by Tryphon in a number of special works, apparently aiming at bringing order into this long-standing but rather multifarious branch of lexicography.⁵⁸⁵ A first group of writings was devoted to spoken dialects, including the general Greek language or *koinē* (*Περὶ τῆς Ἑλλήνων διαλέκτου*, apparently taken as an *Urgriechisch*, from which the other

580 *On breathings* (*Περὶ πνευμάτων*): Valckenaer [1822²] 188–215; *On linguistic changes* (*Περὶ παθῶν τῆς λέξεως*): Schneider [1895]; *On metres* (*Περὶ μέτρων*): see Wendel [1939d] 731; *On the particle "hos"* (*Περὶ τοῦ ὅς*): Hermann [1801] 463–466. On all of these works see Gräfenhan [1852]; Wendel [1939d].

581 P.Lond. 126 (3rd century AD), first edited by Kenyon [1891] 109–116 and then by Wouters [1979] 61–92.

582 Walz [1832–1836] 8.726–760; Spengel [1856] 189–206.

583 After Walz [1832–1836] 8.761–778 and Spengel [1856] 215–226, re-edited by West [1965].

584 Standard edition: von Velsen [1853], to be integrated with Pasquali [1910]. On orthography: Schneider [1999].

585 Apart from authors and titles quoted above, in this context it is worth recalling at least the 2nd century AD fragmentary papyrus roll containing an anonymous lexicon, compiled in the late Hellenistic or early Roman period, of non-Greek ("Persian", "Babylonian", and "Chaldaean") words drawn from a variety of Greek authors, firstly published as P.Oxy. 15.1802+71.4812 and re-edited with commentary by Schironi [2009a].

dialects were believed to be derived),⁵⁸⁶ then the main ethnic dialects (certainly Doric and, possibly, Asian Aeolic), and finally local languages subsumable under the latter (Laconian, Argolic, Himerian, Rheginum, Syracusan, and so forth). A second treatise, or series of treatises collectively recorded under the title *The dialects in Homer, Simonides, Pindar, Alcman and the other lyric poets*, plausibly focused on a blend of local language varieties (this appearing to be the meaning of the plural *dialects*) in works of archaic epic and choral poetry.⁵⁸⁷ In all likelihood these writings also touched on questions of style.

Tryphon devoted other special treatises, later used and frequently cited by the 2nd century AD grammarian Apollonius Dyscolus, to formal description of the individual parts of speech and to a number of relevant flecional aspects: noun, verb, participle (considered as an independent part, intermediate between noun and verb), article (a definition including relative and indefinite pronouns), preposition (in its own right and also as a nominal and verbal preverb), adverb (including some interjections and particles), conjunction. The *Περὶ σχημάτων* explored noun formation and the *Περὶ ὀνομάτων συγκριτικῶν* dealt with comparatives. Tryphon's lexicographic research found expression in a collection of explained names (*Περὶ ὀνομασιῶν*), some fragments of which, referring to musical instruments, are preserved by Athenaeus; other titles of which we have knowledge, (*Names*) of plants (*Φυτικά*) and *On animals* (*Περὶ ζώων*), could refer to different sections of the latter.⁵⁸⁸

What can be reconstructed of Tryphon's doctrine from this great mass of indirect and fragmentary information is that by developing his approach in the framework of a firm belief in analogy, he on the one hand played a role in redefining the overall body of knowledge concerning the fields of prosody and orthography,⁵⁸⁹ while on the other he was the first to conduct an organic and systematic study of dialectology and the parts of speech, thus earning repute among the beginners of ancient normative grammar and making a contribution which would prove to be useful, in the early Imperial Age, for the advance of syntaxis as an autonomous branch.⁵⁹⁰ His influence on these fields

586 Schwyzer-Debrunner [1939–1971] 1.118 n. 1; cf. Cassio [1993b] 86–88.

587 All of these titles are attested to by *Suda* τ 1115, apart from *On the dialect of the Laconians* (*Περὶ τῆς Λακωνῶν διαλέκτου*: P.Oxy. 24.2396, a *sillybos*, i.e. a papyrus title-tag, edited by E. Lobel) and *On the Aeolic dialect* (*Περὶ Αἰολίδος*: fragments edited as P.Bouriant 8, hypothetically attributed to Tryphon by Wouters [1979] 274–297). Cf. Cassio [1993b] 78–79 (Tryphon's dialectology), 77–78 and 79–81 (literary languages taken by ancient grammarians as moulded on local spoken dialects).

588 A new edition of Tryphon's works is being prepared by Stephanos Matthaios.

589 Di Benedetto [1958–1959] 199.

590 Matthaios [2003] and [2004]; Swiggers-Wouters [2003b]; Lambert [2011].

in the subsequent generations is emblematically illustrated by the fact that Apollonius Dyscolus, one of the main Greek grammarians during the Imperial Age and one of our most important sources of Tryphon's work, is said to have been a 'disciple' of the latter—obviously in a figurative sense, given the chronological gap.⁵⁹¹

In short, Aristonicus, Didymus and Theon provided the final achievements which crowned the exegetic strand of Alexandrian scholarship that had been built up and brought to maturity by Aristarchus in an earlier era. Didymus in particular, in addition to his work in the field of textual exegesis (on verse as well as prose writers), never failed to seize every opportunity to familiarize himself with any learned sector defined and explored during three centuries of philology at Alexandria, from lexicography to dialectology, grammar, paroemiography, *Sachphilologie* and antiquarianism. It was by virtue especially of Theon's work that even the Hellenistic poets were also finally granted full and definitive citizenship among the *πραττόμενοι* authors. Furthermore, all of these scholars, including and above all Tryphon, breathed new life and vitality into linguistic and dialectological research, highlighting the systematic dimension of technical grammar. At the watershed represented by the rise of Rome's political domination over Greek culture, these figures of erudites assembled an exceptional recapitulative storehouse of knowledge and placed it at the disposal of rising retrospective intellectual trends such as Classicism and Atticism. Thus, the extreme points of both the last section and the whole of this overview on Hellenistic scholarship ineluctably lead back to the time-honored category embodied by the complementary combination of old and new, or *continuity and change*—so often acting in the historical flow of cultural phenomena, and equally valid at present as the most natural foreword, and an announcement, for the reader of the next chapter of this book.⁵⁹²

I am also grateful to my friends and colleagues in Thessaloniki and Leiden, Despoina Papadopoulou, Anthi Revithiadou and Christoph Pieper, for their corrections.

1 State of Research, Presuppositions and Focal Points of a Historical Survey

When faced with the task of writing the history of Greek philology and grammar¹ in the Imperial era and Late Antiquity, a period stretching over almost six centuries,² a number of difficulties must be addressed even in a summary outline such as this. The greatest problem, which also arises throughout the entire field of ancient philology and grammar, is the preserved source material and the state of its transmission. With very few exceptions, the original writings of the ancient philologists and grammarians have been lost. In their stead, we have to be content with occasional or, in the best cases, a small number of fragments and testimonies from later secondary sources. Therefore, our picture of the contents and developments of ancient scholarship is incomplete and based upon the accidental transmission of evidence. Moreover, many of the philologists and grammarians in this period remain shadowy figures, whose place of activity or the contents and purpose of their writings are largely unknown.

In addition to the insufficient and scant transmission of the source material, the state of current research on the historical and theoretical aspects cannot be described as satisfactory. Study of the philology and grammar of the Imperial era and Late Antiquity has profited relatively little from the expansion and intensity of investigations which, over recent decades, have focused on the Hellenistic—above all the Alexandrian—period, largely motivated by the interest of scholarship in the ‘learned’ character and the philological background of Hellenistic poetry.³ With regard to the Imperial era and Late

1 When here and below I speak of “philology and grammar”, I am in no way referring to two different sciences, but to the two essential areas of one and the same discipline called *γραμματική τέχνη*; on the notion *γραμματική*, see below in § 2.3 and Swiggers-Wouters (section 11.2) in this volume. To avoid misunderstandings and to distinguish the expression from the present-day meaning of the term grammar, the ancient form will be rendered in this article as “philology and grammar”. But occasionally, the equivalent expression ‘grammar’, enclosed in single quotation marks, is also used. The same applies to the representatives of the ancient discipline, the *γραμματικοί*, who are referred to herein mainly as “philologists and grammarians”, but if at times I often speak simply of grammarians, this characterization is to be understood as encompassing both areas, namely philological interpretation and linguistic analysis.

2 The period to which the present paper refers is specified and explained below in § 2.1.

3 On the philological background of Hellenistic poetry, which finds its expression clearly in the double identity of its representatives, the so-called ‘poets and philologists’ (*ποιητῆς ἄμα*

Antiquity, on the other hand, the existing collections of fragments and text editions, insofar as complete works have been transmitted, involve a very limited number of philologists and grammarians from this period, with most of the studies dating back to the 19th and early 20th century. At that time, such works were seen as accompaniments to research that was essentially stimulated by other achievements in the field, especially by the monumental edition *Grammatici Graeci* [1867–1901] and the (first) editions of ancient commentaries and scholia to the classical authors.⁴

Interest in the history of Imperial and Late Antique philology and grammar in its own right began to increase as from the mid 20th century, basically due to the work of H. Erbse on the edition of the *scholia* on the *Iliad* and W. W. Koster's project of a new edition of the Aristophanes *scholia*.⁵ These projects breathed new life into the whole field of ancient scholarship and thrust it into the foreground of vivid and intensive research activity. Yet with the exception of a small number of dissertations and studies on specific Imperial grammarians, mainly inspired by H. Erbse,⁶ the period in question has benefited only sporadically. This outcome can be inferred from the program that formed the basis for the series *Sammlung griechischer und lateinischer Grammatiker* (*SGLG*): founded expressly for the publication of editions of ancient philological and grammatical writings, a large proportion of the editions published in this series so far have consisted of lexicographic works from the Imperial

καὶ κριτικός'), see Matthaios [2008] 549–569 and [2011a] 81–85. On this question, see also the contribution of Montana in this volume, especially §§ 1.1, 2.4.

- 4 On the editions and studies in the field of scholia up to the beginning of the 20th century, see the survey by Gudeman [1921]. The lexicographic works that were published in this period, such as the edition of Suidas' *Lexicon* by Adler [1928–1938] and of Pollux' *Onomasticon* by Bethe [1900–1937], are of central importance. These editions basically resulted from Reitzenstein's investigations into Late Antique lexicography, especially Byzantine *Etymologica* [1897].
- 5 See Erbse [1969–1988] and also his special study on the transmission of the *Iliad* scholia [1960]. In 2007, the final volume published by D. Holwerda completed the project of a new edition of the Aristophanes *scholia* initiated by W. W. Koster in the year 1969.
- 6 I mention here as an example Guhl's collection and commentary on Theon's fragments [1969]—on Theon, see below in § 3.3, and Montana in this volume—, Nickau's studies on the so-called Ammonius lexicon [1960] and the edition of this lexicon that followed [1966]—on this lexicon, see below in § 6.2—as well as the study of Alpers [1964] on Theognostus' orthographical work. Under H. Erbse's supervision, Fischer [1974] edited Phrynichus' *Ecloga* and Neitzel [1977] collected the fragments of Apion's work *Γλῶσσαι Ὀμηρικαί* ("Homeric glosses"). H. Erbse also stimulated Blank's edition [1988] of Lesbos' treatise *Περὶ σχημάτων* ("On figures") and Dyck's edition of the Homeric epimerisms [1983–1995].

period and Late Antiquity,⁷ whereas other philologists and grammarians from the same time span are poorly represented. This is in sharp contrast to the editions and collections of fragments concerning the Alexandrian predecessors.⁸

Unlike the philologists, the language theoreticians—the grammarians in the modern sense—from the Imperial era and Late Antiquity have received intense scholarly scrutiny since the mid 20th century. This phenomenon has mostly been prompted by studies in the area of the philosophy of language and the historiography of modern linguistics. A similar interest, however, can effectively also be seen within classical philology, especially in the context of the very intensive debate that began around the mid 20th century on the authorship and authenticity of the grammatical manual *Τέχνη γραμματική* attributed to Dionysius Thrax.⁹ Discussion of the development of ancient linguistic theory has, as expected, also involved the Imperial and Late Antique periods of ancient grammar, whose main representatives, Apollonius Dyscolus and Herodian, are the two figures that have profited most significantly from this renewed interest. Apollonius Dyscolus has even been honored with new editions and modern commentaries as well as with a number of special investigations into his doctrine.¹⁰ At the same time, our knowledge on the development of ancient linguistic theory has grown considerably, thanks to the evidence from a series of grammatical papyri, dating mostly from the Imperial era and Late Antiquity. Thus one of the achievements of recent research has involved examination of papyrus sources in order to investigate their theoretical relationship with authored works; accordingly, the contents of these grammatical papyri can now be placed in the context of the development of grammatical doctrine.¹¹

7 In general, the field of Atticist lexicography has met with special interest in recent research through the studies on rhetoric during the Imperial era and the Second Sophistic; cf. below in § 6.4.

8 See for instance the edition of pseudo-Herodian's "On figures" by Hajdú [1998]. Apart from this work published in the series *SGLG*, a new edition of the fragments of the grammarian Epaphroditus was published by Braswell-Billerbeck [2008].

9 For an overview of the discussion concerning the authenticity of the *Techne* ascribed to Dionysius Thrax, see Pagani [2011] 30–40 with reference to older bibliography on this subject; cf. also Matthaios [2009a] and Pagani [2010b].

10 Editions, commentaries and translations of Apollonius' works are listed below in § 5 n. 376; cf. also the bibliography in the section on Apollonius Dyscolus (§ 5).

11 Wouters [1979] and [1988] edited and commented a great amount of the grammatical manuals transmitted in papyri.

The field of philology, i.e. the interpretation of literary texts through commentaries and the investigation of their language through lexicographic collections, has likewise profited from the increase in new papyri fragments and the insights to be gained from them.¹² Yet despite these encouraging advances, particularly in a field that is often considered as marginal against the backdrop of ‘mainstream’ classical philology, important aspects of advanced research still await urgent attention. These include background work, in particular the renewal and actualization of the textual basis underlying the production of the Imperial philologists and grammarians. Such advances can only be achieved through new editions and commentaries, capable of closing the many gaps that still exist.

In light of the above, it is evident why general or comprehensive overviews of the history of philology and grammar in the Imperial era and Late Antiquity are still awaited. Compared with the complete documentation and investigation of the Hellenistic epoch of ancient philology, the contrast with the works available for the subsequent periods is sobering. This is mainly due to the regrettable fact that there has been little effort to replicate the scope and quality with which Pfeiffer analyzed the Hellenistic period in his monumental *History of Classical Scholarship* [1968].¹³ Readers interested in Imperial and Late Antique scholarship as well as specialists are generally dependent on portrayals in older reference works, especially in histories of ancient Greek literature. Such overviews are primarily the relevant chapters in Schmid-Stählin’s *Geschichte der griechischen Literatur*.¹⁴ While not intended to be comprehensive, they offer the most informative survey of the developments in the field during the whole period.

It would be remiss in this context to pass over Gräfenhan’s four-volume *Geschichte der klassischen Philologie im Alterthum* [1843–1850] without even a mention, as is unfortunately often the case in recent literature.¹⁵ Gräfenhan,

12 Related to the study of the new papyri material is the project *Commentaria et lexica Graeca in papyris reperta* (CLGP). Special studies on this body of texts, such as that by Trojahn [2002] on the papyri containing commentaries on ancient comedy, are especially welcome.

13 The first volume of the work deals with the 1st century, the period of the so-called ‘Epigoni’ in the history of the Alexandrian philology, whereas the second part [1976] treats the Renaissance and early modern period.

14 For Imperial and Late Antique philology and grammar the following sections are relevant: Schmid—Stählin [1920–1926] I 425–446 (from 146 BC to 100 AD), II 866–896 (100–300 AD) and II 1075–1094 (300–530 AD).

15 Philology and grammar during the Roman Empire are treated in the third volume of Gräfenhan’s *Geschichte*.

and later Sandys, are so far the only scholars to have provided a systematic analysis of the field. However, Gräfenhan's portrayal only extends to the 4th century. Furthermore, although it represents an admirable achievement for his time, it must also be admitted that he presents the rich material in a confusing manner, often providing a tangled web of details, so that the systematic aspect suffers, and at the same time the explanation of the historical and cultural context is neglected or poorly clarified. Sandys, on the other hand, treated the entire period in question in the first volume of his work *A History of Classical Scholarship* [1921³]. His presentation, however, is no "real history of scholarship itself", as Pfeiffer conceded,¹⁶ but rather an incomplete catalogue of figures, whose philological and grammatical achievements are vaguely assessed.¹⁷

Beyond these comprehensive overviews, we are by and large dependent upon shorter surveys either in specialized works, such as Gudeman's *Grundriss der Geschichte der Klassischen Philologie* [1909], or in recently published histories of literature¹⁸ and introductory works on the study of classical philology.¹⁹ N. G. Wilson's *Scholars of Byzantium* [1996] and the second volume of H. Hunger's history of Byzantine literature [1978], which addresses the philological and grammatical activities of the Byzantines in a separate chapter, are also relevant in this context. The interested reader can draw cursory information from these works concerning the 5th and 6th centuries of ancient scholarship. On the ancient education system and the role it assigned to philology and grammar, the studies of R. Cribiore [1996] and [2001] as well as T. Morgan [1998] are particularly important,²⁰ even if they cover only parts of the period in question here. In his *Guardians of Language. The Grammarian and Society in Late Antiquity* [1988], R. A. Kaster analyzes the profile of the grammarian from a socio-cultural perspective, while at the same time providing a brilliant contribution to the prosopographic analysis of the philological and grammatical field. His presentation, however, goes no further than the 4th and 5th centuries of philological-grammatical activity. For the reconstruction and analysis of the writings and the scholarly profile of the philologists

16 See Pfeiffer [1968] viii.

17 In contrast to Gräfenhan's presentation, which documents even the smallest detail, Sandys's presentation omits not only biographical information, but also exact references to the specific work of each philologist and grammarian he treats.

18 See Dihle [1989] 261–266, 438–441 and 446–456.

19 See for example N. Wilson in Nesselrath [1997] 97–103 and M. Weißenberger in Riemer-Weißenberger-Zimmermann [2000] 20–23. A brief sketch of the history of philology and grammar is also provided by Dickey [2007] 3–17.

20 This aspect will be discussed below in § 2.4.

and grammarians active throughout the entire period under consideration, the relevant articles in *Pauly's Realencyclopädie* are still indispensable.²¹

While the above discussion presents the current situation of research in detail and highlights the lack of editions and commentaries, especially the lack of a comprehensive survey of the philological and grammatical studies during the Imperial period and Late Antiquity, the emphasis on its failings is not intended to act as the defining characteristic of the task involved in this contribution. Rather, its aim is to underline the challenging limits of this undertaking and to demarcate the boundaries of the present attempt. Thus the paper does not intend to provide an overview encompassing all aspects of a temporally protracted, and geographically, culturally and politically varied period in the history of ancient philology and grammar. Instead, in line with its nature as a presentation designed for a *Companion*, it is historically oriented and built around the main points of the ancient *γραμματική*, aiming above all at providing basic knowledge concerning the development of the discipline in the Imperial era and Late Antiquity by focusing on its contents and contexts.

In order to clarify the demarcation boundaries of this undertaking, I will begin by mentioning the main concessions and compromises made for the treatment of the subject, with regard to which I count on the reader's forbearance. The most important of these restrictions concerns the scope and perspective of the intended presentation. In a study that makes "ancient philology and grammar" its subject, the attribute "ancient" indicates the character of the analysis and constitutes its methodological starting position. If a scholar takes to heart Pfeiffer's definition of philology as "the art of understanding, explaining and restoring the literary tradition" ([1968] 3), and also embraces the ancient philologists' and grammarians' understanding of their area of responsibility,²² then the contents of the present study can be expressed more precisely: the focus falls on the interpretation of *ancient* literature and refers to those persons who have accomplished this specific task. This results in the total exclusion of Christian literature, which arose during Late Antiquity, but also of its exegesis, which, according to the modern understanding, is considered to belong to philology. However, given the nature and objectives of ancient scholarship, the exclusion of interpretive activity on Christian authors

21 Actualized bibliographical references for each philologist and grammarian are supplied in the relevant entries in *Der Neue Pauly* and *Brill's New Pauly*. An essential contribution to prosopographical investigation of ancient philologists and grammarians is provided by the online databank *Lessico dei Grammatici Greci Antichi (LGGA)*, established and directed by F. Montanari (University of Genoa).

22 The contents of the ancient *γραμματική* and the tasks of philologists and grammarians during the Roman Empire and Late Antiquity are discussed below in § 2.3.

and texts—effectively a subject of a separate study—is reasonable. For no one who was characterized as γραμματικός in Antiquity felt himself responsible for the study of Christian literature, and no one who was educated in ‘grammatical’—in the ancient sense of the term—matters was instructed in this period on the basis of Christian and theological texts.²³

But distinctions and limitations should be made also within the term “ancient literature”, which serves as a designation of the subject matter of philology and grammar. These limitations are primarily due to the establishment of certain scientific areas as separate and clearly defined disciplines since as early as the Hellenistic period. Like any other field of science, the ancient γραμματική participated in this process and strove to define and demarcate their own areas of specialization in opposition to other competing disciplines. It is significant that Chairis, a grammarian from the school of Aristarchus, drew up his own definition of ‘grammar’ which excluded from the subject of the γραμματική those contents and their specific language form for which other disciplines were responsible.²⁴ The consequence of this view, however, is that the entire range of technical literature and scientific writings did not belong to the realm of philological-grammatical activity. This involved in particular medical, astronomical, mathematical, geometrical and geographic studies, which were read and commented on quite intensively in the Imperial era and during Late Antiquity. As is to be expected, the interpretation of scientific literature was carried out by the representatives of each specific discipline.²⁵ In this sense, even the rich commenting activity on ancient philosophical texts, especially of the Aristotelian works undertaken by the Middle- and Neoplatonic school, features many aspects that are of major interest from the point of view of language, but it would be beyond the scope of this paper to go into this aspect

23 This subject area is described by N. Wilson in Nesselrath [1997] 99–101. Wilson, however, did not take it into account in his study of Byzantine philology [1996]; see Wilson [1996] in his “Note to the revised edition, 1996”: “The coverage is admittedly not complete, and possibly “Classical Philology in Byzantium” would have been a more precise title; I recognise the possibility that someone may show that the Byzantines reached a high level in theological scholarship”. On this point, see the criticism put forward by Alpers [1988] in his review of Wilson’s study. Hunger [1978] likewise restricts his presentation of Byzantine philology to the interpretation of ancient literature.

24 See Sext. Emp. *Math.* 1.76; on the wording of Chairis’ definition, cf. *Sch. Dion. T.* 118.10–12. Sextus cites this definition mistakenly under the name of the grammarian Chares; see Blank [1998] 137 with n. 105. For an interpretation of Chairis’ definition, see Blank [1998] 137–140 and Matthaios [2011a] 72–73; cf. also the contribution of Swiggers-Wouters (section 11.2) in this volume.

25 For an overview of the technical and scientific literature in the Roman Empire and Late Antiquity, see Schmid-Stählin [1920–1926] II 446–455, II 896–925 and 1094–1100.

here, and it cannot be taken into account in this presentation.²⁶ In effect, these texts were rarely studied by grammarians; moreover, they were not perceived by the latter as forming part of the *literary* tradition.

The Imperial era and Late Antiquity also saw the growth of strong contacts between philology and rhetoric. But the difference lies primarily in the research perspective and objectives of each discipline. Rhetoric defined the program for contemporary literary production and was interested in ancient prose texts and oratory, insofar as they served the purpose of educating the speaker and provided the benchmark for assessing the new texts being composed. This explains the rhetorician's engagement with ancient prose authors, especially with the Attic orators, whose activity was becoming strongly linked with the domain of rhetoric at that time. Literary criticism—a subject which by definition belonged to the tasks of ancient philology²⁷—was almost exclusively cultivated by rhetoricians during this period. Consequently, poetry was regarded as the sole area of philological-grammatical activity.²⁸ With the exception of the Sophists and rhetoricians who were active in a traditionally philological area, that of lexicography, Imperial rhetoric and literary criticism will only be considered here to a limited extent.²⁹

Finally, a history of philology and grammar in the Imperial era and during Late Antiquity should also take into account the relationship between Greek and Latin speakers in the Roman Empire. In the overall context under consideration here, the teaching of Latin and the Latin grammarians active in the eastern provinces would comprise special aspects of such an analysis. Such a study, however, is beyond the scope of this survey.³⁰

The present contribution is divided into two main sections, an introduction and a prosopographical section. The introductory part discusses the character and contents of Imperial and Late antique philology and grammar by placing them within their historical, cultural and scientific background as well as in the context of the ancient educational system. The prosopographical section takes into account both historical and systematic aspects. The grammarians of each period are classified according to the major focal points of their

26 On the interpretation of philosophical texts during this period, see N. Wilson in Nesselrath [1997] 101–102; on the commentating tradition of the Platonic and Aristotelian philosophy, see Dickey [2007] 46–51; cf. also the contribution of Lapini in this volume.

27 See below in § 2.3.

28 Concerning the points of contact between rhetoric and philology and the ancient view on them, see Wolf [1952] 36–39.

29 This area is presented in the contribution by de Jonge in this volume.

30 This and other aspects are dealt with in the study by Rochette [1997]. On bilingual language instruction, the introductory remarks in Dickey's edition [2012] of Ps.-Dositheus' *Colloquia* are significant.

philological and grammatical activity, though they are presented in such a manner that chronological connections are not ignored and continuities or discontinuities are awarded due consideration. The article deals primarily with figures that are known through their specific writings.³¹ Biographical data are given in some detail, and this serves the purpose of determining more precisely not only the activity of the philologists and grammarians involved, but also their social and scholarly profile.³²

2 Philology and Grammar in the Imperial Era and Late Antiquity in Context

2.1 *Criteria for the Periodization of the History of Philology and Grammar*

The historical setting of this contribution covers a very broad period, which begins at the end of the 1st century BC and extends up to the beginning of the 6th century AD. From a historical point of view and also in terms of literary history, this period includes two great epochs commonly characterized by the designations “Imperial era” and “Late Antiquity”.³³ The history of philology and grammar during this period conventionally takes its starting point in 31 BC, when Octavian defeated Antony in Actium, thus eliminating Egypt, the last kingdom of the former Alexandrian empire, and leading to Octavian’s exclusive rule over the *Imperium Romanum*. Therefore, the Greek cultural scene in its Hellenistic extension came under the hegemonic control of Rome. The final point is marked by Justinian’s entry into the empire in 527, and above all by the closing of Plato’s Academy in Athens in 529, which followed Justinian’s decree. For Greek philology and the history of Greek culture, this event marked a general break with antiquity, which—although not final—assumed great

31 Several grammarians from the 4th and 5th century AD who were mainly active as teachers of grammar, but left no writings are discussed by Kaster [1988]. On the other hand, grammatical manuals and other material on papyri have been transmitted anonymously. The grammatical treatises are edited by Wouters [1979]; several ‘school exercises’ deriving from the school and education activity in Greco-Roman Egypt are listed by Criboire [1996] 173–284.

32 Immediately following the initial mentioning of the person to be treated, reference bibliography, but also editions and collections of fragments of their works are cited in a footnote.

33 For a definition and specification of the term “Late Antiquity”, see Inglebert [2012]; cf. E. Pack in Nesselrath [1997] 435–436 as well as R. Klein in Christes-Klein-Lüth [2006] 23–27.

symbolic significance, in the sense that the prolonged struggle between pagan and Christian culture was decided to the advantage of the latter.

Approximately half way through the period lying between these two milestones, a second event took place, which had a lasting effect on the course of the Greek cultural history. This was the overthrow of Rome, which was ousted from its position as the imperial capital, a process that had begun with Diocletian and was sealed by Constantine in 330 AD with the establishment of Constantinople as the new capital of the Roman Empire. Overall, the reigns of Diocletian (284–305) and Constantine (306–337) shaped an important historical turning point, which became evident above all in the history of literature with the advent and constant growth of Christian literature. In response to the crisis-ridden experiences of the 3rd century, which were due partly to the barbarian invasions and partly also to the continuing riots and unrest within the empire, Diocletian drew up an extensive plan to reform both state and society in order to strengthen the internal and external unity of the empire. Diocletian's project was then further developed and ultimately brought to completion by Constantine. Under the reign of Constantine the transition from Principate to Dominate was brought about, eventually resulting in the transformation of the Roman Empire into an absolute monarchy. Constantine began with a policy of tolerance toward Christians, with a number of moves that led to a decisive favoring of Christianity: in so doing, he prepared the conditions that gave rise to Justinian's Caesaropapism. In effect, the historical break between the two periods dealt with here, and thus the beginning of so-called Late Antiquity, can essentially be dated to the reigns of Diocletian and Constantine. The first centuries of Late Antiquity, however, are claimed by both Classicists and Byzantinists as their own domain. Depending on the respective perspective from which these early centuries are viewed, they are regarded by Classicists as the end of the ancient world or, by Byzantine scholars, as the beginning of the Byzantine era and consequently as belonging to the 'early Byzantine' period as far as its (literary) history is concerned.³⁴

Turning now more specifically to the history of literature,³⁵ classicism and, in a strengthened and clearer form, the atticistic movement, were predominant in the first sub-period, *i.e.* during the Imperial era. Classicism in its role as a

34 On the question of the beginning of Byzantine literature, see Shepard [2008] 21–26; cf. Haldon [2000] 15–32, who regards the 4th and 5th centuries as the period of transformation of the Roman world and assigns it to the Byzantine millennium. See also James [2010] 1–8.

35 The main characteristics of the Roman Empire and Late Antiquity from a literary and historical perspective are sketched by Schmid-Stählin [1920–1926] II 663–671 and 943–956; see also the introductory chapter of Dihle [1989] 13–74. The Imperial era and Late Antiquity are systematically presented by Cambiano-Canfora-Lanza [1994].

term defining an epoch, represented at the beginning of this period by Caecilius of Cale Acte³⁶ and Dionysius of Halicarnassus, propagated conscious literary dependency on a defining canon of classical and above all Attic authors, who were now considered as exemplary models to be imitated.³⁷ Supporters of this movement were the rhetoricians who implemented the classicistic ideals of language and literary form both in theory and rhetorical practice. From the late 1st century, Greek cultural life was characterized by the flourishing of a movement Philostratus (*Vit. Soph.* 1.2.26–27) called “Second Sophistic”.³⁸ This movement spread from Asia Minor and became extended almost throughout the entire empire. Its main representatives, the Sophists, were in actual fact rhetoricians who gave private lessons and were also appointed to state teaching positions in Rome and Athens. As public speakers, the Sophists made scholastic rhetoric into a medium of entertainment for the educated ruling class. Their writing activity took its cue from the language of the classical Attic models, also imitating the old literary forms and subjects. The philologists and grammarians from this period were at the service of the rhetoricians. Before taking up the study of rhetoric, a rhetorician was required to have already completed his general education with a grammarian, who would provide him with the traditional subjects and would ensure proper acquisition of the literary models.

In the second sub-period, however, a distinct separation between pagan and Christian literature began to emerge. Overall, it can be said that the pagan literature of the first centuries of Late Antiquity clear signs of a transformation of traditional literary genres and materials, while also strengthening historicist tendencies that forge a link with classicism and result from it. In addition prose became the dominant mode of literary production at this time, though traits of renewal can also be perceived in poetry, in terms both of form and content. The revitalization of poetry may well have been due to the need for self-determination and re-definition felt by 4th and 5th century philologists and grammarians, who saw themselves as curators and mediators of the old literary tradition and thus were active also as poets.³⁹ In this process, they associated themselves, consciously or unconsciously, with the Hellenistic

36 On Caecilius' Atticistic studies, see below in § 6.1.

37 The term ‘classicism’ is aptly described by Gelzer [1979]. This period is treated in the collected volume edited by Flashar [1979]; see also Schmitz-Wiater [2011]. The classicist program of Dionysius of Halicarnassus is treated by Hidber [1996] and Wiater [2011].

38 For a presentation of the Second Sophistic, see Bowersock [1969], Anderson [1993] and Whitmarsh [2005].

39 On the model of ‘poet and scholar’ during Late Antiquity and the early Byzantine period, see below in § 3.3.

‘poets and scholars’, without significantly sharing the contribution of the latter in injecting fresh energy into contemporary poetry.

Now, if one inquires into the position of philology and grammar in the historical and literary context that has been briefly sketched here, searching at the same time for criteria that could lead to the periodization of scholarship during the Imperial era and Late Antiquity, it becomes clear that philology and grammar were strikingly coherent in their disciplinary character throughout the entire period. That is to say, one cannot speak of a specific self-awareness of an epoch, on the basis of which Imperial and Late Antique philology and grammar could, from a theoretical point of view, be separated from the preceding and following periods. On the contrary, philology and grammar during this period display a marked continuity that links the field seamlessly with the earlier Hellenistic period and leads it just as seamlessly to the Byzantine epoch. Change affected only the external conditions, resulting in an expansion and reorganization of philology and grammar in the new centers of scholarship and culture, simultaneously also strengthening the position of the discipline in educational and intellectual life. The main criterion that forged strong bonds in the philological and grammatical discipline throughout the extended period of the Roman Empire and Late Antiquity and determined their history was exclusively their institutional status and integration into the ancient educational system, which also guaranteed the position of the field within political and socio-cultural life.

Accordingly, study of the history of philology and grammar in the Imperial era and Late Antiquity must take as its basis the terms “school” and “institution” which refer to this discipline. Any differentiations and specifications within the history of the subject during this extensive period arise only from the criterion “institution” and are due to the development of the philological and grammatical subjects. This aspect will be considered in further detail below.

2.2 *The Institutional Character of Philology and Grammar*

The institutional character of philology and grammar in the Roman Empire and during Late Antiquity can be analyzed from a twofold perspective. On the one hand, it can be considered in terms of the subject itself and its contents, and this constitutes the internal aspect involving the scientific character of the field, and on the other, in terms of its position in educational and social life and its effect on the cultural environment, with focus on the external criteria.

2.3 *The Ancient γραμματική: Disciplinary Contents*

Philology and grammar were already established as an independent discipline in the 3rd century BC in Alexandria and were developed and investigated

systematically during the last three centuries BC, especially in the scholarly center of the above city.⁴⁰ The final period of the history of Hellenistic philology and grammar is marked by the accomplishments of two figures: Didymus and Tryphon. Both scholars were active at about the same time in Alexandria and by virtue of their extensive works they are justifiably associated with the perfection of the field. Didymus' significance lies primarily in his wide range of philological studies. Tryphon, on the other hand, is important for his extensive studies in the area of grammar in the strict sense, *i.e.* the study of language, its structure and the conditions of its correct application.⁴¹ But what is of particular interest here is to inquire into the origin of this division of areas of work within ancient philological and grammatical doctrine, and its significance for the further development of the discipline during the Imperial era and Late Antiquity.

Philology and grammar in Antiquity did not constitute two different academic fields, but two areas of responsibility in one and the same discipline, which claimed for itself the designation *γραμματικὴ τέχνη* ('grammar'). However, whereas grammar in the narrow sense, *i.e.* linguistic theory, initially stood at the service of philology, textual criticism and the interpretation of literature, it later gained its autonomy, insofar as language began to be studied and systematically described independently of the interpretation of the literary text at hand. Given this shift in focus, a distinction is usually drawn between two periods in the history of Hellenistic, especially Alexandrian philology. The first period refers to philologists such as Zenodotus, Aristophanes of Byzantium and Aristarchus, while the second includes language theoreticians such as Tyrannion and Tryphon in the 1st century BC and, in the AD era, figures such as Apollonius Dyscolus and Herodian from the 2nd century. The temporal boundary between these two main periods of ancient scholarship and grammar is approximately the turn of the 2nd to the 1st century BC. This is mainly due to the situation mentioned above: whereas grammar during the first period supplied the instrument for philological activity and was tied to the explanation of literary texts, in the second stage a demand for theoretical

40 The history of Hellenistic philology and grammar, especially that of Alexandria and Pergamum, are treated in the monumental work of Pfeiffer [1968] 87–279. The same period is discussed in the contribution of Montana in this volume; see also Matthaios [2008].

41 On Didymus' accomplishments, see Pfeiffer [1968] 274–279. Both scholars—Didymus and Trypho—are presented by Montana in this volume.

elaboration and systematization of the linguistic theory was felt, and this soon found expression in special monographs and textbooks.⁴²

The contents and tasks of the ancient γραμματική began to be systematized very early.⁴³ The available evidence suggests that the systematization process was initiated by Dionysius Thrax, whose ‘grammatical’ manual entitled Παραγγέλματα (“Instructions”),⁴⁴ defined the γραμματική and determined its μέρη (“parts”).⁴⁵ According to his definition, ‘grammatical’ science aimed to analyze “what has been said by poets and prose writers”, *i.e.* to explore the literary contents and the manner of their expression.⁴⁶ As emerges from the list of specific tasks, the philological interpretation includes some categories aiming at a linguistic approach, such as finding etymologies (ἐτυμολογίας εὔρεσις), and calculating analogies for the purpose of assigning the words to their correct inflectional paradigm (ἀναλογίας ἐκλογισμός). The linguistic approach—grammar in the modern sense—was intended to be merely an instrument aiding philological comprehension and the interpretation of literary contents.

The language description fulfils this same function in Asclepiades of Myrlea, a contemporary of Dionysius, and later in Tyrannion, even when these two scholars tried to present the parts of philology and grammar in a rather more systematic form than that of Dionysius. According to the testimony of Sextus Empiricus (*Math.* 1.91–96; cf. *Math.* 1.252), Asclepiades divided philology into three parts (μέρη); a) a “technical part” (μέρος τεχνικόν)—the systematic description of language—, b) a “peculiar part” (μέρος ιδιαίτερον)—philological and textual criticism—and finally c) a “historical part” (μέρος ιστορικόν)—the

42 For this model of periodization of the ancient philological-grammatical discipline, basically related to the position of language description within philology, see Matthaios [2012] and [2013b].

43 On the ancient term ‘grammar’, see Glück [1967] 17–23, Ax [2000] 96–98 and 128–129, Lallot [1998²] 27–30 and Matthaios [2013b]. On the systematization of the contents and areas of responsibility of the philological discipline according to the testimony of the transmitted definition of ‘grammar’, see Blank [2000]; cf. the contribution of Swiggers-Wouters (section 11.2) in this volume.

44 On the contents of ‘grammatical’ manual of Dionysius Thrax, see Pagani [2010b] with further references to this subject.

45 See Dion. T. § 1, *GG* I/1, 5.2–6.3; cf. Sext. Emp. *Math.* 1.57 and 1.250; on Dionysius’ ‘grammar’ definition, see Lallot [1998²] 69–82.

46 The much-debated issue of whether ‘grammar’ is an empirical science or a system based upon rules and has a ‘technical’ character is a problem that emerges from the comparison of Dionysius’ definition with that of Asclepiades of Myrlea. This question was vehemently debated in antiquity, but is irrelevant for our context. On the details and the significance of this controversy, see Matthaios [2011a] 76–77 and [2012] 257–261—with references to further literature on this topic—and Swiggers-Wouters (section 11.2) in this volume.

interpretation of realia.⁴⁷ In the so-called Tyrannion system, ‘grammar’ consists of four specific parts (μέρη)—textual criticism (διορθωτικόν), reading (ἀναγνωστικόν), interpretation (ἐξηγητικόν) and the aesthetic evaluation of literature (κριτικόν)—, which are in turn supported by four auxiliary instruments (ὄργανα), namely the explanation of glosses and of poetic vocabulary (γλωσσηματικόν), the study of realia (ἱστορικόν), metrics (μετρικόν) and grammar (τεχνικόν).⁴⁸ Nevertheless, it is important to mention that in Asclepiades’ and Tyrannion’s system the description of language also serves philological purposes, even though this part now deals with a well-defined subject. Grammar in the modern sense, the μέρος or the ὄργανον τεχνικόν, has two main fields of study: (a) the presentation of the constituent structure of language from the sounds up to the sentence, with an emphasis on the theory of the parts of speech (μέρη τοῦ λόγου) and (b) the theory of the correct use of the Greek language (ἐλληνισμός), which aims to investigate the proper usage of individual words and sentences.⁴⁹

The unity of philology and grammar in the system of the Hellenistic γραμματικὴ τέχνη did not remain unchallenged nor was it long-lived. According to the testimony of Sextus Empiricus, Demetrius Chlorus, a grammarian who probably lived during the 1st century BC,⁵⁰ defined ‘grammar’ as follows (*Math.* 1.84): γραμματικὴ ἐστὶ τέχνη τῶν παρὰ ποιηταῖς τε (καὶ συγγραφεύσι λεγομένω post τε add. Di Benedetto) καὶ τῶν κατὰ τὴν κοινὴν συνήθειαν λέξεων εἰδησις (“Philology is the study of that which is said by the poets, but also the knowledge of language according to common usage”).⁵¹ Thus for the first time in the history of ancient scholarship a significant development can be identified, whereby the subject area of the philological and grammatical discipline came to be positioned, as it were, in a diptychon structure. The responsibility of γραμματικὴ was no longer merely the interpretation of literary texts, as had been the case for Dionysius Thrax and Asclepiades of Myrlea, but it now also

47 On Asclepiades’ classification of ‘grammar’, see Glück [1967] 17–23, Blank [1998] 146–149 and [2000] 407–413.

48 This so-called four-part system is mentioned in the *Sch. Dion. T.*, *GG* 1/3, 10.8–10, 123.13–15, 164.9–11 and 170.18–20; the four “parts” are all listed in *Sch. Dion. T.*, *GG* 1/3, 12.3–8 and 115.8–9; see Blank [2000] 408. The fact that the four “parts” (*lectio, enarratio, emendatio, iudicium*) were known to Varro speaks for the age of this system; see Var. fr. 236 Funaioli and Glück [1967] 19 and 21 with n. 3. On the position of this system within grammatical education, see below in § 2.4.

49 The concrete contents of the grammatical theory are listed by Sext. Emp. *Math.* 1. 92; on Sextus’ testimony, see Ax [2000] 97–98 and 128–129. See also the contributions of Swiggers-Wouters (section 11.2) and Pagani in this volume.

50 On Demetrius’ identity and lifetime, see Blank [1998] 144 with n. 112.

51 For a discussion of Demetrius’ definition, see Blank [1998] 144–146.

included knowledge of language in its everyday form, *i.e.* in its usage outside of the literary contexts.

This new approach was considered to be of no lesser value than the original task: indeed, it fairly rapidly became the mainstream perspective, and Demetrius' view was soon shared by other philologists, as Sextus attests (*Math.* 1.84: Δημήτριος δὲ ὁ ἐπικαλούμενος Χλωρός καὶ ἄλλοι τινές). However, modern scholarship has awarded little attention to the fact that Quintilian did not define the *grammatica* in his *Institutio oratoria* in a substantially different manner than Demetrius (*Inst.* 1.4.2): *haec igitur professio, cum brevissime in duas partes divitatur, recte loquendi scientiam et poetarum enarrationem, plus habet in recessu quam fronte promittit.*⁵² Even Quintilian postulated the twofold subject matter of 'grammar', which encompassed the doctrine of the proper use of language and the interpretation of poetry. Quintilian's view is presumably of Greek origin. In *Inst.* 1.9.1 he designates the two parts of 'grammar'—here they are called *ratio loquendi* and *enarratio auctorum*—by using the Greek terms *methodice* and *historice*. As is to be expected from a rhetorician, Quintilian still viewed literature as the means to an end, in the sense that literary language was the model and benchmark by which language use in general was to be judged.

Nonetheless, the twofold structure of *grammatica*, especially the equal status of the grammatical doctrine and the interpretation of literature, became the essential characteristic of the philological discipline in the 1st century AD. But the history of γραμματική then passed through a further stage, which led to a clear narrowing of the scope of the term. In the transition from Antiquity to the Middle Ages, the term 'grammar', initially designating the philological discipline, became restricted to grammar in the modern sense. This can be seen in the example of Isidor of Seville's definition of *grammatica*, when he defines the field as follows (*Orig.* 1.2.1): *grammatica est loquendi peritia* and (*Orig.* 1.5.1): *grammatica est scientia recte loquendi.*⁵³

The above observations prompt the question of whether the development of the term and scope of γραμματική that emerged in the period from Quintilian to the beginning of the Latin Middle Ages also led to a change of perspective among philologists and grammarians from the Greek Imperial era and Late Antiquity. According to our sources, philologists and grammarians active during that period worked intensively on defining and describing their scientific

52 On Quintilian's definition of 'grammar', see Ax [2011] 95–96 and 405 with further references on this subject; cf. Glück [1967] 21–22, who traces this development back to Quintilian's grammar teacher Remmius Palaemon.

53 See Glück [1967] 22–23 and Ax [2011] 96.

subject. Such assertions are corroborated by a number of treatises “On grammar” composed during the entire period in question here. These works belong to the type of monographs known as τέχνη γραμματική/*ars grammatica*, which, in addition to the part devoted to the description of the constituent structure of language, included the definition of ‘grammar’ and the responsibilities of the discipline.⁵⁴

Some fragmentary papyrus treatises of this type of monograph, dating from the period under investigation, have come down to us. Most such treatises were used in the classroom and served the purpose of general instruction on grammatical theory.⁵⁵ These papyri specimens of τέχνη γραμματική have mostly come down to us anonymously, but during the Imperial era and Late Antiquity several grammatical manuals are attested with the name of their authors. In the 1st century treatises of this kind are attested for Apollonius Anteros, Pamphilus, Lucillus of Tarrha and Astyages, in the 2nd century for Telephus of Pergamum, in the 3rd for Lupercus of Berytus, in the 4th for Eudaemon of Pelusium and finally in the 5th century for Hyperechius.⁵⁶ Almost all of these works are now known only by their titles, but there is some evidence that their authors engaged in theoretical discussion on definitions of the philological and grammatical discipline. Telephus, for instance, was the author of a manual addressing the hotly debated question of the responsibilities of a γραμματικός.⁵⁷

However, the development that genuinely led to the gradual narrowing of the term γραμματική and limited the tasks of this discipline to grammatical doctrine is indirectly recognizable in the changing priorities that philologists and grammarians of the Imperial era and Late Antiquity began to establish in their writing activity. As can be observed from the extant works, philologists of the 1st and 2nd centuries AD were active both in philology and grammar, often perhaps with a preference for philological studies. In the following centuries, however, philological interests gave way decisively to works focusing on grammar. This development had already begun to come to the fore in the 2nd century through Apollonius Dyscolus and Herodian whose writings comprised exclusively linguistic matters. It was also the main characteristic for the grammatical activity of scholars during Late Antiquity, *i.e.* from the 4th

54 On this type of monograph, see the contribution of Valente (section II.4) in this volume.

55 The preserved papyrus-τέχνη are edited by Wouters [1979] 33–210.

56 On the individual figures and their works, see the relevant section in the prosopographical part of this article, §§ 3.3, 3.4.

57 See below in § 3.3. A further theoretical statement found in the context of grammatical treatises of the period in question is that of Lucillus of Tarrha, who deals with the question of the status of the γραμματική within the ancient system of sciences; see below in § 4.2.

century onward.⁵⁸ It was a process that culminated in a terminological innovation: the designation *γραμματικός* was now accompanied by the special characterization *τεχνικός*, which had its origin in the *μέρος* or *ὄργανον τεχνικόν* of the philological and grammatical discipline. This descriptive term specifically identified experts in questions of linguistic theory⁵⁹ and was used to characterize Apollonius Dyscolus, Herodian, Dionysius Thrax—as the author to whom the *Τέχνη γραμματική* was attributed—and several Byzantine grammarians such as Choeroboscus.⁶⁰ The fact that it partially replaced or at least endowed the common professional designation of *γραμματικός* with a more specific meaning suggests that it expressed an essential distinctive feature for the profile of grammarians during the Imperial era and Late Antiquity.

The survey presented here on the development of the term *γραμματική* and the contents of the specific discipline in the Imperial era and Late Antiquity helps to pinpoint a key criterion for periodization of the philological-grammatical discipline during this period. Thus in the Imperial period, the diptychon structure of the ancient *γραμματική* can be followed in relation to its subject area: philological *and* grammatical studies were either represented in the work of one and the same person or were distributed in equal proportion throughout the entire period. In contrast, from the end of the 2nd century, but increasingly from the 3rd and 4th centuries, the two areas became independent. The philological emphasis steadily receded, giving way to a wide-ranging linguistic theory that increasingly came to the forefront of writing activity.

2.4 *The Position of γραμματική in Imperial and Late Antique Education*

When Sextus Empiricus initiated his attack against the ‘grammarians’ in the treatise *Πρὸς γραμματικούς* with the statement that “we are handed over to ‘grammar’ almost as children and scarcely out of our diapers” (*Math.* 1.41: ἀπὸ νηπιότητος σχεδὸν καὶ ἐκ πρώτων σπαργάνων γραμματικὴ παραδιδόμεθα), he was—in spite of his irony and exaggeration—effectively expressing the ubiquity of ‘grammar’ within ancient education. Sextus is also one of our best witnesses in matters of terminology and the structure of ‘grammar’ as a specific educational subject and scientific field.

58 The different emphases can be clearly seen in the prosopographical section of the article; see also the introductory remarks (§ 1).

59 Interestingly, the expression *Τεχνικά* appears as the title of the grammatical treatise of Lucillus of Tarrha; see below in § 4.2. On the work ascribed to Draco with the title *Τεχνικά* see below in § 4.1.

60 For a discussion of the terms *γραμματικός* and *τεχνικός* see Lallot [1997] I 14–18. On the meaning of the term *γραμματικός* during Late Antiquity, see Wolf [1952] 31–41.

In a subsequent section of the same treatise, in which the notion ‘grammar’ and the scope of the discipline are clarified, Sextus speaks (*Math.* 1.44–48) of the twofold use of the term *γραμματική*,⁶¹ explaining that it can be used in a common manner (*κοινῶς*) as well as with a special meaning (*ιδίως*). The *κοινῶς* usage is normally designated as *γραμματιστική*; in this case, the term means the knowledge of *γράμματα* in the sense of “letters”. On the other hand, the term *γραμματική* in the second—and more proper—use (*ιδιαιτερον*) indicates the “perfect grammar” (*ἡ ἐντελής γραμματική*). This particular use of the term *γραμματική* invokes the concept of the philological-grammatical discipline, whose foundation, according to Sextus, is to be credited to Aristarchus and Crates. The term *γραμματική* in the meaning of “philology” is also based on the expression *γράμματα*. In this usage, however, the expression to be understood in the sense of “*συγγράμματα*”, which covers texts, especially literary products, in both poetry and prose.

Sextus’ dichotomy of ‘grammar’, confirmed also through other testimonies,⁶² points, as far the first part of the division is concerned, to the primary stage of the ancient educational system, *i.e.* elementary school, in which children are taught reading and writing under the supervision of a *γραμματιστής*. As regards the second part, Sextus refers to the position of ‘grammar’ as a specific discipline both within the common, *i.e.* universal education (*ἐγκύκλιος παιδεία*), and higher education. At both levels, the mission of the *γραμματικός* was to acquaint students with ancient literature and its language; his lessons also included a general study of language, which comprised theories on the constituent structure of language as well as on *hellenismos*, the correct use of Greek.

Particularly at the higher education level, ‘grammar’ developed into an autonomous, institutionalized scientific area as early as the Hellenistic era and was studied systematically in an exemplary manner both in the Alexandrian and Pergamenian philological school. That both institutions were not only

61 On the history and development of the terms *γραμματική* and *γραμματικός* in the meaning ‘philology’ and ‘philologist’, see H. Usener in Susemihl [1891–1892] II 663–665, Pfeiffer [1968] 157–158, Blank [1998] 110–111 and 113–115 as well as Matthaios [2008] 560–562; cf. also Matthaios [2011a] 66 with n. 43, where references to further literature on this subject are cited, and Montana in this volume.

62 A differentiation of ‘grammar’ into a “perfect” (*τέλειος*, *τελειότερα* or *ἐντελής*) and a “inferior” (*ἀτελεστέρα*) is attested, apart from Sextus, also in Phil. *De congr. quaer. erudit. gr.* § 148, III 103.24–103.3 and *De somn.* 1.205, III 249.14–16. According to the *Sch.* Dion. T., GG I/3, 114.23–34 and 164.23–29, ‘grammar’ is divided into a *μεγάλη* (“great”) or *νεωτέρα* (“younger”) and a *μικρά* (“small”) or *παλαιά* (“old”); on this differentiation, see Matthaios [2011a] 60–67 with further bibliography on this topic.

engaged in scholarly research but also constituted centers where ‘grammar’ was taught as a specific academic field⁶³ is evident from the observation that each of the institutions was structured as a “school” (σχολή), which presupposed a close relationship between teachers and students. Through the principle of school affiliation and also of the succession (διαδοχή) from one generation to the next, continuity in matters of theory and of methodological principles was guaranteed.⁶⁴

The type of primary education in reading and writing, but especially theoretical instruction in language and literature, provided during the Hellenistic and Imperial periods has been carefully investigated on the basis of rich papyri discoveries, which have transmitted a number of writing exercises, textbooks and manuals from Egypt dating from the 3rd century BC onward.⁶⁵ For instance we have information on a ‘grammar’ lesson at the level of general education from several grammatical manuals, dating both from Greek and Roman antiquity. The tasks of a ‘grammarian’ and the areas of responsibility of ‘grammar,’ enumerated by Dionysius Thrax at the beginning of his manual, reflect the teaching process as well as the methods and educational objectives.⁶⁶ The initial task, namely training in flawless reading of literary texts, was of paramount importance, and presupposed knowledge of accentuation, the segmentation

63 See Seidensticker [1999].

64 The school of Aristarchus emerges as a characteristic example of a solid and durable school in the history of ancient scholarship and grammar. According to Suidas’ testimony (α 3892), Aristarchus had no less than forty students. These are certainly not to be understood as direct students of him, but, as can be seen by the chronological relationship of each person to their supposed master, they belonged to and continued the school tradition founded by him (see Montana in this volume). When, for example, Pamphilus (on Pamphilus, see below in § 3.3) is designated still in the 1st century AD as an Ἀριστάρχειος (Suid. π 142), this term should be interpreted only as an indication of the scholarly tradition to which he belongs. On Aristarchus’ philological school, see Blau [1883]. On the continuation of the Alexandrian school of ‘grammar,’ especially of the ‘grammatical’ chair in Imperial Alexandria see below in this paragraph.

65 After the fundamental study of Marrou [1965⁶] 218–291 and 356–411 on the teaching of ‘grammar’ in the ancient, especially the Hellenistic and Roman educational system, the field is comprehensively presented by Morgan [1998] 90–189 and Criboire [2001] 127–219. See also the overview of the ‘grammar’ instruction at the elementary level and in higher education given by Christes-Klein-Lüth [2006] 89–123 and 125–155. Cf. also Nilsson [1955] on the Hellenistic educational system and Wolf [1952] on education during Late Antiquity.

66 See Dion. T. § 1, *GG* I/1, 5.4–6.3; and *Sch.* Dion. T, *GG* I/3, 12.3–13.6. On Dionysius’ division of the tasks of the γραμματική, see above § 2.4. Cf. also Swiggers-Wouters (section 11.2) in this volume.

of words into syllables, familiarity with metrical principles for the determination of quantities, and punctuation as well. The second task consisted in explanation of the linguistic and stylistic peculiarities of literary texts. This was accompanied by explanation of challenging words and interpretation of mythical and historical material, and also by two specific linguistic tasks: the explanation of etymologies and the calculation of analogies for the purpose of determining the grammatical peculiarities of the vocabulary of the literary text under consideration. Finally, overall aesthetic and critical evaluation of the text completed the task.

Quintilian describes the structure of a 'grammatical' lesson in a similar fashion,⁶⁷ and it is correctly assumed that his account represents the teaching tradition originating from the Alexandrian school. In the so-called Tyrannion system, also known from its Latin counterpart, which is attested by Varro (fr. 236 Funaioli),⁶⁸ the various steps are compressed into the four parts (μέρη) of 'grammar': first the μέρος ἀναγνωστικόν (*lectio*), second the μέρος ἐξηγητικόν (*enarratio*), which consists in the interpretation of a text by focusing on its mythological and historical peculiarities as well as in providing the correct explanation of words and the determination of stylistic and other means, third the μέρος διορθωτικόν (*emendatio*, the task concerning textual criticism, and fourth the μέρος κριτικόν (*iudicium*), the expression of an opinion concerning the aesthetic values, but also addressing the issue of the authenticity of the literary text.⁶⁹

Courses at the level of general education aimed primarily to enhance learning, and secondarily to encourage development of interpretive skills, which were reserved for professional studies. Collections of maxims (γνώμαι), didactic anecdotes (χρεΐαι) and proverbs (ἀποφθέγματα) served to provide an overview of ancient literature and values, and were especially popular in the Roman Empire and during Late Antiquity. Since Roman education was, after all, bilingual, the *grammaticus Graecus* was taught alongside the *grammaticus Latinus*.⁷⁰ The teaching staff responsible for the Greek 'grammar' courses

67 See Quint. *Inst.* 1.8.1–12 (*lectio*) and 13–21 (*enarratio poetarum*). For a commentary on these passages, see Ax [2011] 350–404.

68 See above n. 48.

69 On the description of the contents of 'grammar' instruction, see Glück [1967] 17–24 and Ax [2011] 94–97; cf. also R. Baumgarten in Christes-Klein-Lüth [2006] 95–96, D. Bornmann in Christes-Klein-Lüth [2006] 104–110 and Chr. Krumeich in Christes-Klein-Lüth [2006] 115–123; see also Montana and Swiggers-Wouters (section 11.2) in this volume.

70 Cf. Quint. *Inst.* 1.4.1; see also the commentary of Ax [2011] 95 on this passage. On the bilingual education in Rome, see Marrou [1965⁶] 374–388 and the references quoted above in n. 30.

were recruited from the Greek-speaking world and often consisted of slaves and freedmen.⁷¹

In addition to its permanent position in general education, ‘grammar’ as an autonomous scientific field experienced an astonishing geographic expansion and growth at the level of higher education during the entire period of the Roman Empire and Late Antiquity. As a result, the discipline acquired a more cosmopolitan dimension in comparison to its previous almost exclusive presence in Alexandria and Pergamum during the Hellenistic period.⁷² At the beginning of the Imperial era, Alexandria still maintained its leading position as a center of research and cultivation of science and, as such, also of scholarship and grammar. The extant biographical sources concerning philologists and grammarians from Alexandria during the predominance of the Roman Empire testify that these scholars maintained the chair for grammatical studies established by the librarians and the members of the Alexandrian *Museum*; moreover, they preserved the tradition that linked them to their Hellenistic fore-runners. As far as we can reconstruct the διαδοχή, Theon, Apion, Chaeremon, Dionysius of Alexandria, Pamphilus and Vestinus succeeded one another as the head of the Alexandrian chair of ‘grammar’.⁷³ In general, Alexandria continued to be the most influential center of philological and grammatical education and research right up to the 6th century.⁷⁴ Although other important scientific centers developed in this period, Alexandrian scholarship retained its importance precisely due to the strong attachment to its rich tradition. At the beginning of the Imperial era and throughout the entire 1st century AD, most of the Greek philologists and grammarians who were active in Rome had originally been trained in Alexandria. However, Rome achieved an independent position in the discipline of Greek scholarship during Hadrian’s time, in concomitance with Hadrian’s founding, in 135 AD, of the *Athenaeum* as a landmark of Greek erudition in Rome, following the model of the Alexandrian *Museum*.⁷⁵ Thus in the 1st century AD philology and grammar oscillated between Alexandria

71 Slaves and freedmen, who were active as grammarians in Rome from the period of the waning Republic until the Principate, are presented by Christes [1979].

72 On Alexandrian and Pergamenian scholarship, see Montana in this volume.

73 On the individual figures, see the relevant section in the prosopographical section below in § 3.3, 3.4.

74 Schemmel [1909] studied the Alexandrian university and other educational institutions of the 4th and 5th centuries; see also Wilson [1996] 42–49 and Bowersock [1996]. The library of Dioscorus of Aphrodito provides a significant picture of the rich intellectual and cultural life in Egypt in the 6th century; the preserved material has been edited and commented on by Fournet [1999]. Philologists and grammarians of the 4th and 5th century active in Alexandria and Egypt, are listed by Kaster [1988] 469–473.

75 See Schmid-Stählin [1920–1926] II 664 and 866.

and Rome, but the discipline of scholarship became integrated from the 2nd century onwards throughout the Roman Empire, by virtue of the fixed salaried positions provided for the universal and higher education system of the Imperial period. Hadrian's regulations stated that public grammarians were to have the same freedoms as other scholars and scientists such as philosophers, rhetoricians and physicians. In addition to public teaching posts for grammar, teaching chairs at the Alexandrian *Museum* and at the *Athenaeum* in Rome were also available. During the Imperial era, Athens also received a significant stimulus, as professorships were established there and endowed by the Roman Emperor. Athens, however, was the recognized center for philosophical and rhetorical studies during the Roman Empire and throughout Late Antiquity, whereas grammatical studies played a relatively minor role in Athens. For instance, during Late Antiquity the Emperor financed one chair in rhetoric and the city itself funded two chairs, but only one Greek chair was provided for philology and grammar.⁷⁶

An important turning point in the history of philological and grammatical studies was the founding of Constantinople and the nomination of the city as the new capital of the Roman Empire, which gave a new impulse to Greek culture in the direction of the east. The old educational institutions in Alexandria, Rome and Athens were now supplemented by a number of new or formerly less well-known centers in other cities. Most apparent is the wealth of educational centers in the 4th century in Asia Minor and Syria. Foremost among these were Nicomedia, Ancyra, Tarsus, Nicaea, Cyzicus, Smyrna, Sardis, Pergamum, Caesarea, Seleucia; in Syria and Palestine especially Antioch, Sidon, Tyre, Berytus, Apameia, Emesa, Gaza; finally, in Egypt, Pelusium and Hermupolis in addition to Alexandria.⁷⁷ Philological and grammatical studies strongly benefited from this extraordinary geographic and cultural expansion. Several of these places achieved recognition as the birthplace of Late Antiquity scholars. Antioch achieved a special status in the 4th century as a result of Libanius' school of rhetoric,⁷⁸ and several grammarians are known from Libanius' correspondence.⁷⁹ Gaza was also home to an important school of rhetoric, which, thanks to Procopius, gained an exceptional reputation in the early 6th century.

76 On the position of Athens in philological and grammatical studies, see Schmid-Stählin [1920–1926] II 664 and 947–948. See also Schemmel [1908]; Wilson [1996] 36–42; Lapini, and Pontani in this volume.

77 See Schmid-Stählin [1920–1926] II 948–949.

78 On Libanius' school of rhetoric in Antioch, see Criore [2007]; cf. Wilson [1996] 28–30.

79 On these figures, see the prosopographical study of Seeck [1906]. Grammarians known from the letters of Libanius are listed in Schmid-Stählin [1920–1926] II 1075 n. 4.

Various grammarians from this city are known as well.⁸⁰ Furthermore, philological and grammatical studies achieved considerable status and were stimulated during Late Antiquity in Constantinople itself, and this development was essentially related to the re-organization of the University by Theodosius II.⁸¹ According to Theodosius' decree in 425 (cod. Theodos. 14.9.3), there were to be five chairs of Greek rhetoric, three chairs of Latin rhetoric, one chair for philosophy, two chairs for law and ten chairs (!) each for Greek and Latin grammar. In the 4th and 5th centuries, the major figures of the intellectual world were active in Constantinople.⁸² The outstanding position Constantinople had already reached by this time as an educational, scientific and cultural center was crucial for the nature and the further development of the history of Byzantine philology and grammar.⁸³

One may wonder whether and to what extent it would be reasonable and appropriate to arrange and present the history of philology and grammar in the Imperial era and Late Antiquity according to the different scholarly centers and places of activity of the 'grammarians' who were active in each such location. This would certainly be possible, although the distribution of philological and grammatical scholarship in the various research and educational centers provides a merely external criterion for presentation of the subject: since there are no fixed boundaries between the individual schools, and it is also characteristic that scholars who were active in one place later moved to a different institution. On the other hand, the unity and cohesiveness of the disciplinary contents, quite independently of the place of activity of each 'grammarian', clearly speaks against imposing the geographic criterion as the principle for periodization of the history of scholarship in the Imperial era

-
- 80 On the significance of Gaza as an educational and cultural center, see Wilson [1996] 30–33. On the so-called 'school of Gaza', see Seitz [1892]. The 'grammarians' who came from the eastern centers of the Empire and were active there are listed in Kaster [1988] 475–478; on each personality, see Kaster's prosopographical entry.
- 81 The intellectual, cultural and educational history of Constantinople during Late Antiquity and the early Byzantine period from the 4th to the 6th century is described by Lemerle [1971] 43–73; on the University in Constantinople, see *ibid.*, pp. 63–64; cf. also the works of Schemmel [1908] and [1912] on this topic as well as Wilson [1996] 49–60. On the question whether the University of Constantinople was to be thought of as a 'high school' providing higher education or as 'secondary school', as Speck [1974b] 387 and, following him, also Wilson [1996] 50 maintained, see the objections of Alpers [1981] 95 n. 43; on this topic see also Pontani in this volume. On the educational system in Constantinople, see Schlange-Schöningen [1995] and [1999].
- 82 The philologists and grammarians from the 4th and 5th centuries, who were active in Constantinople, are listed in Kaster [1988] 464–467.
- 83 On the history of scholarship in Byzantium see the contribution of Pontani in this volume.

and during Late Antiquity. A distinction—such as that commonly made in the Hellenistic period—between the Alexandrian and Pergamenian schools and between the traditions derived from them cannot be drawn between the philological and grammatical centers of the Imperial era and those of Late Antiquity.

This specific differentiation of Hellenistic scholarship is based on the different theoretical and methodological positions of the Alexandrian and Pergamenian schools in questions of textual interpretation and linguistic theories. The prosopographic presentation in the second part of this paper will, however, be built not only on centers of philological and grammatical activity, but also on the two main chronological divisions, “Imperial era” versus “Late Antiquity. This will allow a clearer arrangement of the material, seeking at the same time to illustrate the migration, dissemination and expansion of scholarship throughout the period. The mode of presentation does not, on the other hand, represent theoretical and methodological differences and disputes between the various schools, as they were not relevant to this particular context.

Finally, a word on some specific characteristics that constitute the profile of the philologist-grammarian, as can be inferred from the biographical sources.⁸⁴ Such characteristics predominate among those who were active as researchers and occupied contemporary academic chairs: Philologist-grammarians received stipends and salaries from public sources and also enjoyed privileges granted them by the Imperial court. Not infrequently, they exercised political influence, thereby achieving high government positions, a favorable reputation and great esteem: for instance, philologist-grammarians were often served as tutors of princes. Similar privileges and positions were already enjoyed in the Hellenistic period by scholars active in the Hellenistic Diadochi kingdoms, especially in Alexandria and Pergamum. Philologists and grammarians often extended their research activity into other intellectual areas, such as history, doxography and philosophy, regarding their mission as intrinsically linked to the transmission of erudition and culture. The poetic works some scholars produced in addition to their philological activity formed a link with the Hellenistic tradition, which should not be overlooked. This specific feature is particularly evident among early Byzantine scholars,⁸⁵ and is closely related to the upheaval on both the political and cultural level that brought about the

84 The social status of ‘grammarians’ in Late Antiquity is examined in the first part of Kaster’s study [1988] 9–230. The professional and social status of slaves and freedmen active in Rome as ‘grammarians’, is examined by Christes [1979].

85 See Schmid-Stählin [1920–1926] II 1075. On the ‘poets and philologists’ of this period, see the study of Cameron [1965].

relocation of the capital of the Roman Empire to Constantinople. This tone of renewal was mediated through the poetical work of the figures acting as ‘grammarians,’ whose compositions often took the form of a song of praise for the emperor.

3 Persons, Works and Achievements

3.1 *Judgments and Prejudices*

The foregoing remarks have underscored that the contents of philological-grammatical doctrine and the position of this discipline in contemporary educational and intellectual life form an appropriate criterion for presentation and periodization of *γραμματική* in the Imperial era and during Late Antiquity. In this perspective, it is undisputable that achievements in this field during the period in question have not been correctly estimated or even properly appreciated by previous and to some extent also by current research. This neglectful attitude is due primarily to the so-called ‘Alexandrianism’ that is predominant in the history of ancient scholarship, and it can essentially be ascribed to high admiration—or indeed overestimation—of the Hellenistic and particularly the Alexandrian period. As a consequence, the history of Imperial and Late Antique, but also of Byzantine philology stands in the shadows of Alexandrian models. This trend is also reflected to some extent in Pfeiffer’s history of Hellenistic scholarship, which labeled the representatives of the 1st century BC as ‘epigones.’⁸⁶

The importance of Imperial and Late Antique philology and grammar has therefore been viewed as limited to the transmission of older commentaries originated primarily from the Alexandrian period. Accordingly, it has been perceived only in this function with the acknowledgement that precisely this transmission through the Imperial and Late Antique philological and grammatical writings has made it possible to reconstruct the great Alexandrian works, in some cases even to establish their original wording. Judgment on the achievements of the Imperial period and of Late Antiquity in the field is thus predefined: the Alexandrian era is thought to be the outstanding epoch of ancient scholarship whereas the field of philology and grammar during the following centuries is said to be characterized basically by decline, as revealed by the lack of originality of works stemming from this period. According to the view of contemporary scholars, philologists and grammarians of the Imperial period and of Late Antiquity confined themselves to the

86 The last chapter of Pfeiffer’s *History*, in which he treats the generation of grammarians after Aristarchus ([1968] 252–279), is accordingly titled “The Epigoni”.

dull excerption and compilation of older works, and any creations of their own were little more than abridgments of older works, often contaminated with younger materials—in a word, a distortion and corruption of the Alexandrian philological commentaries.⁸⁷

Given this perspective and such pejorative judgments, neither the background nor the circumstances of the philological and grammatical achievements of this period are correctly recognized, nor are the potential and autonomy of this epoch cast in the light they deserve. Apart from the fact that the older works from the Hellenistic period of Alexandrian philology were already not easily available at this time, excerpting and compiling were in no way senseless or academically unnecessary procedures. For the first time, the Imperial and Late Antique philologists had at their disposal the rich research, source and material basis of the earlier scholars, which not only needed to be collected and studied thoroughly in order to be transmitted but also represented the basis for critical analysis and, moreover, for completion, extension, renewal and actualization of the philological past. These were essentially new features, constituting the unique characteristics of the history of philology and grammar in the Imperial era and Late Antiquity.

Instead of the narrow and one-dimensional perspective adopted by current research, which places the Alexandrian period at the center of the history of ancient philology, and grounds the importance of the entire discipline solely

87 The introductory comments by Schmid-Stählin [1920–1926] 11 866–867 in their historical account of Imperial philology are characteristic of the judgment of current research: “die Wurzel der Philologie vertrocknet” or “[Kommentare], die aber ähnlich wie schon die des Didymos wesentlich Kompilation älterer Arbeiten . . . gewesen zu sein scheinen”. The history of late antique philology and grammar is characterized by Schmid-Stählin [1920–1926] 11 1075 in the following way: “Auf allen Gebieten der Wissenschaft hört vom 4. Jh. an jede Spur von Selbständigkeit und eigener Forschung auf. Es wird lediglich ausgezogen und zusammengestellt. . . . In diesem freilich recht beschränkten Sinn haben wir Anlaß für den Fleiß auch der letzten Epigonen dankbar zu sein, desto mehr, je mehr sie sich eigener Zutaten und geschwätziger Umschreibungen enthalten”. Similar judgments are repeated in several places by Dickey in her Introduction; see e.g. Dickey [2007] 6: “The Alexandrians had established good texts of the important works of classical literature and produced excellent commentaries on them, so there was *little original work* to be done on these areas. [. . .]. Other [scholars] sacrificed their originality and continued to work on classical authors, producing syntheses or reworking of earlier commentaries. These scholars’ *lack of originality*, [. . .], at the same time incurs gratitude insofar as we owe to it virtually all our knowledge of the Alexandrians’ work.”; [2007] 10: “late antique scholars had *little opportunity for constructive originality*”; [2007] 14: “*the scholia suffered many kinds of corruption*. They were frequently abbreviated, displaced, miscopied, or inappropriately run together.” [my emphases]. On this research position using Dickey’s statements and judgments as an example, see Matthaïos [2009b] 151–152.

on the value and achievement of this single era, an attempt should be made to understand the history of philology and grammar in the Imperial Period and Late Antiquity on its own terms and to judge its own potential and momentum. Seen in this manner, while the Alexandrian period of ancient scholarship and grammar can correctly be credited with the *foundation* of the discipline, the following epochs constitute the period which led to the *systematization*, *expansion* and *renewal* of philological and grammatical contents and theories. It will be shown here that the process in question not infrequently involved opposition and a critical attitude towards the Hellenistic predecessors.⁸⁸

As already indicated in the first section of this study, the prosopographic section is structured according to the main focal points of ancient philological and grammatical doctrine. First, the philological, interpretative and editorial activity during the Imperial Period and Late Antiquity will be set in relation to the ἐξηγητικὸν and διορθωτικὸν μέρος, but also to the μέρος ἱστορικὸν of the ancient γραμματική. This will be followed by a presentation of the figures and works pertaining to the field of linguistic theory, the so-called μέρος τεχνικόν, *i.e.* grammar in the modern sense. Studies concerning ancient theories on metrics will also be dealt with in this context. Finally, in a third part the lexicographic activity of the entire period will be presented. Subsections of each chapter will be based either on the place of activity of the scholars and grammarians under discussion or, as in the lexicography section, on the special emphases of each area.

3.2 *Philological Achievements in the Imperial Era and Late Antiquity*

The processes of enlargement and expansion of the contents of philological activity, which have been highlighted here as the peculiar characteristic of the history of philology and grammar in the Roman Empire and Late Antiquity, went hand in hand with the editorial and interpretive work carried out in this period. One of the great merits of the Imperial and Late Antique scholars, in contrast to their Hellenistic forerunners, was that of broadening the spectrum of their research activity, including among their interpretive and editorial interests not only the authors and works of the renowned classical literature, but also poets from the period immediately preceding their own. At the same time, commentaries from the Hellenistic period on classical authors were updated in new works penned by philologists of the Imperial and Late

88 On this model of the development of ancient scholarship and grammar, see Matthaïos [2009b] 152. From this perspective, in contrast to both of the first periods, the Byzantine period is seen as connected with the process of the *adaptation* and *transformation* of traditional knowledge and studying material.

Antique period. In so doing, philologists who were active in this period did not merely collect and compile older works into new ones, but also engaged in critical appraisal of older research positions. By the end of these periods, above all by the end of the Imperial era, the ancient literary tradition had been explored and made available in its entirety both in terms of literary genres and of the various historical stages. Its comprehension had been made available and furthered through editions, commentaries and specialized monographs, which dealt with the interpretive aspects and explored the source material. This paved the way for the emergence of Byzantine commentaries and collections of scholia.

As mentioned earlier, philologists and grammarians of the 1st and 2nd centuries represented both areas of *γραμματική*, namely philological interpretation and as well as linguistic theory. The emphasis of their writing activity, however, focused above all on textual interpretation and philological issues. It was not until the 2nd century that philological interests increasingly gave way to linguistic matters.

3.3 *Between Alexandria, Rome and the Educational Centers of the East*

Already in the waning years of the Ptolemaic dynasty and during the reign of Augustus, two prominent scholars were active in Alexandria, Theon and Seleucus. In spite of the fact that chronologically speaking, they belonged to the Hellenistic era, their accomplishments reveal that they both represented the link between tradition and innovation within Alexandrian scholarship while, at the same time, signaling the turning point from the Hellenistic to the Imperial period.

Theon⁸⁹ was the son of the grammarian Artemidorus of Tarsus,⁹⁰ who belonged to the school of Aristophanes of Byzantium, and seems likely to have been the father of Apollonius, the commentator of Homer mentioned

89 Literature on Theon: Gräfenhan [1843–1850] III 250–252, Susemihl [1891–1892] II 215–217, Schmid-Stählin [1920–1926] I 435, Sandys [1921³] 144, Wendel [1934a], Damschen [2002], LGGA s.v. Theon (1) (Cl. Meliadò), and Montana in this volume. Theon's fragments were collected and discussed first by Giese [1867] and later by Guhl [1969]. Unlike Giese, Guhl substantially extended the textual base by taking into account new material obtained mainly from new papyri findings as well as a series of fragments which, although not explicitly attributed to Theon, contained a mention of his name (fr. *41–*182 Guhl); on these fragments cf. Guhl [1969] 16–18.

90 See *Etym. Gen.* α 1198 Lasserre-Livadaras (= test. 2; fr. 2, 7 Guhl) s.v. ἀρμόϊ (cf. *Etym. Magn.* 144.47–58 s.v. ἀρμόϖ = Hdn. *Orth.*, GG III/2, 502.10–14). On the grammarian Artemidorus (1st c. BC) see Susemihl [1891–1892] II 185–186, Wentzel [1895c], Montanari [1997b], LGGA s.v. Artemidorus (1), and Montana in this volume.

in *Sch. Hom. (A) 20.234c*.⁹¹ According to the information provided by Suidas, Theon was a contemporary of Dionysius of Halicarnassus and also the predecessor of Apion as leader of the philological school in Alexandria.⁹² If Apion followed Theon in this function during Tiberius' reign (14–37 AD), Theon's lifetime coincides with the reign of Augustus. Theon was thus a contemporary of Didymus, but unlikely to have been older than the latter, in contrast to Guhl's assumption.⁹³

In any case, it is not so much the temporal aspect that appears to be decisive for the proximity or distance of Theon to Didymus as, rather, internal criteria arising from the works of both grammarians. In accordance with the Alexandrian tradition, Theon dealt with the interpretation of classical literature. A commentary by Theon on the *Odyssey* (Ἑπόμνημα εἰς τὴν Ὀδύσσειαν) is attested by name in the *Etymologica*.⁹⁴ Theon's commentating activity extended to Pindar as well,⁹⁵ while the surviving evidence also points to

91 Gräfenhan [1843–1850] III 61–62 equated the Apollonius who is called Theon's son in this scholion with Apollonius Anteros; on Apollonius Anteros see below in this paragraph. On Gräfenhan's supposition, see Susemihl [1891–1892] II 217 note 400.

92 See Suid. α 3215 (= test. 1 Guhl): Ἀπίων . . . Διδύμου δὲ τοῦ μεγάλου θρεπτός. ἐπαίδευσε δὲ ἐπὶ Τιβερίου Καίσαρος καὶ Κλαυδίου ἐν Ῥώμῃ. ἦν δὲ διάδοχος Θεώνος τοῦ γραμματικοῦ καὶ σύγχρονος Διονυσίου τοῦ Ἀλικαρνασέως. For the interpretation of Suidas' statement in the sense that Theon and not Apion was a contemporary of Dionysius of Halicarnassus, see Susemihl [1891–1892] II 217 note 40 and Guhl [1969] 2. The grammarian Apion is discussed below in this paragraph.

93 See Guhl [1969] 2. Guhl based his view concerning the chronological relationship between Didymus and Theon and the priority of the latter over the former on the assumption that Didymus—“der Endpunkt der antiken Grammatikererklärung” (so Guhl [1969] 15)—integrated Theon's hypomnema on Pindar in his own Pindaric commentary. The same view concerning the relationship of the two works to each other has recently been followed by McNamee [2007] 95. Both works, however, can and should be regarded independently of each other. Theon's commentary, of which at least the part related to the *Pythian odes* was already available in the 2nd c. AD in P.Oxy. XXXI 2536 (= fr. 38 Guhl) in a reworked or abbreviated form, builds the basis for the second branch of sources of the Pindaric scholia, which Irigoien [1952] describes as a “Schulkommentar”; cf. Maehler [1994] 114–119. On the history of the transmission of the Pindaric scholia, see Dickey [2007] 38–40.

94 See fr. 14–18 Guhl; on the character of Theon's hypomnema, see Guhl [1969] 13. The existence of a commentary on the *Iliad* was accepted by Wendel [1934c] 2055 and also by Gräfenhan [1843–1850] III 251 with n. 19; the opposite opinion is expressed by Guhl [1969] 12–13.

95 See fr. 36–38 Guhl; cf. n. 93. Knowledge of Theon's commentary on Pindar has been substantially increased by the papyri findings. In addition to the only scholion previously known (*Sch. Pind. Ol.* 5.42a [= fr. 36 Guhl]), a marginal note from Theon's commentary on *Pind. Pae.* 2.37–8 in P.Oxy. V 841, iv 37 (fr. 37 Guhl) and also an extensive fragment

work on Sophocles, at least in the form of an edition.⁹⁶ Additionally, Theon's philological activity found expression in the field of lexicography. Following Didymus' example, he wrote lexicographic works on the language of comedy and very likely also on that of tragedy.⁹⁷

Theon's achievement, however, is associated with a clear shift in the focal points of traditional Alexandrian scholarship. His main contribution and innovation consisted in focusing his research more intensely on the Hellenistic poets. The preserved fragments refer directly, *i.e.* by mentioning the relevant title, but also indirectly to his commentaries (ὑπομνήματα) on Callimachus, Apollonius Rhodius, Theocritus, Lycophron and Nicander.⁹⁸ We even know from the subscription of the scholia on Apollonius Rhodius that Theon's commentary was taken into consideration and incorporated into the surviving corpus.⁹⁹ Thus Theon took the lead in the interpretation of Hellenistic poetry within Alexandrian scholarship.¹⁰⁰ By integrating contemporary literature

from his commentary on Pindar's *Pythians* in P.Oxy. xxxi 2536 (cf. fr. 38 Guhl) have been added; in the subscription preserved in the latter papyrus, Theon's commentary on Pindar is mentioned *expressis verbis*.

- 96 As the expression οὕτως ἦν ἐν τῇ Θέωνος indicates, P.Oxy. IX 1174 preserves remnants of Theon's critical edition of Sophocles' satyr play *Ichneutai* (fr. 19–35 Guhl). It is correctly assumed that Theon's ἔκδοσις was not just limited to this satyr play, but encompassed all the works of Sophocles. It remains unclear, however, whether Theon also wrote a commentary on Sophocles; see Wendel [1934c] 2055 and Guhl [1969] 13.
- 97 Hesychius testifies Theon's lexicographic activity in the dedication letter of his own lexicon; see Hsch. *Epist. ad Eulogium* 1.3: ... οἱ δὲ τὰς κωμικὰς ἰδίᾳ καὶ τὰς τραγικὰς ὡς Θέων καὶ Δίδυμος καὶ ἔτεροι τοιοῦτοι. The question of whether Theon's lexicon covered the vocabulary of both tragedy and comedy or was restricted to only one field has been answered merely on the basis of the transmitted material. Because both of the surviving fragments (fr. 39–40 Guhl; cf. Bagordo [1998] 166–167) deal with the language of comedy, it has been concluded that the lexicon was dedicated exclusively to the λέξεις κωμικαί; see Susemihl [1891–1892] I 216 with n. 394, Wendel [1934c] 2057, Guhl [1969] 15–16 and, recently, Bagordo [1998] 63–64. The lexicon by Epitherses, however, on the language of both comedy and tragedy (on Epitherses see below in this paragraph) indicates that works encompassing both areas did in fact exist.
- 98 For Theon's commentary on Theocritus, see fr. 1–2, for that on Nicander fr. 3–4a, on Callimachus fr. 5–7, on Lycophron fr. 8–10 and on Apollonius Rhodius fr. 11–13 in the edition of Guhl [1969]. On the contents and scope of Theon's commentaries, see Wendel [1934c] 2055–2057 and Guhl [1969] 3–11.
- 99 See *Sch.* A.R. 329.8: Παράκειται τὰ σχόλια ἐκ τῶν Λουκίλλου Ταρραίου καὶ Σοφοκλείου καὶ Θέωνος. Cf. Wendel [1932a] 105–115 and Dickey [2007] 62–63.
- 100 The philological activity on Hellenistic poetry actually started with Theon's father Artemidorus (see Montana in this volume). We know of a commentary of Artemidorus on Callimachus' *Aetia*. Artemidorus probably produced also an edition of Theocritus; see Susemihl [1891–1892] I 185–186 and Wentzel [1895c] 1332.

into the spectrum of philological interpretation he broke new ground in the Alexandrian scholarly tradition. Theon's works on the Hellenistic poets provided a rich basis and shaped the subsequent commenting activity in this field during the following centuries.¹⁰¹

Seleucus,¹⁰² usually known by the nickname 'Ομηρικός, often also called γραμματικός, came from Alexandria and was a younger contemporary of Didymus and of other great Alexandrian philologists such as Tryphon, Philoxenus and Aristonicus.¹⁰³ After a decisive period of education and philological activity in the Ptolemaic capital, Seleucus moved to Rome, where he worked at the court of Tiberius.¹⁰⁴ The work of Seleucus marked a change in the history of philology insofar as he was not only active as a philologist, as a γραμματικός in the traditional meaning of the term, but also embodied the profile of a scholar in the wider sense. Such figures appear frequently at the beginning of the Imperial era; they mainly saw their role and function as of fostering interaction between the Greek cultural heritage and the environment of Rome.

In Seleucus, this role is evident from the diversity and multifacetedness of his research interests and writings. His oeuvre spans philology and grammar in their entire breadth, but also draws on other areas such as theology, the history of philosophy and biography. Seleucus' biographical work Περί βίων ("Lives"), attested with its title by Harpocration (ο 19 s.v. 'Ομηρίδαι = *FHG* III 500 = fr. 76 Müller), apparently had antiquarian character with special

101 On the evaluation of Theon's philological activity and its after-effect, see Guhl [1969] 18–24; cf. Wendel [1934c] 2058–2059; see also Montana in this volume.

102 Literature on Seleucus: Schmid-Stählin [1920–1926] I 269, Müller [1921b], Sandys [1921³] 296–297, Baumbach [2001b] and Razzetti [2002b]; cf. also Schmidt [1848] and Jacoby in his commentary on *FGrHist* 341, pp. 92–93. Seleucus' fragments from his antiquarian works are collected in *FHG* III 500 and *FGrHist* 341; the philological—in the furthest sense—fragments were firstly collected by Schmidt [1848] 445–452 and then by Müller [1891]. New fragments deriving mainly from Seleucus' grammatical studies have been presented by Reitzenstein [1897] 157–211. An edition of the fragments comprising the entire oeuvre of Seleucus is still pending.

103 See Suid. σ 200 (= *FGrHist* 341 T 1): Σέλευκος, Ἀλεξανδρεὺς, γραμματικός, ὃς ἐπεκλήθη 'Ομηρικός· ἐσοφίστευσε δὲ ἐν Ῥώμῃ. On the nickname γραμματικός, see D.L. 3.109 and 9.12.

104 Seleucus' move to Rome is, in addition to Suidas (cf. n. 103), also attested by Suetonius (*Tib.* 56 = *FGrHist* 341 T 2), who testifies Seleucus' position as court philologist in the circle of Tiberius. On the identification of Seleucus named by Sueton with the "Homeric" Seleucus, see Müller [1891] 1–3 and Müller [1921b] 1252–1253 with reference to older literature on the matter.

reference to literary personalities.¹⁰⁵ The treatise *Περὶ φιλοσοφίας* (“On philosophy”; fr. 74–75 Müller), ascribed to the grammarian Seleucus by Diogenes Laertius is characterized as a work dealing with the history of philosophy.¹⁰⁶ Suidas confirms the existence of a work by Seleucus called *Περὶ τῶν ψευδῶς πεπιστευμένων* (“On things which have wrongly been believed”), which may have contained a critical examination of paradoxographic writers and fabulists.¹⁰⁷ The treatise bearing the title *Περὶ θεῶν* (“On gods”), also attested by Suidas, probably did not address exclusively theological matters. On the basis of the material collected by Reitzenstein from the *Etymologica*, explanations of mythological names also formed part of this work.¹⁰⁸

Seleucus’ antiquarian research also included the work *Σύμμικτα* (“Miscellanea”; *FGrHist* 341 F 3–*5), likewise testified by Suidas. This work, as the title suggests, had an assortment of diverse materials; the preserved fragments deal mostly with mythographical issues.¹⁰⁹ Finally, the compilation of Alexandrian proverbs entitled *Περὶ τῶν παρ’ Ἀλεξανδρεῦσι παροιμιῶν* (“On Alexandrian proverbs”), which is again mentioned by Suidas, lies on the borderline with philology. Seleucus’ work is regarded as the source for the collection of proverbs with the same title that is ascribed to Plutarch.¹¹⁰

On the philological level, according to Suidas’ testimony, Seleucus dealt with the interpretation of almost every poet: ἔγραψεν ἐξηγητικά εἰς πάντα ὡς εἰπεῖν ποιητῆν. The majority of the surviving fragments from Seleucus’ commentaries relate to Homer and Hesiod (fr. 1–33 Müller).¹¹¹ Scholars have

105 On the contents of this treatise, see Müller [1921b] 1255–1256; cf. Müller [1891] 23. Doubts on the attribution of this writing to the “Homeric” Seleucus were expressed by Jacoby in his commentary on *FGrHist* 341, pp. 92–93.

106 See Müller [1921b] 1255; Jacoby in his commentary on *FGrHist* 342, p. 93, is skeptical about the attribution of this work to the grammarian Seleucus.

107 Cf. Müller [1921b] 1254.

108 On the possible contents of this writing, see Müller [1921b] 1254. Reitzenstein [1897] 188 recognized Apollodorus as Seleucus’ main source. In his commentary on *FGrHist* 341, p. 93, however, Jacoby denies that the work *Περὶ θεῶν* stems from the grammarian Seleucus.

109 See Müller [1921b] 1255.

110 Plutarch’s collection of proverbs is often regarded by older scholarship as an excerpt from Seleucus’ work; see Müller [1921b] 1252 and Jacoby in a commentary on *FGrHist* 341, p. 92, with references to older literature.

111 According to the testimony of P.Oxy. II 221 (= P.Lond.Lit. 178 = Pap. XI Erbse), xv 24–25, Seleucus’ commentary was titled *Διορθωτικά*. Based on fr. 34, Müller assumed the existence of a commentary of Seleucus on the tragedians. His view, however, has been met with criticism; see Reitzenstein [1897] 165–166 and Müller [1921b] 1254.

long agreed that the *Εἰς τοὺς λυρικοὺς ὑπόμνημα* (“Commentary on the lyric poets”),¹¹² which Suidas attributes to Seleucus of Emesa, should more properly be ascribed to Seleucus “Homericus”.¹¹³ A work on Simonides of at least four books, which is mentioned in the fragments from the *Etymologica* collected by Reitzenstein, was most probably a commentary on this poet.¹¹⁴ Seleucus also dealt with the interpretation of Solon’s laws in his *Ὑπόμνημα τῶν Σόλωνος ἀξόνων* (“Commentary on Solon’s laws”; *FGrHist* 341 F 1–*2).¹¹⁵ Two further works of Seleucus, the *Προσατικὸς πρὸς Πολύβιον* (fr. 71 Müller) and the *Προσατικὸς πρὸς Ζήνωνα* (fr. 72 Müller),¹¹⁶ belong to the subject area of the so-called *λυτικοί*, i.e. of philologists who provide the ‘solutions’ to problems concerning Homeric poetry and literature in general. The commentary on *Il.* 21.1–516 (?), which was compiled by a certain “Ammonius, son of Ammonius”, transmitted in P.Oxy. II 221 (P.Lond.Lit. 178 = Pap. XII Erbse; 2nd century AD), is especially revealing for the extent, character and method of Seleucus’ philological studies. In particular, the papyrus commentary testifies to a further, hitherto unknown, philological treatise of Seleucus, originally consisting of at least three books with the title *Κατὰ τῶν Ἀριστάρχου σημείων* (“Against the critical signs of Aristarchus”): *πρὸς ταῦτα λέγει Σέλευκος ἐν τῷ(ι) γ’ Κατὰ τῶν Ἀριστάρχου σημείων ὅτι κτλ.* (col. xv, l. 16 [comm. on *Il.* 21.290]).

This testimony is important for several reasons: it reveals that Seleucus occupied a special position within scholarship, especial Homeric scholarship during the Imperial era, as the papyrus commentary treats the most recent range of sources concerning the interpretation of the Homeric poetry. In addition to Seleucus, mention is also made of Didymus, Aristonicus, Ptolemaeus Ascalonita and Ptolemaeus Pindarion. Seleucus is quoted as among the renewers of traditional Homeric scholarship, especially of the strands deriving from the Alexandrian school and, on a par with them, he seems to have contributed to approaching the subject through the filter of more contemporary research. For although he was a member of the Alexandrian school and worked closely with the major descendants of the Aristarchean tradition, he did not hesitate to examine or even oppose the opinions of Aristarchus, proceeding in a more independent manner than other Aristarchean scholars. This is made clear not

112 See Suid. σ 201 s.v. Σέλευκος Ἐμισσηνός. On the Emesian Seleucus, see below in § 3.4.

113 See Schmidt [1848] 444 and Müller [1921b] 1255; cf. also Porro [1994] 16–17.

114 See Reitzenstein [1897] 161, Nr. 61: Σελεύκου· Ἰλεύς· . . . ταῦτα παρατίθεται ἐν δ’ Σιμωνίδου. Cf. Müller [1921b] 1255.

115 Cf. Müller [1921b] 1255.

116 On these works, see Müller [1921b] 1255. Seleucus’ fr. 73 Müller stems, as it can be seen from the testimony mentioned by Reitzenstein [1897] 165.15 and his commentary in the textcritical apparatus, not from Seleucus’ work *Προσατικὸς πρὸς Ζήνωνα*.

only by the character of his treatise, which was in effect a polemical disparagement of Aristarchus' critical signs and their explanations,¹¹⁷ but even more so by the arguments he put forward to counter the Aristarchean interpretation of Homer.¹¹⁸

Seleucus thus proves not to be a mere compiler of old exegetical material, but an independently working scholar who critically addressed the philological tradition of his own school. The same picture can be reconstructed for Seleucus' grammatical works in the strict sense. In the field of etymology, Seleucus is regarded, along with Philoxenus, as the founder of a scientific etymology, which ran counter to the philosophical explanation, especially the stoic etymological explanation based upon arbitrary methods.¹¹⁹ Seleucus' etymologies are attested in the material provided by Reitzenstein from the Byzantine *Etymologica*.¹²⁰ In place of an etymological explanation that assumes the composition of a word from segments of other words, both Philoxenus and Seleucus developed a theoretical framework that was mainly based upon derivation. In their conception, a word is to be traced back to its stem by taking into consideration and explaining phonological and morphological changes that have affected the word structure. Seleucus believed that etymology serves to determine the correct use of language, and according to the testimony of Athenaeus (9.367a) he devoted a special study to this topic, entitled *Περὶ ἑλληνισμοῦ*.¹²¹ The etymologies attributed to Seleucus presumably derive from this work. Finally, Seleucus' lexicographic activity includes the collection *Γλώσσαι* ("Glosses"; fr. 36–68 Müller) and also a work bearing the title "On different meanings of synonymous words" (*Περὶ τῆς ἐν συνωνύμοις διαφορᾶς*), which is testified only by Suidas.

The grammarian Ptolemaeus also belongs to the Alexandrian tradition.¹²² The period of his life can be set at the first half of the 1st century AD, if it can be assumed that Ptolemaeus, in agreement with the testimony of Athenaeus and

117 On Aristarchus' critical signs and also on Aristonicus' writing which served to explain them, see Montana in this volume.

118 On the philological principle *κατὰ τὸ σιωπώμενον*, which Seleucus assumes for the interpretation of *Il.* 21.290, see Nünlist [2009a] 157–164, especially 169–170. According to Nünlist, Seleucus modified and expanded the traditional exegetical principle, which was widely utilized in early Alexandrian interpretation of Homer.

119 On Seleucus' etymological approach, see Reitzenstein [1897] 184–188.

120 Cf. n. 102.

121 On this special type of grammatical treatises, see Siebenborn [1976] 32–35; Valente (section II.4), and Pagani in this volume.

122 Literature on Ptolemaeus: Susemihl [1891–1892] II 215, Schmid-Stählin [1920–1926] I 438, Dihle [1962], Matthaïos [2001b] and LGGA s.v. Ptolemaeus (3) Aristonici (A. Boatti).

Herodian, was the son and not the father of Aristonicus.¹²³ The later dating is supported by the fact that Ptolemaeus, according to the testimony of Suidas, was active as a grammarian in Rome, like his father Aristonicus. The most probable date for Ptolemaeus' stay in Rome was during the reign of Augustus.¹²⁴ Suidas also provides a list of his writings. The few fragments of Ptolemaeus' works that have survived until today derive from his "Commentary on Homer" (Εἰς Ὀμηρον), which consisted of 50 books.¹²⁵ Ptolemaeus' work titled Τὰ ὁμοίως εἰρημένα τοῖς τραγικοῖς dealt, as the title suggests, with the recurrent themes in tragedies.¹²⁶ Two further works of Ptolemaeus, known only by their title—the treatises Τὰ παρὰ τῷ ποιητῇ ξένως ἱστορημένα ("Strange stories in Homer") and Τὰ περὶ Μουσῶν καὶ Νηρηΐδων ("On the Muses and Nereids")—were presumably concerned presumably with mythographical and antiquarian issues.

The grammarian Apollonides of Nicaea lived during the reign of Tiberius.¹²⁷ As testified by Diogenes Laertius, Apollonides dedicated his commentary on Timon's *Silloi* (Ἵπομνήματα εἰς τοὺς Σίλλους) to the Emperor.¹²⁸ Diogenes Laertius quotes from the first book of Apollonides' commentary, providing biographical information on Timon as well as a synopsis of the *Silloi*.¹²⁹ In addition to his work on Timon's *Silloi*—a somewhat strange choice for his philological activity—Apollonides wrote a commentary on Demosthenes' speech "On the false embassy" (Ἵπόμνημα τοῦ Περὶ τῆς παραπρεσβείας Δημοσθένους).¹³⁰ He also composed a work consisting of at least 8 books with the title Περὶ

- 123 See Ath. 11.481d and *Sch. Hom. Il. (A) 4.423 a¹*: Πτολεμαῖος ὁ τοῦ Ἀριστονίκου. Due to a misunderstanding, Suidas regards him as the father of Aristonicus; see Suid. π 3036: Πτολεμαῖος, Ἀριστονίκου τοῦ γραμματικοῦ πατήρ, καὶ αὐτὸς γραμματικός. ἄμφω δὲ ἐπεδείκνυντο ἐν Ῥώμῃ. On Aristonicus, see Montana in this volume.
- 124 See Susemihl [1891–1892] II 215 n. 386 and Wendel [1920] 77–78; cf. Matthaios [2001b]. Dihle [1962] does not believe it is possible to come to a more certain conclusion regarding the relationship between both grammarians, due to the fact that both grandfather and grandson often shared the same name.
- 125 Wendel [1920] 78 also assigned the *Sch. Theoc. 1.110a–c* to the Homeric commentary of Ptolemaeus.
- 126 See Bagordo [1998] 65 and 162.
- 127 Literature on Apollonides: Gräfenhan [1843–1850] III 250, Schmid-Stählin [1920–1926] I 435, Wentzel [1895a], Di Marco [1989] 54–55, Montanari [1996e] and LGGA s.v. Apollonides (A. Ippolito). Testimonies and fragments from Apollonides' works are listed in *FHG* IV 310 and in LGGA.
- 128 See D.L. 9.109: Ἀπολλωνίδης ὁ Νικαεὺς, ὁ παρ' ἡμῶν, ἐν τῷ πρώτῳ τῶν εἰς τοὺς Σίλλους ὑπομνήματι, ἃ προσφωνεῖ Τιβερίῳ Καίσαρι.
- 129 See D.L. 9.109–111 = Timo Phlasius test. 1, fr. 1 Di Marco.
- 130 The work is attested in Ammon. *Diff.* 366 s.vv. ὄφλειν καὶ ὀφείλειν.

κατεψευσμένων ἱστοριῶν (“About fictitious stories”),¹³¹ which, judging from the little that has survived, had a literary-historical character and included criticism of false assumptions made by or about various authors.¹³² Apollonides’ philological writings also encompass a treatise bearing the title Περὶ παροιμιῶν (“On proverbs”), which is attested by Stephanus of Byzantium (617.5–7 s.v. Τέρινα).

Similarly to the aforementioned grammarians, Apion¹³³ also lived in the period between the end of the 1st century BC and the middle of the 1st century AD and belongs to those figures who mark the transition to a new epoch in the history of Imperial scholarship. Apion was Egyptian by birth, the son of a certain Posidonius and a contemporary of Dionysius of Halicarnassus.¹³⁴ According to Suidas, he was educated in Alexandria in the house of Didymus, where he had the opportunity to hear Euphranor, who was at the time over 100 years old. Apion was also a disciple of Apollonius Archibiu and Theon’s successor as leader of the Alexandrian grammarians’ school.¹³⁵ His philological activity is summed up in the title γραμματικός.¹³⁶ He taught in Rome during the reign of Tiberius and Claudius, and had Pliny the Elder among his listeners.¹³⁷ During Caligula’s reign, Apion traveled through Greece, gave lectures on Homer and was honored by the Greek cities with the title Ὅμηρικὸς (“Homeric”).¹³⁸ Apion was a citizen of Alexandria and was sent at the age of 40 to Caligula in Rome as the head of a delegation, in order to present an argument against a certain Philo, a Jew, on the subject of the accusations lodged

131 In Ammon. *Diff.* 253 s.vv. κατοίσις καὶ κατοίησις the third book of this work is cited; the eighth book is cited in the *Vita Arat.* I 10.16–19 Martin; Müller *FHG* IV 310 also attributes the quotation of Harp. I 27 s.v. Ἴων to this work.

132 The work Περὶ κατεψευσμένης ἱστορίας ascribed by Suidas (α 3422) to Apollonius Dyscolus is unjustly regarded by Müller in *FHG* IV 310 as a work either of Apollonides or of the historian Apollonius; see R. Schneider in *GG* II/3, 140. It is also unclear whether the Apollonides-fragment transmitted by Priscian in *GL* III 406.22–407.4 is to be ascribed to this work; Apollonides is quoted here together with Lucillus Tarrhaeus for the view they shared on the use of letters as numerals.

133 Literature on Apion: Gräfenhan [1843–1850] III 58–59, Cohn [1894b], Schmid-Stählin [1920–1926] I 437–438, Sandys [1921³] 295–296, Montanari [1996d] as well as Neitzel [1977] 189–190. The fragments from the historical writings of Apion are collected in *FHG* III 506–516 and *FGrHist* 616. On Apion’s glossographical work, see below in this paragraph.

134 See Suid. α 3215 (= *FGrHist* 616 T 1); cf. the testimonies mentioned in *FGrHist* 616.

135 On Theon, see above in this paragraph. On Apollonius Archibiu, see below in this paragraph.

136 Cf. Suid. α 3215 (= *FGrHist* 616 T 1) and the testimonies listed under *FGrHist* 616 T 5.

137 See Suid. α 3215 (= *FGrHist* 616 T 1); cf. Plin. *N.H.* 30.18.

138 See Sen. *Ep.* 88.40 (= *FGrHist* 616 T 7).

in 38 AD by Jews from Alexandria, who claimed they had been abused.¹³⁹ In the conflict between Greeks and Jews in Alexandria, he had decisively taken a position against the Jews. We are informed of Apion's views and intentions by the polemic work of Flavius Josephus bearing the significant title "Against Apion" (Πρὸς Ἀπίωνα), which defends the Jews. The impression Apion made on his contemporaries was twofold and contradictory. On the one hand, his erudition and eloquence were praised, on the other his insufferable smugness was ridiculed.¹⁴⁰ He was named a *cymbalum mundi* by Tiberius, whereas Pliny called him a *propriae fama tymbanum*.¹⁴¹ He was also nicknamed Πλειστονίκης, the "frequent winner",¹⁴² and also Μόχθος, a designation which probably referred to his diligence.¹⁴³

Apion's oeuvre includes the work Αἰγυπτιακά, consisting of five books, which provides a presentation of Egyptian history and literature.¹⁴⁴ It is in this work that Apion launched his attacks against the Jews, which prompted Flavius Josephus to draw up a refutation. The works Περὶ μάγου¹⁴⁵ and Περὶ τῆς Ἀπικίου τρυφῆς,¹⁴⁶ which are known either only by title or through a few fragments, belong to his historical writings. Pliny (*N.H. ind. Auct. Lib. xxxv*) mentions one further work with the Latin title *De metallica disciplina*. Apion's philological writings are primarily related to the field of glossography. His lexicographic activity included the collection Γλῶσσαί Ὀμηρικαί, which was used by Apollonius Sophista for the compilation of his own Homeric dictionary;¹⁴⁷ Hesychius likewise mentions Apion's Γλῶσσαί and enumerates this work among the sources of his lexicon.¹⁴⁸ The lexicographic works of Apion also

139 See Joseph. *AJ* 18.257 (= *FGrHist* 616 T 6).

140 See Gel. 5.14.1, 7.8.1 (= *FGrHist* 616 T 10a, b).

141 See Gel. 5.14.1 (= *FGrHist* 616 T 10a) and Plin. *N.H. praef.* 25 (= *FGrHist* 616 T 13).

142 See Suid. α 3215 (= *FGrHist* 616 T 1) and the testimonies listed under *FGrHist* 616 T 2.

143 Cf. Suid. α 2634 s.v. Ἀντέρως (= *FGrHist* 616 T 8): ... ἀκουστής δὲ ἦν Ἀπίωνος τοῦ μόχθου; on Apollonius Anteros, see below in this paragraph. Apion's nickname Μόχθος is also attested in Apol. *Dysc. Synt.* 1.154, *GG* 11/2, 124.9 and in *Sch. Ar. Pax* 77.

144 The fragments preserved from this writing are collected in *FGrHist* 616.

145 See *FGrHist* 616 F 23.

146 See *FGrHist* 616 F 24.

147 On Apollonius' lexicon and its sources, see below in § 6.1.

148 See Hsch. *Epist. ad Eulogium* 1.2–3 and 1.31–2.1 Latte. Hesychius' lexicon is discussed below in § 6.3, and in the contribution by Pontani in this volume. The surviving fragments from Apion's glossographical collection have been edited and commented by Neitzel [1977]. A meager collection of Homeric glosses has been transmitted in several manuscripts under the title Ἀπίωνος γλῶσσαί Ὀμηρικαί; this glossary is edited by Ludwig [1917] and [1918]. In spite of substantial revisions, this glossary seems to have been mainly based upon Apion's original work; on this question, see Neitzel [1977] 301–326.

include the treatises *Περὶ ἐπωνύμων* (*FGrHist* 616 F 26) and *Περὶ τῆς Ῥωμαϊκῆς διαλέκτου* (Ath. 15.680d).

As can be seen from his works, Apion shared the same characteristic of the scholars of his day, namely a critical attitude toward the interpretation of their predecessors in the Alexandrian school. It is also worth noting that even though lexicography, especially Homeric glossography, made up the lion's share of his philological activity, as the nickname Ὀμηρικὸς suggests, Apion appears to have dealt with other ancient authors as well. P.Oxy. XXI 2295 (= CLGP I 1.1., Alcaeus 7) fr. 28 (*ad Alc.* 167) shows that Apion worked on Alcaeus,¹⁴⁹ as also confirmed by a quotation of Alcaeus in the *Syntax* of Apollonius Dyscolus, in which Apollonius makes a reference to an explanation deriving from Apion.¹⁵⁰ Finally, the field of technical grammar was covered by Apion's treatise *Περὶ στοιχείων* ("On Sounds").¹⁵¹

According to Suidas (α 2634), the grammarian Apollonius Anteros (Ἀντέρως),¹⁵² Apion's pupil, taught in Rome together with Heraclides Ponticus the Younger during the reign of Claudius. On the basis of the same testimony, Apollonius wrote a treatise "On grammar" (*Περὶ γραμματικῆς*) consisting of two books, of which no fragments have survived. However, Suidas' article on Heraclides mentions a grammarian named Aper, who belonged to the school of Aristarchus. Aper is described as being an enemy of Didymus, against whom he is said to have written several polemical works. Heraclides Ponticus the Younger, a pupil of Didymus, wrote a work directed against the grammarian Aper with the title *Λέσχαι* ("Academic conversations").¹⁵³ Unfortunately, due to textual transmission problems Suidas' wording at this point is difficult to follow. Westermann changed the transmitted name Ἄπερος—which Adler corrected into Ἄπερως—into the form Ἀντέρωτος, and thus claimed the identification of the putative Aper with Apollonius Anteros.¹⁵⁴

149 The papyrus commentary transmits two remarks by Apion: a metrical observation (l. 3) and a *varia lectio* (l. 18); see Porro [2004] 77 and 134.

150 See Apol. Dysc. *Synt.* 1.154, *GG* 11/2, 124.9–125.3.

151 See *Sch.* Dion. T., *GG* I/3, 183.25–31 (= *FGrHist* 616 F 27); the fragment refers to the question of whether the Greeks used the Ionic alphabet.

152 Literature on Apollonius Anteros: Gräfenhan [1843–1850] III 61–62, Cohn [1895c], Schmid-Stählin [1920–1926] I 438, Montanari [1996f] and *LGGA s.v.* Apollonius (7) Anteros.

153 See Suid. η 463: Ἡρακλείδης, Ἡρακλείδου, Ποντικός, ἀπὸ Ἡρακλείας τῆς Πόντου, γραμματικῶς ὅστις Διδύμῳ τῷ πάνυ κατὰ τὴν Ἀλεξανδρέων ἐφοίτησεν. οὗτος ἐπειδὴ ἤκουσεν Ἄπερως, τοῦ Ἀριστάρχου μαθητοῦ, εὐδοκίμουτος κατὰ τὴν Ῥώμην, πολλὰ τε τοὺς Δίδυμον διασύροντας, ἔγραψε κτλ.

154 See Westermann [1845] 369 (apparatus on l. 52); cf. Schmidt [1854] 9–10. Bergk [1845] 125, on the other hand, corrects the transmitted form into Ἄσπερος and interprets it as the genitive of the name of a Roman grammarian named *Asper*. Gräfenhan [1843–1850]

If the identification is correct, Anteros' career can be more precisely reconstructed. It must have included more philological studies than merely the manual "On Grammar". Anteros' offense of Didymus cannot be further investigated. It also cannot be ruled out that it took place in the oral form of lectures and courses. At the same time, he can be recognized as having a tendency towards a critical engagement with the past, which was actually not devoid of altercations and disputes. It was, however, through such disputes with the older philological tradition that younger scholars tried to establish their position in the history of scholarship.

Heraclides Ponticus the Younger,¹⁵⁵ a grammarian from Heraclea Pontica, was a student of Didymus in Alexandria before the period of his teaching activity in Rome under Claudius and Nero.¹⁵⁶ Suidas (δ 875) testifies that Heraclides' son named Didymus was also a grammarian (Δίδυμος ὁ τοῦ Ἡρακλείδου), likewise active in Rome at Nero's court.¹⁵⁷ As mentioned above, Suidas states that Heraclides wrote a work consisting of three books with the title *Λέσχαί* ("Academic Conversations"), which was composed in Sapphic and Phalaecian hendecasyllable.¹⁵⁸ In this work, Heraclides defended his teacher Didymus on the subject of his interpretation of mythological and historical material, against the attacks of Apollonius Anteros (or Aper). The work had a symptical character; it was perhaps written in dialogue form and was intended to represent a learned discussion at a banquet. Artemidorus placed it beside Lycophron's *Alexandra* and Parthenius' elegies because of its thematic affinity with these works: it contained *ἰστορίαί ξέναι καὶ ἄτριπτοι* ("strange and unused

III 62–63 believes that this Asper (Ἄσπερ) is the Latinized Anteros, and that the name is primarily a description of a characteristic, such as Δύσκολος, Μόχθος or Χαλκέντερος. Furthermore, Gräfenhan [1843–1850] III 63 is of the opinion that Asper did not turn against Didymus Chalkenteros, but against Didymus the Younger or Didymus Claudius, who was actually the son of Heraclides Ponticus. That is merely an assumption, which cannot be proven. The same is also the case for the changed form Ἀπίωνος in Suidas' testimony and the identification of the grammarian referred to there with the already discussed Apion (see above in this paragraph), as Hertz [1862] suggested. In the view of Hertz, Apion's possible "Ausfall gegen seinen 'Erzieher' Didymos" is understandable. But this is also pure speculation, though this suggestion was endorsed by Cohn [1894b].

155 Literature on Heraclides: Gräfenhan [1843–1850] III 64–65, Schmidt-Stählin [1920–1926] I 322 and 330, Daebritz-Funaioli [1912], Fornaro [1998g] and LGGA s.v. Heraclides (6).

156 See Suid. η 463 and α 2634; the text of the first passage named is quoted in the previous n. 153.

157 On this Didymus, see Daebritz-Funaioli [1912] 487.

158 The few surviving fragments of this work are collected and discussed by Meineke [1843] 377–381; some hints of other possible fragments are given by Daebritz-Funaioli [1912] 487. See also Heitsch [1963–1964] II 41 (S 1).

stories”).¹⁵⁹ It is perhaps on account of the dark brooding nature of the poem¹⁶⁰ that it later became the object of a commentary.¹⁶¹

According to Suidas, Heraclides “also composed many epic poems” (ἔγραψε δὲ καὶ ποιήματα ἐπικά πολλά), of which, however, none have survived. A treatise of Heraclides on the meaning and use of δεῖ and χρῆ belongs to the area of grammar.¹⁶² The Heraclides used by Orion as a source for his *Etymologicon*, contrary to the opinion above all of older research, is probably to be construed as the Younger and not the Elder.¹⁶³ Consequently, the work Περὶ ἐτυμολογιῶν, which Orion attributed to Heraclides by name, and also a series of etymologies ascribed to him by Orion and, additionally, in later *Etymologica*—though without mentioning the title of the work,¹⁶⁴—go back to Heraclides the Younger.

The grammarian, historian, Stoic philosopher and priest (ἱερογραμματεὺς) Chaeremon¹⁶⁵ was a contemporary of Heraclides. He was the head of the chair of grammar in Alexandria after Apion and before Dionysius of Alexandria.¹⁶⁶ Some time prior to the middle of the 1st century AD, Chaeremon was appointed, together with the philosopher Alexander of Aegae, as tutor of Nero at the Imperial court in Rome.¹⁶⁷ A fragment from Chaeremon’s grammatical activity has been preserved in Apollonius Dyscolus’ work *On Conjunctions*. According

159 See Artem. 4.63: ... εἰσι γὰρ καὶ παρὰ Λυκόφρονι ἐν τῇ Ἀλεξάνδρᾳ καὶ παρὰ Ἡρακλείδῃ τῷ Ποντικῷ ἐν ταῖς Λέσχαις καὶ παρὰ Παρθενίῳ ἐν ταῖς Ἐλεγεῖαις καὶ παρ’ ἄλλοις πολλοῖς ἱστορίαι ξένα καὶ ἄτριπτοι.

160 See Suid. η 463: ... δυσερμήνευτα καὶ πολλὴν τὴν ἀπορίαν ἔχοντα προβαλλομένων ζητημάτων.

161 This can be concluded from a remark in *Etym. Gud.* 297.49 s.v. Κῶναβος, which leads one to suppose the existence of a commentary on Heraclides’ Λέσχαι.

162 This work is attributed in *Etym. Magn.* 248.49–56 s.v. δοῦλος to a certain Ἡρακλῆς; according to Sylburg, the transmitted form is to be changed to the name Ἡρακλείδης.

163 See Wehrli [1969²e] 117–119 with a discussion of the older views of scholars on this topic; cf. Kleist [1865] 22–24.

164 See Orion s.v. ἀχλύς: ... οὕτως Ἡρακλείδης ὁ Ποντικός ἐν (τῷ) Περὶ ἐτυμολογιῶν (= *Exc. e cod. reg.* 2610 [G.H.K. Koës] in Sturz [1973] 186.9). The fragments of Heraclides deriving from this work are listed by Wehrli [1969²e] 117.

165 Literature on Chaeremon: Schwartz [1899], Schmid-Stählin [1920–1926] I, 369 and 439, Inwood [1997] and Razzetti [2003b]. Chaeremon’s fragments, especially those which derive from his historical works “History of Egypt” (Αἰγυπτιακὴ ἱστορία) and “Hieroglyphs” (Ἱερογλυφικά), are edited in *FGrHist* 618.

166 See Suid. δ 1173 s.v. Διονύσιος, Ἀλεξανδρεὺς, ὁ Γλαύκου υἱός, γραμματικός· ὅστις ἀπὸ Νέρωνος (ἦν καὶ) (add. Rohde) συνῆν καὶ τοῖς μέχρι Τραϊανοῦ (sc. ἐν Ῥώμῃ παιδεύσασιν) καὶ τῶν βιβλιοθηκῶν προὔστη καὶ ἐπὶ τῶν ἐπιστολῶν καὶ πρεσβειῶν ἐγένετο καὶ ἀποκριμάτων. ἦν δὲ καὶ διδάσκαλος Παρθενίου τοῦ γραμματικοῦ, μαθητῆς δὲ Χαιρήμονος τοῦ φιλοσόφου (= *FGrHist* 618 T 3), ὃν καὶ διεδέξατο ἐν Ἀλεξανδρείᾳ. On Apion, see above in this paragraph.

167 See Suid. α 1128 s.v. Ἀλέξανδρος Αἰγαῖος· φιλόσοφος Περιπατητικός, διδάσκαλος Νέρωνος τοῦ βασιλέως, ἅμα Χαιρήμονι τῷ φιλοσόφῳ (= *FGrHist* 618 T 2).

to Apollonius Dyscolus, Chaeremon discusses the question of whether the expletive conjunctions can be regarded as conjunctions at all and, moreover, whether they belong to the word class “conjunction”.¹⁶⁸ Unfortunately, it can no longer be determined from what context or which work Chaeremon’s view originally stems. It is certainly conceivable that it came from a work dealing with conjunctions, *i.e.* a special treatise *Περὶ συνδέσμων* (“On Conjunctions”), like the ones written by Tryphon and later by Apollonius Dyscolus.

The next in succession after Chaeremon in the Alexandrian chair for grammar was the grammarian Dionysius of Alexandria.¹⁶⁹ We know of Dionysius’ life and work only from Suidas’ biographical article,¹⁷⁰ which states that Dionysius was the son of Glaucus, a pupil of the grammarian Chaeremon, whom he succeeded as occupant of the chair for grammar, and also the teacher of the grammarian Parthenius.¹⁷¹ Dionysius lived in the period between Nero and Trajan, *i.e.* in the second half of the 1st century AD; he was head of the Alexandrian libraries and held the offices *ab epistulis et legationibus et responsis*. It is uncertain whether these positions suggest a stay in Rome, as Cohn maintains.¹⁷² There is no testimony referring to Dionysius’ writings.

The grammarian Soteridas of Epidauros,¹⁷³ probably the father, and not the husband of the scholar Pamphile,¹⁷⁴ was active before the reign of Nero and perhaps already during Caligula’s reign. Apart from the question of what role

168 See Apol. Dysc. *Conj.*, GG II/1.1, 247.30–248.13. Concerning the significance of expletive conjunctions in the ancient word class system, see Matthaios [1999] 582–584.

169 Literature on Dionysius of Alexandria: Gräfenhan [1843–1850] III 54 and 67 and Cohn [1903g].

170 See Suid. δ 1173 s.v. Διονύσιος Ἀλεξανδρεὺς—the text of this testimony is quoted in the previous n. 166.

171 On Parthenius, see below in § 6.1.

172 See Cohn [1903g] 985.

173 Literature on Soteridas: Gräfenhan [1843–1850] III 91, 106, 227–228, 258–259, Schmid-Stählin [1920–1926] I, 437 and 440, Gudeman [1927e] and LGGA s.v. Soteridas (A. Ippolito). On Soteridas’ lifetime, see Gudeman [1927e] 1233.

174 Pamphile is mostly known from her *ἱστορικὰ ὑπομνήματα*, which consists of 33 books and is a collection of literary and historical material of the most varied nature, as well as from an epitome of Ctesias’ historical works. She probably lived during Nero’s reign; cf. Gräfenhan [1843–1850] III 397 and 402, Schmid-Stählin [1920–1926] I 437, Sandys [1921³] 295 and Regenbogen [1949]. There is contradictory information about Soteridas and his relationship to Pamphile. In Suid. σ 875 Soteridas is mentioned as the husband of Pamphile, in σ 876, however, as her father. The complex question surrounding the genealogical relationship of Pamphile with Soteridas and with Socratidas, who also appears as her betrothed, is treated by Gudeman [1927e] 1232–1233; cf. Regenbogen [1949] 309–312. Gudeman, *loc. cit.*, finds it more probable that Soteridas was Pamphile’s father.

Soteridas may have played in connection with the composition of Pamphile's *Ἱστορικά ὑπομνήματα* ("Historical commentaries"),¹⁷⁵ Suidas attributes to him several works on philology and grammar.¹⁷⁶ These include a work on "Homeric problems" (*ζήτησεις Ὀμηρικαί*),¹⁷⁷ a commentary on Menander and Euripides, as well as a treatise on comedy (*Περὶ κωμωδίας*).¹⁷⁸ Two further works of Soteridas attested by Suidas deal with grammatical matters; the first is an orthographical treatise (*Ὀρθογραφία*), the second is a treatise on metrics (*Περὶ μέτρων*).

Pamphilus¹⁷⁹ was another grammarian who also came from Alexandria. Suidas (π 142) refers to him as *Ἀριστάρχειος* ("Aristarchean"), not because he was a direct pupil of Aristarchus, but because he was associated with the Aristarchean tradition, partly also on account of the Alexandrian grammatical chair, which Pamphilus presumably held. His lifetime can be delimited by the fact that Apion¹⁸⁰ is the youngest author mentioned by Pamphilus in his lexicographic work¹⁸¹ and, with respect to the *terminus ante quem*, by the date of Hadrian's reign, during which Pamphilus' lexicon was epitomized at first by Vestinus and then by Diogenianus. Thus Pamphilus' period of activity must have been during the second half of the 1st century AD.¹⁸² His achievements in the area of philology are associated with his extensive lexicographic collection, which formed the basis for later lexica, above all for Hesychius. Pamphilus' lexicon will be treated separately below, in the section dealing with Imperial and Late Antique lexicography.¹⁸³

175 Both of Suidas' articles on Soteridas (σ 875 and σ 876) as well as the article on Pamphile herself (Suid. π 139) attribute to him the authorship of Pamphile's work; the information in σ 876 derives from Dionysius of Halicarnassus the Musician (on whom, see below in this paragraph). On the authorship question of the *Ἱστορικά ὑπομνήματα*, see Gudeman [1927e] 1232–1233.

176 See Suid. σ 875.

177 It is improbable that *Sch. Hom. Il. 4.412b¹* stems from this work. A grammarian named Soteris is indeed cited here, but Dindorf probably incorrectly changed the name to Soteridas; on this question, see Erbse in the testimonies apparatus to *Sch. Hom. Il. 4.412b¹*.

178 See Bagordo [1998] 65 and 165–166.

179 Literature on Pamphilus: Gräfenhan [1843–1850] III 56–57 and passim, Schmid-Stählin [1920–1926] I 435–436, Wendel [1949b], Tosi [2000c] and LGGA s.v. Pamphilus (1). There is now a thorough study on Pamphilus with an edition and commentary on his fragments by Hatzimichali [2006].

180 On Apion, see above in this paragraph.

181 See Ath. 14.642e = fr. 4 H.; cf. also Hatzimichali [2006] 57–59.

182 The biographical information about Pamphilus has been presented and extensively discussed by Hatzimichali [2006] 11–14.

183 See below in § 6.1.

The list of Pamphilus' writings provided by Suidas names another work in addition to his lexicon, with the title *Λειμών* ("Meadow"). If the heading is not merely a secondary title for Pamphilus' lexicon, the work is more likely to be a Florilegium containing myths, anecdotes and exempla accompanied by a careful citation of the relevant source materials.¹⁸⁴ A work "On Plants" (*Περὶ βοτανῶν*), consisting of 6 books, was particularly influential. It was probably a botanical Onomastikon similar to that of Tryphon.¹⁸⁵ Pamphilus' philological works included a commentary with the title *Εἰς τὰ Νικάνδρου ἀνεξήγητα* ("Inexplicable in Nicander"),¹⁸⁶ as well as a treatise with the curious title *Ὅπικα*, whose content remains unknown.¹⁸⁷ Whether these writings constituted parts of the *Λειμών*, or whether they were independent works, is a matter of debate.

Suidas also testifies to the existence of a *Τέχνη κριτική* written by Pamphilus, though it should not be assumed that Pamphilus calls the philological discipline *κριτική*, following the Pergamenian grammarians, who also called themselves *κριτικοί*.¹⁸⁸ The work seems to be identical to the *Τέχνη γραμματική* ("Manual on grammar") which Suidas attributes in the immediately preceding article π 141 to a scholar of the same name, who is difficult to identify.¹⁸⁹ Suidas' article on the above mentioned Pamphilus concludes with the statement *καὶ ἄλλα πλείστα γραμματικά*, which in turn implies that he wrote several works on philological and grammatical matters. Specialized studies by Pamphilus on Homeric prosody can be inferred from specific quotations that have been transmitted in the corpus of the Homeric scholia. In contrast to previous research, which has assigned the relevant Pamphilus fragments to his lexicographic work, it seems plausible that Pamphilus discussed Homeric prosody in a separate work with the title *Ὀμηρικὴ προσωδία*, as did many grammarians of his time.¹⁹⁰ Since all of these fragments are scholia which go back to Herodian, it is reasonable to assume that Pamphilus' prosodic studies belonged to Herodian's sources.¹⁹¹

184 For a discussion of the possible contents of this work, see Hatzimichali [2006] 15–16.

185 A description of the work with edition and commentary of the fragments belonging to it is to be found in Hatzimichali [2006] 150–194.

186 See Hatzimichali [2006] 16–17.

187 See Hatzimichali [2006] 17–18.

188 On the terms *κριτική* and *κριτικός*, see Pfeiffer [1968] 157–158.

189 On this question, see Hatzimichali [2006] 18–20.

190 On prosodic studies during the Roman Empire, see below in § 4.

191 The fragments from Pamphilus' studies on Homeric prosody have been edited and discussed by Hatzimichali [2006] 107–149. On Herodian, see below in § 4.1.

The grammarian Heracleon,¹⁹² the son of Glaucus, is stated by Suidas and by *Sch. Hom. Il.* (bT) 21.577 to have originally come from Tylotis near Heracleopolis in Egypt and to have taught in Rome.¹⁹³ It is usually assumed that he lived during the reign of Augustus, but there is no certainty, nor any compelling reason for this dating.¹⁹⁴ Under closer investigation of the transmitted material, Heracleon would be placed definitively after Didymus and before Epaphroditus, *i.e.* in the first half of the 1st century AD.¹⁹⁵ His attitude towards the Alexandrian, especially the Aristarchean interpretation of Homer (see below) speaks for a later dating. Suidas also provides us with a list of Heracleon's writings, stating that he wrote a "Commentary on every book of the Homeric poems" (Ἰπόμνημα εἰς Ὀμηρον κατὰ ῥάψωδιαν) as well as a "Commentary on the lyric poets" (Ἰπόμνημα εἰς τοὺς λυρικοὺς). The majority of the surviving fragments refer to Heracleon's Homeric exegesis; they have been mainly transmitted in the Homeric scholia, but also in lexicographic works as in Harpocration, Hesychius and Stephanus of Byzantium. As can be seen from the preserved fragments, Heracleon attempted a comprehensive interpretation of the Homeric poems, including an investigation of language, grammar, etymology as well as of the historical material and topography. He consistently tried to make an independent judgment, often including criticism against Aristarchus.¹⁹⁶ Heracleon's grammatical studies included a treatise mentioned also by Suidas with the title: Περὶ τῶν παρ' Ὀμήρῳ προστακτικῶν ῥημάτων ("About the imperative verbs in Homer").

- 192 Literature on Heracleon: Susemihl [1891–1892] II 20–22, Schmid-Stählin [1920–1926] I 204 and 438, Gudeman [1912c], Sandys [1921³] 160, Fornaro [1998j] 387 and *LGGA s.v.* Heracleon (1) (A. Ippolito). Heracleon's fragments have been collected by Berndt [1914].
- 193 On Heracleon's origin and teaching activity in Rome, see Suid. η 455 *s.v.* Ἡρακλέων, Αἰγύπτιος, ἀπὸ κώμης Τιλώτεως οὐσης ὑπὸ τῇ Ἡρακλέους πόλει, γραμματικός, ἐπαίδευσε δὲ ἐν Ῥώμῃ and *Sch. Hom. Il.* (bT) 21.577: ... φησὶν Ἡρακλέων (fr. 15 Berndt) ἐν Ῥώμῃ τοῦτο τεθεῖσθαι. On the name of his father see Steph. Byz. α 50 *s.v.* Ἀγυιά: Ἡρακλέων δὲ ὁ Γλαύκωνος, α 410 *s.v.* Ἀρέθουσα and 386.7 *s.v.* Κροκύλειον: Ἡρακλέων δὲ ὁ Γλαύκου.
- 194 On the question of Heracleon's datation see Gudeman [1912d] 512–513. Heracleon is also placed in the Augustan period by A. Ippolito in *LGGA s.v.*
- 195 See above all Steph. Byz. α 410 *s.v.* Ἀρέθουσα (fr. 18 Berndt), in which Heracleon turns against an explanation by Didymus; interestingly, Heracleon's explanation is borrowed according to *Sch. Theoc.* 1.117b (fr. 2a Br.–Bi.) by Epaphroditus. Heracleon is connected with Epaphroditus by Steph. Byz. β 89 *s.v.* Βῆσσα, πόλις Λοκρῶν. Ἡρωδιανός (Καθ. προσ., *GG* II/1, Ὀρθ., *GG* II/2, 481.25–28) δι' ἐνὸς σ γράφει, Ἀπολλόδωρος (*FGrHist* 244 F 188) δὲ καὶ Ἐπαφρόδιτος (fr. 21 Br.–Bi.) καὶ Ἡρακλέων (fr. 17 Berndt) διὰ δύο. On the relationship between Heracleon and Epaphroditus, see Braswell-Billerbeck [2008] 52.
- 196 It remains unclear whether Heracleon tended towards an allegorical exegesis; on this question, see Gudeman [1912c] 514.

The grammarian Epaphroditus of Chaeronea¹⁹⁷ was raised and educated as a slave in the house of the grammarian Archias in Alexandria.¹⁹⁸ He was then acquired by the prefect of Egypt, M. Mettius Modestus, who appointed him as tutor for his son Petelinus. Epaphroditus thus came to Rome and lived there under Nero until the reign of Nerva. He was probably freed when the son of Modestus had outgrown his care. His Latin name was M. Mettius Epaphroditus. He seems to have gained full autonomy from the house of his patron, and even gained substantial wealth; he was able to obtain a library of 30,000 scrolls and even purchase two homes. For us today, Epaphroditus is an exceptionally tangible figure, as there is a marble statue in Rome, in the Villa Altieri, which depicts him. The statue bears the inscription (*CIL* VI 9454 = *ILS* 7769 = test. 3 Br.–Bi.): *M. Mettius Epaphroditus grammaticus Graecus | M. Mettius Germanus l(ibertus) fec(it)*.¹⁹⁹ The description of his occupation as a *grammaticus Graecus* and the information from Suidas' article that he had lived in Rome at the same time as Ptolemaeus, the son of Hephaestion,²⁰⁰ seems to indicate that Epaphroditus opened a school after having been freed. His grammatical school would have been the source of his prosperity.

Suidas speaks of a substantial number of writings (συγγράμματα δὲ κατέλιπεν ἱκανά) by Epaphroditus, without mentioning their titles or topics. They included, as can be inferred from other sources,²⁰¹ commentaries on each book of both the *Iliad* (Ἐπόμνημα τῆς Ἰλιάδος; fr. 16–43 Br.–Bi.) and the *Odyssey* (Ἐπόμνημα τῆς Ὀδυσσεΐας; fr. 44–47 Br.–Bi.),²⁰² a commentary on the pseudo-Hesiodic *Shield* (Ἐπόμνημα Ἀσπίδος Ἡσιόδου; fr. 54–55 Br.–Bi.)²⁰³ and

197 Literature on Epaphroditus: Gräfenhan [1843–1850] 111 65, Schmid-Stählin [1920–1926] I 439, Cohn [1905c], Sandys [1921³] 297, Christes [1979] 102–103, Fornaro [1997b], Braswell-Billerbeck [2008] 25–59 and *LGGA s.v.* Epaphroditus. Braswell-Billerbeck [2008] produced after Luenzner [1866] a complete edition of Epaphroditus' fragments with translation and extensive commentary.

198 On Epaphroditus' life, see Suid. ε 2004 (= test. 1 Br.–Bi.). This extensive article goes back to the biographical work of Hermippus of Berytus on slaves, who stood out in the educational system; see Cohn [1905c] 2711, Christes [1979] 102 n. 93, Braswell-Billerbeck [2008] 68 and 72 and also below in this paragraph. On the grammarian Archias (1st c. AD), see Cohn [1895], Montanari [1996i] and *LGGA s.v.* Archias. Little evidence of Archias' work is transmitted in Apollonius Sophistes' and in the lexicographic works of other writers; the fragments testify to Archias' interest in etymological and grammatical questions.

199 For a commentary on the inscription, see Braswell-Billerbeck [2008] 27 and 75–77.

200 On Hephaestion, see below in § 4.1.

201 On the sources for Epaphroditus' fragments, see Braswell-Billerbeck [2008] 41–48.

202 Braswell-Billerbeck [2008] regard fr. 48–53 as “Homeric” of uncertain origin and context within Epaphroditus' writings. For a description of Epaphroditus' works on the Homeric poems, see Braswell-Billerbeck [2008] 34–39.

203 See Braswell-Billerbeck [2008] 40.

also on the *Aetia* of Callimachus (‘Υπόμνημα Καλλιμάχου Αιτίων; fr. 56–57 Br.–Bi.).²⁰⁴ Epaphroditus’ Homeric exegesis is his best known work. He dealt with both questions of content and of language and grammar, while also devoting close attention to Homeric place names and their etymologies, which is why he is so extensively quoted by Stephanus of Byzantium. In addition, through his commentary on Callimachus’ *Aetia*, Epaphroditus made a substantial contribution to the interpretation of Alexandrian poetry. Due to his onomasiological interest and research, he also extended Theon’s methods and focal points in this area.

Epaphroditus’ oeuvre also included an alphabetical lexicographic work entitled Λέξεις κατὰ στοιχείον συγγεγυμνασμέναι—better known by the abbreviated name Λέξεις (fr. 14–15 Br.–Bi.). This work did not merely serve to explain the language of comedy, as was previously erroneously thought to be the case.²⁰⁵ Finally, Epaphroditus’ work Περὶ στοιχείων did not refer to the theory of sounds or letters: rather, the expression στοιχείον is to be understood in this case as having the meaning of “word element”. The work bore the title “On the elements of words” and dealt with etymological matters. From the preserved fragments (fr. 1–13 Br.–Bi.) it is evident that Epaphroditus implemented Seleucus’ attempts to determine the etymologies of words based upon strictly grammatical criteria;²⁰⁶ this was also to a certain extent attempted by Heraclides Ponticus the Younger.²⁰⁷ Such criteria were primarily the phonological and morphological alterations (πάθη)²⁰⁸ a word stem had undergone.

Lucillus,²⁰⁹ a grammarian who lived in the middle of the 1st century AD, was born in Tarrha in Crete. Nothing is known about the place of his scholarly

204 See Braswell-Billerbeck [2008] 40.

205 Luenzner [1866] sought to establish a connection between Epaphroditus’ lexicographic collection and the lexicons of Didymus and Theon on the language of comedy. Luenzner’s view has already been criticized by Cohn [1905c] 2714; see also Braswell-Billerbeck [2008] 28–34.

206 Luenzner [1866] assumed the unity of the two last-mentioned works of Epaphroditus and supposed that the title of this specific work was Λέξεις κατὰ στοιχείον. This view has now been rejected by Braswell-Billerbeck [2008] 28–34 with convincing arguments based upon newly discovered material.

207 On the achievements of the two grammarians in the area of etymology, see above in this paragraph. On Epaphroditus’ etymological method, see Braswell-Billerbeck [2008] 56–57.

208 On the grammatical πάθη-theory, see below n. 414, and Pagani in this volume.

209 Literature on Lucillus: Gräfenhan [1843–1850] II 173 and III 252–253, Schmid-Stählin [1920–1926] I 439, Gudeman [1927a], Baumbach [1999a] and LGGA s.v. Lucillus. The fragments of Lucillus’ work Περὶ Θεσσαλονίκης are included in *FHG* IV 440–441. His philological-grammatical fragments are collected and commented by Linnenkugel [1926]

activity; he probably lived in Alexandria²¹⁰ or also in Rome, as his name indicates. We know of his writings through Stephanus of Byzantium,²¹¹ but also on the basis of the subscription in the scholia to the fourth book of Apollonius Rhodius' *Argonautica* (*Sch.* A.R. subscr. 329.8–9 Wendel): παράκειται τὰ σχόλια ἐκ τῶν Λουκίλλου Ταρραίου καὶ Σοφοκλείου καὶ Θέωνος. Lucillus followed Theon in the commentary tradition of Apollonius Rhodius, and his work was taken into consideration for the compilation of the corpus of scholia, as can be inferred from the quoted subscription.²¹² The very few surviving fragments of Lucillus' exegesis show that the grammarian from Tarrha turned his attention to the primary sources of the poet, focusing on Apollonius' innovations and deviations from the mythological vulgata.²¹³ Lucillus' commentary, however, was short and limited to that which was considered essential and necessary, avoiding the superfluous erudition evident in Theon's commentary.

According to information provided by Stephanus of Byzantium, another long-standing achievement of Lucillus was his *Περὶ παροιμιῶν* ("On proverbs"), which consisted of three books and, together with the collection of Didymus, formed part of the main sources of Zenobius' collection.²¹⁴ Lucillus' work *Περὶ Θεσσαλονίκης* ("On Thessalonica") was probably historical in nature.²¹⁵ Two further works of Lucillus are of special significance for the history of ancient scholarship. We have evidence of a grammatical treatise with the title *Τεχνικά*, a fragment of which is transmitted in *Sch.* Dion. T., *GG* I/3, 110.32–33 (= fr. XIII Linnenkugel) which deals with the character and position of 'grammar' in the ancient system of sciences. In this fragment, Lucillus carried out a classification of the scientific fields into various types, according to the methods upon which each one was based, their contents and the benefits each one as designed to achieve. Lucillus' classification envisioned four εἶδη ("types") of

69–114; on this work, see however the review of Martin [1929]. The identification of Lucillus with the epigram poet Lucillus is groundless.

210 The fact that according to the subscription of the scholia on Apollonius Rhodius (see in the main text) Lucillus belongs to the same scholarly tradition as Sophocleus and Theon speaks for locating his activity in Alexandria.

211 See Steph. Byz. 604.5 s.v. Τάρρα. . . . Λούκιλλος δ' ἦν ἀπὸ Τάρρας τῆς Κρητικῆς πόλεως. φέρεται δὲ τούτου τὰ περὶ παροιμιῶν τρία βιβλία ἄριστα καὶ περὶ γραμμῶν καὶ τεχνικά γλαφυρώτατα. See also Steph. Byz. 311.6 s.v. Θεσσαλονίκη. . . . Λούκιλλος δὲ ὁ Ταρραῖος περὶ Θεσσαλονίκης βιβλίον ἔγραψε κτλ. (= *FHG* IV 440 fr. 1).

212 See Wendel [1932a] 108–110 and Gudeman [1927a] 1787–1788.

213 See fr. VIII–XII Linnenkugel ([1926] 88–96) as well as the literature in the previous note 209.

214 See fr. I–IV Linnenkugel ([1926] 74–83). On Lucillus' collection of proverbs, see Gudeman [1927a] 1788–1790.

215 See fr. V–VII Linnenkugel ([1926] 83–88).

τέχνη, an ἀποτελεσματικόν, a πρακτικόν, an ὀργανικόν and a θεωρητικόν. A special section of his Τεχνικά was the treatise Περὶ γραμμάτων, which dealt with the letters and history of the Greek alphabet (fr. XIV–XVI Linnenkugel).

In the field of ancient scholarship, the grammarian Astyages²¹⁶ was particularly important because of his commentary on Callimachus' poetry (Εἰς Καλλίμαχον τὸν ποιητὴν ὑπόμνημα).²¹⁷ We know have no knowledge of precisely when or where Astyages lived. However, since he was concerned with the interpretation of Hellenistic literature, it can probably be assumed that he shared the new characteristic of contemporary scholarship and belonged to the generation of the 1st century AD. The list of works cited by Suidas suggests that Astyages wrote several grammatical works in addition to his Callimachus commentary. Among his grammatical writings we know of a Τέχνη γραμματική ("Manual on grammar"), a work entitled Περὶ διαλέκτων ("On dialects"), a treatise Περὶ μέτρων ("On Versification") as well as a work named Κανόνες ὀνομαστικοί ("Rules of nominal inflection"). A treatise on the number of cases, in which Astyages argued that there are six nominal cases, is mentioned in the part of the scholia on Dionysius Thrax in Cod. Lond. Add. 5118 that derives from Choeroboscus. The work dealing with the rules for declensions seems to indicate that Astyages lived after Herodian. The quantity of Astyages' grammatical works, as compared with his philological activity, also speaks in favour of a later datation, most probably at the beginning of the 2nd century AD. But nothing can be assumed with certainty in this question.

The end of the 1st century AD was marked by a geographic expansion of the philological discipline beyond the borders of Alexandria and Rome. Several cultural centers in the eastern part of the Roman Empire were thus integrated into the field of scholarship. A number of significant philologists, whose work is described below, philologists stand out in this period:

Herennius Philo from Byblos in Phoenicia²¹⁸ was a learned antiquarian, doxographer and grammarian of the second half of the 1st century AD. He also

216 Literature on Astyages: Gräfenhan [1843–1850] III 83, Schmid-Stählin [1920–1926] I 439, Cohn [1896] and LGGA s.v. Astyages (G. Uzziardello).

217 See Suid. α 4259 s.v. Ἀστυάγης, γραμματικός. Τέχνην γραμματικὴν, Περὶ διαλέκτων, Περὶ μέτρων, Κανόνες ὀνομαστικούς, καὶ εἰς Καλλίμαχον τὸν ποιητὴν ὑπόμνημα.

218 Literature on Herennius Philo: Gräfenhan [1843–1850] III 44–45 and passim, Schmid-Stählin [1920–1926] II 867–868, Gudeman [1912e], Christes [1979] 105–106 and 137–138, Fornaro [1998k], where further references on Philo are given, and LGGA s.v. Herennius Philo (2). Philo's fragments, especially those from his antiquarian and cultural-historical writings, are edited in *FGrHist* 790.

survived the reign of Hadrian, about whom he wrote his *Περὶ τῆς βασιλείας Ἀδριανοῦ*, a treatise, which is now completely lost.²¹⁹ Philo was probably not a former slave and freedman, but a client of the consul Herennius Severus, who according to Pliny the Younger (*Ep.* 4.28.1) took great interest in educational matters. Philo bore the praenomen “Herennius”, in recognition of the consul’s support in granting him citizenship.²²⁰ Thus Philo may have been present for a lengthy period of his life in his hometown, and it was probably in Byblos that he taught his countryman and pupil Hermippus of Berytus.²²¹

Herennius Philo wrote several works, not all of which are enumerated in Suidas’ article (φ 447 = *FGrHist* 790 T 1). His “Phoenician history” (Φοινικικὴ ἱστορία or Φοινικικά; *FGrHist* 790 F 1–6) belongs to his cultural-historical and doxographical works. It consisted of nine books, and is allegedly a revision of a writing by Sanchuniathon, who is thought to have composed a history of Phoenicia during the reign of Semiramis in pre-Trojan times. The works “On the Judeans” (Περὶ τῶν Ἰουδαίων; *FGrHist* 790 F 9–*11) and “On Phoenician letters” or “On Phoenician elements” (Περὶ τῶν Φοινίκων στοιχείων), which presumably constituted a part of the “Phoenician history”, were also related to Phoenicia.²²² We owe to Philo’s antiquarian interest the biographical and historical work “On cities and on the famous men, who were brought forth in each of them” (Περὶ πόλεων καὶ οὐδὲς ἐκάστη αὐτῶν ἐνδόξους ἦνεργεν; *FGrHist* 790 F 15–51) in 30 books. This collection later made up the basis for the biographical and ethnographical studies by Hesychius Milesius, Orus and Stephanus of Byzantium.²²³

Philo also composed a bibliographical guide of twelve books with the title “On owning and selecting books” (Περὶ κτήσεως καὶ ἐκλογῆς βιβλίων), which was organized according to the scientific subject of the works discussed in this collection. Additionally, he compiled “material worth knowing” in his work *Περὶ χρηστομαθείας* (*FGrHist* 790 F 14), and thus became the forerunner of the later chrestomathies. Philo’s significance for the history of scholarship is, however, primarily due to his dictionary of synonymous words *Περὶ τῶν διαφόρων σημαينوμένων*. It was the first synonymicon and formed the basis for the

219 On Philo’s life, see Suid. φ 447 (= *FGrHist* 790 T 1); see also Suidas’ testimonies quoted under *FGrHist* 790 T 2, which refer to Philo’s contemporaries. On the biographical information regarding Philo, see Gudeman [1912e] 650–651 and Christes [1979] 106.

220 See Christes [1979] 105–196 and 137–138.

221 On Hermippus of Berytus, see below in the next paragraph.

222 On the contents of Philo’s historical studies, see Gudeman [1912e] 659–661.

223 See Gudeman [1912e] 654–659. On Orus and Stephanus of Byzantium, see below in § 6.2.

collections compiled by ‘Ammonius’, ‘Ptolemaeus’, and, in the Byzantine period, by Symeon.²²⁴

Hermippus of Berytus²²⁵ was, as already mentioned, a student of Herennius Philo and lived during Hadrian’s reign. Originally a slave, he was educated by his teacher Philo and, thanks to his exceptional mental aptitude, was granted his freedom. Once Hermippus’ education was completed, Philo brought him to Rome in order to recommend him to his patron Herennius Severus. Hermippus is not mentioned as a ‘grammarian’ in the biographical testimonies but, presumably due to his extensive knowledge, he is characterized as a “scholar” (λόγιος). He was, in fact, a “Buntschriftsteller”. Tertullian (*De anim.* 46.10–11 = *FGrHist* 1061 T 5) mentions a five-volume work of Hermippus titled ‘Ονειροκριτικά (“Interpretations of dreams”) and Clemens of Alexandria (*Strom.* 6.16.145 = *FGrHist* 1061 F 6) attests to the work Περὶ τῆς ἐβδομάδος (“About the days of the week”). The most popular work of Hermippus, which has been frequently cited, was his Περὶ τῶν ἐν παιδείᾳ διαπρεψάντων δούλων (“About slaves who have excelled in education”), in two books. The goal of Hermippus was not, however, to write a purely biographical work, but to demonstrate that a slave is in no way inferior to a freeborn in his mental capacities: thus Hermippus’ ultimate aim was to celebrate education as power.²²⁶

The grammarian Nicanor of Alexandria was, according to Suidas,²²⁷ a contemporary of Hermippus. Nicanor was the son of an otherwise unknown Hermeias.²²⁸ His achievements in the area of grammar are associated with his

224 On the synonymica, see below in § 6.2. The works “Deverbatives” (Τὰ ῥηματικά) and “On the Language of the Romans” (Περὶ Ῥωμαίων διαλέκτου), which are cited in *Etym. Magn.* under Philo’s name, should be attributed to the grammarian Philoxenus, as is evident from the relevant entries in *Etym. Gen.*

225 Literature on Hermippus: Schmid-Stählin [1920–1926] II 868, Heibges [1912], Christes [1979] 137–140, Sartori [1981], Montanari [1998b] and *LGG A s.v.* Hermippus (2) (A. Ippolito). The fragments from his work are collected in *FHG* III 51–52 and *FGrHist* 1061; see also Müller in *FHG* III 35–36. The main biographical testimony concerning Hermippus’ life is Suid. ε 3045 s.v. “Ἑρμιππος, Βηρύτιος, ἀπὸ κώμης μεσογαίου, μαθητῆς Φίλωνος τοῦ Βυβλίου· ὑφ’ οὗ ὤκειώθη Ἑρηνίῳ Σευήρῳ ἐπὶ Ἀδριανοῦ τοῦ βασιλέως, ἔκδουλος ὦν γένος, λόγιος σφόδρα· καὶ ἔγραψε πολλά. ἔγραψε καὶ περὶ ὄνειρων; cf. Suid. ν 375 s.v. Νικάνωρ, ὁ Ἑρμείου, Ἀλεξανδρεὺς, γραμματικὸς, γεγωνὸς ἐπὶ Ἀδριανοῦ τοῦ Καίσαρος, ὅτε καὶ Ἑρμιππος ὁ Βηρύτιος.

226 See Christes [1979] 139–140.

227 See Suid. ν 375 s.v. Νικάνωρ—the text is printed in the previous n. 225.

228 Literature on Nicanor: Gräfenhan [1843–1850] III 67–68, 94–95 and 189, Schmid-Stählin [1920–1926] II 868–869, Sandys [1921³] 322, Wendel [1936], Bagordo [1998] 68–69, Matthaios [2000b] and *LGG A s.v.* Nicanor (3) (F. Montana). The fragments from his writings Περὶ Ἀλεξανδρείας and Πρὸς Ἀδριανόν are edited in *FGrHist* 628; on the collections of Nicanor’s fragments pertaining to his punctuation theory, see below n. 373.

theory of punctuation, which will be presented separately below.²²⁹ Nicanor, however, also dealt with several philological and grammatical subjects beyond the punctuation issue. These works, which are listed in Suidas, are mainly known only by their titles. He is attested as the author of a work with the title *Περὶ τοῦ ναυστάθμου* (“On the ship’s hold [in the *Iliad*]”), which was written following the model of Aristarchus.²³⁰ Nicanor also wrote a treatise on the form *ᾠνάξ* (*Περὶ τοῦ ᾠνάξ*),²³¹ and a work on the material dealt with in comedies, bearing the titled *Κωμωδούμενα* (“Contents of comedy”).²³² Nicanor’s writings *Περὶ Ἀλεξανδρείας* (“On Alexandria”) and *Πρὸς Ἀδριανόν* (“To the Emperor Hadrian”) are attested by Stephanus of Byzantium. Jacoby suggests that they constituted one and the same work having the title *Περὶ Ἀλεξανδρείας πρὸς Ἀδριανόν*. Whatever the case may be, it can be assumed on the basis of the preserved fragments that these treatises dealt with grammatical matters²³³—unless the fragments in question merely happened to address the excerpter’s favorite subjects.

An important figure in the history of Imperial philology was Telephus of Pergamum.²³⁴ Telephus was probably born in the last decades of the 1st century, which means that he may have come to Rome around 140 and was perhaps appointed along with Hephaestion by Antonius Pius as teacher of the second adopted prince, the future Emperor L. Verus.²³⁵ During this period, Telephus appears to have gained a high reputation. In the ancient testimonies, Telephus is ususally characterized as *γραμματικός*;²³⁶ Aelian, however, called him *κριτικός*.²³⁷ Whether the title *κριτικός* is due to Telephus’ Pergamian origin or corresponds to his philological-grammatical theories, on the basis

229 See below in § 4.1.

230 On this writing of Aristarchus, see Montana in this volume.

231 Wendel [1936] 275 assumes that the work “vielleicht nicht nur die Gesetze der Krasis, sondern die von den Grammatikern gerne behandelte Erscheinung der Synaloiphe in allen ihren Arten darstellte”.

232 See Bagordo [1998] 68–69 and 153.

233 See Wendel [1936] 275–276.

234 Literature on Telephus: Gräfenhan [1843–1850] III 39–40, 149–150, Schmid-Stählin [1920–1926] II 869, Schrader [1902], Wendel [1934a], Bagordo [1998] 69, Baumbach [2002a] and LGGA s.v. Telephus (L. Pagani). The fragments of his historical work are collected in *FHG* III 634–635; the fragments of his works on Pergamum, above all the writing “On the Kings of Pergamum” (*Περὶ τῶν Περγάμου βασιλέων*), are edited in *FGrHist* 505; see also *FGrHist* 1071.

235 See *Hist. Aug. Verus* 2.5. On Hephaestion, see below in § 5.

236 See Gal. *De san. tuenda* v 4.15, vi 333–334 Kühn, 12.28, vi 379–380 Kühn, Suid. η 495 s.v. Τήλεφος, Περγαμηγός, γραμματικός and *Hist. Aug. Verus* 2.5.

237 See Ael. *NA* 10.42: λέγει ταῦτα Τήλεφος ὁ κριτικός ὁ ἐκ τοῦ Μυσίου Περγάμου.

of which Aelian wished to present Telephus as a representative of the Stoic-Pergamenian tradition and to distinguish him from the Alexandrian school, is not easy to determine.

Telephus' activity encompasses all areas of the ancient γραμματική, *i.e.* both grammar and philology, though without neglecting rhetoric or historiography.²³⁸ Fundamental questions on the nature of scholarship were examined in what amounted to an introduction to the philological discipline. Suidas provides no special title, but a summary of the work's contents: ἐν οἷς παρατίθεται πόσα χρῆ εἰδέναι τὸν γραμματικόν.²³⁹ The work is an attempt to clarify the areas and topics for which 'grammar' was responsible, whereas the work Ποικίλη φιλομάθεια, consisting of two books, was a selection of material considered to be of interest and worth knowing, taken from the field of scholarship and literary history. Telephus' Βιβλιακὴ ἐμπειρία, composed of three books, was a critical bibliographical guide, somewhat akin to the work of Herennius Philo, since it also seeks to prove τὰ κτήσεως ἄξια βιβλία.²⁴⁰ His work Βίοι τραγικῶν καὶ κωμικῶν ("Lives of tragedians and comedians") belongs to the history of literature, but only its title is known.²⁴¹ It is, however, interesting that Telephus, like Epitherses before him and probably also Theon,²⁴² dealt with both tragedy and comedy in the same work.

Homer played a prominent role in Telephus' philological studies, with attention to numerous aspects of the Homeric poems. In the works Περί τῆς καθ' Ὀμηρον ῥητορικῆς and Περί τῶν παρ' Ὀμήρῳ σχημάτων ῥητορικῶν Telephus sought to show that Homer was the father of rhetoric, and these works exerted a strong influence on the ancient interpretation of Homer.²⁴³ In the work Περί τῆς Ὀμήρου καὶ Πλάτωνος πλάνης he attempted, basing his arguments on an allegorical interpretation, to eliminate Plato's offenses against Homer. His work Περί τῆς Ὀδυσσεύς πλάνης probably dealt with an old Stoic problem

238 A list of Telephus' writings is attested in Suid. η 495.

239 A passage from the eighth book of this work is quoted in *Sch. Hom. Il. (A)* 10.545–6a¹. Wendel [1934a] 369 also attributed *Sch. Hom. Il. (A)* 10.53a¹ to this work (in this scholion Telephus criticizes Didymus) as well as (T) 15.668b.

240 See Wendel [1934a] 370; on the bibliographical work of Herennius Philo, see above in this paragraph.

241 See Bagordo [1998] 69 and 166.

242 See below in § 6.1, and above n. 97.

243 See Wendel [1934a] 370–371. On the position of Schrader [1902], according to whom it is not only the Homeric scholia (see Lehnert [1896]) that derive from Telephus' work, but also the rhetorical treatments of the Homeric speeches in the *Zetemata* of Porphyrius, in the so-called *Vita Homeri* of Plutarch, in Dionysius of Halicarnassus and Hermogenes, see Schmid-Stählin [1920–1926] II/2, 869 n. 9 and Wendel [1934a] 370–371. A different opinion is expressed by Wehrli [1928] 6–9.

concerning Homeric geography.²⁴⁴ The work “Ὅτι μόνος Ὀμηρος τῶν ἀρχαίων ἐλληνίζει” treats the question of how one can best learn the correct use of the Greek language by studying Homer.²⁴⁵ This work thus marks an entry into the realm of grammar, especially the field of *hellenismos*.

In this context, mention should also be made of Telephus’ work *Περὶ συντάξεως λόγου Ἀττικοῦ* in five books, a syntactical treatise, which very likely was at the service of Atticism. In the field of lexicography, Telephus wrote an *Onomasticon* consisting of ten books, which bore the title Ὠκυτόκιον (“Means of giving birth easily”). According to Suidas, the work was a collection of epithets for rhetorical and poetic use (ἔστι δὲ συναγωγὴ ἐπιθέτων εἰς τὸ αὐτὸ πρᾶγμα ἀρμοζόντων πρὸς ἔτοιμον εὐπορίαν φράσεως).²⁴⁶ Another lexicographic work by Telephus was an alphabetically arranged *Onomasticon* on garments and other articles of daily use (*Περὶ χρήσεως ἡτοι ὀνομάτων ἐσθήτων καὶ τῶν ἄλλων οἷς χρώμεθα*).²⁴⁷ The works *Περὶ τῶν Ἀθήνησι δικαστηρίων* and *Περὶ τῶν Ἀθήνησι νόμων καὶ ἐθῶν* had historical-antiquarian character and dealt with Athenian law and the judiciary. Finally, Telephus dedicated three works to the history of his native city of Pergamum, namely the *Περιήγησις Περγάμου* in two books, the *Περὶ τοῦ ἐν Περγάμῳ Σεβαστείου* and the *Περὶ τῶν Περγάμου βασιλέων*.

Alexander of Cotiaeion in Phrygia was one of the most famous grammarians of this period.²⁴⁸ Alexander was the teacher of Aelius Aristides, and his life is described in great detail by the latter in his twelfth speech (Alex. Cot. test. 1 Dyck)—a consolation speech to the residents of Cotiaeion on the occasion of Alexander’s death, giving a vivid portrait of the grammarian. With the help of this source, Alexander’s biographical data can be reconstructed as follows:²⁴⁹ He was probably born around 70–80 AD and, since he reached quite a venerable age, he would have lived until the middle of the 2nd century. Alexander was active in Rome as a grammarian and came to enjoy such high regard that he was appointed as tutor of Marcus Aurelius.²⁵⁰ Even at a later date, he appears to have retained his position at the imperial court (Aristid. *Or.* 12, I 138. 139. 144).

244 See Wendel [1934a] 371.

245 Wendel [1934a] 370 links this work with the Atticistic doctrine of Telephus and believes that the Pergamian grammarian regarded Homer as a representative of the Attic idiom. On the ancient *Hellenismos* theory, see the contribution of Pagani in this volume.

246 On this work by Telephus and on the onomastic dictionaries, see below in § 6.2.

247 On Telephus’ lexicographic works, see Cohn [1913] 692 and Tolkiehn [1925] 2458.

248 Literature on Alexander of Cotiaeion: Lehrs [1837] 8–16, Gräfenhan [1843–1850] III 41–42, 163 and 264–265, Schmid-Stählin [1920–1926] II 869–870, Sandys [1921³] 312, Wentzel [1894a], Montanari [1996a] and LGGA s.v. Alexander (6) Cotiaeus (F. Montana). The extant fragments from Alexander’s writings have been collected and discussed by Dyck [1991].

249 See Dyck [1991] 307–308.

250 Cf. M. Ant. 1.10 (= test. 2 Dyck) and *Hist. Aug. Ant.* 2 (= test. 3 Dyck).

Alexander was a true representative of the Second Sophistic. As a σοφιστής, he had been paid for his teaching and had therefore come into a substantial fortune, which he invested in his native city by financing various institutions. His erudition is highlighted by both Aelius Aristides and Stephanus of Byzantium.²⁵¹ According to Aelius Aristides (*Or.* 12, I 136. 137. 142. 143. 146), his philological-grammatical activity, mainly represented by means of lectures rather than in specific writings, included all Greek poets and prose writers. Aristides quotes a single work by Alexander, a Ὀμηρικὴ συγγραφή, which is probably the same work, consisting of at least two books, that Porphyry cites under the title Ἐξηγητικά (test. 6 = fr. 2 Dyck). Judging by the fragments that can be assigned to this treatise with certainty (fr. 1–3 Dyck), in this work Alexander was primarily concerned with the interpretation of various passages from the Homeric poems.²⁵²

Another work of Alexander known by its title was a particularly extensive lexicographic collection Περὶ παντοδαπῆς ὕλης or Παντοδαπά in 24 books (fr. 4–5 Dyck).²⁵³ We have information on these two works from a series of fragments (fr. 6–15 Dyck), though Dyck has left the question open on how they should be assigned to one or the other of the two works. The fragments consist mostly in explanations of Homeric words, but also refer to other subjects. Alexander seems to have been highly regarded not only by his contemporaries but also by subsequent grammarians, who cite from his writings. His interpretation of Homer, however, does not stand out for its originality nor does it display a tendency toward a critical discussion of the philological past. In his function as a teacher, Alexander was primarily a mediator of knowledge; as a philologist, however, he was a “routinier”, as Dyck ([1991] 335) correctly characterized him.²⁵⁴

Pius²⁵⁵—a “wandernder Grammatiker” according to Schmidt [1854] 273—was active in Memphis and Sparta;²⁵⁶ the dates of his lifetime, however, are uncertain. With all due caution, we can assume that he probably lived toward

251 See Steph. Byz. 379.3 s.v. Κοτιάειον... ἔνθα ἦν Ἀλέξανδρος ὁ Ἀσκληπιάδου γραμματικὸς (= test. 5 Dyck) πολυμαθέστατος χρηματίζων.

252 On the contents and character of Alexander's Ἐξηγητικά, see Erbse [1960] 53–56.

253 The first variation for the title is attested by Stephanus of Byzantium (Steph. Byz. 379.3 s.v. Κοτιάειον = test. 5 Dyck), who also mentions the number of books; the second one appears in the *Etymologicum Genuinum* (fr. 4 Dyck) and in the Homeric *scholia* (fr. 5 Dyck).

254 For an appraisal of Alexander's philological accomplishments, see Dyck [1991] 333–335.

255 Literature on Pius: Gräfenhan [1843–1850] II 50, Hiller [1869], Schmid–Stählin [1920–24] II 870, Strout–French [1950], Simons [2000] and LGGA s.v. Pius (A. Ippolito). The surviving fragments were collected and commented upon by Hiller [1869].

256 See *Sch. Hom. Od.* 4.356 (= fr. 9 Hiller)—*pace* Pontani's conjecture Ἀπίων (*ad loc.*) instead of the assumed Πίος—and 8.372 (= fr. 12 Hiller). According to these testimonies, Pius owed his explanations to his own autopsia at these places.

the end of the 2nd century, perhaps after the reign of Marcus Aurelius.²⁵⁷ Pius' work is mentioned by its title in *Etym. Gen.* (= *Etym. Magn.* 821.55) s.v. ὠμῆρησεν. Since a ὑπόμνημα to the 16th book of the *Odyssey* is quoted there, it can be assumed that Pius wrote a commentary on the Homeric poems, probably on each book of the *Iliad* and the *Odyssey*. The fragments that have survived from this work (fr. 1–15 Hiller), show that Pius' commentary treated matters of the Homeric language as well as questions of content and style. According to *Sch. Hom. Il.* (bT) 12.175–81b (= fr. 5 Hiller), Pius turned against Aristarchus' athetesis of the *Iliad* lines in question. This led Hiller to believe that the main concern of Pius' commentary was to oppose Aristarchus' athetesis. It seems plausible to assume that Pius stood in critical opposition to the old Alexandrian exegesis, especially against that of Aristarchus. What is somewhat implausible is Hiller's conclusion that all the Homeric scholia directed against Aristarchus, including those where Pius is not mentioned by name, are traceable back to the latter.²⁵⁸ It has also been postulated on the basis of *Sch. Soph. Aj.* 408 (= fr. 16 H.) that Pius wrote a commentary on Sophocles; the exact context of this scholium, however, remains uncertain.²⁵⁹

A grammarian named Irenaeus²⁶⁰—probably not identical with the Atticist Irenaeus, and also known by the Latin name Minucius Pacatus²⁶¹—lived around the middle of the 2nd century. Irenaeus' activity in the field of philology included commentaries on the individual books of Apollonius Rhodius' *Argonautica*. His contribution becomes tangible through the fact that the grammarian Sophocleus inveighed vehemently against his views.²⁶² According to a testimony in *Lex. Rhet. Cant.* 22.23–23.18 (s.vv. ὀροσάγγης / σαγγάνδης / παρασάγγης / ἄγγαρος [= fr. 16 Haupt]), Irenaeus also wrote a commentary on Herodotus and, on the basis of the *Sch. Eur. Med.* 218 (fr. 17 Haupt), presumably on Euripides' *Medea* as well.

257 The counterposition says that Pius was a contemporary or immediate predecessor of Didymus, a thesis that is not very convincing. On Pius' life, see Strout-French [1950] 1891 with further references.

258 See Lühns [1992] 269 note 376.

259 See Hiller [1869] 90–91 and Strout-French [1950] 1892.

260 Literature on Irenaeus: Gräfenhan [1843–1850] III 249, Schmid-Stählin [1920–1926] II 870, Cohn [1905b] 2121, Wendel [1932a] 106–107, 111 and 115 and Fornaro [1997a] 919. Irenaeus' fragments have been collected by Haupt [1871–1876].

261 On the Atticist Irenaeus, alias Minucius Pacatus, see below in section 6. Schmidt-Stählin [1920–1926] II/2, 870 and Wendel [1932a] 106–107 speak against the identification of the two figures; Cohn [1905b] 2121, however, is in favor of this view.

262 Irenaeus is quoted four times in the scholia on Apollonius Rhodius; see *Sch. A.R.* 1.1299 (= fr. 18 H.), 2.123–129e (fr. 19 H.), 2.992 (fr. 20 H.) and 2.1015 (fr. 21 H.). On the relationship between Irenaeus and Sophocleus, see Wendel [1932a] 106.

The grammarian Palamedes²⁶³ also belongs to the (late) 2nd century AD. Both Athenaeus (9.397a) and Suidas (π 43) label him by his origin, Ἑλεατικός.²⁶⁴ The circumstances of his life and the place of his activity remain unknown. Athenaeus lists him as a participant at Larensius' banquet, and this is the only available information on his life. A "Commentary on Pindar" mentioned by Suidas (ὑπόμνημα εἰς Πίνδαρον τὸν ποιητὴν) attests to Palamedes' philological activity, but no fragments from this work have survived. This reasonably leads to the conclusion that Palamedes' commentary had no effect on the development of the corpus of the Pindaric scholia.²⁶⁵ The major part of Palamedes' philological activity consisted in lexicographic works, which included a Λέξις κωμική ("The language of comedy") and a Λέξις τραγική ("The language of tragedy")²⁶⁶ as well as an Ὀνοματολόγος, which was apparently a dictionary arranged on the basis of synonymous expressions concerning specific semantic fields such as Pollux' *Onomasticon*.²⁶⁷

Salustius,²⁶⁸ a grammarian who is probably identical with the scholar of the same name cited by Stephanus of Byzantium (α 75 s.v. Ἀζίλις), lived according to Wilamowitz in the 4th or even 5th century,²⁶⁹ though it is not inconceivable that he lived somewhat earlier. Salustius is the author of a commentary on Callimachus' *Hecale*, which was still in use during Suidas' time.²⁷⁰ It is very

-
- 263 Literature on Palamedes: Gräfenhan [1843–1850] III 178 and 261, Förster [1875], Schmid-Stählin [1920–1926] II 870, Wendel [1942b], Bagordo [1998] 69, Matthaios [2000c] and LGGA s.v. Palamedes.
- 264 The attempts to set Palamedes in relation with the Eleatic Zeno are discussed by Förster [1875]; see also Wendel [1942b] 2512.
- 265 Wilamowitz [1889] 185 n. 126 presumed that Palamedes was actually the redactor responsible for the compilation of the Pindaric scholia. Such a work, however, could hardly have been designated as a ὑπόμνημα; cf. Wendel [1942b] 2513. Irigoín [1952] 75, esp. 93–94 is also skeptical of Wilamowitz's view.
- 266 Only seven fragments are extant from these works; they are listed in Bagordo [1998] 153–155.
- 267 Schmidt-Stählin [1920–1926] II 1039 n. 6 suspect that this work was a collection of proper names and biographies in the sense of the Ὀνοματολόγος of Hesychius Milesius; Wendel [1942b] 2513 argues convincingly against this assumption; he also mentions passages that could be assigned to this work. According to Gräfenhan [1843–1850] III 178, the Ὀνοματολόγος cannot have been a separate work by Palamedes; Suidas must have misunderstood a passage of Athenaeus (9.397a), in which Palamedes himself is called an ὀνοματολόγος.
- 268 Literature on Salustius: Schmid-Stählin [1920–1926] II 870, Pfeiffer [1949–1953] II XXVIII–XXX, Baumbach [2001a] and LGGA s.v. Sal(l)ustius (2) (G. Ucciardello).
- 269 See Wilamowitz [1893–1941] 31.
- 270 See *Etym. Gen.* (AB) α 1279 Lass-Liv. s.v. ἀσκάντης... οὕτω Σαλούστιος εἰς τὴν Ἑκάλην Καλλιμάχου (ad fr. 240 Pf.); (AB) α 1224 Lass-Liv. s.v. ἀρπίδες... οὕτω Σαλούστιος (ad *Callim.*

likely that Salustius made a complete edition of Callimachus' *Hymns*.²⁷¹ In addition to his Callimachean studies, Salustius' philological works also dealt with Sophocles. The surviving hypotheseis on Sophocles' *Antigone* and *Oedipus at Colonus* are attributed to him.²⁷²

Symmachus,²⁷³ a scholar cited by Herodian (*Μονήρ. λέξ.*, GG III/2.2, 945.5–6), who provides the *terminus ante quem* for him, must at the very latest have lived during the first half of the 2nd century. Symmachus is the author of a commentary on Aristophanes' comedies, which, according to the subscriptions in the *scholia* on Aristophanes' *Birds*, *Clouds* and *Peace*,²⁷⁴ was one of the basic sources for the redaction of the later corpus of Aristophanes' *scholia*.²⁷⁵ A total of 41 quotations in which Symmachus is cited by name have been transmitted in the Aristophanes *scholia*. For his own commentary, Symmachus took into account several older works, including without doubt Didymus' Ὑπομνήματα Ἀριστοφάνους (Schmidt [1854] 246–261). Symmachus is also remarkable for his critical approach to his source material,²⁷⁶ which shows his independence and confirms at the same time the tendency of this period to renew and actualize the earlier philological interpretation.

Together with Symmachus, the grammarian Phaeinos²⁷⁷ is likewise mentioned in the subscriptions of the *scholia* on Aristophanes' *Clouds* and

Hec. Fr. 235 Pf.); (AB) α 1230 Lass.-Liv. s.v. ἀρρηφόροι καὶ ἀρρηφορία . . . οὕτω Σαλούστιος (*ad. fr. inc. auct.* 741 Pf.); and also Hollis [1990] 37. On the use of Salustius' commentary on *Hecale* by Suidas, see Reitzenstein [1890–1891] 13–18.

- 271 This is assumed by Bulloch [1985] 78, who sets the evidence from Steph. Byz. α 75 s.v. Ἄζιλις in relation with Callim. *Hymn. Ap.* 89.
- 272 The text of the hypotheseis is printed by Dindorf [1852b], 17.18–18.12 and 19.11–20.13.
- 273 Literature on Symmachus: Gräfenhan [1843–1850] III 266, Schmid-Stählin [1920–1926] II 870, Gudeman [1931] and [1921] 674–679, Simons [2001], Trojahn [2002] 141–142 and LGGA s.v. Symmachus (1) (F. Montana). The fragments from Symmachus' commentary on Aristophanes are collected by Schauenburg [1881], who discussed them regarding their relationship to Didymus' interpretation.
- 274 See *Sch. Ar. Av.* subscr. 241.8–9: παραγράφεται ἐκ τῶν Συμμάχου καὶ ἄλλων σχολίων; *Nub.* subscr. α 250.2–3: κεκάλισται ἐκ τῶν Ἡλιοδώρου, παραγράφεται δὲ ἐκ τῶν Φαείνου καὶ Συμμάχου καὶ ἄλλων τινῶν; *Pax* subscr. 182.14–15: κεκάλισται πρὸς τὰ Ἡλιοδώρου, παραγράφεται ἐκ Φαείνου καὶ Συμμάχου.
- 275 On the importance of Symmachus' commentary for the development of the corpus of Aristophanes' *scholia*, see Wilamowitz [1889] 179–184; cf. Gudeman [1921] 674–687, Dunbar [1995] 41–42 and Dickey [2007] 29.
- 276 See Schauenburg [1881] and Gudeman [1931] 1139–1140.
- 277 Literature on Phaeinos: Gräfenhan [1843–1850] III 266–267, Schmid-Stählin [1920–1926] II 870, Gudeman [1921] 674–677, Strout-French [1938], Trojahn [2002] 142 and LGGA s.v. Phaeinus (F. Montana).

Peace.²⁷⁸ He is also mentioned separately five times, but only in the scholia on Aristophanes' *Knights*.²⁷⁹ Contrary to an earlier research position, it is more realistic to assume that Phaeinos did not live much later than Symmachus.²⁸⁰ Phaeinos produced a form of 'Schulkommentar' on at least the eleven surviving comedies of Aristophanes, which was most likely a revision of Symmachus' work, partially enriched with additional material.²⁸¹ However, there is little ground for believing Phaeinos to be the redactor of the corpus of *scholia* on Aristophanes, in contrast to the suggestion put forward by Wilamowitz, among other scholars.²⁸²

After Theon, philological studies dealing with Hellenistic poetry continued to flourish. As well as Astyages and Salustius,²⁸³ the grammarian Archibius,²⁸⁴ the father—or more likely the son—of Apollonius Sophista²⁸⁵ was one of the commentators of Callimachus. Suidas (α 4105) mentions Archibius as the author of a commentary on Callimachus' epigrammatic poetry (Ἐξήγησις τῶν Καλλιμάχου ἐπιγραμμάτων).²⁸⁶ Another grammarian by the name of Sophocleus,²⁸⁷ who lived in the late 2nd century AD, is known for his

278 See the passages quoted in the previous n. 274. Gudeman [1921] 675 presumes that Phaeinos' name was also present in the subscription to *Sch. Ar. Av.* Together with Symmachus, Phaeinos is quoted once again in *Etyim. Gen.* (AB) β 146 Lass.-Liv. s.v. βλιμάζειν (*Etyim. Magn.* 200.37–49); the explanation transmitted in this testimony refers to *Ar. Av.* 530 (cf. *Sch. Ar. Av.* ad loc.).

279 The extant fragments from Phaeinos' commentary are discussed in detail by Gudeman [1921] 676.

280 Wilamowitz [1889] 181 places Phaeinos in a period after the 4th century; this view is also shared by Trojahn [2002] 142. Gudeman [1921] 676 argues for placing Phaeinos closer in time to Symmachus.

281 See Gudeman [1921] 675–677; cf. also Dunbar [1995] 41.

282 See Wilamowitz [1889] 181; Gräfenhan [1843–1850] III 266–267 already argued against this view.

283 See above in this paragraph.

284 Literature on Archibius: Gräfenhan [1843–1850] III 58, Schmid-Stählin [1920–1926] I 138 note 5, II 870, Cohn [1895h] and LGGA s.v. Archibius (1) (A. Ippolito).

285 On Apollonius Sophistes, see below in § 6.1.

286 This Archibius is not to be confused with the grammarian of the same name originally from Leucas or Alexandria; the later Archibius was the son of a Ptolemaeus, who taught during the reign of Trajan in Rome; see Suid. α 4105 with Gräfenhan [1843–1850] III 58, Cohn [1895i] and LGGA s.v. Archibius (2) (A. Ippolito).

287 Literature on Sophocleus: Gräfenhan [1843–1850] III 253, Schmid-Stählin [1920–1926] I 146 and II 870, Gudeman [1927d], Wendel [1932a] 105–107 and 110–116, Matthaïos [2001e] and LGGA s.v. Sophocleus (L. Pagani). On the form of the name (Sophocles or rather Sophocleus), see Wendel [1932a] 90 n. 1.

commentary on Apollonius Rhodius' *Argonautica*. As can be seen from the subscription in the *scholia* on Apollonius,²⁸⁸ Sophocleus's commentary, which had a primarily mythographical and geographic character, is to be dated later than Theon and Lucillus from Tarrha, and was probably composed in opposition to the work of Irenaeus.²⁸⁹ Sophocleus is mentioned by name only twice in the corpus of the Apollonius *scholia*. However, the etymologies of place names, which are preserved by Stephanus of Byzantium, can be safely attributed to him.²⁹⁰

It is also worth mentioning the testimony of several *scholia* on Aratus by Sporus of Nicaea,²⁹¹ a grammarian of around 200 AD, who wrote a commentary on Aratus's *Phaenomena*, and possibly a text edition as well. Another grammarian, Amarantus of Alexandria,²⁹² from the 2nd century AD,²⁹³ dealt with Theocritus: his commentary on Theocritus was used frequently in Late Antiquity and during the Byzantine times, and is also cited in the *Etymologicum Genuinum*.²⁹⁴ As well as his work on Theocritus, Amarantus wrote a Περὶ σκηνῆς ("On Stages"), comprising several books. Several fragments of this work—mostly biographical anecdotes about actors—are preserved by Athenaeus.²⁹⁵

Munatius of Tralleis,²⁹⁶ according to Philostratus' testimony (*Vit. Soph.* 2.1.14, 1.25.7), was the teacher of Herodes Atticus; Munatius' period of activity thus falls in the first third of the 2nd century AD. He also wrote a commentary on Theocritus, cited in the *scholia* eight times; it mainly contained paraphrases

288 The text of the subscription is quoted above in this paragraph.

289 On these commentators of Apollonius, see above in this paragraph. On the role of Sophocleus' commentary for the constitution of the corpus of the *scholia* on Apollonius, see Wendel [1932a] 105–107 and 110–113; cf. also Dickey [2007] 62. On the influence and after-effect of Sophocleus' commentary, see Maehler [1994] 107–109.

290 See Wendel [1932a] 87–99.

291 Literature on Sporus: Schmid-Stählin [1920–1926] I 167 and II 870, Gudeman [1929], Folkerts [2001] and LGGA s.v. Sporus.

292 Literature on Amarantus: Gräfenhan [1843–1850] III 256 and 377, Schmidt-Stählin [1920–1926] I 196 and II 870, Wentzel [1894c], Bagordo [1998] 67, Montanari [1996c] and LGGA s.v. Amarantus (F. Montana).

293 Amarantus' lifetime can be inferred from the mention of his name in Ath. 8.343f and in Gal. *De comp. medic. sec. loc.*, XIII 84.10–85.4 Kühn and Gal. *Ant.*, XIV 208.14–209.8 Kühn. A reference to Amarantus' origin and also the place of his activity is found in Ath. 10.414e.

294 See *Etym. Gen.* (AB) α 1288 Lass.-Liv. s.v. ἀσπάλθοος and in *Etym. Magn.* 273.38–42 s.v. διεκρανώσατε. With regard to Amarantus' commentary on Theocritus, see Wendel [1920] 83–84.

295 The preserved fragments are collected by Bagordo [1998] 73–74; on the contents of this work, see Bagordo [1998] 67.

296 Literature on Munatius: Gräfenhan [1843–1850] III 351–352, Schmid-Stählin [1920–1926] I 196 and II 870, Wüst [1956], Matthaios [2000a] and LGGA s.v. Munatius.

and summaries, but dealt additionally with prosodic issues as well as word explanations and questions of content. A further interpreter of Theocritus, the grammarian Theaetetus, whose identity cannot be closely determined, rejected the views of Munatius.²⁹⁷ Finally, Dionysius Leptos (ὁ Λεπτός)²⁹⁸ is mentioned by Fronto as a grammarian and rhetorician and also as his own teacher.²⁹⁹ Accordingly, Dionysius must have lived during the 2nd century AD. He was probably identical with the so-called Dionysius ὁ Ἀσκάλαφος, who, according to a testimony in *Etym. Magn.* 278.1–5, was so called either because he was constantly quoting *Il.* 9.82, or because he was so tall, thin and pale that he looked like an ἀσκάλαφος. His philological writings are now known only from a single quotation in Athenaeus (11.475f), which refers to a passage from Dionysius' commentary on the Hellenistic poet Theodoridas.

According to Porphyry's testimony (*Plot.* 7.11.12–16 H.–Schw.), Zoticus,³⁰⁰ a friend of Plotinus, wrote a work of textual criticism on Antimachus (Ἀντιμάχου διορθωτικά). In the same testimony, Zoticus is described as a κριτικός τε καὶ ποιητικός (“both a critic and a poet”). Whether Zoticus claimed this characterization for himself is unknown, but it is in any case reminiscent of the profile of Antimachus and the Hellenistic “poets and scholars”.³⁰¹ Nothing has survived from his poetic work bearing the title Ἀτλαντικός, which was a versification of Plato's *Critias*, and no fragments from his philological activity are extant.

When dealing with prose authors, the boundaries between philology, rhetoric and scientific literature are especially fluid. This is in marked contrast to the interpretation of poets, which was always regarded as the domain of philology. Attic oratory thus constituted the primary subject of rhetoricians; lexicographers of the Imperial era who dealt with the language of the classical orators were basically rhetoricians.³⁰² Ancient philosophy, first and foremost Plato and Aristotle as well as the *corpus Hippocraticum*, were mainly interpreted by philosophers and physicians.³⁰³ Ancient historiography presented a

297 Regarding Munatius' commentary on Theocritus, see Wendel [1920] 74–78 (with additional information on Theaetetus) and 88–90.

298 Literature on Dionysius Leptos: Cohn [1903h] and LGGA s.v. Dionysius (13) Tenuior.

299 See Fronto *Ad M. Antonin. de eloq.* 5.152.2 van den Hout: *in eos quoque meus magister Dionysius Tenuis arte compositam fabulam protulit de disceptatione vitis et arboris ilicis* and *Ad Caes.* II 1.17.8 van den Hout: αἰ μοι συνέβη τι τῶν δεινῶν παθεῖν ἐρῶντι. ἤρων δὲ . . . τοτέ δὲ Διονυσίου τοῦ ῥήτορος.

300 Literature on Zoticus: Gräfenhan [1843–1850] III 333, Schmidt-Stählin [1920–1926] II 870, Ziegler [1972] and LGGA s.v. Zoticus; cf. also Matthews [1996] 75.

301 See above § 2.1. On Antimachus as a model of Alexandrian ‘poets and scholars’, see Matthaios [2008] 640–642, cf. also Novokhatko and Montana in this volume.

302 On the lexicographic analysis of classical Attic rhetoric, see below in § 6.2.

303 See also our discussion above, §§ 1 and 2.

special case, inasmuch as rhetoricians to a certain extent took over its interpretation. Antyllus³⁰⁴ is attested by Suidas (α 2770) as a rhetorician without any further information on his activity. According to the little that is known about him, Antyllus focused on the work of Thucydides, composing a biography of Thucydides³⁰⁵ as well as a commentary cited in just a few scholia.³⁰⁶ The rhetorician Sabinus,³⁰⁷ who is known only through Suidas, lived during the reign of Emperor Hadrian and wrote a commentary on Thucydides.³⁰⁸ Another rhetorician, Hero,³⁰⁹ who probably lived at approximately the same time, is stated by Suidas (η 552) to have composed not only biographical studies on the Attic orators but also an ἐξήγησις on Dinarchus and commentaries on Herodotus, Thucydides and Xenophon. His writings include a work consisting of three books with the title *Κεκριμένα ὀνόματα* (“Words that are attested in recognized authors”), which was probably an Atticistic glossary. Additionally, the above mentioned grammarians Irenaeus and Salustius also dealt with Herodotus.³¹⁰ The rhetorician Zeno of Citium,³¹¹ who probably lived in the 2nd century AD, wrote a series of technical treatises on rhetoric but likewise composed commentaries on Xenophon, Lysias and Demosthenes.³¹²

The 36 books *Μουσικὴ ἱστορία* (“History of music”), written by the grammarian Dionysius of Halicarnassus,³¹³ who lived in Hadrian’s time, also belong to the area of scholarship. To distinguish him from the rhetorician Dionysius of Halicarnassus as well as from the Atticistic lexicographer Aelius Dionysius, the grammarian was called ὁ μουσικὸς.³¹⁴ Several articles by Suidas point

304 Literature on Antyllus: Gräfenhan [1843–1850] III 287, Schmid-Stählin [1920–1926] II 870, Brzoska [1894], Weißenberger [1996] and LGGA s.v. Antyllus (L. Pagani).

305 See Marcelin. *Vit. Thuc.* 22, 36 and 55; in the last quotation Antyllus’ credibility is highlighted.

306 See *Sch. Thuc.* 3.95, 4.19 and 4.28; Antyllus’ fragments are discussed by Goslings [1874] 54–57.

307 Literature on Sabinus: Gräfenhan [1843–1850] III 261, Schmid-Stählin [1920–1926] II 870, Gerth [1920], Weißenberger [2001] and LGGA s.v. Sabinus.

308 Biographical details about Sabinus and list of works are mentioned in Suid. σ 11.

309 Literature on Hero: Gräfenhan [1843–1850] III 222, Schmid-Stählin [1920–1926] II 870, Kroll [1912] and LGGA s.v. Heron.

310 See above in this paragraph.

311 Literature on Zeno: Gräfenhan [1843–1850] III 140 and 269, Schmid-Stählin [1920–1926] II 870, Gärtner [1972], Weißenberger [2002] and LGGA s.v. Zeno (5).

312 Biographical details on Zeno and a list of his writings are mentioned in Suid. ζ 81.

313 Literature on Dionysius: Gräfenhan [1843–1850] III 437, Westphal [1883] 248–250, Scherer [1886], Schmid-Stählin [1920–1926] II 870–871, Cohn [1903j], Montanari [1997l] and LGGA s.v. Dionysius (11) Musicus (E. Rocconi).

314 See Suid. δ 1171.

to the character of his *Μουσική ἱστορία*: Dionysius understood the word *μουσική* in a broad sense and thus in his “History of music” he dealt not merely with musicians such as citharists and flute players, but also with poets of the most diverse genres. Dionysios’ writings also feature a work with the title *Ῥυθμικὰ ὑπομνήματα* (“Treatises on rhythm”) in 24 books and also his *Μουσική παιδεία ἢ διατριβαί* (“Musical education”) in 22 books.

3.4 *Philologists of Late Antiquity on the Way to Constantinople*

From the 4th up to the beginning of the 6th century, the number of scholars dealing exclusively with philological matters tapered off considerably. In their stead one finds a preponderance of figures who addressed linguistic and grammatical problems. If the extent of the present section is compared with that of the section concerning the theoreticians of language from the same period,³¹⁵ the difference in emphasis becomes clear. This development arose from the fact that scholarship was squeezed out from the interpretation of ancient prose texts by competing disciplines such as philosophy, rhetoric and literary criticism as well as by the specific scientific fields pertaining to the ancient texts that required explanation. In this period, philosophers—especially Neoplatonists—even interfered in the exegesis of poetry: through recourse to an allegorical interpretation, the old poets were now made to confirm the philosophical dogmas. On the other hand, the decline in specifically philological works was compensated by the emergence of new scholarly genres, such as chrestomathies, anthologies and florilegia. Though Late Antiquity philology was still characterized by the activity of a number of scholars, as detailed in the following paragraphs:

Demo³¹⁶ lived in the second half of the 5th century³¹⁷ and dealt with the interpretation of Homer. She was the author of an allegorical commentary on the *Iliad* and the *Odyssey*, which is cited in the Homeric scholia, by Eustathius and in the *scholia* on Lucian. Tzetzes, in the proem of his allegorized *Odyssey* (*Alleg. Od. proem.* 31–37), cites Demo together with Heraclitus, the author of the *Ἀλληγορίαι Ὀμηρικαί*, Cornutus and Palaephatus and Psellos, and presents her as one of the main representatives of the allegorical tradition. The surviving fragments show that she interpreted the Homeric gods and myths in

³¹⁵ See the relevant section below in § 4.2.

³¹⁶ Literature on Demo: Schmid-Stählin [1920–1926] II 1076, Cohn [1903b], Kroll [1918b], Hunger [1978] II 61, Montanari [1997e] and *LGGA s.v.* Demo (L. Pagani). The fragments have been collected and discussed by Ludwig [1895] and [1912–1913 and 1914].

³¹⁷ This conclusion is based on the evidence provided by Ludwig [1895] 315–318 that Demo used the work *Ἐλληνικῶν παθημάτων θεραπευτικὴ* of the church historian Theodoretus.

a rationalist manner and even used specific astronomical knowledge for an in-depth understanding of the field.³¹⁸

Seleucus of Emesa,³¹⁹ described by Suidas (σ 201) as “grammarian” (γραμματικός), cannot be dated with certainty. According to Suidas, Seleucus composed a didactic poem having the title Ἀσπαλιευτικά (“Angling”) in four books as well as a historical epic poem (or a historical prose work?)³²⁰ Παρθικά (“History of the Parthians”) in two books. In addition, Suidas mentions among Seleucus’ works a commentary on the lyric poets (Ἰπομνήμα εἰς τοὺς λυρικούς), which justifies Seleucus’ characterization as “grammarian”. It is uncertain whether Seeck is correct in postulating the identification of this Seleucus with Seleucus from Cilicia, who was the brother of the grammarian Calliopius³²¹ and a correspondent of Libanius.³²²

The lifetime of the grammarian Dionysius³²³ is uncertain. In the subscriptions to the scholia on Euripides’ *Medea* and *Orestes*, Dionysius is attested as the author of a commentary on Euripides,³²⁴ which appears to have been used as a source for the corpus of the Euripidean scholia, and this constitutes the main justification for a late dating of Dionysius’ lifetime. Dionysius is also mentioned in the treatises Περὶ κωμῶδίας (“On comedy”). Tzetzes attributed to Dionysius, and also to the grammarians Crates and Euclid,³²⁵ views on the

-
- 318 Ludwich [1895] and [1912–13 and 1914] ascribed the fragment of a commentary on *Il.* 1.1–560 transmitted in Cod. Vindob. Philol. Gr. 49, fol. 8r–12r to Demo; objections against the attribution to Demo were made by Kroll [1918b] 332–333.
- 319 Literature on Seleucus of Emesa: Gräfenhan [1843–1850] III 42 and 218, Schmid-Stählin [1920–1926] II 1076, Müller [1921a], Seeck [1906] 272–273, Seeck [1921], Kaster [1988] 428–429 (Nr. 253), Matthaios [2001d] and LGGA s.v. Seleucus (2) (G. Ucciardello).
- 320 This work is presented as a historical prose treatise in *FGrHist* 780 T 1; cf. Schmid-Stählin [1920–1926] II/2, 1077. On Seleucus’ poetical work, see Schmid-Stählin [1920–1926] II/2, 959.
- 321 On Seleucus from Cilicia, see Kaster [1988] 250–252 (Nr. 25).
- 322 See Seeck [1906] 272–273 and [1921]. Seeck’s identification has been accepted by Schmid-Stählin [1920–1926] II/2, 1075 n. 2; Müller [1921a] 1251 and Kaster [1988] 428–429, however, expressed objections against Seeck’s view.
- 323 Literature on Dionysius: Susemihl [1891–1892] II II n. 54, Schmidt-Stählin [1920–1926] II 1076, Cohn [1903i], Montanari [1997k], Bagordo [1998] 62 and LGGA s.v. Dionysius (8) (L. Pagani). Wilamowitz [1889] 134 n. 21 presumed that Dionysius was identical to Dionysius of Halicarnassus, the author of the *Μουσική ἱστορία*; on Dionysius, see above § 3.3. Cohn [1903i] 986 opposed the identification.
- 324 See *Sch. Eur. Med.* subscr.: πρὸς διάφορα ἀντίγραφα Διονυσίου ὀλοσχερές καὶ τινα τοῦ Διδύμου and *Sch. Eur. Or.* subscr.: πρὸς διάφορα ἀντίγραφα παραγέγραπται ἐκ τοῦ Διονυσίου ὑπομνήματος ὀλοσχερῶς καὶ τῶν μικτῶν.
- 325 On these figures and the various attempts to identify them, see Bagordo [1998] 61–62 with further references on this question.

parts of tragedy and comedy as well as of the satyr drama.³²⁶ Cohn ([1903i] 986) argues for the possibility that the fragments of Dionysius stem from the prolegomena to his commentary on Euripides, though it cannot be ruled out that they may derive from a separate work dealing with drama.

The grammarian Horapollo,³²⁷ who came from the village Phenebythis in the Egyptian Panopolites,³²⁸ first taught in Alexandria as grammarian and then in Constantinople under Theodosius II. (408–450). He is also known as a teacher of Timotheus of Gaza.³²⁹ Suidas indicates that Horapollo wrote a grammatical work with the title *Τεμενικά* (“Temple Names”), in which he discussed the morphology of temple names.³³⁰ His philological activity includes commentaries on Sophocles (Ἰπόμνημα Σοφοκλέους) and on Alcaeus (Ἰπόμνημα Ἀλκαίου) as well as a monograph (or commentary) on Homer (Εἰς Ὅμηρον). If Horapollo is identical with the grammarian mentioned by Photius in his *Bibliotheca* (cod. 279, 536a15–17), then he was also active as a poet. Photius credits him with the composition of dramatic poetry (δράματα) as well as an antiquarian work about Alexandria, which was probably written in verse (Περὶ τῶν πατρίων Ἀλεξανδρείας).³³¹ As already mentioned, poetic activity fits well with the scholarly profile during the first period of Byzantine philology.

Diogenes of Cyzicus,³³² described by Suidas (δ 1146) as “grammarian”, is known for his antiquarian and topographical works, which would, however, more appropriately characterize him as a historian. One such work, according to Suidas, is the *Πάτρια Κυζίκου* (“On the homeland Cyzicus”), which Stephanus

326 Dionysius’ fragments are collected by Bagordo [1998] 124.

327 Literature on Horapollo: Gräfenhan [1843–1850] III 270–271 and 435, Schmid-Stählin [1920–1926] II 1076–1077, Roeder [1913], Kaster [1988] 294–295 (Nr. 77) and Felber [1998]. This Horapollo is to be distinguished from the scholar and philosopher from Neilopolis by the same name, who authored two books on hieroglyphics (Ἱερογλυφικά); on this Horapollo, see Kaster [1988] 295–297 (Nr. 78) with further literature.

328 The basic biographical source on Horapollo is Suid. ω 159.

329 See Seitz [1892] 30 with n. 3; cf. also Reitzenstein [1897] 312.

330 See Reitzenstein [1897] 313 with n. 1. A collection from the excerpts of Timotheus attested in the Cyrillus-scholia leads Reitzenstein [1897] 313–316 to trace a route directly or indirectly through Timotheus back to this work of Horapollo. Gräfenhan [1843–1850] III 435 believed that Horapollo’s *Τεμενικά* had as its subject temple architecture and the works of art that adorned temples; likewise, Jacoby in *FGrHist* 630 attributes cultural-historical character to this work.

331 Testimonies and fragments from this work are collected in *FGrHist* 630. Reitzenstein [1897] 312 and Kaster [1988] 294 ascribe the poetical works to the Horapollo under discussion here.

332 Literature on Diogenes: Schwartz [1903], Schmid-Stählin [1920–1926] II 1077 and Kaster [1988] 398–399 (Nr. 207). The fragments of his work *Πάτρια Κυζίκου* are edited in *FGrHist* 474.

of Byzantium cites on several occasions (*FGrHist* 474 F 1–3). Stephanus also provides the *terminus ante quem* for Diogenes' lifespan. On the basis of the *communis opinio*, he is likely to have lived after the 4th and at the latest at the beginning of the 6th century. Of Diogenes' writings enumerated by Suidas, three treatises are related to the philological-grammatical discipline: the treatise Περὶ ποιητικῆς ("On the art of poetry"), a Περὶ τῶν ἐν τοῖς βιβλίοις σημείων, which presumably dealt with the theory of punctuation, and, finally, the work Περὶ στοιχείων ("On sounds").³³³

4 Linguistic Studies in the Imperial Era and Late Antiquity

Towards the end of the Imperial era and throughout entire Late Antiquity, philologists and grammarians dealt almost exclusively with the μέρος τεχνικόν of the ancient γραμματική, *i.e.* with the study of language. Earlier in this paper, this was tracked back to a theoretical development within the discipline of philology and grammar, which as from the 2nd century AD led to a clear split between the two subject areas of ancient scholarship, namely the interpretation of literature and the study of language independently of its realization in literary contexts. By the end of Late Antiquity and during the early Byzantine period, this split was intensified, and the concept embodied by the term γραμματική was almost exclusively restricted to linguistic theory.³³⁴ This can be seen clearly in the writings of philologist-grammarians of the 4th and especially of the 5th century, which now focused almost solely on linguistic studies.

As far as the history of grammatical studies in the narrow sense is concerned, two figures of the 2nd century stand out: Apollonius Dyscolus and his son Herodian. Their works were central in the linguistic theory of Late Antiquity and the entire Byzantine period, and their importance goes some way to explaining why many of their writings have survived, although mainly preserved indirectly, as is the case above all for Herodian. However, it would be a disservice to the diverse and profound studies in the area if this survey of the development of ancient linguistics were to be restricted solely to these two scholars. As the following overview will show, the field of linguistic theory

333 Since Suidas appears to confuse Diogenes with the grammarian and lexicographer Diogenianus (on Diogenianus, see below in § 6.3), these works are ascribed to Diogenianus; this view is followed by Jacoby in *FGrHist* 474 T 1. Cf. also Kaster [1988] 399. Diogenes' oeuvre, however, as it is transmitted by Suidas, fits well to the profile of a learned scholar and grammarian active during Late Antiquity.

334 See above § 2.3.

was extensively represented by a number of grammarians. In particular, since much of the most intensive research on a wide variety of subjects was conducted in the Greek language, this resulted in the systematization of studies on Greek at all levels, including word class theory, prosody, orthography, etymology and flexion. In general, the greatest achievement of this research is undoubtedly found in the theoretical foundation of the grammatical studies, which presupposed constant interaction with their philosophical background, especially the Stoic theory of language. Moreover, these intensive linguistic studies were stimulated by the fundamental question of correct language use, which was the focus not only of grammatical, but also of rhetorical education.

4.1 *Between Alexandria, Rome and the Educational Centers of the East: The Imperial Era*

The grammarian Habron³³⁵ stands at the beginning of the Imperial period and marks the transition from the Alexandrian era to the new epoch. The only available biographical source on Habron is Suidas' article (α 97), which is explicitly derived from Hermippus' biographical work.³³⁶ According to this testimony, Habron was a slave of Phrygian origin, who studied (or also taught) in Rhodes. Apparently, he became greatly esteemed there and was sent to Tryphon in Alexandria to further his studies. He presumably went to Rome as a freedman, where, as can be seen from his chronological relationship to Tryphon, he worked until the reign of Tiberius.³³⁷ Judging from the preserved fragments, Habron dealt exclusively with the so-called "technical part" (μέρος τεχνικόν) of the philological discipline and not with the interpretation of literature. Habron's work *Περὶ ἀντωνυμίας* ("On pronouns"; fr. 1–8 B.) is cited with its title by Apollonius Dyscolus, who transmits all of Habron's fragments belonging to this treatise. The work *Περὶ παρωνύμων* ("On denominatives"; fr. 11–18 B.) was known to Herodian and Stephanus of Byzantium. Finally, the study "On possessive names" (*Περὶ κτητικῶν*; fr. 9–10 B.) is attested in the *scholia* on Dionysius Thrax.

As far as his research interests are concerned, Habron essentially followed in the footsteps of his teacher Tryphon. His theory of the word class system shows him to have been closely linked with the Alexandrian tradition initiated by

335 Literature on Habron: Gräfenhan [1843–1850] III 57, III and 115, Susemihl [1891–1892] II 213–214, Schmid-Stählin [1920–1926] I 435, Funaioli [1912], Christes [1979] 92–93, Fornaro [1998c] and LGGA s.v. Habron. Habron's fragments have been collected and discussed by Berndt [1915].

336 On Hermippus, see above § 3.3.

337 For the details of Habron's biography, see Christes [1979] 92–93.

Aristarchus,³³⁸ though he often criticized the Aristarchean doctrine. Evidence of Habron's critical attitude towards Aristarchus is the introduction of the term *κτητικός* as a designation of the possessive pronouns, with which he replaced the traditional, apparently Aristarchean, but still essentially mistaken term *σύναρθρος*. Apollonius Dyscolus followed Habron with respect to this issue.³³⁹ Habron also discussed Aristarchus' definition of pronouns, vehemently criticizing the view that pronouns are words which form morphological groups according to the feature of the grammatical person. On this topic Apollonius Dyscolus likewise followed Habron, at least in his *Syntax*.³⁴⁰ Given the spuriousness of the *Techne Grammatike* ascribed to Dionysius Thrax and considering the disputed development of grammatical studies in the late Hellenistic period and in the early centuries AD, Habron is, along with Tryphon, the figure from the pre-Apollonian period, who, through his critical investigations and independent research, formed the theoretical framework of the Alexandrian linguistic approach and contributed significantly to the development and expansion of the field.

During this period several grammarians were occupied with questions pertaining to the constituent structure of language and the word class system. Apion and Lucillus were involved with the theory of sounds and letters, whereas Chaeremon dealt with conjunctions.³⁴¹ In addition to these subjects, grammarians of this period also dealt with the theory of *hellenismos*, i.e. the correct use of language. Seleucus³⁴² and Ptolemaeus of Ascalon,³⁴³ following the pattern of Philoxenus and Tryphon, composed treatises "On *hellenismos*" (*Περὶ ἑλληνισμοῦ*) which discuss the linguistic correctness theory in its entirety. The grammarians of this period also examined the broad thematic spectrum of this theory—prosody, orthography, inflection, word formation and etymology, syntax and dialectology—in treatises devoted to specific individual topics. In the field of etymology, for instance, Seleucus, Heraclides Ponticus the Younger and Epaphroditus obtained significant achievements with their studies in this area.³⁴⁴

338 On the development of the Alexandrian theory on the word class system, see Matthaios [2002f].

339 See fr. 1 and the commentary of Berndt [1915] 1483–1485 on this fragment; cf. Matthaios [1999] 481–482 and Lallot [1998²] 209–210.

340 See fr. 2; on Habron's views, see Berndt [1915] 1485–1486 and Matthaios [1999] 447–457.

341 On Apion, Lucillus and Chaeremon, see the relevant sections above § 3.3.

342 On Seleucus, see above § 3.3.

343 On Ptolemaeus' grammatical activity, see below in this paragraph.

344 See above § 3.3.

In order to give a more extensive overview of the wide variety of subjects related to the field of the theory of *hellenismos*, we will now turn to a discussion of grammarians from the Imperial period:

Ptolemaeus of Ascalon³⁴⁵ was active in the 1st century AD, and was not, as Stephanus of Byzantium claims,³⁴⁶ a direct student of Aristarchus, but a descendant of the Aristarchean tradition and thus considerably younger than the Alexandrian scholar. The *terminus ante quem* for determining Ptolemaeus' lifespan is provided by Herodian, who cites several fragments of his writings. In addition to the list of Ptolemaeus' works, Suidas (π 3038) also testifies that Ptolemaeus taught in Rome. The work *Περὶ τῆς ἐν Ὀδυσσεΐᾳ Ἀριστάρχου διορθώσεως* belongs to his philological studies, in which Ptolemaeus probably discussed, as did Didymus earlier, Aristarchus' decisions on orthographic and prosodic questions concerning the text of the *Odyssey*.³⁴⁷ In *Sch. Hom. Il. (A) 3.155b* Nicanor attests to another philological treatise by Ptolemaeus, the *Περὶ τῆς Κρατητείου αἰρέσεως*, in which he spoke out offensively against the text-critical decisions of the Pergamene scholar Crates.³⁴⁸

The main subject of Ptolemaeus' studies, however, was the area of grammar, especially the complex question of *hellenismos*. As already mentioned, Ptolemaeus is said by Suidas to have authored a work consisting of 15 books called *Περὶ ἑλληνισμοῦ ἢ ὀρθοεπειᾶς* ("On *hellenismos* or on linguistic correctness").³⁴⁹ The work *Προσῳδία Ὀμηρικὴ* ("Homeric prosody") also belongs to the theory of *hellenismos*. This work was formed of two parts, in which the *Iliad* and the *Odyssey* are discussed separately in at least two books each.³⁵⁰ Thanks to Herodian, who used Ptolemaeus' work as one of the main

345 Literature on Ptolemaeus of Ascalon: Gräfenhan [1843–1850] III 37–38, Blau [1883] 25–37, Susemihl [1891–1892] II 156–158, Schmidt-Stählin [1920–1926] I 439 and 444, Dihle [1959], Matthaios [2001c] and Razzetti [2003d]. The preserved fragments from Ptolemaeus' writings have been collected by Baege [1882].

346 See Steph. Byz. α 476 s.v. Ἀσκάλων, πόλις Συρίας πρὸς τῇ Ἰουδαίᾳ... γραμματικοὶ δὲ Πτολεμαῖος Ἀριστάρχου γνώριμος.

347 This is Lehrs' view [1882] 26 n. 8 on the content of this treatise, from which, however, no fragments have been preserved. See also Baege [1882] 14–15.

348 See Baege [1882] 21–22.

349 See Baege [1882] 11–12.

350 With regard to the structure and scope of Ptolemaeus' prosodic studies on Homer, see Ammon. *Diff.* 436: σταφυλὴν ὀξύτονητον ὡς ἀλυκὴν καὶ σταφυλὴν βαρυτόνων ὡς Μελίτην διαφέρειν φησὶ Πτολεμαῖος ὁ Ἀσκαλωνίτης (p. 42 Baege) ἐν δευτέρᾳ Περὶ τῶν ἐν Ὀδυσσεΐᾳ προσῳδιῶν. . . ὁ αὐτὸς πάλιν ἐν δευτέρᾳ τῶν ἐν Ἰλιάδι προσῳδιῶν. See also Baege [1882] 9–11.

sources of his own prosodic studies and quoted abundantly from it,³⁵¹ this is the best-known composition by Ptolemaeus.³⁵² Herein, he proved to be a strict analogist and was especially concerned with creating prosodic rules in accordance with the principle of analogy. This often brought him into conflict with the accentuation of Homeric words proposed by Aristarchus, which was instead mainly grounded on philological arguments.³⁵³ Ptolemaeus' grammatical studies included a treatise *Περὶ μέτρων* ("On meters"),³⁵⁴ while a lexicon of synonyms with the title *Περὶ διαφορᾶς λέξεων* ("On expressions with different meanings") forms part of his lexicographic activity; however, the epitome transmitted under his name is spurious.³⁵⁵

The grammarian Heraclides of Miletus³⁵⁶ appears to have lived around 100 AD,³⁵⁷ and is presumed to have been active in Alexandria.³⁵⁸ Only two of his works are known by their title, *Περὶ καθολικῆς προσωδίας* ("General prosodic rules"; fr. 1–15 C.) and *Περὶ δυσκλίτων ῥημάτων* ("On irregular verbs"; fr. 16–55 C.).³⁵⁹ With his work *Περὶ καθολικῆς προσωδίας*, Heraclides apparently became the first grammarian to produce a coherent presentation of a prosodic theory for the Greek language as a whole. He thus is a forerunner of Herodian, who in fact used Heraclides in his own prosodic study, but often cited him without mentioning his name. However, even where Herodian did cite Heraclides by name, it was always with polemical intentions. Heraclides' work *Περὶ δυσκλίτων ῥημάτων* dealt with the field of inflection and was an investigation of verbs with irregular conjugations verbs. Since Heraclides also

351 See below in this paragraph. On accentuation theories during the Roman Empire and the studies accomplished during that time on this subject, see Hatzimichali [2006] 109–119.

352 The fragments from this work are collected by Baege [1882] 39–64.

353 A representative example for this is the explanation given by Aristarchus and Ptolemaeus on the accentuation of the pronoun *σέο* in *Il.* 1.396–397 transmitted in *Sch. Hom.* (A) *Il.* 1.396b¹; for an interpretation of this testimony, see Matthaios [2012] 265–272.

354 For a description of this work, see Baege [1882] 12–13; the extant fragments are edited *ibidem*, p. 64.

355 See below in § 6.2.

356 Literature on Heraclides Milesius: Schmidt-Stählin [1920–1926] I 439, Schultz [1912b], Fornaro [1998h] and Razzetti [2003c]. His fragments were collected first by Frye [1883] and then by Cohn [1884a].

357 Heraclides' lifetime can be determined by the fact that he used Aristonicus, but was himself quoted by Apollonius Dyscolus; see Frye [1883] 97 and Cohn [1884a] 6–11.

358 Heraclides is identical with the person often quoted by Eustathius with the nickname "Alexandrian"; see Frye [1883] 102 n. 1.

359 Fr. 56–60 C. are of unknown provenance; fr. 61–62 C., on the other hand, are regarded by Cohn as "dubia".

considered dialectal aspects in this research, his study was important for the field of dialectology as well. The work is often cited by Eustathius; several fragments can also be found in lexicographic and etymological works from the Byzantine period.³⁶⁰

An epitome on Didymus' Σύμμικτα ("Miscellanea")³⁶¹ was composed by Alexion,³⁶² a grammarian from the second half of the 1st century AD,³⁶³ who was also active above all in the field of orthography, prosody and etymology. The titles of his grammatical writings are unfortunately not known. The preserved fragments of his works, containing grammatical explanations that concerned primarily Homer and the Homeric language,³⁶⁴ are mainly transmitted by Herodian and in the Byzantine *Etymologica*. They contain passages in which Alexion often criticized the views put forward by his forerunners, such as Tyrannion, Didymus, Ptolemaeus of Ascalon and Heracleon, who favored the Aristarchean explanations of the problems under discussion.

The grammarian Draco from Stratoniceia in Caria,³⁶⁵ whose lifespan was a little earlier than that of Apollonius Dyscolus, probably lived during the 2nd century AD. His writings deal largely with the technical part of ancient scholarship:³⁶⁶ for instance, Draco's writing Περὶ ἀντωνυμιῶν ("On pronouns") is concerned with the word class theory. Apollonius Dyscolus (*Pron.*, GG II/1.1, 17.1–5) cites Draco's terminological suggestion from this work, according to which possessive pronouns should be designated as διπρόσωποι ("pronouns which imply two persons").³⁶⁷ Draco also dealt with issues pertaining to

360 Heraclides' theory and his accomplishments are presented in detail by Cohn [1884a] 20–36; cf. Schultz [1912b] 492–493.

361 See Ammon. *Diff.* 117: ... Ἀλεξίῳ [fr. 1 B.] δηλοῖ ἐν τῇ ἐπιτομῇ τῶν Διδύμου Συμμίκτων (p. 378 Schmidt); cf. Eust. 1788.52 and *Etym. Gud.* 124.2.

362 Literature on Alexion: Gräfenhan [1843–1850] II 98 and 404, Schmid-Stählin [1920–1926] II 439, Wentzel [1894b], Montanari [1996b] and LGGA s.v. Alexion Cholos (L. Pagani). Alexion's fragments have been collected by Berndt [1906].

363 The testimony concerning Alexion's epitome of Didymus' Σύμμικτα (see n. 361) provides the *terminus ante quem* for Alexion's lifetime; see Wentzel [1894b] 1466.

364 For a discussion of the extant surviving fragments, see Wentzel [1894b].

365 Literature on Draco: Gräfenhan [1843–1850] I 444, 454, 468, 478 and 502, Susemihl [1891–1892] II 193, Schmid-Stählin [1920–1926] II 893, Cohn [1905a], Montanari [1997n] and LGGA s.v. Draco (L. Pagani).

366 A list of Draco's writings is attested in Suid. δ 1496. The first work listed there under the title Τεχνικά is probably a description of the character of his writings, rather than a particular work concerning the technical part of philology, the so-called μέρος τεχνικόν; see Cohn [1905a] 1662.

367 Since in the *Technē Grammatike* attributed to Dionysius Thrax it is said that the possessive pronouns are also designated as διπρόσωποι ([Dion. T.] *Ars Gram.* § 17, GG I/1, 68.3–4), it

orthography in the work Ὀρθογραφία (“Orthography”), and with the nominal declension in the work Περὶ τῶν κατὰ συζυγίαν ὀνομάτων (“On the regularly declinable nouns”). It is presumably from these works that two further fragments stem: the first is transmitted by Herodian (*Μονήρ. λέξ.*, GG III/2.2, 939.25–26), while the second is reported in Photius’ lexicon (π 113 s.v. πάμπαν). The greater part of Draco’s writings, however, referred to metrical theory. Suidas lists the following relevant titles: Περὶ μέτρων, Περὶ τῶν Πινδάρου μελῶν, Περὶ τῶν Σαπφοῦς μέτρων and Περὶ τῶν Ἀλκαίου μελῶν.³⁶⁸ The content of the work Περὶ σατύρων remains unknown.

The grammatical studies undertaken by Nicanor,³⁶⁹ who lived during the reign of Hadrian, focused predominantly on the theory of punctuation, as attested by his nickname ὁ Στιγματίας (“The punctuator”).³⁷⁰ Nicanor devoted two special studies to this area of grammar, namely the treatise Περὶ στιγμῆς τῆς παρ’ Ὀμήρῳ καὶ τῆς ἐξ αὐτῶν διαφορᾶς ἐν τῇ διανοίᾳ (“On Homeric punctuation and the different interpretations which result from it”) and the work Περὶ στιγμῆς τῆς παρὰ Καλλιμάχῳ (“On Callimachean punctuation”).³⁷¹ No fragments have been preserved from the study on Callimachus. The treatise on Homeric punctuation, however, is the best known and most thoroughly studied work by Nicanor, on account of the particular circumstance that Nicanor’s work belonged to the so-called ‘Viermännerkommentar’,³⁷² and was excerpted extensively for its compilation.³⁷³

has been assumed that Draco was indeed a contemporary or even older than Dionysius Thrax; see Susemihl [1891–1892] II 193 with n. 257 and Cohn [1905a] 1662. In view of the doubts regarding the authorship and authenticity of this grammatical manual, the early dating of Draco’s lifetime should be disregarded; see Matthaios [1999] 485 with n. 260.

368 The treatise Περὶ μέτρων ποιητικῶν (“On poetic meters”), ascribed to Draco in Cod. Paris. Gr. 2675 (the work is edited by Hermann [1812]), is a forgery of the 16th century; see Cohn [1905a] 1662–1663. The appeal to Draco’s name, however, speaks for his authority in questions of metrical theories that reached into the Early Modern Age.

369 Nicanor is discussed above, § 3.3, in connection with his philological works.

370 See Eust. 20.12; cf. Suid. v 375.

371 The titles of these works are attested in Suid. v 375.

372 The ‘Viermännerkommentar’ is the name of commentary on the *Iliad* that stems probably from the early Byzantine period. It is a compilation of works of Aristonicus, Didymus, Herodian and Nicanor. It is attested in the subscription to the individual books of the *Iliad* in Cod. Venetus A; see Matthaios [2002e]; Dickey [2007] 18–19; and Dickey in this volume.

373 The fragments from Nicanor’s studies on the Homeric punctuation have been collected, as far as the *Iliad* is concerned, by Friedländer [1850] and, in relation to the *Odyssey*, by Carnuth [1875]. Both collections should now be compared with the new editions of the Homeric scholia, that of Erbse [1969–1988] on the *Iliad* and that of Pontani [2007–2010] on the *Odyssey*. On the quotations in the corpus of the Homeric and especially the Iliadic scholia, which derive from Nicanor’s work, see Schmidt [1976] 35–39.

Nicanor presented a systematic description of his punctuation theory in the work *Περὶ στίγμης τῆς καθόλου* (“General punctuation theory”), which consisted of 6 books. There was also a one-volume epitome of the study.³⁷⁴ The basic features of Nicanor’s theory are outlined in the scholia to Dionysius Thrax (*GG* I/3, 26.4–28.8),³⁷⁵ in which it is clear that Nicanor developed a highly differentiated punctuation model based on a system consisting of just two marks, the *τελεία στίγμη* (“period”) and the *ὑποστίγμη* (“comma”). Overall, his system contained a total of eight different marks (*στιγμαί*), five of which—the *τελεία στίγμη* (“period”), the *ὑποτελεία στίγμη* (“sub-point”), the *πρώτη*, the *δευτέρα* and the *τρίτη ἄνω στίγμη* (“first, second and third super-point”)—were intended for various forms of paratactic clause linkages. Three other marks—the *ὑποστίγμη ἐνυπόκριτος* or *μεθ’ ὑποκρίσεως* (“comma connected with expressive speech”), the *ὑποστίγμη ἀνυπόκριτος* (“comma without expressive speech”) and the *ὑποδιαστολή* (also called *βραχεία διαστολή* or simply *διαστολή*, a mark similar to a comma)—were intended for periods with hypotaxis. Nicanor’s punctuation system served primarily to facilitate the understanding of literary texts. At the same time, it provided instructions for their pronunciation, since each mark was connected with a differing fixed length of a pause in speech. Because of its philological orientation, however, Nicanor’s system had little effect on subsequent grammarians.

Apollonius Dyscolus³⁷⁶ is undoubtedly by far the most outstanding, innovative and influential grammarian not only for the period discussed here, but also for the whole history of ancient philology and grammar. Our knowledge of Apollonius’ biographical data is based upon a short *Vita*,³⁷⁷ which was probably written by the grammarian Theodosius of Alexandria.³⁷⁸ The article in *Suidas* (α 3422) is limited to a listing of his works, which, however, are mentioned only summarily in the *Vita*. As detailed in these testimonies, Apollonius was the son of a certain Mnesitheus and Ariadne and was himself the father of the grammarian Herodian.³⁷⁹ He came from Alexandria, where, apart from a short stay in Rome, he spent his entire life. Since Apollonius’ stay in Rome, according to our sources, took place during the reign of Marcus Aurelius (161–180), and

374 Cf. *Suid.* v 375.

375 Nicanor’s theory on punctuation is presented by Steinthal [1890–1891] II 351–354 and Blank [1983]; cf. Matthaïos [2000b] and Lallot [1998²] 91–92.

376 Basic literature on Apollonius Dyscolus: Schmid-Stählin [1920–1926] II 883–887, Cohn [1895e], Sandys [1921³] 319–321, Blank [1993], Montanari [1996g], Brandenburg [2005] 13–25, Dickey [2007] 73–75 and *LGGA s.v.* Apollonius (9) Dyscolus (L. Pagani).

377 The *Apollonius-Vita* is printed in *Apol. Dysc. Fragm.*, *GG* II/3, XI.6–XI.5.

378 See Lallot [1997] I 10; on Theodosius, see below in § 4.2.

379 On Herodian, see below in this paragraph.

since his son Herodian was a contemporary of Galen (129–199), Apollonius' lifetime is to be placed in the 2nd century.

Already during Antiquity, the question as to the origin of the epithet Δύσκολος (“difficult”, “sullen”) was raised. Three different justifications are given in the *Apollonius Vita*: (a) the epithet referred either to his character or (b) to his habit of asking difficult questions, or (c) perhaps to his difficult mode of expression.³⁸⁰ The reasoning behind the explanation referring to his penchant for asking difficult questions points to Apollonius' teaching activity in the context of the higher grammatical education.³⁸¹ Apollonius' work was particularly extensive, but was related only to linguistic theory, both in the field of the word class system as well as in that of *hellenismos*.

The titles of his works are known from quotations by Apollonius himself, some of which can be confirmed from Suidas' testimony, but other works likewise mentioned by Suidas are known only by their titles.³⁸² The three so-called *scripta minora*—the treatises “On the pronoun” (Περὶ ἀντωνυμίας),³⁸³ “On adverbs” (Περὶ ἐπιρρημάτων)³⁸⁴ and “On conjunctions” (Περὶ συνδέσμων)³⁸⁵—and also the four books “On Syntax” (Περὶ συντάξεως)³⁸⁶ have been entirely preserved.³⁸⁷ The remaining writings, which include orthographic, prosodic and dialectal studies, are known partly through quotations made by Apollonius himself, but also from later grammarians, especially Priscian, the scholiasts of Dionysius Thrax and Choeroboscus.³⁸⁸ These studies also refer at length to the theory of the constituent structure of language, with special

380 See Blank [1993] 709, Lallot [1997] II 12–13 and Brandenburg [2005] 14.

381 See Blank [1993] 709–710 with reference to several allusions to teaching contained in Apollonius' writings.

382 For an exhaustive list of Apollonius' writings on the basis of self-quotations of the grammarian and in other sources, see Schneider in *GG* II/3, VII–X.

383 Edited by Schneider in *GG* II/1.1, 1–116; the treatise “On the pronoun” has been translated into German by Brandenburg [2005].

384 Edited by Schneider in *GG* II/1.1, 117–210.

385 Edited by Schneider in *GG* II/1.1, 211–258; a French translation of the treatise with an exhaustive commentary has been provided by Dalimier [2001].

386 The standard edition of Apollonius' *Syntax* is that of Uhlig in *GG* II/2; a new edition with a French translation and extensive commentary is provided by Lallot [1997]. Apollonius' *Syntax* was translated into German by Buttman [1877], into English by Householder [1981] and into Spanish by Becares Botas [1987].

387 On the chronological order of the preserved writings, see Blank [1993] 710 with n. 13 and Brandenburg [2005] 16–17.

388 The extant fragments have been collected, arranged and commented by Schneider in *GG* II/3.

emphasis on the system of the word classes. Overall, the whole writing activity of Apollonius, not only his *Syntax*, but also his treatises “On nouns” (Περὶ ὀνομάτων ἤτοι ὀνοματικόν) and “On verbs” (Περὶ ῥημάτων ἤτοι ῥηματικόν) exerted particular influence on the later grammarians.³⁸⁹

The theoretical foundation of ancient grammatical doctrine is rightly associated with Apollonius Dyscolus, as is also the case with Herodian. Apollonius and Herodian were the two major figures whose activity resulted in the systematization and completion of the contents of the Alexandrian tradition.³⁹⁰ In the area of word class theory,³⁹¹ Apollonius picked up the thread of the old Alexandrian tradition that dated back to Aristarchus and which was represented by Tryphon at the end of the Hellenistic period. Essentially, Apollonius submitted the theories formulated in the earlier era to a new and thorough investigation. The available evidence shows that he shared the views of his Alexandrian predecessors on certain basic questions, though reliable knowledge of Stoic linguistic theory is more evident in Apollonius. Thus it is clear in many parts of his writings that he argued directly with the Stoic sources, but whereas in the case of his predecessors, especially Tryphon, the dispute with Stoic views resulted in polemical rejection, in the case of Apollonius, it was creatively integrated into his systematization of the word class theory. Apollonius can thus be regarded as the scholar through whose accomplishments the Alexandrian and Stoic linguistic theory were combined into a meaningful synthesis and. Furthermore, he stands as the authority under whom the process of formulating the canon of the word class system that stemmed from the Alexandrian philological-grammatical tradition was brought to completion.³⁹²

As well as his word class theory, Apollonius' essential contribution to ancient linguistics is, from a diachronic point of view, the foundation of the grammatical theory of syntax.³⁹³ In assessing ancient views on syntax,

389 A short overview of Apollonius' writings transmitted in fragments is given by Blank [1993] 712–713.

390 Among the special studies on Apollonius Dyscolus, which have meanwhile increased considerably, mention should be made of Blank [1982], Sluiter [1990] 39–140 and Lallot [2012a].

391 On Apollonius' accomplishments concerning the theoretical foundation of the ancient word class system, see Matthaios [2002f] 197–198.

392 See Lallot [1988]; cf. also the contribution of Swigger-Wouters (section III.2.1) on word class theory in this volume.

393 On Apollonius' theory of syntax see, in addition to the references given in n. 390, also Steinthal [1890–1891] II 339–347, Lallot [1997] I 29–73 as well as the short, but highly informative overview by Blank [1993] 714–727. See also the contribution of Lallot in this volume.

a distinction should be drawn between a logical, an aesthetic-persuasive and a grammatical perspective.³⁹⁴ So-called logical syntax was the product of a philosophical approach, which took as its starting point the sentence, attention then being directed to analysis of the constituents of the sentence, subject and predicate. Aesthetic syntax was developed by rhetoricians and focused on the combinatory effects of language elements, such as the position and combination of phonemes and syllables within a word, as well as on assessing the word order within a sentence or text that could most effectively build up the argument of a rhetorical speech or serve the required poetic purpose.³⁹⁵ Thus Apollonius Dyscolus is the most significant figure who should be credited with the development of a genuine syntactic theory in the context of the school of grammarians. Grammarians before him such as Tryphon, but also the Alexandrian scholars such as Aristarchus, already recognized the syntactic peculiarities of certain word classes, but they believed that such peculiarities served to regulate the congruence between words within a sentence, and not to describe and analyze sentence structure as a whole.³⁹⁶ In contrast, Apollonius sought to place individual words and word classes in a hierarchical system depending upon their syntactic position and relevance.³⁹⁷ Accordingly, in his view nouns and verbs were indispensable for the constitution of sentences, while the remaining six word classes could either substitute the former, as is the case with pronouns, which can take the place of nouns, or be combined with them, as is the case with adverbs, which modify a verb. Apollonius asserted that the highest principle governing syntax was the rationality of language. This he conceived as *καταλλήλότης*, *i.e.* the reason that makes something 'sayable' or 'not sayable.' He regarded the theory of syntax as concerned primarily with the level of meaning, that is to say, the *νοητά*, and as such it was to be distinguished from other levels: for instance, it should be treated separately from morphology.

394 See Ax [2006b] 235.

395 A borderline case between rhetorical and grammatical syntax theory is the treatise *Περὶ σχημάτων* ("On figures") of Lesbonax, an otherwise not well known grammarian who lived before the end of the 2nd century; on Lesbonax, see Schmid-Stählin [1920–1926] I 440, Aulitzky [1925], Blank [1988], Montanari [1999] and LGGA s.v. Lesbonax (L. Pagani); the treatise is edited by Blank [1988]. The work is a compilation of unusual syntactic usages that differ from common usage; they are subdivided either by poet or by dialect, depending on their origin, for which literary sources, mostly Homeric are always provided.

396 On the development of syntax theory before Apollonius Dyscolus on the basis of Tryphon's views, see Matthaios [2003].

397 See Lallot [2012] 289–297.

Seen from a historical perspective, in the area of syntax Apollonius appears to have merged Stoic theory and grammatical ideas into a meaningful whole. As current research has shown, this process was originally set in motion by rhetoricians and literary critics, above all Dionysius of Halicarnassus,³⁹⁸ but the decisive step that led to the synthesis of Stoic and grammatical or even rhetorical theories was clearly taken by Apollonius Dyscolus. Apollonius' *Syntax* influenced Greek syntax theory throughout Late Antiquity and in the Byzantine period, either directly or through Priscian's *Institutiones*. Grammarians such as Michael Syncellus (9th century), Gregory of Corinth (12th century), Johannes Glykys and Maximus Planudes (both in the 14th century) wrote several syntactic treatises that followed Apollonius' model.³⁹⁹

Herodian,⁴⁰⁰ the son of Apollonius Dyscolus, shares the same distinguished position in the history of ancient philology and grammar as his father. The biographical information about him, linked in part to that of Apollonius,⁴⁰¹ indicates that he was born and raised in Alexandria, and then went to Rome during the reign of Emperor Marcus Aurelius. The emperor was interested in his grammatical activity and encouraged his prosodic studies; thus Herodian dedicated to the emperor his major work, the *Περὶ καθολικῆς προσωδίας* ("General prosody"), which encompassed no less than 20 books.⁴⁰² In Herodian's work *Περὶ μονήρους λέξεως* ("On lexical singularities") the name form Αἴλιος Ἡρωδιανός is attested, and this indicates that Herodian had obtained the Roman citizenship.

A list of Herodian's writings has not been preserved in the biographical testimonies, but his oeuvre was immense, as can be reconstructed mainly from indirect transmission, and included several areas of ancient grammatical doctrine, such as phonology, morphology, declination and conjugation, pathology, orthography and, above all, prosody and accentuation.⁴⁰³ His magnum opus,

398 On the relationship of Dionysius of Halicarnassus' syntax theory to that of Apollonius, see De Jonge [2011] 475–477.

399 On Apollonius' after-effect, see Blank [1993] 728–729; on syntax in Byzantine grammar, see Robins [1993] 149–233 and Pontani in this volume.

400 Basic literature on Herodian: Schmid-Stählin [1920–1926] II 887–888, Schultz [1912c], Sandys [1921³] 321–322, Dyck [1993a], Montanari [1998c], Dickey [2007] 75–77 and LGGA s.v. Aelius (2) Herodianus (L. Pagani).

401 The testimonies on Herodian's life have been presented by Lentz in *GG* III/1, VI–VII, and include the *Apollonius Dyscolus-Vita* (see above in this paragraph) and the short article of Suidas (γ 546). For a discussion of Herodian's biographical testimonies, see Dyck [1993a] 772–774.

402 Herodian's entire oeuvre has been edited by Lentz in *GG* III/1–2.

403 The authentic writings by Herodian, which were edited by Lentz, are listed in the order of the edition by Schultz [1912c] 962–963; an excellent overview of Herodian's writings is provided by Dyck [1993a].

“General Prosody”,⁴⁰⁴ is concerned above all with the theory of accentuation. It was based, apparently following the example of Nicanor,⁴⁰⁵ on specific prosodic studies, especially Ἰλιακὴ προσωδία (“Prosody in Homer’s *Iliad*”) and Ὀδυσσειακὴ προσωδία (“Prosody in Homer’s *Odyssey*”). Since Herodian also belonged to the so-called ‘Viermänner’, together with Aristonicus, Didymus and Nicanor, of whose writings the Homeric ‘Viermännerkommentar’⁴⁰⁶ was composed, the two works on Homeric prosody were richly transmitted in the corpus of Homeric scholia.⁴⁰⁷

As the original works have been lost, knowledge of Herodian’s accentuation theory is only indirect. The “General prosody” is transmitted in an epitome falsely ascribed to Arcadius and in an epitome with the title Τονικά παραγγέλματα (“Accentuation rules”) by John of Alexandria. However, some fragments from Herodian’s “General prosody” have luckily been preserved in Palimpsest-Cod. Vindob. Hist. Gr. 10 (fol. 1–8, 24 and 25).⁴⁰⁸ An exception is the work Περὶ μονήρους λέξεως (“On lexical singularities”), which is Herodian’s only text that has been completely preserved in its original version.⁴⁰⁹ Predictably, Herodian’s authorship is also claimed for a number of spurious works.⁴¹⁰

Herodian is the authority to whom both the theory on the accentuation and prosody of the Greek language and our knowledge of this area can essentially be attributed.⁴¹¹ In his “General prosody”, Herodian treated the accentuation of over 60,000 words and systematized them on the basis of prosodic rules. He was the representative of a strict analogical method as pertains to the structure and standardization of language, regarding the principle of analogy as the essential criterion governing correct language usage; thus he applied it for controlling, exploring and recovering problematic word forms. Analogy and the analogical heuristic procedure essentially belong to the theoretical

404 For a description of the work and its transmission, see Dyck [1993a] 776–783; cf. Schultz [1912c] 963–965. The work has been edited by Lentz in *GG* 111/1, 1–547.

405 See above in this paragraph.

406 See above in this paragraph.

407 The collections of fragments provided by Lentz in *GG* 11/2.1, 22–128 (Περὶ Ἰλιακῆς προσωδίας) and 11/2.1, 129–165 (Περὶ Ὀδυσσειακῆς προσωδίας) are now supplemented by Erbse’s edition of the *Iliad* scholia [1969–1988] and of the *Odyssey* scholia by Pontani [2007–2010]. For a description of both writings, see Dyck [1993a] 783–786; cf. Schultz [1912c] 966–967.

408 The codex has been edited by Hunger [1967a]; see Dyck [1993a] 780–782.

409 Edited by Lentz in *GG* 11/2.2, 908–952; newly edited by Papazeti [2008]. For a description of the work, see Dyck [1993a] 790–791.

410 The works falsely ascribed to Herodian are listed by Schultz [1912c] 971–973.

411 On Herodian’s accentuation theory, see Laum [1928]; see also the contribution of Probert in this volume.

background of the Alexandrian school: at the time of its foundation the early Alexandrians, Aristophanes of Byzantium and Aristarchus, were involved in the famous analogy-anomaly controversy with the Pergamenian philological tradition and its exponent Crates of Mallus.⁴¹² The analogical method is based on the idea that a grammatical accident, be it inflectional or prosodic, will occur in similar word forms in the same fashion. Therefore, the words compared in the process of analogy should be subjected to a prior similarity test.

Conditions of similarity, which must be heeded in the implementation of analogical deductions, were already proposed by Aristophanes of Byzantium and Aristarchus. Herodian significantly expanded the preconditions for correct application of the analogical process, and created a canon of conditions that took into account the following criteria:⁴¹³ genus, species, type of composition, number, accent, case, same ending in the nominative singular, nature of the penultimate syllable, quantity of the vowel of the penultimate syllable, number of syllables and the nature of the consonants before the ending. After this rigorous application of the principle of analogy, Herodian formulated prosodic, but also morphological and orthographical rules.

The problem of exceptional cases in a language, and more importantly, how Herodian dealt with such exceptions, was treated separately in his work *Περὶ μονήρους λέξεως* (“On lexical singularities”). Here he examined words that have ‘anomalous’ character in the sense—according to Sluiter’s formulation ([2011] 292)—that they “look normal enough and are in frequent use, but do not conform to the rules that would most obviously seem to apply”. Yet even for these exceptional cases, Herodian devised a grammatical explanation. Deviation from a rule was to be explained on the basis of phonological and morphological changes in the basic word form, the so-called *πάθη*.⁴¹⁴ In this way the chasm between the two most distant criteria for assessment of linguistic correctness, analogy and common usage (*συνήθεια*, *usus*),⁴¹⁵ was bridged. From this

412 On the history of the so-called ‘analogy-anomaly-controversy’ and on the essential theses of this feud, see Matthaïos [2013b] with further references on this subject; see also Montana and Pagani in this volume.

413 This catalog is attested in Herodian’s *Περὶ κλίσεως ὀνομάτων* (“On the nominal declination”) in *GG* II/2.2, 634.6–24. On this, see Siebenborn [1976] 72–75. On the character and the transmission of this specific work of Herodian, see Dyck [1993a] 789 and Dickey [2007] 76–77.

414 This was evidently the subject of Herodian’s writing *Περὶ παθῶν* (*GG* III/2.1, 166–388), which was identical with the work *Ἐπιτομή τῶν περὶ παθῶν Διδύμου* (*GG* III/2.1, 389); see Dyck [1993a] 786–787. On the ancient *πάθη*-theory see Lallot [2012] 21–36; Nifadopoulos [2005]; and Pagani in this volume.

415 The criteria taken into consideration for evaluation of linguistic correctness are explored by Siebenborn [1976]; see also the contribution of Pagani in this volume.

perspective, exceptions and problematic cases that depart from a rule are brought into the system and can thus be regulated; hence common usage is legitimized as a criterion for the normation of linguistic correctness.⁴¹⁶

Lupercus and Cassius Longinus emerged in the area of grammar in the middle of the 3rd century. According to Suidas (λ 691), Lupercus,⁴¹⁷ a native of Berytus, was active during the reign of emperor Claudius Gothicus (268–270). He probably stood in a close relationship with the emperor.⁴¹⁸ Suidas ascribes to Lupercus a historical work with the title Κτίσις τοῦ ἐν Αἰγύπτῳ Ἀρσινοῆτου (l. Ἀρσινοῖτου) νομοῦ (“The foundation of Arsinoites in Egypt”) as well as the treatise Περὶ τοῦ παρὰ Πλάτωνι ἀλεκτρυόνος (“On the rooster in Plato”), which was probably an interpretation of Socrates’ final words in Plato’s *Phaedo* (118a). The largest portion of his oeuvre, however, was made up of works on the so-called “technical” part of the philological discipline. This included a Τέχνη γραμματική, as well as a work consisting of 13 books on the grammatical genera (Περὶ γενῶν ἀρρενικῶν καὶ θηλυκῶν καὶ οὐδετέρων).⁴¹⁹ This work surprisingly earned Suidas’ praise; Lupercus is said to have exceeded even Herodian with this text.⁴²⁰ If Suidas refers to the 6th book of this work (ἐκ τῶν ζ’ τῶν Λουπέρκου), which is still quoted in a marginal note by the hand of Maximus Planudes in Plut. *Mor.* (*De inim. util.* 10) 91e in Cod. Ambr. C. 126 inf., fol. 27v,⁴²¹ Lupercus’ writing probably survived or was known until the 13th century.

Lupercus also dealt with other grammatical questions, explaining the use of the particle ἄν in his writing Περὶ τοῦ ἄν, which consisted of three books, also addressing the very controversial accentuation of τὰς (or τὰς) in the treatise Περὶ τοῦ τὰς, as well as the quantity of the iota in the word καρὶς in his work Περὶ τῆς καρίδος.⁴²² Additionally, Lupercus was active in the field of lexicography: his collection Ἀττικαὶ λέξεις (“Attic vocabulary”) is mentioned by

416 A thorough and insightful study of Herodian’s analogistic position, as it is stated in the writing Περὶ μονήρους λέξεως, is provided by Sluiter [2011].

417 Literature on Lupercus: Gräfenhan [1843–1850] III 42–43, 83, 121 and 200, Schmid-Stählin [1920–1926] II 889, Gudeman [1927b], Kaster [1988] 305 (nr. 91), Baumbach [1999b] and LGGA s.v. Lupercus (G. Ucciardello).

418 See Gudeman [1927b] 1839–1840.

419 The few extant fragments from Lupercus’ work are attributed to this writing; see Gudeman [1927b] 1840–1841. Gudeman’s assumption (ibid.) that this work was part of Lupercus’ *Techne grammatike* is not compelling.

420 See Suid. λ 691: . . . ἐν οἷς πολλὰ κατευδοκίμει Ἡρωδιανοῦ; cf. Gudeman [1927b] 1841.

421 See Paton [1912].

422 The two last mentioned works are incorrectly regarded by Gudeman [1927b] 1840 as not being independent writings, but as questions Lupercus had dealt with in his lexicon Ἀττικαὶ λέξεις.

Suidas in the biographical article on Lupercus and is also counted among the material enumerated in the *Preface* to Suidas (*praeef.* 1.8) as forming part of the Suidas sources.⁴²³

With a profile encompassing philosophy, rhetoric and philology, Cassius Longinus⁴²⁴ emerged as an outstanding representative of the classicistic movement during the 3rd century. He achieved great fame and veneration for his comprehensive erudition. The names βιβλιοθήκη ἔμψυχος (“living library”) and μουσεῖον περιπατοῦν (“wandering museum”) attributed to him denote admiration for his great knowledge.⁴²⁵ Longinus lived in the period from about 210 to 272/273, and according to Suidas (λ 645), he was active during the reign of Emperor Aurelian. His mother was a sister of the sophist Fronto of Emesa, whose fortune Longinus inherited. He owed his philosophical education essentially to Ammonius Saccas and Origen. After completing his studies, he settled in Athens as a teacher of philosophy, where Porphyry became his student. Around 267 Longinus left Athens for the court of Queen Zenobia, the widow of Odenathos in Palmyra. After suppression of their rebellion against the Romans, Longinus and other advisors of the queen were executed at the end of 272 or the beginning of 273.

It is to his philological activity that Longinus owes the nickname κριτικός,⁴²⁶ which separates him, to a certain extent and probably intentionally, from the γραμματικοί, inasmuch as his works emphasize the field of literary aesthetics and criticism. Of Longinus’ extensive and diverse philological-grammatical oeuvre, more titles than fragments have been preserved.⁴²⁷ His works include several writings related to Homer such as “Homeric questions” (Ἀπορήματα Ὀμηρικά), “Is Homer a philosopher?” (Εἰ φιλόσοφος Ὀμηρος) etc. A large proportion of his work falls within the area of lexicography, including two editions of “Attic Words” (Ἀττικῶν λέξεων ἐκδόσεις δύο), special lexicons on Antimachus⁴²⁸ and Heracleon, but also on Homer with the title Περὶ τῶν παρ’ Ὀμήρῳ πολλὰ σημαίνουσῶν λέξεων (“On ambiguous words in Homer”). Longinus

423 On Suidas’ Preface and its authenticity, see Matthaios [2006] 4 with n. 15 and Kaster [1988] 282.

424 Literature on Longinus: Gräfenhan [1843–1850] III 352–356, Schmid-Stählin [1920–1926] II 889–891, Sandys [1921³] 338–339, Aulitzky [1927], Brisson-Patillon [1994] and [1998], Baltes [1999] and LGGA s.v. Cassius Longinus (C. Castelli).

425 See Eunap. *Vit. Soph.* 4.11–5.

426 Thus according to Suid. λ 645; Porphyrius in *Plot.* 20 even refers to him as κριτικώτατος.

427 Longinus’ philological writings are presented in a detailed manner by Brisson-Patillon [1998]. The relevant fragments have been collected, translated and commented by Patillon-Brisson [2002].

428 On Longinus’ lexicon Λέξεις Ἀντιμάχου, see Matthews [1996] 75.

also dealt with questions of metrics. Furthermore, part of his commentary on Hephaisstion has survived.⁴²⁹

4.2 *From the Mediterranean Cities to Constantinople: Late Antiquity*

During the 4th and 5th centuries, Constantinople became the center of grammatical activity. The city itself and its university exercised a strong attraction over scholars, who moved the site of their activity to the new Imperial capital. In this period, the entire field of ancient linguistics, both the theories regarding the constituent structure of language and the theories on *hellenismos*, were examined anew. This was certainly contingent upon the new cultural and (educational-)political circumstances, especially as it involved study of the language spoken in the eastern part of the empire and in the territory of the new capital. Furthermore, from a historical point of view the new research had to take into consideration the development of the Greek language and be accordingly adapted and updated. The history of Late Antique grammar is represented by the grammarians cited below.

Eudaemon⁴³⁰ from the Egyptian Pelusium, a correspondent of Libanius and his 'brotherly friend' for several years,⁴³¹ lived in the 4th century.⁴³² He studied rhetoric in Elusa, then returned to Egypt, but was forced by a lawsuit to go to Antioch, where he became acquainted with Libanius. In 357, he lived as an attorney in Elusa, where he became a public teacher somewhat later and as such received a salary subsidized by the emperor. Soon thereafter, he moved to Constantinople, but returned to Egypt in 361. Eudaemon is characterized as *γραμματικός* by Suidas,⁴³³ but he was also active as a poet. Among his philological-grammatical activities,⁴³⁴ we are aware of a *Τέχνη γραμματική* ("Manual on grammar") and an *Ὄνοματική ὀρθογραφία* ("Nominal

429 On Hephaisstion, see below in § 5.

430 Literature on Eudaemon: Gräfenhan [1843–1850] III 76, 83–84, 93 and 163, Schmid-Stählin [1920–1926] II 1075, Seeck [1906] 131 (Eudaimo I.), Cohn [1907c], Hunger [1978] II 13 and 18, Kaster [1988] 279–282 (Nr. 55), Fornaro [1998a], Criore [2007] 76 and LGGA s.v. Eudaemon (Cl. Meliadò).

431 See Suid. ε 3407. Libanius wrote several letters to Eudaemon, from which his biographical details can be reconstructed; see the references in Seeck [1906] 131 and Kaster [1988] 279–281.

432 Eudaemon was born before 337 (Kaster [1988] 279 places his birth between 314 and 324) and died before 392 AD; see Kaster [1988] 279.

433 This Eudaemon is not to be confused with the teacher of rhetoric by the same name, who also belonged to the circle of Libanius; on this Eudaemon, see Seeck [1906] 131–132 (Eudaimo II.), Kaster [1988] 400–403 (Nr. 210) and Criore [2007] 33–34. On the meaning of the term *γραμματικός* in this period, see Wolf [1952] 31–41.

434 See the list of Eudaemon's writings transmitted in Suid. ε 3407.

orthography”), which was used by Stephanus of Byzantium and the *Etymologica*, as shown by some quotations preserved therein.⁴³⁵

According to the title of his work given in the manuscript tradition, Theodosius⁴³⁶ came from Alexandria and was active as γραμματικός.⁴³⁷ If Synesius is referring to this Theodosius in a letter he wrote to his brother, calling him θαυμάσιος γραμματικός,⁴³⁸ then his lifetime is to be set at the end of the 4th or beginning of the 5th century. Theodosius’ main work, *Κανόνες εισαγωγικοί περί κλίσεως ὀνομάτων καὶ ῥημάτων* (“Elementary rules on nominal and verbal inflection”),⁴³⁹ consists of rules and exhaustive declination and conjugation paradigms. It was intended to supplement the word class theory, which has been handed down in great detail in the *Techne Grammatike* attributed to Dionysius Thrax, with all inflectional patterns. The conjunction paradigms for the verb τύπτω (*GG* I/1, 125–132) stem from Theodosius’ work and are appended to the *Techne* as a fourth supplement in the edition of Uhlig. Theodosius’ *Κανόνες* was of fundamental importance for school education, as can also be inferred from the fact that it was the object of extensive commentaries by Johannes Charax and Georgios Choeroboscus.⁴⁴⁰ Two short treatises on the theory of inflection also stem from Theodosius, *Περὶ κλίσεως τῶν εἰς ὦν βαρυτόνων* (“On the declination of the barytone nouns ending in -ων”) and *Περὶ κλίσεως τῶν εἰς ὦν ὀξύτόνων* (“On the declination of the oxytone nouns ending in -ων”).⁴⁴¹ It has been suggested that he is also the author of the treatise *Περὶ προσωδιῶν* (“On prosodies”), which was appended to the text of the *Techne* of Dionysius Thrax (*GG* I/1, 105–114).⁴⁴² However, whether Theodosius also wrote an epitome of Herodian’s *Καθολικὴ προσωδία* is highly doubtful.⁴⁴³

435 The extant fragments are quoted and discussed by Cohn [1907c].

436 Literature on Theodosius: Schmid-Stählin [1920–1926] II 1078–1079, Gudeman [1934b], Hunger [1978] II 11–12, Kaster [1988] 366–367 (Nr. 152), Wilson [1996] 42–43 and 69–71, Matthaios [2002a], Dickey [2007] 83–84 and *LGGA s.v.* Theodosius (L. Pagani).

437 See the inscriptio to Theodosius’ *Κανόνες*: Θεοδοσίου γραμματικοῦ Ἀλεξανδρέως εισαγωγικοὶ κανόνες περὶ κλίσεως ὀνομάτων (*GG* IV/1, 3.1–2)

438 See Syn. *Ep.* 4.310–316; for the identification of this Theodosius with the grammarian of the same name from Alexandria, see Oguse [1957] 85–86; cf. Kaster [1988] 152 and *ibid.* (Nr. 151).

439 The work is edited by Hilgard in *GG* IV/1, 3–99.

440 Choeroboscus’ commentary is edited by Hilgard in *GG* IV/1, 103–417 and *GG* IV/2, 1–371. The commentary of Charax has survived in the excerpted version of Sophronius; it is edited by Hilgard in *GG* IV/2, 375–434.

441 They are edited by Hilgard [1887] 16–22 and 22–24.

442 See Laum [1928] 27–28; cf. Kaster [1988] 367.

443 In three manuscripts of the epitome of Herodian’s work—in the Codd. Matrit. 38, Barocc. 179 and Haun. 1965—Theodosius is named as the author; see Kaster [1988] 367.

The grammarian Helladius⁴⁴⁴ was a native of Alexandria and initially a priest of Zeus in his hometown, but fled to Constantinople together with the grammarian Ammonius⁴⁴⁵ after the bloody fighting between pagans and Christians in 391.⁴⁴⁶ We learn from Suidas (ε 732) that Helladius was active as a grammar teacher under Theodosius II. (408–450). He appears to have come into favor with the emperor and on March 15, 425 he was awarded the *comitiva primi ordinis*, which corresponds to the rank of privy councilor (*Cod. Theod.* 6.21.1). The “Eulogy to Theodosius” (“Ἐπαινος Θεοδοσίου τοῦ βασιλέως”) could refer to this event. Suidas lists the eulogy under his writings, along with the titles of epideictic speeches or perhaps poems. Helladius is mentioned in Suidas’ biographical article as the author of a general lexicon entitled *Λέξεως παντοίας χρήσις κατὰ στοιχείον*. It consisted of seven books, which are alphabetically arranged. Photius describes the lexicon in *Bibl. cod.* 145, 98b40–99a12,⁴⁴⁷ and Suidas counts it among its source material.⁴⁴⁸

Orus,⁴⁴⁹ a grammarian who lived in the 1st half of the 5th century, was a native of Alexandria, but he probably worked in Constantinople as a professor of the newly organized university⁴⁵⁰ there. In the list of works provided by Suidas, he is credited with having authored a number of works on grammatical subjects. His studies on the area of orthography included the works Ὄρθογραφία κατὰ στοιχείον (“Alphabetically arranged orthography”), Περὶ τῆς εἰ διφθόγγου (“On the diphthong εἰ”) and Ὄρθογραφία περὶ τῆς αἰ διφθόγγου (“Orthographical matters concerning the diphthong αἰ”).⁴⁵¹ An excerpt from

444 Literature on Helladius: Gräfenhan [1843–1850] II 200–201, Schmid-Stählin [1920–1926] II 1075 and 1080, Gudeman [1912b], Seeck [1912], Kaster [1988] 289 (Nr. 67), Fornaro [1998e] and LGGA s.v. Helladius (3) (Cl. Meliadò).

445 On this grammarian, see Kaster [1988] 241 (Nr. 10).

446 Helladius’ biographical details can be reconstructed on the basis of a testimony deriving from Socrates, one of his later students; see *Socr. Hist. eccl.* 5.16.1–14. Cf. also Phot. *Bibl. cod.* 28, 6a17–20.

447 See Wilson [1996] 110–111.

448 See Suid. *praeef.* 1.3 Adler.

449 Literature on Orus: Ritschl [1834–1866], Schmid-Stählin [1920–1926] II 876, 1077 and 1081–1082, Wendel [1939c], Hunger [1978] II 13, 18, 39, 45 and 49–50, Alpers [1981] and [2000], Kaster [1988] 325–327 (Nr. 111), Wilson [1996] 51 and 221, Dickey [2007] 99–100 and LGGA s.v. Orus (A. Ippolito).

450 See Suid ω 201. In contrast to the confusion and erroneous presumptions of earlier research (see for example Gräfenhan [1843–1850] II 74–75: “[Oros] perhaps did not even exist”), the biographical information on Orus has now been thoroughly revised by Alpers [1981] 87–101.

451 For a description of the work, see Wendel [1939c] 1179–1180; the last two writings were probably sections of the larger orthographical work of Orus.

an alphabetically arranged orthographical treatise in Cod. S. Salv. 118 of the University Library in Messina, which has been transmitted anonymously, was shown by Reitzenstein ([1897] 289–296) to be a work of Orus. A number of fragments in the *Etymologicum Genuinum*, in which Orus is cited by name, belong to this work. There is also evidence of a “Commentary on Herodian’s orthography” (Ὑπόμνημα τῆς Ὀρθογραφίας Ἡρωδιανοῦ).⁴⁵² The majority of Orus’ production arose from his lexicographic studies, including a work Περὶ πολυσημάντων λέξεων (“On ambiguous words”), of which the manuscript tradition has preserved several excerpts.⁴⁵³ Orus’ work Ὅπως τὰ ἔθνικὰ λεκτέον (‘How to build ethnic names’) has been preserved only as fragments mainly in the *Etymologicum Genuinum* and also by Stephanus of Byzantium.⁴⁵⁴ Orus’ lexicon Ἀττικῶν λέξεων συναγωγὴ (“Collection of attic expressions”),⁴⁵⁵ which will be discussed further below in the section on lexicography,⁴⁵⁶ belongs to the context of Atticistic lexicography.

According to Suidas (v 273), the grammarian Hyperechius⁴⁵⁷ came from Alexandria, but worked in Constantinople during the reign of Emperor Marcian (450–457) and also during the reign of Leo I. (457–474).⁴⁵⁸ He must have enjoyed significant prestige, if one is to believe Tzetzes’ testimony (*H.* 10.58) that Hyperechius was entrusted with instructing Eudocia, Leo’s daughter, on the subject of grammar.⁴⁵⁹ His philological-grammatical activity can be determined only by the list of works attested in Suidas. It included several areas of grammatical theory: he is credited with having written a Τέχνη γραμματικὴ (“Manual on grammar”), as well as special studies on the theory of inflection—Περὶ ὀνομάτων (“On nouns”) and Περὶ ῥημάτων (“On verbs”)—and also an orthographic treatise Περὶ ὀρθογραφίας. Traces of his grammatical theory, most probably deriving from the work Περὶ ὀνομάτων, become tangible

452 The work is cited in *Etym. Gud.* 415.45–46 s.v. ξίρις.

453 See Reitzenstein [1897] 335–347; on the character of this writing, see Wendel [1939c] 1181–1182.

454 The excerpts from the *Etymologicum Genuinum* were collected by Reitzenstein [1897] 335–347; a collection of Orus’ fragments transmitted by Stephanus of Byzantium has recently been presented by Billerbeck [2011].

455 On this work, see Alpers [1981] 97–101. The extant fragments are edited by Alpers [1981] 149–260.

456 See below in § 6.4. On further works ascribed by Suidas to Orus, see Wendel [1939c] 1182–1183; cf. Alpers [2000].

457 Literature on Hyperechius: Schmid-Stählin [1920–1926] II 1077, Funaioli [1914], Hunger [1978] II 13 and 18 and Kaster [1988] 297 (Nr. 79).

458 See Suid. λ 267.

459 On this information, however, see Kaster [1988] 297.

from a scholion of Choeroboscus on the canons of Theodosius (*GG IV/1*, 292.6–7) in the form in which the passage has been transmitted in Codex v.

Pamprepius of Panopolis⁴⁶⁰ in Egypt was born in the year 440 AD.⁴⁶¹ He studied in Alexandria, where he met Hermias and thus entered into the circle of Neoplatonic philosophers. At the age of about 30, he moved to Athens, where he studied with Proclus and became a respected γραμματικός. In 476, he transferred to Constantinople, where he was appointed to a university chair for grammar. Pamprepius is known mainly because of his poetic work.⁴⁶² Of his etymological work (*Ἐτυμολογιῶν ἀπόδοσις*), which Suidas (π 136) counts among his writings, nothing more is known than the title.

Another grammarian, Eugenius from Augustopolis in Phrygia,⁴⁶³ was highly respected in the reign of Anastasius I. (491–518). Eugenius was active at the Imperial university of Constantinople, where he was a predecessor of Stephanus of Byzantium in the chair of grammar.⁴⁶⁴ Suidas informs us on his extensive oeuvre, in which Eugenius emerges primarily as a theoretician in metrical matters; his major work, the *Κωλομετρία τῶν μελικῶν Αἰσχύλου, Σοφοκλέους καὶ Εὐριπίδου* (“Colometry of the lyrical passages in Aeschylus, Sophocles and Euripides”) concerns the 15 tragedies of the three tragedians, which were selected for educational use. Thus Eugenius provided a service not unlike that of Heliodorus⁴⁶⁵ to Aristophanes. Eugenius also dealt with metrical issues in his treatise *Περὶ τοῦ τί τὸ παιωνικὸν παλιμβάκχειον* (“In what respect the palimbaccheus is a paean”).⁴⁶⁶ The work *Περὶ τεμενικῶν ὅπως προφέρεται* (“On the question of how one pronounces the names of temples”)⁴⁶⁷ and *Περὶ*

460 Literature on Pamprepius: Schmid-Stählin [1920–1926] II 1077, Keydell [1949], Hunger [1978] II 13, 109–110 and 112, Kaster [1988] 329–332 (Nr. 114), Wilson [1996] 51 and Fornaro [2000].

461 The various biographical testimonies on Pamprepius are presented in detail by Livrea [1979] 1–7; see also Kaster [1988] 329–331.

462 Edited by Livrea [1979].

463 Literature on Eugenius: Schmidt-Stählin [1920–1926] II/2, 1075, Cohn [1907d], Kaster [1988] 282 (Nr. 52), Wilson [1996] 51–53 and Fornaro [1998b].

464 On Eugenius’ career and his writings, see Suid. ε 3394. Stephanus of Byzantium states, in the only passage where he quotes Eugenius, that the latter was his predecessor; see Steph. Byz. α 305 s.v. Ἀνακτόριον, Ἀκαρνανίας πόλις, . . . καὶ Εὐγένιος δέ, ὁ πρὸ ἡμῶν τὰς ἐν τῇ βασιλίδι σχολὰς διακοσμήσας, ἐν συλλογῇ λέξεων διὰ διφθόγγου φησίν. On Stephanus, see below in § 6.1.

465 On Heliodorus, see below in § 5.

466 Cohn [1907d] 987 assumes that this treatise is part of the larger work on colometry.

467 Eugenius’s predecessor in this matter was Horapollo. On Horapollo’s *Τεμενικά*, see above § 3.4.

τῶν εἰς ἰα ληγόντων ὀνομάτων (“On the nouns ending in -ια”)⁴⁶⁸ were orthographic works. A lexicographical work is also known for Eugenius with the title Παμμυγῆς λέξις κατὰ στοιχείον (“Mixed vocabulary in alphabetical order”), which Stephanus of Byzantium cites under the title Συλλογὴ λέξεων (“Collection of expressions”).⁴⁶⁹ According to Suidas’ description, the work had a very mixed character: peculiarities in accentuation, aspiration and orthography were examined, but expressions and proverbs referring to mythological subjects were also incorporated. In Suidas’ *Praefatio* (1.4), Eugenius’ work is counted among the sources of this lexicon. Suidas’ list of works suggests Eugenius was also active as a poet; “some [writings] in iambic trimeters” (ἄλλα τινὰ τρίμετρα ἰαμβικά) are attributed to him.⁴⁷⁰

Timotheus of Gaza⁴⁷¹ is known as a grammarian, a poet and also a popular scientist who, in Suidas’ account (τ 621), lived around 500 AD during the reign of Emperor Anastasius I. (491–516).⁴⁷² In many *scholia* on the Cyrill glossary, Timotheus appears as a student of Horapollo.⁴⁷³ He was the author of an orthographical work with the title Κανόνες καθολικοὶ περὶ συντάξεως (“General spelling rules”; literally: “General rules for the assembly of sounds to syllables and of syllables to words”), which is based upon Herodian’s “Orthography”.⁴⁷⁴ His treatise entitled Περί ὀρθογραφίας (“On Orthography”) has not survived.⁴⁷⁵ From Timotheus, we also have a hexametric poem called Περί ζώων (“On animals”), which is a collection of zoological curiosities,⁴⁷⁶ and a lament addressed to Emperor Anastasius I. regarding trade taxes, which is known only by title.⁴⁷⁷

468 Both orthographical writings of Eugenius are regarded by Cohn [1907d] 988 as sections of his lexicographic work Παμμυγῆς λέξις κατὰ στοιχείον; but the fact that this lexicon is arranged alphabetically makes Cohn’s assumption questionable.

469 See Stephanus’ quotation cited in the previous n. 465.

470 On Eugenius’ poetical work, see Schmid-Stählin [1920–1926] II 974.

471 Literature on Timotheus: Seitz [1892] 30–32, Schmid-Stählin [1920–1926] II 974–975 and 1077, Wellmann [1927], Steier [1937], Hunger [1978] II 13, 18–19 and 265, Kaster [1988] 368–370 (Nr. 156), Wilson [1996] 31, 44 and 143 as well as Matthaios [2002c].

472 See also Tzetz. *H.* 4.166, which names Timotheus as being among the authors who, according to Aelian and Oppian, wrote about zoology.

473 See Reitzenstein [1897] 296 and the material cited on p. 296–297 and p. 312–316. On the question of which Horapollo is meant here, see Kaster [1988] 369–370.

474 The work was edited by Cramer in *Anecdota Graeca*, vol. 4, 239–244.

475 On this work, see Kaster [1988] 369; on Timotheus’ orthographical studies, see Egenolff [1888] 6–8 and Schneider [1999] 15–71.

476 The extant excerpts are collected by Haupt [1869]; an English translation is provided by Bodenheimer-Rabinowitz [1949].

477 On these works, see Kaster [1988] 368–369 with additional references.

The lifetime of Theodoretus⁴⁷⁸ cannot be determined precisely, but it is believed that he lived after the 4th and before the end of the 6th century.⁴⁷⁹ Theodoretus was the author of a treatise *Περὶ πνευμάτων* (“On the spirits”), which is based on the 20th book of Herodian’s *Καθολικὴ προσωδία*. The work was very successful and was still in use during the 13th century as a school manual.⁴⁸⁰

The theologian, neoplatonic philosopher and Aristotle commentator John Philoponus⁴⁸¹ also worked as a grammarian. He lived in Alexandria around 490–575 AD and was a student of Ammonius. His writings comprise a number of grammatical works, above all the *Τονικά παραγγέλματα* (“Accentuation rules”), which was an epitome of Herodian’s *Καθολικὴ προσωδία*.⁴⁸² The work *Περὶ διαλέκτων* (“On dialects”) provided the main basis for the research of Gregory of Corinth in this area.⁴⁸³ As the title indicates, his lexicographic work *Περὶ τῶν διαφόρως τονουμένων καὶ διάφορα σημαίνοντων* dealt with homonyms that were accented differently and therefore had different meanings.⁴⁸⁴

The grammarian Arcadius,⁴⁸⁵ a native of Antioch, also extended the boundaries of the Constantinopolitans. His lifetime cannot be determined with certainty: the *terminus post quem* is Herodian, while the *terminus ante quem* is provided by Stephanus of Byzantium. Some evidence, however, indicates that he may have lived towards the end of the 5th or at the beginning of the 6th century.⁴⁸⁶ Arcadius’ grammatical work includes the areas of orthography, syntax and morphology. Suidas (α 3948) attributes the following works to him: *Περὶ ὀρθογραφίας* (“On orthography”), *Περὶ συντάξεως τῶν τοῦ λόγου μερῶν* (“On the syntax of the parts of speech”) and *Ὀνοματικόν* (“The nominal inflection”). A

478 Literature on Theodoretus: Schmid-Stählin [1920–1926] II 1080, Wendel [1934b], Hunger [1978] II 12–13, Kaster [1988] 434 (Nr. 265) and Baumbach [2002b].

479 See Kaster [1988] 434.

480 On the history of its transmission, see Egenolff [1887] 8–10 and Uhlig [1880] 791–798.

481 Literature on John Philoponus: Schmid-Stählin [1920–1926] II 1067–1068, Cohn [1916] and Kroll [1916], Boehm [1967], Hunger [1978] II 13, 17, 19 and 30–31, Kaster [1988] 334–338 (Nr. 118), Wilson [1996] 44–45 and 187–188, Dickey [2007] 81–82, and Pontani in this volume.

482 Edited by Dindorf [1825]; a new edition is under preparation by G. Xenis (University of Cyprus) for the Bibliotheca Teubneriana. For a description of the work, see Cohn [1916] 1781–1782.

483 Edited by Hoffmann [1893] 204–222; description of the work by Cohn [1916] 17–82–1783.

484 Following Egenolff [1880] the work was edited by Daly [1983]; a description of the work is provided by Cohn [1916] and Koster [1932].

485 Literature on Arcadius: Schmidt-Stählin [1920–1926] II 1077–1078, Cohn [1895j], Hunger [1978] II 13, 15 and 19, Kaster [1988] 244 (Nr. 16), Montanari [1997a] and LGGA s.v. Arcadius.

486 On the question of Arcadius’ lifetime, see Kaster [1988] 241.

few fragments, transmitted under his name by Stephanus of Byzantium and Choeroboscus, probably stem from his Ὀνοματικόν.⁴⁸⁷ On the other hand, the epitome of Herodian's Καθολικὴ προσωδία that circulated in several manuscripts under his name has been wrongly attributed to him.⁴⁸⁸

5 Studies on Metrics in the Imperial Era and Late Antiquity

The theory of metrics, which, according to the systematization of γραμματικὴ in the so-called ‘Tyrannion-system’, constituted the ὄργανον μετρικόν of the discipline,⁴⁸⁹ represented a special field of philological-grammatical studies during the Imperial era and Late Antiquity.⁴⁹⁰ The grammarians Soteridas, Astyages and Ptolemaeus of Ascalon composed special works Περὶ μέτρων as early as the 1st century AD.⁴⁹¹ During this time, extensive studies in this area were also composed by Heliodorus,⁴⁹² who lived in the 1st century AD and was, according to Suidas (εἰ 190), the teacher of the Atticist Irenaeus, who also went by the name of Minucius Pacatus.⁴⁹³ Heliodorus is known for his studies on metrics that dealt with the comedies of Aristophanes.

Heliodorus’ work—actually a κωλομετρία Ἀριστοφάνειος—took the form of an edition of the comedies, in which the text was divided into the smallest rhythmic elements. Colometric signs drew attention to rhythmic and metrical phenomena and referred to a running commentary that dealt with the issues of interpretation in question.⁴⁹⁴ Heliodorus also wrote a “manual” (ἐγχειρίδιον) on metrics, which according to Choeroboscus’ commentary on Hephaestion (Choerob. *Scholia in Hephaestionem* 181.9–11 Consbruch) was intended for those who wanted to learn the most important chapters of metrical theory.

487 The relevant passages are quoted in Cohn [1895j] 1153–1154.

488 For a detailed discussion on the authorship of this epitome, see Cohn [1895j] 1154–1156.

489 See above § 2.3.

490 On metrical studies during the Hellenistic period, see Schmid-Stählin [1920–1926] I 444–445. The Hellenistic and Imperial theory of metrics is presented in detail by Westphal [1867] 105–232; see also Pretagostini [1993].

491 See above § 3.3.

492 Literature on Heliodorus: Gräfenhan [1843–1850] I 454–455, Westphal [1867] 214–226, Hense [1870] and [1912a], Schmid-Stählin [1920–1926] I 445–446, Fornaro [1998d] and LGGA s.v. Heliodorus (E. Rocconi).

493 On Irenaeus, see below in § 6.4.

494 The preserved fragments from this work in the corpus of the Aristophanes scholia were collected by Thiemann [1869] and later also by White [1912] 384–395. On Heliodorus’ commentary on meter in Aristophanes, see Holwerda [1964] and [1967].

For this purpose, Heliodorus started his presentation with a definition of the different meters.⁴⁹⁵ He was a follower of the so-called derivation theory on the origin of various meters.⁴⁹⁶ His theory was based on the distinction among the most important metrical feet, from which all meters were held to be created by omission or addition of one or more syllables at the beginning of the colon.

The foundation of metrical theory, the after-effect of which extended through the Byzantine period into the early modern time, is linked to the achievements of Hephaestion.⁴⁹⁷ Hephaestion came from Alexandria,⁴⁹⁸ but together with Telephus he was appointed in Rome as a Greek teacher of the second adoptive prince, the later Emperor L. Verus.⁴⁹⁹ Hephaestion's most important work was a particularly extensive treatise on metrics (Περὶ μέτρων) in 48 books, which was, however, abridged by the metrician himself first to 11 books, later to 3 books and finally to the Ἐγγχειρίδιον ("Manual") which survives today.⁵⁰⁰ At the end of the manual, fragmentary sections of a work called Περὶ ποιήματος are appended, consisting of an analysis of poetic works according to their metrical structure. A short treatise entitled Περὶ σημείων dealing with diacritical signs that exhibit metric peculiarities was also attached as an appendix.

With regard to the development of the various meters, Hephaestion—like Heliodorus—was essentially an adherent of the derivation theory, which argues that all meters are formed on the basis of certain elementary meters (μέτρα πρωτότυπα). After an introduction in which prosodic problems are discussed, each of the nine elementary meters identified by Hephaestion is treated individually. This is followed by discussion of the meters formed from the basic patterns, as well as those formed from the combination of various metrical feet, and finally, the so-called uncertain meters. In its abbreviated manual form, the work contains examples that were appropriate as school

495 See Longin. *Proleg. Heph.* 81.12–15 Consbruch. On Longinus' commentary on Heliodorus' metric manual, see above in this paragraph.

496 See Schmid-Stählin [1920–1926] I 445.

497 Literature on Hephaestion: Gräfenhan [1843–1850] III 69, 106–107, 228, 327 and 340, Hense [1912b], Schmid-Stählin [1920–1926] II 891–893, Sandys [1921³] 328, Fornaro [1998f], Dickey [2007] 104–105 and LGGA s.v. Hephaestion (A. Ippolito); see also Dickey in this volume.

498 See Suid. η 659.

499 See *Hist. Aug. Verus* 2.4. On Telephus, see above § 3.3.

500 For the history of the formation of Hephaestion's work, see the information provided by Choeroboscus, *Scholia in Hephaestionem* 181.11–13 Consbruch. The work is edited together with Choeroboscus' commentary and the scholia on it by Consbruch [1906]; an English translation with commentary is provided by van Ophuijsen [1987].

exercises; they were taken from lyric poets and comedians but not from tragedians, while choral lyric poetry was likewise disregarded.

Choeroboscus wrote a commentary on Hephaestion's manual, which was accompanied by a rich collection of scholia from the Byzantine period; a commentary on Hephaestion was also composed by Longinus. The commentaries and scholia are important because they are partially based on the original and extended version of the work. Several other philological-grammatical writings of Hephaestion are known through Suidas (η 659), but only by their titles. In one passage transmitted by Porphyry (*ad Il.* 12.127–132, 177.31–35 Schrader), remains of Hephaestion's interpretation of Homer have been preserved.⁵⁰¹

Draco of Stratoniceia was active at about the same time as Hephaestion. In the list of his works as recorded by Suidas several metrical treatises are attributed to Draco, though none have survived.⁵⁰² Eugenius of Augustopolis likewise dealt with metrics in the 5th century. It was mentioned earlier⁵⁰³ that Eugenius wrote a colometry on the lyrical passages of the tragedians, thereby continuing and expanding Hephaestion's work, which was restricted to Aristophanes. A special study on the palimbaccheus is also attributed to Eugenius.

6 Lexicography during the Imperial Era and Late Antiquity

Lexicographic exploration of the Greek language was one of the most productive areas of philological-grammatical activity in the Imperial era and Late Antiquity. Several authors rendered service in this field and their names have been connected with great achievements both in terms of quantity and effort.⁵⁰⁴ Looking back at the overall evolution of ancient lexicography, it should be noted that the area reached its widest development in this period not just in relation to the contents of the dictionaries produced and the lexicographic goal of each one, but also in terms of the typology of genres. All levels of language, including literary language, dialectal vocabulary as well as scientific language were analyzed. Regarding the principle of systematization, the

501 This fragment is ascribed by MacPhail [2011] 201 n. 136 to Hephaestion's work *Περὶ τῶν ἐν ποιήμασι παραχῶν* ("On confusions that occur in poems"), which is attested in Suidas.

502 On Draco, see above § 4.1.

503 See above in this paragraph.

504 For an overview of Greek lexicography from Antiquity and the Middle Ages, see Cohn [1913], Tolkiehn [1925], Serrano Aybar [1977], Degani [1995], Alpers [1990], [2001] and [2008], and Tosi in this volume. See also Matthaios [2010a], who, in addition to history, treats methodological aspects based upon the relations of each lexicographer to his sources.

individual entries were arranged either alphabetically or according to subject areas and semantic fields, in the form of onomastics. The lexical material that was treated was further explained in terms of meanings, synonyms or etymology.

Generally speaking, the lexicographic production of the Imperial era and Late Antiquity, like the philological-grammatical activity from this period on other subject areas,⁵⁰⁵ showed a strong trend towards expansion and systematization of the lexicographic works produced in the Hellenistic period.⁵⁰⁶ Whereas Hellenistic glossographers and lexicographers set themselves the goal of analyzing the language of one specific author or a special literary genre, or at times a dialect or an idiolect, Imperial lexicographers now expanded their task to broader linguistic contexts and encompassed various linguistic levels in a single work. This resulted in collections such as the *Thesaurus Linguae Graecae*, which considered the Greek language in its entirety, without restriction to a specific area of its realization.

The aspiration to build up an exhaustive documentation also had consequences for the method used by the lexicographers of the Roman Empire and for the developmental process of each lexicographic work. In opposition to their Hellenistic predecessors, who gathered the relevant material from their own field of experience, as in the case of dialects or technical languages, but also from their own reading and interpretation of literary texts in direct examination of the respective author and his language, the collections from the Imperial era and Late Antiquity emerged, so to speak, in an indirect manner. Lexicographers now began to excerpt the lexical material that was to be explained from commentaries and lexica of earlier times. They made extracts from special glossaries and joined smaller works together, incorporating them into larger collections. The number and scope of the sources processed in this manner defined and guaranteed the implicit or explicit claim of completeness advanced by each lexicographer. This manner of proceeding should by no means be regarded as suggesting a lack of originality.⁵⁰⁷ Rather, Imperial and Late Antique lexica represent one of the most creative moments of lexicographic activity, which demanded of lexicographers an expertise in no way

505 See above § 4.

506 On the characteristics of Imperial and Late Antique lexicography, see Matthaios [2010a] 1–5.

507 See e.g. the dismissive judgment expressed by Cohn [1913] 688 concerning the lexicographic accomplishments of the Imperial era: “In der Kaiserzeit hörte im allgemeinen die selbständige Forschung auf, fast alle lexikographischen Werke aus dieser Zeit beruhen im wesentlichen auf den Vorarbeiten und Sammlungen der älteren Grammatiker”.

different from today's lexicography, namely the ability to synthesize and systematize, but also to accurately select the relevant data from the available material and to critically analyze the respective sources.

In effect, the linguistic, historical, ideological and cultural conditions of the era are reflected in an especially lively manner in the lexicography of the Imperial era and Late Antiquity. This is true in particular for that branch of lexicography characterized by the term "Atticistic lexicography", which became a crucial feature of the period of ancient scholarship discussed here:⁵⁰⁸ indeed, Atticistic lexicography marked a turning point in the entire field of lexicography. Lexica, especially the Atticistic collections, no longer merely served the purpose of explaining literary language, but were also intended for new text production. The productive function, however, involved a closely connection with the normative and prescriptive character of lexicography, as the lexicographer attempted with his work to instruct the user in the correct use of language, at the same time also exercising influence in questions of language development.

The following overview is divided according to the individual genres of lexica compiled in the Imperial era and Late Antiquity, and discusses the most important representatives and works in each area according to a historical order.

6.1 *Dictionaries on Individual Authors and Literary Genres*

Lexicographic analysis of the Homeric language still constituted a special part of lexicographic activity during the Imperial era. A systematic treatment of this area, which also took into account the abundant previous studies on Homeric diction, is found in the lexicon of Apollonius Sophista,⁵⁰⁹ bearing the title *Λεξικὸν κατὰ στοιχεῖον τῆς τε Ἰλιάδος καὶ Ὀδυσσεΐας* ("Alphabetically arranged lexicon on the *Iliad* and the *Odyssey*"). Apollonius, the son of the grammarian Archibius,⁵¹⁰ lived in Alexandria in the second half of the 1st century AD. His lexicon, which is arranged alphabetically predominantly according to the first two letters, has been directly transmitted in Cod. Coislinianus 345, albeit in

⁵⁰⁸ On Atticistic lexicography, see below in § 6.4.

⁵⁰⁹ Literature on Apollonius Sophista: Gräfenhan [1843–1850] III 58 and 174, Cohn [1895d], Schmid-Stählin [1920–1926] I 438 and 442, Sandys [1921³] 296, Montanari [1996h], Dickey [2007] 24–25 and LGAA s.v. Apollonius (13) Sophista.

⁵¹⁰ See Suid. α 3423 s.v. Ἀπολλώνιος and α 4106 s.v. Ἀρχίβιος. According to Suidas, the father of Apollonius lived up to the time of Trajan. Apollonius' son was also named Archibius (cf. Suid. α 4105) and had worked on the explanation of Callimachus' epigrammatic poetry; on this Archibius, see above § 3.3.

abbreviated form.⁵¹¹ This is in contrast to the rest of the surviving collections from the Hellenistic and early Imperial period, which are mostly preserved in fragments, such as Apion's Γλῶσσα Ὀμηρικαί ("Homeric Glosses").⁵¹² The epitomized text of Apollonius' lexicon can be supplemented with the help of quotations made by later users, above all Hesychius, who, in the preface of his lexicon (*Epist. ad Eulogium* 1.2–3 and 1.31–2.1 Latte) explicitly mentions Apollonius Sophista as one of his sources.

Apollonius' lexicon is considered one of the most important sources for Hellenistic Homeric scholarship, which he systematically incorporated into his work. In addition to Apion's glossographical studies on Homer, Apollonius' sources include not only an unidentified grammarian named Heliodorus,⁵¹³ also a precursor of the later collection of the so-called *D-scholía*, but also Aristarchus' Homeric exegesis, which was largely transmitted through Aristonicus' work, as well as a series of works and commentaries on specific philological Homeric issues composed by Aristarchus' pupils and grammarians.⁵¹⁴ The success of the dictionary, which survived into the Byzantine era, mainly lies in the claim of completeness Apollonius advanced for his analysis of Homeric vocabulary, based on the large number of sources taken into account.

The work Περὶ Ὀμηρικῆς λέξεως ("On the Homeric expression") by an unknown grammarian named Basileides and the epitome of this work made by a certain Cratinus, which is quoted several times in the *Etymologica*,⁵¹⁵ belong to studies on the Homeric language dating from the Imperial and Late Antique era. Similarly, Cassius Longinus' work on polysemantic expressions by Homer with the title Περὶ τῶν παρ' Ὀμήρω πολλὰ σημαίνουσῶν λέξεων ("On ambiguous words in Homer"; 4 books),⁵¹⁶ refer to Homeric language. Due to the scarcity of surviving fragments, it remains uncertain to what extent these lexicographic works also included entirely new aspects or whether they were simply based on earlier source material.

511 The lexicon was edited by Bekker [1833]; an edition of the first four letters is provided by Steinicke [1957]. Papyri containing fragments from Apollonius' lexicon have been studied by Haslam [1982], [1992] and [1994], who also evaluated them for the history of the transmission of the lexicon.

512 On Apion and his Homeric glossary, see above § 3.3.

513 On the Homeric scholar Heliodorus, who was probably not identical to the metrician of the same name (on this Heliodorus, cf. above § 5), see Dyck [1993b] 1–6, who has also collected and commented on his fragments.

514 A detailed report on the sources of Apollonius Sophistes is presented by Schenck [1974]; cf. Erbse [1960] 407–432.

515 On this work, see Cohn [1913] 691 and Tolkiehn [1925] 2445.

516 On this work of Longinus, see Tolkiehn [1925] 2460; on Longinus, see above § 4.1.

As well as the language of Homer, the vocabulary of comedy and tragedy also drew the attention of lexicographic research. Theon had already authored lexicographic works on the phraseology of comedy and quite probably also on the language of tragedies.⁵¹⁷ Epitherses of Nicaea,⁵¹⁸ a grammarian from the first half of the 1st century AD,⁵¹⁹ is attested by Stephanus of Byzantium as the author of a lexicographic work consisting of at least two books with the title *Περὶ λέξεων Ἀττικῶν καὶ κωμικῶν καὶ τραγικῶν* (“On Attic vocabulary in the area of comedy and tragedy”).⁵²⁰ In the late 2nd century AD, the grammarian Palamedes treated the language of comedy and tragedy in two separate lexicons, in his *Λέξις κωμική* (“Phraseology of comic poetry”) and in *Λέξις τραγική* (“Phraseology of tragic poetry”).⁵²¹

The language of historiography was also explored in lexicographic works. Parthenius of Nicaea,⁵²² who lived during Nero’s reign and was probably also the son of Dionysius Tryphonos, was a pupil of the grammarian Dionysius of Alexandria and dealt with the language of historians in general.⁵²³ His work *Περὶ τῶν παρὰ ἱστορικοῖς λέξεων ζητουμένων* (“On the questionable expressions of historians”) is an alphabetic lexicon in at least two books with explanations of rare expressions used by historians. It was quoted several times by Athenaeus and, thanks to Athenaeus, attracted the attention of Byzantine scholars. A certain Apollonius⁵²⁴ treated the language of Herodotus in his work *Ἐξήγησις*

517 On Theon’s lexicographic activity, see above § 3.3.

518 Literature on Epitherses: Gräfenhan [1843–1850] III 178, Cohn [1907a], Fornaro [1997c], Bagordo [1998] 65 and LGGA s.v. Epitherses (Cl. Meliadò); a collection of the surviving evidence from his lexicographic work is provided by Bagordo [1998] 127.

519 If the Epitherses mentioned by Plutarch (*De def. or.* 17.419b–e) is identical to the grammarian from Nicaea, then he lived in the first half of the 1st century AD and was also active in Rome.

520 See Steph. Byz. 474.17 s.v. Νίκαια, πόλις Βιθυνίας, Βοττιαίων ἄποικος... ἐξ αὐτῆς... καὶ Ἐπιθέρησης γραμματικὸς γράψας περὶ λέξεων ἀττικῶν καὶ κωμικῶν καὶ τραγικῶν. The number of books is derived from the only surviving fragment by Erotian. α 103 s.v. ἄμβηνη... Ἐπιθέρησης δ’ ἐν β’ τῶν Λέξεων (fr. *2 Bagordo) ἄμβωνά φησι χεῖλος εἶναι σκευούς καὶ τῆς ἀσπίδος τὸ πρὸς αὐτῇ τῇ ἴττι; this fragment, however, should not be attributed automatically to Epitherses. The form of the name transmitted in the manuscripts is θέρησις, which Meineke changed to Ἐπιθέρησης upon the evidence by Stephanus of Byzantium. Nachmanson emends it into the form Θέρησης. On the character of Epitherses’ lexicon, see Bagordo [1998] 65: “dieses Lexikon [war] eine Art Konkordanz zwischen den Komikern und Tragikern”.

521 On Palamedes, see above § 3.3.

522 Literature on Parthenius: von Blumenthal [1949], Matthaios [2000d] and LGGA s.v. Parthenius (L. Pagani). On his lexicon, cf. Cohn [1913] 691 and Tolkiehn [1925] 2445–2446.

523 On Dionysius of Alexandria, see above § 3.3; on Dionysius Tryphonos, see below in § 6.2.

524 Literature on Apollonius: Cohn [1895f].

τῶν Ἡροδότου γλωσσῶν (“Explanation of Herodotian glosses”).⁵²⁵ Another glossary of Herodotus’ language, whose author is unknown, has been transmitted in two versions. The first is arranged alphabetically, whereas the second reproduces the glosses in the order of the running text. The exact date of its origin, however, cannot be precisely determined.⁵²⁶ As in the case of Herodotus, the language of Thucydides was also addressed by lexicographic scholarship from the Imperial era and Late Antiquity. The grammarian Claudius Didymus,⁵²⁷ who was active in Rome in the early 1st century AD during the reign of the Emperor Claudius, wrote a work of grammatical-lexical contents on the words of Thucydides that violated the analogous formation principle. The title of the work, according to Suidas (δ 874), was Περὶ τῶν ἡμαρτημένων παρὰ τὴν ἀναλογίαν Θεουκιδίδη.⁵²⁸

Similarly to Harpocration from Argos, who is said to have authored a Platonic lexicon,⁵²⁹ Boethus,⁵³⁰ a grammarian from the period between Pamphilus and Diogenianus,⁵³¹ dealt with the explanation of Platonic vocabulary. Two works on this subject are attributed to Boethus, a Λέξεων Πλατωνικῶν συναγωγὴ (“Collection of Platonic expressions”), which was arranged alphabetically and was dedicated to a certain Melanthas, and the work Περὶ τῶν παρὰ Πλάτωνι ἀπορουμένων λέξεων (“On questionable expressions in Plato”), which was addressed to a certain Athenagoras. Both collections are recorded in Photios’

525 The work is quoted by Orion 134.34 and 170.29 as well as in *Etym. Magn.* 552.2 and 722.22. On Apollonius’ glossary, see Cohn [1913] 691 and Tolkiehn [1925] 2446.

526 See Tolkiehn [1925] 2446 with references to further literature and the editions of the glossary.

527 Literature on Claudius Didymus: Gräfenhan [1843–1850] III 64 and 148, Cohn [1903d], Schmid-Stählin [1920–1926] I 434 and 438–439, Christes [1979] 104–105, Montanari [1997g] and LGGA s.v. Didymus (2) Claudius (F. Montana).

528 On this work, see Cohn [1913] 691 and Tolkiehn [1925] 2446.

529 The Platonic philosopher Harpocration of Argos lived in the 2nd century AD and was a pupil of the Platonist Atticus. According to Suidas’ statement (α 401), in addition to a commentary on Plato in 24 books, Harpocration authored a lexicon on the Platonic vocabulary consisting of two books with the title Λέξεις Πλάτωνος (“Platonic expressions”); see Cohn [1913] 691 and Tolkiehn [1925] 2446.

530 Literature on Boethus: Gräfenhan [1843–1850] III 181, Cohn [1903a] and [1913] 691, Schmid-Stählin [1920–1926] I 442, Tolkiehn [1925] 2446, Montanari [1997c] and LGGA s.v. Boethus (2).

531 Boethus’ lifetime can be determined from an entry in the *Lexicon* of Hesychius (δ 1201), where it is evident that Diogenianus used Boethus and quoted him; see Cohn [1903a] 254.

Bibliotheca (cod. 154, 100a13–17 and cod. 155, 100a18–24)⁵³² and were used by the Patriarch himself as sources for the compilation of his own lexicon.⁵³³

We also have knowledge of another two, fully preserved Platonic lexica, by different authors. The first, stemming from Timaeus⁵³⁴ is a lexicon bearing the title “an alphabetical selection of Platonic expressions” (Ἐκ τῶν τοῦ Πλάτωνος λέξεων), which can probably be dated to the 3rd century.⁵³⁵ This lexicon was available to Photius (*Bibl.* cod. 154, 100a15–16), and was in his judgment far surpassed by that of Boethus. The second is entitled *Περὶ τῶν ἀπορουμένων παρὰ Πλάτωνι λέξεων* (“On Questionable Expressions in Plato”) and is falsely ascribed to Didymus Chalkenteros.⁵³⁶ Its date of origin is not easily determined: it was compiled sometime in the period between the 3rd and the beginning of the 10th century.⁵³⁷

Medical language, especially the language of the Hippocratic corpus, was already a special subject of lexicographic research, both from the point of view of philology and of medicine.⁵³⁸ In the middle or towards the end of the 1st century AD, the grammarian Erotian⁵³⁹ presented an extensive “Collection of expressions occurring in Hippocrates” (τῶν παρ’ Ἱπποκράτει λέξεων συναγωγὴ), utilizing a large amount of source material. He dedicated his work to Andromachus, a physician at the Imperial court in Rome. In his arrangement of the lexicographic entries, Erotian followed the text of the Hippocratic corpus according to the order of the individual writings and explained the glosses of each writing in such a manner that whenever a word appeared for the first time, he made reference to all other occurrences of the same term. However, Erotian’s lexicon has not been preserved in its original form, as the work began

532 On the character of Boethus’ lexica, see Cohn [1884b] 783–786, 794–813 and 836–852; cf. also Dyck [1985].

533 See Theodoridis [1982–1998] I, LXXIII–LXXIV with references to other literature.

534 Literature on Timaeus: Schmid-Stählin [1920–1926] II 1081, von Fritz [1936], Alpers [2001] 200 and [2008] 1254–1255, Matthaios [2002b] and LGGA s.v. Timaeus.

535 The lexicon has been edited by Valente [2012]; on Bonelli’s edition [2007], see the review of Alpers [2009a]. On the datation of the compilation of the lexicon, see Valente [2012] 57.

536 On this Platonic glossary, see Cohn [1913] 691 and Tolkien [1925] 2447. The work has been newly edited by Valente [2012].

537 On the dating of the glossary, see Valente [2012] 250.

538 On lexicographic activity on the field of ancient medicine, see Tolkien [1925] 2450–2451 and Manetti in this volume. Information on this matter is provided by Erotian in the *Prefatio* to his *Hippocratic lexicon* (1–9 Nachmanson).

539 Literature on Erotian: Gräfenhan [1843–1850] III 178–179, Cohn [1907b] and [1913] 691–692, Tolkien [1925] 2451–2452, Nutton [1998a], Alpers [2001] 199–200 and [2008] 1255 and LGGA s.v. Erotianus.

very early to be epitomized and excerpted. Thus numerous fragments of the original work were used as scholia in the manuscripts of Hippocrates and have been preserved almost in their original wording. Erotian's glossary was set in an alphabetical order in the 11th century, and was also substantially abbreviated at the same time. A second epitome, written not much later, is the origin of the present form of the preserved manuscripts.⁵⁴⁰ Erotian's erudition, a typical feature of Imperial scholarship, becomes clear from the preserved fragments of the original lexicon in the scholia on Hippocrates, which show that he aimed to achieve the maximum benefit from the sources available to him and to corroborate his explanations with evidence stemming from non-medical language.

Prose literature was also one of the subjects examined in the lexicography of the Imperial era and Late Antiquity, for instance with studies on the Attic orators, in which their language was interpreted in a series of so-called 'Rednerlexika'. The extensive studies of Didymus Chalkenteros in this field present the foundation and basic source from which Imperial lexicography on classical rhetoric drew its information. Lexicographic activity in this area began with Caecilius of Cale Acte,⁵⁴¹ the literary historian and critic of the Augustan period, who was a friend of Dionysius of Halicarnassus. In addition to his extensive literary-historical and theoretical work in the field of ancient rhetoric, Caecilius also compiled lexicographic works on the language of the Attic orators, but neither the number nor the exact titles of Caecilius' lexicographic works can be determined from Suidas' information (x 1165 = fr. 1a Augello). In contrast to earlier views on the existence of two rhetorical dictionaries compiled by Caecilius,⁵⁴² Augello ([2006] 7) believes that there was only one rhetorical lexicon with the title Ἀπόδειξις τοῦ εἰρησθαί πᾶσαν λέξιν καλλιρρημοσύνης ("Exposition of the vocabulary used for the purpose of elegant expression"; fr. 37–40 A.).

The grammarian Julius Vestinus,⁵⁴³ who lived in the first half of the 2nd century AD, was the head of the Alexandrian Museum and the Roman libraries, and also the secretary of the Emperor Hadrian. Vestinus is known mostly

540 The origin and transmission of the work was investigated by Nachmanson [1917]; the standard edition of the lexicon (Nachmanson [1918]) is based upon this work.

541 Literature on Caecilius: Gräfenhan [1843–1850] III 136, 192 and 348–350, Brzoska [1897], Schmid-Stählin [1920–1926] II 463–466, Weißenberger [1997] and LGGA s.v. Caecilius. After Ofenloch [1907], the fragments of Caecilius have been collected and commented on by Augello [2006]; see also Augello [2006] XIII–XX for an overview of Caecilius' life and work.

542 See e.g. Brzoska [1897] 1185; cf. Cohn [1913] 696 and Tolkiehn [1925] 2447.

543 Literature on Vestinus: Gräfenhan [1843–1850] III 52 and 187, Kroll [1918a], Ziegler [1958], Matthaios [2002d] and LGGA s.v. Iulius (4) Vestinus (A. Ippolito).

for his epitome of the lexicon of Pamphilus.⁵⁴⁴ According to Suidas (ο 835), he authored two 'Rednerlexika': a "Selection of expressions from Demosthenes' books" ('Εκλογή ὀνομάτων ἐκ τῶν Δημοσθένους βιβλίων), and a collection that took into account the vocabulary of Thucydides, Isaeus, Isocrates, the orator Thrasymachus and other orators ('Εκλογή ἐκ τῶν Θουκυδίδου, Ἰσαίου, Ἰσοκράτους καὶ Θρασυμάχου τοῦ ῥήτορος καὶ τῶν ἄλλων ῥητόρων).

Three other 'Rednerlexika' stemming from approximately the same period were described by Photius in his *Bibliotheca* (cod. 150, 99a39–99b15);⁵⁴⁵ the oldest of them seems to be compiled by Philostratus of Tyre. This lexicographer is plausibly to be identified with the first Philostratus, among whose writings Suidas names a work (φ 422) with the title *Ζητούμενα παρὰ τοῖς ῥήτορσιν* ("Questionable expressions of the orators"). The first work named by Photius is the "Alphabetically arranged lexicon on the ten orators" (Λεξικὸν τῶν παρὰ τοῖς δέκα ῥήτορσιν λέξεων κατὰ στοιχείον) by a certain Julianus, described by Photius as the most comprehensive of the three. The lexicon by Valerius Diodorus is named in the third place. This Diodorus was the son of Valerius Pollio and, according to Suidas (π 2166), he authored a work with the title Ἐξηγησις τῶν ζητουμένων παρὰ τοῖς ἑνὶ ῥήτορσιν ("Explanation of the questionable expressions of the ten Attic orators"). Photius, struck by the great similarity of Diodorus' work with that of Julianus, surmised that one of the two copied the other. Since according to Photius' description, the lexicon of Julianus was richer in quotations and citations than that of Diodorus, it can be assumed that Diodorus was dependent upon Julianus. However, these two shadowy figures of rhetorical lexicography gain substance from P.Oxy. xv 1804 (3rd century AD), which contains a papyrus lexicon the editors B. P. Grenfell and A. S. Hunt titled *Λέξεις ῥητορικαί* due to its substantial similarity with the so-called 5th *Bekker-Lexicon*.⁵⁴⁶ From this finding, Alpers ([1981] 120–123) was able to make a consummate reconstruction of the history of these rhetorical lexica and their influence on Late Antique and Byzantine lexicography. Since Valerius Diodorus had a country estate in Oxyrhynchus in 173 AD, as can be determined with the aid of several papyrus testimonies,⁵⁴⁷ it is probable that the lexicon transmitted in P.Oxy. 1804, which was actually written a few decades after Diodorus' lifetime in the place where the lexicographer had also been active, is indeed the lexicon of Diodorus himself. This is supported by the

544 See below in § 6.2.

545 On the 'Rednerlexika', also on those that are not separately discussed here, see Cohn [1913] 696 and Tolkiehn [1925] 2461–2462; cf. Schmid-Stählin [1920–1926] II 873.

546 See Grenfell's and Hunt's introduction on the edition of the papyrus as well as their commentary on the individual entries of the papyrus lexicon.

547 For a discussion of the relevant testimonies, see Alpers [1981] 116 n. 73.

fact that the wording of the lexicon preserved on the papyrus agrees with the lexicon of Diodorus that was described by Photius.

Thanks to this finding, it is not only Diodorus' lexicon that becomes tangible, but also its prototype, the lexicon by Julianus. By following Alpers' reconstruction, we can identify the source upon which Diodorus, Harpocratio, the 5th *Bekker-lexicon*, the *Lexicon Cantabrigiense* and, last but not least, Pollux were based. This source was not, as Wentzel maintained,⁵⁴⁸ an "Attic Onomastikon", but the lexicon of Julianus, who had first alphabetized his primary onomastic sources—glosses on names of months, representations of the Athenian court system as well as Attic localities and authorities—and unified them with the work of Didymus Chalkenteros on the Attic orators.⁵⁴⁹

The only surviving 'Rednerlexikon' from the Imperial era is that of Valerius Harpocratio.⁵⁵⁰ Harpocratio is characterized by Suidas (α 4014) as ῥήτωρ. He came from Alexandria and, if he is to be identified with the Harpocratio named in *Hist. Aug. Verus* 2.5, he lived in the second half of the 2nd century AD⁵⁵¹ and was a teacher of Emperor L. Verus. His lexicographic activity is associated with the Λεξικὸν τῶν ἰ' ῥητόρων ("Lexicon of the ten orators"), which is not only of particular importance for the language of Attic orators, but also for the Attic juridical and political system as well as for the cultural history and topography of Athens. Following, again, Alpers' reconstruction (see above), Harpocratio relied significantly on Julianus, but it cannot be ruled out that he also used and incorporated other sources. The lexicon has been transmitted through two routes: one complete version, which has survived in younger manuscripts, stands against an epitome, which is verifiable⁵⁵² already in the 9th century, by virtue of quotations preserved in the lexica of that time, such as Photius and Suidas.⁵⁵³

6.2 *Onomastica, Synonymica, Etymologica*

The Hellenistic period saw the creation of a series of glosses and dialect collections that were very frequently arranged 'onomastically': names, even synonyms used for a certain object, were compiled according to the dialect

548 See Alpers [1981] 117 and the reference made in n. 77 to Wentzel's studies.

549 That is the conclusion reached by Alpers [1981] 123.

550 Literature on Harpocratio: Schultz [1912a], Schmid-Stählin [1920–1926] II 876–877, Cohn [1913] 696, Tolkiehn [1925] 2462, Tosi [1998b], Alpers [2001] 197, Dickey [2007] 94 and LGGA s.v. Valerius (3) Harpocratio (F. Montana).

551 On Harpocratio's lifetime, see Alpers [1981] 116 n. 74 and the references discussed therein.

552 Harpocratio's lexicon was edited by Dindorf [1853] and Keaney [1991].

553 See Theodoridis [1982–1998] II, XLI–XLVI.

to which they belonged or according to their attestation in certain literary genres and contexts. Thus they were not organized and explained alphabetically, but according to subjects and semantic fields. The beginnings of the so-called Onomastica in the Hellenistic period are associated with the lexicographic works of Callimachus and Aristophanes of Byzantium,⁵⁵⁴ which formed the basis for the Onomastica and also for the dictionaries of synonyms of the Imperial era and Late Antiquity.⁵⁵⁵ Furthermore, the grammarian Dionysius Tryphonus (ὁ Τρύφωνος),⁵⁵⁶ who was probably the son or pupil of the Alexandrian grammarian Tryphon and therefore lived no later than the early Imperial era, is frequently cited by Harpocration, Athenaeus and Stephanus of Byzantium as the author of a work consisting of at least 10 books called Περὶ ὀνομάτων (“On Designations”).⁵⁵⁷ This work was structured in lexicographic form and probably organized according to semantic fields. As far as can be seen from the preserved passages, Dionysius treated not only appellatives, but also personal and geographic names.

The grammarian Seleucus,⁵⁵⁸ who was active first in Alexandria and later in Rome at the court of Tiberius, provided an essential impetus for the development of Onomastica and dictionaries of synonyms in the Roman Empire. Suidas (σ 200) attributes to him a work with the title Περὶ τῆς ἐν συνωνύμοις διαφορᾶς (“On semantic differences in synonyms”); his work Γλῶσσαι (“Glosses”) explained rare, dialectal and unknown technical terms.⁵⁵⁹ The lifetime of another grammarian, Simaristos, cannot be dated with certainty, but

554 On the lexicographic works of Callimachus and Aristophanes of Byzantium, see the contribution by Montana in this volume. On Callimachus, cf. Matthaios [2008] 600–601 with references to further literature.

555 An excellent overview of the ancient Onomastica is provided by Tosi [2000a]; cf. also Tosi in this volume.

556 Literature on Dionysius Tryphonus: Gräfenhan [1843–1850] I 538, Schmid-Stählin [1920–1926] I 435, Cohn [1903f], Montanari [1997m] and LGGA s.v. Dionysius (15) Tryphonius (V. Novembri).

557 The relevant passages are listed by Cohn [1903f]. From a passage in Athenaeus (14.641a), where an explanation of the word ἐπιφορήματα is cited under Dionysius’ name, which, however, repeats the same explanation given by Tryphon (Ath. 14.640e = Tryph. fr. dubiae sedis 136 von Velsen); it appears somewhat premature to conclude that Dionysius’ work was only a reworking or an epitome of Tryphon’s work Περὶ ὀνομασιῶν (Tryph. fr. 109–115 von Velsen), as Cohn [1903f] maintains, following Rohde [1870] 66; cf. also von Velsen [1853] 101.

558 On Seleucus’ work, see above § 3.3.

559 To what extent these works are identical, as Müller [1891] 21 assumed (cf. Razzetti [2002b]), remains uncertain. On the lexicographic work of Seleucus, see Cohn [1913] 688 and Tolkiehn [1925] 2453.

he certainly lived before Athenaeus, who quotes him. Simaristos wrote a work *Περὶ συνωνύμων* (“On synonyms”) in at least 4 books.⁵⁶⁰ Ptolemaeus of Ascalon compiled a lexicographic work titled *Περὶ διαφορᾶς λέξεων* (“On expressions with different meanings”).⁵⁶¹ Pamphilus’ work “On Plants” (*Περὶ βοτανῶν*) was also arranged onomastically,⁵⁶² as were the lexicographic works of Telephus, in which expressions for objects of everyday use were collected and explained.⁵⁶³

The only completely preserved representative of the onomastic genre is a work which Pollux himself entitled *Ὀνομαστικόν* in 10 books. Since this work can be assigned to Atticist lexicography due to its time of origin and particularly its ideological and linguistic-historical background, it will be discussed in the relevant section.⁵⁶⁴ The collection “On Ethnics” by the grammarian Orus still falls within the area of *Onomastica*: it is a geographic-etymological lexicon, dealing with the adjectival form of place names.⁵⁶⁵ It was also one of the main sources for the lexicon *Ἐθνικά* by Stephanus of Byzantium, which consists of more than 50 books.⁵⁶⁶ Stephanus, active as a grammarian at the Imperial university of Constantinople, dedicated this work to emperor Justinian. The work, probably composed around 530, contains detailed linguistic, geographic, historical and mythological explanations of a large number of place names and the ethnica belonging to them. It has survived in a drastically epitomized version along with some excerpts from the complete work in the excerpts by Constantine Porphyrogenetos.⁵⁶⁷

Herennius Philo from the Phoenician city of Byblos is known for a work *Περὶ τῶν διαφόρως σημαينوμένων* that examined a number of synonymous expressions and also devoted considerable attention to *Onomastica*.⁵⁶⁸ Several long

560 On Simaristos, see Cohn [1913] 688 and Tolkiehn [1925] 2453.

561 On Ptolemaeus of Ascalon, see above § 4.1.

562 On Pamphilus, see above § 3.3.

563 On Telephus and his lexicographic work, see above § 3.3.

564 See below in § 6.4.

565 On Oros and his lexicographic work, see above § 4.2.

566 Literature on Stephanus of Byzantium: Schmid-Stählin [1920–1926] II 1084–1085, Sandys [1921³] 379, Honigmann [1929], Hunger [1978] II 36–37, Kaster [1988] 362–363 (Nr. 144), Gärtner [2001], Dickey [2007] 101, *LGGA s.v.* Stephanus Byzantius, and Pontani in this volume.

567 On Stephanus’ lexicon, see also Cohn [1913] 702, Tolkiehn [1925] 2469–2470, Alpers [2001] 201 as well as the informative Prolegomena in the edition of Billerbeck [2006]. The work was edited by Meineke [1849]; a new edition is in preparation by M. Billerbeck. So far three volumes have been published: Billerbeck [2006], Billerbeck-Zubler [2011] and Billerbeck [2014].

568 On Herennius Philo and his *Synonymicon*, see above § 3.3.

passages or different versions from this collection have survived, which forms the basis of the ancient synonymica.⁵⁶⁹ One branch of the transmission is the lexicon ascribed to a certain Ammonius.⁵⁷⁰ Others are known under the name of a certain ‘Ptolemaeus’, probably because of the lexicographic work of Ptolemaeus of Ascalon, still others under the name of (H)Eren(n)ius Philo and Eranius Philo.⁵⁷¹ The Byzantine dictionaries of synonyms were built on these collections, especially the so-called *Etymologicum Symeonis* from the 12th century, entitled *Συναγωγὴ πρὸς διαφόρους σημαινομένων σημασίας*. In the first half of the 5th century the grammarian Orus compiled a lexicon bearing the title *Περὶ πολυσημάντων* (“On Ambiguous Expressions”), from which very few fragments have survived.⁵⁷²

The special etymological studies from the philological-grammatical tradition of the Hellenistic and Imperial era were likewise reworked in lexicographic form. A comprehensive presentation of the etymological theory was provided in the form of a lexicon by the grammarian Orio from Thebes in Egypt in the 5th century.⁵⁷³ Orio first taught in Alexandria, later went to Constantinople and finally to Caesarea. Orio is known for his *Etymologicon*, which in the manuscript tradition is titled *Ἐτυμολογία, Περὶ ἔτυμολογίας* or *Περὶ ἔτυμολογιῶν*. The dictionary has survived in three different versions, each having been epitomized to a varying degree.⁵⁷⁴ The entries are arranged alphabetically in such a way that the sources used recur in a specific order within each entry. The structure of the individual lemmas shows the following sequence of sources:⁵⁷⁵ commentaries on Homer and other poets, Soranus’ work *Περὶ ἔτυμολογιῶν τοῦ σώματος τοῦ ἀνθρώπου*, Herodian’s *Περὶ παθῶν* and his orthographic writings,

569 On this branch of ancient lexicography, see Cohn [1913] 702–703, Tolkiehn [1925] 2453, Nickau [1966] LXIII–LXVI and Alpers [2001] 200–201.

570 The work was edited by Nickau [1966]. Nickau, *ibid.*, LXVI–LXVII, discusses the question regarding the authorship of the collection of synonyms; cf. also Nickau [1990].

571 On the various epitomes, see Nickau [1966] XXVII–XLIV; cf. Erbse [1960] 295–310, Nickau [2000] and Dickey [2007] 94–96. The ‘Ptolemaeus’-Epitome was edited after Heylbut [1887] by Palmieri [1981–1982], that of Eranius Philo by Palmieri [1981] and that of (H) Erennius Philo by Palmieri [1988].

572 On Orus and his lexicographic work, see above § 4.2.

573 Literature on Orio: Schmid-Stählin [1920–1926] II 1081, Sandys [1921³] 377–378, Wendel [1939b], Hunger [1978] II 45, Kaster [1988] 322–325 (Nr. 110), Tosi [2000b], Dickey [2007] 99–100 and LGGA s.v. Orion (A. Ippolito).

574 Edited by Sturz [1820]. On Orio’s *Etymologicon*, see Cohn [1913] 697–698, Tolkiehn [1925] 2464–2465 and Alpers [2001] 201.

575 See Kleist [1865] 15–38 and Theodoridis [1976] 16–41.

Heraclides Ponticus' *Περὶ ἐτυμολογιῶν*,⁵⁷⁶ Philoxenus' etymological studies (most notably the work *Περὶ μονοσυλλάβων ῥημάτων*) and Herodian's *Συμπόσιον* and pseudo-Herodian's *Ἐπιμερισμοί*.⁵⁷⁷

6.3 *Alphabetical Lexica: From Pamphilus to Hesychius and Cyril's Glossary*

So far, it has been shown that Imperial and Late Antique lexicography was characterized by an enlarged range of lexicographic contents and an increasingly in-depth approach as compared to the history of the genre in the Hellenistic period. Although the first stirrings of this development had already begun quite early, it was now characterized by the fact of incorporating the entire lexical material of the Greek language in lexicographic form, independently of its realization in specific literary and dialectal contexts. This development strengthened the function of knowledge transfer and led ancient lexicography far beyond the borders of philology. At the same time, it transformed the genre into a popular means for understanding ancient language and culture.

The first steps towards this form of lexicographic works were taken by two scholars from the 1st century AD, Zopyrio and Pamphilus.⁵⁷⁸ Their achievement is an extended lexicographic collection with the title *Περὶ γλωσσῶν καὶ ὀνομάτων* ("On glosses and names"),⁵⁷⁹ which according to Suidas (π 142 s.v. Πάμφιλος) consisted of 95 books, of which Zopyrio edited the letters α-δ and Pamphilus the remaining part from ε-ω. Since Zopyrio is a shadowy figure in the history of ancient scholarship, the lexicon is generally associated with the name of Pamphilus.⁵⁸⁰ Apparently, the lexicon did not have an onomastical structure, as is often assumed, but was arranged alphabetically.⁵⁸¹ Pamphilus intended his lexicon to encompass and explain in a single work the

576 See above § 3.3.

577 On Herodian's *Συμπόσιον* and the *Ἐπιμερισμοί*, which has been transmitted under his name, see Dyck [1993a] 790 and 792–794.

578 On Pamphilus, see above § 3.3.

579 On the title of the lexicon and on its variations, see Hatzimichali [2006] 22–24.

580 On Pamphilus' lexicon, its title, structure and character as well as the sources he used, see Hatzimichali [2006] 22–51; cf. Cohn [1913] 689–690, Tolkiehn [1925] 2448–2449, Wendel [1949b] 337–342, Serrano Aybar [1977] 87–88, Alpers [1990] 25 and [2001] 200. The question of whether Athenaeus used Pamphilus' lexicon is treated in detail and in a convincing manner by Hatzimichali [2006] 33–40. The fragments from Pamphilus' lexicon that could be traced back to him without express mention of his name, mainly transmitted by Athenaeus, were collected by Schmidt [1862] LXI–LXIX. A new collection of fragments with commentary is provided by Hatzimichali [2006] 51–106 (fr. 1–37).

581 The various views of current scholarship on this question have been discussed by Hatzimichali [2006] 28–32.

vocabulary from all areas of nature and human life as well as from various linguistic, dialectal and literary levels. In order to achieve this lexicographic goal, which was substantially broader than that of his predecessors, Pamphilus took the various sources of Hellenistic and early Imperial philological exegesis and lexicography into account and integrated them into his work.

The work in its original form, however, was short-lived, presumably due to its immense size. L. Julius Vestinus⁵⁸² made an epitome from Pamphilus' lexicon in the first half of the 2nd century, to which he gave the title Ἑλληνικά ὀνόματα ("Greek designations"). Shortly thereafter, the grammarian Diogenianus abridged the work of Pamphilus (or the Epitome of Vestinus) to five books, giving the new work the title Παντοδαπή λέξις ("Expressions of any kind"). As Hesychius testifies (*Epist. ad Eulogium* 1.5–23 Latte), Diogenianus then extended the Παντοδαπή λέξις and called this new collection Περιεργοπένητες ("Manual for those without means").⁵⁸³ In this form, Diogenianus's Περιεργοπένητες was the basic source of a lexicon written around 500 AD and attributed to Hesychius, a grammarian from Alexandria.⁵⁸⁴ According to his own statement (*Epist. ad Eulogium* 1.23–2.37), Hesychius expanded his prototype by including proverbs, Herodian's prosodic rules and other material. The transmission of the lexicon continued throughout the entire Byzantine millennium, and during this period the original material experienced changes, cuts, but above all additions, which have come down to us in the only available manuscript, the Cod. Marcianus Graecus 622, written around 1430. Of these alterations, the main change involved the interpolation of the so-called Cyrillexicon. Indeed, the

582 On Vestinus, see above § 6.1.

583 On the various stages in the history of Pamphilus' lexicon, which to some extent coincide with the conditions of the origin of the Hesychiuslexicon, see Hatzimichali [2006] 40–51; cf. Cohn [1913] 689–690, Tolkiehn [1925] 2448–2449, Alpers [1990] 25, [2001] 200 and [2008] 1257–1258. On Diogenianus' work and its relationship to the Hesychiuslexicon, see Latte [1953–1966] I, X–XI and XLII–XLIV; cf. Cohn [1913] 690, Tolkiehn [1925] 2448–2449, Degani [1995] 515–516 and Alpers [2001] 200. On the controversial question concerning the relationship of Diogenianus' Παντοδαπή λέξις to the Περιεργοπένητες, see Hatzimichali [2006] 45–51; cf. Cohn [1903e] 778–782, Schultz [1913] 1320–1321 and Wendel [1949b] 341–342.

584 Literature on Hesychius: Schultz [1913], Schmid-Stählin [1920–1926] II/2, 1083, Hunger [1978] II 35–36, Kaster [1988] 292 (Nr. 73), Tosi [1998c], LGGA s.v. Hesychius (St. Valente), and Pontani in this volume. The lexicon is edited by Latte [1953–1966], Hansen [2005] and Hansen-Cunningham [2009]. Concerning the origin, chronology, sources and transmission of the Hesychiuslexicon, see Latte [1953–1966] I, VII–LI; cf. the *Corrigenda* and *Addenda* to Latte's *Prolegomena* by Alpers [2005] xv–xxiii. For a short characterization of the lexicon see Schultz [1913], Hunger [1978] II 35–36, Degani [1995] 523–524, Alpers [1990] 25, [2001] 200 and [2008] 1257–1258 as well as Dickey [2007] 88–90.

degree of interpolation of entries from Cyrill is so high that one can speak of an amalgamation of the two lexica. According to new estimates, the interpolations from Cyrill comprise one third of the total material. The Cyrill lexicon⁵⁸⁵ is a glossary transmitted under the name of the Patriarch Cyrill of Alexandria. It stems from approximately the same time as the Hesychius lexicon and represents the foundation of all the great Byzantine lexica, as can be seen from its wide-ranging manuscript tradition. The sources of the lexicon consist of elementary glossaries on Homer and Euripides, glosses on Josephus, Plato, Demosthenes, on physicians, on the Bible, on Hellenistic poets and on Christian authors, as well as glosses of Diogenianus and Atticistic lexicographers.

6.4 *The Atticistic Lexica*

Far beyond its interpretive function, the lexicographic discipline in the Imperial era and Late Antiquity acquired a strong normative and prescriptive character, by virtue of the Atticistic lexica.⁵⁸⁶ The ideological and cultural background for this development was the Atticistic movement, which since the 2nd century had propagated the imitation of classical Attic authors no longer merely on the stylistic level, but also on the linguistic and lexical level, thereby becoming one of the decisive factors in the development of the Greek language.⁵⁸⁷ Atticism elevated the Attic language to an identity-forming instrument and regarded it as the educational benchmark by which every scholar was to be measured.⁵⁸⁸

585 On the Cyrill-lexicon, see Drachmann [1936], Latte [1953–1966] I, XII–XIII and XLIV–LI and Cunningham [2003] 43–49; a brief presentation of the lexicon is given by Cohn [1913] 698–699, Tolkiehn [1925] 2465–2467, Serrano Aybar [1977] 101, Hunger [1978] II 37–39, Alpers [1990] 24–25, [2001] 201–202 and [2008] 1263–1266 and Dickey [2007] 100–101; see also Pontani in this volume.

586 For an overview of Atticistic lexicography, see Cohn [1913] 693–695, Tolkiehn [1925] 2454–2463, Serrano Aybar [1977] 93–96, Degani [1995] 519–522 as well as Alpers [1990] 20–24, [2001] 196–199 and [2008] 1255–1256.

587 The history of Atticism is the subject of the foundational study by Schmid [1887–1896]; see also Früchtel [1950] as well as Dihle [1977] and [1992]. On the effect of Atticism on the development of the Greek language, see Triantafyllidis [1938–1981], Browning [1969] 49–55 and Horrocks [1997] 79–86.

588 The demands placed upon a speaker of Greek at that time are correctly described by Dihle [1977] 162: “Jeder, der überhaupt zur Feder griff—und sei es nur, um die Einladung zu einem Abendessen zu formulieren—, stand nunmehr unter der Forderung, sich für den schriftlichen Gebrauch einer längst obsolet gewordenen, mühsam zu erlernenden Sprachform zu bedienen”. On the significance of the Atticist movement from a socio-political and ideological perspective, see Anderson [1993] 86–100, Swain [1996] 17–64, Schmitz [1997] 67–96 and 110–127 as well as Whitmarsh [2005] 41–56.

Quite early on, lexicography was placed at the service of the Atticistic movement. Thus when, during the Second Sophistic—especially during the reign of Hadrian—Atticism reached its peak, rhetoricians compiled lexica for the purpose of collecting the entire range of expressions found in the canon of classical authors, in such a manner as to distinguish the accepted vocabulary from the ἔκφυλον ῥήμα, *i.e.* from expressions regarded as corrupted because they did not belong to the Attic idiom.⁵⁸⁹ A characteristic of the approach adopted by the Atticistic lexicographers was the use of derogatory terms to refer to the Koine forms, which were to be avoided in favor of Attic vocabulary: thus descriptions such as εὐτελής, φορτικόν, μιαιρόν or βάρβαρον, ἔκφυλον, ἀμαθές, ἀδόκιμον and κοινόν explicitly discouraged the Koine use. The corrupted expressions were furthermore attributed to a community of speakers labeled with attributes such as πολλοί, ἰδιῶται and ἀμαθείς, or, in direct contrast to the Ἀττικοί, as Ἑλληγες.⁵⁹⁰ Current research has shown that such expressions served for the designation of *corrupta Graecitas*.⁵⁹¹ The Ἑλληγες were no longer speakers of classical Greek, but spoke a later form of language, which represented the mean and low level. After the Second Sophistic, the Atticistic dictionaries served as source material for the later lexicographic tradition and formed the ground for ideological battles concerning the development of the Greek language.

The earliest of the Atticistic dictionaries derives from the grammarian Irenaeus, the pupil of Heliodorus,⁵⁹² who taught in Rome under the Latin name Minucius Pacatus.⁵⁹³ Among other studies, Irenaeus compiled a work consisting of 3 books with the title Ἀττικά ὀνόματα (“Attic expressions”), an alphabetically arranged lexicon Περί Ἀττικῆς συνηθείας τῆς ἐν λέξει καὶ προσῳδίᾳ κατὰ στοιχεῖον (“On the Attic language use concerning vocabulary and prosody”), and also a treatise Περί Ἀττικισμοῦ (“On Atticism”). Irenaeus is subsumed under the field of Atticistic lexicography, not only because he is often

589 On the expression ἔκφυλον ῥήμα, see Lucian. *Sol.* 11 and *Lex.* 24, as well as Philostr. *Vit. Soph.* 2.8.1. On the meaning of the expression in this context, see Alpers [1981] 4–5 and [1990] 22.

590 On these expressions by which Koine-Greek and its speakers were degraded as ‘uneducated’, see Matthaios [2010a] 187; cf. also Matthaios [2013a] with a study of the use of such expressions in Pollux’ *Onomasticon*.

591 See Maidhof [1912] 43–64.

592 On Heliodorus, see above § 5.

593 Literature on Irenaeus / Minucius Pacatus: Gräfenhan [1843–1850] III 58, 192 and passim, Cohn [1905b], Schmid-Stählin [1920–1926] II 873, Christes [1979] 104–105, Fornaro [1997a] and Regali [2007b]. On his life and writings, see Suid. εἰ 190 and π 29. Irenaeus’ fragments were collected by Haupt [1876].

associated with the Atticistic movement with the nickname Ἀττικιστής, as in *Etym. Gud.* 317.16 de Stefani, but also because, entirely in the manner of the later Atticists, he denounced a non-Attic word unattested in the old authors (παλαιοί), challenging it as βάρβαρον.⁵⁹⁴ From the same period stems the work of Valerius Pollio, which according to Suidas (π 2166) bore the title Συναγωγή Ἀττικῶν λέξεων κατὰ στοιχεῖον (“Alphabetical collection of Attic expressions”). Photius (*Bibl. cod.* 149, 99a34–38) considered the work to be no less rich than Diogenianus’s lexicon.

An anonymous lexicon from the 2nd century has been transmitted in Cod. Coslinianus 345, which D. Ruhnken titled “Antiatticista” because, in opposition to the strict Atticists, it seeks to defend words and expressions as being Attic through evidence from a large number of classical authors.⁵⁹⁵ As Alpers ([2001] 198) has shown, the view that the work was directed against Phrynichus is based on the false identification of the “Antiatticista” as the Atticistic lexicon of Orus.⁵⁹⁶ It is also incorrect to claim that the “Antiatticista” was directed against the first book of Phrynichus’ *Ecloga*.⁵⁹⁷ According to Fischer’s analysis ([1974] 39–41), the “Antiatticista” was not compiled after the completion of the first book of the *Ecloga*, as supposed by previous research. It is rather plausible that the entire glossary was available to Phrynichus, who took it under consideration for his own purposes.

Two other Atticistic collections can partially be reconstructed from quotations in the Homeric commentaries of Eustathius and from Byzantine lexica. They were compiled by Aelius Dionysius of Halicarnassus⁵⁹⁸ and Pausanias,⁵⁹⁹ both grammarians from Hadrian’s time. Photius described both lexica in the *Bibliotheca* (cod. 152,99b20–40 and cod. 153, 99b41–100a12); according to his testimony, there were two editions of Aelius Dionysius’ Ἀττικά ὀνόματα (“Attic expressions”) in 5 books, the second of which contained many entries and quotations from the excerpted authors, which were overlooked in the first.

594 See fr. 13 Haupt; cf. Alpers [2001] 197.

595 The work is edited by I. Bekker in *Anecdota Graeca* I (1814) 77–116; a new edition is in preparation by St. Valente.

596 On the Atticistic lexica of Phrynichus and Orus, see below in this paragraph.

597 This is the view expressed by Latte [1915–1968].

598 Literature on Aelius Dionysius: Cohn [1903j], Schmid-Stählin [1920–1926] II 873–874, Montanari [1997j], Dickey [2007] 99 and LGGA s.v. Aelius (1) Dionysius (F. Montana). The lexicon of Aelius Dionysius was edited by Erbse [1950] 95–151.

599 Literature on Pausanias: Schmid-Stählin [1920–1926] II 873–874, Wendel [1949c], Matthaios [2000e], Alpers [2001] 198, Dickey [2007] 99 and LGGA s.v. Pausanias (2). Pausanias’ *Lexicon* was edited by Erbse [1950] 152–221.

The vocabulary and the material considered in Pausanias' Ἀττικῶν ὀνομάτων συναγωγή ("Collection of Attic expressions") was richer than the lexicon of Aelius Dionysius; in particular, proverbs were described in detail by Pausanias.

In opposition to these two works, the Atticistic lexica of Phrynichus and Pollux are available through direct transmission. A native of Bithynia, Phrynichus⁶⁰⁰ was the author of an alphabetically arranged lexicographic collection comprising 37 books with the title Σοφιστικὴ προπαρασκευὴ ("Sophistic propaedeutic"), which as a complete work was dedicated to Emperor Commodus. Only a small excerpt has survived from this work, along with fragments in Byzantine lexica.⁶⁰¹ As can be inferred from Photius' description of the work (*Bibl. cod.* 158, 100a32–101b31), but above all from the preserved epitome and the fragments that have been transmitted, Phrynichus proceeded in a primarily descriptive and interpretive manner. He collected "elegant and especially characteristic word combinations and phrases" from the language of literature, for which he primarily sought to reproduce the exact meaning. He also divided the collected expressions according to their stylistic value and appropriacy for a range of contexts: thus we learn from Photius that Phrynichus distinguished between the appropriate vocabulary for orators and prose writers, for conversation and for jokes or mockery as well as for matters of love.

In his discussion of the *Praeparatio sophistica*, Photius also lists the authors whom Phrynichus selected as "εἰλικρινοὺς καὶ καθαροὺ καὶ ἀττικοῦ λόγου κανόνες καὶ στάθμαι" (*Bibl. cod.* 158, 101b4–15), namely Plato, Demosthenes and the other nine Attic orators, Thucydides, Xenophon, Aeschines the Socratic, Critias, Antisthenes, Aristophanes, the authors of ancient comedy and finally the three tragedians. The second work of Phrynichus is the shorter Ἐκλογὴ Ἀττικῶν ῥημάτων καὶ ὀνομάτων ("Selection of Attic verbs and names"), which was dedicated to the Imperial secretary Cornelianus.⁶⁰² An analysis of the purpose and form of the *Ecloga* shows that the lexicon was intended as a manual for practical purposes and was therefore conceived in a strict prescriptive manner. At the request of Cornelianus, Phrynichus compiled the expressions considered inadmissible for use.⁶⁰³

600 Literature on Phrynichus: Schmid-Stählin [1920–1926] II 874–876, Strout-French [1941], Matthaios [2006f], Alpers [2001] 198, Dickey [2007] 96–97 and Regali [2008].

601 Phrynichus' *Praeparatio sophistica* was edited by de Borries [1911].

602 On the chronological relationship and the datation of Phrynichus' lexica, see Matthaios [2013a] 71–72 with n. 28. Phrynichus' *Ecloga* has been edited by Fischer [1974].

603 See Fischer [1974] 74–77.

The sophist Julius Polydeuces⁶⁰⁴—generally known by the Latin form of his name Julius Pollux or simply Pollux—was born in Naucratis, in Egypt, and was educated in Athens by the rhetorician Hadrian. Around 180 AD he was appointed professor of rhetoric in Athens by the emperor Marcus Aurelius.⁶⁰⁵ His works include an *Onomasticon* consisting of 10 books, which he dedicated to the later Emperor Commodus.⁶⁰⁶ As mentioned in the dedication letter of the first book (I 1.4–7), Pollux’s lexicon was designed to instruct Commodus in eloquence, by providing him with assistance in the correct use of language and selection of the appropriate vocabulary. According to the modern communis opinio, Pollux’ *Onomasticon* belongs to the most important lexicographic achievements of the Imperial period.⁶⁰⁷ It is distinguished from other lexica of the era by its onomastic structure, which is not arranged alphabetically but divided into groups by subject and semantic field. Pollux’ method can be illustrated as follows: the first book includes the expressions that belong to the area of the divine and religion, subdivided into related categories such as cultic sites, images, altars, temples, priests, seers, the pious, the wicked, etc. The second and third book pertain to the human realm and contain the vocabulary for ages, birth, limbs and organs, sexual relationships, marriage, children, friends, men, slaves, etc.⁶⁰⁸

On the basis of its time of origin, but even more its linguistic and stylistic background and its ideological and cultural references, Pollux’ *Onomasticon* is assigned to the context of Atticistic lexicography. According to the unanimous

604 Literature on Julius Polydeukes: Gräfenhan [1843–1850] III 166–169, Bethe [1918], Schmid-Stählin [1920–1926] II 877–878, Tosi [1999], Dickey [2007] 96 and LGGA s.v. Iulius (2) Pollux (L. Pagani). The *Onomasticon* has been edited by Bethe [1900–1937]. Two collected volumes have recently been published on Pollux and his activity: Bearzot-Landucci-Zecchini [2007] and Mauduit [2013].

605 On Pollux’ life and activity, see the *Vita* in Philostratus (*Vit. Soph.* 2.12) as well as the biographical article in Suidas (π 1951); cf. Bethe [1918] 773–774, Rothe [1989] 153–154 and Tosi [1999] 51.

606 On the time of origin of the *Onomasticon*, see Matthaios [2013a] 70–73 with references to other literature on this question.

607 See Alpers [2001] 198: “es stellt immer noch eine der wichtigsten lexikographischen Arbeiten des Altertums dar”; cf. Alpers [1990] 24. On the significance of the *Onomasticon*, see also Bethe [1918] 779: “Das Onomastikon gibt uns neben Athenaios wohl die beste Vorstellung von der umfassenden, geduldigen lexikographischen Arbeit der antiken Philologen”. On the position the *Onomasticon* holds in the history of ancient lexicography, see Cohn [1913] 692–693, Tolkiehn [1925] 2457–2458, Serrano Aybar [1977] 92, Degani [1995] 521–522, Tosi [1999] 52–53 and Alpers [2008] 1256.

608 For a brief overview of the subjects of the *Onomasticon* and their division into the individual books, see Bethe [1918] 776–777.

judgment of research, within the history of Atticistic lexicography Pollux is regarded as representing a moderate and non-rigorous attitude towards the linguistic norm imposed by the Atticistic postulates.⁶⁰⁹ This view is based on the assumption of a rivalry between Pollux and Phrynichus for the Athenian chair for rhetoric. Naechster [1908] made this the fundamental thesis of his study *De Pollucis et Phrynichi controversiis*, and echoes of his position have persisted over the decades. In recent times, Naechster's view has encountered scepticism, though this has not been duly noted in the history of ancient lexicography. However, a thorough analysis of Naechster's thesis shows that the supposed controversy between Phrynichus and Pollux lacks any historical basis. In addition, it stands in contradiction to the available information about the time of origin of Phrynichus' *Ecloga* and Pollux' *Onomasticon*.⁶¹⁰

If Pollux' attitude toward the Atticist regulations is assessed from the perspective of the fundamental question of approved and inadmissible expressions, he proves to be a convinced Atticist to the same extent as his contemporaries, with no differentiation between a more moderate or stricter attitude. For Pollux as for other scholars, the criterion for determining illicit and therefore unacceptable use of language depends on the essential question of whether the specific expression is attested in the ancient literature.⁶¹¹ It is inappropriate to turn Phrynichus' *Ecloga* into a guideline for evaluation of the postulates that Pollux proposes in his *Onomasticon* for the correct use of language. Had Pollux also trimmed down his *Onomasticon* to a glossary laid out in such a manner that the regulations and perspectives were directed toward the contemporary use of language, but not toward the classical models, then it would not have been fundamentally different in its form from Phrynichus' *Ecloga*. In contrast, Phrynichus' main work, the *Praeparatio sophistica*, shows a greater affinity with the *Onomasticon* than the *Ecloga*, as far as one can ascertain from the material which has been preserved. However, this is likewise the case for the Atticist lexica of Aelius Dionysius or of Pausanias, as for the "Antiatticista", in view of their closeness to the contents of the *Onomasticon*.⁶¹²

609 See Matthaios [2013a] 70 with the references cited there in n. 18.

610 See Matthaios [2013a] 71–78.

611 This is shown in an analysis of Pollux' attitude toward the use of language by the ἰδιῶται, and somewhat by the πολλοί and to a certain extent by the οἱ νῦν-speakers attested in the *Onomasticon*; see Matthaios [2013a] 81–114. Although the boundaries between the way of expression of these particular groups of speakers was fluid and often conditional upon the variously accented arguments of Pollux, Pollux shares the same basic view of the other Atticistic lexicographers of what is actually considered linguistically admissible.

612 See Matthaios [2013a] 127–128.

If Pollux' linguistic and ideological 'program' can be summed up in a single word, then he was a classicist who tried to purify the language and to streamline its usage by turning back to classical models. However, Pollux was also an Atticist inasmuch as 'Attic' was the key concept of classicism by virtue of its paradigmatic position, representing the highest cultural and educational ideal to be emulated.⁶¹³

The Atticistic lexicon of Moeris entitled Ἀττικιστής presumably stems from the 3rd century AD.⁶¹⁴ Photius refers to this work in his *Bibliotheca* (cod. 157, 100a29–31) as a *πονημάτιον*, and it was directed towards practical purposes, following the pattern of Phrynichus' *Ecloga*. It included a comparison of Attic and non-Attic expressions and served as an aid for the correct use of Attic. A small Attic glossary has been transmitted under the name of Herodian, which has the title Φιλέταιρος ("Companion").⁶¹⁵ As Alpers [1998] has shown, it is possibly a 3rd century excerpt of the lexicographic work of Alexander of Cotiaeion.⁶¹⁶ Lupercus' collection Ἀττικαὶ λέξεις ("Attic vocabulary")⁶¹⁷ also stems from the 3rd century.

In the first half of the 5th century, the grammarian Orus compiled an Ἀττικῶν λέξεων συναγωγή ("Collection of Attic expressions"),⁶¹⁸ which took a position against Phrynichus, and, as can be inferred from the surviving fragments, Orus accepted a broader canon of exemplary authors than proposed by the strict Phrynichus.⁶¹⁹ As an ideological program, Atticism did not lose its value even in later times. Rather, in the essential periods of the Byzantine Empire, the so-called 'Renaissance' of the 9th century, during the Comnenian Restoration and later in the Palaeologan period, Atticism served to give substance to the Imperial political, educational and cultural orientation. This found abundant expression in the linguistic-grammatical and lexicographic activity of the Byzantine scholars.⁶²⁰

613 On a definition of Atticism and its relationship to classicism, the distinctions made by Gelzer [1979] 24–41 are especially significant.

614 Literature on Moeris: Wendel [1932b], Baumbach [2000], Dickey [2007] 98 and LGGA s.v. Moeris. Moeris' glossary has been edited by Hansen [1998], who also analyzed the transmission and the sources of the lexicon.

615 The lexicon was edited by Dain [1954]. On its attribution to Herodian, see Dyck [1993a] 791–792.

616 On Alexander and his lexicographic work, see above § 3.3.

617 On Lupercus, see above § 4.1.

618 On Orus and his Atticistic lexicon, see above in this paragraph.

619 See Alpers [2001] 199.

620 See Pontani in this volume.

1 From Justinian to Iconoclasm

1.1 *Beginnings*

Sept. 22nd, 529 has been regarded by some scholars as the symbolic *coupure* marking the end of antiquity in the Eastern Roman Empire:¹ the date corresponds to Justinian's closing of the philosophical school at Athens, a fact whose historicity is beyond doubt, and whose effects on the cultural life of the Greek East have been variously assessed.² Whether it was a local move directed against the teaching of philosophy and astronomy, *i.e.* against the school of Damascius,³ whether it marked the definitive end of Platonic studies on Greek soil (some teachers, from Damascius to Simplicius, apparently moved to Persia or Syria, and there is hardly any evidence of philosophy being taught in Athens thereafter),⁴ or the end of curricular instruction altogether (in Zonaras' words, "being in need of an enormous amount of money, following the prefect's advice <Justinian> cut the salaries that in every town had always been given by law to the teachers of the liberal arts, and thus the schools were left unattended

1 This periodisation is reported (and countered) in the first sentence of Krumbacher [1897] 1; see also Hadas [1950] 273, who takes precisely 529 as the final limit of his survey.

2 Beucamp [2002].

3 Watts [2004], who downplays the effects on other fields of teaching such as rhetoric; see already Cameron [1969].

4 Blumenthal [1978]; on the peregrinations of the Athenian philosophers see Chuvin [2012] 138–146 and Thiel [1999], to be read however with Luna [2001]; Watts [2006] 138–142.

and ignorance dominated the populations of all towns”),⁵ what matters to us here is that this date is one of the few widely acknowledged iconic moments in Western history to proceed from an issue related to civilisation and education rather than from a military, geographical or political turning-point.

The importance of 529 is clear: even if the long reign of emperor Justinian (527–565) witnessed a remarkable flourishing of poets, jurists, architects and historians, some of whom (from Paulus Silentiarius to Procopius) were directly involved in the state administration,⁶ it has to be considered that the direct patronage of Justinian in the specific field of letters was in fact rather limited,⁷ and that precisely in this period the institutional commitment to the preservation and transmission of the Classical heritage started to show the traces of a steady decline. When prosecutions against pagan intellectuals are effected and propitiated by the Emperor himself,⁸ when philosophy and literate culture are paralleled with hasard games as pointers to a dangerous way of divining the future outside of Christian prescriptions,⁹ when pagan books are burnt (in 562 according to Malalas’ account),¹⁰ and legal prominence is given to religious studies and orthodox professors,¹¹ little room remains for an autonomous

- 10 John Malalas, *Chronicle* 18.136, p. 424.9–11 Thurn, συσχεθέντες “Ἕλληνες περιεβωμίσθησαν καὶ τὰ βιβλία αὐτῶν κατεκαύθη ἐν τῷ Κυνηγίῳ καὶ εἰκόνες τῶν μυσερῶν θεῶν αὐτῶν καὶ ἀγάλματα “Hellenes were arrested and paraded around and their books were burnt in the Kynegion, and so were the pictures and statues of their loathsome gods”.
- 11 *Codex Justinianus* 1.11.2 πᾶν δὲ μάθημα παρὰ τῶν νοσοῦντων τὴν τῶν ἀνοσίων Ἑλλήνων μανίαν διδάσκεσθαι κωλύομεν, ὥστε μὴ κατὰ τοῦτο προσποιεῖσθαι αὐτοὺς παιδεύειν τοὺς εἰς αὐτοὺς ἀθλίως φοιτῶντας, ταῖς δὲ ἀληθείαις τὰς τῶν δῆθεν παιδευομένων διαφθεῖρειν ψυχὰς “For every science, we forbid its teaching by those who are sick with the madness of the Hellenes, that they might not according to this rule pretend to teach those who miserably approach them and in fact destroy the souls of the persons supposedly studying with them”:

circulation of ancient pagan wisdom; that wisdom—it should be stressed—which had proved productive both in the capital until the age of Priscian and of the Vienna Dioscorides (ms. Vind. med. Gr. 1, created for the noblewoman Juliana Anicia in 512), and in Athens, where the old Neoplatonic school of Proclus, situated between the Areopagus and the Acropolis, continued to be inhabited and served until the 530s, only to be later renovated and refashioned into a Christian *insula*.¹²

As a matter of fact, the real transformation effected by the age of Justinian, and more broadly by the 6th century in general, lies less in the emperor's specific decrees than in the establishment of a cultural atmosphere in which the ancient Greek world became a more distant object of study rather than part and parcel of an ongoing identitarian and cultural process,¹³ the active role of pagan teachers became *de facto* a marginal phenomenon, and the book became less a means for the circulation of contrasting ideas and paradigms than a static pedigree functional to the moral instruction of the average citizen, or else a holy object suitable for veneration and cult.¹⁴

This state of affairs has a bearing on each of the three categories of evidence that will retain our attention throughout the present survey, namely the production and transmission of books, the philological activity on ancient texts (originating chiefly, but not exclusively, from the pagan Classical world), and the traces of a broader circulation and reception of those texts in the writings of medieval authors and in the educational systems of their times. It should be stated at the outset that in the case of Byzantine culture the interaction among these elements represents a very fortunate object of study, for we still possess—particularly dating from the 9th century onwards—several manuscript witnesses stemming from the heart of the Empire as well as from its periphery, and indeed the quantity and the quality of extant codices can be

see Fuchs [1926] 4; Lemerle [1971] 68–71. A different context for this law is posited by Trombley [2001] 81–94.

12 Watts [2006] 80–87; Frantz [1988]; Frantz [1975]; doubts on this identification have been cast by Chuvin [2012] 251.

13 Allen-Jeffreys [1996]. The extent of the change can be seen if one compares the perception of space and geography before and after Cosmas Indicopleustes' *Christian Topography* (ca. 547–549): scientific commentaries on Ptolemy did not cease to exist and circulate, but the focus of this discipline shifted to a religious dimension that did not belong to it earlier: see Wolska-Conus [1968] 36–43.

14 Cavallo [1978] and [1987]; Cavallo [2002a] 163–165; Cameron [1985] 19–32; a more optimistic verdict on the circulation of pagan culture under Justinian is given by Kaldellis [2005]; but there is an ongoing debate between those who see a discontinuity in the Dark Ages—e.g. Cavallo [1995] and Kazhdan-Cutler [1982]—and those who do not—Treadgold [1990].

deemed at least partly representative of the wider cultural trends of every single age. The study of this happy combination of direct tradition and indirect sources may be very effective in discrediting the obsolete but persistent view of Byzantium as a substantially hostile or at best indifferent soil for the preservation of Classical texts.¹⁵

To be sure, the interest for ancient authors rested on a sensibility largely at odds with our own, *i.e.* not on their moral, civic or political meaning, but rather on formal issues connected with their stylistic and rhetorical excellence, in a cultural frame in which mastering Greek, and particularly Attic Greek,¹⁶ was an indispensable skill for every high-ranking civil servant or member of the ecclesiastical hierarchy.¹⁷ And it was chiefly this need for a linguistic instruction, and for training in the production and adornment of rhetorically elaborate texts such as the *prooimia* that introduced official documents,¹⁸ that called for a certain continuity of the school curriculum. The latter was structured into a primary (*hiera grammata*: reading, writing and spelling, based on Christian texts and elementary poets), a secondary (*enkyklios paideia*, the necessary linguistic tools for the aspiring civil servants or ecclesiastics, consisting mainly in grammar [Dionysius Thrax, Theodosius' *Canones*, Apollonius Dyscolus and Choeroboscus' *Epimerisms on the Psalms*], rhetoric [Aphthonius and Hermogenes] and some logic [Porphyry's *Eisagoge*]), and a higher level (more elaborate poetry such as Attic drama, Pindar and Theocritus, higher mathematics and astronomy, rhetoric, philosophy).¹⁹ The third stage was normally accessible to a very restricted elite, which aspired to leading positions at court or in the ecclesiastical hierarchy (in this framework, poetry had the role of providing the rhetor with myths and quotations, as well as unusual grammatical rules and eccentric vocabulary). A paradigmatic case, because of the high social rank and the comparatively modest scholarly stature of the man, is represented by John Mesarites (1162–1207), whose long prose epitaph written by his brother Nicholas indulges in a lengthy description of his schooldays and

15 Maas [1927³] 70: "Eine Wissenschaft von der klassischen Literatur hat es in Byzanz nicht gegeben", a position substantially shared by Pasquali (see Tessier [2010b]), and resting on a Western prejudice that has its deep roots in the prejudices of Petrarch and of other humanists: see Bianconi [2008a] 453–455, and Kaldellis [2009a] 1–2 on the danger of 'Orientalism' lurking behind this view.

16 Wilson [2007] 46. On Atticism in Byzantium, see *e.g.* Rollo [2008a]; Horrocks [2004]; Browning [1978b].

17 Mango [1965] 32; Fryde [2000] 8–10.

19 Fuchs [1926] 43–45; Hunger [1978] 10–11; Constantinides [1982] 1; Efthymiadis [2005]; Markopoulos [2006] and [2008]; Browning [1964] 5.

intellectual training, starting from reading and writing all the way up to his full syllabus of rhetoric and philosophy.²⁰

This didactic continuity, which relied partly on the persistence of educational institutions, but left considerable scope for the personal curiosity of advanced scholars throughout several different epochs of the Byzantine millennium, should be regarded as an essential and by no means banal element leading to the preservation and circulation of ancient texts in a Christian milieu, in the very heart of a theocratic regime.²¹ “Byzantine classical scholarship was, therefore, the study of an admired but *foreign* society”, for the Byzantines “were the first culture to consume classical literature from such a detached albeit respectful perspective”:²² in this, they fulfilled perfectly the prescriptions of the 4th-century Greek Fathers (Gregory of Nazianzus and Basil of Caesarea, against the perspective of Julian the Apostate) who wished to separate linguistic and rhetorical Hellenism from religious issues.²³

If we keep in mind this general attitude, as well as the number (and impact) of the personalities who made a decisive contribution to the transmission and study of texts from the 6th through the 15th century, we will realise that any reductive or disparaging verdict against the process and performances of Byzantine scholarship is largely unfair.²⁴

1.2 *Schools and Cultural Centres in the Mediterranean*

Despite its symbolic value, the policy of Justinian against the Neoplatonic academy at Athens is neither the only nor the most relevant feature of the 6th century in the domain of the organisation of culture. This was, for instance, also the age when the glorious pagan schools of grammar, law, rhetoric and philosophy throughout the Mediterranean started to shrink towards an irreversible decline, even well before the Arab conquest in the mid-7th century. In general terms, by the 540s Cassiodorus' praise of Eastern schools that combined the *salus animae* and the *saecularis eruditio*, from Alexandria to Nisibis,²⁵ refers to an academic network that was on the verge of disappearance. After Justinian's edict and its consequences, Athens plunged into a slow decline before its fall to the Slavs in 579; Antioch, the homeland to several Church Fathers as well as

to a significant school of exegesis and grammar, was sacked by the Persians in 540; Berytos, once a pivotal centre for the study of law, did not recover from an earthquake in 551; the golden age of Gaza came to a close under Justinian soon after the glorious times of Choricus' declamations and John of Gaza's poetry.²⁶ At times, peripheral areas could still provide interesting teaching posts, as in the case of Tychikos the scientist, who in the course of the 7th century, after being trained in Alexandria, became a teacher in Trebizond, where he had among his pupils the Armenian geographer and astronomer Ananias of Shirak.²⁷

But the only school in which philosophy (and other related disciplines) continued to be taught regularly, and ancient Greek texts continued to be copied regularly (at least to some extent), is that of Alexandria in Egypt, a town which fell to the Arabs as late as 641. The fortune of the Alexandrian school lies in its inclination to a compromise with Christian doctrine—as opposed to the intransigent Platonic orthodoxy in Athens—and in the ability of its teachers to establish ties with the Christian community and to separate all religious issues from the contents and style of their teaching,²⁸ as well as in a certain predilection for the teaching of technical disciplines and sciences, above all medicine (the 7th century witnessed an explosion of commentaries to Galen, *e.g.* by Paul of Aegina and John of Alexandria).

The major figure of this period in the realm of philosophical studies is John Philoponus (ca. 490–570),²⁹ who was often primarily regarded as a *grammatikos* despite presenting himself as a commentator and critic of Aristotle: his *Against Aristotle* addressed the Stagirite's thought on the aether and on the eternity of movement, and in the fatal year 529 he published eighteen books *De aeternitate mundi* against the Neoplatonic theories of the Athenian scholarch Proclus. But Philoponus was also a specialist in astronomy (he wrote *inter alia* a treatise on the astrolabe and a commentary on Nicomachus of Gerasa's *Introduction to arithmetic*), and, in his capacity as a grammarian, the author of a short lexicon of words differing only for their accent (of the type νόμος θεσμός, νομὸς δὲ ἢ βoσκή),³⁰ and of a companion to Greek dialects,³¹ as well as

of the prosodic rules known as *Τονικά παραγγέλματα*.³² Both these works are in fact partial epitomae of Herodian's *General Prosody*.³³ John's intellectual activity, which embraced several branches of human knowledge, evolved progressively towards Christian and creationist stances: this gave a decisive twist to the philosophical orientations of the Alexandrian school,³⁴ partly offering a radical alternative to the stances of his younger contemporary Olympiodorus (ca. 500–560),³⁵ head of the school for at least 40 years since the mid-520s. Olympiodorus, who in his youth had written commentaries on Platonic dialogues (the *Gorgias*, the *First Alcibiades*), defended the dignity of pagan ideas on theology and ethics by refraining from making them clash against the dogmas of the Christian faith. He later worked on Aristotelian writings, from the *Meteorology* to the *Organon* (Alexandria was *inter alia* home to a very influential compendium of logic, that was to influence a series of ecclesiastical and philosophical writers over the following decades),³⁶ while allowing a place of honour in his school to Christian teachers such as David and Elias. The latter, in the preface to his commentary on Aristotle's *Categories*, devoted an entire paragraph to the art of commentary, insisting on the old, Aristarchan maxim of explaining an author through the author himself (*Homerum ex Homero*),³⁷ without being biased or influenced by others and without adapting one's own ideas and personality to those of the commented author.³⁸

ὁ δὲ ἐξηγητὴς ἔστω ἅμα ἐξηγητὴς καὶ ἐπιστῆμων. ἔστι δὲ ἐξηγητοῦ μὲν ἔργον ἢ ἀνάπτυξις τῶν ἀσαφῶν ἐν τῇ λέξει, ἐπιστῆμονος δὲ ἢ κρίσις τοῦ ἀληθοῦς καὶ τοῦ ψεύδους, ἦτοι ἀνεμίω καὶ γονίμω. δεῖ αὐτὸν μὴ συμμεταβάλλεσθαι οἷς ἂν ἐξηγήται δίκην τῶν ἐν σκηνῇ ὄντων καὶ διάφορα πρόσωπα ὑποδουμένων διὰ τὸ μιμῆσθαι διάφορα ἦθη, καὶ Ἀριστοτελικὸν μὲν γίνεσθαι τὰ τοῦ Ἀριστοτέλους ἐξηγούμενον καὶ λέγειν ὅτι οὐκ ἐγένετο φιλόσοφος τοιοῦτος, Πλατωνικὰ δὲ ἐξηγούμενον Πλατωνικὸν γίνεσθαι...

The commentator should be both commentator and scholar at the same time. It is the task of the commentator to unravel obscurities in the text; it is the task of the scholar to judge what is true and what is false, or

what is sterile and what is productive. He must not assimilate himself to the authors he expounds, like actors on the stage who put on different masks because they are imitating different characters. When expounding Aristotle he must not become an Aristotelian and say there has never been so great a philosopher, when expounding Plato he must not become a Platonist . . . [transl. N. G. Wilson]

Another Alexandrian—though possibly not by birth—is the first man whom our sources credit with the title of *oikoumenikos didaskalos* in Constantinople (on which more will be said shortly): after teaching in the Egyptian metropolis, by 617 Stephanus of Alexandria had been summoned to the capital by emperor Heraclius, where he taught philosophy and the *quadrivium*. He composed commentaries on Porphyry's *Eisagoge*, on Aristotle's *On the Soul* and *On Interpretation* but also, perhaps availing himself of the large technical library at Alexandria,³⁹ on Ptolemy's astronomical treatise known as *Handy Tables*: in effect, Stephanus was very active as an astrologist and alchemist.⁴⁰ A Christian scholar, Stephanus was perhaps the first great teacher of philosophy not to face major problems with the Christian hierarchy. It has been suggested that Stephanus and his books may be one of the links connecting the Alexandrian school with the remarkable collection of manuscripts copied in 9th-century Byzantium and known as "philosophical collection", on which more will be said below in § 2.4.⁴¹

Far from Alexandria, the Egyptian *chora* shows a remarkable circulation of Classical texts not only indirectly, for instance as the evident sources of the poems scribbled by Dioscorus of Aphrodito, who was simply continuing a long-standing literary tradition that used Homer's language in order to express the truths of Christian faith,⁴² but also in the substantial amount of 6th-, 7th- or even 8th-century fragments of papyrus codices found in the Fayûm or in other areas of the Egyptian desert. These codices largely derived from a steadily decreasing but tenaciously enduring personal interest of learned Egyptian citizens, despite the fact that "the production of non-Christian books appears to have declined very sharply after the time of Justinian",⁴³ and the majority of Christian books were copied in monasteries scattered from the Nile Valley

to the desert of Negev. A recent census has shown that while the copying of evangelic, liturgical or patristic books was by far predominant, and almost exclusive from the late 7th century onwards, as far as pagan authors are concerned, together with popular schooltexts such as Aristophanes, Demosthenes, Homer and Euripides one finds a persistence of epic poetry (from Apollonius Rhodius down to the more recent Nonnus of Panopolis), of some novelists (Chariton, Heliodorus) and historians (Thucydides, Malalas), as well as of various technical texts, from lexicographers to medical authorities such as Hippocrates and Galen.⁴⁴ Menander is no longer attested after the late 6th century (PBerol 21199), and notoriously did not make his way into the medieval transmission in minuscule script.⁴⁵ To our eyes, perhaps the most surprising phenomenon—and the most illuminating one concerning the interests of some cultivated individuals in the late antique Egyptian *chora*⁴⁶—is the survival of papyrus codices carrying the poems of Sappho⁴⁷ and Callimachus,⁴⁸ authors whose existence in Byzantium was endangered by their early exclusion from the educational curriculum.⁴⁹

Virtually no clear sign of the practice of textual scholarship is known to us from the so-called Dark Ages, but this does not mean that philological studies had disappeared altogether. Anastasius of Sinai, a Cypriot monk who settled in the monastery of St. Catherine around 660, composed a work called *Hodegos* (“Guide”), concerned with a series of moral, dogmatic and theological issues: in his text he also criticised a governor of Alexandria named Severianus for sponsoring a *scriptorium* of 14 copyists in order to deliberately alter and falsify the text of the Church Fathers, and especially of St. Cyril:⁵⁰

ἐπὶ ἱκανοὺς χρόνους ἔσχε ἰδ’ καλλιγράφους ὁμόφρονας αὐτοῦ, κατ’ ἐπιτροπήν αὐτοῦ καθεζομένους καὶ φαρσεύοντας τὰς βίβλους τῶν δογμάτων τῶν πατέρων, καὶ μάλιστα τὰς τοῦ ἁγίου Κυρίλλου· ἐν <αἴς> ἐλθόντων ἡμῶν εἰς τὴν Πρὸς Σούκενσον χρήσιν τὴν λέγουσαν ὅτι “Δύο τὰς φύσεις εἶναι φαμεν” [*Flor. Ἀλεξανδρεῖα· ἀλλ’ αἱ μὲν εἶχον “Δύο φύσεις ἠνώσθαι φαμεν”, αἱ δὲ πάλιν “Δύο τὰς φύσεις ἔνωεῖσθαι φαμεν”. καὶ ἐν πολλῇ ἀθυμίᾳ ἡμῶν ὄντων, ἐξήγαγεν ἡμῖν ὁ κύριος Ἰσιδωρος ὁ βιβλιοφύλαξ τοῦ πατριαρχείου βίβλον ἔχουσαν ἀνόθευτον τὴν τοιαύτην χρήσιν. ὁμοίως καὶ τὴν τοῦ μακαρίου Ἀμβροσίου διέστρεψαν· ἀντὶ γὰρ τοῦ “Φυλάξωμεν τὴν διαφορὰν τῆς θεότητος καὶ τῆς σαρκός” [Ambros. *De fide* 2.9.77], “Φυλάξωμεν τὴν διαφορὰν τῆς ἀναγνώσεως” ἔλεγον. πάλιν τε τὴν τοῦ μακαρίου Προκλου τὴν περὶ Χριστοῦ φάσκουσαν, ὅτι “ἐκεῖνος ἀφθάρτως ἐγεννήθη, ὁ καὶ θυρῶν κεκλεισμένων ἀκωλύτως εἰσελθῶν, οὗ τὴν συζυγίαν τῶν φύσεων, ὁ Θωμᾶς ἔωρακώς” [Procl. *Const. Or.* 2, p. 104.4–6 Leroy], ἀντὶ τοῦ “ἀφθάρτως” διὰ τοῦ -ως γραφομένου, οἱ Γαϊανῖται “ἄφθαρτος” λέγουσι, καὶ ἀντὶ τοῦ εἰπεῖν ὁμολογούμενον τὸ ἄρθρον τὸ φάσκον “οὗ τὴν συζυγίαν τῶν φύσεων” (τουτέστι τοῦ Χριστοῦ), ἐκεῖνοι πάλιν ἀρνητικὸν αὐτὸ φάσκουσι λέγοντες “οὐ τὴν συζυγίαν ὁ Θωμᾶς ἔωρακώς”, καὶ τὰ ἐξῆς.

For several years he had on his side fourteen calligraphers, who sat under his supervision and falsified the dogmatic books of the Fathers, above all those of St. Cyril: when we arrived at the sentence against Succensus saying that “We say that the natures are two”, we did not find it soundly copied in any book in Alexandria, but some copies carried “We say that two natures are united”, others “We say that the natures are understood as two”. And since we were in great distress, Isidore the librarian of the Patriarchate took out for us a book that had the aforementioned sentence without alterations. They corrupted in the same way the saying of the holy Ambrosius: instead of “Let us observe the difference between divinity and the flesh”, they said “Let us observe the difference of readings”. And again, in the saying of holy Proclus about Christ, that “he was born incorruptibly, he who entered without obstacles when the doors were shut, he whose combination of natures Thomas saw”, the Gaianites read “incorruptible” instead of “incorruptibly” with long -os. And instead of acknowledging the relative pronoun *hou*, “whose duplicity of nature” (namely of Christ), they take that *ou* as a negative, reading “Thomas did not see the combination of natures” etc.

This kind of philological interest surfaces, additionally, in Anastasius’ other major work (he also wrote a lost *Orthography*), the *Hexaemeron*, an extended exegesis on the first three chapters of the *Genesis*, where he shows himself to be familiar with the different Greek versions of the Old Testament, especially with the Septuagint but also with other translations collected in Origen’s *Hexapla*. In *Hexaem.* 8.72 he speaks about some ἀνόθευτα τῶν Ἐξαπλῶν ἀντίγραφα (“uncorrupted copies of the *Hexapla*”), which means that he might have had at his

disposal one or more copies of Origen's work, condemned by the Church in 543 and believed to have gone lost after the Arab conquest of Caesarea in 638.⁵¹

It is of course no chance that Origenian material and methods should have inspired the "sacred philology" of the Greek Dark Ages, for Origen was beyond doubt the first—and to a certain extent the only—great Biblical scholar to apply to the Holy Scripture a textual methodology inherited from Alexandrian models, as both his commentaries and the newly discovered homilies on the *Psalms* show in a spectacular way.⁵² And it is no coincidence that these dangerous textual practices were so disliked by the Church that as late as the 8th century the patriarch of Constantinople Germanus I († 733) used them in retaliation on Patristic works, marking with an *obelos* some passages of Gregory of Nyssa in order to denounce them as interpolations of Origenist haeretics—bizarrely enough, he replaced them with excerpts of Plato's *Phaedo*.⁵³ We can thus see that philology and textual scholarship did survive during the Dark Ages, but they were put to a practical use in the frame of ecclesiastical debates: the history of this particular scientific approach still has to be written.

The library of the monastery of St. Catherine on Mt. Sinai, certainly accessible to Anastasius, was a *Fundgrube* of 7th and 8th-century manuscripts: along with a large bulk of Biblical, liturgical, patristic and hagiographical books, the section devoted to pagan authors must have been admittedly slim; still, a 9th-century *Iliad* with a paraphrasis by Sophronius has come to the light in a chance discovery made forty years ago, perhaps attesting to an earlier circulation of pagan texts as well.⁵⁴

If we move our gaze further north, we can realise that the entire Syro-Palestinian area, as recent research has begun to demonstrate in detail, should rank among the liveliest places in terms of cultural and philological activity during the so-called Dark Ages.⁵⁵ Some scholars have considered it, with a varying degree of likelihood, as the birthplace of very old, often fragmentary manuscripts of Classical authors (e.g. Par. Gr. 2179 of Dioscorides; Lond. Addit. 17211, ff. 49–53, of Euclid; the De Langhe parchment of Euripides' *Andromache*), but also as the home to the lost ancestors of textual branches which remained alive down to the 10th century, e.g. those represented, for Diodorus Siculus, by ms. Neap. Gr. 4*, for Demosthenes by ms. Mon. Gr. 485, for Euripides by ms.

Hierosol. Taphou 36.⁵⁶ And even if the Palestinian origin of these and other textual witnesses remains to a large extent hypothetical, our sources give us evidence of the Palestinian training of several outstanding figures of Greek literacy between the late 6th and 8th century.

Setting aside for the sake of brevity great hymnographers such as Romanos the Melode (the author of the cruel pun against Aratus τρισκατάρατος “thrice damned” and Demosthenes ἀσθενής “feeble” and Homer ὄνειρος ἀργός “empty dream” in *cant.* 33.17.3–6 Maas-Trypanis),⁵⁷ and the great homiletes such as Theophanes and Theodorus “Grapti” (who studied under Michael Syncellus at the monastery of St. Saba), one can assume a certain continuity in the transmission of Greek learning from the remarkable Damascene rhetor, scholar and Anacreontic poet Sophronius (ca. 550–ca. 640), who travelled to Egypt with the monk and ascete John Moschos and later became patriarch of Jerusalem, down to the outstanding theologian Maximus Confessor (ca. 580–662, although other sources relate he was born in Constantinople) and to John the Damascene (ca. 675–749), the greatest Greek-speaking scholar of the 8th century, whose works such as the theological *summa* called *Pege gnoseos* or the florilege called *Sacra parallela* presuppose a wide availability of books⁵⁸—and we will skip here altogether, precisely after mentioning John the Damascene and Maximus Confessor, the thorny issue of the forms and origin of the Greek gnomological tradition, of which the Dark Ages marked an important turning-point in its very complicated history, made of fluctuating, non-authorial materials and desperately uncertain dates.⁵⁹

The percentage of Classical Greek doctrine and quotations in the manuscript evidence and in the literary activity of the aforementioned authors is admittedly thin, and yet Palestine must have been a fertile soil for grammatical instruction, for it gave birth to one of the most outstanding grammarians of the 9th century, namely Michael Syncellus from Jerusalem (ca. 761–846), the author of a fundamental treatise *On Syntax* composed in 812–813 in Edessa (a city where translations from the Greek and the interest in Greek culture

56 Cavallo [2002a] 196–197; Crisci [2000]; and—with a special emphasis on Christian texts in the middle Byzantine period—Perria [2003].

57 A pun Maas [1906] 21 related specifically to the closing of the Athenian academy in 529; but this is unlikely, see Speck [1986] 617.

58 See on these authors, and on the broader picture of Greek learning in Palestine, Cavallo [2002a] 165–166 and 198–202.

were remarkable).⁶⁰ This treatise,⁶¹ which Syncellus wrote in addition to several theological writings (and some poetical and encomiastic works), is a landmark in a field which the Byzantines never practiced in depth;⁶² it is indebted to Apollonius Dyscolus, Herodian, Arcadius, as well as to several Atticist authors,⁶³ and it is based on the typical Byzantine approach, centered on single words and on single parts of speech rather than on their reciprocal relations in the natural flow of discourse. Syncellus' speculation on the transitivity of verbs and on their constructions with different cases runs along similar lines as Apollonius Dyscolus and Priscian; his treatment of prepositions is detailed, and displays overt references to Homer and awareness of ancient Homeric exegesis, although he does not recommend indulgence for poetic usage.⁶⁴ This is a representative passage on the preposition ὑπέρ:⁶⁵

Ἡ ὑπέρ πρὸς γενικὴν καὶ αἰτιατικὴν συντάσσεται, οἷον ὑπέρ τοῦ ἀνθρώπου ὅπερ σημαίνει δύο, τὸ ἄνωθεν τοῦ ἀνθρώπου καὶ περὶ τοῦ ἀνθρώπου. ἤνικα μὲν συνηγορίαν ποιῶμεν, λέγομεν ὑπέρ τινος· ἡ γὰρ ὑπέρ συνηγορικωτέρα ἐστίν· ὁ γὰρ λέγων ὑπέρ τοῦ Πέτρου συνηγορεῖ τῷ Πέτρῳ. εὐρίσκεται δὲ λαμβανομένη ἀντὶ τῆς κατὰ, ὡς παρ' Ὀμήρῳ [Ζ 523–24] “τὸ δ' ἔμὸν κῆρ / ἄχνηται ἐν θυμῷ ὅθ' ὑπέρ σέθεν αἴσχε' ἀκούω”, ἀντὶ τοῦ κατὰ σοῦ· δηλοῖ δὲ καὶ πολλακίς τὴν ἀντὶ πρόθεσιν, οἷον “ὑπέρ Χριστοῦ πρεσβεύομεν”. ἀντὶ τοῦ Χριστοῦ γὰρ δηλοῖ· καὶ ὑπέρ τοῦ φίλου κινδυνεύειν τὸ ἀντὶ τοῦ φίλου σημαίνει· τὸ αὐτὸ δὲ σημαίνει τὸ ὑπέρ ἀνθρώπῳ κατὰ ποιητικὴν σύνταξιν τῷ ἄνωθεν τοῦ ἀνθρώπου· τὸ μὲντοι ὑπέρ ἀνθρώπου αἰεὶ ποτε σημαίνει τὸ ὑπέρτερον τοῦ ἀνθρώπου· οὕτω καὶ τὰ παραπλήσια συντασσόμενα. δηλοῖ δὲ ἐν ταῖς συνθέσεσιν ὑπεράσπισιν καὶ συνηγορίαν, οἷον ὑπέρμαχος, ὑπερασπιστής, καὶ τὴν ὑπέρ τὰ λεγόμενα ἄρσιν καὶ ὑψωσιν, οἷον ὑπέρθεος, ὑπερούσιος, ὑπεράγαθος· ἐπὶ Θεοῦ δὲ ταῦτα λέγονται καὶ σημαίνουσιν αὐτὸν εἶναι ὑπέρ πᾶν ὄνομα ὀνομαζόμενον οὐσίας τε καὶ ἀρετῆς σημαντικόν· ἐξ αὐτῆς δὲ παρήκται καὶ τὸ ὑπέρτερος.

The preposition *hyper* is constructed with genitive and accusative, as in *hyper tou anthropou*, which has two meanings, “above man” and “about man”. When we give a defensive speech, we speak in favour of (*hyper*) someone: *hyper* is often used in justice, for the one who speaks in favour

60 Segal [1970] 210–213.

62 Donnet [1967b].

63 Robins [1993] 149–162.

64 § 127, l. 1000 Donnet ἄλλ' οὐ χρηστέον τῇ ποιητικῇ συνηθείᾳ.

65 § 143, ll. 1109–1127 Donnet.

of Peter defends Peter. The same preposition is found to be used instead of *kata*, as in Homer (*Il.* 6.523–24) “my heart is grieved within me, when I hear words of shame regarding you”, instead of “against you”; it also often stands for the preposition *anti*, as in “we pray for Christ”, which means “in place of Christ”, and in “to risk for a friend” which means “in place of a friend”. “*hyper anthropo*” [dative] in poetic syntax means the same as “above man”; but “*hyper anthropou*” [genitive] always signifies that which is higher than man: and the analogous constructions in a similar way. In compounds, the preposition indicates defence and assistance, as in *hypermachos* (“combatant for”), *hyperaspistes* (“defensor”) and also the rising above what is predicated, as in *hypertheos* (“supradivine”), *hyperousios* (“supersubstantial”), *hyperagathos* (“exceedingly good”): these adjectives are used of God, and they mean that He is above every named noun meaning substance and virtue. From this preposition derives also *hyperteros* (“higher”).

Almost coeval with Syncellus, and—according to the most refined codicological and material analysis—probably also originating from Jerusalem or Damascus,⁶⁶ is an important manuscript of the so-called *Doctrina Patrum*, Vat. Gr. 2200, showing both an early form of the minuscule Greek script, independent from the Stoudite type that was to prevail in the early 9th century in Constantinople (see below § 1.5), and a new writing material, namely paper, a support that would begin to supersede parchment in Byzantium no earlier than the 12th century,⁶⁷ and must therefore proceed in this case from contacts with the Arabic tradition.

The reality of textual transmission in the Egyptian province throughout the Dark Ages, as well as the sporadic information we gather from the Syro-Palestinian area, help us gauge the evolution of tastes and interests during this crucial period, before and after the decline of Alexandria as the leading cultural centre of the Mediterranean in the later 7th century. What is certain is that without public support and a widespread fruition, although ancient texts could still circulate in the hands of some erudites they had little chance of surviving the grand rapids of history, especially in peripheral *milieux*. Subsequent to the political, urbanistic and legal efforts of Justinian, the centre that showed an overt ambition to a leading cultural role (in the domain of architecture, law, politics and art in general) was of course Constantinople. But when we turn to the capital, it may come as a surprise that until the early 9th century it

66 Perria [1983–1984].

67 Irigoien [1950].

was definitely not the venue of the most significant scholarly or scholastic activities.⁶⁸

1.3 *Constantinople: Schools and Scholars*

The decay of teaching and of the general scholarly *niveau* in Constantinople is the proof of the cultural decline (widely known under the generic label of “Dark Ages”) that followed from Heraclius’ reign until the early 9th century:⁶⁹ the elites thinned down, the atmosphere of social and political precariousness hampered the promotion of literary studies, the only curricular teaching that could survive was primary instruction, with the occasional, elementary reading of such common authors as Homer, Euripides, Aristophanes, Demosthenes, Aelius Aristides and Gregory of Nazianzus. What is more, we have no evidence of the existence of a higher scholastic institution throughout this period: the *Pandidakterion* founded by Theodosius II in 425 in the very heart of the capital (in itself little more than a school of grammar, rhetoric and philosophy) disappears from extant records after the age of John Lydus (*On magistracies* 3.29), and nothing is known about the fates of its curricula or its library.⁷⁰

What we hear about the initiative of patriarch Sergius (610–639) involving a project to restore a school in the Patriarchate is again a likely fact, albeit uncertain in its size and importance:⁷¹ but while we know that the palace known as Thomaites housed the patriarchal library, which was of course devoted to ecclesiastical writings (including haeretical works “on a special shelf”, ἐν τῷ ἰδίῳ κιβωτίῳ), and burnt down in 791,⁷² it is far less self-evident to admit that regular courses were being taught there. This explains our surprise when we encounter well-read authors such as Theophylactus Simocatta, who in the early 7th century alludes to Callimachus, to Euripides’ *Alcestis* and to other relatively uncommon texts (but see above § 1.2 about the circulation of manuscripts) in the proem of his historiographical work, sketched as a dialogue between

71 Lemerle [1971] 77–79 and 96.

72 John Zonaras, *Epitome* 15.12, p. 362.11–17 Dind. ἐμπρησμοῦ δὲ συμβάντος, ὁ μέγας τρίκλινος τῶν ἱερῶν ἀνακτόρων ὁ Θωμαιτῆς λεγόμενος ἔργον γέγονε τοῦ πυρός, ὅτε λέγεται καυθῆναι καὶ τὰ σχεδιάσματα τῆς ἐξηγήσεως τῆς θείας γραφῆς, ἃ ὁ χρυσοῦς τὴν γλώτταν συνεγράψατο Ἰωάννης, ἐκεῖσέ που ἀποκείμενα “a fire took place, and the great hall of the holy palace called Thomaites was destroyed by fire: it was then, they say, that were burnt the papers of John Chrysostom’s commentaries on the Holy Writ, which were kept in that building”. See Wilson [1980] 282.

Philosophy and History in praise of the patriarch for his activity of restoring studies and culture.⁷³ It is namely unclear whether Theophylactus gained this knowledge and skill, also apparent from his private correspondence, through his own, personal study, or thanks to some sort of curricular instruction. Later in the same century, with the remarkable exception of George of Pisidia and of his flawless iambic trimeters on the campaigns of Heraclius, there surfaces hardly any trace of familiarity with ancient models among high-brow literati. In fact, no profane work in Greek survives from the age of Theophylactus' *History* down to the *Historical epitome* written by patriarch Nicephorus shortly before 787.

An important symptom of the discontinuity in this context is the definitive linguistic separation between Latin and Greek: after the age of Priscian (the author of the most ambitious extant work on Latin grammar, the *Institutiones grammaticae*, completed in the early years of the 6th century), Latin slowly disappeared from both official use⁷⁴ and from cultivated communication in Byzantium: the Latin panegyrics written by Corippus in 566–567, and later the entire age of Emperor Heraclius (610–641), appear as the swan song of a bilingual literate society.⁷⁵ In the Latin West, the decades following the great season of Graecomania “de Macrobe à Cassiodore”,⁷⁶ witness a parallel oblivion of Greek, a phenomenon which resulted *inter alia* in the progressive disappearance of Greek manuscripts from the regions of Western Europe, with some exceptions—of uncertain size—in the areas of Sicily and Rome, where some translations of technical and ecclesiastical texts were undertaken.⁷⁷ Cassiodorus' library at Vivarium lists mathematical, geometrical and medical texts in cupboard 8 (“ubi sunt Graeci codices congregati”) and some translations may have taken place in his coenobium,⁷⁸ but neither this reference nor the rare and mostly uncertain traces of the production of profane Greek books in Ravenna or Byzantine Italy,⁷⁹ nor other traces of the likely Italian circulation

73 Olajos [2000].

74 John the Lydian *On magistracies* 3.68 tells about this gradual oblivion of Latin in official documents of the Empire: τὰ τῆς ἐλαττώσεως προὔβαινε, “the process of reduction began to advance”.

79 *E.g.* ms. Neap. Gr. 1 of Dioscorides (7th century), but ms. Par. suppl. Gr. 1362 of Aristotle's *Sophistical Confutations* and ms. Bruxell. IV.459 of Paul of Aegina also belong to this age.

of 5th-century Greek manuscripts,⁸⁰ can possibly credit the Italian peninsula with the preservation of a substantial heritage of ancient Greek culture (not to mention ancient Greek scholarship) for the use of monks or scholars, the few remaining traces of Greek—even in the age of the Greek or Palestinian popes—being almost exclusively confined to aspects of ecclesiastical life and at most to the preservation of medical works.⁸¹ After all, neither Isidore of Seville nor Gregory the Great were to know a word of Greek,⁸² and the aids to the mere understanding of words (dictionaries, lists of words such as the *Hermeneumata* etc.),⁸³ while sometimes invaluable as detectors of phonetic, grammatical and semantic phenomena, show that the West never shared in a real programme of cultural transmission.

But even turning our gaze away from the decline of bilingualism and into the field of Greek studies proper in the heart of the empire, we find that the age of Justinian has little to offer in terms of textual scholarship *stricto sensu*. Admittedly, Agathias of Myrine (ca. 532–ca. 580) was so clever as to collect and edit a *Cycle* of epigrams written by himself and other contemporaries, in what would later become an essential component of the *Greek Anthology*;⁸⁴ Hesychius of Miletus compiled a bio-bibliographical dictionary of pagan writers and scholars of the Classical and Hellenistic period (Ὀνοματολόγος ἢ πῖναξ τῶν ἐν παιδείᾳ ὀνομαστῶν), which went lost but was to become a primary source for the lexicon of Suidas in the 10th century.⁸⁵ Even more importantly, the obscure grammarian Stephanus of Byzantium, most probably a Christian, produced sometime in the 6th century a remarkable geographical and topographical lexicon called *Ethnika*, consisting of roughly 50–55 books, and extensively depending on his predecessors Orus and Eugenius. Only an epitome survives, produced by a certain Hermolaus a few years after the original (Suid. ε 3048),⁸⁶ and it shows that Stephanus had a more markedly linguistic and philological

80 The scattered palimpsest leaves of Theophrastus and Strabo in Vat. Gr. 2306 (+Vat. Gr. 2061A+Crypt. Z.α.43) were perhaps rewritten in Southern Italy, and some folios of Cassius Dio were re-used in a Calabrian menologion (Vat. Gr. 1288): see Irigoin [2006a].

81 Irigoin [1969] 43–45; Cavallo [2002a] 203–5; Berschin [1980] 113–118.

86 Rare passages are quoted *ad verbum* and in full by Constantine VII Porphyrogenitus in his *De administrando imperio*: see Billerbeck [2006] *3–*9. The letters not yet included in Billerbeck's edition (Billerbeck [2006] and [2014] and Billerbeck-Zubler [2011]) must be consulted in Meineke [1849].

rather than strictly geographical interest, as his entries, in addition to localisation, display a special concern for the orthographical variants in toponyms and ethnonyms, for their occurrences in the works of ancient historians or poets, and sometimes for the local mythographical traditions involving them. Here is an example, where Stephanus also refers to his own teaching role:⁸⁷

Ἄνακτόριον Ἀκαρνανίας πόλις, οὐδετέρως, Κορινθίων ἄποικος. Θουκυδίδης α' (1.55.1). ἄρσενικῶς παρὰ Σοφοκλεῖ (fr. 1009 Radt). τὸ ἐθνικὸν Ἄνακτόριος καὶ Ἄνακτορία ἢ γῆ καὶ Ἄνακτοριεύς. Σοφοκλῆς (fr. 916 Radt) δὲ φησι διὰ τῆς εἰ “Ἄνακτόρειον τῆσδ' ἐπώνυμον χθονός”. καὶ Εὐγένιος δέ, ὁ πρὸ ἡμῶν τὰς ἐν τῇ βασιλίδι σχολὰς διακοσμήσας, ἐν συλλογῇ λέξεων διὰ διφθόγγου φησίν· ἔοικε δ' ἀστιγεί ἐντετυχηκένα βιβλίῳ· ἡμεῖς γὰρ διὰ τοῦ ι εὐρομεν.

Anaktorion: a town in Acarnania, colony of the Corinthians. Neuter noun. Thucydides book one. It is masculine in Sophocles. The ethnonym is *Anaktorios* (the feminine *Anaktoria* indicates the hinterland), and also *Anaktorieus*. Sophocles writes it with *ei* “Anaktoreion, that gives the name to this land”. Likewise Eugenios, our predecessor in the direction of the schools in the capital, writes it with a diphthong in his *Collection of words*, but he must have used an uncorrected book: we have found it with *iota*.

Above and beyond Stephanus' work, lexicography and grammar were certainly practiced in Constantinople between the 6th and the 8th century, even if the extant evidence is meagre. As a lexicon, Stephanus' *Ethnika* belongs to a well-represented category in the centuries ranging from the 6th to 8th. The so-called lexicon of Cyril, whose origin probably belongs to the age of Justinian, underwent many different redactions and reshaping, and various minor lexica were added to its original bulk;⁸⁸ more importantly, before the end of the 9th century it was interpolated into the lexicon of Hesychius, thus giving rise to one of the favourite lexica of the Byzantine period, alas still unedited to our own day.⁸⁹ More specific grammatical lexica on spirits⁹⁰ and on accents⁹¹ may belong to the later part of the 8th or early 9th century.

87 Steph. Byz. α 305 Billerbeck. The occurrence of the adj. ἀστιγής (non punctuated, hence not corrected) should be noted.

91 Ed. Koster [1932].

In the field of grammar proper, there was little theoretical advance, but the systematisation of the inherited doctrine continued *e.g.* in the works of John Charax, a scholar who may belong to the late 6th century.⁹² We may recall here his treatise *On enclitical words* (a compilation from Herodian's *General Prosody* book 21), his commentary on Theodosius of Alexandria's *Canons*, later abridged by Sophronius patriarch of Alexandria in the 9th century,⁹³ and a still unpublished *Orthography*.⁹⁴ The field of orthographical studies was covered by several other specialist handbooks, partly unedited and partly preserved in shorter *résumés* dealing with the distinction of homophone vowels and diphthongs, such as η / ι / υ / ει / οι, ο / ω, ε / αι.⁹⁵

The mechanisms of textual transmission do not appear to be especially popular among writers of the Dark Ages. We hardly ever hear, either in literature or in subscriptions to manuscripts of Classical authors, of a systematic emendatory work performed by learned individuals on single texts. Some attention is devoted to this issue by John the Lydian, the author of three antiquarian books *On magistracies*, *On months*, *On omens*, in his account of the history of the oracles of the Chaldaean Sibyl:⁹⁶

ὅτι δὲ οἱ στίχοι αὐτῆς ἀτελεῖς εὐρίσκονται καὶ ἄμετροι, οὐ τῆς προφήτιδος ἐστὶν ἢ αἰτία ἀλλὰ τῶν ταχυγράφων, οὐ συμφθασάντων τῇ ῥύμῃ τῶν λεγομένων ἢ καὶ ἀπαιδεύτων γενομένων καὶ ἀπειρῶν γραμματικῶν.

That her lines are found to be incomplete and unmetrical, does not depend on the prophetess but on the scribes, who did not keep up with the speed of the dictation, and were ignorant and unexperienced in grammar.

Again under Justinian, Hypatius of Ephesus questioned the authenticity of the works ascribed to Dionysius the Areopagite on the grounds that they were not quoted in the theological works of either Cyril or Athanasius (we know about

92 Kaster [1988] 391–392 argues for the 8th–9th century, but see Alpers [2004] 19.

93 Mazal [2001] 477.

94 Alpers [2004] 7–8 and 19.

95 See Hunger [1978] 18–19 for all the references, and above all Egenolff [1888]; Alpers [2004]. The popularity of orthographic questions is attested by their frequent appearance in manuscript notes and short treatises down to the 15th century: Hunger [1978] 21–22; Ronconi [2012a] 72–80 for the general context of grammatical and orthographical teaching on Dionysius Thrax and other texts.

96 *On months* 4.47 Wünsch.

this from Theodore's refutation of Hypatius summarised in the first chapter of Photius' *Bibliotheca*, on which more in § 2.2)—a methodology allegedly employed by the emperor himself against the authenticity of some texts supporting the monophysite haeresy.⁹⁷

As a matter of fact, the transmission of ecclesiastical or theological texts seems to be a particularly fertile area for the application of textual philology even during the Dark Ages: we have seen above the case of Anastasius in the peripheral area of Mt. Sinai, but issues of authenticity could concern also official ecclesiastical documents. The acts of the Council of Constantinople of 680 are full of palaeographical and philological arguments introduced in order to prove or disprove the reliability of the contrasting theological stances: numbering and misplacement of quires, palaeographical observations, comparisons between paper and parchment codices—all this is invoked for such purposes as refuting the authenticity of a letter on the unity of Christ's will, allegedly written by patriarch Menas to pope Vigilius.⁹⁸ This is a sample:⁹⁹

καὶ ἐπισκήψαντες ὁ τε εὐσεβέστατος βασιλεὺς ἅμα τοῖς ἐνδοξοτάτοις ἄρχουσι καὶ τισι τῶν τῆς ἁγίας συνόδου θεοφιλῶν ἐπισκόπων, καὶ ἀναπτύξαντες καὶ ἀνακρίναντες εὗρον τρεῖς τετράδας εἰς τὴν ἀρχὴν τοῦ βιβλίου ἐκ προσθήκης ἐμβληθῆναι, μὴ ἐχούσας ὑποσημείωσιν ἀριθμητικὴν τὴν πρὸς συνήθειαν ἐντεθειμένην ἐν ταῖς <τετ>ράσιν, ἀλλ' ἐν τῇ τετάρτῃ τετράδι εἶναι τὸν πρῶτον ἀριθμόν, καὶ εἰς τὴν μετ' αὐτὴν δευτέραν καὶ τρίτην τετράδα ἐφεξῆς· ἄλλως τε καὶ ἀνόμοια εἶναι τὰ γράμματα τῶν ὑποβληθεισῶν ἐν πρώτοις τριῶν τετράδων, ἐν αἷς ἐμφέρεται ὁ λεγόμενος Μηνᾶ πρὸς Βιγίλιον λόγος, πρὸς τὰ γράμματα τὰ ἀρχῆθεν γεγραμμένα ἐν τῷ λεχθέντι βιβλίῳ.

The most pious emperor together with the most illustrious magistrates and some god-beloved bishops of the holy Synod, inquired, opened, and examined the book, and found out that three quires had been added at the beginning, which did not bear the numbering *in calce* usually apposed on quires: the first quire-number appeared on the fourth quire, and then on each following quire. Furthermore, the handwriting of the three quires interpolated at the beginning, which carried the so-called letter of Menas to Vigilius, was different from the one originally employed in the book under review.

Similar discussions of alleged forgeries and tampering with manuscripts also repeatedly surface in the acts of the Council of Nicaea (787) in the framework of the iconoclastic *querelle*.¹⁰⁰

In the field of profane studies, the fate of grammar and learning in the capital experienced a radically new thrust in the second half of the 8th century, the age of two outstanding scholars, George Choeroboscus and Ignatius the Deacon. Choeroboscus, perhaps an *oikoumenikos didaskalos* and/or a *chartophylax* (the titles leave us confused: while certainly working in the patriarchate, he might have been a teacher, a dignitary, a librarian), was a prolific author, but a rather obscure personality.¹⁰¹ He produced *inter alia* some treatises on prosody and metre (amongst which a rich commentary to Hephaestion's manual, dealing with metres that had long perished in Byzantine poetical practice),¹⁰² a commentary on the *Techne* of Dionysius Thrax,¹⁰³ a widely read canon of the 27 rhetorical figures,¹⁰⁴ and a substantial guide to orthography, now preserved in a very partial and abridged form.¹⁰⁵ According to a plausible recent reconstruction, the lost proem of the latter work may have contained the following, representative methodological statement:¹⁰⁶

κανόνες δὲ αὐτῆς (*scil.* ὀρθογραφίας) τέσσαρες, ἀναλογία, διάλεκτος, ἔτυμολογία, ἱστορία. καὶ ἀναλογία μὲν κατορθοῦμεν γραφήν, ὅταν κανόνα ἀποδῶμεν, ὡσπερ ἐπὶ τοῦ ταχεῖα ἐδηλώσαμεν· διάλεκτῳ δέ, ὅταν τὸ ἡμεῖς διὰ τῆς εἰ διφθόγγου γράφων εἶπω ὅτι Αἰολεῖς ἄμμες λέγουσι, τὸ προσὸν ἐν τῇ λέξει <ἐκ>φωνήσαντες. ἔτυμολογία δέ, ὅταν τὸ ἡπειρος διὰ τοῦ η τὴν πρώτην συλλαβὴν καὶ διὰ τῆς εἰ διφθόγγου τὴν δευτέραν γράφων, εἶπω ἐπειδὴ πέρας οὐκ ἔχει, ἄπερός τις οὔσα. ἱστορία δέ, ὅταν τὸ χίλιοι γράφων διὰ τοῦ ι εἶπω· οὕτως αὐτὸ βούλεται γράφεσθαι ἢ παράδοσις.

Its [*scil.* orthography's] canones are four: analogy, dialect, etymology, history. And we correct the spelling with analogy, when we enunciate a canon, as we have demonstrated for the word *tacheia*. With dialect, when I spell *hemeis* with the diphthong *epsilon-iota* and I say that the Aeolians

100 Lamberz [2000]; Speyer [1971] 199 and 277; Lemerle [1971] 109–112.

101 Long believed to belong to the age of Justinian, his chronology has been partly fixed only recently: Theodoridis [1980] 341–345; Alpers [2004] 19.

102 Ed. Consbruch [1906] 175–254; see Hunger [1978] 50–51.

104 Ed. Spengel [1853] I, 244–256; see Besharov [1956].

105 Ed. Cramer, *An. Ox.* II [1835] 167–281; see Valente [2010a] 639–650. Alpers [2004] 31–35.

106 Valente [2010a] 644–645.

say *ammes* pronouncing the *epsilon* present in the word. With etymology, when we spell *epeiros* (“land”) with *eta* in the first syllable, and with the diphthong *epsilon-iota* in the second and I say “because it has no limits, being *aperos*”. With history, when I spell *chilioi* (“a thousand”) with *iota* and I say “the paradosis has it spelt this way”. [transl. S. Valente]

But Choeroboscus wrote above all two remarkable works, both honoured by prolonged success in Byzantine grammatical practice,¹⁰⁷ and both clearly intended for the instruction of pupils in need of elementary training in accentuation, punctuation, prosody and grammar. The first one, indebted to Apollonius Dyscolus, Herodian and of course Dionysius Thrax, is a long commentary to the *Canons* of Theodosius of Alexandria,¹⁰⁸ chiefly concerned with the establishment and observation of a clean linguistic standard, and of rules designed to prevent barbarism and solecism.¹⁰⁹ The other work is *Epimerisms on the Psalms*,¹¹⁰ a pedantic exercise of word-for-word parsing of the Septuagint’s text with the aim of singling out the morphological and grammatical category of each term, independently of its syntactic function but with an eye to its semantics.¹¹¹ A nice, if very synthetic example of how Choeroboscus interweaves different sources in his grammatical work is his note on *Ps.* 75.7:¹¹²

ἐνύσταξαν· ῥῆμα, ἀόριστος πρῶτος τρίτου προσώπου τῶν πληθυντικῶν. τὸ δὲ νυστάζω γίνεται ἐκ τοῦ νευστάζω, τὸ δὲ παρὰ τὸ νεύω. Τί διαφέρει τὸ κινεῖν καὶ νευστάζειν; τῇ μὲν φωνῇ διαφέρει, τῷ δὲ σημασινομένῳ οὐδαμῶς. ἴσον γὰρ τὸ κινεῖν τῷ νευστάζειν, καὶ Ὁμηρος· “νευστάζων κόρουθι βριαρῆ” [Υ 162], καὶ τὸ “νευστάζων κάραν Ἰούδας” [Cosm. Hieros. canon pro magna quinta feria, PG 98.480B].

enystaxan: verb, first aorist, third person plural. *Nystazo* derives from *neustazo*, itself deriving from *neuo*. What is the difference between “to

112 *Epim. Ps.* 160.29–35 Gaisf. (whence *Etym. Gud.* 481.16 Stef.)

move” (*kinein*) and “to shake” (*neustazein*)? The words are different, but the meaning is identical, for *kinein* and *neustazein* mean the same thing, as in Homer “shaking his mighty helmet”, and “Judas shaking his head”.

Being a *pièce de résistance* of the school system, epimerisms were a very popular genre in Byzantine grammar, and were practiced in schools down to the age of Planudes and Moschopoulos. Those attributed by manuscripts to Herodian are demonstrably a Byzantine product, perhaps as late as the 12th century,¹¹³ but epimerisms to Homer represent an undoubtedly ancient practice, already attested as early as the 2nd century AD.¹¹⁴ The collection of *Epimerismi Homerici* handed down to us in Byzantine manuscripts has been plausibly ascribed to Choeroboscus himself, and it might in fact represent his greatest scholarly achievement in the field of pagan literature.¹¹⁵ Due to the plurality of its sources (from Herodian to Cyril, from Philoxenus to Michael Syncellus), and the consequent variety of its approaches (one finds quotations of Sophron and Callimachus, of Gregory of Nazianzus and the Old Testament), this collection represents an invaluable source of fragments documenting the evolution of Homeric and grammatical scholarship from Apion to Herodian to Theognostus, as well as a very influential tool for the great etymological lexica produced between the 9th and the 10th century.¹¹⁶ Originally arranged as the grammatical parsing of each word along the order of the *Iliad*'s lines, these epimerisms were soon reshuffled into a bulky alphabetical ‘lexicon’ (the so-called *Epimerismi alphabetici*),¹¹⁷ much in the same way as (some time between the late 9th and the early 10th century) a special dictionary known from its first item (αἰμωδεῖν) arose out of a combination of epimerisms from Byzantine historians (Procopius, Agathias, Menander and Theophylactus Simocatta) with glosses and epimerisms to Homer.¹¹⁸

The other important scholar of this age, Ignatius the Deacon (ca. 770–ca. 845), was not only a very artificial writer (his letters bulge with references to Homer and Euripides: see *e.g. epist.* 32, 36, 60 Mango), but also one of the few Byzantines not only to be acquainted with various ancient Greek metres, as

113 Ed. Boissonade [1819].

114 Dyck [1983] 3–5, insisting on the meaning of *epimerismos* as “division of a line into its parts” rather than into the “parts of speech” (or μέρη τοῦ λόγου).

he himself states in the biography of his teacher Tarasius,¹¹⁹ but also to use them in his own poetical activity,¹²⁰ and to show a special sensitivity for Greek tragedy in his trimeters on Biblical subjects and in his paraphrases of Babrius' fables.¹²¹ All this does not necessarily configure him as a first-rate Classical scholar, but his claim to a high rank in the realm of poetry and to the merit of rescuing from oblivion the art of grammar may be at least partly justified.¹²²

The first half of the 9th century is also the common dating of the book on orthography dedicated by a grammarian named Theognostus to emperor Leo, traditionally taken to be Leo V (813–820), although a recent study has made a case for Leo VI (886–912), thus shifting the chronology to the middle of the century.¹²³ The work itself,¹²⁴ with its 1006 *kanones* dealing first with the beginning and body of words (1–142) and then more broadly with their endings (143–1006), has the lexicon of Cyril as one of its main sources, and it declaredly follows the ordering of Herodian's *General prosody*, while emending and restoring some of its items. This *Orthography* thus offers a comprehensive study of Greek grammar going far beyond the mere spelling of words,¹²⁵ which is why it was chosen, together with Choeroboscus' *Orthography*, a treatise *On quantity* (περὶ ποσότητος), and a series of alphabetical epimerisms, as the source of a grammatical *corpus* used by the redactor of the *Etymologicum Genuinum*, and copied *tel quel* in the 10th-century manuscript Bodl. Barocc. 50.¹²⁶

If we turn for a moment to rhetorical studies, their continuity in Byzantium is apparent (in the so-called Dark Ages, writers such as Paul of Aegina and Theophylactus Simocatta display in their works a remarkable familiarity with

119 See Lemerle [1971] 128–129 and Mango [1997] 8 for the relevant passage of the *Life of Tarasius* (p. 69.7–10 Eftymiadis) τῆς μὲν ἐντροφῆσας ἐν ἀκμῇ τῆς νεότητος καὶ μυηθεὶς ἐκ σοῦ τριμέτρων καὶ τετραμέτρων τροχαϊκῶν τε καὶ ἀναπαιστικῶν καὶ ἠρώων ποιημάτων τὰ κράτιστα “The former [*scil.* education] I enjoyed in the prime of my youth when I was initiated by you in the best examples of the trimeter and the tetrameter, both trochaic and anapaestic, and in dactylic verse” (transl. C. Mango).

the principles of artistic prose), though often hard to trace in detail due to the lack of primary witnesses and the physiological, continuous replacement of handbooks and treatises. As a matter of fact, the first scientific writing on this subject after Late Antiquity is a commentary on Aphthonius' *Progymnasmata* by John the archbishop of Sardis (first half of the 9th century),¹²⁷ Aphthonius being the major schoolbook of rhetorical training throughout the Byzantine era.¹²⁸ Based on a series of earlier treatises (from David's commentary on Porphyry down to Sopater's own *progymnasmata*), this work not only attests to the continuity of rhetorical teaching throughout the Dark Ages and early Macedonian period, but it was also to provide fruitful reading for rhetors of the later Byzantine age.¹²⁹ John of Sardis' definition of myth, for instance, may depend on Sopater, but it also undoubtedly displays a certain originality.¹³⁰

καί φαμεν, ὅτι τοῦ μύθου δύο εἶδη· τὸ μὲν γὰρ αὐτοῦ ἐστὶν ἀλληγορικόν, τὸ δὲ πολιτικόν· καὶ ἀλληγορικόν μὲν ἐστὶν, ὅταν ἄλλην ἔχη τὴν φαινομένην πλάσιν, ἄλλο δὲ ἀγορεύειν δοκῆ, ὡς οἱ παρ' Ὀμήρῳ πεπλασμένοι οἶον “Ξανθῆς δὲ κόμης ἔλε Πηλείωνα” (A 197)· τὸν γὰρ νοῦν ἀντὶ τῆς Ἀθηνᾶς αἰνίττεται ὁ μῦθος. καὶ οἱ ποιητικοὶ δὲ μῦθοι τοιοῦτοι τὴν φύσιν ὡς ἐπὶ τὸ πλεῖστον, διὸ καὶ ἀσυντελεῖς εἰσιν εἰς τὴν ῥητορικὴν, τῷ μέντοι τυγχάνειν οὐσιώδεις τὸ ψεῦδος αὐτῶν εἶναι γε μῦθοι πιστεύονται· οὐκοῦν οἱ ἀλληγορικοὶ τῶν ῥητόρων ἀλλότριοι. τῶν δὲ πολιτικῶν μύθων οἱ μὲν εἰσιν πλαστικοί, οἱ δὲ ἱστορικοί· καὶ πλαστοὶ μὲν λέγονται οἱ τῆς ἐν αὐτοῖς πλάσεως πολλὴν τὴν αἴσθησιν παρεχόμενοι, ὡς ὁ τοῦ γηράσαντος λέοντος καὶ ὑποκρινομένου τὴν νόσον ἢ ὁ τοῦ ἵππου καὶ τῆς χελώνης· ἢ γὰρ πλάσις τούτων καὶ τῶν τοιούτων εὐαίσθητος. ἱστορικοὶ δὲ εἰσιν οἱ δοκοῦντες ὡσπερ ἱστορεῖσθαι καὶ ἐωρᾶσθαι γινόμενοι καὶ ἔχοντες μὲν καὶ αὐτοὶ τὸ ψεῦδος ὁμολογούμενον, τῇ φύσει δὲ τῆς ὕλης τὴν πλαστικὴν ἐναλλάττοντες, ὡς ὁ παρῶν μῦθος καὶ ὁ τῆς κυνὸς τῆς ἀρπασάσης τὸ κρέας καὶ ὡς ὁ τοῦ ἱξευτοῦ τοῦ ἐξαπατηθέντος ὑπὸ τῆς φωνῆς τοῦ τέττιγος· οἱ γὰρ τοιοῦτοι ἐξ ἐπιπολῆς ὡσπερ εἰπεῖν ἀληθείας δόκησιν παρεχόμενοι τὸ ψεῦδος τὸ ἐν αὐτοῖς ἐπικρύπτουσιν.

We say that there are two kinds of myth: one is allegorical, the other political. Allegorical myth is when its outer appearance is different from

the message it conveys, like the myths fashioned by Homer, “she seized the Peliad by his blond hair” (for in myth, Athena means the mind). The myths of the poets are mostly of this nature, wherefore they are useless for rhetoric, and because their falsehood is substantial they are believed to be myths: allegorical myths are thus alien to rhetors. Political myths are subdivided into invented and historical ones: invented myths give a clear sense of their invention, like the myth of the old lion pretending to be ill or that of the horse and the tortoise: that these and similar myths are invented is easy to perceive. Historical myths are those that seem to have been found by searching and then seen in their development, and have their declared share of falsehood, but which, on account of the nature of their subject, resemble sculpture, like the present myth, and that of the dog seizing the meat, or of the bird-hunter deceived by the verse of the cicada: such myths, so to say, procure superficially an expectation of truth, while concealing the falsehood they contain.

1.4 *Iconoclasm*

The most important cultural phenomenon in the period under review is doubtless the battle against the holy images known as iconoclasm, a theological and ideological movement stretching from the late 7th century well into the 9th.¹³¹ Due to the lack of reliable sources, different views have been taken concerning the impact of iconoclasm on the transmission of books and particularly of Classical culture:¹³² we now incline to believe that this impact must have been rather modest, for while the iconoclasts were ready to destroy illuminated Bibles and patristic books, the iconodules, in their orthodoxy, showed an even greater hostility towards paganism and ancient culture. We also have to reckon with the consequences of propaganda: major episodes such as the action of setting fire to the *oikoumenikon didaskaleion*, allegedly perpetrated by the initiator of iconoclasm Leo III Isaurikos in 726, are probably the fruit of iconophile propaganda rather than of historical truth.¹³³

In fact, important grammarians and experts in ancient Greek language and literature, such as the aforementioned Theognostus (perhaps a Sicilian) and Choeroboscus, were trained under iconoclastic emperors, and it seems that this did not adversely affect their instruction; the same can be said for Theodore Stoudites (759–826) and the organisation of the Stoudios

133 John Zonaras, *Epitome* 15.3 (pp. 341.17–25 Dind.), with Speck [1974a] 74–90 and Lemerle [1971] 89–94.

monastery in Constantinople. Quite the contrary: the evidence of hagiographies down to the early 9th century suggests that education continued to follow a bipartite curriculum, consisting of an elementary *propaideia* (focusing on psalms and hymns) and of a more restricted, and far less common, *paideia* (grammar, rhetoric, philosophy, dialectic etc., with regular combination of Christian and pagan authors), in a line of continuity with respect to earlier ages¹³⁴ and without too negative a thrust in comparison with the ensuing so-called 'Macedonian Renaissance' (see below § 2.1).¹³⁵

Debates on texts and their status predictably flourished in iconoclastic times: as we have seen above (§ 1.3), the 7th oecumenical Council of Nicaea (787) implied discussions about forgeries, faithful and unfaithful copies, and even details of book production. In the second and final phase of iconoclasm, emperor Theophilus (829–842) resorted to a full collation of the available copies of Isaiah in order to establish the correct reading of a debated passage.¹³⁶

τοῦ δὲ μακαρίου Θεοφάνους ῥήσιν τινα ἐκ τῆς τοῦ Ἡσαΐου προσάγοντος προφητείας, οὐκ ἔχειν οὕτως ταύτην ὁ Θεόφιλος ἀντέλεγεν, καὶ ἅμα τὴν ἑαυτοῦ βίβλον ἀνελίττων ἐδείκνυε τοὺς λόγους πιστούς. Ὡς δὲ νενοθεῦσθαι ὑπ' αὐτοῦ οὐ ταύτην δὴ μόνον ὁ ἅγιος ἐπεβόα, ἀλλὰ καὶ πάσας τὰς εἰς αὐτοῦ χεῖρα βιβλους ἐλληλακυίας, ἐκείνην ἔλεγε προστιθεὶς τὴν βίβλον ἰέναι πρὸς αὐτὸν τὴν κατὰ τὴν πατριαρχικὴν ἐν τῷ Θωμαίτῃ κατὰ τήνδε τὴν θέσιν κειμένην βιβλιοθήκην εἰς τῶν λεγομένων βεβαίωσιν.

When blessed Theophanes adduced a quotation from the prophecy of Isaiah, Theophilus answered that the text was not correct, and looking it up in his own Bible he pointed at the right reading. When the holy man complained that not only had that prophecy been altered by him, but that all the other books that had come in his hands had been as well, he added the order to fetch the book that lay in a certain place in the patriarchal library in the Thomaites, so that the wording might be verified.

Theophilus, the last iconoclastic emperor, had been trained in his youth by John the Grammarian (born ca. 770), who later became a patriarch and suffered confinement upon Theophilus' death in 842. John had been one of the

most highly regarded scholars of the first half of the 9th century,¹³⁷ and in 814 he had promoted on behalf of Leo v a famous hunt for ancient manuscripts in churches and monasteries,¹³⁸ aiming at the discovery of ecclesiastical and patristic texts rather than of pagan literature.¹³⁹ A bibliophile and a reader of pagan authors, John was criticised by the learned monk Theodore Stoudites for being a new Pythagoras or a new Plato, a charge that is partly understandable in the light of his interests in pagan philosophy, magic, and poetry.¹⁴⁰

It is plausible, albeit impossible to demonstrate, that he may have promoted an ambitious lexicographical compilation, largely derived from the so-called lexicon of Cyril, other sources including the D-scholia to Homer, the glosses of Apollonius Sophista's Homeric lexicon, and Atticist glosses to historians (Thucydides, Xenophon, Arrian, Dio Cassius), orators (Demosthenes, Aeschines etc.) and philosophers (Plato, Aristotle). This dictionary, which proved highly influential in the coming centuries for the lexica of Photius and Suidas, is known as the *Synagoge lexeon chresimon* and was transmitted above all by the 10th-century ms. Par. Coisl. 347, and—in an enlarged version that took onboard further Atticist glosses from Harpocration, Phrynichus, Aelius Dionysius, Pausanias, Orus—in ms. Par. Coisl. 345.¹⁴¹

1.5 *Transliteration*

The name of John the Grammarian has sometimes been connected, though without any firm basis, with one of the most important developments in the history of Greek texts, which occurred between the last decades of the 8th century and the first decades of the 9th: namely, transliteration. The technical evolution of Greek handwriting from majuscule into minuscule is of uncertain origin and debated chronology, but it certainly affected in a decisive manner not only the layout of the individual codices, but above all the chances of survival of ancient Greek texts.¹⁴² Although a recent, provocative study has attempted to trace the genealogy of minuscule script back to the standard of Byzantine notaries from as early as the 6th century,¹⁴³ a scientifically more

acceptable view identifies the origin of the minuscule in 7th- and 8th-century acts and documents of the imperial and patriarchal chanceries.¹⁴⁴

The calligraphic evolution of this minuscule as a book script¹⁴⁵ has often been connected with the monastery of Stoudios in Constantinople, apparently the place of origin of the first dated minuscule codex (the famous Uspenskij Gospel Book of 835, ms. Petrop. GPB gr. 219), as well as of other, early books in the new handwriting (Leid. BPG 78; Laur. 28.18).¹⁴⁶ The astronomical content of the latter books reminds one of the well-known ms. Vat. Gr. 1291 of Ptolemy's *Handy Tables*, a richly illuminated codex which has been dated to the late 8th or more realistically shortly after 811, but is still written in uncial letters.¹⁴⁷ Now, the proof of a pivotal role of Stoudios in the transliteration movement is admittedly thin, but we do know that in the rules of the monastery in question the work of scribes was very strictly organised, with fines and punishments for those who committed mistakes in matters of punctuation or accents, for those who broke their pen out of rage or irritation, for those who followed their *dictée intérieure* rather than the manuscript's text, and for those who dared interpolate something in the text they were copying.¹⁴⁸

The advantages of the new script, smaller and faster than the majuscule, are evident in terms of space-saving and practicality, and particularly, due to the more systematic presence of reading aids such as accents, spirits and punctuation marks, in terms of reader-friendliness: this explains its comparatively fast spread throughout the empire, with the majuscule remaining confined to ecclesiastical or liturgical books, such as the famous book of Ps.-Dionysius the Areopagite (now Par. Gr. 437) offered by the Byzantine ambassadors of emperor Michael II to king Louis le Pieux in Compiègne in 827, and thereupon exhibited to public veneration in the abbey of St. Denis. This official

144 A unique example of this evolution is P^Vindob G 3, whose handwriting reproduces the writing standard of 681: De Gregorio-Kresten [2009] 339–344.

148 *Monastic penalties* 53–60 (PG 99.1740) see esp. 55: ἐάν τις ἐκστηθήσει ἐκ τῶν γεγραμμένων τοῦ ἐξ οὗ γράφει βιβλίου, ἀφοριζέσθω ἡμέρας γ' "if someone learns by heart what is written in the book from which he is copying, let him be relegated for three days"; and 56: εἴ τις πλέον τῶν γεγραμμένων ἀναγνώσει ἐξ οὗ γράφει βιβλίου, ξηροφαγείτω "if someone reads more than what is written in the book from which he is copying, let him eat dry food". These rules probably do not stem from Theodore himself but certainly reflect his views: Leroy [1958] 210–212. See in general Lemerle [1971] 121–128; Cholij [2002] esp. 31–33; Eleopoulos [1967].

ecclesiastical use may be one of the reasons why this script was adopted by Cyril and Methodius, the apostles of the Slavs, when shaping a new alphabet.¹⁴⁹

On the other hand, the once fashionable idea that most Greek texts must have undergone no more than one transliteration in the course of their history, and that every *stemma codicum* should eventually lead to a single 9th-century archetype of the entire *paradosis*, is no more than a scholarly myth with little firm basis in either historical evidence or common sense. However complicated the transliteration process may have been, due to the plurality of libraries and of Greek-speaking cultural centres in the entire Mediterranean area, copies of texts in majuscule script certainly survived for a long time, and the switching from one handwriting to the other must have been a more plural, multifaceted, and at times also slow and belated process.¹⁵⁰

2 From the Byzantine Revival to the Age of Encyclopedism

2.1 General

Several recent studies have warned against considering Byzantine culture along the parameters of “renaissances” (or indeed “humanisms”) and subsequent “dark ages”: not only do these terms anachronistically refer by way of an ambiguous comparison to a unique experience—the Italian Quattrocento—belonging to a totally different time and place, but above all they obfuscate the substantial, if uneven, continuity of Classical instruction in the educational process of all Byzantine elites.¹⁵¹ Ancient Greek authors may have experienced various degrees of popularity among the members of the educated class, but they never disappeared altogether, nor did they cease to be, if in varying degrees, a primary component of the Greek identity. Therefore, when we talk about ‘revivals’ we reject all ideas of a ‘new beginning’, and simply adopt this terminology in order to highlight historical moments in which a higher number of scholars devoted their efforts to the production and study of books and texts, often in the wake of a special increase in educational policies and cultural investments.¹⁵²

In particular, the Byzantine Renaissance of the 9th century has been authoritatively described as the moment when the Romans of the East started to

149 Cavallo [1977]; Berschin [1980] 145–147.

150 Ronconi [2003] 7–39.

151 Treadgold [1984] 76 “If humanism simply means reading and understanding Greek literature of the classical period, humanism had never died out at Byzantium”; Irigoin [1980].

152 Ševčenko [1975] 19.

peruse and exploit the ancient Greek heritage in the view of their own identitarian needs.¹⁵³ This, however, does not necessarily imply that we believe in the existence or the creation of an imperial academy or a patriarchal school, two institutions whose role has too often been taken for granted on a very slight basis: the latter is not positively attested until the early 12th century;¹⁵⁴ as for the former, we only know that some time in the second quarter of the century emperor Theophilus granted a room for teaching at the church of the Forty Martyrs to Leo the Philosopher (or the Mathematician, ca. 790–post 869), the cousin of John the Grammarian.¹⁵⁵ Leo, who was later promoted to the archbishopric of Thessalonica, had apparently studied at Andros in his youth,¹⁵⁶ and before being appointed by the emperor he taught privately in Constantinople: thanks to his deep knowledge of astronomy and astrology he won the admiration of the Arab caliph Al-Mamun, who apparently invited him to come and teach in Baghdad.¹⁵⁷ A much-debated passage of Theophanes Continuatus relates that some time between 843 and 855–856 the *kaisar* Bardas—a high-ranking civil servant, who dominated the political scene of Byzantium around the middle of the century—created a new school, directed by Leo himself, in which the *ἔξω σοφία*, the pagan learning, finally revived after decades of silence:¹⁵⁸

τότε δὲ τῆς ἔξω σοφίας ἐπιμεληθεῖς (καὶ γὰρ ἦν τῷ τοσοῦτῳ χρόνῳ παραρρυσταὶ καὶ πρὸς τὸ μηδὲν ὄλως κεχωρηκυῖα τῇ τῶν κρατησάντων ἀγροικία καὶ ἀμαθία) καὶ διατριβάς τῶν μαθηματικῶν κατὰ Μαγναύραν ποιήσας αὐθις ἀκμάζειν καὶ ἀνηβᾶν αὐτήν ἐσπούδαζέ τε καὶ πεφιλοτίμητο.

Then he [*scil.* Bardas] took charge of pagan learning, which after such a long time had fallen in decay and boiled down almost to nothing due to the ignorance and boorishness of the people in power: establishing a school of science close to the Magnaura, he made ambitious efforts in order to reinvigorate that learning and make it flourish again.

Whether Bardas' initiative was simply the refurbishing of Theophilus' academy by a powerful minister in search of personal prestige, or the creation of

a totally new institution by public initiative,¹⁵⁹ remains unclear; in much the same way, we have no knowledge of the precise link of this school with the imperial palace of the Magnaura, next to which (or “in which”?) it appears to have been established. The four teachers appointed were Leo himself for philosophy, the otherwise little known Theodore and Theodegius for geometry and astronomy respectively, and a man named Cometas for grammar, “which makes words soundly Greek”.¹⁶⁰ This must be the same Cometas mentioned in some epigrams of the *Greek Anthology* (15.36–38) as the promoter of a ‘rejuvenation’ and transcription of the *Iliad* and the *Odyssey*.¹⁶¹

εὐρών Κομητᾶς τὰς Ὀμηρείους βίβλους
 ἐφθαρμένας τε κοῦδαμῶς ἐστιγμένας,
 στίξας διεσμίλευσα ταύτας ἐντέχνως
 τὴν σαπρίαν ῥύψας μὲν ὡς ἀχρησίαν,
 γράψας <δ’> ἐκαινούργησα τὴν εὐχρησίαν.
 ἐντεῦθεν οἱ γράφοντες οὐκ ἐσφαλμένως
 μαθητιῶσιν ὡς ἔοικε μανθάνειν.

I, Cometas, finding the books of Homer
 corrupt and quite unpunctuated,
 punctuated them and polished them artistically,
 throwing away the filth as being useless,
 and with my hand I rejuvenated what was useful.
 Hence writers now desire to learn them
 not erroneously, but as is proper. [transl. W. Paton]

This epigram has been variously interpreted by modern scholars as referring to a mere practice of punctuation and transcription,¹⁶² a complex and systematic work of transliteration,¹⁶³ or a philologically refined edition of the poem.¹⁶⁴

159 These are by and large the opposing views of Speck [1974a] and Lemerle [1971]. A fresh look on these topics will be provided by the proceedings of the conference *À la suite de Paul Lemerle*, organised by J.-C. Cheynet and B. Flusin in Paris in October 2013.

160 Theoph. Cont. 4.29, p. 192.16–20 Bekker τῆς κατὰ τὴν Μαγναύραν μὲν οὗτος [*scil.* ὁ Λέων] ἤρχε φιλοσόφου σχολῆς, ὁ δὲ δὴ τούτου φοιτητῆς Θεόδωρος τοῦ τῆς γεωμετρίας διαιτητηρίου προΐστατο, καὶ Θεοδῆγιος τοῦ τῆς ἀστρονομίας, καὶ Κομητᾶς τῆς τὰς φωνὰς ἐξελληνιζούσης γραμματικῆς.

In any case, it is hard to think that this sort of textual scholarship should have remained without some kind of relationship with the new philological *facies* of the *Iliad* and its scholia as we perceive it from the archetype *a*, the direct ancestor of the glorious ms. Venetus A (Marc. Gr. 454).¹⁶⁵

Whatever the implications of Cometás' activity, two issues remain open: first of all, behind the four subjects taught at the Magnaura we can hardly discern the shape of a consistent curriculum;¹⁶⁶ secondly, there is no evidence that this school should be regarded as having been a public institution rather than an elitarian system of education with no legal profile and no official recognition.¹⁶⁷

The director, Leo the Philosopher, whether or not he had among his pupils Constantine/Cyril the apostle of the Slavs,¹⁶⁸ is known for a high-brow scholarly activity that is difficult to reconcile with his teaching at the Magnaura, for he devoted his efforts to various authors of philosophy, *e.g.* emending Plato's *Laws* up to 5.743b (as we learn from a note preserved in three Platonic manuscripts, among which the venerable Vat. Gr. 1 and Par. Gr. 1807, once attributed to Arethas' patronage)¹⁶⁹ and writing an epigram on Aristotle's *Categories*.¹⁷⁰ Epigrams in the *Greek Anthology* also inform us that copies of such disparate and demanding authors as Apollonius of Perga, Proclus, Theon, Euclid, Archimedes, Ptolemy all featured in his library: he might have indeed owned or made a copy of Vat. Gr. 1594 of the *Almagest*, and he certainly commissioned the earliest Byzantine recension of Archimedes, as we gather from colophons in mss. Laur. 28.4 and Par. Gr. 2360;¹⁷¹ his studies of profane authors, which included even a novel such as *Leucippe and Clitophon* (*Greek Anthology* 9.203), earned him the lively and stern reproach of Constantine the Sicilian¹⁷² in a famous epigram condemning his proclivity to pagan deities, philosophers and attitudes.

Leo, also nicknamed "Hellen",¹⁷³ represents a good example of a wider trend in Byzantine culture and scholarship, one we will encounter often from now

165 Alpers [1989] 257; Pontani [2005b] 143 and 148–149.

166 Fuchs [1926] 18–20 vainly attempted to detect a syllabus consisting of grammar, ancient poets, rhetoric, dialectic, arithmetic and geometry and astronomy.

172 Rather than Constantine/Cyril of the Slavs, as Spadaro [1971] maintains: see Lemerle [1971] 172–176 and Cameron [1993] 245–253.

173 See the lemma of the epigram *Gr. Anth.* 15.12, a text that shows Leo's familiarity with allegorical readings of Homer: see Westerink [1986].

on, and more so in later periods of enhanced scholarly activity: rather than (and sometimes along with) public teaching or institutionalised curricula, the element that fuelled the recovery and the study of classical authors throughout the Middle Ages was the constant activity of individual members of the cultivated elite who had received secondary education, a very restricted group often assessed at no more than 300 people altogether¹⁷⁴—as opposed to a situation of relatively wide literacy at an elementary level.¹⁷⁵ These people often gathered in groups of two, three, or more, and joined their efforts in reading, discussing, interpreting ancient pagan or christian texts, in a sense continuing the late antique practice that had come to an abrupt end in the Latin West.¹⁷⁶ It is thus thanks to these “literary salons and coteries”, to these learned gatherings of educated civil servants, ministers, officers, metropolitans, priests, teachers and amateurs, that many ancient texts carved their way out of the Dark Ages.¹⁷⁷ This said, we should never forget that even the scholars who were most keen on the study of pagan books exercised themselves even more often on Christian texts, namely those which displayed a more immediate and evident *opheleia* (usefulness) for everyday life and ethics:¹⁷⁸ this is confirmed, *inter alia*, by the sheer number of pagan authors to be found in book-lists of the Byzantine period.¹⁷⁹

2.2 *Photius*

One of the members of the cultivated elite, and doubtless one of the most remarkable men of learning in the entire Byzantine age, is Photius (ca. 810–893): perhaps a pupil of Leo the Philosopher, perhaps himself a private teacher for a short while,¹⁸⁰ he was a high-ranking civil servant, first as a *protasekretis*,¹⁸¹ later switching to the ecclesiastical career and becoming patriarch of Constantinople (he held this post twice, in 858–867 and in 878–886), and the man who tried to bring about the radical schism with the Roman Church by attacking and refuting the authority of the Pope (863–867). Some modern critics have regarded Photius as the first outstanding representative of

174 This was the estimate of Lemerle [1971] 257; Treadgold [1984] 81; but see Markopoulos [2006] 86–87.

the so-called ‘Christian humanism’, namely an intellectual trend, stretching from John the Damascene to George of Cyprus, from Theodore Metochites to Bessarion, consisting in profound familiarity not only with pagan Greek literature but also with the methods of its study and with its epistemological dimension—in a word, the concretisation of the old idea of the Church Fathers that the knowledge of letters should be devoted solely to the pursuit of the divine word, according to the criterion of *opheleia*.¹⁸² Whether or not this definition applies to Photius, or rather to other, less ‘ecclesiastical’ figures such as John the Grammarian and Leo the Philosopher,¹⁸³ the scholarly output of this man is remarkable, and will be considered here only in its broader outlines.

In his youth, Photius spent some time compiling a *Lexicon*, whose edition is now almost completed, after the happy discovery in 1959 of a new, much fuller manuscript preserved in the monastery of Zavorda in northern Greece. The *Lexicon* is by no means an original work, for it derives most of its lemmas from the enlarged recension of the *Synagoge lexicon chresimon* (see above § 1.4), and from rhetorical lexica and Atticist works (Harpocration, Phrynichus, Aelius Dionysius, Pausanias, Boethus, Antiatticista):¹⁸⁴ Photius’ outspoken taste for the fragments of Attic comedy and for Atticist glosses in general makes us think that this work was meant as a tool for prospective writers of good Atticist prose, rather than as a help in reading classical works. To be sure, if the boom of lexicography in the 9th century may well be connected with the ongoing revival of classical authors,¹⁸⁵ Photius’ case should be contextualised in the frame of rhetorical and linguistic training, particularly in the appropriation of the sources’ linguistic standard for Byzantium’s learned elite,¹⁸⁶ rather than in the light of an alleged ‘humanistic’ attitude. This is partly what Photius himself alludes to when recalling in a later work the genesis of his own lexicon:¹⁸⁷

καὶ πολὺστιχον ἂν τις ἀπαρτίσῃ βιβλόν, οὐκ ἔάν ποθεν τὰς πολυσήμους φωνὰς ἀπάσας περιλαβεῖν ἐθελήσοι (ἐργῶδες τε γὰρ τοῦτο καὶ πλησίον τῶν ἀνεφίκτων), ἀλλ’ ἔάν εἰς ἓν συναγαγεῖν βουλευθεῖν τὰς ἐπὶ πλέον τῶν ἄλλων συνήθειαι καὶ τοῖς λόγοις μᾶλλον ἐπιπολαζούσας· οἶα δὴ καὶ ἡμῖν ἐπράχθη τὴν τῶν μερακίων ἡλικίαν, ὡς καὶ αὐτὸς οἶσθα, παραλλάττουσι...

182 On this ideal, see Podskalsky [2003]; Fryde [2000], 11–13; Bossina [2003].

183 Different views are held on this *e.g.* by Wilson [1996²] and Alpers [1988].

185 Tosi [2007].

186 Matthaios [2010a] 193–197.

187 *Amphilochia* 21.132–36 Westerink.

One would compile a long book, not only if one wished to embrace all the polysemic words (a laborious task, next to impossible), but even if one wished to collect in one place the most common of them, those surfacing more often in literature: precisely this I did, as you know, when I was quitting the age of childhood.

Photius' most ambitious (if partially unsuccessful)¹⁸⁸ achievement is the collection of 280 'book-reviews' of different literary texts known as *Myriobiblos* or *Bibliotheca*.¹⁸⁹ We will refrain from entering here the long-standing debate on the reliability of the prefatory letter to this work, in which Photius informs his brother Tarasius, the dedicatee, that he had written it before leaving Constantinople on an embassy to Baghdad, as a sort of *pro-memoria* of the books they had not been able to read together. The reference to the embassy has led scholars to date the work either to 838 or to 855, with the latter date proving more likely,¹⁹⁰ but what can be gleaned from Photius' words, and from the very shape of his work, is that the *Bibliotheca* grew out of a 'reading circle'¹⁹¹ devoted to the study of relatively uncommon prose writers (which is why the most obvious authors consecrated by school curricula are not considered, with the sole exception of Demosthenes in *codex* 265). The group probably had at its disposal a remarkable wealth of rare books, whether they belonged to Photius' personal library or to the library of the Imperial Palace.¹⁹² The entire question of the composition of the *Bibliotheca* will have to be studied afresh after the recent reappraisal of its most important manuscript witness, namely Marc. Gr. 450,¹⁹³ as the palaeographical and philological evidence strongly suggests that this very manuscript is the master copy on which the work was first put together from Photius' scattered notes and *schedaria*: if so, this implies that—especially in the latter part—we are in fact dealing with a sort of work-in-progress, extending well into the 870s.

More important to our ends are two other basic issues: the choice of the authors discussed, and the typology of Photius' approach. The predominance

188 In the list of manuscripts provided by Eleuteri [2000], just three antedate the 15th century.

189 Lemerle [1971] 189–196; Ziegler [1941]; Wilson [1996²] 93–114; Wilson [2002].

190 Markopoulos [2004] no. xii.

191 Canfora [1998].

192 Another hypothesis has it that a special lot of books arrived from Alexandria, which would perhaps explain the prominence of Egyptian authors, and the very form of the introductory letter, modelled on Aristeeas' narration about the translation of the Septuagint: Canfora [1995] 38–58.

193 Ronconi [2012a]. See on the topic Canfora [1995] 30–43.

of theology (with special emphasis on haeretical works), and in general of Christian works (158) over profane ones (122) chimes in with what we have just said about the interests and background of the educated Byzantine elite: “what Photius and other Byzantines lacked is a preconception that Greek works written before Alexander the Great were inevitably superior to later ones”.¹⁹⁴ It should be noted that among the works discussed there also figure council acts, a genre whose popularity among Byzantine scholars we have already illustrated (above § 1.3). As for profane authors, the total absence of poets—matched by the relative paucity of surviving manuscripts—should not be explained as a sign of general neglect for poetry in the 9th century, but rather as the peculiar choice of the compiler. Clearly, Photius’ heart beat for historiography, and particularly for imperial historiography, from Appian to Herodian and beyond (Herodotus, summarised in the very brief codex 60, and Thucydides, absent altogether, were neither familiar nor edifying authors for the public of the *Rhomaioi*),¹⁹⁵ with some curious preferences (Memnon’s history of Heraclea Pontica is awarded an extremely long and detailed résumé in *codex 224*), and the addition of paradoxographers, mythographers and fantastic tales (*e.g.* Phlegon of Tralles, Conon, Ptolemy Chennus, for all of whom Photius is our main or sole source of information).

Writers on philosophy, mathematics, agriculture and science are also represented, but even less easily compatible authors such as Achilles Tatius (*cod.* 87) or Lucian (*cod.* 128) are included and earn high praise for their style, the command of high-quality Attic being Photius’ fixed ideal throughout the *Bibliotheca*—a substantial part of the codex devoted to Philostratus’ *Life of Apollonius of Tyana* (*cod.* 241) is occupied by a long list of words and expressions worthy of particular attention from the stylistic point of view; and in later *codices* we find lengthy excerpts from orators and rhetors, such as Dio Chrysostom (*cod.* 209), Himerius (*cod.* 243), and Aelius Aristides (*cod.* 246–48). It should be stressed that many of the authors reviewed by Photius are not known to us through direct transmission, indeed several of the historians were, to the best of our knowledge, no longer available to emperor Constantine VII Porphyrogenitus a few decades later. Allowance should be made to the possibility of indirect or imperfect knowledge: one will hesitate, for instance, to believe that the patriarch did actually see a manuscript containing 52 genuine speeches of Hyperides (*cod.* 266), whereas no medieval codex of his survives.¹⁹⁶

194 Treadgold [1984] 96; Schamp [2011] insists on his specific paedagogical project.

195 See *e.g.* Jeffreys [1979]; A. Pontani [1995a] 339–341.

196 With the exception of the folios in the ‘Archimedes palimpsest’: see Easterling [2008].

Let us now turn to the contents: while most of Photius' chapters contain some biographical data on the author,¹⁹⁷ some kind of résumé of the work at issue, and some stylistic observations, three different typologies can be discerned for the pagan works:¹⁹⁸ the short notices (*Kurzreferate*), the analytical notices (with in-depth analysis of the work) and the excerpts (with entire passages from the book at issue—these instances represent an invaluable source for us in the modern age, when the work is lost or poorly attested, *e.g.* in the case of Agatharchides' *On the Erythraean Sea*, or of Conon's stories, or of Proclus' *Chrestomathy*). As mentioned above, stylistic observations creep in more or less overtly, and they relate to both ancient and new categories:¹⁹⁹ this explains for instance the favour accorded to Arrian (*cod.* 91–93) as the *princeps historicorum* and to Aelius Aristides (*cod.* 246–48) as the *princeps oratorum*, as well as the praise bestowed on Plutarch, Philostratus and Damascius; in some cases Photius seems to posit an interrelation between the stylistic qualities and the ethical value of the single authors.²⁰⁰ On the whole, the constant interaction between profane and Christian learning has a bearing on Photius' skilful technique of abridging and evaluating the books he is talking about.²⁰¹

As a representative case, we choose to present a large part of *codex* 164 on Galen's *On sects*, bearing in mind that Galen is one of several medical writers Photius proves familiar with (Oribasius, Aetius, Paul of Aegina etc.).²⁰²

ἀνεγνώσθη Γαληνοῦ περὶ αἰρέσεων. περὶ αἰρέσεων δὲ τῶν κατὰ τὴν ἰατρικὴν τὴν σύστασιν ἐσχηκυῖων διαλαμβάνει, καὶ φησι τρεῖς κατ' ἰατρικὴν καθολικὰς αἰρέσεις συστήναι, τὴν τε καλουμένην λογικὴν, ἣν καὶ δογματικὴν ἐπονομάζει ἔτι δὲ καὶ ἀναλογιστικὴν, δευτέραν δὲ τὴν καλουμένην ἐμπειρικὴν, ἥτις καὶ τηρητικὴ καὶ μνημονευτικὴ ἐπικαλεῖται, τρίτην δὲ τὴν μεθοδικὴν . . .

δῆλον δ' ὅτι τὸ βιβλίον τοῦτο τῶν κατὰ τὴν ἰατρικὴν ἀναγνωσμάτων πάντων προτάττεσθαι ὀφείλει, εἴπερ δεῖ μαθεῖν ποῖα πασῶν ἀρίστη αἵρεσις, εἶθ' οὕτω ταύτη κεχρησθαι. εἴη δ' ἂν οὐδὲ κυρίως ἰατρικὸν τὸ βιβλίον ἀλλὰ προοιμίου τόπον ἐπέχον καὶ φιλοσοφία μᾶλλον ἀνακείμενον. δῆλον δ' ὅτι, ὅσα γε ἐπὶ τε λέξει καὶ συντάξει, καθαρὸν ἐστὶ καὶ εὐκρινές. τοῦτων γὰρ ἐστὶν ἐν πᾶσιν ὁ Γαληνὸς φροντιστής, εἰ καὶ ἐν πολλοῖς αὐτοῦ τῶν συγγραμμάτων ἀκαιρολογίας

201 Schamp [2010].

202 *Bibliotheca* 107a–b (II.135–36 Henry).

καὶ παρεκτροπαῖς καὶ τῶ τῶν περιόδων σχοινοτενεῖ φορτίζων τὰ βιβλία συγχεῖ καὶ σκοτοῖ τῶν γεγραμμένων τὸν νοῦν, τὴν τε σύμφρασιν οἰονεὶ διακόπτων, καὶ εἰς ἀκηδῖαν ἄγων διὰ τοῦ μακροῦ λήρου τὸν ἀκροατὴν ὧν τέως τὸ παρὸν βιβλίον ἀπήλλακται.

I have read Galen's *On sects*. It is about the sects that have originated in the art of medicine. He says that three great medical sects have seen the light: the so-called 'logical' one (which he also names 'dogmatic' and 'analogistic'), the so-called 'empirical' one (which is also defined 'observationist' and 'recording'), and thirdly the 'methodical' one . . .

This book must clearly stand before all other readings in the domain of medicine, if one needs to make out which sect is the best, and then follow it. The book itself might not seem to be a book of medicine *stricto sensu*, but it plays the role of a prologue, and belongs rather to philosophy. It is clearly pure and neat as far as style and syntax are concerned, for Galen is always careful in these matters, even if in several of his treatises, by loading the text with infelicitous additions, digressions, and prolix phrasings, he blurs and obscures the meaning of what he writes, interrupting the context, so to speak, and pushing the reader towards indifference through his verbosity: but the present book is free from these faults.

Aside from its paramount importance as an unprecedented collection of pagan and Christian literature, and aside from its relevance for the development of stylistic criticism, the *Bibliotheca* does not stand out as a thorough work of scholarship. Photius does follow his authors when they deal with issues of forgery²⁰³ or debated authorship.²⁰⁴ But that in such a bulky work the references to philology and grammar should be so rare, certifies that these were not Photius' primary areas of interest.

While Photius' letters, through their numerous allusions, display a vast and often unexpected acquaintance with Classical texts ranging from Sophocles

203 See *cod.* 1 on Dionysius the Areopagite; *cod.* 230 and 274; in *cod.* 201 and 219 Photius himself puts forth the issue.

204 In *cod.* 88 a book on the history of the Council of Nicaea is presented as follows: "The name of the author is not given in the title; but in another manuscript of the same text I found the work attributed to Gelasios, bishop of Caesarea in Palestine" οὐ γὰρ ἐγγέγραπτο αὐτῶ ἡ κλήσις τοῦ γράψαντος. ἐν ἄλλῳ μέντοι ἔχοντι τὰ αὐτά, Γελασίου τοῦ ἐπισκόπου Καισαρείας τῆς Παλαιστίνης εὗρον τὸ βιβλίον ἐπιγραφόμενον (*Bibl.* 66b 30–33). In *cod.* 77 Photius refers to a double edition of Eunapius which he has found ἐν παλαιοῖς βιβλίοις. See also *cod.* 98 and 111.

to Aristophanes, from Epicharmus to Plato,²⁰⁵ a partly different picture emerges from the collection of problems and solutions called *Amphilochia*, a work belonging to the later part of Photius' career, when his main interest was devoted to theological or philosophical issues, and the space awarded to pagan doctrine was strongly reduced.²⁰⁶ In these shorter essays, Photius' philological sensitivity is particularly attracted to the textual problems of the Bible: the editions of the Old Testament (*Amphil.* 154), the pagan quotations in the Gospels (*Amphil.* 151), the polysemantic words in Greek from Plato to the New Testament (*Amphil.* 21, a long text mentioned above in connection with Photius' lexicon), and above all variant readings such as those elegantly discussed in *Amphil.* 227 (whether the Son was born or simply came into existence according to *1st epistle to the Galatians* 4.4: γενόμενος vs. γεννώμενος) and in *Amphil.* 1. The latter essay deals with the variant ἔκτησεν "possessed" vs. ἔκτισεν "created" in the Septuagint text of *Prov.* 8.22, as well as—in the wake of John Chrysostom's anti-Marcionite polemic—with the question of the correct punctuation of *2nd epistle to the Corinthians* 4.4: these apparently minor, but in fact dogmatically essential variant readings elicit from our author an important statement of principle:²⁰⁷

οὐ μόνον δὲ γράμματος ἐνὸς πρόσθεσις καὶ ἀφαίρεσις οὕτω πολλῶν πραγμάτων καταστροφὴν καὶ ἀλλοίωσιν ἀπεργάζεται, ἀλλὰ καὶ τόνου χρῆσις οὐκ εὐκαιρος τό τε ῥῆμα ἀνθ' ἑτέρου, καίτοι τῆς γραφῆς ἀναλλοιώτου μενούσης, παρέδειξεν ἕτερον, καὶ εἰς νόημα παντελῶς ἀλλοτριώτατον τὸν νοῦν ἐκτοπίσασα ἢ δυσσεβῆ δόξαν ἢ γελώμενον λήρον συνήγαγεν. τί δαὶ λέγω γράμματα; ὅπου γε καὶ αὐτὸ τὸ πάντων βραχύτατον, ἢ στιγμὴ, κακουργούμενον ἢ παρορώμενον καὶ τῆς οἰκείας μετατιθέμενον λήξεως, παντοδαπὰς μὲν καὶ μεγάλας αἰρέσεις ἀπέτεκεν . . .

It is not only the addition or subtraction of a single letter that creates wholesale confusion and misrepresentation, but the inexact use of an accent can turn one word into another although the spelling is identical, and can alter the sense to an utterly inappropriate meaning or produce an impious notion or laughable nonsense. Why speak of letters? After all, even the smallest of signs, the mark of punctuation, wrongly used or overlooked or misplaced, creates great haeresy of every kind. [transl. N. G. Wilson]

205 The evidence is collected and discussed by Wilson [1996²] 111–114.

206 Lemerle [1971] 199–202.

207 *Amphil.* 1.742–49 Westerink. See Wilson [1996²] 116–118.

2.3 *Lexicography and Grammar*

When mentioning the *Lexicon* of Photius, we have referred to a wider interest in lexicography during the central decades of the 9th century: the most remarkable outcome of this trend, probably connected in some way with the activity of the Magnaura school, is a bulky etymological dictionary preserved in just two manuscripts (Vat. Gr. 1818, 10th century, and Laur. San Marco 304, copied in 994), but highly influential on later works of this kind.²⁰⁸ I am referring to the so-called *Etymologicum Genuinum*,²⁰⁹ an impressive alphabetical list of terms derived from prose and poetry of all centuries, analysed in their etymology, orthography and meaning, with the help of commentaries to ancient texts, and often with references to non-grammatical sources that may help clarify proper names or historical realities: all this lends to the work the status of an encyclopedia.²¹⁰ While the *Genuinum* is chiefly indebted to Orion's *Etymologikon*, to the enlarged *Synagoge*, and to various other (largely lost) lexicographical predecessors, the level of scholarship displayed by the compilers can be properly assessed only if one takes into account the fact that they evidently had access to a series of commented editions of Homer, Hesiod, Aeschylus, Euripides, Aristophanes, Apollonius Rhodius, Lycophron, Nicander, Theocritus, and various other poets.²¹¹ To the modern scholar, this means that the *Etymologicum Genuinum* represents a source of primary interest not only for the massive amount of ancient learning it displays (including a great number of quotations from lost ancient texts, such as lyric poets or novels),²¹² but also in view of the constitution of both text and scholia to the authors involved (the case of the scholia to the *Iliad* is particularly remarkable, for the compilers had access to the direct ancestor of ms. Venetus A).²¹³ In an historical perspective, this means that even if we do not possess them any longer, poetical manuscripts did circulate in 9th-century Byzantium, and that it is all the less likely that such an ambitious enterprise should have been conceived outside of Constantinople and of a highly developed institutional context of education and research such as the school of Leo the Philosopher.²¹⁴

214 Alpers [1989] esp. 267; Alpers [1988] 347–348.

In the neighbouring field of grammar, it can be added that around the middle of the 9th century, at the request of the bishop of Damietta, Sophronius the patriarch of Alexandria (848–860) drew up a highly abridged version of John Charax's commentary on Theodosius' *Canons* (on which see above § 1.3) trying "to obtain the useful brevity but renouncing a longer discourse, as you thought would be suitable, not by ignorance of the rhetorical means, but rather in the attempt to appear friendly towards beginners";²¹⁵ Sophronius must be the same man who also produced a paraphrasis of the *Iliad*, known to us in the folios of ms. Sinai ΜΓ 26.²¹⁶ The special favour enjoyed by grammatical and linguistic studies throughout this period is proved by the wealth of extant manuscripts dating to the later part of the 9th century: I am particularly referring to the D-scholia to Homer's *Iliad* (Matr. 4626 + Rom. Bibl. Naz. Gr. 6),²¹⁷ to the lexica preserved in mss. Par. Coisl. 347 (see above § 1.3 about the *Synagoge*), and to the Leipzig palimpsest containing an uncial copy of Oros' commentary on Herodian's *General Prosody* (Lips. Gr. 2)²¹⁸—Herodian's work itself is notoriously lost, and only a minuscule copy dated ca. 900 is fragmentarily preserved in ms. Vind. hist. Gr. 10.²¹⁹ It is thus no wonder if around 895 even a learned amateur such as the ambassador and minister Leo Choerosphactes (†ca. 920) was ready to display, in a diplomatic correspondence, the sophistication of his grammatical training, and to take his cue from issues of syntax and punctuation when addressing an official complaint to Symeon the king of Bulgaria about the release of some prisoners:²²⁰

εἴπερ γραμματεῖς καλῶς ἀναγινώσκοντας εἶχες, ἀρχόντων φιλανθρωπότητα, εἴπερ τοῖς στιγμῆν προσήκουσαν ποιούμενοις εὐπόρεις, ἔγνωσ ἄν ἔγνωσ . . .

if you had secretaries capable of reading properly, o most generous of rulers, if you had at your service people capable of punctuating correctly, you would understand . . .

215 Ed. Hilgard [1889–1894] II 375–434 (quotation at 375.15–17: καὶ σύντομον ἐξ αὐτῆς ὠφέλειαν καρπώσασθαι πειράσομαι, τὸ πλάτος δὲ τοῦ λόγου παραιτήσομαι, ἔπερ αὐτός, οὐχ ὡς ῥητορείας ἄπειρος, εἰς τοὺς εἰσαγομένους δὲ μᾶλλον φιλανθρωπευσάμενος, ἐπενόησας).

2.4 Manuscripts (9th Century)

The evidence of extant 9th-century manuscripts of ancient Greek authors is controversial: the almost total lack of poetical texts, as we have just seen, does not imply that these texts were not available in Constantinople at the time. Admittedly, the lion's share among extant books is taken by philosophers and technical writers: Aristotle (*e.g.* his ethical works in ms. Laur. 81.11, an *Organon* in ms. Ambr. L 93 sup., and the famous Vind. phil. Gr. 100 carrying *On generation and corruption, On heavens, Physics, Meteorology* and *Metaphysics*),²²¹ Ptolemy (the *Almagest* is preserved in minuscule, Vat. Gr. 1594, and in uncials, Par. Gr. 2389), Dioscorides (Par. Gr. 2179, again in uncials), Euclid (Vat. Gr. 190, the only manuscript preserving the original text without Theon's alterations), astronomical collections (Vat. Gr. 204), astrological poems (Manetho and Maximus in Laur. 28.27), geographers (Heid. Pal. Gr. 398).²²²

The last two manuscripts we have mentioned belong to a special group of 19 extant books that share analogous outer characteristics, scribes and, roughly speaking, contents: they were most probably produced under the same circumstances in mid-9th-century Constantinople, and have been baptised by the name of "philosophical collection". The group includes not only codices of Plato (the venerable Par. Gr. 1807), Proclus, Damascius, Olympiodorus, Philoponus, Albinus, Simplicius, Alexander of Aphrodisia, Dionysius the Areopagite, but also scientific books and particularly a unique and extravagant sylloge of geographers, paradoxographers and epistolographers (ms. Heid. Pal. Gr. 398).²²³ The importance of the "philosophical collection" for the history of textual tradition is at least twofold: on the one hand we owe to it (and to it alone) the survival of most of the extant Neoplatonic commentaries to Plato and Aristotle, as well as of a number of other rare authors, in philologically adequate copies; on the other hand, it shows that 9th-century Constantinople could indeed dispose of (and deem worthy of further transmission) an unexpected wealth of ancient texts.

This is the reason why this codicological enterprise has often been linked with the names of great scholars of this age, from Leo the Philosopher to Photius to Arethas, without any support in textual evidence.²²⁴ The fullest survey of the paleographical evidence²²⁵ has detected the leading role of one of

221 Irigoin [1957].

222 For a survey, see Wilson [1996²] 85–87.

223 Cavallo [2002a] 208–209 and [2007] with earlier bibliography.

224 Ronconi [2007] 33–75, through a detailed study of Heid. Pal. Gr. 398, discusses and rules out all these hypotheses. See also Marcotte [2007].

225 Perria [1991], who also reviews the attributions to known scholars.

the scribes (scribe I), who beside copying various parts of the manuscripts also played the role of coordinator and corrector; however, the identity of this man remains obscure. It has even been suggested, particularly in view of the many Alexandrian authors represented in the collection, that this sylloge of texts (*i.e.* the antigraha of these manuscripts) may have arrived in Constantinople from the Egyptian capital—as we mentioned above (§ 1.2), Stephanus of Alexandria has been credited with the role of mediator. Nowadays there is a tendency to enlarge the scope of the provenance of these codices, renouncing any unitary solution, taking into account the contribution of Palestine, Persia and other peripheral areas of the Greek world, and referring the entire conception of this cultural enterprise to the activity of one or more ‘writing circles’ in 9th-century Constantinople.²²⁶ However, other scholars maintain that at least the core group of these manuscripts must share a common background, that should be confidently traced back to Late Antiquity.²²⁷

The existence of non-professional writing circles, often connected with single personalities or groups of intellectuals, has emerged as a vital factor in 9th- and 10th-century book production, even if—due to the collective nature of the enterprises—these men were less ready to leave a trace of their activity in the form of colophons or subscriptions.²²⁸ One wonders if this may be the origin of other outstanding products of Byzantine scribes of the late 9th century, namely Vat. Urb. Gr. 111 of Isocrates (deriving *recta via* from a late antique edition of the orator)²²⁹ and Par. Gr. 2934 of Demosthenes (famously preserving the text of the decrees and the *martyriai* reported in the trials, and probably coming from a different late antique prototype than the three other independent witnesses, themselves slightly later in date).²³⁰

In Greek-speaking Southern Italy, between the 9th and the 10th century we do not encounter any known scholar or scholarly activity *stricto sensu*,²³¹ nor is the number and quality of Classical manuscripts at all remarkable. What we understand, however, is that Greek lexicography and grammar, along

226 Cavallo [2005]; Ronconi [2008], with a special analysis of Par. Gr. 1962; Ronconi [2013], a radical thesis against the very existence of a “philosophical collection”.

227 See, after Irigoin [1980] 200–204, Rashed [2002], Marcotte [2007], and the forthcoming proceedings of the conference *La collection philosophique face à l'histoire* organised by F. Ronconi and D. Bianconi in Paris, June 2013.

228 Orsini [2005].

229 Pinto [2003] 38–40; Fassino [2013] 28–32.

230 See the essays in Gruškova-Bannert [2014] (particularly E. Gamillscheg, S. Martinelli Tempesta, B. Mondrain, and J. Gruškova).

231 Mazzucchi [2010b] has argued that some form of philological activity must have been performed in Southern Italy on Dio Cassius' Vat. Gr. 1288 and on Homer's *Ilias picta Ambrosiana* (Ambr. F 205 inf.).

with technical disciplines such as rhetoric and medicine, did find readers in Calabria and Sicily, possibly as a mirror of the peculiar interests displayed by the late antique schools of Egypt, Syria and Palestine,²³² but also following to some extent a chain of indigenous transmission.²³³ To narrow down the focus to grammar and lexicography, the circulation of the so-called lexicon of Cyril in Southern Italy is testified very early (see *e.g.* ms. Vallic. E 11); however, it seems unlikely that ms. Marc. Gr. 622 of Hesychius, written in the 15th century, should have an Otrantine origin—as once believed—and thus derive from an earlier Italian copy. Even if scholars are today more skeptical about the Italian provenance of the two manuscripts of the *Etymologicum Genuinum*,²³⁴ and even if we do not know the exact origin of the so-called *Etymologicum Casulanum* (12th–13th century),²³⁵ the persistence of an important tradition of lexicographical studies is confirmed by such a complex manuscript as Vat. Barb. Gr. 70, to be assigned to the Terra d'Otranto of the late 10th century.²³⁶ The archetype of the entire extant tradition of the so-called *Etymologicum Gudianum*, a widely read and copied lexicon that draws on the same sources of the *Genuinum* (notably the epimerisms to Homer and the Psalms, the lexica of Orus and Orion, synonymic lexica and *lexeis* to Byzantine canons etc.),²³⁷ ms. Barb. Gr. 70, was the object of a remarkable philological work of diorthosis, addition and implementation (*e.g.* further Homeric scholia and notes by Choeroboscus; the lexicon called *Synonymicum Barberinum*), that must have taken place in the Terra d'Otranto towards the end of the 10th century.²³⁸ It has been plausibly argued that this activity, directed by the hand known as *d*, took place in the context of school teaching.²³⁹

2.5 *Arethas*

The leading Byzantine scholar between the last quarter of the 9th and the early decades of the 10th century is again an ecclesiastical, namely Arethas of Patras, archbishop of Caesarea in Cappadocia (ca. 850–*post* 932): neither a teacher nor a literary critic, he contributed to the dissemination of ancient Greek

239 Arnesano-Sciarra [2010] 430–433.

culture by organising and promoting the copy of manuscripts, above all of pagan prose texts, some of which still carry his handwritten notes in the margins. The identification of the exemplars that belonged to his library, and of the scribes who cooperated in his scriptorium, is not yet a settled question:²⁴⁰ among the landmarks in Greek codicology which certainly belonged to Arethas we find ms. Bodl. D'Orville 301 of Euclid (the first dated Greek profane manuscript in minuscule handwriting, copied by Stephanos *klerikos* in 888),²⁴¹ ms. Bodl. Clark. 39 of Plato (written in 895 by John the Calligrapher: it cost 13 nomismata for the copy + 8 for the parchment, and was equipped with a series of scholia whose late antique origin has been recognised but recently),²⁴² ms. Vat. Urb. Gr. 35 of Aristotle's *Organon*, with copious marginalia,²⁴³ ms. Lond. Harl. 5694 of Lucian (written by the scribe Baanes, again with many scholia in Arethas' hand),²⁴⁴ ms. Bodl. Auct. T.4.13 of Epictetus' *Dissertations*.

Arethas also owned works by authors of the Second Sophistic and the Imperial age, from Aelius Aristides (Par. Gr. 2951 + Laur. 60.3, written by John the Calligrapher)²⁴⁵ to Dio Chrysostom (Vat. Urb. Gr. 124 may be the offspring of Arethas' edition, and most probably carries his notes),²⁴⁶ from a lost manuscript of Plutarch (some scholia to the *Lives* have been plausibly traced back to Arethas)²⁴⁷ down—according to some scholars—to the venerable Marc. Gr. 447 of Athenaeus (also attributed to John the Calligrapher, but devoid of scholia);²⁴⁸ Arethas may also have been behind the lost archetype of the lexicon of Pollux,²⁴⁹ and the lost archetype of Marcus Aurelius' philosophical work. We know about the latter from a letter sent by Arethas himself to a certain Demetrius, where he claims to have copied an old, but not too badly flaked codex of the *Meditations*, for the benefit of a wider public.²⁵⁰

249 Bethé [1900] v–vi.

250 *epist.* 44 Westerink: the correct interpretation of the passage οὐ μὴν ὅτι καὶ παντάπασι διερρηγῶς καὶ τοῦ χρησίου ἐαυτοῦ τοῖς βουλομένοις βασιχάναντος (“not entirely fallen apart, nor depriving readers of its utility”) has been restored by Ceporina [2011] against *e.g.* Cortassa [1997b]; see also Ronconi [2003] 20–23.

It should not come as a surprise that Arethas' attention was also drawn towards Christian texts, *e.g.* ecclesiastical law (Vallic. F. 10, with scholia),²⁵¹ the apologete Fathers such as Justin, Athenagoras, Eusebius and Clement (Par. Gr. 451, completed in 914; Arethas paid 20 nomismata to the scribe, Baanes, and 6 for the parchment, and the codex is now a fundamental witness for all the texts it carries), and theological treatises (Mosq. GMI 231, written by Stylianos in 932, with scholia).

As for the scholia penned by Arethas in his books, some of them faithfully reproduce ancient or late antique prototypes, others (such as the memorable “dialogues” with Lucian, or the criticisms directed against Plato and Julian) stem from his own pen and ideas, though the distinction is not always easy to draw. Recent analysis of the scholia to Lucian—by far the largest *corpus* of Arethan scholia to one and the same author—has shown how much Hellenic doctrine Arethas mastered and loved to display: on the cottabus, on the jussive infinitive, on the history of Delos, on the blindness of Homer, on the Attic use of incidental ἦ δ' ὅς, on hyperbata in Hermogenes, on the *aitia* of the Attic Thesmophoria, on Pythagoras' golden thigh, and above all on all sorts of lexicographical issues.²⁵² In finding modern equivalents for Lucian's words, in elucidating antiquarian or mythographical issues, in looking for the author's stylistic and narrative characters even beyond the charges of impiety and sacrilege, Arethas establishes a dialogue with the ancient sophist that involves in a productive manner not only his erudition but also the principles of his own faith and ethics. Let us read a note on the *Apology*, in which the archbishop learnedly attacks Lucian's inconsistency with respect to his earlier treatise on the “salaried posts in great houses” (*de mercede conductis*):²⁵³

ὀδύρεσθαι τὸ γῆρας· ἀπλότητος ἦθους ταῦτα κατασκευαστικά. ἀλλ' οὖν, βωμολόχε, εἰς ταύτην κάκεινοι, ὧν κατέδραμες ἀπηνῶς, καταφεύγοντες ἀπολογίαν ληρόν σε καὶ φιλαίτιον καὶ μεμψίμοιρον ἀποφανοῦσι καὶ κώνωπα, φασί, μιμούμενον ἀετόν· τάχα γὰρ καὶ Σωκράτην ἐθέλων μιμείσθαι, οἷς οὗτος Πρόδικον τὸν Κεῖον καὶ τοὺς κατ' αὐτὸν ἀπελέγχει σοφιστάς, ἐπὶ τὴν τοιαύτην ἀπέδραμες γλωσσαλγίαν. ἀλλὰ γὰρ καλῶς ἔχει τοῖς Ὀμήρου σε βάλλειν· “ἦ τοιόσδε ἐὼν πόντον ἐπιπλώσας ἐτάρους ἐρήφρας ἀγείρας” [Γ 46–47] καὶ ὅσα λοιπά.

251 Meschini [1972].

252 Russo [2012].

253 *Sch. Luc. Apol.* 10 (p. 236.11–21 Rabe), see Russo [2012] 92–93.

to complain of old age: this creates the image of a simple character. But, o ribald, those whom you have cruelly attacked will resort to this same excuse, and will show that you are a censorious and querulous charlatan, a mosquito—as they say—imitating an eagle: perhaps you resorted to this verbiage in the attempt to imitate Socrates, when he refutes Prodicus of Ceos and the sophists around him. But it is enough to counter you with Homer's lines: "Were you like this when you assembled oarsmen and sailed over the sea" etc.

For all his admiration for a paradigm of pure Attic prose, Arethas was notoriously fond of an obscure and difficult style, a choice he defended by invoking the example of Thucydides, Herodotus and even Gregory of Nazianzus: the following passage is interesting for his views on ancient and modern Greek style:²⁵⁴

εἰ δὲ δεῖ φιλαληθέστερον φθέγγασθαι, ποθοῦσι καὶ οὗτοι, ὡς ἔστιν ἐπακοῦσαι πάλιν τοῦ θείου τὸν λόγον ἀνδρός, τὴν Θουκυδίδου γλώσσαν καὶ τὴν Ἡροδότου σχολὴν [cf. Greg. Naz. or. 4.92] τοῖς ἑαυτῶν ἐναρμόσασθαι λόγοις, οἵτινες ἄνδρες τῶν παρ' Ἑλλήσι δεινότατοι χρῆσασθαι τῇ τε κατὰ λέξιν τῇ τε κατ' ἔννοιαν συστροφῇ καὶ πολλὰ παρέχουσι πράγματα μέχρι τοῦ δεῦρο τοῖς φιλοπινώτερον αὐτοῖς ἐντυγχάνουσιν. οὐκ ἂν γὰρ ἔλοις αὐτόθεν τὸ τούτοις προχειρισθέν, μὴ πρότερον ἀμυθήτους στροφάς περιενεχθεῖς καὶ μεγάλα τῇ ἀπορίᾳ μεμψάμενος. οὐκ οὖν ἀδόκιμον οὐδὲ τοῖς θείοις πατράσι τὸ τοῦ λόγου συνεστραμμένον τε καὶ στριφνὸν καὶ πρὸς σεμνότητα διαιρόμενον.

To tell the truth, they [*scil.* the Fathers] too (as one can gather from the words of the divinely writing man) seek to adapt to their own works the language of Thucydides and the learning of Herodotus, two authors who prove to be the best among the Hellenes through their density of style and thought, and cause serious trouble to their attentive readers down to the present day. For you cannot grasp automatically what they mean, unless you follow ineffable twists and complain greatly about your helplessness. Thus, not even the divine Fathers hold the conciseness, the acerbity and the elevated solemnity of style as displeasing.

254 *Scripta minora* 17 (1, pp. 187.27–188.5 Westerink).

2.6 *More Manuscripts (10th Century)*

No first-rate philologist, Arethas stands out as a reactive scholiast and a bibliophile peculiarly committed to profane prose. This is all the more important in a century that saw a large production of manuscripts of Classical writers, some of which of paramount importance for the respective textual traditions down to the present day.²⁵⁵ I recall here the glorious Vat. Gr. 1 of Plato (baptised “O” by editors), Vat. Gr. 90 of Lucian (annotated in the second quarter of the century by Alexander of Nicaea: the subscription hints at some kind of editorial work),²⁵⁶ Laur. 69.2 of Thucydides (the subscription “*Deo gratias Petrus scripsit*” suggests it may have been copied from a late antique prototype in 13 rather than 8 books, stemming from Justinianic Constantinople),²⁵⁷ Laur. 70.3 of Herodotus (also perhaps carrying traces of a late antique recension),²⁵⁸ Vat. Gr. 1335 of Xenophon’s minor works, Par. Gr. 1853 of Aristotle,²⁵⁹ Marc. Gr. 395 of Cassius Dio, Laur. 59.9 of Demosthenes, Par. Gr. 1741 of Aristotle and other authors,²⁶⁰ Par. Gr. 1397 of Strabo,²⁶¹ the famous palimpsest of Archimedes now in Baltimore,²⁶² and the important grammatical miscellany (our unique witness *e.g.* for Apollonius Sophista and Phrynichus) Par. Coisl. 345, once attributed to Arethas himself.²⁶³

One of the most famous and productive copyists of this period, working for Arethas and other patrons, and particularly careful with regard to orthographic precision and to the faithful rendering of variant readings and diacritical signs, was the scribe Ephraem, to whom we owe *inter alia* the main

255 Wilson [1996²] 136–140, with further bibliography; Irigoin [1980] 192–193.

256 *Sch. Luc.* p. 154.15 Rabe διώρθωσα ἐγὼ Ἀλέξανδρος ἐπίσκοπος Νικαίας . . . : Kavrus-Hoffmann [2010] 55–56, with previous bibliography.

257 Luzzatto [1993]; Pernigotti [2001].

258 Luzzatto [2000].

259 See now Ronconi [2012c], showing that this codex is not the copy of a late antique prototype, but rather the work of a 10th-century compiler who collected and annotated different Aristotelian texts.

260 On Laur. 59.9 see L. M. Ciolfi, in Gruškova-Bannert [2014] 239–62. Par. Gr. 1741 is our fundamental witness of the *Poetics*, grouped together with Dionysius of Halicarnassus, Menander Rhetor and other uncommon authors of literary criticism: it was clearly commissioned by someone favouring an alternative approach to rhetoric than the current one, represented by Hermogenes and his commentators: Harlfinger-Reinsch [1970]; Conley [1990]; Fryde [2000] 31–32; Orsini [2005] 310–313.

261 Diller [1975] 42–53.

262 Kavrus-Hoffmann [2010] 65–66. Netz-Noel-Tchernetska-Wilson [2011].

263 On Coisl. 345 as in fact belonging to the late 10th century, see now Valente [2008]. See however Ucciardello [2012] 91–94.

witness of Polybius' first pentad (Vat. Gr. 124, ca. 947),²⁶⁴ an independent codex of Plato (Marc. Gr. IV.1, siglum T), an *Organon* (Marc. Gr. 201), the basic extant collection of Hippocratic writings (Marc. Gr. 269),²⁶⁵ as well as an important sylloge of rhetorical handbooks (Vat. Urb. Gr. 130).²⁶⁶

This elementary and very incomplete list (which could easily be extended to the later decades of the century with such illustrious manuscripts as Neap. Gr. 4* of Diodorus Siculus,²⁶⁷ Vind. phil. Gr. 67 of Stobaeus, and Vat. Gr. 738 of Sextus Empiricus),²⁶⁸ serves only as an exemplification of how important a contribution this century made to our knowledge of Greek prose authors: even when these manuscripts, most of which bear clear traces of their Constantinopolitan origin, are not our unique or our earliest witnesses for the authors involved, they generally stand out for their philological accuracy and completeness.

The 10th century is also the age of the first, massive appearance of poetical manuscripts in Byzantium.²⁶⁹ Perhaps the best-known exemplar is the famous Venetus A of Homer (Marc. Gr. 454), the only extant codex to display in its margins the critical signs and (large excerpts from) the commentaries deriving from the textual criticism of the great Alexandrian scholars: a remarkable manufacture reproducing its archetype with impressive skill, ms. Venetus A is perhaps one of the most pivotal codices in the entire history of Classical philology.²⁷⁰ No less impressive is Laur. 32.9, a landmark in our knowledge of both Greek tragedy (it is our earliest witness for both Aeschylus and Sophocles) and Hellenistic epic (it carries Apollonius Rhodius' *Argonautica*), and of their ancient exegesis.²⁷¹ The philological analysis of both these codices shows that they most probably derive from prototypes of the 9th century, which means that the discovery of Greek poetry definitely antedated the age of Arethas.

264 Moore [1965] 11–12 and *passim*.

265 Formentin [1999].

266 Prato [1994] 13–29; Irigoin [1958–1959].

267 Lucà [1990].

268 de Gregorio [2000b].

269 Diller [1974].

270 Dué [2009], with earlier bibliography; Pontani [2005b] 96–99 and 146–150; Maniaci [2002] insists on the overly complex *mise en page*; old ideas of connecting the manuscript with Arethas (Severyns) or Ephraem (Hemmerdinger) must be rejected (the copyist also appears in Par. Gr. 1741 of Aristotle).

271 Orsini [2005] 305–310 on its conception as a single unit; Fryde [2000] 21–23 about transliterations.

It cannot be denied, however, that Venetus A and Laur. 32.9 belong to an age especially fertile in books of poetry, such as the earliest preserved *Odyssey* (Laur. 32.24),²⁷² the composite Par. suppl. Gr. 388 (Theognis, Dionysius the Periegete and other poets),²⁷³ the miscellany Bodl. Barocc. 50 (carrying *inter alia* the epyllion of Musaeus, but also the *Orthography* of Theognostus, see above § 1.4),²⁷⁴ and above all ms. Ravennas 429 (copied by the same scribe as the Sophocles in Laur. 32.9), which is our unique complete witness for several comedies of Aristophanes, and our earliest one for all of them;²⁷⁵ on a smaller scale, and from the last quarter of the century, one can recall the beautifully illustrated Par. suppl. Gr. 247 of Nicander,²⁷⁶ as well as Par. Gr. 2771, the oldest copy of Hesiod's *Works and Days*.²⁷⁷

A paradigmatic case showing the intimate connection between philological work and production of manuscripts in this age is represented by the collection to which we owe most of the extant ancient Greek epigrams, namely the anthology put together in the last decade of the 9th century by Constantine Cephalas, a teacher in the school of the Nea Ekklesia, and *protopapas* in the imperial palace in 917. Through a meticulous selection of texts from previous syllogae, and with the help of transcriptions from stone epigrams collected by a certain Gregory of Campsa in Greece and Asia Minor, between 880 and 902 Cephalas gathered together and digested a large number of epigrams, increasing the pagan collection with a series of Christian texts (most notably the epigrams collected in book 1; but perhaps Cephalas had included in his original master plan also Nonnus' *Paraphrasis of the Gospel of St. John* as well as the ephrastic poems by Paulus Silentiarius and John of Gaza).

Thus arose an exemplar whose closest extant reproduction—but by no means the only one: other copies, now lost, must have circulated, *e.g.* one by Alexander of Nicaea—is preserved in ms. Heid. Pal. Gr. 23 + Par. Suppl. Gr. 384 (ms. P, from which the *Greek Anthology* has inherited its denomination *Palatine*), written in the mid-10th century.²⁷⁸ This large codex, whose rediscovery after centuries of oblivion in the late 16th century brought about a

278 The story is reconstructed by Cameron [1993]; Lauxtermann [2007]; Maltomini [2011]. An updated survey in Valerio [2014] 41–115.

revolution in the modern knowledge and *Nachleben* of the epigrammatic genre, represents an impressive achievement, in that it puts together two different copies of Cephalas' Anthology, it incorporates later accretions (today's books 2, 3 and 8), and adds further epigrams of recent date. The *concepteur* of the Heidelberg manuscript has been identified with scribe J, the learned scholar Constantine the Rhodian,²⁷⁹ himself the author of important ecphrastic poems on the city of Constantinople.²⁸⁰ The outline of this complicated story of books, collections and corrections, makes clear how, in the span of two generations, different scholars and various anonymous scribes engaged in what resulted in a collective effort for the preservation and transmission of a hitherto largely neglected genre, often adopting a highly insightful philological approach.

2.7 *Schools*

The intellectual life of 10th-century Constantinople did not consist only of ambitious scholarly enterprises. The epistolary of an anonymous professor of grammar and rhetoric, who lived and taught in Constantinople around 920–930, represents an invaluable and unique document revealing the dynamics and mechanisms of education in this age.²⁸¹ Beside showing that private teaching was fairly common in the capital, and that the pupils mostly belonged to the educated elite of high state officers,²⁸² this collection of letters also yields historical elements concerning the competition and cooperation among teachers, the practices of transcription, copying and borrowing of manuscripts, the methods for teaching elementary and advanced grammar, the fees pupils were required to pay and the help expected from ecclesiastical authorities, the educational attitude and the special role of teaching assistants assigned to advanced students.

However, what interests us more directly in the present context is the philological practice to which the Anonymous professor refers in one of his letters, addressed to a patriarch, perhaps Nicholas I Mysticus (in office 901–907 and 912–925).²⁸³ Evidently aware of the distinction between the scholars (φιλομαθείς and σπουδαῖοι) and the mere scribes and calligraphers (χειροτέχνοι

283 This is *epist.* 88 Markopoulos: see Browning [1954], Markopoulos [1982], and particularly Cortassa [2001].

and βάνουσοι),²⁸⁴ the Anonymous professor declines the responsibility of revising and editing a particular (probably patristic) text, which the patriarch has assigned to him. Arguing that the task is too complex and not sufficiently rewarding, the professor suggests leaving it in the hands of other copyists whose work he might then revise, or else taking the edition of one scholar and then merely copying it down, with or without further revision. In the professor's opinion, the emendation of the text would require such a vast and deep examination of the tradition that it could not be achieved within a short space of time; above all, the text could not be emended by simply adding diacritical signs (l. 35 σημείοις ὀλίγοις) in the margins, or the missing parts or the indispensable corrections: rather, it would call for a new transcription and a fresh constitution of the text (ll. 35–36 δι' ἑτέρας μετεγγραφῆς καὶ ἑτέρας συνεπισκέψεως), because the variant readings concern single words (Χριστός vs. ὁ Χριστός vs. Θεός) as well as matters of punctuation and syntax, *e.g.* whether a sentence should be read as affirmative or as interrogative (ll. 36–41).²⁸⁵ Even if the professor concludes (ll. 47–53) that he will bow to the authority of his predecessors (or superiors), save when the sense of the passage, the style of the author and doctrinal orthodoxy require the opposite, the issues raised in this text show that textual criticism was far from unknown even to simple school-teachers and to their pupils.

One wonders if this is the same situation encountered in Constantinople by Abraamius of Trebizond, later known as Athanasius the founder of Athonite monasticism and the Great Lavra. We know from his *Life* that some time in the mid-10th century Abraamius followed the courses of a certain Athanasius, described as “president of the schools” (προκαθήμενος τῶν παιδευτηρίων), and that later—before his definitive conversion to monastic life—he started a career as a teaching assistant and then became a teacher in his own right, after having received the *placet* of the emperor (νεύσις βασιλική), namely of Constantine VII Porphyrogenitus.²⁸⁶

284 *Epist.* 53.13–15 Mark.

285 *Epist.* 88.32–41 Mark.: καὶ εἰ ἔστι τις ὁ διατεινόμενος κὰν λανθάνον εὔροι (φύσεως γὰρ ἀνθρωπίνης τοῦτο) τοσαύτης δεῖσθαι ἀκριβοῦς ἐπιδιορθώσεως, ὡς οὐκ ἔξαρκεῖν παρεντιθέναι τοῦτο καὶ τὸ περιττεῦον ἢ ἄλλοιπον σημείοις ὀλίγοις ποιεῖν ἐμφανές, ἀλλὰ δι' ἑτέρας μετεγγραφῆς καὶ ἑτέρας συνεπισκέψεως ἐπικρίνεσθαι. . . ἵνα τί γένηται; ἴν' ἕτερος μὲν ὁ Χριστὸς γράψῃ, ἀπαλείψοι δὲ τὴν προσθήκην ἄλλος τοῦ ἄρθρου, ὁ δὲ μεταβάλῃ τὸ Θεὸς ἀντ' ἐκείνου; ἢ ἵνα ὁ μὲν τῆ κάτω, ὁ δὲ τῆ μέσῃ, ὁ δὲ τῆ ἄνω στίξοι στιγμῆ; ἀλλ' ἵνα τὸ χωρίον ὁ μὲν κατ' ἄρσιν, ὁ δὲ κατὰ πρόσθεσιν, καὶ ὁ μὲν κατ' ἐρώτησιν, ὁ δὲ μὴ κατ' ἐρώτησιν ἀναγνῶ.

286 Lemerle [1971] 257–260.

2.8 Collections

As a matter of fact, the role of Constantine VII (912–959) in the organisation of culture must have been quite remarkable: we know that he sought to revitalise higher instruction by combining in his ‘university’—whether this was an entirely public institution or an episodic creature of the emperor’s mecenatism²⁸⁷—both *praxis* and *theoria*, and by appointing the best teachers available.²⁸⁸ Amongst them was the aforementioned Alexander of Nicaea, the author of *catenae* to the Old and New Testament and the owner of ms. Vat. Gr. 90 of Lucian, on which he left scholia partly related to those of Arethas.²⁸⁹ But Alexander was also the bibliophile to whom Nicetas Magistros wrote in 937/938 complaining that he could not find commentaries on some well-known orations of Demosthenes (the *False Embassy*, the *Crown*, the *Against Androction* etc.).²⁹⁰

That a well-developed interest in books and book-collecting should surface in schools and literary *milieux* of this age, is understandable: the emperor himself, partly continuing the tradition of his father Leo VI “the Wise”, devoted strong efforts to arts and letters, not only writing ambitious comprehensive syntheses on the etiquette at the imperial court (*On the Cerimonial at the Court of Constantinople*), on government (*On the Administration of the Empire*), on the geography of the empire (*About the Themes*), but also guiding the compilation of encyclopedic syllogae devoted to different areas of human knowledge, from medicine to veterinary studies (ms. Berol. Phill. 1538, prepared for the imperial library), from zoology (the ancestor of Par. Suppl. Gr. 495 and Athos Dion. 180) to agriculture (a copy in Laur. 59.32 of the *Geoponica*),²⁹¹ from military technique (Laur. 55.4 of the *Tactica*) to human history.²⁹²

Rather than envisaging the faithful textual transmission of single works, Constantine aimed at collecting in his library as many books as he could, appointing teachers and scholars capable of working on these books, and then digesting the useful knowledge gathered from them in suitable encyclopedias. By far the most ambitious of these collections embraced excerpts from Greek historians of all ages (with a predilection, as far as we can tell, for

287 Lemerle [1971] 263–266 vs. Speck [1974a] 22–28 (stressing the role of the corporation of teachers).

288 Theophanes Continuatus 6.14, p. 446.1–22 Bekker: see Agapitos [1998] 175–176 and Lemerle [1971] 264–265.

early Byzantine authors), arranged according to their topic: out of the 53 original sections, only the book *On embassies* and partly the books *On virtues*, *On ambushes* and *On gnomic statements* survive,²⁹³ but their bulk is such that one wonders if the whole enterprise—consisting of dozens of similar chapters—was ever brought to a conclusion, and at any rate if it was ever read or copied by anyone, beyond being preserved in the imperial library.²⁹⁴

This incredible compilation was clearly intended not as a historiographical achievement in its own right,²⁹⁵ but rather as an encyclopedic work, which paid the price of de-contextualisation to the advantage of readability and of a thoughtful selection, especially—though by no means exclusively—orientated on the moral aspect.²⁹⁶ Its leading idea was to gather bits and pieces from different historians from Herodotus to Georgius Monachus (no more than 26 appear in the extant sections), and to select their most useful parts in a spirit that has recently been compared with Justinian's rationale in putting together the *Digest*.²⁹⁷

ὁ τῆς πορφύρας ἀπόγονος Κωνσταντῖνος, ὁ ὀρθοδοξότατος καὶ χριστιανικώτατος τῶν πώποτε βεβασιλευκότων, ὄξυωπέστερον πρὸς τὴν τῶν καλῶν κατανόησιν διακείμενος καὶ δραστήριον ἐσχηκῶς νοῦν ἔκρινε βέλτιστον εἶναι καὶ κοινωφελὲς τῷ τε βίῳ ὀνησιφόρον, πρότερον μὲν ζητητικῇ διεγέρσει βίβλους ἄλλοθεν ἄλλας ἐξ ἀπάσης ἐκασταχοῦ οἰκουμένης συλλέξασθαι παντοδαπῆς καὶ πολυειδοῦς ἐπιστήμης ἐγκύμονας, ἔπειτα τὸ τῆς πλατυεπείας μέγεθος καὶ ἀκοᾶς ἀποκναῖον ἄλλως τε καὶ ὀχληρὸν καὶ φορτικὸν φαινόμενον τοῖς πολλοῖς δεῖν ᾧθήη καταμερίσαι τοῦτο εἰς λεπτομέρειαν ἀνεπιφθόνως τε προθεῖναι κοινῇ τὴν ἐκ τούτων ἀναφυομένην ὠφέλειαν, ὡς ἐκ μὲν τῆς ἐκλογῆς προσεκτικωτέρως καὶ ἐνδελεχέστερον κατεντυγχάνειν εἰς τοὺς τροφίμους τῶν λόγων καὶ μονιμώτερον ἐντυποῦσθαι τούτοις τὴν τῶν λόγων εὐφράδειαν, μεγαλοφυῶς τε καὶ εὐεπιβόλως πρὸς ἐπὶ τούτοις καταμερίσαι εἰς ὑποθέσεις διαφόρους, τρεῖς ἐπὶ τοῖς πενήκοντα τὸν ἀριθμὸν οὔσας, ἐν αἷς καὶ ὑφ' αἷς ἅπανα ἱστορικῇ μεγαλουργίᾳ συγκλείεται. κοῦκ ἔστιν οὐδὲν τῶν ἐγκειμένων, ὃ διαφεύξεται τὴν τοιαύτην τῶν ὑποθέσεων ἀπαριθμησιν, οὐδὲν τὸ παράπαν ἀφαιρουμένης τῆς

τοῦ λόγου ἀκολουθίας τῇ διαιρέσει τῶν ἐννοιῶν, ἀλλὰ σύσσωμον σωζούσης, καὶ ἐκάστη ὑποθέσει προσαρμοζομένης τῆς τηλικαύτης οὐ συνόψεως, ἀληθέστερον δ' εἰπεῖν οἰκειώσεως.

So it is that Constantine, born in the purple, that most orthodox and most Christian of the emperors up to the present time, fitted to the task by a most sharp discernment concerning what is good and possessing an enterprising intellect, judged that the best thing, the most conducive to the common good and useful for governing conduct is—in the first place—to collect by means of diligent research all manner of books from all over the *oikoumene*; books bursting with every kind and every variety of knowledge. Next, he thought that it was necessary to divide and distribute their great quantity and extent—which weigh heavily on the understanding and which seem to many to be irksome and burdensome—into small sections. Hence, all the useful material which they contain in such fertile abundance could, [he thought,] be made available unstintingly to the public. By a very careful selection the utility of these works could be demonstrated more assiduously to those who are being reared in the knowledge of letters, while at the same time their literary quality might be more easily impressed upon them. In addition to this, [his intention was] to distribute [the material] after an ingenious and careful manner into diverse subjects, fifty-three in number, in and through which the whole epic course of history might be grouped together. Nothing contained in the texts would escape this distribution into subjects; by following the sequence of the narrative nothing would be omitted in virtue of this division according to subject. Rather would it preserve the coherence of the whole, not by providing the usual summary for each of the subjects, but rather, to describe the process more accurately, by assigning each of them a proper classification. [transl. A. Németh]

The scale of this enterprise did not dissuade the compilers—whatever the organisation of their work, itself a debated issue²⁹⁸—from quoting long passages from the various historians *verbatim*, with a fidelity that is all the more welcome as several of the original sources (from Nicholas of Damascus to John of Antioch down to several books of Diodorus Siculus) went lost soon after the production of this anthology. In its ambition to transmit the useful parts of a massive cultural heritage for the benefit of future generations, the scope of Constantine's work as stated in the proem attains the status of

298 Mazzucchi [1979a] 133; Matthaios [2006] 12–13.

a full-fledged scholarly operation, all the more so if one considers that in the same decades the imperial *scriptorium* was busy in the actual copying of manuscripts of historians (the famous 32-lines books, amongst which *e.g.* Patm. 50 of Diodorus Siculus, Vat. Urb. Gr. 105 of Dionysius of Halicarnassus etc.),²⁹⁹ and also devoted attention to the preservation of less popular authors such as Theopompus, Ctesias, Polybius.

The terminology connecting the latter part of the Macedonian Renaissance with the idea of ‘encyclopædism’ has been the object of much revision over the last decades,³⁰⁰ and some scholars prefer to speak today about the phenomenon of “collection” / *sylloge*, while others wonder whether such aspects as the systematisation of the hagiographical material in the calendar designed by Symeon Metaphrastes (who translated and refashioned into high Greek the lives that had been written in the ‘low’ language) should be ranged under the label of ‘encyclopædia’ or not.³⁰¹

Beside nominalistic issues, it is clear that the bulky lexicon known as “Suida(s)” or “Souda”³⁰² represents an outstanding example of the 10th-century ambition to cover and systematise different areas of knowledge, and particularly to entertain a dialogue with the Hellenic past. Of uncertain date but probably belonging to the last quarter of the century, Suidas is largely based on earlier lexica, such as the enlarged *Synagoge*, a rhetorical lexicon, an abridged version of Harpocration, the so-called *Lexicon Ambrosianum*,³⁰³ and perhaps Photius,³⁰⁴ as well as on various exegetical *corpora* to Greek authors, and on the biographies of Hesychius of Miletus. Organised in a particular alphabetical order (the so-called *antistoichia*), it embraces 31.342 entries, the majority of which of lexicographical nature, or dealing with proverbs and quotations from literary authors, while others are more directly oriented around historical, geographical or scientific interests: roughly 5000 entries derive directly from Aristophanes and his scholia, many others from Homer and his exegetes, whereas yet others stem from or discuss passages of Marcus Aurelius, Athenaeus, epigrams (from Cephala’s collection) and above all Greek

302 Adler [1931]. The name is itself a riddle: see recently Ruiz de Elvira [1997], to be added to the several other proposals (Dölger for *suda* as “fortification”, Mercati for *suida* as ital. “guida”, Siamakis for *souda* as lat. *summa*, Hemmerdinger for *Suidas* as a personal name etc.) listed by Matthaïos [2006] 4–5.

303 On this unpublished and poorly studied lexicon, see Pace [2000].

304 This is a hotly debated issue: see Theodoridis II [1998] xxvii–xl and Cunningham [2003] 29.

historians of the imperial and early Byzantine age, mostly subsumed from Constantine Porphyrogenitus' brand-new encyclopedia.³⁰⁵

Perhaps unsurprisingly, the longest articles are devoted to such important figures as Homer, Jesus, Origen and Dionysius the Areopagite. As a matter of fact, the main goal of this work is to produce a historical dictionary that might revive the (best of the) glorious Hellenic and Roman past in contemporary Byzantium: lexicographical and historiographical choices can be explained precisely in the light of this veneration of the remote past.³⁰⁶ The peculiar attention devoted to Roman history chimes in well with what one would expect from a Byzantine work, but also derives largely from the peculiarity and scope of the intermediate sources to which Suidas is indebted.³⁰⁷ If the interest of the modern scholar is stirred primarily by the wealth of information about ancient authors and intellectuals, going back—sometimes in a desperately confusing way—to Hesychius of Miletus, and is attracted by the numerous fragments of otherwise lost works,³⁰⁸ it should be borne in mind that this work represents an outstanding *unicum* in the panorama of scholarly literature of the 10th century, for it does not limit its scope to that of a mere etymological lexicon, but combines different sources and different areas of interest in order to provide the Byzantine reader with a wealth of otherwise widely scattered knowledge, to introduce the reader into a world of the past that might open up a dialogue with the present. A recent analysis has even attempted to demonstrate that the compiler(s) of this lexicon was/were particularly gifted in conjectural criticism.³⁰⁹

3 From Basil II to the Fourth Crusade

3.1 *From Basil II to the nth Century: The Context*

According to a famous statement of the historian Anna Comnena, “from the time of Basil Porphyrogenitus down to the emperor Monomachus, the study of letters was neglected by the many, but it did not die out altogether: in the days of emperor Alexius [*scil.* since 1081] it blazed up again and sprang

308 See *e.g.* Schepens [2010].

309 Theodoridis II [1998] lvii–lxvi.

forward, being seriously pursued by the learned ones".³¹⁰ As a matter of fact, the earlier of the two periods outlined by Anna happens to be a golden one for both profane and Christian poetry, if one considers the activity of such learned authors as John Geometres (2nd half of the 10th century), John Mauropous (ca. 990–1075), and Christopher of Mitylene (ca. 1000–1050).³¹¹ Even the evidence of manuscripts points to an enduring interest in Classical authors between the later years of the 10th and the earlier part of the 11th century: suffice it to mention Oppian's beautifully illustrated *Marc. Gr. 479*,³¹² the Plutarch and the Homeric scholia written by Gregory *kouboukleisios* (Laur. 69.6 and Bodl. Auct. V.1.51),³¹³ several good manuscripts of Plutarch's *Lives* and *Moralia*, Lucian's *Vind. phil. Gr. 123*, etc.

In later years, the hand or the supervision of Theodore *hypatos* and *basilikos notarios*—perhaps the son of the historian Michael Attaliates—produced an important witness of Isocrates (Vat. Gr. 65, dated to 1063), while another Theodore, in much the same years, produced the archetype of the extant tradition of Lysias (Heid. Pal. Gr. 88);³¹⁴ additionally, other manuscripts arose, equipped with fundamental scholiastic *corpora* drawing on doctrine of the imperial age by way of a late antique or early Byzantine mediation: e.g. the Townley *Iliad* (Lond. Burney 86, dated 1059), ms. *Marc. Gr. 474* of Aristophanes (with scholia drawing on Heliodorus and Symmachus), and two codices of Euripides (Par. Gr. 2713 and Hierosol. Taphou 36; the former, just like the slightly later *Marc. Gr. 471*, carries a subscription mentioning the commentaries of Dionysius and Didymus).³¹⁵

However, this state of affairs does not necessarily correspond to a flourishing exegetical or didactic activity on Classical texts: the imperial faculties of law and philosophy, created by Constantine IX Monomachus (1042–1055) and entrusted to the two most outstanding scholars of the period, Michael Psellus and the patriarch John Xiphilinus, focused more closely on the explanation of legal books such as the *Basilica* (although, in the process, grammatical and

310 Anna Comnena, *Alexiad* 5.8.2 (p. 162.50–54 Reinsch): καὶ γὰρ ἀπὸ τῆς αὐτοκρατορίας Βασιλείου τοῦ πορφυρογεννήτου καὶ μέχρις αὐτῆς τῆς τοῦ Μονομάχου βασιλείας ὁ λόγος, εἰ καὶ τοῖς πλείοσιν ἐρραθύμητο, ἀλλ' οὖν γε πάλιν οὐ καταθεδυσκῶς ἀνέλαμψε καὶ ἀνέθορε καὶ διὰ σπουδῆς τοῖς φιλολόγοις ἐγένετο ἐπὶ τῶν χρόνων Ἀλεξίου τοῦ αὐτοκράτορος.

syntactical issues were sometimes tackled),³¹⁶ and they hardly survived the general political and cultural decline in the decade following the disastrous military defeat at Mantzikert in 1071, which marked a decisive turning-point in the history of the Byzantine empire. There is no reason to assume that these chairs were part of a more wide-ranging ‘imperial university’ encompassing a full-fledged curriculum, but it is clear that Monomachus’ initiative was an attempt to gather under the same roof the intellectual elite of his time, whose members, from John Mauropous to the *mesazon* Constantine Leichoudes to Psellus himself,³¹⁷ had since the age of Basil II been running private schools in various areas of the capital (Chalkoprateia, Sphorakiou, Forty Martyrs, Diakonissa, Orphanotropheion etc.):³¹⁸ “in those days men did not devote themselves to letters for profit but cultivated learning on their own, whereas most scholars do not follow this path in matters of education, since they consider money as the prime reason for occupying themselves with learning”.³¹⁹ A case in point might be John Xiphilinus, the nephew of his namesake the patriarch: his epitome of Cassius Dio’s books 36–80 (these books are today mostly no longer preserved) was inaugurated at the request of emperor Michael Ducas (1071–1078) in order to give an account of the pre-history of the Roman empire, and therefore focused particularly on Augustus’ accession to imperial power “given that our own life and political system to a very large extent depend on those times”.³²⁰

This elite of imperial teachers, scholars, scribes and amateurs, which included civil servants, learned monks, high-ranking ecclesiastics etc., was deeply rooted in the intellectual and cultural atmosphere of the capital, not only as far as instruction was concerned, but also with respect to their periodical meetings, readings and recitals known as *theatra*. The *theatra* became particularly frequent in later decades under the Comnenian emperors, and focused primarily on rhetoric and learning, sealing the mutual links of cooperation and exchange between their members: what we gather from the speeches and the reciprocal *encomia* of these people is the picture of a network of

educated friends who conceived literature and art both as a vehicle of education and as a form of performance and high-brow entertainment.³²¹

This context is all the more important for two reasons: first of all, the predominance of the capital has inevitably induced scholars to neglect isolated amateurs living in more remote regions of the empire, such as the Cappadocian *protospatharios* Eustathius Boilas, whose will (1059) stands out because it mentions, along with a generous list of liturgical and ecclesiastical books, one copy of *Leucippe and Clitophon*, one of Aesop, and perhaps one of Artemidorus' *Onirocriticon*.³²² Secondly, the rhetorical turn of *theatra* and of learned communication in the 11th century (declamations, encomia etc.) explains to a certain extent the flourishing activity of distinguished rhetoricians such as John Sikelos, who wrote a lengthy and erudite commentary on Hermogenes' *On types of style (De ideis)*, and later of John Doxapatres, the author of homilies on Aphthonius which draw significantly on ancient and less ancient literature from Dionysius of Halicarnassus down to John Geometres.³²³

3.2 *Maupous, Psellus, Italus*

John Maupous (ca. 990–soon after 1081) was active as a teacher in his small house in Constantinople; he later became a monk and an educator and counsellor at the imperial court, then finally the metropolitan of Euchaita in the Pontus.³²⁴ Capable of writing official imperial documents but also of composing difficult didactic verse on the etymology of Greek words,³²⁵ he is sometimes known for his 'blasphemous' dodecasyllables invoking God's grace over Plato and Plutarch, "for in their words and in their ways of life / these twain approached most nearly to thy laws".³²⁶ But beyond his veneration for pagan texts and authors, Maupous also displayed an activity as a textual critic: in some of his epigrams he described his own editorial work concerning the transcription and emendation of the *Menaia*, showing that he regarded this

326 *Epigr.* 43.4–5 Lagarde: ἄμφω γὰρ εἰσι καὶ λόγον καὶ τὸν τρόπον / τοῖς σοῖς νόμοις ἔγγιστα προσπεφυκότες.

operation as the culmination of his scholarly life.³²⁷ In his letter 17 Karpozilos, he discusses minute philological problems in the speeches of Gregory of Nazianzus, ranging from the syntax of correlative μέν—δέ in *Oration* 15.1 and elsewhere in the *corpus*,³²⁸ to the correct interpretation of an η as disjunctive rather than as an adverb or particle in *Oration* 38.6, down to the scribal *lapsus* that replaced the name of Alcmeon by that of Solon in *Oration* 4.72, which elicits a thoroughly Bentleyan comment:³²⁹

ἦττον γὰρ ἔγωγε προσέχω τοῖς ἀντιγράφοις ἢ τῇ ἀληθείᾳ τοῦ πράγματος, ἐπεὶ καὶ ἄλλως οὐκ ἔχω συννορᾶν ἐν αὐτοῖς τὸ καθαρὸν καὶ ἀκίβδηλον ὑπὸ τοῦ χρόνου σφζόμενον

as for myself, I pay less attention to the copies than to the truth of the matter, since I have no other way to detect in them the tradition preserved by time in a genuine and uncorrupted state.

Finally, Mauropous' letter 18 is devoted to philological problems in the Old and New Testament, ranging from matters of interpretation (the five or six persons in NT, *Luke* 12.52 should be intended in an allegorical sense) to clerical errors of transmission (in *Luke* 24.13 “thirty” should be read instead of “sixty”):³³⁰

πάσι δὲ τοῖς τοιούτοις μίαν λύσιν ἐπάγουσι, τὸ τῶν ἀντιγράφων οὐκ ἄπταιστον περὶ τὴν γραφὴν οὐδ' ἀνέγκλητον· ᾧ λόγῳ καὶ ἡμεῖς οὐκ ἀλόγως πρὸς τὸ θεολογικὸν κεχρήμεθα ζήτημα

to all such problems they [*scil.* scholars] put forth one solution—that copies are not infallible nor blameless in their text, an explanation that I have also introduced with good reason in the discussion of this theological inquiry.

327 See *epigr.* 97–99 Lagarde, e.g. 97.1–2 ὕμνων ἐπελθὼν ἡμερησίῳ βιβλίῳ, / πᾶσάν τε τούτων τὴν γραφὴν ἐπιξέσας, on which Magnelli [2010] 113–115; Bianconi [2009] and [2011a] describes the *corpus* designed and put together by Mauropous in ms. Vat. Gr. 676.

328 *Epist.* 17.59–60: ὁρᾷς ὅση δύναμις ἔνεστι τοῖς ἀνὰ χεῖρα συνδέσμοις, κἂν μονοσυλλαβία στενοχωροῖντο: “you see how much power there is in these particles in hand, even though they are limited to one syllable”.

329 *Epist.* 17.127–30. On this and on Mauropous' philology in general, see A. Pontani [1995a] 344–347.

330 *Epist.* 18.113–16.

It is also interesting to see that Mauropous, while dealing with the reading “Absalom” instead of “Joab” in Gregory of Nazianzus (*Oration* 21.15), identifies the category of *Verschlimmbesserung* as “what the mass calls a mistake from correction” (τὸ παρὰ τοῖς ὄχλοις ἀδόμενον ἐκ διορθώσεως σφάλμα: *epist.* 18.97–98; perhaps a reminiscence of Origen’s terminology? or else a terminological borrowing from the ethical/religious sphere?).

A pupil of Mauropous became the leading intellectual of his age: Michael Psellus (1018–1092/93) would frequently boast of his expertise in the most diverse fields of knowledge, such as astronomy and medicine, geography and mythology, law and architecture, music and rhetoric, with a special emphasis on the entire range of Greek literary history.³³¹ Claiming to be well acquainted with foreign cultures (Egyptian treatises and Chaldaean oracles, works on magic and alchemy etc.), Psellus was a polygraph who constantly tried to present himself as a philosopher (a physician, a theoretic philosopher, a theologian): as a matter of fact, he became *hypatos ton philosophon* in Monomachus’ newly restored academy,³³² and in his own autobiography, after describing his early success as a pupil, he showcased his swift promotion to the rank of the most learned and versatile professor of the capital (he taught amongst others the Georgian scholar Petritsi):³³³

καὶ γὰρ καὶ περὶ ποιημάτων πρὸς ἐνίους τῶν ὁμιλητῶν φθέγγομαι καὶ περὶ Ὀμήρου καὶ Μενάνδρου καὶ Ἀρχιλόχου, Ὀρφέως τε καὶ Μουσαίου καὶ ὅποσα καὶ τὸ θῆλυ ἦσαν, Σιβύλλαι τε καὶ Σαπφῶ ἢ μουσσοποιός [Hdt. 2.135.1], Θεανῶν τε καὶ ἡ Αἰγυπτία σοφῆ, πολλοὶ δέ με καὶ περὶ τῶν ἐν αὐτοῖς ὀνομάτων κατελιπάρησαν, ὥστ’ εἰδέναι τί τὸ ἀκράτισμα, τί τὸ ἄριστον, τί δὲ τὸ ἐσπέρισμα καὶ τίς ἡ δορπίς καὶ ἡ ἐν τοῖς δεῖπνοις Ἰσαΐα καὶ τίνες μὲν ἐν ἔπεσι συνεγράψαντο, τίνες δὲ τῇ καταλογάδην λέξει ἐχρήσαντο καὶ τίς ἡ παρ’ Ὀμήρῳ ὄρχησις καὶ ὅλως τίς ὁ παρὰ τῷ ποιητῇ ἠρωϊκὸς βίος, τί τε ὀψοφαγία καὶ τί πολυτέλεια, καὶ τίς ἡ τῶν ἀκροδρύων χρῆσις καὶ ἡ ἀρχαιοτέρα τῶν Τρωϊκῶν, τί τε τὸ νέκταρ καὶ ἡ ἀμβροσία καὶ τὸ πρόπομα καὶ τὸ ὑπὸ γῆν γεράνιον καὶ ἡ ἐγγεστόκος γένεσις [Theophr. *hist. plant.* 1.6.9]. ἐὼ λέγειν ὅποσα μοι παρέχουσι πράγματα, τίς ὁ Ἄλεξις καὶ ὁ Μένανδρος καὶ ὁ αὐτόσιτος Κρῶβυλος [Athen. 1.47e] καὶ ὁ Κλήσαφος καὶ εἴ τις ἕτερος ποιήσει λεγόμενος χρῆσασθαι.

331 A recent assessment of Psellus as an intellectual is provided by Papaioannou [2013]. On his scholarship, see Wilson [1996²] 156–179.

332 Fuchs [1926] 29–31. On the office of *hypatos ton philosophon* from the 11th to the 14th century, see Constantinides [1982] 113–115.

333 *Autobiography* 30a–d (see Criscuolo [1989]; Kaldellis [2006] 106–108).

And so I lecture to some of my students on matters of poetry, on Homer, Menander, and Archilochos, on Orpheus and Musaeus, and also on the verses sung by women, Sibyls and ‘Sappho the poetess’, Theano and the wise Egyptian woman [*scil.* Hypatia]. Many also entreated me earnestly about the terms that occur in those works, in order to know what the *akratisma* is, what the *ariston*, what the *hesperisma*, what the *dorpis* and the dinner-time *isaia*; which authors wrote in verse and which made use of prose composition; what the dance is in Homer, and, in general, what the heroic life is in the poet’s view; what dainty living is and what luxury, what use do fruit grown on the upper branches have; what the most ancient of the Trojan events was; what *nektar*, *ambrosia*, and the *propoma* are; what the “geranium under the earth” and what “the generation that occurs within the earth”. I leave aside all the issues that I am asked to clarify, such as who Alexis was and who Menandros; who Krobylos, “who brought his own provisions”, Klesaphos, and any other who may be known for his poetic compositions. [transl. A. Kaldellis]

In the footprints of Byzantine encyclopedism, but arguing that only a multi-disciplinary approach can secure a better understanding of the spiritual and material world,³³⁴ Psellus practiced epistolography and historiography, theology and poetry, writing a large amount of essays in various genres. Some of the items of his *corpus* are demonstrably spurious, while others appear to be pedestrian reworkings of ancient material. The former category includes the so-called Psellian paraphrase of the *Iliad*,³³⁵ the latter embraces a meticulous *reprise* of Porphyry’s allegory on the *Cave of the Nymphs*, a discourse on the soul and its journeys, the Intellect, the angels.³³⁶ Undoubtedly, allegory (and chiefly Neoplatonic and Christianising allegory) was the method he preferred in his own autonomous exegesis of Homer, which he had practiced since his early years:³³⁷ Psellos applied it to the opening of *Iliad* 4 (the heavens, God and the angels), the Golden Chain in *Iliad* 8 (the One and the lesser substances), the birth of Zeus (God and Kronos / Time), and to various other mythological issues (Pandarus’ bow, Circe, Tantalus, the Sphinx), including a careful analysis of Odysseus’ *moly* (*orat. min.* 32 Littlewood).³³⁸

This approach was probably a consequence of his long-standing friendship with Nicetas, himself a teacher of grammar at the school of St. Peter, and an allegorist in search of the “mysterious beauty” (ἀπόθετον κάλλος) of pagan poetry, which he pleased himself to Christianize, for instance interpreting the Golden Chain as a halt in the revolution of the universe, or Ithaca as the celestial Jerusalem.³³⁹ Psellus’ attitude on this point was slightly different, as he insisted on detaching the individual lines from their context, and on highlighting the rhetorical dimension of the allegorical game, which in his view may—or may not—have displayed the divine dogmas of Christianity behind the pagan subject-matter:³⁴⁰

μῦθος ὡς ἀληθῶς ἄπας Ἑλληνικὸς μῦθος, καὶ ὡσπερ οὐκ ἂν ὑποσταίεν ποτε ὅσα μῆτε ὑφέστηκε, μῆτε ὑποστήναι δεδύνηται, οὕτως οὐδ’ ἡ κενὴ τῶν Ἑλλήνων μυθολογία ἐν ὑποστήματι σταίη ποτέ, ἢ πῆξιν τινα ὁ διαλελυμένος αὐτῶν λήψεται λόγος. ἀλλ’ ἡμῖν γυμναστέον τὸν λόγον οὐκ ἐπὶ τοῖς ἰσχυροῖς μᾶλλον καὶ ὅσα βάσιμα ῥητορικῆ πομπεία καὶ λόγοις φιλοσόφοις καθέστηκεν, ἀλλ’ οὐδὲν ἦττον καὶ τοῖς ἀνυπάρκτοις τὴν ἀπὸ τοῦ λόγου δοτέον ὑπόστασιν, ἵνα μὴ μόνον ἀπὸ τῶν ποτίμων ναμάτων ἀλλὰ καὶ ἀπὸ τῆς θύραθεν ἄλμης γλυκάζουσιν πόσιν παραδεχόμεθα.

Every Hellenic myth is really just myth, and just as the things that do not exist and never had a chance to exist can never exist, so too the empty mythology of the Hellenes can never acquire firm substance, nor will their scattered wisdom ever become concrete. However, we should practice speech not only on the firm ground and on paths accessible to the mission of rhetoric and philosophical discourse, but we should give discursive substance even to non-existent entities, so that we may obtain a sweet drink not only from the drinkable waters but also from the external, bitter ones.

Less a philologist than an experienced rhetorician,³⁴¹ Psellus practiced an original form of literary criticism, taking his cue from ancient prototypes such as Hermogenes and Dionysius of Halicarnassus (Laur. 59.15, the most important—at times the only—extant manuscript of the latter’s *opera*

339 Guglielmino [1974]; Cesaretti [1991] 29–43; Wilson [1996²] 149–150. Psellos’ funeral oration for Nicetas is still to be read in Sathas [1876] 87–96.

341 Papaioannou [2013] 29–50.

rhetorica, stems precisely from Psellos' age):³⁴² his focus on style influences his judgment concerning Christian authors, *e.g.* the praise he bestows on Symeon Metaphrastes for having recast the hagiographies in a neater style, or on Gregory of Nazianzus as the finest paradigm of Greek prose (in various genres, from panegyric to philosophical writing), or on John Chrysostom for his clarity as opposed to Thucydides.³⁴³ Psellos' most illuminating essays in this field are the *comparationes* between Euripides and the 7th-century poet George of Pisidia and between the novelists Heliodorus and Achilles Tatius. While the conclusion of the former comparison is lost (but Euripides' metrical versatility and ethical shortcomings are both taken into account),³⁴⁴ the latter ends in favour of Heliodorus, thanks to the quality of the complicated plot, the richness of Attic diction, and the moral qualities of the female protagonist³⁴⁵ (a Byzantine *penchant* for Heliodorus is easy to prove: suffice it to think of the allegorical interpretation by Philip-Philagathus of Cerami: see below § 3.8). A passage on Euripides will exemplify Psellos' approach to ancient authors:³⁴⁶

οὐτ[ε] ἀνὴρ τὰς ὑποθέσεις [ὑπερορᾷ οὐτε τὰ τῶν προσώπων ἦθη, καίτοι ἐν τούτοις αἱ Σοφοκλέους τραγωδίαι] μάλιστα τῶν ἄλλων ἐπραγματεύθησάν τε καὶ ἐπονῆ[θησαν]. Εὐρι[πίδ]η δὲ τούτων μὲν [ἦτ]τρον ἐμέλησεν, ἐπραγματεύσατο δὲ πλέον ἐκείνου περὶ τε τ[ὴν με]λοποιΐαν, φημί δὴ τὴν [ἐν λ]όγοι[ς], καὶ τὴν χρῆσιν ταύτης καὶ τὰς τρεῖς ταύτας τῶν καλλίστων ἐπιστημῶν, μουσικὴν τε καὶ ῥυθμικὴν καὶ [μετ]ρικήν, ὥσπερ α[ὐλοῦς καὶ] κιθάρας καὶ λύρας ταῖς οἰκείαις συναγαγὼν ὑποθέσει. βαρβαρίζ[ειν δὲ δέον τὴν γλώ]τταν μεμίμηται ὡς δοκεῖν τὸν αὐτὸν ἄκρωσ τε ἐλληνίζειν καὶ ἀκριβῶς σολ[οικίζ]ειν· τὸ γὰρ παρὰ τὴν Ἀτθίδ[α] γλώτταν ἐν ταῖς βαρβαρικαῖς λέξεσι σολοικοφανές. ἔστι δ' ὅπη διαμαρτάνει τοῦ πρέποντος καὶ τῆς δυνάμεως μάλλον τῆς λογικῆς γίνεται ἢ τοῦ ἀκριβοῦς τῆς ποιήσεως· ἀμέλει τοι τὴν Ἑκάβην τῷ Ὀδυσσεὶ ἀντεισενεγκῶν [Hec. 218ff.] ἀνδρὶ γενναίῳ καὶ ῥητορικῶ κατ' ἐκείνου αἴρει καὶ τὰ πρεσβεῖα χαρίζεται· καὶ μελετᾷ μὲν κάκεινον οὐκ ἀτερπῶς, ἐλάττονα δὲ τῆς αἰχμαλώτου ποιεῖ.

those of others. Euripides, on the other hand, took fewer pains over these matters but devoted more effort than he to musical composition, *i.e.* that in the words, and its use and to these three fairest of arts, viz. music, rhythmic and metric, bringing as it were shawms, citharas and lyres into conjunction with his own plots. When he has to use barbarian accents, he imitates their speech in such a way that the same man is considered best in using Greek and most precise in committing solecisms (the element in barbarian speech which is contrary to Attic is solecistic). There are times when he deviates from propriety and comes more under the sway of the power of his own eloquence than of the strict demands of the poetry. For instance, when he has brought Hecuba onstage as antagonist to Odysseus, a man of noble birth and oratorical skill, he raises her up against him and gives her the prize of honor; he has Odysseus declaim not without charm, but he makes him inferior to a captive woman! [transl. A. R. Dyck]

Indeed, Psellus was particularly keen on ancient Greek drama—a rare occurrence in pre-Palaeologan Byzantium³⁴⁷—, and there is a chance that he may have composed a short treatise on tragedy, partly derived from Aristotelian doctrine and partly original in its approach to metre, poetic diction, scenography (*ekkyklema* etc.), musical styles, dance and actorial conventions.³⁴⁸

Even if Byzantine philosophy does not fall within the scope of the present survey, it must be stressed that Psellus' commitment to the recovery and the study of Platonic and Neoplatonic thought (Porphyry, Iamblichus, Proclus, but also the Hermetic *corpus*) proved propaedeutic not only to the development of his own theoretical work (*e.g.* the important treatise *On miscellaneous wisdom* [*De omnifaria doctrina*], largely indebted to Plutarch and Proclus), but above all to a surge in the transmission and study of these authors in Byzantium.³⁴⁹ Psellus' letter to the patriarch Xiphilinus is paradigmatic in this respect as an attempt to rescue Plato and pagan philosophy in the sense indicated by the Church Fathers and by Gregory of Nazianzus in particular.³⁵⁰ Much as in the case of Homeric allegorism, Psellus keeps promoting pagan wisdom for the exclusive purpose of gaining useful teachings for the present age and a correct understanding of nature, without any conflict with the Christian faith.³⁵¹

This is why Psellus' 'humanism' has been often seen as a compromise that gave no impulse to a first-hand scholarly activity on texts or to a true philosophical revival, but fostered a new inquiry into the intellectual and literary genealogy of well-known authors (Gorgias behind Hermogenes, Plato behind Proclus etc.).³⁵²

Even so, Psellus' Platonism earned him the sentence of having to make a public profession of orthodox faith, and a brief relegation in a monastery.³⁵³ Much more severely, Psellus' pupil John Italus, a native of Southern Italy who succeeded him in the chair of philosophy in 1055, was put to trial in 1076 and confined to a monastery six years later for his overt adherence to Platonism, and for his attempt to deal on the same level with pagan philosophy and with Christian theology.³⁵⁴ The text of the anathema against Italus and his works (which, despite the *damnatio*, partly survive down to our own day) is a remarkable *caveat* against "those who study the Greek disciplines and not only for the sake of educational training but also follow these vain doctrines and believe in them as having certainty, so that they initiate others into these doctrines, some by stealth, others openly, and teach them without hesitation".³⁵⁵ Although Italus' learning extended to grammar and poetry,³⁵⁶ his symbolic importance in the cultural history of 11th-century Byzantium is connected with the vicissitudes and the meaning of his trial:³⁵⁷ the risk of a Neo-platonic haeresy was to pop up frequently in the 12th century, not only at the imperial court,³⁵⁸ but also in the wider context of culture, from the inaugural lectures in the

patriarchal academy³⁵⁹ down to the choice of whether or not to copy new manuscripts of Plato.

This trend contributed to the enforcement of a sort of cultural barrier between philosophy and theology,³⁶⁰ and more in general to the gradual severing of the links with Classical antiquity as a full-fledged heritage of thought (and art: one need just think of the difference between the Nea Moni on Chios and the later frescoes of Peć or Chora). But this did not necessarily entail adverse consequences for the development of textual scholarship: “The repression of metaphysical speculation under the Comnenoi did not inhibit the study of ancient texts for their own sake, and may even have proved beneficial to language and literature . . . By renouncing, or denouncing, Hellenism as a system of thought, they were able to preserve and even proclaim Hellenism as a mode of expression”.³⁶¹

3.3 *The Comnenian Age: General Features*

The age of the Comnenian dynasty (ca. 1081–1185) marks in many ways a fresh beginning as regards the cultural trends of the Byzantine empire. First and foremost, the imperial court played a far more active role than before, both in terms of patronage and through direct initiative in the domain of education. Patronage was exercised not only by the emperors themselves, but also by their relatives such as Anna Comnena, Bertha of Sulzbach or the sebastokratorissa Irene:³⁶² either by hiring individual scholars for a specific intellectual duty, or by creating a true reading circle, these members of the imperial elite contributed crucially to the protection and the promotion of culture in Constantinople.³⁶³

This is also the first period in Byzantine history for which we can point out with a degree of certitude that curricular instruction was offered in the capital, both by the state and by the patriarchate, in newly reorganised institutions that worked alongside each other in a spirit of co-operation or at least in non-conflictual terms (Alexius I Comnenus restructured the panel of teachers in 1107, shortly after the school of the patriarchate had been refurbished by the

patriarch Nicholas III Grammaticus).³⁶⁴ Many of those who belonged to the scholarly *milieux* and most of the educated civil servants and ecclesiastical dignitaries were trained both personally and professionally in the imperial or the patriarchal academy, under the supervision of a pool of teachers that included decade after decade most of the *intelligentsija* of the Greek-speaking world, from Nicephorus Basilaces to Eustathius of Thessalonica, from Michael Italicus to Nicetas of Heraclea, from Gregory of Corinth to George Tornices, etc.³⁶⁵ This does not detract from the permanence and the importance of informal classes in the homes of intellectuals and the *grammatikoi*, and it should be remembered that we have evidence of a new substantial interest in a systematised higher education rather than of the structure of a proper ‘university’.³⁶⁶

The share and the quality of Classical learning in the patriarchal school can be gauged by looking at some remarkable scholars who taught there: one such figure was Nicetas of Heraclea (also known as Nicetas of Serres, but not to be confused with Psellus’ companion Nicetas, of whom more above § 3.2), who lived between the late 11th and the early 12th century, and probably reached the honour of *oikoumenikos didaskalos*—whether or not this term has a direct connection with the oecumenical patriarchate.³⁶⁷ Nicetas of Heraclea may or may not be the copyist and commentator of the excellent and richly annotated manuscript Marc. Gr. 476 of Lycophron and Aratus,³⁶⁸ but he was certainly the author of catenae and scholia on orations of the Church Fathers, of a short treatise on metre,³⁶⁹ of a versified *résumé* of Greek grammar and syntax,³⁷⁰ and of various didactic poems on orthography and lexicography, including some on eccentric subjects such as the epithets of the Olympian gods or the forms of the aorist subjunctive.³⁷¹ The most likely context of these works was teaching in schools.

Another interesting case is that of the distinguished rhetor Michael Italicus († *ante* 1157), who eventually became in 1142 “teacher of the Gospel” (διδάσκαλος τοῦ Εὐαγγελίου): according to his own words, he used to offer his pupils a “banquet of wisdom” (λογικὴ πανδαισία) embracing many pagan authors, from poets to mathematicians (including Sappho and Euclid), and thereby leading “to the bosoms of the Gospel” (εἰς τοὺς εὐαγγελικούς κόλπους).³⁷² This attitude not only lay at the origin of the wealth of Classical learning in Italicus’ orations, but it was also reflected in his philological concerns and *institutio*, as they appear for instance in a letter written in 1143 from Philippopolis to an Alexius Comnenus:³⁷³ in addressing a detail of interpretation and with a gratuitous digression on the meaning of the adjectives *homognios* and *homaimon* (not just “brother”, but more broadly “relative”), the author invokes several ancient authorities such as Homer, Hesiod, Euripides, Plato and Lucian, and mentions the peculiar sense of *haima* as *genos* in *Odyssey* 4.611 (already discussed by the *sch. v in Od.* 4.611a), as well as Nicander’s verse address to Hermesianax in *Theriaca* 3 “o most illustrious of my many *homaimoi*” (πολέων κудίσταθ’ ὁμαίμων, a reading nowhere attested in Nicander’s manuscripts), whereby he clarifies that:

καὶ δῆλον ὡς οὐκ ἀδελφὸν αὐτὸν ὠνόμασεν ἐκ τοῦ καὶ τινα τῶν ἀντιγράφων “πηῶν” ἔχειν τὸ τοῦ μέτρου ἀκροτελεύτιον. <ἐν> ἐνίοις γὰρ τῶν βιβλίων οὕτως ἐφεύρομεν· “πολέων κудίστατε πηῶν”· ὁ δὲ “πηὸς” συγγενῆς ἐστὶ δῆπουθεν.

clearly he did not call him “brother”, for some copies have “*peon*” [of the *peoi*] as the fag-end of the line: in some of the exemplars we have found “*poleon kudistate peon*” [most illustrious of my many *peoi*], and *peos* is a generic noun for “relative”.

Many other scholars taught in the patriarchal academy during the first half of the century. But a no less crucial feature of the Comnenian age consisted in the imperial court’s special interest in the ancient Hellenic heritage. Far from the asphyctic walls of schools and academies, in a delicate historical juncture where “they needed to counterbalance the territorial contraction of their Empire”,³⁷⁴ the emperors and their circles rediscovered or reshaped part of their Greek identity precisely around the Hellenic past and classical *exempla*, in a ‘double-tongued’ discursive synthesis that was not in conflict

372 Gautier [1972] 156; Cavallo [2010] 28.

374 Roilos [2005] 302.

with the Christian and Roman pedigree but supplemented it with the flavour and the very substance of a glorious civilisation: the pagan gods were back in fashion, political and historical speculation cautiously started to take into account ancient Athens behind the old and the new Rome, and some of the ancient works dealing with pagan history and mythology became essential reading for every educated man.³⁷⁵ This is very evident in the fresh approach to Homer and Homeric studies as a repertoire for historians, as a source of inspiration for poets and writers, and as a working ground for philologists (from Theodore Prodromus to Eustathius of Thessalonica, from the novelists to Constantine Manasses to Nicetas Choniates).³⁷⁶ But perhaps even more impressive is the creation, by the hand of an anonymous scholar deeply familiar with ancient literature, of a refined cento of 5th-century Attic drama known as *Christus patiens*, and dealing in very sophisticated and allusive (chiefly Euripidean) terms with the Passion of Christ (the text used to be attributed, wrongly, to Gregory of Nazianus).³⁷⁷

To be sure, a suspicious attitude against profane culture, and specifically against the teaching of ancient Greek grammar, continued to make itself felt, *e.g.* when the rhetor George Tornices, metropolitan of Ephesus in the 1150s, gave voice to the worries of Alexius I, and wrote that the wise emperors and educators did show a high consideration for culture and studies, but:³⁷⁸

τὴν γε μὴν προτρέχουσαν τούτων γραμματικὴν, ἧς τὸ κράτιστον μὲν ἢ ποιήσεις, ἧς τὸ πολύθειον εἴτ' οὖν ἄθεον καὶ μῦθοι τὸ γνῶρισμα, οἱ θεοὺς πλάττουσιν ἐρώντας δυσέρωτας ἔρωτας καὶ παρθένων φθορὰς καὶ ἀρρένων ἀρπαγὰς καὶ ἄλλην ἀριστουργίαν ἐν λόγοις καὶ ἔργοις πολὺ τὸ ἄσεμνον ἔχουσαν, ταύτην μὲν καὶ ἀνδράσιν ἐπικίνδυνον, γυναιξὶ δὲ καὶ παρθένους καὶ λίαν ἐπίβουλον καλῶς νενομίκασιν, ὧν δὴ ἀκοὰς καὶ ὀφθαλμοὺς παρθενεύειν χρῆναι κεκρίκασιν.

the grammar preceding these doctrines [*scil.* dialectic and philosophy], whose main topic is poetry connotated by polytheism (or actually atheism) and by myths that depict badly lovesick gods, raped virgins, abducted males, and other remarkable feats entirely indecent in the facts and in the accounts; this grammar, then, they rightly judged both dangerous for

378 Darrouzès [1970] 245.5–11.

men and treacherous for women and girls, whose eyes and ears, in their view, should remain virgin.

Despite these tensions and reservations, however, the so-called 'revival' or 'renaissance' of the 12th century³⁷⁹ created a favourable atmosphere enabling intellectuals not only to salvage, preserve and compile what remained of the literary and philological scholarship of antiquity, but also to engage in the active practice of textual and interpretive criticism of ancient texts.³⁸⁰ This trend affected all levels of culture, from scholastic teaching all the way up to pure scholarly research.

3.4 *The Comnenian Age: Schedography and Grammar*

What was chiefly at stake in this period was precisely how pagan literature should be used: on the one hand stood a cautious trend that considered ancient works as mere pre-texts for grammatical exercises, parsing and everyday schooling practices; on the other, there was no shortage of voices urging a deeper philological and philosophical engagement with the same texts, well beyond their re-use as a mode of expression for purely educational or rhetorical ends. The essence of this contrast is highlighted in a famous passage of Anna Comnena's *Alexiad* (15.7.9):

ταῦτα δὲ λέγω ἀχθομένη διὰ τὴν παντελῆ τῆς ἐγκυκλίου παιδεύσεως ἀμέλειαν. τοῦτο γάρ μου τὴν ψυχὴν ἀναφλέγει, ὅτι πολὺ περὶ ταῦτὰ ἐνδιατέτριφα, κἂν, ἐπειδὴν ἀπὴλλασθαι τῆς παιδαριώδους τούτων σχολῆς καὶ εἰς ῥητορικὴν παρήγγειλα καὶ φιλοσοφίας ἠψάμην καὶ μετὰ τῶν ἐπιστημῶν πρὸς ποιητὰς τε καὶ ξυγγραφεῆς ἦξα καὶ τῆς γλώττης τοὺς ὄχθους ἐκείθεν ἐξωμαλίσάμην, εἶτα ῥητορικῆς ἐπαρηγόσης ἐμοὶ κατέγων τῆς πολυπλόκου τῆς σχεδογραφίας πλοκῆς

I am distressed by the complete neglect of general elementary education. This enrages my mind because I have spent much time on these same parsings, and when I escaped from these puerile studies and took up rhetoric and applied myself to philosophy, as part of these studies I turned eagerly to the writers of poetry and prose, and from them I smoothed away for myself the roughness of my speech, and finally, with the help

379 See Basilikopoulou-Ioannidou [1971–1972] 169–199, and a thorough discussion of the reliability of this terminology in Magdalino [1993] 382–412.

380 Browning [1995] 23.

of rhetoric, I condemned the complicated twist of schedography. [transl. G. Buckler]

Schedography was a method of systematic, elementary and rather repetitive linguistic analysis of the words of a specifically composed text—in prose or verse—, involving features of etymology, orthography and grammar (it ultimately derived from epimerisms), and designed as an aid for pupils to recall the morphological and lexical peculiarity of every single term and construction rather than to obtain any sense of the general meaning or literary value of the text at issue.³⁸¹ These model-texts often included well-thought-out misspellings, tricky orthographies and problematic pronunciations, precisely in order to prompt reflection among pupils: for example, an enigmatic text by the renowned rhetor and satirical writer Theodore Prodromus [† *ante* 1157] on Nicholas of Myra can be read in a twofold way depending on word-division, itacistic traps and consonantal word-play;³⁸² some iconic lines by his contemporary Leo of Rhodes convey not only a professor's lament on the toil of teaching, but above all a reminder about the use of completive participles and the double accusative, as well as a pun between the homophonous locutions *eis os / isos* (εἰς ὧς / ἴσως, “in the ear”—“in the same way”):³⁸³

κέκμηκα καὶ γὰρ προσλαλῶν βρεφυλλίους,
 πλέκων ἀπείπον τοὺς ἀμιλλητηρίους.
 ὧς οὖν ἐφάνης, Παῦλε, κυρίου στόμα
 λέγων πρὸς ὧτα τῷ σοφῷ διδασκάλῳ,
 οὕτω περ ἴσως τληπαθοῦς ἀνδρὸς χάριν
 τῷ πατριάρχῃ φράζει τῆς οἰκουμένης.
 διδάξον αὐτὸν τοὺς μακροὺς ἐμοὺς πόνους
 ὄσους ἀνέτλην σῆς χάριν κληρουχίας.

381 Robins [1993] 127–148; Browning [1975a] 9; Browning [1976]; Gallavotti [1983]; Festa [1931]; Polemis [1995]; Efthymiadis [2005] 266–271; Ciccolella [2008] 113–118; a synthetic overview in Hunger [1978] 24–29.

382 Vassis [1993–1994] 10–12, ll. 4–6: χρηστὰ γάρ τιν' ἄμμιν οἴσων ἐπιδεδήμηκεν ἐπὶ τὴν τοῦ βύζαντος γῆν, μᾶλλον δὲ ἤδη κεκόμικε πόλλ' εἰς πάσαν νικολαϊκῶν ἂν ἐπλήσθη χαρίτων = χρηστὰ γάρ τινα μηνύσων ἐπιδεδήμηκεν ἐπὶ τὴν τοῦ Βύζαντος γῆν, μᾶλλον δὲ ἤδη καὶ κώμη καὶ πόλις πάσα Νικολαϊκῶν ἀνεπλήσθη χαρίτων “For he came to Byzantium bringing us good news (but every village and every town are already full of Nicholas' grace)”.

383 Miller [2003] 12–13 (ll. 8–15).

For I am worn out in addressing the tribes of young children, / and I renounce my weaving contentious words. / Therefore, just as you appeared as the mouth of the Lord, O Paul, / when you spoke into the ear of the wise teacher [John Chrysostom], / so, in the same way, on behalf of a wretched man / speak to the ecumenical patriarch. / Teach him my long painful labors, / as many as I have endured on behalf of your inheritance. [transl. T. S. Miller]

Leo's "contentious words" are in fact a reference to contests of schedography between pupils and schools, which were very popular in this age: from these lines one may even conjecture that the patriarch himself attended these competitions—and Leo's school, the Orphanotropheion, was by no means a minor institution: it numbered amongst its teachers or pupils a large part of the ecclesiastical hierarchy of the age, including important scholars such as Constantine Stilbes, metropolitan of Cyzicus in 1204, who proved capable of judging the authenticity of several works attributed to John Chrysostom on the basis not only of moral and theological arguments, but also of stylistic and palaeographical criteria (*e.g.* he warned from the danger of assigning excessive significance to the age of manuscripts).³⁸⁴

However foreign to scholarly activity *stricto sensu*, schedography earned the attention and harsh criticism of Anna Comnena and John Tzetzes³⁸⁵ due to its enormous spreading and influence from the 11th through the 14th century: affecting even high-brow circles such as those of Michael Psellus and Constantine IX Monomachus,³⁸⁶ and becoming an indispensable tool for the elementary schooling of a broader public of pupils (witness, for instance, the first exercises of John Mesarites),³⁸⁷ it gradually diverted attention away from the canonical descriptive texts of earlier centuries such as those of Dionysius Thrax, Apollonius Dyscolus, Theodosius and Choeroboscus.³⁸⁸

Traditional grammar, however, did not die out entirely: a comprehensive treatise on the subject may stem from Prodromus himself,³⁸⁹ and lexicography

384 Lackner [1984].

385 *Chiliades* 9.703–708 Leone "for the many have become barbarians through their schedographies, / without reading at all the books of the ancients": καὶ γὰρ ἐβαρβαρώθησαν οἱ πλείους σχεδουργίαις, / βιβλους ἀναγινώσκοντες τῶν παλαιῶν οὐδόλως. Other texts are collected by Efthymiadis [2005] 269.

experienced a period of remarkable flourishing. This was namely the age of two very popular etymological lexica, known as *Etymologicum Symeonis* (ca. 1100–1150),³⁹⁰ and *Etymologicum Magnum*. The latter represents simultaneously the bulkiest of Byzantine dictionaries and a free re-elaboration of the *Genuinum* and *Gudianum*, with interpolations from the lexicon of ‘Cyril’, further reworked (through suitable additions and omissions) in order to satisfy the needs of contemporary literate society.³⁹¹

Perhaps the most distinguished grammarian of this age (also a professor of rhetoric at the patriarchal school) is Gregory Pardus, archbishop of Corinth some time between 1092 and 1156:³⁹² he composed a learned commentary on Hermogenes’ *On the forcefulness of style*,³⁹³ an exegesis on John the Damascene’s iambic canon for the Pentecost,³⁹⁴ an essay on syntax, partly building on Syncellus,³⁹⁵ and a handbook on style dispensing guidelines and judgments about the writing of prose and iambic poetry, and setting the very influential canon of the four most brilliant orations ever written in Greek language (Demosthenes’ *On the Crown*, Aristides’ *Panathenaic*, Gregory of Nazianzus’ *Epitaph on Basil the Great*, Psellus’ *Autobiography*).³⁹⁶ The mingling of Christian and pagan learning emerges from the ensemble of Gregory’s *oeuvre*: in his exegesis to the iambic canon (a peculiar grammatical and theological genre that developed in the 12th and 13th centuries),³⁹⁷ flat paraphrases of single strophes and elaborate discussions of Christological issues are flanked by disquisitions on the etymology of the word *πόπυσμα* or on the role of long compound adjectives in hymnic poetry,³⁹⁸ thus displaying a special taste for the sometimes rare and obscure linguistic features of the Damascene’s language.

390 Only partly edited: see Sell [1968]; Berger [1972]; Lasserre-Livadaras [1976–1992]; Baldi [2013]. Its interest lies *inter alia* in the fact that it faithfully reproduces the glosses of the *Genuinum*, thus enabling their reconstruction when the two mss. of that lexicon are damaged or missing.

391 Ed. Gaisford [1848]; letters α – β are also available in the synoptic edition of Lasserre-Livadaras [1976–1992]. See Reitzenstein [1897] 241–248. A much smaller compilation is the so-called *Etymologicum Parvum*, ed. Pintaudi [1973].

398 Gregory of Corinth, *Exegesis on the iambic canon* 17.4 and 2.5–6 Montana respectively.

But the work that constitutes Gregory of Corinth's best claim to renown today is his lengthy treatise on the Greek dialects,³⁹⁹ whose degree of originality has, however, often been called into question. The author himself mentions among his sources Trypho and John Philoponus; modern research has confirmed these debts, and has also detected debts to the scholia to Dionysius Thrax—all in all, little seems to proceed directly from Gregory's own autonomous learning. In the treatise, we find a series of (sometimes precious) quotations from ancient authors digested according to their alleged provenance: the preface mentions Aristophanes, Thucydides and Demosthenes for Attic, Hippocrates for Ionic, Archytas (!) and Theocritus for Doric, Alcaeus for Aeolic (though of course *e.g.* Euripides, Herodotus and Pindar often appear in connection with their respective dialects, and Homer for all of them). Then we read a definition also indebted to late antique models:⁴⁰⁰

Διάλεκτός ἐστὶν ἰδίωμα γλώσσης, ἢ διάλεκτός ἐστι λέξις ἴδιον χαρακτήρα τύπου [τόπου Schaefer] ἐμφαίνουσα. Ἰὰς ἐκλήθη ἀπὸ τοῦ Ἰωνος, τοῦ υἱοῦ τοῦ Ἀπόλλωνος καὶ Κρεούσης τῆς Ἐρεχθέως θυγατρὸς, ἣ ἔγραψεν Ὀμηρος. Ἀτθίς ἀπὸ τῆς Ἀτθίδος, τῆς Κραναοῦ θυγατρὸς, ἣ ἔγραψεν Ἀριστοφάνης. Δωρίς ἀπὸ Δώρου τοῦ Ἑλλήνος, ἣ ἔγραψε Θεόκριτος. Αἰολίς ἀπὸ Αἰόλου τοῦ Ἑλλήνος, ἣ ἔγραψεν Ἀλκαίος. κοινὴ δὲ ἦ πάντες χρώμεθα, καὶ ἣ ἐχρήσατο Πίνδαρος, ἡγουν ἢ ἐκ τῶν δ' συνεστῶσα. ἐκάστη δὲ διάλεκτος ἔχει οἰκεῖον ἰδίωμα.

A dialect is the idiom of a language, or a lexical form displaying the peculiar character of a genre [*or*: of a single place]. Ionic was named after Ion, the son of Apollo and of Creusa the daughter of Erechtheus: Homer used it. Attic was named after Atthis, the daughter of Kranaos, and it was used by Aristophanes. Doric after Dorus the son of Hellen, and it was used by Theocritus. Aeolic after Aeolus the son of Hellen, and it was used by Alcaeus. The *koine* is the dialect we all use (and Pindar used it as well), namely the dialect arising out of the other four. Every dialect has its own peculiarity.

Gregory's work on the whole lacks a coherent structure, and it shows a number of mistakes, oddities and inconsistencies, but it deserves consideration as an ambitious attempt to systematise such a difficult issue for the benefit of

399 Ed. Schaefer [1811]; see Bolognesi [1953] and Consani [1991] 59–68.

readers of Classical authors—one which would hardly be superseded by later efforts of the same kind.⁴⁰¹

3.5 *The Comnenian Age: Commenting Texts*

When Anna Comnena (1083–1153), one of the most brilliant Byzantine historians and herself an important (if politically unfortunate) member of the ruling dynasty,⁴⁰² regrets the time wasted in schedographic exercises (see above § 3.4), she is implicitly referring to her own very different and inspiring readings of ancient literature (those permeating the literary texture of the *Alexiad*), but also to her own unprecedented activity of cultural patronage, which led her to create and support a lively literary and philosophical circle. This circle included the Aristotelian commentators Eustratius of Nicaea and Michael of Ephesus:⁴⁰³ the former, a pupil of John Italus and himself convicted of heresy and forced to abdicate from his archbishopric, wrote on the *Nicomachean Ethics*, and devoted himself also to the exegesis of logical works; Michael of Ephesus, a faithful follower of Alexander of Aphrodisia, wrote extensively on the *Sophistic Refutations* and on many physical, cosmological and ethical treatises included in the *corpus* of Aristotle.⁴⁰⁴ Michael and Eustratius, who focused on different works of the Stagirite and thus strove at once to revive late antique exegesis and fill in its gaps, believed firmly in the relevance of Peripatetic doctrine to contemporary ethics and values, even beyond the religious distinctions. It is possible that their interest in Aristotle prompted some of the early Italian visitors to Constantinople (above all James of Venice) to produce the invaluable Latin translations that proved paramount for the return of Peripatetic thought to the West and, in due course, for the rise of scholastic philosophy (see below § 3.8).

That these Byzantine scholars should choose to write commentaries rather than autonomous philosophical treatises is in keeping with the philosophical tradition that had started in the previous century, above all with Psellus' *oeuvre* and his interest in late antique Neoplatonists. But the popularity of commentary as a genre is a hallmark of the 12th century, by no means limited to the

401 Including one unduly attributed to the 13th-century scholar Manuel Moschopoulos: see Hunger [1978] 31–32 with references, and Cengarle [1971].

402 Gouma Peterson [2000].

404 Some of his works ended up in the *Okeanos*, namely ms. Laur. 85.1: Cacouros [2000]; Fryde [2000] 193–196. For Michael's interest in Aristotelian works on biology and zoology see Hellmann in this volume.

domain of philosophy: the revival of Classical poets from Homer to Lycophron resulted in an unprecedented production of exegetical works, designed either for an audience of scholars and advanced pupils or for a broader public of amateurs, by and large corresponding with the elite that patronaged letters.⁴⁰⁵ Two interesting examples of these distinct approaches to the art of exegesis are, respectively, John Diaconus Galenus and Isaac Sebastocrator.

The former, of whom virtually nothing is known other than the name (indeed, his very chronology is uncertain),⁴⁰⁶ wrote a long, though not continuous allegorical commentary to Hesiod's *Theogony*,⁴⁰⁷ which displays strong familiarity with ancient grammatical techniques, but at the same time represents perhaps the first attempt towards a thorough Platonising Christianisation of an ancient epic poem: we find here the reading of Zeus as God, the lore of Pythagorean numerology, the ethical or physical resonances of Olympian myth, the astronomical symbolism of Hecate and related deities, the etymological approach to the truth underlying Hesiod's innumerable proper names, and other similar interpretive devices. The following reading of the myth of Prometheus, while appended to a specific Hesiodic passage, clarifies Galenus' sophisticated transition between the Platonic and the Christianising approach.⁴⁰⁸

Πλατωνικῶν δὲ παῖδες τὴν δόξαν ταύτην σφετερισάμενοι θρυλλοῦσιν ἄνω καὶ κάτω, ὡς διὰ τινὰ ἁμαρτίαν ἐς τὸ σῶμα κατακέκριται ἐμπεσεῖν ἢ ψυχῆ· οὐκ ἄτοπον δὲ εἶ τις ὀρθῶς ἐθέλει νοεῖν τὰ λεγόμενα, καὶ ἐς τὴν ἡμετέραν αὐλὴν τὴν εὐσεβῆ παρεισάξαι τὸν μῦθον, καὶ ἐπὶ τοῦ προπάτορος ἐκλαβέσθαι τὸ νόημα εὐσεβῶς, ὡς ἠπάτησε μὲν τὸν δημιουργὸν ὁ πρωτόπλαστος, τὴν ἐντολὴν παραβάς, ἐξόριστος δὲ γέγονεν ἕκτοτε τῆς Ἑδέμ καὶ τοὺς δερματίνους ἀμφιέννυται χιτῶνας τὴν παχυτέραν ταύτην σάρκα, καὶ τὴν ἐπίπονον διαγωγὴν κληροῦται καὶ τὴν εἰς τὸ κλαυθμῶνος πέδον κατὰκρισιν, καὶ τὴν ἐν ἰδρώτι τοῦ προσώπου βρῶσιν τοῦ ἄρτου, καὶ τὰς παλαμναίας ἀράς· καὶ τὸ δὴ τελευταῖον ἐπιτίμιον, τὸν θάνατον, ἕως οὗ Ἡρακλῆς ἐλθὼν, ὁ ἐμὸς Ἰησοῦς, τῶν δεσμῶν ἠλευθέρωσεν.

Platonists appropriated this view, and famously affirmed that it was because of a sin that the soul had been condemned to fall into the body: nothing strange, then, if, wishing to understand the text correctly and

408 Jo. Diaconus Galenus, *On Hesiod's Theogony* 538, p. 336 Flach.

to introduce the myth in our own rightful court, one piously interprets its sense in relation to our forefather: for the first created man deceived the demiurge, violating his order, and was then exiled from Eden. Since then, he has worn this thicker flesh as a leathern coat, and has been allotted this toilsome life, being condemned to live in the valley of tears, to eat bread with his sweat, to succumb to abominable maledictions and to the worst of penalties, death—until Heracles, my Jesus, comes to set him free.

Neoplatonic philosophy was still popular in these days: Isaac Sebastocrator (1093–post 1152), the son of the emperor Alexius I Comnenus, and thus Anna Comnena's younger brother, was so conversant with it as to produce excerpts and paraphrases from works of Proclus we no longer possess.⁴⁰⁹ But perhaps his most interesting achievement is an elaborate *ekdosis* of the *Iliad*, framed by a general preface and two introductory works, of modest originality, dealing with the *praetermissa ab Homero* (the facts that happened before and after the *Iliad*) and with the physiognomical features of the Homeric heroes.⁴¹⁰ This annotated edition, preserved in ms. Par. Gr. 2862, provides the poem with a remarkable series of scholia, some of which reproducing or rephrasing the ancient exegesis to the relevant lines (from the D-scholia to the bT-scholia down to Porphyry's *Homeric Questions*), others focusing on minute formal analysis (prosody, grammar, and particularly etymology, with some new interpretive suggestions; he also has some notes on rhetoric).⁴¹¹ Writing far-removed from any scholarly ambition, Isaac is hardly ever interested in textual criticism (indeed he sometimes defends absurd or unmetrical readings): rather, he prefers to concentrate on ethical and theological aspects, deploring passions (e.g. Achilles' wrath on *Il.* 22.358), declaring his misogyny (against Hera's deceitful speech on *Il.* 16.458), denouncing Athena's treacherous nature (on *Il.* 22.228–31), pondering on the relationship between gods and mortals (on *Il.* 24.423), on the cosmic and ethical value of friendship (on *Il.* 23.105), on the nature of dreams (on *Il.* 1.63) etc.

409 The best edition is Rizzo [1971]. See also Wilson [1996²] 180.

410 The treatises are edited by Kindstrand [1979] and Hinck [1873] 57–88. On Isaac's *ekdosis* see Pontani [2006a], with the *editio princeps* of selected scholia.

411 His interest in prosopopoea surfaces e.g. in his note to *Il.* 8.183, where we read an uncommon reference to Lucian: *πολλάκις δὲ τοῖς ἀψύχοις λόγοις καὶ ἔναρθροι φωναὶ προσάπτονται, ὡς ὁ Λουκιανὸς παρίστησι τὴν κλίην καὶ τὸν λύχνον κατηγοροῦς τῶν τοῦ Μεγαπένθους ἀδικημάτων* (cf. *Catapl.* 27).

An important element of Isaac's exegesis is allegoresis, both physical and ethical, though he rarely attains a true degree of originality: his work thus has a more banal ring to it than John Galenus' Hesiodic soundings. Not comparable either in scope or in depth with Eustathius' *Parekbolai* (on which more below § 3.7), Isaac's *ekdosis* sometimes includes baffling items: such is the case, for instance, when he reads in *Il.* 24.214 a non-existent participle *ἐκαβιζόμενον* instead of the right *ἐκακίζόμενον* (referred to Hector), and explains it as follows:

συναρμοζόμενον τῷ ἐμῷ δηλαδή τῆς Ἑκάβης βουλήματι καὶ βουλευμάτι καὶ τῇ παρακλήσει τῇ βιασάσῃ τοῦτον ἐντὸς εἰσελθεῖν τῆς Τροίας καὶ ἀποσχέσθαι τοῦ Ἄρεος. τὸ δ' ἐκαβιζόμενον ῥῆμα πανευφύεστατόν τε καὶ τῶν ἄλλων τοῦ Ὀμήρου ῥημάτων καινοπρεπέστερον ἡμῖν ἔδοξεν

“complying with my (*i.e.* Hecuba's) intention and resolution, and with my plea that urged him to enter the walls of Troy and retire from the battle”. The verb *hekabizomenon* seemed to us extremely well-shaped and more original than the other Homeric verbs.

3.6 *John Tzetzes*

A layman having no direct professional link with the ecclesiastical or the imperial *milieu*, John Tzetzes (†1170 or 1180) was one of the most versatile and learned scholars in the Byzantine age, and in many ways an exception in the landscape of 12th-century culture. During his life, after working as a private teacher and subsequently falling into disgrace, he faced periods of severe economical difficulties,⁴¹² and found himself depending more than once on private patronage: the shrewdness and boldness exhibited when offering his services for money, a stern independence of judgment, a very idiosyncratic personality, all conjure up the complex character of a ‘freelance’ intellectual, “one of the first men in European society to live by his pen”,⁴¹³ ready to tackle the most diverse subjects in a highly sophisticated and original fashion.

A great expert on Homer, under the sponsorship of empress Bertha of Sulzbach and later of the court dignitary Constantine Cotertzes he produced two books of *Allegories on the Iliad* and *on the Odyssey* in decapentasyllables:⁴¹⁴ hexameters, instead, he used for a group of three poems summarising in a modern poetic fashion the essential information about the events of the Trojan

⁴¹² Grünbart [2005].

myth, named *Antehomerica*, *Homerica* and *Posthomerica*.⁴¹⁵ All these works were not strictly speaking scholarly achievements, but rather well-thought-out *divertissements* aiming to introduce an audience of non-specialists into the maeanders of Homeric mythology and ideology. The *Allegories*, an ambitious if partly unsystematic work, attempt to deal with all 48 books of Homer by singling out passages and lines suitable for a physical, a moral or an historical/pragmatic reading, with a special preference for the latter, the most interesting one for rhetoricians (we often find gods who become kings, divine ambassadors identified as letters, etc.).⁴¹⁶ This interpretive approach, while refraining from a consistent and overarching allegorical exegesis of either poem, did not require any deep Classical learning on the part of the audience: by neutralising the pagan element and at the same time stopping short of any Christianisation, by avoiding the dangers of atomisation and by contextualising every allegory within the framework of Homeric narration, by showing Homer as a ‘strong allegorist’ who intended to cover his discourse in implausible myths for reasons of *variatio* or of stylistic choice, Tzetzes succeeded in offering his amateur patrons an elegant and morally edifying version of the Trojan saga, and could thus appropriately claim that his approach grasped the truth of Homer’s poetic intention, surpassing earlier ones—Palaephatus, Heraclitus, Cornutus etc., the woman allegorist Demo (whom he paronomastically insults as a μῆμω “monkey”), and of course Psellus.

But John Tzetzes was above all the author of a very different and more ambitious sort of exegesis, clearly designed for a scholarly audience, and thus adequately displaying the author’s learning and his predisposition towards intellectual research and polemical attitudes. Of his commentary to the *Iliad*, only part of book 1 is preserved—indeed it is so detailed that one wonders if he ever got beyond that point:⁴¹⁷ as could be expected, Tzetzes virtually eclipses the original by treating it as a pretext for every kind of learned *excursus*, be it in the realm of prosody or etymology, of grammar or mythography, of ethical or allegorical interpretation. Whether or not this commentary was conceived and used in and for everyday school practice, it shows a plurality of approaches and offers a suitable floor for Tzetzes’ polemic against Psellos’ didactic methods, digressions and Christianising allegories: Homer may well be the source of all knowledge (including philosophy and the workings of the world), his myths are indeed rhetorical devices intended to entice the interest of the many in delving into hidden philosophical truths, but both Homer’s intellectual

415 Ed. Leone [1995].

417 Ed. Papatomopoulos [2007].

biography and the contents of *Iliad* and *Odyssey* must be reconstructed and understood *within* their historical context and ideological horizon, not in the arbitrary *vacuum* of a philosophical or theological stance.⁴¹⁸ In this respect, Tzetzes displays a very philological mind indeed.

Tzetzes is also the author of several *corpora* of scholia now lost or unpublished, e.g. to Sophocles,⁴¹⁹ to Oppian,⁴²⁰ to Porphyry's *Eisagoge*.⁴²¹ But he is best known for the impressive commentaries on Hesiod's *Works and Days*,⁴²² on Aristophanes' plays,⁴²³ and on Lycophron's *Alexandra*—the latter is attributed in the manuscripts to his brother Isaac, but was in fact certainly composed under John's direct scrutiny.⁴²⁴ All three works, preserved intact down to our day, address pivotal texts in the late antique and Byzantine curriculum (the fortune of Lycophron may sound unexpected to us, but it proceeds from the status of the *Alexandra* as a repository of exquisite mythographical learning, and as the only narrative poem in “dramatic” form),⁴²⁵ and they all interact with the respective *corpora* of *scholia vetera*. However, Tzetzes' attitude towards the heritage of ancient exegesis is rarely a passive one: the Hesiod commentary offers from the very beginning a proud statement of its novelty and originality, and is replete with critical remarks against the predecessor Proclus, who is reproached for his obscurity and manifold inadequacy.⁴²⁶ The remarkable blend of literary, allegorical, moral, etymological and mythographical learning in Tzetzes' writings on epic is well exemplified by the following passage on the Muses occurring in *Works and Days* 1 (29.13–30.1 Gaisford = ll. 109–33 Cardin):

ἀλλὰ Μοῦσα μὲν ἔστιν ἡ διὰ παιδεύσεως γνῶσις, οὐχ ἡ αὐτοφυῆς καὶ ἀδίδακτος φρόνησις. Μοῦσα δὲ λέγεται παρὰ τὸ ὑπὸ πάντων ἢ τῶν πλειόνων ζητεῖσθαι, ἢ παρὰ τὸ περὶ πολλῶν ζητεῖν καὶ πολυπραγμονεῖν συλληπτικῶς δὲ καὶ πληθυντικῶς ἢ Μοῦσα Μοῦσαι ἐκλήθη, καὶ ἑννέα εἶναι μυθεύονται, καὶ τρεῖς τρεῖς, ἤγουν πολλάκις πολλαί· ὁ γὰρ τρεῖς ἀριθμὸς πλήθους ἀρχή. κἄν γὰρ ἡ καθόλου γνῶσις μονοειδῆς ἔστι καὶ ἀπλή, ἀλλ' οὖν ταῖς κατὰ μέρος

ἐπιγνώσεσί τε καὶ ἐφευρέσειν εἰς ἄπειρον παρεκτείνεται· αἱ γὰρ ἐν ἀνθρώποις γνώσεις ἀμυδραὶ τε καὶ μερικώταται, καὶ οὐχ οἷα ἢ παρὰ τῷ θεῷ ἐνιαία τε καὶ ὀλόκληρος. γεννῶνται δὲ αἱ παρ' ἡμῖν αὐταὶ γνώσεις, αἱ Μοῦσαι, ἐν τῇ Πιερῷ, τῷ τοῦ Διὸς ἦτοι τῷ τοῦ νοδὸς οἰκητηρίῳ, τῷ περὶ τὴν κεφαλὴν ἡμῶν τόπῳ, ἔνθα τὰ πῖονα καὶ πιμελῆ καὶ ἀγχινοῦστατα ῥέουσι, τοῦ Διὸς ἐννέα ἡμέρας μιγέντος τῇ Μνημοσύνῃ, τουτέστι τοῦ νοδὸς πολλάκις ἀναπολήσαντος καὶ μνημονεύσαντος ἃ ἀνέγνωκε. γεννηθεῖσαι δ' αἱ γνώσεις ἐν τῇ τοιαύτῃ Πιερῷ, οὐκ ἐν τῷ ὄρει, χορεύουσιν ἐν τῷ Ἑλικῶνι, τὸν αὐτῶν πατέρα Δία ὑμνοῦσαι, τουτέστιν ἐγγραφεῖσαι ταῖς βίβλοις ἐλίσσονται καὶ περιφέρονται πανταχοῦ, δίκην χορείας κηρύττουσαι τὸν αὐτὰς γεννησάμενον νοῦν. καὶ οὕτω τὸ τοῦ νοδὸς ἐγὼ οἰκητήριον Πιερῷαν καλῶ, τὰς βίβλους δὲ Ἑλικῶνας, ἐν αἷς περιχορεύουσιν αἱ Μοῦσαι γνώσεις, καὶ τὰ συγγράμματα.

But “Muse” is the knowledge obtained through education, not the innate and untaught wisdom. “*Mousa*” is so called because it is sought by everyone or by the many, or because it inquires and investigates on many things. The Muse is called collectively “Muses” in the plural: they are nine, according to myth, namely thrice three, *i.e.* many times many, for number three is the beginning of multitude. And even if the general knowledge is uniform and simple, it extends itself endlessly through the partial discoveries and inventions: the doctrines of men are faint and very partial, not like the divine one which is unitary and entire. And those doctrines of ours, the Muses, are born in Pieria, the dwelling of Zeus (*i.e.* of the intellect), namely the place in our head whence flow the fertile, abundant [*piona, pimele*] and wittiest thoughts, through a nine-day intercourse of Zeus with Mnemosyne, *i.e.* through the intellect’s repetition and memorisation of what it has read. Being born in this true Pieria (not on the mountain), the doctrines dance on the Helicon, celebrating their father Zeus: this means that, being written down in books, they whirl [*helisson-tai*] and circulate everywhere as if in a dance, announcing the intellect that has given them life. And thus I call Pieria the dwelling of the intellect, and Helicon the books through which the doctrines (*i.e.* the Muses) circulate, and the literary works.

The scholia to Aristophanes are largely indebted to ancient *corpora*, but expand them through comparisons with many other ancient Greek poets and with Tzetzes’ contemporary linguistic (and sometimes political) reality. They show a conservative textual critic who rarely accepts new readings in his text (even when he owns better manuscripts and proves capable of assessing their value), and indulges in all sorts of antiquarian details and

linguistic observations; here too, Tzetzes often displays a polemical attitude,⁴²⁷ particularly—due perhaps to the very content of the plays—in his commentaries to the *Frogs* and the *Wealth*, which may on occasion become somewhat verbose. For example, he does not refrain from declaring his need to pad the text with additional comments in order to fill the page,⁴²⁸ or the fear of hostile acts by his rivals bent on robbing him of some works and ideas.⁴²⁹ While hardly ever offering something new as regards the interpretation of Aristophanes himself, Tzetzes' works embody a certain rendering of the Byzantine Atticist trend, and at the same time they give a sense of a deep personal engagement of the commentator with his favourite dramatic author.

Finally, the commentary on Lycophron is a genuine mine of mythographic lore, equipped with dozens of quotations or allusions from extant or lost poetical works (among them, a number of fragments of the Epic Cycle, and of lost Euripidean tragedies), and it displays thorough familiarity with a vast range of handbooks and lexica, but above all with the exegetical *corpora* to other authors, starting from Homer. Tzetzes' acquaintance with unusual texts is demonstrated by the fact that he was the last known reader of a book by the archaic lyric Hipponax,⁴³⁰ and was familiar with Ptolemy's *Geography* (well before Planudes' rediscovery), with Ptolemy Chennus' cumbersome *New History*, with the early books of Cassius Dio's historiographical work, with some of Callimachus' fragments. . . .⁴³¹ The Lycophron commentary, however, is in bad need of a new edition singling out and explaining Tzetzes' genuine additions to the bulk of ancient exegesis: it is also worth noting that when the Byzantine's contributions are overtly declared as such, they present his characteristic features, such as rationalising allegories and a polemical attitude against the author.⁴³²

Minor treatises were devoted by Tzetzes to various aspects of Greek literature and scholarship: his *Prolegomena on comedy*, which he prefaced to the commentary on Aristophanes, as well as important sections of the proems to other commentaries,⁴³³ include a sketch of the literary history of archaic

427 Hunger [1967b].

428 *On Aristophanes' Wealth* 677b and 833b; but this should be understood in Tzetzes' wider concern for the *mise en page* of his exegetical works, see e.g. *On Aristophanes' Frogs* 843b with Koster's note.

429 *On Aristophanes' Frogs* 897a; the same issue is mentioned in Tzetzes' *epist.* 42 Leone.

Greece (esp. lyric poetry and drama), a controversial history of the Pisistratean recension of the Homeric poems and of the translation of the Septuagint,⁴³⁴ and a detailed reconstruction of the library and the scholars in Hellenistic Alexandria (the author's interest in chronology emerges more fully in his bulky *Chiliades*—a sort of universal chronicle grown out of distinct scholia to his own letters—but also in other parts of his work).⁴³⁵ A didactic treatise in iambic trimeters on ancient Greek tragedy, largely devoted to its origins, structure, and metre, was compiled by Tzetzes on the basis of scholia to Euripides and Dionysius Thrax, the *Anonymus Parisinus* and other more remote sources.⁴³⁶ His inquiries into metre resulted in a short companion to the principal *cola*,⁴³⁷ but his brother Isaac surpassed him greatly in this respect: in his versified treatise on Pindar's odes⁴³⁸ Isaac paraphrased the metrical scholia but also displayed a certain familiarity with complex lyric systems and responsion,⁴³⁹ in an age when Byzantine doctrine on metre still widely relied on the rules put forth by Hephaestion's handbook, variously excerpted, commented, and amplified in the several, mostly anonymous short treatises devoted to the subject.⁴⁴⁰ Following in Isaac's footsteps, his later contemporary Trichas produced an influential *Synopsis of the nine metres*, based on the lines of a hymn to the Virgin.⁴⁴¹

We will never know what Tzetzes' "book of reasonings" (βιβλος τῶν λογισμῶν) looked like, if it ever existed: in a passage of his commentary on the *Frogs*,⁴⁴² he tells us it contained a critical discussion of 52 (!) Euripidean dramas and 119 books of various authors, while yet "other books bear my scattered reasonings on other wise authors", dealing with flaws, contradictions and various types of lapsus to be found in each of them. The latter statement has found some partial corroboration in the notes detected on two important manuscripts of ancient Greek historians: Tzetzes' autograph annotations on ms. Laur. 70.3 of Herodotus address issues of prosody, grammar, and accentuation,⁴⁴³

434 Ferreri [2002] 20–47.

435 *E.g. epist.* 81 Leone, where he correctly assigns Galen to the second century AD, or *Allegories on the Odyssey* 5.157–65, where he dates Theocritus in the time of Ptolemy Philadelphus, and Homer to a later date than David and Salomon.

while the fifty marginalia he penned in the margins of a late 9th-century codex of Thucydides (Heid. Pal. Gr. 252) display a greater ambition, and number among the most surprising, if unsystematic, philological achievements of the Comnenian age.⁴⁴⁴

In addition to the acute observation of some palaeographical peculiarities of the scribe (the position of final *sigma*, the old-fashioned system of accentuation and punctuation), Tzetzes offers here some more wide-ranging protests against the world of learning around him (we have mentioned his violent attacks on the new fashion of schedography and its popularity in the patriarchal academy: see also his note to Aristophanes' *Frogs* 1160a, p. 139 Koster), or against the obscurity (*asapheia*) or the syntactical soloecism of the author he is commenting on (notes on Thuc. 5.17.2 and 18.1–5). More specifically, when defending the reading *προφέρεται* against *προφέρετε* in Thuc. 1.123.2, he adds an extremely violent invective against those philologists (“offspring of pigs, of illiterate barbarians”) who correct sound texts without any guiding criterion, e.g. eliminating the psilosis from Ps.-Herodotus' *Life of Homer* (ἐφ' ἡμισείας, ἀφικνεῖται instead of the respective forms with π; he later pleads in favour of the manuscript's ἐπ' ἡμᾶς in the speech of the Thebans in 3.61.1—although he wonders why this is the only dialectal feature left in the entire speech):⁴⁴⁵

τὰς συγγραφὰς κρίνειν δὲ τεχνικῶ τρῶπι
 σκύλλου τε τουδὶ καὶ παλαιῶν καὶ νέων
 Τζέτζου μόνου χάρισμα δυσμαθεστάτου,
 ἢ φύρσις ὄνπερ καὶ χυδαιότης βίου
 ἐγγωνιώντα τῇ Στοᾷ καὶ τῇ Θόλῳ
 σύρει διαμπάξ, ἢ σοφὴ κουστωδία,
 ἀνθ' οὐπερ αὐτοῖς οὐδαμῶς συνειστρέχει
 ὅτι τέ φησι τεχνικῶς δέον γράφειν
 πεζοῖς ὁμοῦ λόγοις τε καὶ τοῖς ἐν μέτρῳ,
 φύρειν δὲ μηδὲν μηδαμοῦ τὰ τῆς τέχνης.

To judge according to the criteria of *technē* the writings / of this puppy [scil. Thucydides], of the ancients and the recent authors, / is the prerogative of Tzetzes, the most ignorant man: / as he crawls in a corner of the Stoa or of the Rotunda, / the learned guard, the coarse and confuse / mass of his time, targets and ridicules him / because he never rushes to chime

444 Full edition and commentary in Luzzatto [1999].

445 Luzzatto [1999] 48–59; see also below § 3.7.

in with their opinions, / and argues that one should write according to the *techne's* norm / both in poetry and in prose, / not polluting in any respect the principles of the *techne*.

Together with many other minor philological suggestions, some of which supported by references to his knowledge of literature (*e.g.* Euripides' *Alcmeon* quoted on Thuc. 2.102.5), or to unconventional etymologies (*Italia* from Latin *vitulus*, or *Gela* from river Gelas: the latter shows that he had access to a fuller copy of Stephanus of Byzantium's *Ethnika*), Tzetzes overtly addresses issues of manuscript transmission when praising the antiquity of manuscripts as a criterion for their textual reliability. This is the same idea lurking behind his lengthy metrical addition to the scholium on Aristophanes' *Wealth* 137 (p. 41.12–28 Massa Positano), against the βέβηλοι δυσμαθείς βιβλογράφοι who blemish recent codices:

ἐπεὶ δ' ὅς ἡμᾶς ἦν συνωθήσας γράφειν,
 πρῶτον παλαιᾶν οὐκ ἐφευρέ μοι βίβλον
 ἢ καὶ δύο ἢ τρεῖς ἔκ γε τῶν νεογράφων,
 ὡς ἄλλον ἐξ ἄλλης ἀνορθοίην στίχον,
 βίβλους ἐφευρῶν τῶν νεογράφων δύο . . .
 ὥρθουν μὲν ὥρθουν τὸ σκάφος τὸ τοῦ λόγου
 ἕως βραχὺ τὸ κύμα τῆς ἀτεχνίας.

because the man who had urged me to write / did not find for me an old book, / or at least two or three of the recent ones, / so that I may correct one line from one, one line from the other, / I then found two recent books . . . / and I redressed the ship of speech / until the wave of awkwardness remained tiny . . .

3.7 *Eustathius*

Tzetzes' aforementioned invective in the Thucydides notes was directed, amongst others, against the professors of the patriarchal school (the *Tholos* of St. Sophia) and of the imperial academy (the so-called Senate of the Philosophers, close to the Portico of Achilles). It is possible that Tzetzes included among his targets also the most distinguished figure among such professors, although we have no clear information about his personal and intellectual relationship with him: I am alluding to the other great Classical scholar of the Comnenian age, perhaps the most learned man of the Byzantine millennium, namely archbishop Eustathius of Thessalonica (ca. 1115–1195/96).

Eustathius spent the first part of his life in the capital as a private teacher, then from 1168 onwards as a professor of rhetoric (*maistor ton rhetoron*) in the patriarchal academy and as the organiser of an important reading circle; in 1174 (or 1177) he was appointed archbishop of Thessalonica, the city whose surrender to the Latin invasion in 1185 he described in a detailed historical monograph.⁴⁴⁶ His letters and his *opera minora*, while dealing chiefly with moral, ecclesiastical or theological issues, show a vast amount of Classical learning, which he regularly manages to prevent from clashing with Christian ethics and ideology. In this respect, Eustathius appears as one of the most paradigmatic examples of Byzantine Christian humanism, all the more so as he proves conversant with an incredible number of ancient authors and texts. His pupil Michael Choniates, in a heartfelt eulogy of Eustathius' extraordinary moral and intellectual qualities, affirmed that he "subordinated Greek philosophy to the divine Christian wisdom like a serious servant to a noble landlady."⁴⁴⁷

Eustathius' outstanding place in the history of scholarship is ensured, once again, by his commentaries: there is scanty evidence about his notes to Oppian,⁴⁴⁸ Aristophanes,⁴⁴⁹ or the *Greek Anthology*,⁴⁵⁰ and we will overlook here his (as yet largely unpublished) exegesis on John the Damascene's Iambic canon for Pentecost.⁴⁵¹ The most important documents of his scholarly work are definitely his commentaries on Pindar, on Dionysius the Periegete and on the Homeric poems.

Of the Pindar commentary, probably the earliest in date, only the proem is extant, and it is fair to wonder if he ever wrote down in full the entire exegesis, or if it remained in the state of an unsystematic set of notes from his lectures. Be that as it may, even the proem⁴⁵² offers some penetrating insights on Pindar's poetic style (his dialect, the compound adjectives, the hyperbata, the profusion of metaphors and allegories, the *ekphraseis*, the frequent use of digressions and *gnomai*, obscurity as a *Stilprinzip*), as well

446 On Eustathius' biography see Kolovou [2006] 3–5.

447 Lampros [1879] 283–306: 304, ll. 6–7 (σοι) ὑποκλίναντι τὴν Ἑλληνα φιλοσοφίαν τῇ χριστιανικῇ θεοσοφίᾳ ὅσα καὶ σεμνῆ δεσποίνῃ σπουδαίαν θεράπειναν.

449 Koster-Holwerda [1954].

450 His scholia to the epigrams allegedly featured in a single manuscript destroyed in the fire of the Escorial library, but the reliability of the account is doubtful: Browning [1962–1963] I, 187.

451 See Ronchey [1991], esp. 153–155 for Eustathius' discussion of the authenticity of the canon on stylistic and philological grounds. An edition, by S. Ronchey and P. Cesaretti, is forthcoming [Berlin-New York 2014].

452 Negri [2000]; Kambylis [1991a] and [1991b].

as sound information on metre, music and performance, and various bio-bibliographical data on the author, mostly taken over from the ancient *Lives* and from the scholia. Eustathius' explanation for the survival of the epinicians to the detriment of Pindar's other poetical output overlaps with that suggested by some modern specialists.⁴⁵³

οἱ καὶ περιάγονται μάλιστα διὰ τὸ ἀνθρωπικώτεροι εἶναι καὶ ὀλιγόμυθοι καὶ μηδὲ πάνυ ἔχειν ἀσαφῶς κατὰ γε ἄλλα

they [*scil.* the epinicians] are especially popular because they are more human, concise and otherwise relatively less obscure.

Furthermore, in his stylistic observations he does not refrain from comparing Pindar's poetic diction with the prose style of Basil or Gregory of Nazianzus, *e.g.* when noting the use of a simple instead of a double negative particle, as in νόσοι οὔτε γήρας (*Pythian* 10.41–42).⁴⁵⁴

Eustathius' commentary on Dionysius the Periegete,⁴⁵⁵ written for the court dignitary John Doukas before his appointment to the archbishopric of Thessalonica but already containing references to the Homeric *Parekbolai*, concentrates chiefly on matters geographical, *i.e.* on the identification and discussion of toponyms, both on the linguistic and on the etymological and mythographical niveau. Eustathius' intention, as stated in the proem (pp. 205–7 Müller), is to clarify Dionysius' poetic style without correcting or changing the data it conveys, but simply amplifying the sections in which the author deals too briefly with certain areas of the world, and above all referring to other Classical authors who mention the same places, from the more 'obvious' Herodotus, Aristotle, Strabo and Arrian, down to poets like Homer, Pindar, the tragedians, Lycophron and Apollonius Rhodius: the notes on the Nile (*On Dionysius the Periegete* 222–229, pp. 256–258 Müller), on Dodona (*On Dion. Per.* 431, pp. 298–300 Müller) and on the Cyclades (*On Dion. Per.* 525, pp. 317–19 Müller) are particularly impressive for their learning and their multiple approach. If more technical in scope, and also partly relying on the ancient scholia (and on Stephanus of Byzantium), this commentary stands out for the amount of information it conveys, which could be especially useful to the advanced student.

453 *On Pindar* 34.1, see Negri [2000] 135–149.

454 See Eust. *On Pindar* 12.1–2: the references, undetected by Negri and Kambylis, are to Basil *Homily 2 (On Fasting)*, PG 31.192.10–12; Greg. Naz. *Funeral oration for Basil* 1.5.4 Boulenger.

455 Ed. Mueller [1861] 201–407; see Diller [1975] 181–207 and Cassella [2003].

The achievement for which Eustathius will be remembered forever in the history of classical scholarship is his huge commentary (*parekbolai*, properly speaking excerpts from exegetical works, or select annotations)⁴⁵⁶ to Homer's *Iliad* and *Odyssey*. One first interesting aspect of this bulky work is that we own Eustathius' autograph copies (one for the *Iliad*, ms. Laur. 59.2–3, and two for the *Odyssey*, Marc. Gr. 460 and Par. Gr. 2702), which give us an unprecedented snapshot of the *atelier* of a Byzantine scholar, and of the way he constantly added new findings in the form of parchment strips glued to the folia (in the *Iliad* manuscript), assembling scattered notes in a coherent exegetical discourse, or putting together different sets of quires in the various stages of the manuscripts' production (this is particularly evident for the *Odyssey*):⁴⁵⁷ it is clear that the author, albeit involved in very intense political and ecclesiastical activity, devoted many years of his long life to this enterprise.

Eustathius' main goal in the *parekbolai* is of a didactic nature: rejecting the sort of fanciful writings produced by the *kompsoi*, the "refined ones" (p. 2.20 van der Valk: Tzetzes' *Allegories* may be intended), he declares his essentially scientific purpose, and his intention to introduce the friends of his reading circle and above all his advanced students of rhetoric to the peculiarities and to the most uncommon features of the Homeric text:⁴⁵⁸

ἦν δὲ τὸ φιλικὸν θέλημα διὰ τῆς Ἰλιάδος ἐλθεῖν καὶ ἐκπορίσασθαι τὰ χρήσιμα τῷ διεξοδεύοντι, οὐ λέγω ἀνδρὶ λογίῳ, ἐκεῖνον γὰρ οὐδὲν ἂν τῶν τοιούτων εἰκὸς λαμβάνειν, ἀλλὰ νέῳ ἄρτι μαθητὴν τυχὸν δὲ καὶ μαθόντι μὲν, δεομένῳ δὲ ἀναμνήσεως

my heartfelt aim was to stroll through the *Iliad* and provide what is useful to the reader, not to the learned man (for it is unlikely that he should ignore any of these things), but to the young man who is learning at this moment, or perhaps has already learnt but needs some reminders.

This is why he devotes pages and pages to a systematic examination of even apparently irrelevant orthographical and grammatical peculiarities, expanding or developing morphological rules and stylistic principles from the minute consideration of individual passages or words; accentuation, prosody, etymology, are all fields Eustathius covers with the help of an amazing set of earlier

456 On this term, see Kambylis [1991a] 15–16. Kolovou [2012] 151–153.

457 Martini [1907], Pontani [2000], and above all the revealing codicological analysis by Cullhed [2012].

458 *Commentary on the Iliad* 2.21–23 (p. 3.5–8 van der Valk). See Browning [1992a] 141–142.

manuals or lexica, and above all by drawing extensively on various classes of Homeric scholia. The relationship between Eustathius and ancient scholia is undoubtedly highly complex, for it is clear that in the *Iliad* he had access to a collection called “Apion and Herodorus”, probably the very commentary carried by the ancestor of Venetus A (Erbse’s ms. *a*), and to a copy of the so-called “exegetical” scholia (*c* = bT),⁴⁵⁹ which makes him a primary witness in the *constitutio textus* of the *Iliad* scholia, but also a very interesting case-study of how the scholia could be re-used and appropriated in the frame of an autonomous scholarly discourse.⁴⁶⁰ In the *Odyssey*, he probably did not rely on any fuller scholiastic source than those still extant now, but there too one is struck by his skilful procedure of presenting the wisdom of “the ancients” (οἱ παλαιοί) and interweaving it with quotations from lexica or ancient grammarians.⁴⁶¹

In his immense editorial task on the *Iliad* commentary, Marchinus van der Valk has analysed in depth the incredible wealth of Eustathius’ sources, which represent in and of themselves an anthology of the most important scholarly tools that were in use in 12th-century Byzantium.⁴⁶² Leaving aside the technical manuals (Dionysius Thrax, Herodian, Apollonius Dyscolus, Choeroboscus, the Atticist and etymologic lexica, the scholia to Dionysius Thrax etc.) and the scholiastic *corpora* to virtually all ancient texts, the most recurrent authors quoted in the *Parekbolai* are Strabo (ὁ γεωγράφος) and Stephanus of Byzantium (rather than Pausanias) for geographical issues, Herodotus for historical comparisons, Hermogenes (ὁ ῥήτωρ) for rhetorical terminology and judgments, Athenaeus for poetical fragments and *Realien*. But of course Eustathius also had access to a number of works that we no longer possess (Strabo’s book 7; Arrian’s *Bithyniaka*; Ptolemy Chennus’ *New History*; Euripides’ ‘alphabetical’ plays, which were also known to Tzetzes),⁴⁶³ even if the enthusiasm for *e.g.* his quotation of the famous fr. 34V of Sappho (*in Il.* 729.22) should be attuned to the possibility that he may have consulted an anthology carrying the lines rather than a complete copy of the poet.⁴⁶⁴ It must be borne in mind, however, that any reference to poets ‘younger’ than Homer (the so-called *neoterōi*) is not intended—much in Aristarchus’ fashion—to clarify Homer’s text, but rather to gratify the pupils with pieces of more or less rare ancient doctrine.

459 Erbse [1960] 123–173.

460 Kolovou [2012].

461 Pontani [2005b] 170–178.

464 Pontani [2001] 245–248.

Not especially conversant with textual criticism (Maas' idea that he might have restored the text of Athenaeus when producing its epitome has been proved to be wrong),⁴⁶⁵ careful but sometimes enthusiastic with allegorical interpretation (especially when applied to traditional myths rather than to a poet's isolated fanciful imagination),⁴⁶⁶ Eustathius strikes the modern reader for his immense devotion to study, and his manifold interest in ancient life and literature. Rhetorical, allegorical and grammatical explanations occur freely here and there, and individual passages are sometimes first summarised and briefly commented on from an overall perspective and then taken up line by line. This procedure responds to the different needs inherent in Eustathius' commentary: on the one hand the task of locating and explaining passages of a complex poetical text, on the other the preparation of this text as a potential source of quotation and imitation for the pupils. Hence the importance of Hermogenian terminology:⁴⁶⁷ Eustathius' rhetorical comments on Homer, as recent research has shown, are not purely erudite notes on a dead author, but they rather presuppose a widespread mimetic practice on the part of Byzantine writers, in which both the stylistic features and the mythological content of the Homeric text are paramount to the refinement of oratorical or historiographical prose.⁴⁶⁸

The use of allegory in Eustathius is not primarily defensive for confessional purposes, and never aims at Christianising the poem (as in Psellus or to a certain extent in Galenus): rather, while refraining from a purely contextual or rhetorical rendering of the myths involved, Eustathius sticks to the general credibility of Homer's plot,⁴⁶⁹ but adds interpretive dimensions to a text whose multiple hermeneutic facets the pupils were invited to discover. This is why, even in the wider allegorical framework presenting, for instance, Penelope as philosophy (the homeland of the spiritual journey of Odysseus/man), in several cases various diverging types of allegoresis can be juxtaposed without choosing between them (Calypso as matter, bodily life, or astronomy; Proteus as a dancer, the idea of friendship, primal matter, or number ten).⁴⁷⁰

Eustathius' guiding principle is in fact the utility of Classical works for the education of the young. The "utility" (ὠφέλεια) of the poem does not reside in its alleged hidden Christian message, but more deeply in a moral reading,

465 Van der Valk I [1971] lii–lvi; Erbse [1950] 75–92; A. Pontani [1995a] 341–342.

which of course presupposes a monotheistic context but more closely involves Homer's role as a paradigm of style and as a teacher of ethical behaviour. Although it is sometimes difficult to follow the archbishop in his convoluted accumulations of information, complicated grammatical lists (for onomatopoeic words, double-sensed words, compound words, metaplasmatic words etc.) and elaborate etymological and grammatical reasonings (he sometimes indulges in practices not too remote from epimerisms or schedography), one must consider that his enthusiasm for the fresh value of ancient poetry, as well as his frequent comparisons with the linguistic and ethnic reality of his own day,⁴⁷¹ are part and parcel of the same critical dialogue with Classical antiquity that we have identified as a hallmark of the Comnenian age.

καὶ τὰ χρήσιμα κατὰ ἀκολουθίαν εὐσυνθέτως ἐκλέγονται, οὐχ ὥστε μέντοι τὰ πάντων ἐνταῦθα εἶναι τῶν πονησαμένων εἰς τὸν ποιητὴν (τοῦτο γὰρ καὶ μόχθος μάταιος καὶ περιττός καὶ οὐδὲ ῥᾶον ἀνύσιμος), ἀλλ' ὥστε τὸν γινώσκειν ἐθέλοντα εὐρίσκειν κατὰ τόπον εὐτάκτως τὰ μὴ παρέλκοντα, οἶον· ἐννοίας εὐχρήστους τῷ καταλογάδῃ γράφοντι καὶ βουλομένῳ ῥητορικὰς ποιεῖν εὐκαίρως παραπλοκάς· μεθόδους, ἐξ ὧν καὶ ὠφελεῖται τις μιμεῖσθαι θέλων καὶ τῆς εὐτεχνίας θαυμάζει τὸν ποιητὴν· λέξεις, τὰς πλείους μὲν ὡς πεζῶ λόγῳ προσηκούσας, πολλάκις δὲ καὶ σκληρὰς καὶ τραχείας καὶ ποιητικὰς, ἅς εἰ μὴ ἀναπτύξει τις ἐτυμολογικώτερον οὐκ εὐγνώστον ἔσται τὸ χωρίον, ὃ παρεκβέβληται· γνώμας, αἷς καὶ αὐταῖς πολλαχοῦ ἡ Ὀμηρικὴ σεμνύνεται ποίησις· ἱστορίας, οὐ μόνον αἷς ὁ ποιητὴς χράται κατὰ κανόνα οἰκεῖον, ἀλλ' ἔστιν ὅπου καὶ πλατύτερον, ὡς ἐξ ὧν ἱστόρησαν ἕτεροι· ἔτι δὲ μύθους, τοὺς μὲν ἀκράτους καὶ ἀθεραπεύτους καὶ κατὰ μόνον θεωρουμένους τὸ προφερόμενον, τοὺς δὲ καὶ μετὰ θεραπείας ἀλληγορικῆς εἶτε καὶ ἀναγωγικῆς.⁴⁷²

and we select in a reasonable order the useful things, so as not to fit in here the words of all those who have worked on the poet (this would be a useless and superfluous task, and one not easy to accomplish), but to let the curious find in the appropriate place what is necessary, such as for example: ideas useful for the writer of prose wishing to interweave poetic quotations in the right place; expressive modes that are precious for those who wish to imitate and inspire admiration for the poet's art; words, most of which suitable for prose, but often also the harder, more difficult and poetic ones, which have to be explained etymologically lest the passage under discussion become obscure; maxims, which in several

471 Koukoules [1950] and [1953].

472 *Commentary on the Iliad* 2.26–36.

places lend nobility to Homer's poetry; mythical stories, not only those told by the poet in a peculiar manner, but sometimes even more widely, as they emerge from the accounts of other writers; finally myths, some of which untempered, incurable and considered only at face value, others, on the other hand, equipped with an allegorical or anagogic treatment.

The importance of Eustathius' teaching and cultural activity must have been indeed remarkable in the latter part of the Comnenian age: two learned brothers acquired proficiency in the realm of letters precisely thanks to their daily *synanagnoseis* ("common readings") with the future archbishop. I am referring to Michael and Nicetas Choniates, the former himself an archbishop of Athens since 1182, the latter a writer of history and theology. Neither was a classical scholar, but Nicetas' historical prose is perhaps the most sophisticated example of the adoption of Classical quotations and models in Byzantine prose, as recent studies have shown, with regard, for instance, to the depiction of emperor Andronicus Comnenus in Odyssean terms,⁴⁷³ or even on a more down-to-earth lexical level.⁴⁷⁴

Nicetas' brother, Michael Choniates (1138–1222), overtly describes in his *epist.* 102 Kolovou his own participation in a reading circle of the capital, and recalls Eustathius' contributions of doctrine and liveliness to these meetings.⁴⁷⁵ Michael's special feeling for antiquity is revealed by a long elegy on the ruins of Athens, perhaps one of the most important pieces on this subject in the whole of extant Byzantine literature.⁴⁷⁶ His entire *oeuvre* is permeated by a sense of Christian humanism coloured by Stoic accents and by a strong fidelity to Atticist style, as well as by a constant dialogue between his Greek, Roman and Christian backgrounds. Michael's proximity to antiquity is shown *inter alia* by the fact that he is the last known man to quote at first hand Callimachus' *Hecale* and *Aitia*, yielding not only invaluable elements for the reconstruction of the epyllion, but also one of the most remarkable instances of stylistic and rhetorical appropriation of a Hellenistic author in Byzantium. As we learn from his letters, Michael owned a large personal library, which included Euclid, Thucydides and other Classical authors: it might well have suffered losses after

473 Saxey [2009]; Gaul [2003]; Cullhed [2014] 79–83.

474 *E.g.* when in a very dramatic scene of the city's fall, an old man is presented as ὄλοφύρομενος καὶ τῷ πηλῷ φυρόμενος (19.3.6, p. 590.6 van Dieten), with an etymological game that clearly derives from Eustathius *Il.* 696.18; for similar cases see the commentary by A. Pontani [1999] and [2014].

475 On Michael's intellectual biography see Kolovou [1999] 201–297.

476 Rhoby [2003] 24–72; Pontani [2002] 46–48; Kaldellis [2007] 317–334 and [2009b] 145–165.

the fall of Athens to the Latins in 1205, but it certainly subsisted after that date during Michael's exile on the island of Keos—indeed most of the Callimachean quotations in his works belong to the second decade of the 13th century.⁴⁷⁷

3.8 *The Comnenian Age: Manuscripts*

It is a reasonable expectation that such a productive age in the field of scholarship should also see the production of a large number of manuscripts, especially of Classical authors; recent studies have detected a slow but steady evolution of Greek handwriting (both in books and in documents) around and immediately after the cultural change brought about by the Comnenian dynasty.⁴⁷⁸ Indeed, we know that book-collecting was a popular activity, which kept even the patriarch John IX Agapetus (1111–1134) busy, if we are to trust the encomium of Theodore Prodromus crediting his library with no less than a copy of Empedocles.⁴⁷⁹

Quite surprisingly, however, aside from the autographs of Eustathius and the books owned by Tzetzes, there is a relatively limited amount of Greek manuscripts (and particularly of philologically important manuscripts of Classical authors) that can safely be dated to this age. Part of the problem may depend on our inability to distinguish, on palaeographical grounds, 12th-century codices from later ones: this would explain recent attempts to predate books previously thought to belong to the Palaeologan age, such as Par. Gr. 1759 of Diogenes Laertius, and Laur. 57.40 of Psellus' works.⁴⁸⁰

Perhaps the most interesting of these cases is ms. Ambr. C 222 inf., an illustrious codex carrying a first-rate recension of Pindar's epinicians, as well as a remarkable sylloge of dramatic (Aeschylus, Sophocles, Aristophanes, Lycophron) and narrative poetry (Hesiod, Oppian, Dionysius the Periegete, Aratus), and a number of other poetical and grammatical texts. Only a recent and thoughtful study⁴⁸¹ has managed to correct the generally accepted dating to the 13th/14th century, and to show that the codex was in fact written in 1185–1195 by a pupil and junior assistant of John Tzetzes and John Camaterus. This scribe has so far escaped identification, but his philological performance, whatever his personal contribution to the textual quality of the Ambrosianus, commands admiration, and probably proceeds from his idea of the purpose of

477 Pontani [2011b] 115–117, with further bibliography; Wilson [1996²] 204–206.

480 Cavallo [2000] 231–233 lists several manuscripts, arranged according to their paleographical *facies*.

481 Mazzucchi [2003] and [2004].

culture as allowing men “to have a mind sharp enough to produce thoughts, and a tongue ready to express what has been thought”.⁴⁸² One wonders if the note left by this scribe on f. 339r describes his own editorial work or that of his direct source, but in either case it shows the philological consciousness lying behind the idea of correcting a text with the aid of the indirect tradition and of metrical treatises:⁴⁸³

σημείωσαι ὅτι ὁ τοιοῦτος Θεόκριτος ὠρθώθη μετὰ τοῦ βαϊούλου τοῦ Καλαβροῦ βιβλίου, τοῦ σχολάζοντος εἰς τὸν Ψελλόν. ὁ δὲ Περιηγητής, ὠρθώθη ἀπὸ τοῦ Στεφανίτζη τοῦ περιηγητοῦ. ὁ Πίνδαρος ἐκ τοῦ Τριχᾶ.

Note that this Theocritus was corrected against the book of Calabrus the paedagogue, the pupil of Psellus. The Periegete, on the other hand, was corrected by comparing the text with Stephanitzes the Periegete [*scil.* Stephanus of Byzantium], and Pindar from Trichas.

One of the hands found in Ambr. C 222 inf. appears together with other scribes in a series of 21 manuscripts produced by the so-called “scriptorium of Ioannikios”.⁴⁸⁴ The only known scribe of this group, Ioannikios, must have been the leading figure of a team specialised in manuscripts of philosophical and medical content (Aristotle, Galen, Aetius, Paul of Aegina), while showing an interest for literary authors as well, *e.g.* Sophocles and Euripides (the important Laur. 31.10, with scholia), Homer’s *Iliad* (Vat. Gr. 1319) and Apollodorus (Par. Gr. 2722, ff. 16–32). Earlier research had connected this activity with Southern Italy, because five of the codices identified so far bear the mark of Burgundio of Pisa, an Italian scholar and translator who spent his life between Constantinople, Messina and his hometown (more on him below § 3.9); however, palaeographical and codicological analysis has proved inconclusive, and the exact collocation of this very interesting enterprise still remains *sub iudice*; an interesting case has been made for Constantinople, in connection with the local interest in Aristotelian philosophy in the early 12th century.⁴⁸⁵

482 Mazzucchi [2004] 417: τὸ τὸν νοῦν μὲν πρὸς νοημάτων τόκον εὐθηκτον σχεῖν τὴν δὲ γλώτταν, πρὸς τὴν τῶν νοουμένων ἔκφρασιν εὐστροφον (the note, actually excerpted from a text by Christophorus Zotrus, occurs on f. 337r).

483 Mazzucchi [2004] 433–434 (f. 339r).

484 For recent overviews, and description of the mss., see Degni [2008], [2010] and [2012].

485 See most recently Baldi [2011].

3.9 *Italy*

Ioannikios' manuscripts are linked to Burgundio of Pisa, one of the learned Westerners who spent part of their careers in Constantinople, in an age when Venice, Genoa and other cities intensified their commercial links with the Byzantine Empire.⁴⁸⁶ Burgundio translated the *Exposition of the Orthodox Faith* by John of Damascus as well as other patristic treatises, but also works of Galen and Nemesius, and Aristotle's *Meteorologica*. Other outstanding members of this heteroclite group of Italians are James of Venice, to whom the West owes the first systematic activity of translation of Aristotle from the Greek rather than from the Arabic,⁴⁸⁷ and Moses of Bergamo, a book collector and translator of Greek ecclesiastical and grammatical works (including a treatise on the oblique case of nouns like *χαρρακτήρ*), whose hand has recently been identified as the annotator and interlinear glossator of Theognis in the glorious ms. Par. Suppl. Gr. 388.⁴⁸⁸ Burgundio, James and Moses took part as interpreters and experts in the famous theological dispute of 1136 between patriarch Nicetas and Anselm of Havelberg in Constantinople.⁴⁸⁹ Other scholars and translators, particularly keen on ecclesiastical issues, were to follow in later decades, among them Leo Tuscus and Hugo Etherianus.⁴⁹⁰

But, as we have seen above (§ 2.6), first-hand Greek doctrine did circulate on the Italian soil: whether or not the Ioannikios manuscripts belong to Southern Italy, a brief note must be devoted here to Greek written culture in Sicily and Apulia between the 11th and the 12th century. First of all, once more we find an absolute predominance of liturgical and theological manuscripts; in the face of this, scholars have uttered conflicting judgments about the range and the extent of the circulation of Classical texts in the area. The optimistic view insists on the continuity of some textual traditions preserved in *Magna Graecia* since antiquity;⁴⁹¹ a more painstaking and more cautious analysis stresses the persistent incompatibility between monastic culture and pagan literature (even in the most important monasteries such as the Patir at Rossano or San Salvatore at Messina), and the paucity of manuscripts of Classical authors that can be safely ascribed to Southern Italy before the early 13th century (other

than the always popular 'technical' treatises of medicine, law, mathematics and grammar, see above § 2.6), be it in the Salento, or in Sicily and Calabria.⁴⁹²

The Norman conquest of Sicily, completed in 1079, has often been regarded as the starting-point of a cultural 'Renaissance' (the very adoption of this term is, once again, itself debatable), and this idea might well be argued in some respects: on the other hand, as far as the copy of codices of pagan authors and the emergence of full-fledged scholarly circles or personalities is concerned, the image of a 12th-century Renaissance seems to rest on an altogether shaky ground.⁴⁹³ Of course, some profane manuscripts were copied in Calabria and Sicily, though probably less by initiative of the state than of private scholars or families (I have in mind here the important ms. Messina, Fondo Vecchio 11 of Hesiod's *Works and Days* with conspicuous Tzetzian scholia, or Neap. III.B.29 of Diogenes Laertius, or the Madrid Skylitzes).⁴⁹⁴ But rather than favouring the development of Greek studies *per se*, and despite an overall negative attitude towards the Greek-speaking officers and ecclesiastical hierarchy, the Normans promoted the translation into Latin of some Greek works, above all philosophical texts: two Platonic dialogues (*Meno* and *Phaedo*), Aristotle's *Meteorology* and (perhaps) Diogenes Laertius' *Lives of the Philosophers* were translated by Henricus Aristippus, a cultivated officer at the Norman court; at the same place and time, Eugenius of Palermo rendered into Latin Ptolemy's *Optic* (and supervised a partial translation of the *Almagest*), besides writing Greek iambic verse that displays a long-standing dialogue with ancient Greek models.⁴⁹⁵

While following up on an earlier tradition of Latin versions of Greek medical treatises,⁴⁹⁶ the translators at the Norman court were members of a wider (if scattered and not institutionally or academically organised) class of intellectuals with a certain *penchant* for classical learning; perhaps the most widely debated and significant figure of this kind is Philip-Philagathus of Cerami, a Calabrian monk and renowned homilete, long active in Northern Sicily in the

492 Lucà [2012b] and [1993] respectively. See also Lucà [1990]; Jacob [2002].

493 See Lucà [1993] 29–30 and especially 63–88, with a painstaking examination of the cultural *milieu* and the manuscripts (though he is wrong on Philip-Philagathus, see below). Some form of philological attention was devoted to Christian texts (see *e.g.* Lucà [1989]), but the Norman domination did not bring about a flourishing of schools, academies or cultural activities in Southern Italy.

mid-12th century. This man stands out for his acquaintance with Classical texts (from Homer to Plato, from Menander to Lucian to late Greek rhetors), which emerges both from the learned quotations, the philosophical depth and the erudite style of his homilies,⁴⁹⁷ and from the most surprising of his writings, namely a complex allegorical introduction to Heliodorus' novel, preserved in the Otrantine ms. Marc. Gr. 410, copied shortly after Philip's times.⁴⁹⁸ This allegory in Neoplatonic fashion,⁴⁹⁹ written upon the request of some students, is staged as an educational dialogue between Philip and his students, intended to show that the *Aethiopica*, albeit clad in a pagan atmosphere, are actually concerned with the fight between good and evil and the contemplation (θεωρία) of God, whereby the characters Theagenes and Chariclea represent models of *sophrosyne*, and Kalasiris (etymologically, ὁ εἰς τὰ καλὰ σύρων) the hierophant who "drags" mankind "towards the good".

By the late 12th century, Sicily and Calabria lost ground as opposed to the rapid ascent of southern Apulia, which became a more solid hearth for the transmission of the Greek written heritage. A paramount role was played in this context by the *hegoumenos* Nicholas-Nectarius (ca. 1155/60–1235) at St. Nicholas of Casole, in the region of Otranto.⁵⁰⁰ Active as a diplomat and an interpreter, he travelled extensively in Italy and to Byzantium, wrote epigrams and theological treatises, annotated manuscripts (most notably Par. Gr. 3 of the *Old Testament*), and devoted efforts to the creation of a rich library, also seeking to promote dialogue with the Roman Catholic Church, and to forge a Salentine circle of Greek-speaking poets and intellectuals. One of Nicholas' pupils, Palaganus of Otranto, is the *concepteur* of two outstanding manuscripts, namely the *codex unicus* of Aristaenetos' *Letters* (Vind. phil. Gr. 310) and the oldest preserved *Odyssea cum scholiis* (Heid. Pal. Gr. 45, anno 1201). The latter, the product of a team-work of eight scribes, carries an autograph epigram by Palaganus (the son of the powerful *komes* Pelegrinus) and a colophon written by the hand of Nicholas-Nectarius, and it displays on its margins chiefly glossographical and mythographical material, partly drawn from the

exegetical works of John Tzetzes (*e.g.* to Lycophron's *Alexandra*).⁵⁰¹ This state of affairs is particularly revealing, in that it shows that in the early years of the 13th century Otranto hosted an organised *scriptorium* devoted to the copying of Classical texts, probably in a scholastic context, and that Salentine scholars at such an early date were already familiar with the work of John Tzetzes, who had been active in Constantinople just a few decades before.

4 From Nicaea to the Palaeologan Renaissance

4.1 *Nicaea*

Nicetas Choniates' account of the dramatic siege and fall of Constantinople to the Latins in 1204 (books 17–19), weaves together Biblical tones and Classical reminiscences, and makes intense appeals to God's justice and to ancient Nemesis, as well as incorporating hints of the disintegration of Christian icons and the fusion of pagan statues in the Hippodrome.⁵⁰² Having inspired Edward Gibbon's image of the massive destruction of the books and the symbols of learning in the aftermath of the fall,⁵⁰³ Nicetas' pages on the Fourth Crusade serve as an excellent introduction to the long period (1204–1261) of the Latin Empire of Constantinople, when the Byzantine court was exiled in the provincial city of Nicaea, present-day Iznik.⁵⁰⁴ The need for a more immaterial and at the same time more substantial foundation of a national identity, as well as the growing and increasingly conflictual relations with the Latin West, prompted—in the wake of a wider trend of which more above in § 3.3—a further attachment to Hellenic identity, and particularly to the heritage of ancient Greek language, art and culture.⁵⁰⁵

Naturally, intellectual life in Nicaea could not immediately be revived. First of all, there was a predictable shortage of books: though no estimate can be made, a number of texts must have gone lost in 1204,⁵⁰⁶ and the manuscript production that can be safely assigned to the Nicaean period is extremely

501 Arnesano-Sciarrà [2010] 433–440; Pontani [2005b] 218–225; Jacob [1988]; Irigoien [1969] 51 ([1980] 248–249).

scanty, especially as far as the profane authors are concerned—and in this case, grammars, lexica and rhetorical handbooks once again prevailed, with very little room left for literary texts.⁵⁰⁷ But the most serious problem concerned intellectuals and scholars: some of them, starting from Nicetas Choniates and Nicholas Mesarites, found refuge in Nicaea upon fleeing the capital, but a new generation had to be raised and trained in order to replace them, and this was the long-term project of two important emperors such as John Vatatzes (1222–1254) and Theodore II Lascaris (1254–1258).

The latter must be regarded not only as a man of rhetorical and intellectual standing (he wrote short texts on rhetoric and annotated a copy of Aristotle's *Physics* and *On Heavens*),⁵⁰⁸ and a keen admirer of the *grandeur* of ancient Greece (his *epist.* 80 Festa is a tribute to the ruins of Pergamon),⁵⁰⁹ but also—in the wake of his predecessor, who had founded libraries on every art and subject in provincial towns⁵¹⁰—as a collector of books which he then left at the disposal of interested readers or students,⁵¹¹ and the promoter of a school of grammar and rhetoric in the newly restored premises of St. Tryphon in Nicaea. The teachers in this school (we are told in Theodore's *epist.* 217 Festa, which also includes details about the curriculum) were a certain Andronikos Phrankopoulos and a somewhat better known Michael Kakos Senacherim, who in addition to attaining the grade of *protasekretis* in the imperial administration also devoted efforts to the exegesis of Homer, as can be proved by a handful of scholia to the *Iliad* and *Odyssey* attributed to him in manuscripts.⁵¹²

In the early 1240s, Theodore Lascaris had been the pupil of Nicephorus Blemmydes (1197–1272), a theologian and an ascetic, but above all the most important teacher and scholar of philosophy in the entire Nicaean age.⁵¹³ We have considerable knowledge about his training and career from his

513 Constantinides [1982] 7–27; Wilson [1996²] 221–222; Fryde [2000] 75–77; Cacouros [2006] 8–13.

Autobiography,⁵¹⁴ in which he sketches a rather ordinary educational *iter*: Homer, Aphthonius, Hermogenes, mathematics and astronomy, logic (Aristotle's *Organon*), and finally divine science. Blemmydes then recalls his own activity as a monk and as a teacher of the same disciplines before and after he declined to accept the state appointment proposed to him by emperor John Vatatzes, "preoccupied by the decadence in education".⁵¹⁵ The latter emperor had sponsored his book-hunting tour in Northern Greece in 1239, which apparently yielded the discovery of some texts that had remained hitherto unknown to his contemporaries (*Autob.* 1.63–64). His last years were spent as a private teacher to the monks of Emathia near Ephesus.

Blemmydes' scholarly achievements are not especially original to our eyes, inasmuch as they consist of compilations and abridgments (primarily of Aristotle's treatises on logic and physics) and commentaries (*e.g.* on the *Psalms*);⁵¹⁶ however, they fulfilled the role of preserving and handing over ancient wisdom to the next generations in a difficult age, and they thus demonstrate that despite having entered monastic life he assigned a very important role to the teaching of and the scholarly research on pagan culture.⁵¹⁷ It has been suggested that Blemmydes might be the author of the most widespread lexicon of the Byzantine age (129 extant manuscripts), known under the name of "Zonaras", but assigned by modern research to a certain Nikephoros and to a date between 1204 and 1253.⁵¹⁸ Not a particularly original tool, it is based on a reworking of the older *Etymologica*, but also on Suidas and the *Lexicon Ambrosianum*, supplemented with excerpts from other grammatical or rhetorical works (most notably Michael Psellus, Stephanus of Byzantium, Anastasius Sinaites, and the Atticist lexicon of Orus), and with articles on terms of the Old and the New Testament.⁵¹⁹

Whether or not he lurks behind the mysterious figure of "Zonaras", we can safely argue that Blemmydes, together with his many pupils, gave a decisive impulse to Greek studies in the Nicaean period, even under adverse conditions. The appointment of professors on the part of the establishment is in this respect of the highest importance, as demonstrates the leading role played by

intellectuals such as *e.g.* Senacherim, Blemmydes and Theodore Hexapterygos (the latter a teacher of rhetoric who produced several *diegemata* on pagan mythology),⁵²⁰ and—as we have just seen—the creation of libraries in other centres of the Empire.⁵²¹ The importance of provincial areas should not be overlooked: the catalogues of monastic libraries in Patmos and on mt. Athos yield a positive image of the circulation of books, including classical authors,⁵²² and towards the end of the Nicaean age the Western scholar William of Moerbeke (1215–1286, Catholic archbishop of Corinth since 1280) completed in Boeotia and the Peloponnese his Latin translation of Aristotle's *Metaphysics*, of Proclus' commentary on Plato's *Parmenides* (for whose 7th book he is our only source), of Archimedes' works, and of various other philosophical treatises, which were evidently available *in loco*, sometimes in more than one copy.⁵²³ Amongst the texts Moerbeke converted into Latin we can single out Aristotle's *Poetics*, for whose textual constitution his version, pedestrian and sometimes mistaken though it may appear, represents a fundamental indirect witness.⁵²⁴

4.2 Southern Italy between the 13th and the 14th Century

Recent studies have stressed the role of Southern Italy in Moerbeke's education and training;⁵²⁵ as a matter of fact, of all the 'marginal areas' of the Greek-speaking world, throughout the 13th century it is Southern Italy, and particularly Apulia, that earns pride of place. The Salentine pupils of Nicholas-Nectarius (on whom see above § 3.9) were particularly active, both as writers and as book-collectors: one need just think of John Grassus, a *litteratus* and an amateur poet, who sent an *Odyssey* to his friend George Bardanes the metropolitan of Kerkyra (the receiver was naturally intrigued by the books on Scheria, the Homeric equivalent of his island), and later annotated a copy of Diodorus Siculus, which had been brought from Constantinople to Otranto by a man named Nicholas (Par. Gr. 1665).⁵²⁶

524 Colonna [1957]. The importance of Moerbeke's translation for the reconstruction of the Greek is also particularly relevant *e.g.* in Aristotle's *On Heavens* and in Alexander of Aphrodisias' *On Fate*, not to mention the works whose original is lost today (Fryde [2000] 108–110).

525 Rashed [2002].

526 Hoeck-Loenertz [1965] 184–188; Pontani [2005b] 207; Mazzucchi [1999].

Despite the slow decline of the Casole monastery, book production in the entire Salento grew conspicuously thanks to the efforts of low-brow ecclesiastical figures or isolated scholars,⁵²⁷ not only in Otranto but also in minor centres such as Gallipoli, Aradeo, Zollino, often connected to libraries or scholastic institutions.⁵²⁸ Of 177 Otrantine manuscripts of the 13th and early 14th century listed in the latest census, almost 50% are of profane character, and many of them are written in a peculiar style, conventionally known as “Baroque minuscule”.⁵²⁹

What is surprising is that we do not find only servile aids to students of medicine, law or rhetoric (though of course etymologica, lexica etc. are frequent), or schedographic and grammatical collections incorporating philosophical and technical definitions,⁵³⁰ but also ambitious copies of Homer equipped with bulky and prestigious *corpora* of scholia, such as ms. Lond. Harl. 5674 (our most important witness of the scholia to the *Odyssey*), Ang. Gr. 122 (a pivotal text for the so-called h-scholia to the *Iliad*), Vind. phil. Gr. 49 (the only witness of Demo’s Homeric allegories), Vind. phil. Gr. 56 (an *Odyssey* probably deriving from a copy of Nicholas-Nectarius, copied in the year 1300), and Oxon. New College 298 (an *Iliad* with many exegetical and allegorical materials partly stemming from Tzetzes and the Constantinopolitan *milieu*).⁵³¹ An Otrantine provenance and a date in the 13th century has also been assumed for other crucial copies of ancient Greek poets, *e.g.* (to mention but a few) mss. Par. Gr. 2773 and Vat. Gr. 2383 of Hesiod’s *Works and Days*,⁵³² ms. Scor. R-I-18 of Lycophron (of 1255, with Tzetzes’ commentary), ms. Laur. Conv. Soppr. 152 of Sophocles (of 1282),⁵³³ ms. Vat. Gr. 1135 of Euripides;⁵³⁴ not to mention miscellanies of philosophical (Laur. 71.35 of Porphyry and Ammonius, *anno* 1290–1291), rhetorical (Par. Gr. 2970)⁵³⁵ or medical content (Marc. Gr. 273 of Dioscorides).

In fact, despite this remarkable production of books, no real indigenous philological activity or advanced scholarship can be assumed for Southern Italy either before or after the reigns of Frederick II Hohenstaufen and Manfred—both emperors, for that matter, proved attentive to Greek, the

former promulgating a bilingual version of the *Liber Augustalis* in 1231 (and earning an obituary upon his death by the hand of no less an authority than emperor Theodore II Lascaris), the latter promoting the translation of medical and philosophical writings by the hand of the learned scholar Bartholomew of Messina.⁵³⁶ Decades later, in the 1330s, when the golden age of Otrantine learning and scholarly activity was on the verge of decline, the king of Naples Robert I of Anjou would similarly hire Nicholas of Reggio to translate dozens of works of Galen, some of which are lost today in the original.⁵³⁷

Thus, even if some of the scholarly achievements mirrored in South Italian manuscripts, and the conspicuous doctrine assembled on their margins are best ascribed to their Oriental prototypes, it is undeniable that a form of interest for advanced Classical learning did flourish especially in medieval communities of the Salento, and that literary circles partly analogous to those of the Constantinopolitan *milieu* did develop there as well. Nothing comparable to the widespread ignorance of Greek in the rest of Latin-speaking Europe, where even such a remarkable feat of scholarship as Roger Bacon's Greek grammar, produced in the second half of the 13th century, or as Robert Grosseteste's coeval translations from Byzantine lexica, remained isolated exceptions.⁵³⁸

4.3 *The Palaeologan Renaissance: Context and Early Personalities*

The recovery of Constantinople by Michael VIII Palaeologus in 1261 was followed by a swift and massive movement of intellectuals heading to restore the capital as a centre of learning and research: the seeds thrown in the Nicaean period could finally fructify.⁵³⁹ The following decades were marked by great political instability, for neither Michael VIII himself (†1282) nor especially his son and successor Andronicus II (1282–1328) managed either to settle completely the internal struggles for power, or to consolidate the Balkan and Anatolian borders of the empire; nor did the attempt towards a theological reconciliation with the Latins—the Union of the Churches at the Council of Lyons of 1274, which also fulfilled an essential political goal in consolidating the power of Michael VIII—meet with approval among the Byzantine clergy

538 Berschin [1980] 314–317; Ciccolella [2008] 92–97; Dorandi [2013b].

539 The expression is by Theodore Metochites (Mineva [1994–1995] 324, concerning Nicaea: διέσωσε δὲ ὑπέρτατος ἀναβιώσεως σπέρματα). A concrete example might be found in the most important manuscript of the Greek novelists (Laur. Conv. soppr. 627), written in the 1260s or 70s, but carrying also some letters of Theodore II Lascaris: Wilson [1996²] 225; Bianchi [2002] 183–184.

and population; indeed the very quarrel around the union of the Churches had profound and unfortunate consequences on the Byzantine *intelligentsija* and on the teaching system in Constantinople.⁵⁴⁰

Despite this political shakiness, the reigns of Michael VIII and Andronicus II were a golden age for scholarship (and classical scholarship in particular), and a period to which we owe an immense debt for our knowledge of Greek pagan literature, both in matters of quantity and of quality. In quantitative terms, the comparison between the sheer number of manuscripts of any classical author dating before 1204 and after 1261, helps to understand the extent of the change that came about;⁵⁴¹ this process went hand in hand with the recovery of many books previously scattered far from the capital,⁵⁴² and with the rise of a new public for books and book-collecting, also thanks to the increasing popularity of bombycine and then particularly of (cheaper) Italian paper.⁵⁴³ In qualitative terms, the scholars of the Palaeologan age, from Planudes to Moschopoulos, from Pachymeres to Triclinius, produced outstanding editions and commentaries of tragedy and comedy, of Pindar, of hexametric poetry, of Plutarch, Ptolemy and Strabo, of Plato and Aristotle and Proclus . . . : for all these texts, and many others, the Palaeologan age can be said to represent a vital turning-point in the history of their tradition.⁵⁴⁴

This is by and large what is commonly understood under the label 'Palaeologan renaissance' (or 'revival'), a phenomenon that originated in the reawakening of learning in and around the imperial and patriarchal *milieux*, and involving not only the capital, but also spreading to Thessalonica (the second city of the empire), and extending to more peripheral centres such as Ephesus, Trebizond, Cyprus, Crete, and later the Peloponnese. Once more, it should be stressed that we are not dealing with a sudden revolution, but rather with the intensification of a contact with texts (and particularly ancient texts) that had never entirely disappeared from the horizon of Byzantine learned elites (those that met regularly within active scholarly circles and literary

coteries),⁵⁴⁵ but acquired at this point a new institutional dimension and a renewed cultural prestige.⁵⁴⁶

As opposed to the relative diffidence of monks towards Classical wisdom in previous times,⁵⁴⁷ a crucial role was played in this age by the monasteries of the capital, such as the Akataleptos, the Christ Soter, the Pantokrator, and above all the monastery of Chora, which proved so important for Planudes, Metochites and Gregoras. Furthermore, the initiative of private intellectuals, often gathering in *theatra* and building a sort of closed elite,⁵⁴⁸ was essential in increasing and enhancing the didactic practices of traditional Byzantium, and in fostering the interaction between scholars in the so-called “*sodalizi eruditi*”.⁵⁴⁹ However, two decisive moves were the restoration of the patriarchal school by Germanus III (1265–1266),⁵⁵⁰ and the creation of an imperial school of philosophy by Michael VIII’s prime minister, the learned historian George Acropolites (1217–1282),⁵⁵¹ who had been a pupil of Blemmydes and was also an experienced teacher of mathematics (Euclid and Nicomachus), rhetoric, and Aristotelian philosophy, as well as a specialist in Neoplatonism.⁵⁵²

The two initiators of the early Palaeologan renaissance were precisely Acropolites’ pupils: George/Gregory of Cyprus and John Pediasimus. George of Cyprus (ca. 1240–1290),⁵⁵³ who had received his elementary instruction in Nicaea and later lived as a monk at the Akataleptos monastery in the capital, himself became the head of the school of philosophy in 1273, teaching such distinguished pupils as John Glykys, Theodore Muzalon, Nicephorus Chumnus, Constantine Acropolites and Maximus Planudes; he then attained the dignity of patriarch (by the name of Gregory II) in 1283. Bad health, poor resources (he lacked paper and books), and later his ecclesiastical commitments prevented him from writing a conspicuous *oeuvre*,⁵⁵⁴ but not from

552 It may be no coincidence that virtually no extant manuscript of Plotinus pre-dates the mid-13th century, starting with the fundamental Laur. 87.3: see Henry [1948²].

553 Constantinides [1982] 32–49; Mergiali [1996] 17–21; Larchet [2012] 13–64; Wilson [1996²] 223–225.

554 He apologises for this in his autobiography (p. 189.16–24 Lameere): ἔτυχε γὰρ ὁ ἀνὴρ καὶ πένης εἶναι καὶ τῶν βιβλίων κατάκρωσ ἐράων· ἔτυχε δὲ καὶ περὶ τὸ γράφειν μετρίως ἀγαθὰς ἔχων τὰς χεῖρας καὶ ἐπειδὴ περ χρήμασιν οὐκ ἦν τὰ φίλτατα κτήσασθαι, τοῖς ἰδίοις ἰδρῶσιν ἐκτῆσατο

practicing the typically Byzantine art of transcribing excerpts from the texts of his interest.⁵⁵⁵ Chosen on account of their linguistic features, proverbial nature or antiquarian importance, these excerpts (drawn from such diverse authors as Homer and Sophocles, Philo and Synesius) reveal a series of interesting variant readings, which must be ascribed either to his conjectural skill or to the use of better manuscripts than the ones extant today⁵⁵⁶—corrections and annotations by Gregory of Cyprus have been spotted in the margins of manuscripts of Demosthenes (Par. Gr. 2998), Plato (Scor. y.I.13), Proclus (Marc. Gr. 194)⁵⁵⁷ and Aelius Aristides (Par. Gr. 2953, a very influential hyparchetype in the tradition of this author, probably deriving from Acropolites' copy).⁵⁵⁸ An outstanding teacher and a prolific excerptor, George/Gregory of Cyprus tried his skill at rhetorical declamations, *progymnasmata* and paraphrases (e.g. of Aesop's fables),⁵⁵⁹ and he became one of the most distinguished paremiographers of the Byzantine age, setting up an epitome of the old collection of 'Diogenianus'.⁵⁶⁰ His intellectual physiognomy, however, will become clearer only once his theological *oeuvre* is taken into account, including some interesting linguistic remarks e.g. on the values of the prepositions *ἐκ* and *διὰ* in Gregory of Nyssa, related to the widespread 12th-century debates on the procession of the Holy Spirit.⁵⁶¹

Acropolites' other pupil, John Pediasimus Pothos (ca. 1250–1310/14), probably trained first in Thessalonica and later in the capital, became a deacon and was first appointed *hypatos ton philosophon* in the 1270s, was later promoted to the rank of chartophylax of Ochrid (where he also taught), and finally in 1284 *megas sakellarios* again in Thessalonica.⁵⁶² Not a particularly original scholar,

καὶ βιβλίων ἀντιγραφεὺς γέγονεν ὅσων οὐδεὶς σχεδὸν ἕτερος, τῶν λόγους φημί μετιόντων “he was poor and absolutely fond of books: his hands were relatively skilful at writing, and since he could not buy his favourite works with money, he bought them through his own toil and he became a copyist of more numerous books than any other lover of culture ever copied”.

561 *Antirrhética* 59; see Larchet [2012] 240; on the wider issue see Bucossi [2009].

562 Constantinides [1982] 116–125; Mergiali [1996] 21–23; Wilson [1996²] 242; Bianconi [2005a] 60–72, who also refers to a catalogue of books (in ms. Vat. Gr. 64) that may have something to do with Pediasimos.

Pediasimus wrote on astronomy, music, geometry, medical and legal subjects, and he shared with George/Gregory of Cyprus a special interest in such diverse literary texts as Aristotle's *Analytics* and *On Interpretation*,⁵⁶³ Theocritus' *Syrinx*,⁵⁶⁴ and Hesiod's *Shield*,⁵⁶⁵ on which he concocted scholia largely based on the materials of his predecessors, including his teacher Manuel Holobolus (on whom more below) and John Tzetzes; a treatise on the labours of Heracles is little more than a paraphrase of Apollodorus' *Bibliotheca*.⁵⁶⁶

A perfect contemporary of George/Gregory of Cyprus, and a *grand seigneur des lettres* during the last decade of Michael's reign and beyond, the historian and rhetorician George Pachymeres (1242–ca. 1315) held high positions both in the ecclesiastical and in the imperial hierarchy,⁵⁶⁷ and certainly taught in some form at the patriarchal school.⁵⁶⁸ Primarily known for his chronicle of the period 1258–1308, as well as for his rhetorical *meletai* and *progymnasmata*,⁵⁶⁹ Pachymeres compiled a companion to the four disciplines of the Quadrivium (arithmetic, geometry, music and astronomy) known as *Tetrabiblos*, and he was especially keen on mathematics, as is apparent from his notes on ms. Ang. Gr. 38 of Diophantus.⁵⁷⁰ While his literary interests still await proper inquiry, particularly as far as the ethical and rhetorical exegesis on Homer's *Iliad* is concerned,⁵⁷¹ Pachymeres' philosophical studies are of the utmost importance: the twelve books of his *Philosophia*, containing a faithful paraphrase and summary of Aristotle's *oeuvre*, exerted a notable influence on the textual transmission of Peripatetic philosophy, and the manuscripts of this work, as well as those of his later exegetical works to Aristotle's *Organon*, *Physics*, *Metaphysics* and *Nicomachean Ethics*, show that he must be regarded as the head of a specialised circle of scribes.⁵⁷² Furthermore, as recent research has shown, Pachymeres' autograph copy of Proclus' commentary to Plato's

572 Golitsis [2008], [2009] and [2010].

Parmenides (ms. Par. Gr. 1810) represents a true 'edition' of the text, full of conjectures, corrections of philosophical terms and ideas, and equipped with a long supplement which he designed *suo Marte*.⁵⁷³ Pachymeres was fully convinced, against the ideas of patriarch Athanasius I, that philosophy is important for man,⁵⁷⁴

φέρει γὰρ εἰκόνα ταύτης τὸ τοῦ Ἑρμοῦ μῶλυ, ὃ χαλεπὸν τοῖς πολλοῖς ὄν ὀρύσσειν
τηνάλλως μεμίσηται, καὶ ἔδοξεν ἀγλυκερές τὸ γλυκάζον διὰ τὴν ἀτημελησίαν
τῶν παντευκόλων, οὓς δὴ καὶ “ποτῶ δηλήσατο Κίρκη”.

for its aspect is similar to Hermes' *moly*, which is difficult to extract for the many and thus provokes their hatred, so that the sweet appears as bitter, because of the negligence of the simple men, those whom Circe “destroyed by means of a drink”.

The exact place of Pachymeres in the patriarchal school (the sources credit him with the titles of *dikaiophylax* and *megas didaskalos*) remains unclear, as does the distinction and hierarchy between the offices of *didaskalos ton didaskalon* and *katholikos didaskalos*. However, the deep links between the patriarchal school and the imperial *milieu* are demonstrated by the fact that the first teacher of logic and rhetoric (appointed in 1265 at the Church of the Holy Apostles, where generations of professors had taught) was no other than the imperial secretary Manuel-Maximus Holobolus (ca. 1245–1310/14), a monk, poet and scholar whose adventurous public life earned him imprisonment, mutilation and rehabilitation (as a fierce opposer of the union with the Latin Church, he was persecuted by his former patron Michael VIII).⁵⁷⁵ Holobolus, who became in his youth a *rhetor ton rhetoron* and later an *oikoumenikos didaskalos*, had experienced the difficult cultural situation of Nicaea, and after the recovery he successfully prompted Michael VIII to implement the teaching of grammar, poetry and rhetoric. He spent his career teaching and devoting his time to the study and exegesis of Aristotle (he made an overarching paraphrase of the Stagirite's works, as well as commentaries on *Physics* and *Prior*

573 Steel-Macé [2006]. Ed. Westerink et al. [1989]. Fryde [2000] 206–208 on Pachymeres' Platonic studies.

Analytics),⁵⁷⁶ to the translation of Boethius' philosophical texts from Latin into Greek, and to a new annotated edition of the Hellenistic *carmina figurata*.⁵⁷⁷

The Palaeologan age, from its very beginnings, is by definition the period when scribes, even anonymous scribes, tended to interact with the texts they were copying, and sometimes appeared as *pleno iure* editors of special types of recensions of those texts. The reconstruction of scribal *milieux* and of copying centres (in and beyond the capital) thus represents a fascinating task that sheds light on the intellectual and scholarly practices of this age.⁵⁷⁸ Amongst these scribes I single out as particularly significant one of the few female scholars of the Byzantine millennium,⁵⁷⁹ namely Theodora Raoulaina (ca. 1240–†1300), the niece of Michael VIII.⁵⁸⁰ As a nun, and a fierce opposer of the union of the Churches, Theodora was both a prolific copyist of Classical texts,⁵⁸¹ and the author of hagiographies containing many learned references and allusions to Homer, Hesiod, Euripides, and even to prose authors such as Strabo and Diogenes Laertius.

4.4 *Maximus Planudes*

The acme of the Palaeologan renaissance is undoubtedly represented by the long reign of emperor Andronicus II (1282–1328): despite a deep military crisis, the end of the dream of a union with the Catholic Church, and a series of severe political troubles in Anatolia and Thrace, this highly cultivated ruler surrounded himself with learned counsellors, and propitiated a fruitful cooperation with the orthodox Church, as well as the blossoming of a new generation of well-trained scholars.

576 Golitsis [2007].

577 Strodel [2002] 131–147; Galán Vioque [2009].

578 See e.g. Mergiali [1996] 43–48. Among the most active researchers in this field figure today D. Bianconi, M. Menchelli, I. Pérez Martín.

579 For lists see Schreiner [1999]; Cavallo [2007] 52–56. On Irene Eulogia Choumnaina, see Mergiali [1996] 103–105.

580 Riehle [2014]; Constantinides [1982] 44; Nicol [1994] 33–47; Mergiali [1996] 24–25; Parrinello [2011]; Kotzabassi, in Gruškova-Bannert [2014] 316–321.

581 Gregory of Cyprus and then Maximus Planudes owned her manuscript of Thucydides, now Mon. Gr. 430. Kotzabassi [2011] presents Theodora's correspondence with Gregory of Cyprus, esp. *epist.* 18 Kotz. which refers to Gregory promising her that great care would be taken in the copying of a ms. of Demosthenes (ἄστικτος . . . καὶ ἀκηλίδωτος) as soon as the time was ripe for the transcription (for now μηδὲ ἔαρ ἔστι, οὐδὲ κρεωφαγούσιν ἄνθρωποι, οὐδὲ δέρρεις προβάτων εἰς γραμμμάτων ὑποδοχὴν “it is not spring yet, and people do not eat meat, and there are no sheep hides to accommodate the letters on”).

The most important protagonist of this cultural climate was Manuel/Maximus Planudes (1255–1304/5),⁵⁸² born in Nicomedia and trained in the capital under George/Gregory of Cyprus, with whom he shared several friends, a form of bibliophilia, and a *penchant* for old proverbial sayings and for the Latin language. After favouring in his youth the union with the Latin Church, he later renounced worldly life, becoming a monk first at the Chora monastery and later at the Akataleptos; he taught for decades in the capital, at a monastic school or in some imperial institution.⁵⁸³ His contribution to the study and the transmission of ancient Greek literature in Byzantium is so impressive that it is impossible to list all the texts that have been in one way or another linked with his name, either on a palaeographical or on a philological basis.

Let us start with prose and science: in addition to his role in preparing new compilations of existing *corpora* of musical (lost) and rhetorical treatises (Laur. 57.5), in ms. Edinb. Adv. Library 18.7.15 Planudes tried his skill in astronomy by transcribing and emending the texts of Cleomedes, Eratosthenes and Aratus—in the latter’s *Phaenomena* he even added some hexameters refashioned *suo Marte* on the basis of Ptolemy’s *Almagest*.⁵⁸⁴ On the subject of mathematics, he wrote a treatise about Arabic numerals and the number zero (the autograph is preserved in ms. Ambr. &157 sup., ca. 1292–1293), he annotated Apollonius’ *Conics*, but above all he revised critically the archetype of the entire medieval tradition of Diophantus’ books 1 and 2 (Matr. 4678, later owned by John Chortasmenus),⁵⁸⁵ an enterprise in which he worked on a manuscript owned by Manuel Bryennius,⁵⁸⁶ and exploited his special expertise in drawing diagrams and in solving arithmetical problems:⁵⁸⁷

ἡ δὲ Διοφάντου βίβλος, ἦν ἀνάγκη τε ἀποπέμπειν ἦν... ἐπανήκει νῦν ἐκ τῶν πάλαι ρυτίδων ἠβύσσα· τὰ μὲν ἔξωθεν ὄφιν ἂν εἴποι τις τὴν παλαιὰν ἀποξυσάμενον λεβηρίδα, τὰ δ’ ἐντός, οἶαν ἂν ἴδοιμεν οἰκίας ἐκ μακροῦ πεπονηκυίας ἐπισκευὴν καὶ ἀνάκτησιν.

587 *epist.* 67 (to Mouzalon), p. 99.24–29 Leone.

the book of Diophantus, which I had to send away . . . returns now rejuvenated from the old wrinkles. Its outer aspect resembles that of a snake having just deposited its old skin, its inner aspect recalls the restoration and refurbishing of a long neglected house.

In a long hexametrical epigram on Ptolemy's *Geography*, Planudes states that the difficult and expensive copying of that work and of its invaluable map of the entire oecumene had been made possible only through his own efforts and with the generous support of emperor Andronicus II. This could be an allusion to the discovery of an old, possibly late antique manuscript, which was the archetype of the entire Byzantine tradition of the *Geography*, starting with mss. Istanbul, Seragl. G1 57 and Vat. Urb. Gr. 82 (the latter is the copy brought to Italy by Manuel Chrysoloras, to the great benefit of geographic knowledge in the Renaissance).⁵⁸⁸

Planudes worked—often by conjectural emendation *inter scribendum* or by penning corrections in the margins of exemplars produced by his *scriptorium*—on a series of other prose authors, from Thucydides to Strabo to Cassius Dio, from Theophrastus to Marcus Aurelius to Pausanias,⁵⁸⁹ and he also prepared *Collectanea* (Συναγωγαί) of excerpts from various ancient and Byzantine authors,⁵⁹⁰ or syllogae of ancient texts dealing with one specific topic.⁵⁹¹ Recent research on ms. Laur. 60.8 has demonstrated the major contribution of Planudes' circle to the text of Aelius Aristides, a very popular author in Late Byzantine culture, as is certified by the multiple references to manuscripts carrying his work, scattered in the letters of Palaeologan scholars.⁵⁹²

However, Planudes' philological activity on Plato and Plutarch deserves a special mention. While his hand is not to be found in either ms. Laur. 59.1 or Par. Gr. 1808 of Plato, both originating from his *milieu*,⁵⁹³ he did co-operate personally with eight other scribes in the copying of ms. Vind. phil. Gr. 21, under the guide of the learned metropolitan of Crete (and bibliophile) Nicephorus Moschopoulos.⁵⁹⁴

588 Mittenhuber [2009]; Pontani [2010a]; Burri [2013]. For other instances of the direct derivation of Palaeologan manuscripts from late antique prototypes see Fryde [2000] 153–155.

589 See Fryde [2000] 237–241 (with further bibliography) and several essays collected in Diller [1983]; specifically on the text of Pausanias (whose archetype was probably prepared by Planudes) see Diller [1980] 489–491.

590 *E.g.* Laur. 59.30: Fryde [2000] 248–253.

591 *E.g.* Vat. Gr. 191 carrying technical and scientific authors: see Bianconi [2004b] 324–333.

592 Quattrocelli [2009]. Gaul [2011] 174–181.

593 The former was the antigraphon of Ficino's Laur. 85.9: see Bianconi [2008b].

594 d'Acunto [1995].

With regard to Plutarch, admittedly his *Lieblingsautor*,⁵⁹⁵ he continued to devote unceasing efforts to the philological improvement of his text: ms. Ambr. C 126 inf., carrying *Moralia* 1–69 and several *Lives*, was produced by no less than ten scribes working under Planudes' direct supervision, probably in 1294, and it still carries some notes in his hand.⁵⁹⁶ Planudes also contributed to the copy of mss. Par. Gr. 1671 (containing all the other *Lives* and several *Moralia*, and dated to 1296) and Par. Gr. 1672 (probably his definitive edition):⁵⁹⁷ a note penned in the former (f. 213r) shows his desire to find an old copy and his worries regarding the scribe's habit of concealing the material lacunae in his antigraphon:⁵⁹⁸

τὸ χωρίον τοῦτο ἀσαφέστατόν ἐστι διὰ τὸ πολλαχοῦ διαφθαρέντα τὰ τῶν παλαιῶν ἀντιγράφων μὴ δύνασθαι σώζειν τὴν συνέχειαν τοῦ λόγου· καὶ εἶδον ἐγὼ παλαιῶν βιβλίον, ἐν ᾗ πολλαχοῦ διαλείμματα ἦν, ὡς μὴ δυνηθέντος τοῦ γράφοντος εὑρεῖν τὰ λείποντα, ἐλπίσαντος δὲ ἴσως εὐρήσειν ἄλλαχοῦ. ἐνταῦθα μέντοι κατὰ συνέχειαν ἐγράφη τὰ διαλείποντα τῷ μηκέτι ἐλπίδας εἶναι τὰ λείποντα εὐρεθήσεσθαι

This passage is very obscure because the text of the old copies, worn away in many places, does not yield a continuous and consistent sense: I have seen an old book with many blank spaces, left by the scribe for he was clearly unable to find the missing words, but hoped perhaps to find them elsewhere. Here, on the other hand, in place of what was missing one finds continuous writing, because there was no hope of finding the missing parts.

In the context of Planudes' production, the three big manuscripts of Plutarch (accomplishments made possible *inter alia* by the increasing availability of parchment as a consequence of military victories in Asia Minor)⁵⁹⁹ belong to the category of the “*grands volumes*” gathering the works of an author in large, bulky and well-written books designed for the preservation of the text; manuscripts of smaller format, normally written in a cursive hand, represent

595 *epist.* 106, p. 169.18–19 Leone πάνυ γάρ, ὡς οἶσθα, τὸν ἄνδρα φιλῶ (“as you know, I like him very much”).

596 Rollo [2008b], with further bibliography. See Stadter [1973] (and A. Pontani [1995b] 92–93) on the manuscript's fate in Quattrocento Italy.

599 See Constantinides [1982] 136 on this and other instances of scholars facing problems with the parchment supply.

useful venues for taking more sporadic notes on selected works (“*exemplaires de travail*”).⁶⁰⁰ The former category embraces some other famous codices of prose (e.g. the aforementioned Vat. Gr. 191) and above all illustrious verse codices, which it is now time to examine.

Planudes’ achievements in the domain of poetry are most impressive, although he did not deal in depth with either lyric or dramatic poetry. As a matter of fact, scholia to Hesiod, Pindar and some scenic poets might stem from his pen,⁶⁰¹ and his *milieu* probably produced selections of teaching texts—partly equipped with scholia—such as Vat. Gr. 915 (Pindar, Lycophron, Homer, Theognis etc.).⁶⁰² But Planudes’ major feats of scholarship lie elsewhere: ms. Laur. 32.16, the product of six scribes working under his supervision as early as 1280–83,⁶⁰³ is a voluminous anthology of hexametric poetry ranging from Nonnus’ *Dionysiaca* (for which work it is our *codex unicus*) to Theocritus and Apollonius Rhodius (for both texts it is an independent witness of the utmost importance),⁶⁰⁴ from Hesiod’s *Theogony* (of which it offers our earliest preserved complete copy), down to Oppian, Moschus, Nicander, Tryphiodorus and some autobiographical poems of Gregory of Nazianzus.

Perhaps Planudes’ most remarkable achievement is his outstanding collection of Greek epigrams, digested by subject in 7 books⁶⁰⁵ in Marc. Gr. 481, written in 1299 or 1301.⁶⁰⁶ This codex embraces both Nonnus’ *Paraphrase of the Gospel of St. John* and a rich selection of Cephalas’ sylloge (see above § 2.6), including 388 epigrams lacking in the Heidelberg manuscript and now making up the *Appendix Planudea* (or book 16) in modern editions of the *Greek Anthology*. Planudes’ enthusiasm for this genre, as testified by his scribal care and conjectures, as well as by other copies of the same collection (he slightly later supervised the realisation of ms. Lond. Addit. 16409, a fair copy of the Marcianus), did not prevent him from mutilating or bowdlerising the more

600 The important distinction is made by Quattrocelli [2009] 152–155.

601 Constantinides [1982] 79. On Pindar see Irigoien [1952] 247–269. On Aristophanes see Koster [1963] 394–396.

602 Pontani [2005b] 293–297 and [2010a] 177–178.

603 Turyñ [1972] 28–39; Bianconi [2004b] 333–335; Browning [1960] 17.

604 See also Fryde [2000] 231–233, with further bibliography. It should be remembered that Planudes also wrote an *Idyllium* in 270 hexameters in Theocritus’ style, see Pontani [1973].

605 Later to be augmented by appendices merged in the first 4 books (according to Planudes’ own indications on f. 8iv of the Marcianus) in ms. Par. Gr. 2744, a codex that will be owned and corrected by Demetrius Triclinius (see below § 4.6).

606 Turyñ [1972] 90–96, with Cameron [1993] 75–77 and Valerio [2014] 66 n. 96.

morally questionable or erotically explicit texts.⁶⁰⁷ However, Planudes' acts of censorship in this and other genres were not frequent, and they should rather be regarded as a way to ease the access of a vast heritage of pagan wisdom into the cultural horizon of Palaeologan Byzantium.⁶⁰⁸ The note on the second-last page of ms. Marc. Gr. 481 (f. 122v) is evidence of the way in which, as a monk, Planudes sought to combine a militant approach to ancient literature with the orthodox faith: once more, his ideal of 'Christian humanism' rested ultimately on a stylistic approach.⁶⁰⁹

ἰστέον δὲ ὅτι αἰεὶ πρόσεστι τοῖς φιλομαθέσι ποθεινὸν καὶ ἐράσμιον ἢ τῶν Ἑλληνικῶν συγγραμμάτων ἀνάγνωσις, καὶ μάλιστα ἢ τῶν Ὀμηρικῶν, διὰ τὸ εὐφραδὲς καὶ ποικίλον τῶν λέξεων. οὐ ἔνεκεν καὶ ἡ παρούσα μετάφρασις ἐμμέτρως ἐν ἡρωϊκοῖς ἐγεγράφη στίχοις, πρὸς τέρψιν τοῖς φιλομαθέσι καὶ φιλολόγοις.

We should note that the reading of Hellenic literature has always been an object of longing and delight for lovers of learning, and particularly the reading of the poems of Homer, because of the grace and variety of the language. That is why the present metrical paraphrase has been written in heroic metre, to give pleasure to lovers of learning and literature.
[transl. R. Browning]

One genre where Planudes was indeed sometimes obliged to resort to censorship were his translations of Ovid's amatory poems. In fact, relying on a solid though not impeccable knowledge of Latin⁶¹⁰ acquired perhaps through his familiarity with the Westerners living next door to the Akataleptos monastery, and refreshed during his diplomatic mission to Venice in 1296–1297, Planudes was the first Byzantine to devote a systematic effort to the Hellenisation of Roman masterpieces, from Christian (Augustine's *On Trinity* and Boethius' *Consolation of Philosophy*) to philosophical works (Cicero's *Dream of Scipio* with Macrobius' *Commentary*), from Ovidian poetry (including the *Heroides*

607 On censorship in general throughout the Byzantine millennium see Wilson [1996²] 12–18; A. Pontani [1995a] 322–327.

608 Karla [2006]; Valerio [2011].

609 Browning [1995] 21; Fryde [2000] 10; De Stefani [2002] 44.

610 See Bianconi [2004a] 554–564 on various categories of his mistakes in the translations, such as “διὰ βαλλαντίου” for “*perperam*”—wrongly spelled “*per peram*”—in Aug. *de trinitate* 13.5.8.

and above all the *Metamorphoses*)⁶¹¹ to a series of grammatical schooltexts (Donatus' *Grammar*, the *Disticha Catonis*, parts of Priscian's *Syntax*).⁶¹² The cultural impact of this *translatio* (barely initiated by Holobolus' attempts with Boethius) was substantial: not only did Planudes' versions become fairly widespread in manuscripts, but they opened up for the Byzantine audience a path to integrate and adapt Greek philosophy and mythology "into a new and challenging Latin cultural matrix".⁶¹³

The route of the dialogue between Greek and Latin culture, before affecting the heights of philosophy and theology (incidentally, translations from Augustine clearly fit into Michael VIII's unionist policy, which Planudes initially approved of),⁶¹⁴ had to arise from a basis of grammatical learning. This becomes clear if one considers Planudes' interest in Greek morphology, lexicography and syntax: he wrote epimerisms to Philostratus' *Images*,⁶¹⁵ a lexicon,⁶¹⁶ a dialogue on grammar,⁶¹⁷ and a treatise on syntax largely indebted to Priscian's *Foundations of Grammar*,⁶¹⁸ additionally, he has been regarded by some linguists as the *protos heurtes* of the so-called 'localist' theory of cases and case-endings.⁶¹⁹

The philological and palaeographical study of Planudes' manuscripts has often led scholars to the conclusion that he and his scribes had at their disposal very old codices, more than one copy of the same work, and enough material for a systematic work of collation. This state of affairs is hard to imagine outside of the most important library of Constantinople, namely that of the Chora monastery: indeed, recent scholarship has focused on the links between the books that demonstrably belonged to that library and some of the most illustrious scholars of the Planudean age, from Planudes himself to Nicephorus Gregoras and Theodore Metochites, of whom more will be said presently.⁶²⁰ All this is evidence of the continuity and co-operation between teachers and pupils, of the unceasing interchange and osmosis that marked intellectual activity in Byzantium from 1270 until 1330.

4.5 *Constantinople after Planudes: Moschopoulos, Grammar, Lexicography*

Planudes' favourite pupil was Manuel Moschopoulos (ca. 1265–*post* 1316),⁶²¹ the nephew of Nicephorus Moschopoulos, the metropolitan of Crete whose conspicuous library required no less than eleven mules for its transport.⁶²² Manuel was one of the leading grammarians of his age, the author of a popular grammar in erotapocritic form (*Erotemata*), and of minor grammatical works drawing on a long earlier tradition,⁶²³ but he also became one of the greatest innovators and authorities in the field of schedography—a method he applied to a wide range of texts from Homer to Christian prayers, increasing its practice in schools through massive insertion of learned quotations from ancient sources.⁶²⁴ Moschopoulos' linguistic, etymological and orthographical commentary on Philostratus' *Images* (later transformed into a lexicon known as *ὀνομάτων ἀπτικῶν συλλογή*)⁶²⁵ was based on the parsing of individual words, with special focus on declensions, morphology, semantics, but with little attention to the overall meaning, style or literary quality of the text. It is precisely for this reason that it enjoyed wide popularity in schools (especially in connection with his syllabus of prose and poetry, on which more below), attesting to the importance of schedography as a way to transform ancient masterpieces into texts not relevant to Greek culture or society, but mere linguistic paradigms.⁶²⁶

In keeping with his primary interest in grammar and its teaching, Moschopoulos worked on ancient lexica and grammars (although his involvement in the transmission of Harpocration is *sub iudice*: see below), and he wrote treatises on the Ionic and Doric dialects (attribution is partly controversial),⁶²⁷

621 Constantinides [1982] 103–108; Mergiali [1996] 49–52; Fryde [2000] 295–298; Wilson [1996²] 244–247; Gaul [2008] 169–171 argues for an earlier date of death, shortly after his teacher Planudes.

622 Constantinides [1982] 141; Browning [1960] 13. Among Nicephorus' books was the Plato mentioned above § 4.4 and the *Odyssey* Caes. Malat. D.XXVII.2 (Pontani [2005b] 297–300).

623 Ed. Titze [1822] 17–43. See Hunger [1978] 14; P. Ippolito [1981]; Constantinides [1982] 105–106; Mergiali [1996] 50–52; Fryde [2000] 219–221.

624 Webb [1994]; Keaney [1971] 303–313; Gaul [2011] 305–307. Moschopoulos' *Erotemata* and *Περὶ σχεδῶν* enjoyed great popularity throughout the Byzantine period and the Renaissance. The epimerisms to prose authors created by an otherwise unknown Staphidakes are discussed by Gaul [2008] 191–194.

625 See Lindstam [1925], and Gaul [2011] 181–183 for the success of Philostratus in Palaeologan Byzantium.

626 Webb [1997]; Webb [1994] 85–91.

a paraphrasis of *Iliad* 1–2 (without the *Catalogue of ships*),⁶²⁸ and a commentary on Hesiod's *Works and Days*, also largely paraphrastic but displaying clear knowledge of the ancient scholia and some familiarity with the etymologies in Plato's *Cratylus* and in other exegetical literature.⁶²⁹ This is an example:⁶³⁰

κρύψε δὲ πῦρ] εἶχε δὲ τέως ὁ Ζεὺς κεκρυμμένον τὸ πῦρ· τοῦτο μὲν αἰθίς ὁ καλὸς παῖς τοῦ Ἰαπετοῦ, ἤγουν ὁ Προμηθεύς, ἔκλειψεν ἐν κοίλῳ νάρθηκι παρὰ τοῦ Διὸς τοῦ βουλευτικοῦ, χάριν τῶν ἀνθρώπων, λαθῶν τὸν Δία τὸν τερπικέρανον· ὃν φασιν οὕτως ὠνομάσθαι, ἀπὸ τοῦ τρέπειν κατὰ μετάθεσιν τοῦ ρ, οὐκ ἀπὸ τοῦ τέρπεσθαι, ὡς τρέποντα δηλονότι τοὺς ἐναντίους τῷ κεραυνῷ, οὐχ ὡς τερπόμενον ἐν αὐτῷ. εἶτα ἐπάγει κατ' ἠθοποιῶνα, τίνας ἂν λόγους εἶπεν ὁ Ζεὺς ὀργιζόμενος πρὸς τὸν Προμηθεά διὰ τὴν κλοπὴν τοῦ πυρός.

hid the fire] Zeus had kept the fire hidden until then: Prometheus, the good son of Iapetos, stole it from Zeus the decision-maker in a hollow reed, for the sake of the mortals, escaping the notice of Zeus the thunder-bearer (*terpikeraunos*), whose name—they say—derives from the verb *trepein* (“to turn”) through metathesis of the *rho*, not from the verb *terpesthai* (“to be delighted”): this means that Zeus puts to rout the enemies with his thunder rather than delighting himself with it. Then he adds a sort of ethopoeia, imagining which words Zeus would speak to Prometheus in anger due to the theft of fire.

As a scholar of ancient Greek poetry, Moschopoulos produced important editions (with commentaries and glosses) of Pindar's *Olympian Odes*⁶³¹ and of the first eight idylls of Theocritus,⁶³² as well as of the triads of Sophocles (*Ajax*, *Electra*, *Oedipus Rex*) and Euripides (*Hecuba*, *Orestes*, *Phoenissae*).⁶³³ These texts, together with the aforementioned parts of Homer and Hesiod, were included in a standard curriculum of school readings that met with

632 Gallavotti [1934].

633 Scholia ed. Dindorf [1863] and Longo [1971]. On Sophocles see the contrasting judgments of Turyn [1952] 16–30 and Dawe [1973]; on Euripides see Turyn [1957] 83–164; Günther [1995], esp. 60–64 and 268–270; Pérez Martín [1997b]; a balanced assessment in Mastronarde-Bremer [1982] 22–24 and 89–120 (see also Fryde [2000] 293–294, with bibliography). On his Aristophanes see Keaney [1972].

evident success throughout the Palaeologan age, and was often copied up to the 1330s.⁶³⁴ Moschopoulos' inclination to anthologies and chrestomathies in general also led him to the creation of the so-called "*Anthologie des quatre*" (excerpts from Philostratus' *Images*, Marcus Aurelius, Aelian's *Natural History*, and the so-called *Sylloge Vaticana* of the epigrams), which was designed as a textbook for the intermediate level between the primary learning of grammar and the exegesis of more advanced poetical texts. This collection, which still awaits closer study (as do other products of the Palaeologan anthologising fashion),⁶³⁵ marked the first instance of prose texts being integrated in a fixed school curriculum.⁶³⁶

While the real extent of his philological contributions to the establishment of the texts of Attic drama is still hotly debated in the present day (especially in the case of Sophocles, an author he edited around 1290), it can be affirmed that Moschopoulos does not stand out as a first-rate textual critic, although he was definitely well acquainted with the iambic metre, and certainly inserted metrical conjectures in his recensions. Some of his good readings, however, may in fact derive from deliberate editorial choices rather than from the inspection of better sources. Be that as it may, Moschopoulos' editions certainly enjoyed a great success among Byzantine schoolmen and scholars, and were by far the most widespread ones before Triclinius.

Moschopoulos owed his success also to his activity as a grammarian and schedographer. In fact, the fashion of elementary grammatical exercises, epimerisms, and schedography was so common in Palaeologan Byzantium that a man like George Lacapenus,⁶³⁷ a teacher of grammar and rhetoric living in the capital, even applied this method to a wide selection of Libanius' letters, and later to his own letters exchanged with Michael Gabras, with Planudes' pupil John Zarides and with other learned friends over a considerable span of years (1297–1315): these epimerisms were later arranged in alphabetical order.⁶³⁸

634 Dain [1980]; Gaul [2008] 174–177.

636 Gaul [2008] 168 and 172–174.

637 Fryde [2000] 302–303; Constantinides [1982] 101–103; Mergiali [1996] 52–53; Wilson [1996²] 243.

638 Ed. Lindstam [1924]; and for the alphabetical version see Voltz [1893]. Little is known about his rhetorical notes to Homer in Par. Gr. 2938 (Pontani [2005b] 269–270). Lacapenus never wrote on Epictetus (*pace* Voltz [1893] 222).

And besides Lacapenus, lexicography was a lively genre in the early 14th century:⁶³⁹ Andreas Lopadiotes put together the so-called *Lexicon Vindobonense*,⁶⁴⁰ a second-rate work that embraced references to Greek literature from Homer to Gregory of Cyprus, and preserves down to our own day some otherwise unknown fragments of Attic drama; however, Lopadiotes showed a remarkable reluctance to include in his quotations from Euripides the conjectures of his colleague (or teacher) Manuel Moschopoulos. The still unpublished lexicon of George Phrankopoulos depends extensively on Zonaras and the *Etymologicum Magnum*, but its ms. Vat. Gr. 7 (of 1301) bears important, possibly autograph, marginalia with excerpts from Planudes, Lacapenus and other philological and rhetorical works, including some quotations from lost speeches of the Attic orators.⁶⁴¹ In view of the importance of the Atticist model in lexicography (particularly evident in the case of Thomas Magistros, see below § 4.7), and of the strong interest in Attic oratory to which such manuscripts as the *codex Crippsianus* (Lond. Burney 95) or the Bodl. Auct. T.2.8 bear witness, it has recently been suggested that precisely Lopadiotes or Phrankopoulos—rather than Moschopoulos, as had been hitherto assumed—should be credited with the redaction of the archetype of the entire textual tradition of Harpocration's *Lexicon of the ten orators*.⁶⁴²

4.6 *Constantinople after Planudes: Between Christian and Classical Culture*

Hagiographies of the Palaeologan age show that profane wisdom and theology continued to be kept separate in school curricula, thus confirming the persistent, obvious *Spaltung* between Christian and pagan instruction⁶⁴³—an issue that will become paramount with the explosion of the Palamite movement and ideology (see below § 5.1). Throughout the early period, however, in the frame of the ideal of so-called ‘Christian humanism’, various different strategies were adopted by scholars, monks and ecclesiastics in order to bridge the gap between Classical and Christian learning.

639 Gaul [2008] 195–196.

642 Gaul [2008] 183 *contra* Keaney [1969].

643 Mergiali [1996] 26–29 and 84–89.

The monk Joseph Rhacendytes (ca. 1260–ca. 1330), long a teacher in Constantinople (1308–1321),⁶⁴⁴ took the encyclopedic approach: his *Synopsis*, a massive work on universal learning (from rhetoric to logic, from physics to medicine and theology) was subdivided into a number of mostly independent treatises, and largely based on the synthesis made by eminent Byzantine commentators and theologians, from Menander the Rhetor to Maximus Confessor, from Nicephorus Blemmydes to George Pachymeres. Rhacendytes' paedagogical aim, striving to provide pupils with a guide to the supreme truth by means of an adequate recognition of the intermediate sciences, did not prevent him from embracing a much more radical contemplative stance (possibly under the influence of hesychasm) during his later years.⁶⁴⁵

A more distinctly rhetorical path was followed by a correspondent of Joseph, the monk Sophonias, who excelled in the paraphrase of Aristotelian treatises (*Short Treatises on Nature, Sophistical Confutations, On the Soul*). Recent studies have shown an unexpected facet of this lesser figure of Palaeologan learning, for he has been identified as the author of a *melete* on the oration of St. Paul at Athens' Areopagus, full of overt or less overt references to Platonic philosophy, starting from the *incipit*, patently reminiscent of Plato's *Apology of Socrates*.⁶⁴⁶

A fervent admirer of Plato and Platonic philosophy in all its aspects, from psychology to ethics,⁶⁴⁷ Manuel Gabalas, later Matthew archbishop of Ephesus (ca. 1271/72–1355/60),⁶⁴⁸ iconically declared his inner conflict between Classical and Christian instruction in a letter to Michael Gabras, where he described his irresistible passion for Homer.⁶⁴⁹ In effect, Gabalas produced a series of three works on the *Odyssey*, carried by an autograph manuscript otherwise exclusively devoted to theological works (Vind. theol. Gr. 174): a lengthy prose paraphrase of some of Odysseus' wanderings with no reference whatsoever to the pagan gods,⁶⁵⁰ a short moralistic prologue to the poem (insisting on Homer as a universal teacher and on Odysseus as a paradigm of virtue),⁶⁵¹ and a brief *résumé* of books 9–12 of the *Odyssey*, in which many episodes are read in an allegorical or moralistic key (the Cyclops as the daemon of evil; Circe and the

Sirens as two different forms of pleasure; Scylla and Charybdis as moral and physical sin etc.).⁶⁵² These works, albeit no outstanding feats of scholarship, all attest to a lively enthusiasm for ancient poetry, substantiated by a remarkable erudition and familiarity with old exegetical and allegorical works; however, this fondness is never devoid of a sense of guilt for the pleasure of reading a poetry that he qualifies as ἔπεα σαθρά, “sordid, rotten verse”.⁶⁵³

Finally, another learned teacher and politician who devoted his time to literate instruction was John Glykys, a former pupil of George of Cyprus, and an imperial officer who later became patriarch of Constantinople in 1315–1319.⁶⁵⁴ Glykys is the author of a treatise entirely devoted to syntax,⁶⁵⁵ which abandons the ambition of a general overview and opts, instead, to provide solutions to particular problems (*zetemata*), above all the nominal cases, the uses of the participle and the issue of solecism and barbarism—the latter a very popular theme in Byzantine grammars but also in smaller independent, mostly anonymous notes or treatises to be found scattered in Byzantine manuscripts.⁶⁵⁶

σῶμά τι γὰρ ὁ λόγος, ἐς τὸ πλήρες εἰρμοῖς καὶ μέλεσιν, ὡς ἐκεῖνο, καὶ αὐτὸς συγκεῖμενος . . . περὶ ταῦτα γὰρ καὶ τὴν αὐτῶν συνάφειαν, ὡς χρῆ, καὶ σύνταξιν καὶ ὁ λεγόμενος σολοικισμός, ὅσπερ ἐστὶ χωλότης ἐν τῷ λόγῳ, φαίνεται, περὶ οὗ σε φροντίσαι δεῖ οὐδὲν τι ἥττον τῶν καλλίστων ἐπὶ τῇ γραφῇ ἰδιωμάτων καὶ ὠραϊσμάτων Ἀττικῶν

A sentence is a sort of body, and like a body it consists entirely of joints and limbs . . . It is in these limbs and their connections and syntax that, as one would suspect, what is called solecism, that is lameness in the sentence, makes its appearance. You must pay attention to this, no less than to the finest styles of written literature and the beauties of the Attic authors.⁶⁵⁷ [transl. R. Robins, adapted]

4.7 *Thessalonica: Thomas Magistros and Demetrios Triclinios*

We have mentioned above that one of the characteristics of the Palaeologan revival is the plurality of cultural centres, libraries and *scriptoria*: cities such as Trebizond, Mystra, Ephesus acquired a certain prestige in this period; the most

evident sign of this new polycentric dimension is the city of Thessalonica, already a lively place in the times of archbishop Eustathius, but since the Greek *reconquista* in 1246 a first-rate intellectual metropolis. Thessalonica was the birthplace of some illustrious *literati* such as John Pediasimus, Nicephorus Chumnus, Thomas Magistros and Demetrius Triclinius, and hosted in the first or second decade of the 14th century such outstanding personalities as Maximus Planudes, Theodore Metochites, George Lacapenus, Joseph Rhacendytes.⁶⁵⁸

Thomas Magistros (ca. 1280–† soon after 1347)⁶⁵⁹ is the perfect example of a ‘gentleman scholar’, a champion of that cooperative production of written culture which flourished in the literary salons of 14th-century Thessalonica. His lexicon *Collection of Attic Words*, written before 1328 and edited by F. Ritschl in the early 19th century,⁶⁶⁰ owes its form to an early circulation in the *milieu* of the author, which led to a textual instability (‘interpolations’ and omissions) that still deserves closer analysis.⁶⁶¹ This bulky work, displaying a clear prescriptive goal in orthographical and morphological issues, derives its examples partly from a first-hand reading of some of the leading Attic writers (from Aristophanes to Thucydides), and partly from pagan authors of the imperial age (and from Gregory of Nazianzus); its greatest innovation on the background of contemporary linguistic tools consists in the massive use of the Atticist lexica of the imperial age, from Phrynichus to Moeris.⁶⁶² Magistros’ familiarity with the Attic dialect, and more specifically with the authors and the intellectual horizon of the Second Sophistic, was so great that two of his speeches (in ms. Vat. Gr. 714) have been regarded for centuries as the work of Aelius Aristides.⁶⁶³ In this connection the author’s ideal of *paideia* bears a distinct political and ideological dimension.⁶⁶⁴

But Magistros, who was a teacher of renown and became a monk at the important monastery *tou kyr Isaak* in the 1320s, but apparently never held any political or ecclesiastical role, also stands out for his unceasing devotion to the edition and commentary of dramatic texts:⁶⁶⁵ in the years around 1300 he pro-

665 An analytical catalogue of the manuscripts and the modern editions of Magistros’ scholia to the scenic poets (mostly, but not always, coinciding with that of Triclinius’ and Moschopoulos’) is provided by Gaul [2011] 387–401.

vided the triads of Aeschylus, Euripides, Aristophanes and Sophocles (the latter with the addition of the *Antigone*) with important introductory texts, such as biographies and summaries, and with commentaries largely indebted to earlier scholia (the same is true for Pindar's *Olympian Odes* and, less certainly, *Pythian* 1–4).⁶⁶⁶ In most of these cases Magistros did not constitute genuinely new texts of the poets involved: rather, he added his own exegesis and some emendations to the 'vulgate' text of Planudes and Moschopoulos,⁶⁶⁷ at times displaying great tolerance for *variae lectiones* of the same passage and their multiple meanings.⁶⁶⁸ This partially explains why it is sometimes very hard to disentangle in the manuscripts the exact attribution to the different Byzantine scholars, and to sort out the contributions of each one to the constitution of the text.⁶⁶⁹ However, as far as Magistros' notes are concerned, the obvious morphological paraphernalia and a rather uncertain command of metre do not obscure the attention he dedicated to mythological and stylistic features, as well as his pride in distinguishing his own approach from that of his colleagues. The analysis of the scholia to the *Oedipus rex* (the only ones well edited in modern times—in addition, naturally, to the Aristophanes scholia)⁶⁷⁰ shows a much more wide-ranging and ambitious approach than Moschopoulos'.⁶⁷¹ A good example is provided by the ambitious note on Aristophanes' *Wealth*, post 626 χοροῦ:⁶⁷²

σημείωσαι ἐνταῦθα ὅτι, δέον χορὸν διὰ μέσου θείναι μέχρις ἂν ἐκείνοι ἐς Ἀσκληπιοῦ ἐλθόντες ἀναβλέψαιεν τὸν Πλοῦτον, ὁ δὲ παραχρῆμα τὸν Καρίωνα φέρει εὐαγγελίζοντα τοῖς γέρουσι περὶ τῆς τοῦ Πλοῦτου ἀναβλέψεως. ἐποίησε δὲ τοῦτο οὐκ ἄλογως, ἀλλὰ τῆ τε τῆς νέας κωμωδίας συνηθεία ἐν ἡ αἰ παραβάσεις ἐπαύσαντο, ὡς προείρηται, καὶ ἅμα δεῖξαι βουλόμενος ὡς ἄρα τάχιστα πάνυ ὁ Πλοῦτος ἀνέβλεψεν.

Note here that, although it would be necessary to insert a choral song until they arrive at the temple of Asclepius and can see Ploutos once again, the poet immediately represents Karion as he brings the old men the good news of Ploutos' recovery. He does so not without reason, both following the habits of New Comedy, in which the *parabasis* had disappeared (as we mentioned above), and wishing to show that Ploutos recovered his eyesight very quickly.

The Thessalonican scholar Demetrius Triclinius, who may have been a pupil of Magistros and must have had some contact with the school of Planudes, was the most famous philological genius of the early 14th century,⁶⁷³ and probably—with a breadth of vision well above the average of the literary coteries—the only one to conceive of Classical studies not exclusively as subservient to rhetorical or stylistic aims.⁶⁷⁴ The acme of his activity must be placed in 1305–1320, yet despite the great renown associated with his learning his biography remains very imperfectly known, and no information is available with regard to his profession (where was he trained? did he become a monk? did he ever teach in a school?). What can be reconstructed is an unceasing commitment to the study of Classical texts (poetry in particular), practiced in the wake of his fellow countryman Magistros, probably in the same erudite circles of Thessalonica. More generally, the number and quality of the scribes involved in the copying of manuscripts, as well as the constant dialogue or overlap between the philological activities of the various leading scholars of this age, point to the existence of a *cercle d'écriture* having immediate connections with the capital.⁶⁷⁵

As opposed to his other colleagues and predecessors, Triclinius devoted most of his own efforts to textual criticism, above all concerning dramatic and lyric texts, which he emended and assessed by relying on the collation of several, often old and forgotten manuscripts, and on a firm knowledge of metre, ranging from the more obvious iambic, trochaic, dactylic and anapaestic sequences, to the more elaborate responsions of lyric strophae and antistrophae. This resulted not only in a special ability to make sense in metrical terms of some of the most difficult lyrical sequences in Greek tragic choral

odes,⁶⁷⁶ but also in a revision of Hephaestion's critical and diacritical signs marking length of vowels, speakers, scene-endings, etc. (see, for instance, his introduction to Aristophanes preserved in Holkh. Gr. 88, and above all his ms. Marc. Gr. 483 of Hephaestion and other metrical writers).⁶⁷⁷ Through a careful meditation of Hephaestion and of Isaac Tzetzes' *On Pindar's Metres*, Triclinius progressed towards a constantly growing precision in the assessment of epinician colometry,⁶⁷⁸ which enabled him to produce a new edition of Pindar, improving on the textual and exegetical work of his predecessors Manuel Moschopoulos and Thomas Magistros:⁶⁷⁹ without the textual interventions of these three scholars, the text of this difficult poet would have come down to us, and to the Italian humanists, in a much poorer state.

Triclinius devoted philological attention to the text and scholia of Aristophanes: his autograph of the edition of the triad is preserved in ms. Par. Suppl. Gr. 463, while his final recension of eight plays, equipped with metrical notes and emendations, is carried by the 15th-century ms. Holkh. Gr. 88, and proved immensely influential for and after the Aldine edition of 1498.⁶⁸⁰ Also important for its influence on modern editions since Turnèbe is Triclinius' work on Sophocles: while we no longer possess his autograph, mss. Par. Gr. 2711 and Marc. Gr. 472 reflect the outcome of Triclinius' philological and metrical work, and attest to its early spread in the writing-circles of Constantinople.⁶⁸¹

But the editions for which Triclinius is best known are those of Aeschylus and Euripides: for both of these poets he certainly produced more than one text. The autograph ms. Neap. II.F.31 of Aeschylus, carrying *Agamemnon* and *Eumenides* besides the triad, and improving on the first edition (preserved in mss. Laur. 31.8, Marc. Gr. 616 and Salmant. Gr. 233), is essential both as our only primary witness of some lines of those tragedies (those damaged or missing in the glorious Laur. 32.9, see above § 2.6) and as the most philologically advanced manuscript copy of the poet.⁶⁸²

681 Tessier [2005] xvii–xix; Aubreton [1949] 29–41; Bianconi [2005a] 100–104, a fundamental overview of the mss., adding Triclinius' notes to the *Ajax* in ms. Par. Gr. 2884.

682 Smith [1975] 1 and 34–40; Turyn [1943] 100–116; Dawe [1964] 59–64; Fryde [2000] 270.

Triclinius was also the scholar who managed to find—perhaps unearthing it in some Thessalonican *Fundgrube*, or carrying it over from Constantinople—an old codex (possibly still in majuscule letters) of the alphabetical series of Euripides' plays, which had remained almost unknown to the Byzantines up to his day. He promoted the copying of these texts in the paper manuscript Laur. 32.2 (*siglum* L), written by several scribes and carrying the master's own corrections, notes and interventions.⁶⁸³ The relationship between ms. L and ms. P (Vat. Pal. Gr. 287 + Laur. Conv. Soppr. 172, also carrying the “alphabetical” plays), is notoriously controversial, and so is the role of ms. Ang. Gr. 14, carrying another, peculiar textual recension of the triad. What is certain, is that all these witnesses—and several others—go back to Triclinius' activity, which took its cue from Magistros' text but augmented it by many scholia and glosses, which were to prove highly influential in Western humanism starting with the Aldine edition.⁶⁸⁴

Euripides and Aeschylus appear in the triclinian ms. Vat. Gr. 1824 + 1825 together with two other poets, namely Hesiod (whose three extant complete poems he edited and equipped with a selection of ancient and Byzantine scholia in Marc. Gr. 464)⁶⁸⁵ and Theocritus (Par. Gr. 2832 is the largest extant collection of Theocritean idylls, going well beyond the Moschopoulean selection).⁶⁸⁶ Amongst other Greek authors edited by Triclinius, mention should be made of Babrius (whose fables he emended and annotated in the 10th-century ms. Lond. Addit. 22087)⁶⁸⁷ and the *Greek Anthology* (as mentioned above § 4.4, he owned and annotated at least two manuscripts of Planudes' collection, namely Par. Gr. 2744 and Planudes' autograph Marc. Gr. 481).⁶⁸⁸ Less is known about Triclinius' attention to the study of prose authors, although we can tell that he copied or annotated manuscripts of Aphthonius and Hermogenes, Synesius, Ptolemy's *Geography*, Theodoretus of Cyrhus, and above all of Libanius. In the textual work on Libanius' *Letters*, performed on the 10th-century manuscript

683 Ms. Laur. 32.2 (on which see Zuntz [1965] 128–134; Browning [1960] 15) also included Sophocles, some tragedies of Aeschylus, Hesiod's *Works and Days* and the Theocritean section of Par. Gr. 2722, partly written by Planudes.

684 Turyn [1957] 222–258 and 23–52 (with Bianconi [2005a] 119–122: the scribe of the Angelicanus is the same of Par. Suppl. Gr. 463 of Aristophanes); Zuntz [1965] 136–140; Magnani [2000] 29–51; De Faveri [2002] for the edition of the metrical scholia.

685 Derenzini [1979].

686 Gallavotti [1982]; Bianconi [2004b] 343–344; Bianconi [2005a] 39 and 99, with further bibliography.

687 Turyn [1957] 250–252.

688 Derenzini [1984]; Bianconi [2005a] 124–126. This is of course relevant for our knowledge of the relationship between Planudes and Triclinius: see Wilson [1978].

Vat. Gr. 83, and then in a series of newly produced codices, he was helped by the scribe Nicholas Triclines, who often emerges as his collaborator, and displays a lively copying activity, for instance in ms. Laur. 70.6 (Herodotus) and in the margins of Ang. Gr. 83.⁶⁸⁹

The scholarship of Triclinius is not easy to reconstruct in detail, consisting as it does in a vast proliferation of manuscripts, often produced by a network of well-trained scribes.⁶⁹⁰ His work was aided by unceasing progress in the knowledge of ancient metre, but also prompted by a “divine and secret inspiration” (θεία καὶ ἀπόρρητος ἔμπνευσις) that urged him to textual emendation and conjecture,⁶⁹¹ though his sound method led him to declare regularly the exact provenance of the collected or concocted scholia (*e.g.* by prefixing a cross to Moschopoulos’ notes, a capital letter to Magistros’, and the word ἡμέτερον to his own).⁶⁹² Less frequently, he also showed an interest in other exegetical approaches, including allegory (an astronomical reading of *Iliad* 4.1–4 recalls the Neoplatonic tradition stretching from Porphyry to Michael Psellus).⁶⁹³

Despite the respect it commands, Triclinius’ activity has received contrasting assessments.⁶⁹⁴ What is certain is that: a) it was not merely the fruit of an isolated genius, but it involved an erudite circle keen on editions of poetry and prose (from rhetoric to historiography, from grammar to philosophy and science);⁶⁹⁵ b) it became of paramount importance both in the field of Byzantine teaching⁶⁹⁶ and as the touchstone for the tradition of many Classical texts in Italian humanism and later.⁶⁹⁷ This partly justifies the disparaging attitude by which Triclinius, in the prolegomena to his Aeschylus edition, justifies his interest for lyric metres of Greek drama:

οὐδὲ γὰρ οὐδ’ οἱ πάλαι τὰ κάλλιστ’ ἐπινενοηκότες ταῦτα τοῖς τοιοῦτοις ἐκδεδώκασιν, ἀλλὰ τοῖς συνετοῖς, βραχὺν λόγον τῶν μὴ συνετῶν ἔχοντες ὡς καὶ πού τις ἔφη “αἰδῶ ξυνετοῖσι· θύρας δ’ ἐπίθεσθε βέβηλοι” [Orph. fr. 1a = 101 Bernabé] . . . ἴν’ οὖν μὴ αὐτὸς ἀδικεῖν δόξω τοὺς συνετούς, τὸ ἐπελθόν μοι κατὰ νοῦν τούτοις προὔθηκα, οὗτοι δ’ ἂν εἰδεῖεν εἰ καλῶς ἔχει ἢ μή, ἐπεὶ καὶ

ἄ μοι περὶ τῶν χορικῶν μελῶν καὶ τῶν ἄλλων τῶν ἐν τοῖς δράμασι φερομένων εἰδῶν ἐπινενόηται θεία τινὶ καὶ ἀπορρήτῳ ἐμπνεύσει πλείστα πονησαμένῳ περὶ τε τούτων καὶ τῶν ἐν αὐτοῖς μέτρων, καὶ ταῦτ' ἐν τοῖς δράμασιν ἐξετέθη.

For not even those who invented these excellent things published them for such (ignorant) people, but for the intelligent ones, taking little care of the dull people, as someone once said “I sing to the intelligent: close the doors you laymen”. . . . Therefore, in order not to give the impression that I damage the knowledgeable, I offered them what has come to my mind, and they will realise if it is correct or not, because what I have excogitated on the choral songs and the other genres contained in the plays, working a lot through a divine and secret inspiration on these texts and on their metres, all this has been expounded in the plays.⁶⁹⁸

Interest in ancient Greek tragedy was not confined to Thessalonica: George Carbone, a refugee from Asia Minor and a teacher in Constantinople in the early years of the 14th century, left a few notes (but many more may have existed) on his exemplars of Aeschylus and Sophocles.⁶⁹⁹ However, in the first three decades of the 14th century Thessalonica was certainly populated by many anonymous or little known scribes, among whom one finds the case of John Catrares, who copied an *Iliad* with scholia (Scor. Φ.11.19), owned an important codex of Stobaeus' *Anthologion* (Vind. phil. Gr. 67) and numerous other philosophical, poetical and rhetorical manuscripts.⁷⁰⁰ Above all, Catrares was a book-collector, a poet, and a scholar good enough to compose a short comic fragment in imitation of ancient prototypes,⁷⁰¹ and to be credited with—whether rightly or not—with the forgery of the last lines of Euripides' *Iphigenia at Aulis* (and the beginning of the *Danae*) in ms. Vat. Pal. Gr. 287 (ms. P).⁷⁰²

4.8 *Theodore Metochites and Nicephorus Gregoras*

Any visitor of the Chora monastery (now Kariye Djami) in Constantinople will be impressed by the mosaic portrait of Theodore Metochites (ca. 1270–1332), not only one of the principal benefactors of the monastery, but above all an outstanding scholar, writer and politician (he acted as prime minister

702 Wilson [1996²] 255–256; Magnani [2000] 22; Bianconi [2005a] 144 and n. 86, with further bibliography on the still unsettled dispute over the paternity of these lines.

to Andronicus II), and an extraordinary example of the fusion between *vita activa* and *vita contemplativa*.⁷⁰³ Firmly convinced that the Byzantines shared descent and language with the ancient Hellenes, and were thus their successors,⁷⁰⁴ Metochites proudly stated that “everything done by the Greeks and said about the Greeks has been studied by us to a considerable degree, both great things and things not so great but still perhaps worth a passing mention”.⁷⁰⁵ Ancient Greek writings, in his view, should not be considered just as paradigms of style, but also in their ethical purport, particularly when they concern characters of pagan antiquity such as Pericles or Themistocles.⁷⁰⁶ This attitude has sometimes been regarded as a proof of his ‘humanism’, for in his view the conversation with the Classics constitutes an integral part of man’s intellectual and moral formation, and at the same time the Classical world is considered in a deeper chronological and cultural perspective than used to be the case in previous decades.⁷⁰⁷

However, Metochites regarded himself as an epigone, and his strict obedience to religious principles prevented him from laying out a truly alternative cultural program. His *Miscellanea* (or *Semeioseis gnomikai*) are a good example of this: a series of shorter writings of almost encyclopedic ambition,⁷⁰⁸ in which he makes no claim to originality, for “practically every topic has been taken by others already, nothing is left as our share at this late date . . .”.⁷⁰⁹

Metochites’ range of interests was remarkably broad, stretching from Aristotle (whom he paraphrased and copied, deploring his predecessors’ mistakes but also at times the obscurity of the author)⁷¹⁰ to the development of science, from historiography to rhetoric. Precisely in the field of rhetoric and literary criticism, he had engaged in a lively polemic with the above-mentioned Nicephorus Chumnus, a politician and former friend, arguing for the ideals of *kallos* and *ethos* as they appear in Thucydides’ obscure style, against the plea for absolute *sapheneia* uttered by Chumnus and by his followers in their

709 *Misc.* 1.2, in Hult [2002] πάντα γάρ, ὡς εἰπεῖν, φθάσαντ’ ἄλλοις εἰληπται, καὶ οὐδὲν ὅ τι λείπεται μεθύστερον νῦν ἡμῖν μοιρίδιον εἰς χρῆσιν τῇ φωνῇ.

710 Wilson [1996²] 258–259.

polemic against Metochites.⁷¹¹ While modern judgments vary on Metochites' ingenuity and on his debt to Hermogenian terminology and method, it is clear that he preferred prose authors who could be credited with the gift of *apheleia*, such as Xenophon, Josephus, Synesius, and Plutarch⁷¹²—the latter in particular he found admirable for his encyclopedic learning and high moral value.⁷¹³ Metochites' *comparationes* among ancient authors, and above all among the orators, are particularly relevant in this respect: Synesius is praised as an imitator of Dio Chrysostom (*Misc.* 18–19), and Demosthenes is judged superior to Aelius Aristides (*Misc.* 17),⁷¹⁴ although he considered the latter—as an illustrious representative of epideictic oratory—to be more useful for the present, which was after all an imperial, not a democratic age.

Finally, Metochites was also a first-rate astronomer, who studied with Manuel Bryennios (the author of a fundamental treatise of *Harmonics*),⁷¹⁵ and wrote around 1317 a massive companion to astronomy (the *Stoicheiosis Astronomike*, or *Elements of Astronomy*), the most ambitious attempt to restore the Greek, 'Ptolemaic' astronomical tradition (the entire work is conceived as a commentary on Ptolemy's *Mathematical Syntax*), versus the new theories coming from Islamic quarters, which were bearing special fruits in marginal centres such as Trebizond (an essential role in this mediation was played by Gregory Chioniades).⁷¹⁶

But Metochites' role in the intellectual world of the Palaeologan age goes far beyond his career as a literary critic, essayist, or astronomer. His restoration of the Chora monastery went hand in hand with the creation of a very active *scriptorium*, which both collected and produced codices of pagan and Christian authors, becoming in a few years a treasury of wisdom and a centre of irradiation of Hellenic culture. From the riches of Chora anyone can

ἐκλαβεῖν τάχ' αὐτόθεν ὧν τις ἔραται

obtain whatever one desires, as if from a common treasury of whatever is needful, easily, for there is great need when one purposes ardent study of wisdom for the acquisition of culture and letters with immutable love.⁷¹⁷

The Chora library and scriptorium⁷¹⁸ thus ended up being a repository of illustrious manuscripts (*e.g.* the glorious Clarkianus of Plato, but also Vat. Gr. 130 of Diodorus Siculus),⁷¹⁹ and a sort of scholarly circle, a reading-group where the activity of preserving, copying and annotating could become a collective enterprise, as is shown by the fact that often several scribes (not necessarily professional scribes) were engaged in the production, restoration, or philological study of one single book. Recent studies have made considerable headway towards the identification of some of these copyists: for instance the so-called *Metochitesschreiber*, who worked in close connection with the master⁷²⁰ and produced, besides copies of Metochites' own works, such landmarks as the *codex Crippsianus* (Burney 95) of the minor Attic orators, or the Aelius Aristides Vat. Urb. Gr. 123, or the monumental Aristotle Par. Coisl. 157,⁷²¹ has been identified with Michael Clostomalles, an imperial notary who wrote many official documents throughout the first decades of the 14th century.⁷²²

But the most important figure in this context is Metochites' pupil and cultural heir Nicephorus Gregoras (ca. 1296–1361), a teacher, an intellectual and a multifaceted scholar, capable of writing a fundamental historiographical work on his own times, of annotating and editing Classical authors, but also of calculating the exact length of the astronomical year centuries before the Gregorian reform.⁷²³ No less convinced than his master Metochites—to the edition of whose writings he devoted painstaking efforts—that “not only for us Christians do all good things belong to God, but also for the most learned of the ancient Hellenic writers”,⁷²⁴ his passion for science led him to

724 *Epist.* 4.161–64 Leone οὐχ ὅπως ἡμῖν εὐσεβοῦσιν ἐξάϊρετον τὰς τῶν καλῶν αἰτίας ἀνατιθέναι θεῷ . . . ἀλλὰ καὶ τῶν Ἑλλήνων τοῖς σοφωτέροις. The whole letter is remarkable for its philological speculation on Aristides and Homer.

write on the astrolabe, to predict eclipses,⁷²⁵ and to edit Ptolemy's treatise on musical theory by adding *suo Marte* chapters 13 to 16, which completed Ptolemy's thought, if in a different style.⁷²⁶ This scientific thrust, also to be seen in his editions of Ptolemy (Marc. Gr. 312), ancient mathematical works (Marc. Gr. 320), and Metochites' *Elements of Astronomy* (Vat. Gr. 1087, which is also our main witness for several of Eratosthenes' *Catasterisms* and their antique illustrations),⁷²⁷ co-existed with a lively literary sensibility (he commented on Synesius' *On dreams*, adding textual and linguistic notes),⁷²⁸ with grammatical interests,⁷²⁹ and with a first-hand philological practice involving such diverse authors as Plato (Vat. Gr. 1029), Diodorus Siculus (Marc. Gr. 375), and Appian (he supervised ms. Laur. 70.5).⁷³⁰

The range and quality of his readings is well shown by a codex containing his excerpts, Heid. Pal. Gr. 129,⁷³¹ the list of the books he owned, annotated, or contributed to creating in the writing circle of the Chora monastery, is impressive.⁷³² This fusion of literary and scientific interests also emerges in Gregoras' favourite pupil, a monk, scribe and astronomer named Isaac Argyrus: recent research has detected his hand in a very important recension of the triads of Euripides and Aristophanes (Parm. 154 and Par. Gr. 2821 respectively).⁷³³

But there is a further dimension to Gregoras: namely, his activism as a cultural polemist against the South Italian monk Barlaam, one of the pioneers of

727 Guidetti-Santoni [2013].

728 PG 149, 521–642 (see Guiland [1926] 208–226): when commenting in 564B on Synesius' *On dreams* 6.20 ὀστρεῶδες περιβλημα, Gregoras writes that “our wise Synesius appears in many ways a fervent emulator of Plato, not only from his doctrines (for he shares his views) but also from his ideas and methods, and from his very words. The definition of the body as ‘oyster-like garment’ has its root there, for he says in the *Phaedrus* . . .” (there follows a quotation of 250c): πολλαχόθεν δείκνυται ὁ σοφὸς οὗτος Συνέσιος αἰρεσιώτης τοῦ Πλάτωνος ἄκρος. οὐ μόνον γὰρ ἐκ τῆς δόξης ὅτι τὰ αὐτὰ καὶ οὗτος ἐκείνῳ δοξάζει, ἀλλὰ καὶ ἐκ τῶν ἐννοιῶν καὶ ἐκ τῶν μεθόδων καὶ ἐξ αὐτῶν τῶν λέξεων. τὸ γὰρ λέγειν ὀστρεῶδες περιβλημα τὸ σῶμα ἐκεῖθεν ἔχει τὴν ἀρχήν. φησὶ γὰρ κάκεινος ἐν τῷ Φαίδρῳ . . .

729 Though in this domain some of the works that have been ascribed to Gregoras cannot possibly belong to him: Guiland [1926] 111–122.

the hesychast movement.⁷³⁴ Gregoras' dialogue *Phlorentios or On wisdom*,⁷³⁵ is staged in a fictitious Athens where, with a high number of reminiscences from Plato's dialogues, he depicts a harsh dispute on several topics—from astronomy to theology to politics—between two men called Nicagoras (Gregoras himself) and Xenophanes (Barlaam). An interesting debate addresses the status of grammar, which Nicagoras praises as an essential discipline to prepare for the reading and understanding of all kinds of authors, whereas Xenophanes retorts that it is instead a “slavish and servile art” (τέχνη ἀνδραποδώδης και δούλη).⁷³⁶

Gregoras' opposition to hesychasm—which cost him imprisonment in 1351, distress in his old age, and finally the insult of his corpse being dragged through the streets of the capital upon his death in 1361—rested also on a philological basis: in his still unpublished *Antirrhetica* (1357–1358) Gregoras attempted to unravel the elements of error and falsehood in a Palamite decree of August 1351:⁷³⁷

ἐκείθεν οὖν τὴν τοιαύτην ὁ Παλαμάς ἀνειλημμένος ῥήσιν, οὐκ ἔκρινε δεῖν ὡς εἶχεν ἔχειν οὐδ' αὐτὴ τὸ ὑγιές, ἀλλὰ βραχὺ παρεφθαρκῶς και διασαλεύσας τὰς λέξεις, ὅλον εὐθὺς ἀνετετρόφει τὸν νοῦν. και τελῶς μὲν μίαν συλλαβὴν τῆς ἱερᾶς ἀπῆλειψε βίβλου, λέξιν δ' αὐθις ἄλλην κατόπιν ἀμείψας ἀντεισήνεγκεν ἄλλην, ἀντὶ γὰρ “συνεργίας” “ἐνέργειαν” τῷ οἰκείῳ και παρανόμῳ ἐντέθεικε τόμῳ, τὴν ὁμῶνυμον ταύτην φωνὴν και οὐ μάλα ἀήθη πρὸς πλάνην τάνδρι. τὸ μὲν γὰρ ἐν τῇ πάλαι βίβλω κείμενον ἦν “τὴν ἀμέριστον ὁμοῦ και ἀσύγχυτον, τὴν θατέραν οὐσίαν συνεπαγομένην συνεργίαν”, ὃ δὲ λέγει τοιοῦτόν ἐστιν: “ἡ ἀμέριστος και ἀσύγχυτος οὐσία τοῦ Χριστοῦ, ἡ θεότης δηλαδὴ, συνεπαγομένη και τὴν θατέρας οὐσίας συνεργίαν εἶτουν τῆς ἀνθρωπότητος ἐτέλει τὰ θάυματα”. ὃ δ' ἀναιδῆς οὐτοσί τὸ μὲν ἐν παρυποκλέψας ἄρθρον τὸ “τὴν” και σιγῆς παραπέμψας βυθοῖς θάτερον μόνον τοῖς δυσὶν ἀμαθῶς τε και δυσσεβῶς ἐπεμέρισε κῶλοισ, ὡς ἔστιν ὄραν σοὶ τε και οἷς πρὸς βούλησιν ἄλλοις ἐστί. και ἅμα τὴν ἐξῆς ἀμείψας λέξιν, σύγχυσιν δυσσεβῆ τῇ ἱερᾷ προσετρίψατο ῥήσει και μάλα γε εἰωθυῖαν αὐτῷ. ἐπεὶ δὲ τὴν ἱερὰν ὁπῶσποτε ῥήσιν τῆς τοῦ καταράτου διαβολῆς ἐξελόντες ἀνεκαθήραμεν, φέρε και τὴν εὐσεβῆ προσαποδῶμεν ἔνοιαν.

737 Ms. Laur. 56.14, f. 58v (the text discussed is Sophr. Hier. *expos. fidei*, PG 87/111, 3169D): see Paparozzi [1973].

Palamas took this sentence from here, but he did not believe it carried a correct meaning as it stood: corrupting and partly altering its wording, he transformed radically the whole sense. He omitted altogether one syllable from the holy writ, he changed another syllable and substituted a third one, for in his own, illegal copy instead of “cooperation” (*synergia*) he wrote “act” (*energeia*), an etymologically related word, by no means uncommon for his deceitful games. The original text of the old book went “the indivisible and unmixable substance, invoking the cooperation of the other substance”, and it meant “the indivisible and unmixable substance of Christ (namely his divinity), invoking the cooperation of the other substance (namely of humanity) performed the miracles”. But this shameless man, stealing away one article (*ten*) and concealing it in the abyss of silence, impiously and incorrectly assigned the other article to the two *cola*, as you (and whoever else wishes) can see. Thus, deleting the following word, he brought an impious confusion into the holy sentence, as is customary for him: but now, since we have cleaned the holy sentence of the cursed blasphemy, let us restore the pious meaning.

5 The Last Century of Byzantium

5.1 *The Late 14th Century: Between Hesychasm and Classicism*

By the time of Gregoras' death, the productive phase of the Palaeologan revival had long died out, and political as well as cultural reasons explain this irreversible development. Already in the first decades of the 14th century the defence of Hellenic *paideia* was a difficult challenge, undermined not only by rivalries and personal enmities, but above all by a social environment that tended to confine literary studies to a restricted circle.⁷³⁸ By the 1340s, however, one of the main issues at stake was a religious rather than political factor, namely the development of the mystic spiritual trend known as hesychasm, which preached the total subordination of profane to ecclesiastical culture, and the outspoken prominence of religious authorities over secular ones. Its development and final triumph in Byzantine society, especially after the victory of John VI Cantacuzenus in the civil war of 1341–1347, and after the Church Synod of Constantinople in 1351, entailed a radical change in the extent and practice of education and scholarship throughout the later decades of the century: the

738 Gaul [2011] 272–377.

room left for the study of Hellenic literature and culture suddenly became very narrow.⁷³⁹

This is not to say that hesychasts were necessarily more hostile to pagan learning than their earlier counterparts: according to Gregory Palamas (1296–1359), the coryphaeus and leader of this spiritual movement,

ὡς καὶ παρὰ τῶν ὄφειων ἔστι τι χρήσιμον ἡμῖν, ἀλλ' ἀνελοῦσι καὶ διελούσι καὶ συσκευασαμένοις καὶ χρησαμένοις σὺν λόγῳ κατὰ τῶν ἐκείνων δηγμάτων· εἰς τοῦτο τοίνυν χρήσιμα τὰ κείνων ἡμῖν, ὡς κατ' ἐκείνων χρῆσθαι καθαιρούντας

just as we can gain some utility even from snakes, provided we kill, dissect, prepare and use them reasonably against their very bites, so their (*scil.* the pagans') doctrine is inasmuch useful to us as we may use it in our fight against them.⁷⁴⁰

This implies that Hellenic wisdom could still circulate in schools, but had to be considered as purely subservient to the right religious instruction,⁷⁴¹ and by no means the basis for a philosophical development comparable to the Western scholasticism that had grown out of Aristotle's works.⁷⁴² Hence the slow but inexorable marginalisation of the non-aligned scholars, starting from Nicephorus Gregoras himself, who was satirised by patriarch Philotheus Coccinus (1300–1379) as a sort of Sophoclean Ajax failing to realise that the pagan poets and philosophers were actually dead,⁷⁴³ down to those scholars who eventually converted to Catholicism, first and foremost Demetrius Cydones.

There were partial exceptions: Theodore Meliteniotes († 1393), *didaskalos ton didaskalon* in 1360–1388 and later archdeacon of the Patriarchate, wrote a commentary on the Gospels but also *Three Books of Astronomy* which attempted, decades after Metochites, to reconcile the Hellenic tradition going back to Ptolemy and Theon with the new results of Arab science.⁷⁴⁴ It is interesting to note that Meliteniotes was the owner and annotator of an important

Iliad (now ms. Genav. Gr. 44):⁷⁴⁵ this seals a link between astronomical and Homeric studies which occurs with other contemporary figures as well, e.g. George Chrysococcas the Elder (the scribe of Vat. Pal. Gr. 7 of the *Odyssey*, and a proficient student of Persian astronomy at Trebizond)⁷⁴⁶ and Constantine Lucites (a pupil of Theodore Hyrtacenus, and the owner of the *Iliad* Ambr. I 58 sup.).⁷⁴⁷ More broadly, although the scholarly interest in science during the later Palaeologan era had deep roots in the polymathy of some outstanding scholars of the Planudean age,⁷⁴⁸ it was also a very important phenomenon as far as the transmission and emendation of prose texts in manuscripts is concerned.⁷⁴⁹ Another example is provided by the astronomer Joseph Bryennios, who had been appointed *didaskalos ton didaskalon* or *didaskalos tes ekklesias* since 1390: an expert in Latin language, grammar, and exact sciences, he spent many years of his life in diplomatic missions to Crete and Cyprus, but was above all a faithful theologian of the Patriarchate, as well as a book collector and an enthusiastic reader of Marcus Aurelius' *Meditations*.⁷⁵⁰

But on the whole the second half of the 14th century was dominated by other concerns, above all by the civil and external wars, the dramatic effects of the plague (1348–1362), and the increasing need for a serious interchange of ideas with the Latin West, connected with the tightening of commercial links, the progressive sense of danger that was seizing the empire (after the unsuccessful Ottoman siege of Constantinople in 1394, emperor Manuel II addressed a petition to Western rulers), and also—on the cultural level—the spreading of Planudes' translations of the masterpieces of Latin literature.

A key moment in this process was the attempt to transplant on Byzantine soil the scholastic philosophy of Thomas Aquinas: this challenge was pursued by Demetrius Cydones (1324/25–1397/98),⁷⁵¹ an intellectual and politician who served as *mesazon* to emperors John VI Cantacuzenus and John V Palaeologus, and became a tutor and later a correspondent of the learned Manuel II, an emperor curiously capable of showing enthusiasm for a manuscript of Plato or Suidas.⁷⁵² The author *inter alia* of a very large epistolary (451 letters) in pure

Attic style, abounding in references and allusions to Greek poets, historians and orators, Demetrius was based for several years in Thessalonica, where he entertained one of the rare writing circles of his age.⁷⁵³

Partly helped by his brother Prochorus, he translated into Greek not only works of Augustine, Fulgentius, and Anselm of Canterbury, but above all several of Thomas Aquinas' theological writings, after a felicitous encounter with his *Summa*, which he describes in his *Apology*⁷⁵⁴ as a turning-point in his life. In fact, Demetrius' interest in Thomas and the West, and his dissatisfaction with the Palamist orientation of the Orthodox Church, grew to the point of prompting his conversion to Catholicism in 1357: the ensuing persecution on the part of the Orthodox Church (his brother Prochorus was sentenced to anathema by the 1368 Council promoted by Philotheus Coccinus) also lay at the root of his journeys to Italy, two of which (1390 and then 1396) propitiated his becoming a Venetian citizen, and the appointment of Manuel Chrysoloras as a teacher of Greek in Florence.⁷⁵⁵ Cydones was a man of learning, fully at home in theology as well as in arithmetics: in the process of translation, he proved attentive to the need to collate several copies in order to correct the faulty passages. He once wrote to Maximus Chrysoberga

μόλις γὰρ ἑνὸς εὐποροῦμεν ὅθεν ἐχρῆν μεταφέρειν, ὥστε τὴν ἐκείνου φθορὰν οὐκ ἦν ῥαδίως φωρᾶσαι ἢ διορθώσασθαι, οὐκ ὄντος ἑτέρου ᾧ τὸ ἐν ἐκείνῳ τις παραβάλλων ἠδύνατ' ἂν μᾶλλον τῆς ἀληθείας στοχάσασθαι

I had barely one book from which I had to translate, so that it was not easy to discover a corruption in the text, or to correct it, since there was no other copy to collate with that one text in order to seek the true reading.⁷⁵⁶

The hesychast movement caused a split in the cultural elite of the late 14th century: the anti-Palamites included Cydones' pupil Manuel Calecas (ca. 1360–1410), who in 1390 opened a school of *enkyklios paideia* in Constantinople, and wrote a grammatical work for his teaching activity,⁷⁵⁷ although the comparatively small success of this school was due partly to the difficult political and

economical moment (he had to flee the capital in 1396 upon converting to the Roman faith), and partly to Calecas' own problematic character.⁷⁵⁸ On the side of the admirers of Gregory Palamas one finds a pupil of Thomas Magistros, based in Thessalonica during the third quarter of the 14th century, namely the aforementioned Philotheus Coccinus, later patriarch of Constantinople.⁷⁵⁹ In addition to writing long essays—as we have seen—against Gregoras and pagan wisdom, Coccinus wrote a panegyric for Gregory Palamas phrased in a pure Hellenic style and language, and insisted that Classical learning should be used only as a rhetorical frame and as a help in reading the Scriptures, not for its own sake, much less in the search for truth.⁷⁶⁰

Perhaps the most fervent supporter of Palamas, and the most implacable opponent of Gregoras, the Calabrian monk named Barlaam (†1348), spent most of his life as a scholar and a teacher at the Soter monastery (a *centre de copie* of ecclesiastical as well as of Classical authors),⁷⁶¹ before being appointed bishop of Gerace in 1340.⁷⁶² Barlaam's theological works need not detain our attention here, even if they reveal a close acquaintance with Plato and Aristotle; what is more interesting is the emblematic role of Barlaam as one of the last important figures of Greek culture in Southern Italy during its slow but inexorable decline under the Anjou and Aragonese domination.⁷⁶³ Several decades later, the traveller Athanasios Chalkeopoulos was to describe the sad state of decay of both libraries and linguistic knowledge in Southern Italy.⁷⁶⁴

Barlaam's successor to the see of Gerace in 1348 was another man of letters, later appointed to the diocese of Thebes (1366–1383), called Simon Atumanus:⁷⁶⁵ as well as being a close friend of Cydones, and the first translator of Plutarch in the West (*On controlling anger*; he may also be the translator into Greek of the Hebrew Old Testament in ms. Marc. Gr. 7),⁷⁶⁶ he owned and partly annotated several important manuscripts that were mentioned earlier, such as the 'Planudean' Plato Vind. phil. Gr. 21, the Salentine *Odyssey* Vind. phil. Gr. 56 and the main witness of the alphabetical series of Euripides' tragedies, Laur. 32.2.

758 On Calecas see Mergiali [1996] 134–135 and 163–164; Loenertz [1947].

766 Weiss [1977] 207–210; Mercati [1916].

Perhaps the most iconic link between the late Byzantine age and the roots of Italian humanism is represented by a pupil of Barlaam named Leontius Pilatus. While it is unclear whether he was a Calabrian or a Greek, and whether he attended Barlaam's classes in Italy or in Thessalonica,⁷⁶⁷ Leontius is universally known today as the first translator of Homer into Latin since the age of the Roman empire. This task, which he performed during his stay in Florence in the early 1360s, was entrusted to him by no lesser intellectuals than Francesco Petrarca and Giovanni Boccaccio, who were eventually very unsatisfied with the literary quality of the translation, as well as with the poor outcome of his teaching of Greek in Florence.⁷⁶⁸

If the substantial failure of this attempt delayed the project of restoring Greek as a pivotal part of humanistic curriculum, Leontius' Greek culture in and on itself has been assessed more positively in recent times: his contact with Aristotelian and scholastic philosophy,⁷⁶⁹ his restoration of the Greek passages in the illustrious Florentine codex of the *Pandects*,⁷⁷⁰ his partial translation (in two subsequent redactions) of Euripides' *Hecuba* (on Ioannikios' ms. Laur. 31.10),⁷⁷¹ as well as the painstaking annotations he scattered in the margins of his Homeric versions (partly indebted to glossaries, mythographers, and to the ancient and Byzantine exegesis to Homer, Lycophron and other authors),⁷⁷² show that Leontius must be considered as a scholar conversant with pagan wisdom, and a worthy source of Petrarch's notes in his own Latin copy of the *Iliad* and of Giovanni Boccaccio in his *Genealogiae deorum gentilium*.⁷⁷³ Let us consider for example the following cluster of passages:

Leontius on Euripides *Hecuba* 5 *Hellinica*: "idest 'greca'; nam Hellines Greci dicti ab Hellino quodam rege eorum sic vocato" (see *e.g. sch. D in Il. 1.2* and 16.595; *sch. V in Od. 1.344*)

Leontius on *Odyssey* 1.344 *Helladam*: "Hellada dicta est Grecia tota et specialiter Argon; unde Greci Hellines dicti sunt a rege Hellino dicto".

767 Cortesi [1995] 458–461; Rollo [2007] 7–21 (with earlier bibliography) revises the traditional idea that he should be regarded as a Calabrian, and believes that at least some of his education must have taken place in Crete.

768 Cortesi [1995] 458–461; Pertusi [1964].

769 Harlfinger-Rashed [2002–2003].

770 Di Benedetto [1969]. On the ms. see Baldi [2010].

771 Rollo [2007].

773 Pertusi [1964] 295–380.

Petrarch in his note on *Odyssey* 1.344: “Hellada dicta est Grecia. Greci Hellines ab Hellino rege ut vult Leon. Ego partem Grecie puto circa Athenas, etc.”

Boccaccio, *Genealogies of the Pagan Gods* 4.48 “Ellanum dicit Theodontius filium fuisse Deucalionis et Pyrrae (cf. *schol. D in Il.* 12.117 et alibi), quem ait Barlaam, patre mortuo, adeo nomen suum et imperium ampliasset, ut fere omnis Grecia, que in Egeum mare versa est, a nomine suo Ellada nominata sit, et Ellades Greci”.⁷⁷⁴

5.2 *From Chrysoloras to the Council of Ferrara-Florence (1397–1439)*

1397, the year when the chancellor of Florence Coluccio Salutati appointed Manuel Chrysoloras (ca. 1350–1415) to teach “grecas literas grecamque grammatice”, marked a turning-point in the history of Classical studies in the West. Chrysoloras spent just three years in Florence, and later moved to Lombardy where he taught at the *studium* of Pavia (1400–1403), and—after a series of diplomatic travels that took him to France and England—came back to Rome, where he also gave private lessons to Italian pupils.⁷⁷⁵ The remarkable success of his classes rested *inter alia* on a significant novelty vis-à-vis the more traditional Byzantine didactic methods: his syllabus did not include the usual Christian texts (such as the *Psalms* and some works by Gregory of Nazianzus), but focused primarily on pagan authors, who were functional both to stirring the growing interest of Italian upper classes in Hellenic antiquity and to implementing Chrysoloras’ plan to revive and promote Greek culture and identity even on the political level, at a time when the aid of Western powers was perceived as more and more necessary for the endangered empire.⁷⁷⁶

The potential impact of Chrysoloras’ enterprise is highlighted by the very size and nature of his library, put together over the decades and consisting of an impressive number of Classical poets and prose authors. The recent discovery of Manuel’s *ex-libris* has given an entirely new picture of the written culture in early Graeco-Italian humanism,⁷⁷⁷ and the palaeographic analysis of his hand has demonstrated his role in the restoration of the Greek passages in Suetonius and Cicero,⁷⁷⁸ his interest in ancient Homeric exegesis (the *scholion* to the *Odyssey* in Vind. phil. Gr. 56),⁷⁷⁹ and his philological approach to

the texts he wished to translate (*e.g.* in ms. Vat. Gr. 226 of Plato's *Republic* and Vat. Gr. 191 of Ptolemy's *Geography*).⁷⁸⁰ In this context, it is interesting to note that Chrysoloras' theory of translation, based on a certain degree of liberty though refraining from modifying the *Graeca proprietates*, proved essential for generations of humanists who attended to the painstaking task of Latinising the bulk of ancient Greek literature.⁷⁸¹

In addition to Chrysoloras' charism, spelled out by his pupil Leonardo Bruni, who regarded him as the restorer of Greek letters in Italy after 700 years of silence,⁷⁸² the long-term influence of his teaching consisted above all in the extraordinary tool he fashioned for learning the language, namely a grammar in the traditional question-and-answer form (known already from Moschopoulos), but—for the first time—designed for the needs of a Latin-speaking public.⁷⁸³ Chrysoloras' *Erotemata*, thanks to its multiple and yet coherent structure, enjoyed such widespread success both in the West and in Constantinople and prompted so many abridgments and compendia by the hand of the author's pupils and successors (from Guarino da Verona to Constantine Lascaris), that, in the lack of an autograph, the reconstruction of its original form remains problematic today.⁷⁸⁴ A new critical edition now offers many answers to the open philological issues, and will no doubt be the starting-point for future research in this delicate field.⁷⁸⁵

In a famous letter to emperor Manuel II, Chrysoloras observed in astonishment, in the wake of a similar statement by Cydones,⁷⁸⁶ that

ἄτοπον δὲ καὶ ἐν Ἰταλίᾳ μὲν, ἴσως δὲ καὶ ἄλλοθι, τινὰς σπουδάζειν περὶ τοὺς ἡμετέρους λόγους καὶ νῦν εἶναι τοὺς γινώσκοντας, ἐπὶ δὲ τῆς Ἑλλάδος καὶ τῆς μητροπόλεως ἀμελεῖσθαι

780 Gentile [2002] and [1992]. The notes to Lucian in ms. Vat. Urb. Gr. 121 belong to a pupil of Chrysoloras: Berti [1987].

781 See Cencio de Rustici's report of Chrysoloras' views in Cortesi [1995] 470–471 and Wilson [1992] II.

783 Wilson [1992] 8–12; Pertusi [1962].

784 Ciccolella [2010]; Nuti [2012].

785 Rollo [2012].

786 *Apology* p. 366.95–96 Mercati: the Latins “break much sweat in order to walk in the labyrinths of Aristotle and Plato, for which our people never showed interest” (ἀνδρῶν πολὺν ἰδρώτα περὶ τοὺς Ἀριστοτέλους καὶ Πλάτωνος λαβυρίθους εἰσενεγκόντων, ὧν οὐδὲ πώποτε τοῖς ἡμετέροις ἐμέλησεν).

it is strange that in Italy (and perhaps in other places as well) some people study our culture and are now those who best know it, whereas in Greece and in the capital it is utterly neglected.⁷⁸⁷

It is clear that Chrysoloras' experience could not immediately stimulate the blossoming of philological studies in Italy, but by spreading in the West the first scientific and first-hand knowledge of a lost (and paradigmatic) world, it made a decisive contribution to fostering the *translatio studiorum* that would play a role in shaping the broader phenomenon of Italian humanism.⁷⁸⁸ That this *translatio* relied primarily on linguistic proficiency is shown by the sheer number and importance of the translations of Greek literary works executed by Chrysoloras' pupils:⁷⁸⁹ the aforementioned Leonardo Bruni (1370–1444), chancellor of Florence in 1427, showed his skill and stylistic refinement in his Latin renderings of some books of Homer as well as of several important dialogues of Plato, and also of Aristotle's *Nicomachean Ethics* and *Politics*, and the immensely popular protreptic opusculum of St. Basil on the value of Greek literature.⁷⁹⁰

Guarino da Verona (1374–1460), who spent some years in the East (1403–1408) and later taught in Venice and Florence, ending up in Ferrara where he opened a school attended by pupils from all over Europe, assigned a central place to Greek in the framework of his curriculum.⁷⁹¹ The size of Guarino's library, the importance of his elementary grammar (essentially a revision of Chrysoloras'), his still unpublished collection of short philological notes known as *Commentarioli*, his activity of restoring the Greek passages in authors such as Gellius or Servius, and above all the very number and quality of his translations (ranging from Plutarch to Strabo, from Isocrates to Lucian) indicate him as a coryphaeus of Greek studies in early Italian humanism. When writing to duke Leonello d'Este in 1447 on the subject of the Greek Muses to be painted on the walls of his Studiolo at Belfiore (now held in various different museums), Guarino—perhaps with the help of Theodore Gaza—resorted to an etymological and mythographical explanation reminiscent of ancient and Byzantine exegesis on Hesiod's *Works and Days* (see above § 3.6 on Tzetzes):⁷⁹²

792 Wilson [1991]; the Latin text is reprinted (from epist. II.111–12 Sabbadini) in Baxandall [1971] 89–90 and 158–160.

Sunt qui tres, sunt qui quattuor, sunt qui quinque, sunt qui novem esse contendunt. Omissis reliquis sequamur hos extremos qui novem fuisse dicunt. De ipsis igitur summatim intelligendum est musas notiones quasdam et intelligentias esse, quae humanis studiis et industria varias actiones et opera excogitaverunt, sic dictas quia omnia inquirant vel quia ab omnibus inquirantur, cum ingenita sit hominibus sciendi cupiditas. Μῶσθαι enim graece indagare dicitur; μούσαι igitur indagatrices dicantur.

Some say they are three in number, others four, yet others five or nine. Let us follow straight away the latter, who say they were nine. One has to understand about them that the Muses represent the notions and skills which through human application and hability produced the various works and actions. They are thus named because they investigate everything or are investigated by everyone, for men naturally long for knowledge. *Mosthai* means “to investigate” in Greek; *mousai* thus means “investigators”.

That the translation of ancient Greek works could have a great impact on contemporary *mores* is overtly declared by Guarino’s Venetian pupil Francesco Barbaro (1390–1454), who owned and annotated books of poetry and prose, from Homer to Plato, from Plutarch to Lucian. Precisely Plutarch’s *Lives* represent the favourite work of humanist translators: thus Barbaro himself translated *Aristides* and *Cato the Elder*, while his fellow-countryman Leonardo Giustinian translated the *Lives* of Cimon and Lucullus—two men whose deeds and *ethos*, in Barbaro’s view, provided an excellent model and paradigm for the best energies of the Venetian youth.⁷⁹³

In 1423, Guarino’s other pupil Vittorino da Feltre (1378–1446) was summoned by the Gonzaga family to establish a school near Mantua: the *Ca’ Zoiosa*, one of the milestones in the chain of Western paedagogical thought, focused on humanities, sciences and gymnastics,⁷⁹⁴ and gave pride of place to Greek literature in the original language, with special emphasis on poetry (Homer, Nicander, Oppian, Dionysius the Periegete, Apollonius Rhodius).⁷⁹⁵ The school also gave shelter and an *ubi consistam* to Greek scribes working for Vittorino, such as Petros Kretikos and Girard of Patras, and occasionally hosted outstanding teachers such as George of Trebizond and Theodore Gaza. Although this did not result in the creation of an advanced scholarly circle

793 Wilson [1992] 23–25; F. Barbaro, *epist.* 2 Griggio (to Palla Strozzi).

795 Cortesi [2000].

nor in a long-term educational institution, it did succeed in promoting linguistic knowledge on a higher level, and in spreading the texts and values of ancient Greece which were to become a common heritage of the ruling elite, from erudites such as Niccolò Perotti to princes and rulers such as Federico da Montefeltro.⁷⁹⁶ In this sense, Vittorino's experience proved a fully humanistic enterprise, turning the mainly grammatical and stylistic interests of Byzantine schooling (Moschopoulos, Suidas, etc. were also widely copied in Mantua) into a stratagem for communicating and transmitting ancient ideals to the younger generations.

We have mentioned that Guarino spent some years in Constantinople: he was not the only humanist to do so. So did Chrysoloras' other pupil Iacopo Angeli da Scarperia (ca. 1360–1410/11), one of the promoters of the 1397 appointment, and the translator (with his master) of Ptolemy's *Geography*;⁷⁹⁷ likewise the Sicilian Giovanni Aurispa (1376–1459), who brought back to Italy a remarkable quantity of pagan manuscripts (238 is the number generally agreed on), among which ms. Laur. 32.9, possibly the Veneti A and B of Homer, and many others.⁷⁹⁸ Similarly, Francesco Filelfo (1398–1481), who remained in the East from 1420 until 1427—marrying a member of the Chrysoloras family—and later taught in various Italian cities, also collected a remarkable library and tried himself at writing epistles and epigrams in Greek.⁷⁹⁹ A further case was that of Giovanni Tortelli (1400–1466), a former pupil of Vittorino, who travelled to the East in 1435–1437, and displayed a remarkable familiarity with ancient Greek and Byzantine texts, including lexica, scholia and grammars, in his pivotal work *On orthography*, a mine of erudition and antiquarian information that still awaits a critical edition.⁸⁰⁰

Perhaps the most eccentric and frequent traveller to the Greek East was Ciriaco de' Pizziccoli d'Ancona, whose interest in ancient inscriptions and manuscripts of Classical authors (Homer, Herodotus, Demosthenes, Strabo, Plutarch, Ptolemy) is testified both by his diaries and by the *marginalia* he left on some codices, as well as by excerpts of various kinds, ranging from short

notes on Greek metre to passages of ancient historiographers, from antiquarian details to shaky poetic attempts.⁸⁰¹

The Constantinople these Western travellers found before their eyes was no trifling destination for those in search of Hellenic culture. Under the reign of Manuel II Palaeologus (1395–1421), himself a learned emperor-philosopher who organised and promoted literary salons and *theatra*, and like Metochites had a clear sense that “if one compared the writings of the ancients with contemporary production, he would seem to compare gold with bronze”,⁸⁰² the cultural activity in the capital was dominated by ecclesiastical figures, and above all by John Chortasmenus (ca. 1370–1431), a patriarchal notary, later *katholikos didaskalos*, and since 1425–1430 bishop of Selymbria.⁸⁰³ A poet, a commentator of rhetorical and philosophical texts (Aphthonius’ *Progymnasmata* and Aristotle’s *Organon*), a teacher of grammar (he wrote an essay on word-division at the end of a line), and a bibliophile (he intervened on the glorious Vienna Dioscorides, transcribing into minuscule the uncial text),⁸⁰⁴ Chortasmenus demonstrated an unexpected palaeographical skill when he identified the hand of emperor Theodore Lascaris in the marginalia of ms. Ambr. M 46 sup. (containing Aristotle’s *Physics*): his note (f. Iv) reads as follows:⁸⁰⁵

ἔχει μεταξύ τὸ βιβλίον τοῦτο καὶ γράμματα μικρὰ τοῦ βασιλέως κυροῦ Θεοδώρου τοῦ Λασκάρη, αὐτοῦ γε ὡς ἀληθῶς ὄντα ὡς ἡμεῖς ἰδόντες ἐν ἐτέρῳ βιβλίῳ οἰκειοχείρως αὐτῷ γραφέντι τοῦτο ἔγνωμεν. σῶζουσι δὲ γὰρ πρὸς ἐκεῖνα ταῦτα ἄκραν ὁμοιότητα, οὐ τὰ ἐν τῇ ἀρχῇ δὲ τοῦ βιβλίου, ταῦτα γὰρ εἰσιν ἐτέρου Μελισσηνοῦ λεγομένου, ἀλλὰ τὰ περὶ τὰ μέσα, καὶ ἔτι ἐγγυτέρω στρογγύλα μικρά. ἀλλὰ καὶ τὸ ἐν ἀρχῇ τοῦδε βιβλίου κείμενον ὀρδινόπουλον τὸ λέγον Ἀριστοτέλους φυσικῆς ἀκροάσεως πρῶτον ἐκείνου ἐστίν.

This book also carries the small handwriting of emperor Theodore Lascaris, which actually belongs to him, as we have realised by inspecting another book which is certainly his autograph. The writing of that

book entertains the utmost similarity with ours, not however with the one at the beginning of the book (for this belongs to another man named Melissenos), but rather with the small, rounded characters to be found in the middle of the codex, and even somewhat before that point. But the title “First book of Aristotle’s *Physics*” at the beginning of this manuscript, is also in Theodore’s hand.

Other teachers in Constantinople, though unrelated to any public institution, were Chortasmenus’ pupil Mark Eugenicus and George Chrysococcas the younger:⁸⁰⁶ the latter was not only the teacher of Bessarion and Filelfo in the early years of the 15th century, but also a prolific scribe working for Western scholars such as Filelfo himself and Aurispa. A recent, penetrating study, has shown in a paradigmatic manner how the remarkable activity of transcription and diorthosis performed by Chrysococcas and his *atelier* on Herodotus’ text in ms. Vat. Urb. Gr. 88 was followed and pursued in the 1440s by the Florentine book-collector and scholar Palla Strozzi (at that time in exile in Padua), who not only bought the manuscript, but intervened on its text by annotating the fruits of the collation with other exemplars and proposing his own restorations and conjectures.⁸⁰⁷ Nor was this an isolated case: we know of several instances of Italian scholars commissioning copies of Greek authors from Byzantine scribes.⁸⁰⁸

By contrast, in the period from 1397 to 1438 the emigration of Greeks from Constantinople to the West involved several scribes but only two important scholars: the Cretan philosopher and scholar George of Trebizond (1396–1472/73) and Theodore Gaza (1400–1475). The former stood out as a defensor and admirer of Aristotle, and as an expert in logic and rhetoric, and primarily in the comparison between Greek and Latin rhetoric:⁸⁰⁹ Trebizond’s interest in strictly philological issues is proved *e.g.* by his controversy with cardinal Bessarion over the Vulgate’s rendering of *John* 21.22 ἐὰν αὐτὸν θέλῃω as *Sic eum volo* rather than *Si eum volo*.⁸¹⁰

Gaza, who taught in several Italian cities (notably in Mantua from 1440 until 1446, then in Ferrara until 1449, later in Naples and Rome), translated and worked on philosophical authors, above all Aristotle and Theophrastus, and

810 Monfasani [1976] 90–103; the issue was later picked up by Valla [1540] 846b, see Wilson [1992] 61–62.

produced a bulky and very widespread Greek grammar.⁸¹¹ While in Ferrara he read to his pupils Demosthenes' *On the Crown*, Plato's *Gorgias*, Homer's epics, and works of Aristotle and Xenophon: thanks to the *recollectae* of one of his pupils we are well informed about his course on Pindar's *Olympian Odes*, for which he followed the Moschopoulean recension, offering a running Latin translation (the earliest preserved) and an apparatus of notes based chiefly on the Byzantine scholia, the *Etymologicum Magnum* and a few other grammatical texts (rhetorical and mythographical interests pop up essentially in the introductions to the single odes).⁸¹²

Alongside Constantinople, the only other major cultural centre of the Byzantine East was the Despotate of Morea, a partly independent state of the Peloponnese long ruled by the brother of emperor Manuel II. The Morea, and particularly the city of Mystra (near the site of ancient Sparta), had been a lively place of study and learning since the late 14th century;⁸¹³ in the early 15th, it grew remarkably in this respect both through imperial initiative (from 1400 to 1403 the education of the future emperor John VIII was entrusted to Theodore Antiochites precisely in Mystra) and through the presence and activity of ecclesiastics such as Isidore, the future cardinal of Kiev (1385–1473), who was a bibliophile, a scholar, and a first-rate copyist.⁸¹⁴

The key figure of Peloponnesian learning from about 1409 onwards was the Neoplatonist philosopher George Gemistus Pletho (ca. 1360–1454), the “last of the Hellenes”, who aimed at restoring a sort of pagan religion with new divinities and new cultic practices, and envisaged the study and imitation of the ancients not as a stylistic issue but as a philosophical principle affecting everyone's belief and lifestyle, as well as the state's ethos and shape.⁸¹⁵ Recent studies have shown that Pletho's ideological stance resulted not only in complex and heterodox treatises such as the *Laws* (later to be burnt by patriarch George-Gennadius Scholarius in the final bonfire of pagan wisdom on Greek soil in 1460),⁸¹⁶ but also in selected philological interventions, such as the material erasure and deletion of selected passages in manuscripts of Plato's *Gorgias*, *Symposium* and *Laws*.⁸¹⁷

815 See Mergiali [1996] 211–220; Siniossoglou [2011]; Tambrun [2007]; Woodhouse [1986].

816 Monfasani [2005].

817 F. Pagani [2009]. On Pletho's study of the *Republic* see Martinelli Tempesta [2005].

Greatly interested in ancient Greek history (he compiled summaries and excerpts from Diodorus Siculus and other historians, especially belonging to the Roman period),⁸¹⁸ and so familiar with ancient hexametric poetry as to produce hymns to be sung for his new divinities, Pletho also scribbled short, often unpublished essays on metre, music, myth and various other subjects. His brief essay on Homer's biography and theological tenets, probably conceived for a very personal edition of the *Iliad*, evokes heavy interventions on the text, as the colophon makes clear:⁸¹⁹

Εἰ καὶ διώρθωται ὑφ' ἡμῶν ἢ Ὀμήρου αὐτῆ Ἰλιάς τῶν γε ἀτοπωτάτων μύθων ἐξαιρέσει, ἀλλ' οὖν διὰ τὰ ὑπολελειμμένα ἔτι ἐν αὐτῇ οὐχ ὁμοίως μὲν ἄτοπα, οὐ μέντοι εὐπρεπῶς οὐδ' αὐτὰ ἔχοντα, οὐδὲ πάντα ἐξῆς σπουδῆς χρῆς μετιέναι, ἀλλὰ γνωρίζοντα ἕκαστα τῶν οὕτως ἐχόντων τῷ γε ὀρθῷ λόγῳ, ἀκούειν μὲν καὶ αὐτῶν, ἅτε οὐδ' ἐξελεῖν ῥαδίῳ ὄντων, καὶ διὰ τοῦτο καὶ ὑπολελειμμένων ὑφ' ἡμῶν, οὕτω δ' ἀκούειν ὡς οὐ καλῶς λεγομένων.

Even if we have corrected this *Iliad* of Homer by eliminating the most absurd myths, however, because of the stories that remain in it (forsure not equally unfitting, but not appropriate either), one should not read everything with the same attention, but rather recognise through proper discernment all the dubious stories, and read them anyway (for they were not easy to remove and therefore we were forced to leave them in the text), but in full awareness that they are inappropriate.

One of Pletho's indisputable merits lies in the creation of a school where most of the brightest intellectuals of his time were either trained or hosted for some time: these include Bessarion (who stayed in Mystra between 1431 and 1436, after some philosophical studies in the capital with John Chortasmenus and George Chrysococcas), but also lesser intellectuals or learned scribes such as Nicholas Secundinus, Matthew Camariotes, Constantine Lascaris, John Eugenicus, John Doceianus, Charitonimus Hermonymus, Demetrios Trivolis, Michael Apostolis, Demetrius Raul Cabaces, Demetrius Chalcondylas. Some of them would remain active in the Peloponnese over the following decades, others would move to Constantinople, yet others would flee to Italy and become pioneers of Greek humanism in various European courts or cities.

5.3 *The Last Years before the Fall*

Whatever his direct influence over the rise of Florentine Neoplatonism,⁸²⁰ Gemistus Pletho was certainly one of the most important personalities of the large Greek contingent at the Council that took place in Ferrara and Florence between 1438 and 1439: other members included George of Trebizond, Mark Eugenicus, Gennadius Scholarius, Nicholas Secundinus, not to mention Bessarion himself, who switched to the Roman side. The Council was particularly important not only for political or ecclesiastical reasons, but also because it became the first official venue of confrontation between the East and the West: no wonder that various humanists tackled issues of the authenticity of Patristic works,⁸²¹ no wonder that Bessarion argued his points by referring to the collation of different copies of St. Basil's treatise *Against Eunomius*,⁸²² no wonder that a scholar like the Camaldolese friar Ambrogio Traversari (1386–1439), *inter alia* the translator of Diogenes Laërtius' *Lives of the philosophers* (for which he claimed three manuscript sources were necessary in order to emend and polish the translation),⁸²³ played an essential role in finding, deciphering and interpreting patristic texts to be quoted in support of the different theses during the debates.⁸²⁴

Either immediately or shortly after the Council, several Greek scholars decided to settle in the West, thus giving rise to a crucial phenomenon in the history of Western culture but also to a vital mechanism in the controversial development of Greek identity.⁸²⁵ One of them was Andronicus Callistus (†1476/84), who reached Padua in 1441 and later taught in Florence, only to conclude his career in Northern Europe (Paris and London). The study of Callistus' activity as a teacher and exegete of relatively uncommon poetic masterpieces (Apollonius Rhodius, Pindar) and copyist of Classical texts, has much to say in favour of his conjectural skill and philological alertness.⁸²⁶ One of Callistus' successors on the Greek chair at Florence was Demetrius

Chalcondylas (1424–1511), who arrived to Italy in 1449 and was to become the *editor princeps* of Homer's Greek text in 1488.⁸²⁷

Another scholar who came to Italy for the Council and later travelled back and forth before fleeing Constantinople for good just before the Fall of 1453, was the philosopher John Argyropoulos (ca. 1410–1487).⁸²⁸ A professor of rhetoric and philosophy under the patronage of emperor John VIII until 1441, and later at the Xenon of the Kral after obtaining his degree at the University of Padua, Argyropoulos was perhaps the most influential translator and scholar of Aristotle in the Italian Quattrocento, but he also read and copied Plato and Plotinus. His most serious colleague and rival in the Byzantine capital was George Scholarius, the future patriarch Gennadius:⁸²⁹ although a high officer at the court of John VIII, Scholarius organized and ran a school in his house throughout the period from 1430 through 1448, and at the same time wrote both theological works (despite being a Palamist, he taught Western Scholasticism and even translated into Greek Thomas Aquinas' *On being and essence*) and philosophical commentaries on Aristotle and Porphyry, as well as a handbook of grammar not phrased in the current question-and-answer format.

In a letter to his beloved pupils, Scholarius complained that⁸³⁰

καὶ γένη μὲν Ἰταλῶν ταῖς τῶν λόγων ἐπιστήμαις προσέχουσι, τὰ πρότερον ὑφ' ἡμῶν ἐν μοίρᾳ τεταγμένα βαρβάρων, μᾶλλον δὲ ταῖς οὐσαις προσεξευρίσκουσιν, ἡμῖν δὲ ἄχθος αἱ βίβλοι, μᾶλλον δὲ καὶ ταύτας τοῖς χρήσθαι δυναμένοις προῦδῶκαμεν, ὥστ' εἰ μέλλοιμὲν ποτε γενναίως ἄψεσθαι λόγων καὶ πᾶσιν ἐπιχειρήσειν τοῖς τέως ἡμελημένοις, ἐκ τῆς ὑπερορίου ζητεῖν ἀνάγκη τὰς βίβλους, ὡς δεῖ πρὸς τὸν σκοπὸν ἡμῖν ὑπουργήσειν. καὶ οἱ μὲν τῆς ἡμετέρας φωνῆς φροντίζουσιν, καὶ μεγίστων τιμῶν αὐτοῖς ἀφορμὴ τὸ δόξαι γοῦν ἐλληνίζειν, ἡμεῖς δὲ τῆς ἡμετέρας οὐ συνίεμεν γλώττης, καὶ νῦν ἐν Ἰταλοῖς Ἑλληνας τῶν ἐνταῦθα βελτίους.

the Italians—whom we once considered as barbarians—pay attention to the humanistic disciplines and even invent new ones, whereas for us books are a weight, we have even handed them over to those who can read them, so that even if we wished to revert seriously to our studies and resume what we have hitherto neglected, we would have to ask for the suitable books from overseas. They look after our idiom, and the ability to

speak Greek bestows on them great honours, while we do not understand our own language, so that amongst the Italians there are better Greeks than those who live here.

Scholarius' words tackle a vital issue, namely the fact that the process of *translatio studiorum* revolved around the creation of libraries.⁸³¹ The size of public or institutional collections of Greek manuscripts in Mantua, Rome and Florence, grew dramatically during the second quarter of the century; amongst private libraries mention should be made at least of those of Giovanni Aurispa, of Palla Strozzi, and primarily that of Bessarion, which was enlarged through acquisitions from other scholars' collections (*e.g.* Aurispa's) as well as through book-hunting campaigns in Southern Italy (*e.g.* in Otranto), and finally bequeathed to the Republic of Venice (1468), where it built the core of the newly founded Library of San Marco.⁸³² Bessarion's rationale for the gathering of his library is well explained in his letter to Michael Apostolis, written soon after 1453:⁸³³

Ἰσταμένης μὲν οὖν τῆς κοινῆς Ἑλλήνων καὶ μόνης ἐστίας οὐκ ἐφρόντιζον, πάντα εἰδῶς ἐκεῖ ἀποκείμενα· πεσοῦσης δέ, φεῦ, μεγάλη τις ἐγένετο ἐπιθυμία τῆς πάντων αὐτῶν κτήσεως, οὐκ ἐμοῦ γε ἔνεκα, ὅς γε τῆς ἰδίας ἔνεκα ὠφελείας ἀρκοῦντα κέκτημαι, ἀλλ' ὡς ἂν, εἴ που νῦν τέ τινες λειφθεῖεν Ἑλληνας, εἴ τέ τι εἰς ἔπειτα βέλτιον πράξαιεν—πολλὰ δ' ἐν τῷ μακρῷ χρόνῳ γένοιτ' ἂν—, ἔχοιεν ὅπη τὴν αὐτῶν φωνὴν ἄπασαν, τὴν γε νῦν οὐσαν, ἐν τινι ὁμοῦ ἀποκειμένην ἀσφαλεῖ τόπῳ εὐροῖεν καὶ εὐρόντες πολλαπλασιάσαιεν καὶ μὴ πρὸς οἷς πολλοῖς τε καὶ καλοῖς τῶν θεῶν ἐκείνων ἀνδρῶν πάλαι ἀπολωλέκαμεν ὑπομνήμασι καὶ τὰ ὀλίγα ταῦτα νῦν ἀπολέσαντες ἄφωνοι τὸ πάμπαν μένοιεν καὶ βαρβάρων τε καὶ ἀνδραπόδων οὐδὲν διαφέρουεν

as long as the common and single hearth of the Greeks [*scil.* Constantinople] remained standing, I did not concern myself [*scil.* with gathering manuscripts], because I knew that they were to be found there. But when, alas, it fell, I conceived a great desire to acquire all these works, not so much for myself, as I possess enough for my own use, but for the sake of the Greeks who are left now, and who may have better fortune in the future (for many things may happen in the course of the years), so that they may have a place where to find their own entire culture (the culture

preserved down to our own day) intact and safe, and multiply it, and may thus avoid the risk, which would ensue from the loss of what is extant on top of all the many excellent works of the divine ancient authors that are lost since time immemorial, of remaining forever dumb and under all aspects identical to barbarians and slaves.

The development of libraries is of course part and parcel with the development of scholarship. In an age when Greek literature in the East seemed to be on the brink of entirely perishing,⁸³⁴ this massive transfer of books from the Levant to Italy created the indispensable premise for the rise of a new philological activity performed on Greek texts by Western scholars. Bessarion himself (1403–1472),⁸³⁵ becoming in 1440 a cardinal of the Roman Church and almost a pope, insisted on gathering a remarkable cénacle of scribes and scholars (Gaza, Callistus, Giannozzo Manetti, Giorgio Valla etc.) at his house near the old *Forum Augusti*: it cannot be fortuitous that, for instance, the first, brief Western mention of ms. Venetus A of the *Iliad* occurs precisely in a writing of a member of this circle, Martino Filetico.⁸³⁶

A translator of Xenophon and Aristotle, and a philosopher deeply engaged in the Platonic/Aristotelian controversy, Bessarion did not stand out as a first-rate philologist, but he showed a special familiarity with the Classical heritage both in the *marginalia* he left on his books (as when he tried to restore a corrupt text of Aristotle's *On Heavens* in Marc. Gr. 491 by resorting to a medieval Latin translation, or when he detected the hand of Eustathius of Thessalonica in ms. Marc. Gr. 460 of his commentary to the *Odyssey*) and in the preface and notes added to his translation of Demosthenes' *First Olynthiac*, where the patriotic words of the great Athenian orator were interpreted as an exhortation to the Westerners to take action in favour of Byzantium against the Turkish threat—with the pagan, Hellenic past still somewhat opposed to the Christian present.⁸³⁷

The patronage of pope Nicholas v (1448–1455) marked an unprecedented *Aufschwung* in the history of Greek learning in Rome, for it gave a common

834 This is the exclamation of Lauro Quirini in his letter to pope Nicholas v soon after the Fall (Pertusi [1977] 227.97–99): “nomen Graecorum deletum; ultra centum et viginti milia librorum volumina, ut a reverendissimo cardinali Rutheno accepi, devastata. Ergo et lingua et litteratura Graecorum tanto tempore, tanto labore, tanta industria inventa, aucta, perfecta peribit, heu peribit!”.

network and background to the many brilliant humanists who were living in the city, amongst them Bessarion, George of Trebizond, Theodore Gaza, and the Italian Lorenzo Valla (1407–1457).⁸³⁸ The latter, in particular, was not only a brilliant translator of Homer, Herodotus, Thucydides, and Demosthenes (his devotion to ancient historians was prompted by the commissions of Nicholas V),⁸³⁹ but proved capable of exploiting his philological genius (already at work in his renowned confutation of the *Donation of Constantine*) and his knowledge of Greek both in dealing with ancient inscriptions and in promoting textual analysis in a field which had so far remained almost devoid of systematic treatments.⁸⁴⁰ Valla's *Collation of the New Testament with the Greek Truth* was a *Lebenswerk* that went through at least two redactions in the 1440s and early 1450s:⁸⁴¹ the second version eventually persuaded Erasmus of Rotterdam to publish it in 1505. This displayed to the wider public Valla's unprecedented ability to collate several manuscripts of the same text, to detect or conjecture scribal errors of different kinds behind textual corruptions, to invoke the role of the indirect tradition, to spot interpolations, to blame Jerome for his mistakes, in a word to adopt even for the Holy Writ a sophisticated philological method with a systematic thrust virtually unparalleled in Byzantine quarters, and surpassing the tradition of the 13th-century Latin *correctoria* of the Bible. One example will suffice:⁸⁴²

Matth. 4.6 Quoniam angelis suis mandavit de te] Graece est *mandabit*, quam culpam librarii arbitror, aut alicuius temerarii correctoris tam hic, quam in psalmo: nam e Psalmo [*scil. 90.11*] hic locus est sumptus ὅτι τοῖς ἀγγέλοις αὐτοῦ ἐντελεῖται περὶ σου, μή ποτε. . . 4.10 *Et illi soli servies*] λατρεύσεις, hoc Graeco verbo non utuntur nostri, sed nomine quod est *latría*, volentes hunc actum soli Deo deberi: is etsi frequenter Deo exhibetur, non tamen semper. Nam quantum ego sentio, magis ad homines pertinebat; ideoque principes Graecae linguae, quorum autoritate nitimur in verborum significationibus, ita usurpant, ut apud Xenophontem lib.

841 Perosa [1970] xxiii–xxxvii. See especially the essays by S. Donegà (on Valla's attention to issues of grammar and to translation techniques) and G. Dahan (on the continuity between Valla's approach and the Latin medieval studies on the text of the Vulgate) in Regoliosi [2010] 213–231 and 233–263.

842 Valla [1540] 807b–808a.

3 [3.1.36] in *Cyripaedia*: ἐγὼ μὲν ἔφη ᾧ Κύρε καὶ τῆς ψυχῆς πριαίμην ὥστε μήποτε λατρεῦσαι ταύτην, hoc autem est: “equidem Cyre ego vel anima redimerem nequando ista serviret”. Haec viri sunt verba, tum uxor eadem loquitur alio verbo, ut appareat inter ipsa verba latriam et duliam nihil interesse [3.1.41]: ὡς τῆς αὐτοῦ ψυχῆς ἂν πριαίτο, ὥστε μή με δουλεύειν. Et certe cum priores fuerint autores gentiles quam fideles, sive Graeci sive Latini, nimirum multo plus obtinent autoritatis, quippe cum eos omnis posteritas, tam fidelium quam infidelium, habeat autores, et eatenus recte loquatur, quatenus ab illorum usu non discrepat. Nam consulto quidem et de industria velle ab illis dissentire, nisi vehemens causa coëgerit, insania est, inscientem vero hoc facere, inscitia; quanquam sint qui negent theologiam inservire praeceptis artis grammaticae. At ego dico illam debere servire etiam cuiuslibet linguae usum, qua loquitur, nedum literatae.

Matthew 4.6 *Quoniam angelis suis mandavit de te*] in Greek we have *mandabit*, which I regard as a mistake of the scribe or of some bold corrector both here and in the Psalm (for this passage is taken from the Psalm “he ordered to his angels about you that...”)... 4.10 *Et illi soli servies*] *latreuseis*: the Latins do not use this Greek verb, but the noun *latria*, insisting that this act pertains only to God; now, even though the word appears often in relation to God, this is not always the case. As far as I can judge, it used to pertain to men, which is why the princes of the Greek language, on whose authority we rely in matters of semantics, use it in this sense, as in Xenophon’s *Cyropaedia* book 3: “O Cyrus—he said—I would pay with my life so that she might never be a slave”. These are the man’s words, then the woman says the same with another term, so that it might become apparent that there is no distinction between the words *latreia* and *douleia*: “that he may pay with his life so that I might never be a slave”. And of course pagan authors came earlier than Christian ones, both in Greek and in Latin: which is why they have a greater authority, because later generations (both pagans and Christians) regarded them as models, and used language correctly only insofar as they did not depart from their usage. For anyone who wishes to part with their example on purpose and overtly, without being forced by a strong necessity, is a fool, and to do so by mistake is a sign of ignorance; some, however, deny that theology should follow the rules of grammar. But I argue that theology should follow the usage of any language in which it speaks, all the more so in the written form.

By May 29th, 1453 most Greek scribes and scholars were active in Western Europe, at least some Italian erudites were capable of performing philological activity on ancient Greek texts, and the *translatio* of Greek scholarship to the West was almost complete. In the following year, Angelo Poliziano was born.⁸⁴³

1 **Introduction**

Our knowledge of ancient scholarship comes from four types of source. Some material has been recovered on papyrus; this method of learning about ancient scholarship is in some ways preferable to all others, bypassing the medieval manuscript tradition and all the errors and distortions it introduces. But the amount of material that survives on papyrus is tiny compared to that preserved in other ways, it is usually very fragmentary, and (despite what one might expect) it is not always uncorrupt. Moreover most 'scholarly' papyri belong to the school tradition; material from the best ancient scholarly work is far less common in them than basic lexical information. Thus although papyri are an important resource where we have them, they do not significantly reduce our reliance on manuscript sources.

Another type of source is works that have survived through their own manuscript tradition; these are occasionally intact but more often shortened and/or reworked versions of the original texts. Such works are greatly valued and are not uncommon for certain types of material: lexica, Roman-period grammatical treatises, works on style, and commentaries on religious, philosophical, and scientific works stand a reasonable chance of survival either intact or in substantial epitomes (abbreviated versions). Other types of scholarly material, however, are almost never preserved in this fashion: works of the great Alexandrian scholars, commentaries on and discussions of literary works, and early grammatical treatises fall into this category.

For works that are not preserved intact the next best source is fragments quoted in the text of other works. Such fragments are often tantalizingly short and stripped of context, but sometimes they can be substantial. Fragments are usually quoted with attribution to a specific author, and often with the title of the work in which they appeared as well. It is sometimes possible to reconstruct part of a lost work by putting together the preserved fragments, but when using such reconstructions a reader needs to be aware of the extent to which the text at hand is the creation of a modern editor. A wide range of material can appear in fragments, but grammatical treatises and commentaries on works for which other commentaries survive intact are the most common fragmentary material.

The fourth source for ancient scholarship is scholia, that is material that has survived in the margins of literary works transmitted via the manuscript tradition. Scholia are extremely important to the student of ancient scholarship, as they are our main source of knowledge of Alexandrian scholarship and of ancient commentaries on literary works. But they are also highly problematic, as they are severely abbreviated notes, often without attribution to a source, and very prone to corruption. Scholia tend to be published in editions that collect the marginalia to a given work and arrange them in the order of the work on which they comment. Many scholia are unpublished, for marginalia have little value when they were copied from works that have also survived independently, and marginalia of the Byzantine period are often thought to have little value in any case (though this opinion is now declining in popularity). The published scholia are normally those that provide our only witness to scholarship that is, or could be, of the Hellenistic, Roman, or late antique periods.

2 Papyri

Ancient scholarship on papyrus comes in a variety of forms and a wide range of qualities; almost the only common denominator the different works have is that they are all fragmentary. Portions of commentaries, glossaries, anthologies, explanations, paraphrases, and summaries can all be found on their own, and in addition papyri of literary texts sometimes have marginal or interlinear notes. Some types of text are much better represented than others, in part because of the standardized school curriculum in the Greek-speaking world: work on Homer greatly predominates, followed by other difficult poets, but we also have a few papyri on prose authors.

Perhaps the most famous papyrus of ancient scholarship is the fragment of Didymus' commentary on Demosthenes. This papyrus is fifteen columns

long (covering *Philippics* 9, 10, 11, and 13) and thus far longer than the vast majority of surviving scholarly papyri. Didymus is explicitly named as the author of the commentary, and the papyrus dates to the early second century AD, making it relatively close to Didymus' own time (late first century BC and early first century AD), but the work appears nevertheless to have undergone some abbreviation and alteration in the interval; it may even be a set of excerpts from Didymus' commentary rather than the complete work.¹ This find is in many ways very exciting, but in others somewhat disappointing, as the papyrus does not contain quite what modern scholars had expected that an original commentary of Didymus would have. Pearson and Stephens [1983] give a good text, Gibson [2002] a translation and commentary, and Harding [2006] all three.

Another important fragment of commentary explicitly attributed to a famous scholar is the papyrus of Aristarchus' commentary on Herodotus. The attribution to Aristarchus gives this fragment great importance, but it is in many ways less useful to us than the Didymus papyrus. It is short, containing only one legible column (the end of the commentary on book 1), and considerably later than Aristarchus himself, probably from the third century AD. In terms of content it is even more disappointing than the Didymus papyrus and therefore is normally considered to be an abridgement or set of extracts rather than a full version of the original commentary. Paap [1948] gives a text.

Most scholarly papyri,² however, do not carry attributions to named scholars; no doubt many originally had authors' names attached, but they no longer survive. Some of these papyri are nevertheless of considerable significance.

A relatively large group of papyri preserve hypotheses, brief summaries of literary works. In modern times hypotheses of dramatic texts are widely known, as they are often printed in editions of the texts to which they relate. This privileging of hypotheses over other types of ancient scholarship (which are much less likely to be printed in a modern edition of a literary text) occurs in part because some dramatic hypotheses may go back to the work of Aristophanes of Byzantium and preserve crucial information. But the convention also extends to hypotheses that have no scholarly information and simply summarize the plot, a type much commoner than the scholarly hypothesis. Such plot-summary hypotheses, which often have a mythographic slant, were common in antiquity as well as the Byzantine period, and many of them have been found on papyri. In antiquity, moreover, such hypotheses were written not only for dramatic texts but for a wide variety of different genres: there were even hypotheses

1 Differently Luzzatto [2011] and Montana, in this volume.

2 See Montana in this volume and Montana's edition of the papyri of Herodotean scholarship in *CLGP*, forthcoming.

for the individual books of longer works such as the Homeric poems. These hypotheses are often found in groups in papyri, without the original texts they summarize; the most famous example of this phenomenon is the strings of hypotheses of Euripidean tragedies known as the ‘Tales from Euripides’ (see below § 8.4). Such summaries are obviously of considerable value to us where the original texts have been lost, but they are also of great interest for the window on ancient readers’ interests with which they provide us. A collection of these papyri with discussion is provided by Rossum-Steenbeek [1998].

Some papyri dating from the first/second to the fifth century AD contain remains of the ‘Mythographus Homericus’. This term, invented in modern times, is used to refer to the author of a lost work, probably composed in the first century AD, that related the full versions of myths alluded to in the Homeric poems. The work could be called a mythological commentary, for it was arranged in the order in which the allusions occurred in the poems. It tended to give only one particular version of each myth, attributed to a specific source; a number of the attributions can be shown to be genuine, and it seems that the compiler was using important and now lost scholarly commentaries, probably Alexandrian. Although most of this compiler’s work is lost in its original form, a number of papyrus fragments have survived, and much material from the commentary was incorporated into the medieval D scholia (see below § 8.1). For a text and discussion see Rossum-Steenbeek [1998] 278–309.

Of other papyrus material the largest group is the Homeric, a diverse body that in addition to the Mythographus includes commentaries, glossaries, and paraphrases. Some of this material is incorporated into editions of scholia by Erbse [1969–1988], van Thiel [1992], and Pontani [2007–]; guides to the rest can be found e.g. in M. L. West [2001a] 130–136 and Lundon [1999c]. Another important group is the Aristophanes papyri, which are often the focus of debates on the process by which ancient commentaries were turned into medieval scholia; these are collected with translation and discussion by Trojahn [2002] and Montana [2012a]. A number of papyrus commentaries on philosophical works survive, including a long fragment of commentary on Plato’s *Theaetetus* (normally dated to the second century AD, but perhaps as early as the late first century BC) and a fragment of commentary on Aristotle’s *Topica* from the first century AD; these have been collected in CPF [1995].

There is also a substantial body of grammatical papyri, containing doctrine that is often anonymous but usually of considerable antiquity. Many of these papyri have been collected and discussed by Wouters [1979]. Papyrus lexica form another common genre; most of them appear to be focused on the works of a particular author or group of authors, but more general lexica are not unknown. The lexica have no collected edition; Naoumides [1969] offers a list of papyrus lexica with discussion of their characteristics, but more have been

published since. Author-specific lexica are being published by E. Esposito in *CLGP*; an updated list can be found in Esposito [2009].

Papyri containing literary texts with marginal or interlinear annotation tend to preserve only very short notes, and most of the time the notes belong to the school tradition and relate to an elementary understanding of the text. Nonetheless some of these notes are important, and the group of annotated papyri as a whole (amounting to nearly 300 papyri containing c. 2000 separate notes) can tell us much about the reading processes of the ancients. Fortunately annotated papyri are easy to locate, as a complete corpus of annotations with translation, commentary, and excellent discussion is provided by McNamee [2007].

Many other papyri containing ancient scholarship also exist. The new collection *Commentaria et Lexica Graeca in Papyris reperta*, published by de Gruyter, should eventually provide a comprehensive set of texts of papyrus commentaries and lexica with up-to-date discussion, but the work is still ongoing. In the meantime clues to the existence and whereabouts of much of this material can be found in Dickey [2007].

3 Extant Lexica

The lexicon was a popular form for recording knowledge in antiquity; lexica contained a broader range of information about each entry than a modern dictionary and in some respects resembled our encyclopedias. At the same time the older lexica tended to be narrowly focused, concerning topics like names of fishes or Homeric words rather than being general collections like a modern dictionary (cf. Tosi in this volume). The tradition of Greek scholarly lexica dates back at least to Aristophanes of Byzantium and is one in which surviving material is particularly likely to be old; a large number of ancient and Byzantine lexica survive, intact or abbreviated, and fragments of many others can also be found. These lexica are the source for our knowledge of many elements of Greek vocabulary and for much of our information on lost works of literature, and much still remains to be learned from them. They must however be used with care, as they are usually poorly transmitted and often inadequately edited.

3.1 *Early Lexica*

The earliest surviving lexica come from the first century AD and are glossaries of the terminology used by particularly difficult authors, Homer and Hippocrates. In the case of both authors we know that the extant works built

on a lost tradition of lexicography that went back several centuries; interestingly the tradition of Hippocratic lexicography, which can be securely traced to the third century BC, may be older than that of Homeric lexicography.

The primary Homeric lexicon bears the name of Apollonius Sophista and is based (indirectly) on the work of the great Alexandrian scholars. Apollonius' lexicon is one of the most important works of Greek lexicography, for it is a key source of information on ancient understandings of Homer's vocabulary and how Homer was read in antiquity. In addition, the lexicon preserves many fragments of earlier work, including but not limited to that of Aristarchus; for example the obscure Homerist Heliodorus is known primarily from Apollonius. An epitome of Apollonius' work has come down to us in a single manuscript, and we also have several papyrus fragments of fuller versions, ranging in date from the first to the fifth century AD; these differ among themselves to some extent, showing that numerous alterations to the lexicon were made in the late antique period. Apollonius' lexicon was a source for Hesychius and the *Etymologica*, which can also provide some further information on its original state. The work is in approximate alphabetical order; that is, most of the entries are grouped together by their first two or three letters, but the other letters of the words are not usually taken into account in determining their arrangement.

One of the main sources of Apollonius' lexicon was an etymologizing Homeric lexicon entitled Γλῶσσα Ὀμηρικὰ 'Obscure Homeric Words', composed by a scholar named Apion who lived in the late first century BC and the first century AD. We have a surviving work with that title to which Apion's name is attached, but lack of agreement between that work and the quotations of Apion in Apollonius Sophista make it clear that the surviving work cannot be the one Apollonius used. The surviving lexicon is evidently a poorly-made collection of excerpts from a longer work, and is alphabetized by the first letters of the words.

The epitome of Apollonius Sophista can be found in Bekker [1833] and the longest papyrus in Henrichs and Müller [1976]; the lexicon misattributed to Apion can be found in Ludwich [1917–1918], and there are studies by Haslam [1994] and Schenck [1974].

The earliest surviving lexicon of Hippocratic words is attributed to Erotian; it is based on the lost lexicon of Bacchius of Tanagra, who worked in Alexandria in the late third century BC (cf. Manetti in this volume). Erotian's work was originally a large lexicon of obscure words found in 37 Hippocratic treatises, arranged in the order of their occurrence in the texts; now we have an abridged version, rearranged in partial alphabetical order, and a collection of fragments. The material in Erotian's glossary overlaps to some extent with that found in literary glossaries and scholia on several poetic works, suggesting that his

sources included scholarship on literary texts. The preface, in which Erotian discusses earlier Hippocratic glossography, is particularly valuable. A text can be found in Nachmanson [1918] and further information in Wellmann [1931] and von Staden [1992].

3.2 *Atticist Lexica*

The Atticist lexica come primarily from the second century AD, a period when the revival of fifth-century Attic as a literary medium created a demand for prescriptive works clarifying which words were acceptable for use in Atticizing writing. Such prescriptions were normally based on a canon of authors: any words found in authors belonging to the accepted canon could be used, and other words could not. But there were differences as to which authors belonged in the canon: fourth-century authors such as Plato could be excluded on the grounds that only fifth-century ones had pure Attic, and tragedians could be excluded on the grounds that tragic language is very different from the prose the users of these lexica were trying to produce. Conversely authors that we would not consider Attic at all, such as Homer, could be included on the grounds that they wrote good Greek worthy of imitation. There was additional disagreement about whether, if one had a choice between an Attic word that was still in common use and one that had become completely obscure, it was preferable to use the intelligible or the impressively archaic form.

Phrynichus Arabius, a rhetorician and lexicographer of the later second century, represents one extreme of the Atticist spectrum (for Atticism in the Imperial Age see Matthaïos in this volume); his name became a byword for strictness. He rejected words attested in mainstream fourth-century Attic prose on the grounds that only fifth-century authors qualified for canonical status, but accepted words found in tragedy and Old Comedy. Two of his works survive, both concerned with the nuances of correct Attic usage. The *Σοφιστικὴ προπαρασκευή* or *Praeparatio sophistica* ‘Sophistic preparation’ was a lexicon of Attic words originally in 37 books but now surviving only in a substantial epitome and a collection of fragments. The entries, which are alphabetized by first letters only, consist of obscure words, often collected from lost tragedies or comedies, with definitions and sometimes specific attributions to classical authors.

Phrynichus’ *Ἐκλογὴ Ἀττικῶν ῥημάτων καὶ ὀνομάτων* ‘Selection of Attic Verbs and Nouns’ (or *Ecloga* ‘Selection’) used to be considered an epitome but is now thought to be more or less complete; it is in two books, with a certain amount of repetition between them, and two short epitomes are also preserved. The work consists of a series of pronouncements on different aspects of Attic and non-Attic usage, arranged in the form of a lexicon (but not in alphabetical order,

except for a few sets of entries taken over from alphabetizing sources). Many entries consist of a non-Attic word, usually but not always from the koiné (e.g. *δυσί* ‘two’), an injunction against using it, and the appropriate Attic replacement (e.g. *δυσὶν* ‘two’), while others give the proper Attic syntax of the lemma (e.g. *τυγχάνω* ‘happen’ must be accompanied by *ὄν* ‘being’ when it means ‘happen to be’) or the difference between easily confused words (e.g. a *μείραξ* ‘girl’ is female, but a *μειράκιον* ‘youth’ is male). Phrynichus’ sources include several lost works of ancient scholarship, and his work is valuable both for preserving such fragments and for the light it sheds on the way the Atticists worked and on the type of mistakes that Greek speakers trying to write classical Attic were likely to make in the second century. For texts see de Borries [1911] and Fischer [1974].

Phrynichus’ opposite on the Atticist spectrum was another second-century lexicographer now known as the Antiatticist or *Antiatticista*—a misleading name since this scholar (whose real name has been lost) was clearly an Atticist in principle but differed from Phrynichus in having a different canon. The Antiatticist admitted a larger group of authors into his canon and apparently held that the use of a word by any Attic author made it acceptable as Attic, even if a more *recherché* alternative existed. Until recently it was believed that the Antiatticist was a contemporary of Phrynichus who wrote in response to the first book of Phrynichus’ *Ecloga* and against whom the second book of the *Ecloga* was then directed, but now some hold that Phrynichus attacked the Antiatticist throughout the *Ecloga*, and others that Phrynichus used the Antiatticist’s work rather than attacking it, suggesting that the Antiatticist may have been a predecessor rather than a contemporary.

The lexicon seems to have originally consisted of a list of Attic words, with definitions and references to the words’ occurrences in classical texts; many of the words listed were ones whose claim to be considered properly Attic had been disputed by the stricter Atticists, and the Antiatticist seems to have made a point of showing that those words were indeed attested, often by quoting the relevant passage. Unfortunately the work survives only in the form of a drastically reduced epitome from which most of the quotations have been excised, leaving only tantalizing references to lost works. Enough remains, however, that the work is useful for information on lost literary works, historical details about classical Athens, and fragments of Hellenistic scholarship, as well as for understanding the controversies of the Second Sophistic period (cf. Matthaios in this volume). There is a text in Bekker [1814–1821] vol. I, 75–116.

A work in iambics from around 200 AD entitled *Περὶ Ἀττικῆς ἀντιλογίας τῆς ἐν ταῖς λέξεσιν* ‘On Attic Controversy about Words’ is attributed to the glossographer Philemon; this Philemon is not to be confused with a much earlier

glossographer of the same name who composed a lost work entitled *Περὶ Ἀττικῶν ὀνομάτων ἢ γλωσσῶν* ‘On Attic Nouns or Obscure Words’. The later work survives only in two brief extracts, both of which are essentially alphabetic lists of non-Attic words and their Attic equivalents. One covers the whole alphabet and has been published by Reitzenstein [1897] 392–396, while the other, which has more entries beginning with each letter and gives more detail on each entry, covers only the first four letters of the alphabet; this one has been edited by Osann [1821]. For discussion see Cohn [1898].

The latest of the preserved Atticist lexica is the intact *Λέξεις Ἀττικῶν καὶ Ἑλλήνων κατὰ στοιχεῖον* ‘Word-list of Attic and Greek Speakers in Order’ or *Ἀττικιστῆς* ‘Atticist’ of Moeris, which is likely to come from the third century AD. The lexicon consists of almost a thousand entries, alphabetized by their first letters, most of which involve Attic / non-Attic pairs. Many appear in a formula that juxtaposes *Ἀττικοί* ‘Attic speakers’ and *Ἕλληνες* ‘Greeks’ (i.e. speakers of koiné). Moeris’ Attic canon excluded tragedy and new comedy but included, in addition to prose and old comedy, Homer and Herodotus. There is a good text and study in D. Hansen [1998].

3.3 *Pollux*

Julius Pollux (or Polydeukes) of Naucratis, a rhetorician of the latter part of the second century AD, was the author of the *Onomasticon*, a wide-ranging lexicon in ten books. The work now survives only in the form of an epitome that has suffered interpolation as well as abridgement, but it is still of considerable bulk and primarily Pollux’s own work. It is based on works of classical literature and Alexandrian scholarship, including many no longer extant; among these sources are Aristophanes of Byzantium and Eratosthenes.

The *Onomasticon* is organized not in alphabetical order like other surviving ancient lexica, but by topic; in this it preserves a very early method of organization that originally predominated in Greek scholarship and was only gradually replaced by alphabetical ordering (cf. Matthaios and Tosi in this volume). Some entries are very brief, but others are complex and detailed, offering much more than a simple definition. Perhaps the most famous section is Pollux’s discussion of the classical theater and its paraphernalia, including a description of 76 different types of mask for different characters in tragedies, comedies, and satyr plays, which is an invaluable source of information on the ancient stage. Much other historical information can also be found in the *Onomasticon*, as can fragments of lost works, better readings of extant works, and definitions (including some earliest attestations) of obscure words.

The standard edition of the *Onomasticon* is that of Bethe [1900–1937], and some useful discussion is provided by Tosi [1988] 87–113; see now also Bearzot et al. [2007] and Matthaios [2013a].

3.4 *Ammonius*

A lexicon entitled *Περὶ ὁμοίων καὶ διαφόρων λέξεων* 'On Similar and Different Words' or *De adfinium vocabulorum differentia* 'On the Differences between Related Words' is preserved in late manuscripts under the name of Ammonius, but it is generally agreed not to have been composed by any of the known bearers of that name. The work is closely related to a number of other lexica that survive only as epitomes, of which the most significant are the *Περὶ διαφορᾶς λέξεων* 'On the Differentiation of Words' attributed to an unidentified Ptolemaeus and the *Περὶ διαφόρου σημασίας* 'On Different Meanings' or *De diversis verborum significationibus* 'On the Different Meanings of Words' of Herennius (or Erennius) Philo. It is thought that the ancestor of all these works was probably a lexicon composed by Herennius Philo in the second century AD, which was severely epitomized both with and without its author's name and preserved (probably still in a reduced form, but one of substantial size) with the substitution of Ammonius' name.

The lexicon consists primarily of pairs of words that are similar or identical in some way, with an explanation of the difference between them. It is often called a lexicon of synonyms, and in the majority of cases the paired words are in fact synonyms (e.g. πόλις 'city' and ἄστυ 'city', or εὖ 'well' and καλῶς 'well'), but in other cases they are homonyms, similar or identical in form but different in meaning (e.g. ἐκεῖ 'there' and ἐκεῖσε 'thither', or δῆμος 'populace' and δημός 'fat'). Some are similar in both form and meaning, and occasionally an entry consists of a single word followed by a list of synonyms. The sources include classical literature, Alexandrian scholarship, and scholarship of the early Roman period, most now lost; sometimes literary quotations are included to exemplify the meaning or usage of a particular word. While the vast majority of the entries contain information that is correct by the standards of classical usage, and some of them preserve really valuable scholarly information, there are also a few mistakes and a certain amount of banality. For text and discussion see Nickau [1966] and [2000].

3.5 *Author-Specific Lexica*

The boom in Atticist lexicography in the second century did not eliminate the earlier tradition (see above § 3.1) of lexica designed to elucidate particular authors, a considerable number of which were produced in this period. The most important of these is Valerius Harpocration's glossary to the Attic orators, *Λέξεις τῶν δέκα ῥητόρων* 'Word-list of the Ten Orators', composed in the later second century AD; this work has some characteristics of the earlier author-specific lexica and some of the Atticist lexica. The glossary is particularly important as a source of fragments of lost works and of historical information on classical Athens; the information it contains is notably more accurate

than the average of ancient scholarship. Unusually for a work of this period, Harpocration's glossary follows complete alphabetical order (i.e. words are not merely grouped together by their first letters, or by their first two or three letters, but fully alphabetized as in a modern dictionary); there is however some debate about whether this feature can be traced to Harpocration himself or was added at a later stage of transmission.

Harpocration's work survives, in a contaminated and somewhat abridged form, in a number of late manuscripts; this version is known as the 'full version' in contrast to our other main witness to the text, an epitome dating probably to the early ninth century. There is also an early papyrus fragment of the glossary, from the second or third century AD, as well as extracts from Harpocration preserved in Photius and in scholia to the orators. All texts of Harpocration are unsatisfactory; one edition, and references to the others, can be found in Keaney [1991], on which see Otranto [1993].

From the same century comes a Hippocratic glossary by Galen, which was based heavily on earlier glossaries; unlike Galen's Hippocratic commentaries it is largely scholarly rather than scientific in orientation, and the preface contains much useful information on the work of earlier scholars. Galen's glossary also employs complete alphabetical order, though this feature may not be due to Galen himself. A poor text of the glossary can be found in Kühn [1821–1833] vol. XIX.

Of uncertain date is a lexicon to Plato attributed to an otherwise unknown Timaeus the Sophist, which survives in a single manuscript. The work has clearly suffered significant additions and subtractions at later periods, leading to the inclusion of many non-Platonic words and to non-Platonic definitions of words that do occur in Plato. It is nevertheless important as the sole surviving witness to a genre: two other Platonic lexica, by Boethus and Clement, are known only from insubstantial fragments. Timaeus seems to have used earlier commentaries on Plato that are now lost, and his lexicon also appears to be one of the sources of our extant scholia. Bonelli [2007] and Valente [2012] provide editions.

An anonymous glossary of Herodotean words known as the Λέξεις 'Word-list' survives in two versions; version A is arranged in the order of the words' appearance in Herodotus' text and version B in alphabetical order. Sometimes the title Λέξεις Ἡροδότου 'Word-list of Herodotus' is reserved for version A, while version B is called the Λεξικὸν τῶν Ἡροδοτεῶν λέξεων 'Lexicon of Herodotean Words'. Version A is older; its date is unknown, but it was clearly written to accompany an unaccented version of the text (i.e. before c. 900 AD). It seems to be based (at least in part) on a commentary, for it sometimes offers definitions intended to clarify the interpretation, in a specific context, of common words easily con-

fused with homonyms. Version B appears in several manuscripts and differs from one to another; it seems to consist primarily of rearrangements of the older version into alphabetical order but also contains some additions (including words that do not occur in the text of Herodotus as we have it), subtractions, and other modifications. Rosén [1962] 222–231 provides a text and discussion. Cf. Montana [forthcoming].

3.6 *Hesychius*

Hesychius of Alexandria composed in the fifth or sixth century AD a lexicon of obscure words that survives in an abridged and interpolated version (cf. Matthaios in this volume). Hesychius based his work on a lost lexicon composed by Diogenianus in the second century AD, which he claims to have supplemented from the works of Aristarchus, Heliodorus, Apion, and Herodian. Such claims are now difficult to verify or refute, but the work clearly contains material from lost sources much earlier than Hesychius himself. The lexicon consists of a list of poetic and dialectal words, phrases, and short proverbs. The words are often in inflected forms (as they appeared in the original texts from which Hesychius' predecessors extracted them) rather than the dictionary forms used today, and they are alphabetized usually by the first three letters.

Hesychius' lexicon is useful for several reasons. It is the only source for a large number of rare words that occur nowhere else in extant literature (particularly dialect forms). It also preserves, and provides information on, many words that would be omitted from a modern dictionary for being proper names (thus for example it is one of our main sources for the names of Attic clans). In some cases Hesychius' entries can be used as independent witnesses to the texts of extant authors and can supply correct readings of words corrupted in the transmission of those texts. Hesychius also tells us what ancient scholars thought his obscure words meant; this information can be useful both as a guide to the actual meanings of the words and as a source of insight into the ways that ancient scholars understood and interpreted literature.

The lexicon in its current form is substantially different from the one Hesychius wrote. Not only was his work severely abridged in transmission (a process that eliminated, among other things, most of Hesychius' indications of his sources for the various words), but it has been heavily interpolated as well. About a third of the entries are Biblical glosses from Cyrillus' lexicon, and material from other sources has also been added to Hesychius' original core. The interpolations must have occurred rather early, for material from Cyrillus was already in Hesychius's work by the eighth century.

A further complication is the state of the text. Only one manuscript of Hesychius survives, and it is late (fifteenth century), damaged, and seriously

corrupt. The best edition is that of Latte [1953–1966], P. A. Hansen [2005], and Hansen-Cunningham [2009].

3.7 *Etymologica*

A number of enormous, anonymous Byzantine etymological lexica have survived more or less intact and preserve much valuable ancient scholarship. Though traditionally referred to as etymologica because of the attention they pay to etymology, they contain much other information as well. The oldest and most important of these is the *Etymologicum genuinum* ‘True Etymological Dictionary’, which was compiled in the ninth century, though our only witnesses to it are two tenth-century manuscripts of unusually poor quality. From the original version of this work, with various excisions and additions, are descended almost all the other etymologica, of which the most important are the *Etymologicum magnum* ‘Great Etymological Dictionary’ from the twelfth century, the *Etymologicum Gudianum* ‘Gudian Etymological Dictionary’ from the eleventh century, and the *Etymologicum Symeonis* ‘Etymological Dictionary of Symeon’ from the twelfth century. The *Etymologicum (Florentinum) parvum* ‘Little (Florentine) Etymological Dictionary’, for which we have only entries from the first half of the alphabet, is somewhat older but much less useful because of its small scale and lack of quotations.

The sources of the etymologica vary but generally date to the second century AD and later; major sources include Herodian, Orus, Orion, Theognostus, Choeroboscus, scholia, and the *Epimerismi Homerici*. But since these works were themselves usually based on earlier scholarship, the etymologica are indirect witnesses to a considerable amount of Hellenistic scholarly work, as well as preserving numerous fragments of classical literature otherwise lost.

Texts of these works are incomplete, scattered, and often unsatisfactory; for a complete list see Dickey [2007] 91–92.

3.8 *Suda*

The *Suda* is a huge dictionary / encyclopedia compiled in the late tenth century. From the twelfth until the mid-twentieth century the work was referred to as *Suidae lexicon* ‘lexicon of Suidas’, but now it is generally thought that the Σοῦδα ‘Suda’ in manuscripts is the work’s title, not the author’s name, and in consequence the work is usually called the *Suda* and considered to be anonymous. The *Suda* may have been compiled by a group of scholars, but authorship by an individual cannot be ruled out.

The work consists of c. 30,000 entries of varying types; some lemmata are followed by short definitions as in a lexicon, and others by detailed articles resembling those in a modern encyclopedia. They are arranged in a form of alphabetical order adapted to Byzantine Greek pronunciation (i.e. vowels not

distinguished in pronunciation are alphabetized together). Sources are transcribed largely intact and are usually identifiable. The work is obviously related to Photius' *Lexicon*, and there has been much debate over the nature of the relationship, but the latest evidence suggests that the compiler of the *Suda* simply drew directly on Photius' work.

Despite its late date, the *Suda* is of great importance for our knowledge of antiquity, since it is based to a large extent on lost sources. Most of the immediate sources were lexica and other scholarly compilations of the Roman and late antique periods, such as Harpocration, Diogenianus, and scholia (though some pieces of classical literature, particularly the plays of Aristophanes, seem to have been consulted directly), but as these compilations were based on earlier work, the ultimate sources of the *Suda* include a significant amount of Alexandrian scholarship and historical material reaching back to the classical period. The plays of Aristophanes and scholia to them are particularly well represented, appearing in more than 5,000 entries. The *Suda* is especially useful for information about classical and later writers (indeed it is our main source for the titles of lost literary works and the original extent of each author's output) because it includes material from a lost dictionary of literary biography composed by Hesychius of Miletus. It is also the source of important poetic and historical fragments, not to mention countless fragments of ancient scholarship.

A good text is given by Adler [1928–1938], and discussion can be found in Zecchini [1999].

3.9 *Other Lexica*

Numerous other lexica survive from the late antique and Byzantine periods, though they tend to contain less ancient scholarship than those already discussed. Notable among them is the lexicon of Photius, patriarch of Constantinople in the ninth century and often better known for his *Bibliotheca* (see below § 6.2). This work is huge and concerned chiefly with prose words, though a number of items from Old Comedy also appear. Most entries are short, consisting only of the lemma and a one- or two-word definition, but some are substantial paragraphs with citations of authors who use a word, and sometimes with quotations. The lexicon's immediate sources are other late lexica, particularly Cyrillus, but it indirectly preserves much earlier scholarship (particularly material from the lost lexica of Diogenianus, Aelius Dionysius, and Pausanias) and is a source of fragments of lost literary works. For text and discussion see Theodoridis [1982–].

The fifth-century lexicon attributed to Cyrillus (or Cyril) is a substantial work that consists primarily of Biblical glosses, though it also contains some material from the ancient scholarly tradition, including Atticist writings and scholia.

The lexicon exists, in somewhat different form, in numerous manuscripts, and partly for this reason has never been completely published. For discussion see Drachmann [1936] and Cunningham [2003] esp. 43–49; the text of one manuscript has been published online by Hagedorn [2005].

The Ἑτυμολογικόν ‘Etymological Dictionary’ or Περί ἐτυμολογίας ‘On Etymology’ by Orio(n) of Egyptian Thebes is an etymological lexicon, composed in the fifth century, that combines material from other scholars in alphabetical order and so preserves much earlier scholarship, including portions of Aristonicus’ work on Homer. Orion’s work survives in three abbreviated versions, one of which is still of considerable bulk; the smaller versions are known as the Werfer excerpts and the Koës excerpts after their first transcribers. All three versions have been published by Sturz [1818] 611–617 and [1820], and one of them re-edited by Micciarelli Collesi [1970].

Stephanus of Byzantium, a grammarian who taught in Constantinople in the sixth century AD, composed a gigantic geographical lexicon in more than 50 books (cf. Matthaios in this volume). The work, called *Ethnica*, originally contained detailed linguistic, geographical, historical, and mythological information about hundreds of place-names and the ethnic adjectives corresponding to them. Its sources included Herodian, Orus, Pausanias, Strabo, and some ancestors of the Homer scholia, as well as many lost works of scholarship. We now have an epitome, in which the amount of information given about each entry is drastically reduced (in many cases to a mere listing of place-names and their adjectives); eight pages of the original that survive in a separate manuscript; and several fragments preserved in the work of later Byzantines, notably Constantine Porphyrogenitus. Though these remains are only a fraction of the original work, their bulk is still impressive. Billerbeck [2006–] and Meinecke [1849] provide texts.

An enormous lexicon compiled in the first half of the thirteenth century carries the name of Zonaras, a historian who lived in the eleventh and twelfth centuries and so cannot have written it. The lexicon draws freely on the works of a wide variety of earlier (late antique and early Byzantine) scholars and so preserves much scholarship that is otherwise lost, including many of the fragments of Orus’ lexicon. It is organized first alphabetically (to two letters) and then by grammatical category. Entries range in length from two words (lemma and definition) to long paragraphs including quotations from ancient literature. The only edition of the lexicon is that of Tittmann [1808], whence it is sometimes called the *Lexicon Tittmannianum*; for discussion see Alpers [1972] and [1981] 3–55.

From the late eighth or early ninth century comes a work known variously as the Συναγωγὴ λέξεων χρησίμων ‘Collection of Useful Words’, *Lexicon*

Bachmannianum ‘Bachmann’s Lexicon’, and *Lexicon Bekkeri VI* ‘Bekker’s Sixth Lexicon’; a substantial body of material was also added later. Its original basis was the lexicon of Cyrillus, and many of the other sources are also extant. It is therefore often ignored, but the fact that we can trace the growth of the work over several centuries and know its contents at each point makes it useful for understanding Byzantine lexicography. The best text of and source of information on the *Συναγωγή* is Cunningham’s edition [2003].

There are also some other surviving lexica of lesser importance; see Dickey [2007] 102–103 and Degani [1995].

4 Grammatical Works

The date of the origin of the Greek grammatical tradition is hotly debated (cf. Montana and Matthaios in this volume), and as with the lexica, the very earliest works have not survived. But we have surviving works from three ancient grammarians, Dionysius Thrax, Apollonius Dyscolus, and Herodian, as well as a number from the late antique and Byzantine periods; portions of numerous other grammatical works survive as fragments and will be discussed in section 6 (for typology of grammatical treatises and the definitions of *technē grammatike* see Valente and Swiggers-Wouters in this volume).

4.1 *Dionysius Thrax*

The oldest surviving Greek grammatical treatise is the *Τέχνη Γραμματική* ‘Grammatical Art’ attributed to Dionysius Thrax (c. 170–c. 90 BC), a pupil of Aristarchus. The *Τέχνη* is a short, simple grammatical introduction that was enormously influential from late antiquity onwards. If the attribution to Dionysius can be trusted, the handbook is also the only Hellenistic grammatical treatise to survive to modern times. Dionysius’ authorship, however, has been doubted since antiquity and has recently been the focus of considerable discussion; some scholars maintain that the entire treatise is a compilation of the third or fourth century AD, while others defend its complete authenticity and date it to the end of the second century BC. There is also a range of intermediate positions, which in recent years have gained much ground against both the more extreme views: some portion of the beginning of the work could go back to Dionysius, while the rest was written later, or the entire work (or sections of it) could be originally Dionysius’ but seriously altered (and perhaps abridged) by later writers. Some argue that if the *Τέχνη* is spurious, we must revise our whole view of the development of Greek grammatical thought, to put the creation of fully developed grammatical analysis in the first century

BC. Others maintain that Aristarchus and his followers already possessed an advanced grammatical system and that the date of the *Τέχνη* therefore makes little difference to our view of the evolution of grammar.

The *Τέχνη* itself is relatively straightforward; it consists of a concise explanation of the divisions of grammar and definitions of the main grammatical terminology. Because of its extreme brevity, it accumulated a large body of explanatory commentary (this material is all traditionally known as ‘scholia’, but it includes continuous commentaries as well as marginal scholia), which are in many ways more interesting and informative than the text itself, though clearly later. The *Τέχνη* is also traditionally accompanied by four supplements, which are probably old but later than the text itself: *Περὶ Προσῳδιῶν* or *De Prosodiis* ‘On Prosody’, *Περὶ Τέχνης* ‘On the (Grammatical) Art’ or *Definitio Artis* ‘Definition of the (Grammatical) Art’, *Περὶ ποδῶν καὶ Περὶ τοῦ Ἡρωϊκοῦ Μήτρου* or *De Pedibus et de Metro Heroico* ‘On (Metrical) Feet and the Heroic Meter’, and a paradigm of the declension of *τύπτω* ‘beat’ derived from the *Κανόνες* ‘Canons’ of Theodosius. Some of these supplements are the subjects of additional commentaries. Both ‘scholia’ and supplements contain valuable information about other ancient grammatical writings, particularly the lost works of Apollonius Dyscolus, and cover a wide variety of topics.

Good texts of the *Τέχνη* can be found in Lallot [1998²], with translation and excellent discussion, and Uhlig [1883]. The supplements and ‘scholia’ are best consulted in Uhlig [1883] 103–132 and Hilgard [1901].

4.2 *Apollonius Dyscolus*

The works of Apollonius Dyscolus are the most important and influential of surviving grammatical treatises (cf. Matthaios in this volume). In antiquity and the Byzantine world Apollonius was often considered the greatest grammarian, and it is no coincidence that far more remains of his work than of any other Greek grammarian before the Byzantine period. Apollonius, who lived in Alexandria in the mid-second century AD, wrote numerous treatises, of which four survive: the *Syntax* (a major work in four books) and shorter treatises on pronouns, adverbs, and conjunctions.

Apollonius may have invented syntax as a grammatical discipline; even if he did not, his works are the earliest substantial discussions of the topic to survive and represent an important and original contribution that laid the foundations for future discussion. His analyses are theoretical rather than didactic and are concerned with discovering the underlying rules that govern the regularities of language; his goal is the construction of a theoretical framework that accounts for all the observed facts about the aspects of the Greek language he

considers. Although his works are primarily important for their portrayal of Apollonius' own ideas, they are also useful as sources of information on the lost writings of earlier scholars, since they include numerous references to Zenodotus, Aristarchus, and others. Apollonius seems to have been particularly indebted to Trypho, though (perhaps because the latter was a scholarly 'grandchild' of Aristarchus) Aristarchus' direct and indirect influence is also considerable. Apollonius' style is notoriously opaque and elliptical, and his terminology is idiosyncratic; indeed since antiquity one of the explanations offered for his nickname *δύσκολος* 'troublesome' has been a reference to the sufferings he inflicted on his readers.

Good texts of the *Syntax* can be found in Uhlig [1910] and Lallot [1997] with translation and discussion; the minor works can all be found in Schneider [1878–1902], and individually with translation and discussion in Dalimier [2001] for *Conjunctions* and Brandenburg [2005] for *Pronouns*. Glossaries and other aids to understanding Apollonius' difficult Greek can be found in most of these works and in Schneider [1910], and there are additional useful discussions in Blank [1982] and [1993].

4.3 *Herodian*

Aelius Herodianus (2nd cent. AD), son of Apollonius Dyscolus, is responsible for most of our knowledge of ancient accentuation (cf. Matthaios in this volume). His main work, the *Περὶ καθολικῆς προσωδίας* 'On Prosody in General', is said originally to have been an enormous work giving the rules for attaching accents and breathings to Greek words, with explanations based on their terminations, number of syllables, gender, and other qualities; it now survives in several epitomes (most notably those of 'Arcadius' and Joannes Philoponus of Alexandria) and is one of the major extant grammatical works despite being considerably reduced in size. The only one of Herodian's works to survive intact, however, is the *Περὶ μονήρους λέξεως* 'On the Anomalous Word', a treatise on anomalous words.

Many of Herodian's rules were meant to apply to classical and Homeric words, i.e. to words from six centuries and more before his own time. Alexandrian scholars from Aristophanes of Byzantium (c. 257–c. 180 BC) onward worked on accentuation, and Herodian built on a tradition going back to these scholars. Even the Alexandrians were too distanced from classical and Homeric Greek to possess any native-speaker knowledge of those dialects; yet their pronouncements can sometimes be proven right by modern techniques of comparative philology, to which they did not have access. Many modern scholars believe that the Alexandrians drew on a living tradition of accentuation going back to

the classical period and perhaps beyond, but there is some debate as to the form and extent of that tradition. For discussion see Probert [2006] 25–45.

Numerous works of Herodian survive as fragments (see below § 7.2). There are also a number of surviving works doubtfully or spuriously attributed to Herodian, most of which were composed considerably after his day. There are no good texts of Herodian's genuine works; for explanation of the options available and their pitfalls see Dickey [2014] and [2007] 75–77, and Dyck [1993a].

4.4 *Theodosius*

Theodosius of Alexandria, who lived probably in the 4th and 5th centuries AD, was the author of the *Κανόνες* 'Canons', a set of rules and paradigms for declensions and conjugations (cf. Matthaïos in this volume). This long and detailed work was a teaching tool intended to supplement the *Τέχνη* of (ps-) Dionysius Thrax (see above § 4.1) and appears to be the ancestor of the fourth supplement to that work. It gives all theoretically possible forms of the words it illustrates (most famously in an ultra-complete paradigm of *τύπτω* 'beat'), thus producing a large number of forms unattested in actual usage. Partly as a result of this inclusiveness, the *Κανόνες* are not highly respected today, but for many centuries they exerted an important influence on Greek textbooks. Two lengthy commentaries on the *Κανόνες* survive; that of Choeroboscus (8th–9th cent.) is intact, and that of Joannes Charax (6th–8th cent.) is preserved in an excerpted version by Sophronius (9th cent.). These commentaries, particularly that of Choeroboscus, are now considered more important than the *Κανόνες* themselves.

Theodosius is also credited with short treatises entitled *Περὶ κλίσεως τῶν εἰς -ων βαρυτόνων* 'On the Declension of Barytone Words Ending in -ων' and *Περὶ κλίσεως τῶν εἰς -ων ὀξύτόνων* 'On the Declension of Oxytone Words Ending in -ων', and he may be responsible for the *Περὶ προσωδιῶν* 'On Prosody' supplement to (ps-) Dionysius Thrax's *Τέχνη*. Spurious works include a long *Περὶ γραμματικῆς* 'On Grammar' and shorter works entitled *Περὶ διαλέκτων* 'On Dialects' and *Περὶ τόνου* 'On the Accent'.

The best text of the *Κανόνες* and its commentaries is that of Hilgard [1889–1894], which also provides a good introduction to the works; for further information see Dickey [2007] 83–84 and Kaster [1988] 366–367.

4.5 *Philoponus*

The sixth-century philosopher Ioannes Philoponus of Alexandria (cf. Matthaïos in this volume), who is known primarily for his heretical Christian theology and his commentaries on Aristotle, is also credited with several grammatical works, three of which survive. One, the *Τονικά παραγγέλματα* 'Rules for Accentuation',

was originally an epitome of Herodian's *Περὶ καθολικῆς προσωδίας* 'On Prosody in General'. The surviving work is very brief and seems to be an epitome of Philoponus' epitome, which was used in a fuller form by Eustathius. It is useful because Herodian's original work has been lost.

Philoponus also produced a treatise on homonyms that are distinguished only by their accents, which survives (probably in abbreviated form) in many manuscripts but for which there is no established title. The work is probably based to some extent on Herodian, but the extent of its dependence on Herodian and the degree of interpolation it underwent between Philoponus' time and our earliest manuscripts are both matters of debate. The treatise consists of pairs of words with a short definition of each; some pairs, such as βίος 'life' and βίός 'bow', are genuinely homonyms apart from the accent, but others, such as ἕτερος 'other' and ἑταῖρος 'comrade', are spelled very differently and were homophonous only in postclassical Greek pronunciation.

Philoponus is also credited with a *Περὶ διαλέκτων* 'On Dialects', which was an important source for Gregory of Corinth and of which some abbreviated extracts survive directly. The remains are short and basic and rarely considered useful today, though they have some value for the history of the Greek perception of dialects.

The grammatical works of Philoponus are not easy to consult. The only edition of the *Τονικά παραγγέλματα* is the very rare text of W. Dindorf [1825], and the *Περὶ διαλέκτων* was last edited by Hoffmann [1893] 204–222. But the work on homonyms has recently been edited by Daly [1983].

4.6 *Choeroboscus*

George Choeroboscus, who lived in the eighth and ninth centuries AD, was a Byzantine teacher and author of a number of grammatical works (cf. Pontani in this volume). Choeroboscus' works were not intended as contributions to the advancement of grammatical theory; they are clearly part of his teaching materials and were often intended for fairly elementary students. Their significance lies in three areas: the light they shed on grammatical teaching in the 9th century, the influence they exerted on later scholars (including Eustathius and the compiler of the *Etymologicum Genuinum*), and their extensive use of earlier grammatical treatises (Choeroboscus is for example responsible for much of the preservation of Herodian's fragmentary *Περὶ κλίσεως ὀνομάτων* 'On the Declension of Nouns').

The longest and most important of Choeroboscus' works is a gigantic commentary on the *Κανόνες* of Theodosius, evidently composed as a teaching tool, which survives both intact and drastically excerpted in a short collection of extracts on accents entitled *Περὶ τόνων* 'On Accents'. Choeroboscus also

produced a commentary on the Τέχνη of (ps-) Dionysius Thrax that is preserved in extracts under the name of Heliodorus. Closely related is Περί προσωδίας ‘On Prosody’, a commentary on the Περί προσωδιῶν ‘On Prosody’ supplement to the Τέχνη, which survives both under Choeroboscus’ own name and in a longer version rewritten by an otherwise obscure Porphyry. From a discussion of correct spelling, Περί ὀρθογραφίας ‘On Orthography’, we have both an epitome under that name, in which difficult words are listed and their correct spellings explained and justified, and an extract Περί ποσότητος ‘On Quantity’. Choeroboscus also left us a commentary on the *Encheiridion* ‘Handbook’ of Hephaestion (discussing Greek meter) and a set of epimerismi on the Psalms that contain both religious and scholarly information, and his work is one of the sources of the Περί πνευμάτων ‘On Breathings’, a Byzantine collection of extracts on this topic.

There are also a number of extant works of uncertain authorship that are sometimes attributed to Choeroboscus. These include the *Epimerismi Homeric* and a short work entitled Περί τρόπων ποιητικῶν ‘On Poetic Figures of Speech’.

Texts of Choeroboscus’ most important grammatical works can be found in Hilgard [1889–1894]. Other works are scattered through older publications; see Dickey [2007] 80–81 and Kaster [1988] 394–396.

4.7 *Gregory of Corinth*

Gregorios (or Georgios) Pardos, bishop of Corinth probably in the 11th–12th century, was the author of a number of extant scholarly works, as well as some religious and rhetorical writings (cf. Pontani in this volume). His most famous work is the Περί διαλέκτων ‘On Dialects’, which discusses the Greek literary dialects (Attic, Doric, Ionic, and Aeolic). Although this treatise is not very accurate, it is useful for understanding the Greeks’ perception of their own dialect situation, and it preserves some earlier scholarship, for it is based on lost dialectological works of Trypho and Philoponus. Gregory’s other productions include the Περί συντάξεως λόγου ‘On the Syntax of the Sentence’, a work of less than the highest quality that is the third oldest Greek syntactic work we possess (after those of Apollonius Dyscolus and Michael Syncellus); its attribution to Gregory has been questioned but is now accepted as correct. A short treatise Περί τρόπων ‘On Figures of Speech’ has been attributed to Gregory but certainly predates him; it may have been written by Trypho. Gregory’s long commentary on the Περί μεθόδου δεινότητος ‘On the Method of Forcefulness’ attributed to Hermogenes is a teaching tool and discusses various passages in classical literature as well as rhetorical issues; this work may be based partly on lost ancient sources, but it is now generally neglected.

A text of the Περί διαλέκτων can be found in Schaefer [1811]; the other works are given in Donnet [1967a], M. L. West [1965], and Walz [1832–1836]

VII 1088–1352. Only the *Περὶ συντάξεως λόγου* has been translated, into French by Donnet [1967a]. There are discussions of Gregory's work by Kominis [1960] and Donnet [1966].

4.8 *Other Grammarians*

Many other grammatical works now survive only in fragments. Of those that have a more solid existence, Orus and Theognostus are most noteworthy. Orus, who worked in Constantinople in the fifth century AD, has left us numerous fragments and two partially preserved works. One is a manual entitled *Ὄρθογραφία* 'Orthography', from which we have only a substantial excerpt concerning the use of the iota subscript. This consists of a list of words in alphabetical order (only entries from the second half of the alphabet are preserved), with indication of whether or not each is written with the iota. Entries are often accompanied by evidence in the form of quotations from classical literature, thus sometimes preserving fragments of lost works, and some fragments of earlier scholarship can be found as well. The other work is a treatise *Περὶ πολυσημάντων λέξεων* 'On Words with Multiple Meanings', from which we have a number of substantial excerpts.

Theognostus, a Byzantine grammarian of the ninth century AD, has left us a work on correct spelling entitled *Περὶ ὀρθογραφίας* 'On Orthography' or *Κανόνες* 'Canons'. This treatise consists of more than a thousand rules for producing the correct ancient spellings of sounds that had merged in Byzantine Greek, with lists of words illustrating each rule. It is useful today not only for an understanding of Byzantine scholarship but also because it preserves elements of the ancient Greek vocabulary not attested in earlier works. Theognostus' sources were earlier works of scholarship, including Cyrillus and lost works of Herodian.

For editions of these works, and those of other minor grammarians, see Dickey [2007] 86–87, 99–100.

5 *Extant Commentaries*

The vast majority of intact commentaries (and other exegetical works focusing on particular authors or texts, which are grouped here with commentaries for organizational convenience) discuss religious, philosophical and scientific texts and concern their philosophical or scientific aspects. They are usually omitted in discussions of ancient scholarship because the questions with which they are concerned are not normally considered to be within the bounds of 'scholarship', and because they were often composed at a late period with little or no reference to Alexandrian or other early work. But it is important to

be aware of their existence, as such commentaries are in some ways our best evidence for what was going on in the world of late antique scholarship. We have only recently come to appreciate the extent to which scientific and even Biblical scholarship influenced the development of work on, and the transmission of work on, pagan literary texts (cf. McNamee [2007] 79–92).

5.1 *Early Commentaries*

The earliest preserved commentaries date from the Hellenistic period. The earliest commentary, by Hipparchus of Nicaea on Aratus' astronomical poem *Phaenomena* (cf. Montana in this volume), is the earliest piece of intact ancient scholarship of any sort and therefore of immense value for understanding the Hellenistic scholarly milieu. It is however often ignored in discussions of ancient scholarship because its orientation is largely scientific; it is of course precisely this orientation that caused its preservation in centuries with little interest in ancient scholarship.

Hipparchus' commentary is entitled Ἰππάρχου τῶν Ἀράτου καὶ Εὐδόξου Φαινομένων ἐξηγήσεως βιβλία τρία 'Three Books of Hipparchus' Exegesis of the *Phaenomena* of Aratus and Eudoxus' and was composed in the later second century BC. The commentary is concerned principally with correcting Aratus' astronomy—Hipparchus was a noted astronomer in his own right—but also discusses textual issues to some extent. Hipparchus' textual comments give us an insight into the early period of transmission, before a canonical text of Aratus had been established. He also serves as one of our major sources of information on Eudoxus of Cnidus, on whose lost astronomical writings Aratus (himself more a poet than an astronomer) is said to have based the *Phaenomena*; Hipparchus compares Aratus' work to Eudoxus' own writings and quotes the latter at length. Hipparchus also preserves substantial remnants of an even earlier commentary on Aratus by Attalus of Rhodes (earlier second century BC). This work was also heavily astronomical in content, but it differed from Hipparchus' in that Attalus tended to justify Aratus' astronomy rather than to correct it; Hipparchus thus quotes Attalus in order to disagree with him. Manitius [1894] provides a text and translation, and Martin [1956] 22–29 and [1998] vol. I, xxxvi–xcvii and 124–131 useful discussion.

The second earliest surviving commentary, that of Apollonius of Citium (cf. Montana in this volume) to Hippocrates' *On Joints* (a treatise on reducing dislocations), dates to the first century BC. It is however a simplified retelling rather than a commentary in the strict sense of the word and is concerned with medical rather than scholarly questions. The work is accompanied in one manuscript by a set of illustrations thought to descend directly from ones designed by Apollonius himself. Kollesch-Kudlien [1965] provide a text and translation.

5.2 *Galen and Medical Commentaries*

Apollonius of Citium's work is only the earliest survival of a large and important body of Hippocratic commentary, much of it written by Galen, himself a famous physician and intellectual of the second century AD (cf. Matthaios and Manetti in this volume). Galen has left us an enormous body of works, including some that are clearly commentaries on works attributed to Hippocrates (much of the Hippocratic corpus was probably not written by Hippocrates himself), some that are not really commentaries in form but nevertheless are devoted primarily to exegesis of Hippocratic writings, and a large number that have little reference to Hippocrates.

Thirteen of Galen's commentaries on Hippocrates survive, as well as some commentaries falsely attributed to Galen. Not all are intact, but some commentaries and portions of commentaries that do not survive in Greek are preserved in Arabic translations, or occasionally in Latin or Hebrew. Though primarily concerned with medical questions, Galen's work is of particular interest to students of ancient scholarship because of his occasional discussions of the authenticity of specific works and passages, textual corruption, and proposed emendations. Galen brings linguistic, historical, and medical arguments to bear on such questions; sometimes he summarizes the views of earlier scholars on a given point, thereby providing us with most of our information about their methods and opinions and revealing much about ancient editorial theory and practice that we cannot learn from the scholia's abbreviated and mutilated fragments of similar debates over the text of literary works. In discussion of textual variants Galen even distinguishes between older and newer manuscripts. The extended quotations in the lemmata to the commentaries also provide a crucial source for the text of Hippocrates. Galen's non-commentary writings include *De Captionibus*, a discussion of linguistic ambiguity and interpretation that offers intriguing insights into second-century views of a number of linguistic and textual issues, including the role of accentuation.

Late antique and Byzantine writers produced numerous commentaries on both Hippocrates and Galen; many of these works survive at least partially, but they are less respected and less exciting than Galen's commentaries, and not all have been edited. Most were not written for publication but are students' transcripts of the 'author's' lectures. The most important late commentators are Palladius (6th century), from whom we have works on Hippocrates' *On fractures* and book six of his *Epidemics*, as well as on Galen's *De Sectis*; Stephanus of Athens (6th–7th century AD), to whom are attributed extant commentaries on Hippocrates' *Aphorisms*, *Prognostic*, and *On fractures* (this last actually belongs to an unknown earlier commentator) and one on Galen's *Therapeutics*; and John of Alexandria, of whose commentaries on Hippocrates' *Epidemics* book

six and *On the nature of the child* only fragments survive in Greek (though more exists in Latin). For editions and further bibliography see Ihm [2002a].

5.3 *Philosophical Commentaries*

Apart from Biblical and other Judaeo-Christian religious commentary, which is outside the purview of this volume, by far the largest group of surviving commentaries is concerned with the works of ancient philosophers: above all Aristotle but also Plato and a variety of other philosophers.

The amount of surviving ancient commentary on Aristotle is vast, more than double that on any other ancient writer, and this bulk comes from the number of commentaries involved, their length, and their generally excellent state of preservation (cf. Lapini in this volume). Many of these commentaries are works of philosophy in their own right, but in some cases they are heavily derivative from each other (as well as from lost commentaries). The earliest of the commentators, Aspasius of Athens, was an Aristotelian of the second century AD; the prolific and original Alexander of Aphrodisias (2nd–3rd century) and the paraphraser Themistius (4th century) were also Aristotelians. Most Aristotle commentators, however, were Neoplatonists, whose commentaries can be divided into two types: the works of Porphyry (3rd century), Dexippus (4th century), Syrianus (5th century), and Simplicius (6th century) were written for publication like the commentaries of the Aristotelians, and the same is true of Ammonius' (5th–6th century) commentary on the *De interpretatione*, but Ammonius' other commentaries, and those of his followers Ioannes Philoponus (6th century), Olympiodorus (6th century), Asclepius of Tralles (6th century), Elias (6th century), David (6th century), and Stephanus (6th–7th century) are transcripts of lectures (sometimes Ammonius' lectures rather than those of the philosophers whose names they bear) rather than written commentaries. There is much overlap in content among the works of this latter group. After the Neoplatonists, there is a hiatus of several centuries followed by numerous later Byzantine commentaries. In addition, there are anonymous commentaries of each type (Aristotelian, Neoplatonist, and Byzantine), and the fragments of numerous lost commentaries can be extracted from the surviving material. Most of the Aristotle commentaries have been edited as part of the massive 23-volume *Commentaria in Aristotelem Graeca* collection, but some are published elsewhere or remain unpublished. Much of this collection is currently being translated into English in the 'Ancient Commentators on Aristotle' series; see Sorabji [1990] for discussion.

Surviving commentaries on Plato, like those on Aristotle, are often works of Neoplatonic philosophy; they are important for the study of Neoplatonism but of little significance for the study of Plato. Many of the surviving Neoplatonic

commentaries were composed by Proclus Diadochus (cf. Matthaïos in this volume), head of the Neoplatonist school at Athens in the fifth century AD and a prolific scholar: his surviving works include lengthy commentaries on the *Republic*, *Parmenides*, *Timaeus*, and *Alcibiades I*, as well as excerpts from a commentary on the *Cratylus*. Another major commentator was Olympiodorus, a member of the Neoplatonist school at Alexandria in the sixth century AD. His surviving commentaries on the *Gorgias*, *Phaedo*, and *Alcibiades I*, which are based on lost commentaries by Ammonius, were not composed for publication but are transcripts of his lectures on Plato's dialogues. Additional sixth-century commentaries on the *Philebus*, *Phaedo*, and *Parmenides* were formerly attributed to Olympiodorus but are now believed to be the work of Damascius. We also have a commentary on the *Phaedrus* by the fifth-century Hermeias of Alexandria that largely reproduces the views of Hermeias' teacher Syrianus, and anonymous prolegomena to Platonic philosophy derived from sixth-century lecture notes from the Neoplatonist school at Alexandria.

Of earlier work on Plato we have two works by Plutarch, the Πλατωνικά ζητήματα 'Platonic Questions' and a treatise on the generation of the soul in the *Timaeus* (*Mor.* 999c–1011e and 1012b–1032f). A short prologue by the second-century (AD) philosopher Albinus, discussing the genre of the philosophical dialog, is preserved intact, as is a work by an otherwise unknown Alcinous entitled Διδασκαλικός or 'Handbook of Platonism'. Until very recently it was believed that Alcinous was the same person as Albinus, but now that identity is often rejected, though a second-century date for Alcinous is still likely. From Galen (also second century AD) we have a treatise *On the doctrines of Plato and Hippocrates* as well as fragments of a commentary on the *Timaeus*. A partially preserved anonymous commentary on the *Parmenides* is sometimes attributed to Porphyry, an important Neoplatonist who was head of the school at Rome in the third century AD, but the work has also been dated to both earlier and later periods. For editions and translations of Platonic commentaries see Dickey [2007] 46–49.

Philosophical works outside the Platonic and Aristotelian traditions are rarely the subject of surviving commentary, but we have a Neoplatonist commentary on the *Encheiridion* 'Handbook' of the Stoic Epictetus, composed by Simplicius in the sixth century. Hadot [1996] provides a text and discussion, and Brittain-Brennan [2002] a translation.

5.4 *Mathematical Commentaries*

Euclid, Archimedes, and Apollonius of Perga all wrote important mathematical works in the Hellenistic period; in the Roman period they were joined by Ptolemy of Alexandria and Nicomachus. Considerable commentary on all

these authors survives, almost all from the late antique and Byzantine periods but sometimes incorporating earlier work.

The earliest commentaries come from the third century AD. The philosopher Porphyry has left us two works: a commentary on Ptolemy's *Harmonica* (text in Düring [1932] updated by Alexanderson [1969]) and an introduction and explanation of Ptolemy's Ἀποτελεσματικά or Τετράβιβλος, which concerned astrology (text in Boer-Weinstock [1940]). From Iamblichus we have a commentary on the *Introductio arithmetica* 'Introduction to Arithmetic' of Nicomachus of Gerasa; Pistelli [1894] provides a text. There is also a portion of an elementary commentary on Ptolemy's Πρόχειροι Κανόνες 'Handy Tables' surviving from the early third century; text and translation in Jones [1990].

From the fourth century we have more material. Of a commentary by Pappus on the first six books of Ptolemy's *Almagest* we now have the portion on books five and six; text in Rome [1931–1943] vol. I. Pappus' commentary on Euclid's *Elements* has fared less well: two books on book ten of the *Elements* survive, but only in Arabic translation. They include a philosophical introduction to book ten as well as detailed mathematical discussion. There is a good edition with translation in Junge-Thomson [1930].

The works of Theon of Alexandria (cf. Matthaïos in this volume), who also lived in the fourth century, slightly later than Pappus, are better preserved. Theon's commentary on books one to thirteen of Ptolemy's *Almagest* survives apart from the section on book 11 and portions of the section on book 5. The commentary on book three provides a rare glimpse of ancient scholarship produced by a woman, for it was based on a text edited by Theon's daughter Hypatia, who was an important Neoplatonist teacher until lynched by Christian monks; she also wrote her own commentaries, which unfortunately do not survive. For a text of the commentary on the first four books of the *Almagest* see Rome [1931–1943] vols. II–III; for the rest one must resort to Grynaeus-Camerarius [1538]. On Hypatia see Dzielska [1995].

Theon also composed two works on Ptolemy's Πρόχειροι Κανόνες 'Handy Tables'. Both are self-standing treatises rather than commentaries in the strict sense of the word. The 'Great Commentary' originally comprised five books, of which the first four are still extant, and the 'Little Commentary', which has survived intact, is in one book. For text and translation see Tihon [1978], [1991], and [1999] and Mogenet-Tihon [1985]. We also have an introduction to Euclid's *Optica* attributed to Theon; text and translation in Heiberg [1882] 139–145.

Proclus, a Neoplatonist of the fifth century AD, has left us an intact four-book commentary on the first book of Euclid's *Elements*. The commentary is based on a number of earlier works, including Eudemus of Rhodes' lost *History of Geometry* (c. 330 BC), lost works of Porphyry (3rd century AD), and commen-

taries on Euclid from the Roman period. The commentary is oriented toward the curriculum of the Neoplatonist school and has philosophical and historical as well as mathematical value; it is frequently cited by modern scholars in discussions of philosophy, mathematics, Euclid, and its lost sources. Friedlein [1873] provides a text and Morrow [1992²] a translation. Also attributed to Proclus, but probably incorrectly, is a paraphrase/commentary on Ptolemy's Ἀποτελεσματικά 'Astrological Matters' (text in Allatius [1635]).

Eutocius of Ascalon, who lived in the fifth and sixth centuries, has left us three commentaries on works of Archimedes. They are important mathematical works in their own right and significant for our understanding of Greek mathematics and its history. For text and translation see Mugler [1972] and Netz [2004–]. We also have a commentary by Eutocius on the surviving half of the *Conica* of Apollonius of Perga (c. 200 BC). Though not as famous as Eutocius' commentary on Archimedes, this work has some philosophical and mathematical value. For text and translation see Heiberg [1891–1893] vol. II.

Other surviving work includes an introduction to Euclid's *Data* by Marinus of Neapolis, a pupil of Proclus who lived in the fifth and sixth centuries (text in Oikonomides [1977]). There is a long anonymous commentary from sometime in the late antique period on Ptolemy's Ἀποτελεσματικά that has no modern edition (text in Wolf [1559]). Later commentaries on most of the mathematical writers also exist. For further information on many of the works mentioned here see Knorr [1989] and Mansfeld [1998].

5.5 *Ancient Work on Literature*

In comparison with the wealth of commentary in other areas, the lack of surviving ancient commentary on literature is striking; this is particularly the case given the large amount of such commentary that once existed and the importance placed on classical literature by so many generations of Greek speakers. In fact the earliest intact literary commentaries come from the Byzantine period, and not even early in that period. But this does not mean that we do not have any surviving work on literature.

Ancient works on literary criticism, of course, survive rather well. From an early period (cf. Novokhatko in this volume) we have, in addition to Aristotle's 'Poetics' and 'Rhetoric', the 'Rhetorica ad Alexandrum' attributed to Anaximenes of Lampsacus (the only surviving pre-Aristotelian rhetorical treatise) and the 'On the Sophists' of Alcidamas, a fourth-century work praising the merits of spontaneous speeches in comparison to those written in advance. Demetrius' 'On Style' (a discussion of style in a variety of genres in poetry and prose) perhaps dates to the first century BC, a period from which we also have the remains of treatises on poetry and rhetoric by the Epicurean Philodemus.

From the Roman period there are also a variety of surviving works of literary criticism. The literary works of Dionysius of Halicarnassus, from the late first century BC, include critiques of Plato, Thucydides, and the major Attic orators, a treatise 'On Literary Composition' concerning word order and euphony in both poetry and prose, and letters on various questions of literary history and stylistic criticism. The treatise 'On the Sublime' attributed to Longinus is probably from the first century AD and covers both poetry and prose from a wide variety of genres and periods. Treatises surviving from the second century AD and later are less important, but the rhetorical textbooks of Hermogenes of Tarsus (cf. Matthaïos in this volume), who was admired by the emperor Marcus Aurelius, are particularly notable. Of the large corpus attributed to Hermogenes only two works are clearly genuine, but the spurious works are also useful, as are commentaries on the corpus by the fifth-century Neoplatonist Syrianus. For more information on these works see Russell [1995²].

We also have some surviving exegetical work on individual texts, particularly the *Iliad* and *Odyssey*. The earliest of these is the 'Ὀμηρικὰ προβλήματα' 'Homeric Problems' (also known as *Allegoriae Homericae* 'Homeric Allegories') attributed to Heraclitus and written in the first century AD (cf. Matthaïos in this volume); this work offers allegorical interpretations and defenses of Homer's treatments of the gods. Heraclitus' sources included Apollodorus and Crates of Mallos, and there is some debate about whether his work can be considered particularly Stoic in orientation. Buffière [1962] provides a text and translation and Bernard [1990] a discussion; cf. also Konstan-Russell [2005] and Pontani [2005a].

Plutarch has left us several works on particular authors (cf. Matthaïos in this volume): Συγκρίσις Ἀριστοφάνους καὶ Μενάνδρου ἐπιτομή 'Comparison of Aristophanes and Menander, epitome' (*Mor.* 853a–854d) and Περί τῆς Ἡροδότου κακοηθείας 'On the Malice of Herodotus' (*Mor.* 854e–874c), in addition to his works on Plato mentioned above. A substantial essay entitled Περί τοῦ βίου καὶ τῆς ποιήσεως τοῦ Ὀμήρου 'On the Life and Poetry of Homer' is attributed to him but probably dates to the second or third century AD; the first part contains a short biography of Homer, and the second part discusses interpretation. There is a text in Kindstrand [1990] and discussion in Hillgruber [1994–1999].

The third-century Neoplatonic philosopher Porphyry has left us two works on Homer (cf. Matthaïos in this volume). One is an extended allegory on *Odyssey* 13.102–112, the cave of the nymphs; this piece is crucial for understanding the Neoplatonic interpretation of Homer. For discussion of its various editions see Alt [1998] 466. Porphyry also composed a treatise entitled 'Ὀμηρικὰ ζητήματα' 'Homeric Questions', which is believed to be based in part on Aristotle's six-book Ἀπορήματα Ὀμηρικὰ 'Homeric Questions' (now lost except for a few fragments). Porphyry's work is exegetical in nature and consists not of a linear

commentary but of a series of essays that use discussion of specific passages to make larger points about Homeric interpretation. Only the first book survives in its original form, in a single fourteenth-century manuscript, but much of the later books can be recovered from the scholia to Homer. Sodano [1970] and MacPhail [2011] provide a text and Schlunk [1993] a translation.

Other surviving works of literary exegesis, of which the most important are discussed below, come from the Byzantine period.

5.6 *Epimerismi Homerici*

The *Epimerismi Homerici* (cf. Pontani in this volume) are a commentary to the *Iliad* consisting of grammatical explanations and definitions of Homeric words; the ἐπιμερισμός format was an instructional method of the Byzantine school tradition (rather like sentence-parsing in English several generations ago), so most of the explanations in the *Epimerismi Homerici* are elementary. The work was based on a wide range of sources, including Herodian, Apion, the scholia, and several lost works of ancient scholarship. Though anonymously transmitted, the *Epimerismi* are likely to have been composed by Choeroboscus in the ninth century. They are useful not only for what they tell us about the Byzantine reading of Homer, but also because they preserve ancient scholarship that is lost in its original form.

The *Epimerismi* were originally arranged in the order in which the words treated appeared in the poems, but at a later stage the entries pertaining to the first three books of the *Iliad* were reorganized in approximate alphabetical order. We have several manuscripts of this later version, known as the ‘alphabetical epimerismi’, as well as a few texts of the entries for the first book of the *Iliad* in their original order, known as the ‘scholia-epimerismi’. Thus entries for the first book of the *Iliad* are preserved in both versions (though each version contains some entries that do not appear in the other), those for books two and three are preserved only in the alphabetical version, and those after *Iliad* III are lost altogether. Additional material that originally belonged to the *Epimerismi* can be found in the *Etymologicum Gudianum*, which can be used to reconstruct the archetype. The standard edition and discussion of the *Epimerismi* is that of Dyck [1983–1995].

5.7 *Eustathius*

Eustathius, archbishop of Thessalonica, wrote a number of commentaries on ancient authors in the twelfth century AD (cf. Pontani in this volume). The most important of these are his massive works on Homer, but we also possess several others. Eustathius based his commentaries on an impressive range of ancient sources, many of which are now lost to us in their original form. He consulted different manuscripts of the texts with which he worked and recorded variant

readings, thus preserving for us the readings of manuscripts that have since disappeared. He also made extensive use of scholia, lexica, and other scholarly works, some of which no longer exist. In addition, he used works of ancient literature other than the ones upon which he commented and thus sometimes preserves fragments of those texts and variants otherwise lost.

The longest and most important of Eustathius' works is his commentary on the *Iliad*. This was written for students and educated general readers, rather than for scholars, and is designed to be read with or without the text of the *Iliad*. The author provided it with a marginal index, which appears to be an invention of his own. The main source is the Homeric scholia (both those we possess and others now lost), but many other works are also used. The commentary on the *Odyssey* is similar but much shorter and less important. For the *Iliad* commentary, of which we are fortunate enough to possess Eustathius' own autograph manuscript, the best text and discussion is that of van der Valk [1971–1987]; for the *Odyssey* commentary see Stallbaum [1825–1826].

Eustathius' other surviving commentary concerns a second-century didactic poem by Dionysius Periegeta that describes the world. Though the poem itself is not highly regarded today, the commentary (which is far longer than the poem) is important for its preservation of portions of Strabo and of Stephanus of Byzantium that do not survive elsewhere. Müller [1861] gives a text that has been corrected by Ludwich [1884–1885] 11.553–597. Eustathius also wrote a commentary on Pindar, of which we now have only the introduction. This is useful primarily for quotations from odes that have since disappeared. For text and discussion see Kambylis [1991a] and [1991b].

5.8 *Other Byzantine Works*

In the twelfth century Isaac Tzetzes, brother of the more famous John Tzetzes, composed a verse treatise on the metres of Pindar. This work contains a considerable amount of ancient material and is important for reconstructions of the original text of our metrical scholia to Pindar, as well as for an understanding of the revival of metrical study in the Byzantine period. Drachman [1925] gives a text, and Günther [1998] has edited another similar treatise.

Manuel Moschopolus, who lived at the end of the thirteenth century, has left us a description of the Ionic dialect with special reference to Herodotus, Περὶ Ἰάδος 'On Ionic'. It is of interest primarily for the history of the text of Herodotus and for the insight it offers into Byzantine views of dialectology; there is an edition in Rosén [1987–1997] vol. I, LXVIII–LXXXVIII. There are also Byzantine commentaries on a number of authors from the Roman period and later, including Hermogenes, Gregory of Nazianzus, Oribasius, Diophantus, and Aphthonius; see Hunger [1978] vol. II, 55–77. For this period, cf. Pontani in this volume.

6 Other Extant Works

6.1 *Hephaestion*

Hephaestion of Alexandria, who lived in the second century AD, was the author of the most important ancient metrical treatise and is now our main source for ancient metrical theory, analysis, and terminology (cf. Matthaios in this volume). His treatise originally comprised 48 books, but after repeated epitomizing, much of it conducted by the author himself, we now have an epitome in one book, known as the *Encheiridion* 'Handbook'. There are also some fragments of disputed authorship that could be excerpts from fuller versions of the work, entitled Περὶ ποιήματος 'On the Poem', Περὶ ποιημάτων 'On Poems', and Περὶ σημείων 'On Diacritical Marks'.

The most important of these survivals is the *Encheiridion*, which discusses and explains different metrical structures, illustrating them with extensive quotations from ancient poetry. The two fragments on poems, the contents of which overlap to a great extent, concern the analysis of poetic texts by metrical structure, and the Περὶ σημείων discusses the use of the coronis, diple, asteriskos, and other diacritic marks in different types of meter. Though not designed as an introduction to the field, the *Encheiridion* soon became a textbook because of its straightforward, systematic presentation and was used as such for much of the Byzantine period. In consequence it accumulated an extensive body of scholia and commentary, including a detailed and informative commentary by Choeroboscus (early 9th century). A reworking in verse by John Tzetzes is also extant. Hephaestion continued to be the basis of metrical theory until the 19th century, and while modern work on meter has tended to move away from Hephaestion's theories, his terminology is still standard in the field.

Recently Hephaestion has been used chiefly in work on ancient metrical theory, for which Hephaestion's own work is crucial and the ancient commentary on it is also valuable. The collection is however also very important as a source of fragments of lost poetry, and for our understanding of Byzantine classical scholarship. The standard text of all Hephaestion's surviving work, Choeroboscus' commentary, and the scholia is that of Consbruch [1906]; Ophuijsen [1987] gives a translation and commentary.

6.2 *Photius*

Photius, patriarch of Constantinople in the ninth century, was the most important of the Byzantine scholars (cf. Pontani in this volume). His influence was responsible for the preservation of many ancient texts that would otherwise have been lost, and his own work drew on, and thus preserves fragments from, many other works that subsequently disappeared. For his *Lexicon* see above

§ 3.9. His *Bibliotheca* 'Library', sometimes called the *Myriobiblos*, is an enormous literary encyclopedia covering a wide range of authors from the classical to the early Byzantine periods. It contains summaries and discussions of the books Photius had read, ostensibly prepared for his brother's use when Photius was departing on an embassy. The *Bibliotheca* consists of 280 entries, known as *codices* 'books', each of which is concerned with a different work or set of works; some are only a few lines in length, but others stretch to many pages. The works discussed come from many different subjects and genres, both Christian and pagan, with two major restrictions: technical scientific works and poetry are both excluded.

The entries contain not only summaries but also critical commentary of various types, with an emphasis on style. From Photius' perspective one of the main reasons for reading ancient literature was the improvement of one's own prose style, so he frequently offered stylistic judgements of the works included; interestingly, his highest praise was reserved not for any of the classical writers, but for Atticists of the Roman period. He also discussed textual issues and questions of authenticity, using both his own judgement and ancient scholarly materials.

Many of the works Photius discussed are now lost, so his summaries provide all or most of what we know about them. Even when the originals have survived, Photius' comments can be very useful to modern scholars, for apart from the fact that he was an intelligent and perceptive scholar, he often had access to better or more complete texts than we do, and he sometimes provides information on the age of the manuscript he used or on how many manuscripts of a work he found. In addition, his discussions tell us much about the history of the transmission of ancient literature by indicating how much survived into the ninth century and was then lost. Henry [1959–1977] provides a text and translation, and Wilson [1994] a good introduction.

7 Fragments

The works discussed so far are all exceptional in that they survive as independent entities; the vast majority of ancient scholars' work is now either lost or preserved only in fragmentary condition. The fragments may come from extant works of ancient scholarship (thus Hipparchus' commentary on Aratus preserves fragments of Attalus' commentary on the same subject, and the etymologica preserve many fragments of Aristarchus), from scholia (see below § 8), or from extant non-scholarly literature. Strictly speaking only the third category really counts as a source of our knowledge about ancient scholarship

distinct from other sources discussed in this chapter, but for convenience a number of important fragmentary authors will be grouped here even if some or all their fragments come from sources discussed elsewhere in this chapter.

When working with fragmentary authors it is often convenient to use a collected edition of the fragments, where they can be easily located and compared with one another and where an editor has usually provided some information about their probable original context. For this reason I refer to such collected editions frequently in this section. However, many collections of fragments are woefully out of date, relying on grossly inadequate editions of the texts in which the fragments occur, and some of them were inadequate to begin with owing to reliance on fanciful hypotheses about the nature of the original work. So when using a collection of fragments it is important to pay attention to the editions of source texts that were available to its compiler: when the source text has received a better edition since the publication of the collection it is *essential* to consult that edition as well as the collection. For example, if one were to use Lentz's edition of Herodian's fragmentary *Περὶ Ὀδυσσειακῆς προσωδίας* 'On the Prosody of the *Odyssey*' without consulting Pontani's edition of the scholia to the *Odyssey* [2007–], one would be relying on a text a century and a half out of date and wholly unreliable.

7.1 *Fragmentary Lexica*

The most famous fragmentary lexicon is that of Aristophanes of Byzantium (c. 257–c. 180 BC), one of the most important Alexandrian scholars and the teacher of Aristarchus (cf. Montana in this volume). Among Aristophanes' many works was a glossary entitled *Λέξεις* 'Word-list', which contained sections such as *Περὶ τῶν ὑποπτευομένων μὴ εἰρήσθαι τοῖς παλαιοῖς* 'On words suspected of not having been said by the ancients' (i.e. allegedly post-classical words), *Περὶ ὀνομασίας ἡλικιῶν* 'On the names of ages' (i.e. terms used to designate men, women, and animals of different ages), and *Περὶ συγγενικῶν ὀνομάτων* 'On kinship terms' (a few scholars think that these sections were separate works and maintain that the overall title *Λέξεις* is a fiction). Hundreds of fragments of the *Λέξεις* exist, most gathered from sources such as Eustathius, Erotian, Pollux, and the scholia to Lucian but some also surviving in a direct manuscript tradition. Slater [1986] provides a text and discussion; see also Callanan [1987].

Apion's Homeric lexicon survives primarily via fragments preserved in the lexicon of Apollonius Sophista, but there are also some fragments from other sources. They have all been collected and discussed by Neitzel [1977], with an addendum by Theodoridis [1989a].

The founders of Attic lexicography were Aelius Dionysius of Halicarnassus and Pausanias, both from the early second century AD (cf. Matthaios in this

volume). Both produced lexica of Attic words and phrases in alphabetical order, respectively entitled Ἀττικὰ ὀνόματα 'Attic Words' and Ἀττικῶν ὀνομάτων συναγωγή 'Collection of Attic Words', that had a great influence on later lexicographers and survived at least until the twelfth century. Their sources included Alexandrian scholarship such as the works of Aristophanes of Byzantium. Both lexica are now lost, but a substantial body of fragments can be recovered from the works of later scholars, particularly Eustathius; these have been collected with excellent discussion by Erbse [1950].

Orus, who lived in the fifth century AD, composed among other works an Attic lexicon entitled Ἀττικῶν λέξεων συναγωγή 'Collection of Attic Words'. The work, which is concerned more with distinguishing classical from *koiné* Greek than with identifying peculiarities of the Attic dialect, was written in opposition to Phrynichus and is based on classical sources. We have a large group of its fragments, collected primarily from the lexicon of Zonaras. There is a good edition with discussion by Alpers [1981].

Many other fragmentary lexica are known, such as the lexicon of Diogenianus that formed the basis of Hesychius' work, but it is not usually productive to attempt to reconstruct them because of the uncertainty surrounding the attribution of individual entries.

7.2 *Fragmentary Grammatical Works*

Dionysius Thrax (for whom see also § 4.1 and Montana in this volume) wrote a number of grammatical works that survive only in fragments. Because the authenticity of the extant Τέχνη is so hotly debated, these 59 short fragments (47 of them on Homer) are very important as unquestioned testimonia to Dionysius' grammatical ideas and have been so used at least since the Byzantine period; indeed some of them are preserved in the 'scholia' to the Τέχνη in the context of discussion of the work's authenticity. They are also useful for studies of Hellenistic grammatical thought. Linke [1977] gives a good text and discussion of the fragments.

Despite the bulk of the surviving writings of Apollonius Dyscolus (see § 4.2 and Matthaïos in this volume), many of his works are preserved only in fragments; these come not only from scholia and commentaries (especially the 'scholia' to Dionysius Thrax), but also from the Latin grammarian Priscian, who translated much of Apollonius' work into Latin. Many fragments are expressly attributed to Apollonius, but many others are assumed to be his on the principle that when the 'scholia' to Dionysius Thrax agree with Priscian, the source is Apollonius. Schneider [1910] provides a text and discussion.

Several works of Herodian (see § 4.3 and Matthaïos in this volume) now consist only of fragments; the main source of these fragments is the Homeric

scholia. The fragmentary works include *Περὶ Ἰλιακῆς προσωδίας* ‘On the Accentuation of the *Iliad*’, *Περὶ Ὀδυσσειακῆς προσωδίας* ‘On the Accentuation of the *Odyssey*’, *Περὶ παθῶν* ‘On Modifications of Words’, *Περὶ ὀρθογραφίας* ‘On Orthography’, and *Περὶ κλίσεως ὀνομάτων* ‘On the declension of nouns’. The only collected edition is that of Lentz [1867–1870], which is very problematic and should be used only in consultation with Dyck [1993a] and Dickey [2014].

Trypho(n) son of Ammonius, a scholarly ‘grandchild’ of Aristarchus who worked in Rome in the second half of the first century BC, is a somewhat elusive figure who probably made crucial contributions to the development of Greek grammatical thought but whose work is now very poorly preserved (cf. Montana in this volume). Trypho’s name carried great authority for later writers, especially Apollonius Dyscolus, and much of what we know about him comes from their citations. The surviving portions of Trypho’s work amount to just over a hundred fragments, most of them short, and several extant treatises; all the latter are of doubtful authenticity and, if descended from Trypho’s own work at all, were probably severely altered in transmission. A treatise on rhetorical figures entitled *Περὶ τρόπων* ‘On Figures’ is preserved under Trypho’s name, and another treatise of the same name, misattributed in modern times to Gregory of Corinth, is ascribed to Trypho in the manuscripts and may in fact descend (with alterations) from his work. The *Περὶ παθῶν τῆς λέξεως* ‘On Modifications of the Word’, which classifies linguistic changes, irregularities, and dialect forms, probably contains at least some authentic work of Trypho and could be simply an abridgement of his work on that topic. A Byzantine collection of excerpts entitled *Περὶ πνευμάτων* ‘On Breathings’ claims Trypho’s treatise of that name as one of its sources. A substantial fragment of a *Τέχνη γραμματική* ‘Grammatical Art’, attributed to Trypho in a papyrus of c. 300 AD, is probably not the work of this grammarian but could be by a later scholar of the same name, and the *Περὶ μέτρων* ‘On Meters’ and *Περὶ τοῦ ὤς* ‘On the Particle ὤς’ are not by Trypho. For text and discussion see Matthaios [forthcoming].

The fragments of Tyrannio belong to two different grammarians. Tyrannio the Elder was a pupil of Dionysius Thrax and lived from c. 100–c. 25 BC, first in Pontus and then in Rome, where he had a distinguished career that included tutoring Cicero’s son and (at least according to some sources) discovering the manuscripts from which our texts of Aristotle ultimately descend. Tyrannio the Younger (1st. cent. BC–1st. cent. AD) was a pupil of Tyrannio the Elder, whose name he thoughtfully adopted; he is also known by his original name, Diocles (cf. Montana in this volume). To make matters worse, it is possible that there was also another scholar named Diocles. The works of both Tyrannios are largely lost; we have a total of 67 fragments of their works, of which 55 come from Tyrannio the Elder’s *Περὶ τῆς Ὀμηρικῆς προσωδίας* ‘On Homeric

Accentuation', and the rest come from a wide variety of other works of both authors; predictably, the main source of the fragments is the Homer scholia. Haas [1977] provides a text and discussion.

Philoxenus of Alexandria, a grammarian who worked in Rome in the first century BC, wrote a variety of works that now exist only in fragments (cf. Montana in this volume). His main work, Περὶ μονοσυλλάβων ῥημάτων 'On Monosyllabic Verbs', was etymological (probably in the synchronic rather than the historical sense) and concerned with deriving the Greek vocabulary from a core of monosyllabic verbs (as opposed to the Stoic view that the base words were nouns). The surviving fragments therefore come principally from Orion and the etymologica, though scholia are also a major source. Theodoridis [1976] gives a good text; see also Dyck [1982c], Koniaris [1980], Lallot [1991b], and Pagani [forthcoming].

From Orus, who lived in the fifth century AD, we have a fragmentary treatise on ethnics entitled Περὶ ἐθνικῶν 'On Ethnics' or Ὅπως τὰ ἐθνικά λεκτέον 'How Ethnics Should be Spoken'; the fragments come from Stephanus and the *Etymologicum genuinum*, and Reitzenstein [1897] provides a text and discussion; cf. also Billerbeck [2011].

There are numerous other fragmentary grammarians, most notably Lesbos (see Blank [1988]), Comanus of Naucratis (see Dyck [1988b]), Epaphroditus (see Braswell-Billerbeck [2008]), Agathocles, Hellanicus, Ptolemaeus Epithetes, Theophilus, Anaxagoras, and Xenon (see F. Montanari [1988]). There is good information on late antique and Byzantine grammarians and their editions in Hunger [1978] II 3–83.

7.3 *Fragmentary Commentaries*

A great many ancient commentaries exist only in fragments, but they are not normally reconstructed and should rarely be consulted in collected editions. This is because the process by which commentaries were turned into scholia (see below § 8) altered them so much that we know little about their original state; the best we can do is to look directly at the evidence we have by using the scholia. Nevertheless some collections of fragments are useful, either because they gather material that is very scattered or because they rely on sources other than the scholia.

The ultimate fragmentary commentator is of course Aristarchus, the greatest of all ancient scholars; he is cited by name more than a thousand times in the scholia to the *Iliad*, but none of his works survives intact. Because many notes that do not cite him explicitly nevertheless appear to derive ultimately from his works, and because attribution to Aristarchus carries such heavy weight, collecting and analysing fragments of Aristarchus is a difficult task and

has been done in a scattered range of works. See especially Matthaïos [1999], Schironi [2004], Ludwich [1884–1885], and van Thiel [2014].

Other early scholars that can usefully be consulted in collections of fragments include Crates of Mallos (Broggiato [2001] and [2013]), the Homerist Heliodorus (Dyck [1993b]), and Theon (Guhl [1969]). There are elderly collections of fragments of Zenodotus, Aristonicus, Didymus, and Nicanor, but it is not advisable to use them.

Larger commentary fragments tend to come from the same type of commentary that is most often preserved intact, those on philosophical or scientific works. Attalus of Rhodes produced an astronomical commentary on Aratus' *Phaenomena* in the early second century BC, and considerable fragments of it survive via Hipparchus' commentary on the same work (text in Maass [1898] 1–24). Extensive fragments of a commentary to books one through nine of Euclid's *Elements* by Heron of Alexandria (1st century AD) are preserved in Proclus' commentary on the *Elements* and in a tenth-century commentary by Anaritius (Al-Nayrizi), which was originally written in Arabic and translated into Latin. (For editions and translations see Mansfeld [1998] 26 n. 90.) Anaritius' commentary also preserves fragments of a commentary by Simplicius (6th century) on book one of the *Elements*.

The third-century Neoplatonist Porphyry has left, in addition to surviving works on Homer, Aristotle, and Ptolemy, fragments of commentaries on several of Plato's dialogues (texts in A. Smith [1993] and Sodano [1964]). From the same century we have a substantial volume of fragments of commentaries on the dialogues by Iamblichus (Dillon [1973]).

8 Scholia

The term 'scholia' is a complex one. Its primary usage today, and the only one normally employed by those working on literature, is for explanatory notes written in the margins of medieval manuscripts. In some contexts, however (chiefly works on medical and philosophical writers, works written in modern Greek, and some older work), 'scholia' is simply a synonym for 'commentary' and says nothing about the way the material referred to has been transmitted. Scholars differ about whether to call marginal notes in papyri 'scholia', as such notes tend to be different in character and origin from those in medieval manuscripts. Here I use the term only for marginalia in medieval manuscripts; annotations in papyri are discussed above (see § 2).

Scholia are of crucial importance to the study of ancient scholarship, as they provide most of the information we have about Alexandrian scholarship

and ancient commentaries on literary works: nearly all those commentaries are lost in their original form and are now known only from the extracts that were copied into the margins of the texts to which they applied. At the same time scholia are difficult to use, as they consist of compilations of severely abbreviated notes, frequently mixing material from Hellenistic, Roman, and late antique sources with little or no distinction of sources. They are also particularly subject to textual corruption, so that a scholion that appears to be complete nonsense could be either the garbled remains of a precious piece of ancient insight or simply the comment of an ignoramus.

Modern marginalia tend to be written casually by readers, and such scholia are also found in manuscripts, but the scholia on which modern scholarship concentrates are very different from such casual jottings. They are systematic transfers of material from commentaries; in some cases it is clear that the writer was able to fit the entire commentary into the margins of his text, though abbreviated versions are of course common. Sometimes the amount of commentary on a given page greatly exceeds the amount of text, for some texts were designed with specially large margins specifically to accommodate scholia. The scholia were then copied along with the text (often in a different, smaller script, but still by the same hand) to the extent that future copyists had the patience to do so. This patience tended to be limited in the case of longer corpora, so that relatively short bodies of work, such as the speeches of Aeschines, often have much richer scholia than longer works; also, scholia are often much fuller at the beginning of a long work than towards the end.

The transmission process from Alexandrian commentary to medieval scholia was a long and complex one. The original Alexandrian commentaries did not last long in their original format; they were abbreviated, excerpted, and made into composite commentaries by scholars of the later Hellenistic and Roman periods. These reworkings were often later reworked themselves, sometimes with and sometimes without the substitution of a later revisor's name for that of the earlier author. The scholia in our manuscripts often come from several such composite commentaries; thus there may be a series of notes on the same word, perhaps separated by expressions such as ἄλλως 'otherwise' and perhaps not separated at all. Sometimes it is clear that such a series includes different versions of what must originally have been the same note.

There has been a long debate about the date at which the transition from hypomnemata (the ancient self-standing commentaries) to scholia occurred, with proposed dates ranging from the fourth to the tenth century; in recent years there has been an increasing accumulation of evidence in favour of the late antique period as the point at which systematic compilations of scholia were first produced. This evidence, however, does not date the final loss of

the hypomnemata themselves, which is likely to have occurred considerably later in many cases: the works of Photius and other Byzantine scholars make it clear that they had access to much ancient scholarship that has since been lost (that is why their works are valuable as sources of ancient scholarship), and hypomnemata were almost certainly among the works to which they had access. The process of transition was probably a gradual one, with material flowing from independent works to marginalia (and in some cases in the other direction as well: see on the Homeric D scholia, § 8.1 below) over a period of several centuries.

For further information on scholia in general see Nünlist [2009a], McNamee [2007] esp. 79–92 and [1998], Avezzù-Scattolin [2006], Geerlings-Schulze [2002], Goulet-Cazé [2000], Wilson [1967] and [2007], Dickey [2007], Montana [2011a] and Montana-Porro [2014].

8.1 *Homer*

The scholia to the Homeric poems are the largest and most important group of Greek scholia, containing a significant amount of Alexandrian material. They are traditionally divided into three different groups (excluding the Byzantine scholia, which form several groups of their own but are often disregarded as they do not transmit a significant amount of ancient scholarship); the division is based on the history of the *Iliad* scholia, which is much clearer than that of the *Odyssey* scholia, but it is generally considered to apply to both sets of scholia.

The three groups are known as the D scholia, the A scholia, and the bT scholia, classified according to the manuscripts in which they are found. As some scholia are found in several different types of manuscript and therefore fulfill the criteria for more than one group, the classification is hierarchical: identification as a D scholion takes precedence over either of the others, and identification as an A scholion takes precedence over identification as a bT scholion.

The D scholia are unfortunately named after Didymus, with whom they are now known to have no connection; they are also known as ‘scholia minora’ or ‘scholia vulgata’, and from the latter name they can be called V scholia. They are the largest group of Homeric scholia, and our earliest manuscript evidence for them is older than that for the other types of scholia, for the chief witnesses to the D scholia are manuscripts Z and Q, which date to the ninth and eleventh centuries respectively. D scholia are also found in a wide range of other manuscripts; many are very short and can appear as interlinear glosses, but others are more substantial.

The D scholia represent the ancient vulgate tradition of interpretation, the explanations familiar to laymen and used in elementary instruction rather

than an academic, scholarly tradition. (Greek-speaking children learned to read on texts of Homer throughout antiquity, and by the time the living language had been evolving for a thousand years or more since those texts were written this practice meant that considerable explanation was necessary at the elementary level.) They have diverse origins and form a heterogeneous group, but there is no doubt that much of the material in them is very old, for there are remarkable similarities between the D scholia and Homeric scholarship found on papyri; such similarities are much more frequent with the D scholia than with A or bT scholia. One major component of the D scholia is lexicographical, consisting of short definitions or explanations of difficult words. Many of these definitions can also be found in papyrus glossaries and/or as marginalia or interlinear glosses in papyrus texts of Homer, for they come from the ancient vulgate tradition of interpretation. The basis of this tradition goes back to the schoolrooms of the classical period, so that it predates the Alexandrians and represents the oldest surviving stratum of Homeric scholarship. Other components of the D scholia include mythological explanations, plot summaries, and prose paraphrases; these too are paralleled in the papyri and must be ancient, though they probably do not go back as far as the lexicographical element.

The D scholia have the distinction of existing in a number of medieval manuscripts as a self-standing commentary, without the text of Homer; they have thus reversed the path usually taken by scholia, since a self-standing work has been created out of notes from different sources, rather than a commentary being broken down into separate notes. Partly as a result of their unusual manuscript position, and partly because of their inherent usefulness for those who need help to read Homer, they were the first Homeric scholia to be published in printed form (in 1517) and remained pre-eminent until superseded by the A scholia in the eighteenth century. Subsequently they have been much neglected—until a few years ago the 1517 edition was the standard text—and it is only very recently that modern scholars have begun to pay them serious attention. Now, however, it is recognized that D-scholia lemmata sometimes preserve variant readings of the text that are not otherwise attested, that their definitions can provide important evidence for the meaning of Homeric words, and that they contain crucial information about the history and evolution of ancient scholarship, the ancient education system, and the way Homer was read and understood in antiquity.

The A scholia come from the margins of the most famous *Iliad* manuscript, Venetus A (10th century), where they were entered systematically by a single scribe. (A scholia are also found in other manuscripts, including those whose scholia fall primarily into one of the other categories, for they contain material that was widespread long before the writing of Venetus A.) The origins of the A

scholia are clearer than is the case with most scholia, for at the end of almost every book the scribe added a subscription indicating their source: παράκειται τὰ Ἀριστονίκου Σημεῖα καὶ τὰ Διδύμου Περὶ τῆς Ἀρισταρχείου διορθώσεως, τινὰ δὲ καὶ ἐκ τῆς Ἰλιακῆς προσωδίας Ἡρωδιανοῦ καὶ ἐκ τοῦ Νικάνορος Περὶ στιγμῆς “Written beside (the text) are Aristonicus’ ‘Signs’ and Didymus’ ‘On the Aristarchean edition’, and also some extracts from Herodian’s ‘Iliadic prosody’ and from Nicanor’s ‘On punctuation’”. The principal basis of the A scholia is therefore the four works cited in this subscription (all of which are now lost except insofar as they are preserved in the scholia), but it is unlikely that the scribe who wrote it was actually copying from the works themselves. Rather his source, or more likely his source’s source, was a compilation of these four works (and some other material) probably made around the fourth century AD and known today as the *Viermännerkommentar* ‘four men’s commentary’ or VMK.

All four elements of the *Viermännerkommentar* represent Alexandrian scholarship to a significant extent. Aristonicus’ treatise on signs, composed in the Augustan period, was a compilation of excerpts from one of Aristarchus’ commentaries and from other works, focusing on critical signs. Didymus’ work, probably also from the Augustan period but later than that of Aristonicus (which Didymus probably used), was a compilation based primarily on Aristarchus’ commentaries, though his focus was on textual variants. Herodian’s treatise on Homeric accentuation, from the late second century AD, also drew heavily on Aristarchus’ commentaries, and Nicanor’s work on punctuation, from the first half of the second century AD, was based on earlier works including those of the Alexandrians. The A scholia are thus a major source of information about the opinions of Aristarchus and, to a lesser extent, other Alexandrian scholars; they contain more than a thousand explicit references to Aristarchus. They are of crucial importance for our knowledge of the text of Homer, the goals and methods of Alexandrian scholarship, and ancient systems of accentuation, punctuation, etc. (cf. Montana in this volume).

The A scholia also contain material that probably does not derive from the *Viermännerkommentar*. This information is more interpretive in nature and is related to material found in the bT scholia; A scholia of this type are also called exegetical scholia and as such are grouped with the bT scholia.

The bT scholia are so called because they are found in manuscript T (11th century) and in the descendants of the lost manuscript b (6th century). They contain some Alexandrian material (much of it attributable to Didymus) but seem to come more immediately from a commentary of the late antique period (known as ‘c’), of which b produced a popular and T a more scholarly version. These scholia are also known as the exegetical scholia, because they

are concerned primarily with exegesis rather than textual criticism. They include extensive extracts from the 'Ὅμηρικὰ ζητήματα 'Homeric Questions' of Porphyry and the 'Ὅμηρικὰ προβλήματα 'Homeric Problems' of Heraclitus (see § 5.5 and Matthaios in this volume). Until recently the bT scholia were thought to be much less valuable than the A scholia (whose worth has been recognized since the eighteenth century), because of the limited extent to which they can aid in establishing the text of the Homeric poems. In the past few decades, however, an increasing interest in ancient literary criticism has brought these scholia into new prominence, and they are currently at the center of modern work on ancient Homeric scholarship.

The scholia to the *Odyssey* are much fewer and less well preserved than those to the *Iliad*. This distinction goes back to antiquity, when the *Iliad* was considered the superior work and so was read and copied much more often than the *Odyssey*. Nevertheless it is clear that the Alexandrians produced texts and commentaries on both poems, and that ancient scholars discussed the interpretation of the *Odyssey* as well as that of the *Iliad*. Thus equivalents of all three groups of *Iliad* scholia can be found for the *Odyssey* scholia: there are Alexandrian text-critical scholia, exegetical scholia of the bT type, and D scholia (often called V scholia in this context). However, because there is no equivalent of Venetus A among the *Odyssey* manuscripts the different types are not so easily separable by manuscript source.

In addition to the uses of the Homer scholia already mentioned, they are important for the understanding of post-Homeric literature. Much of this literature, both Greek and Latin, was based to some extent on the Homeric poems, but not on the Homeric poems as we read them: rather on the Homer of the scholiasts. Authors such as Apollonius Rhodius and Virgil drew on and alluded to Homer based on the readings and interpretations current in their own time, and therefore the scholia provide us with information crucial for understanding their poems.

Most of the A and bT scholia to the *Iliad* are best consulted in the superb edition of Erbse [1969–1988]. This edition is highly selective and tries to represent an early stage of the A and bT traditions, a feature that makes the most famous scholia readily available and easy to consult but also results in the omission of many scholia from different traditions, some of which are important. The omitted material includes all the D scholia, the bT scholia derived from Porphyry and Heraclitus, and some other material that cannot easily be assigned to any of the three main groups of scholia, not to mention all the Byzantine scholia. The seven volumes of Erbse's edition thus represent only a small fraction of all the preserved scholia, and since many scholia appearing in codex A are omitted from the edition because they belong to the D family,

while others appearing in manuscripts of the b family are ignored because they come from Porphyry or Heraclitus, the edition is not even a complete collection of the scholia appearing in the manuscripts included. The D scholia can be found in van Thiel's edition [2000], and the Porphyry and Heraclitus scholia can be found in Sodano [1970] and Buffière [1962] respectively; for Porphyrius cf. MacPhail [2011]. These last two groups have been translated (Buffière [1962] and Schlunk [1993]), but the rest of the *Iliad* scholia, like nearly all extant scholia, have never been translated into any language.

A comprehensive edition of the *Odyssey* scholia is in progress (Pontani [2007–]), but so far it covers only scholia to the first four books of the poem. For the rest of the poem one can use Ernst [2006] for the D/V scholia and the inadequate work of W. Dindorf [1855] for the others. Of the enormous literature on these scholia some important works are those of Erbsé [1960], van der Valk [1963–1964], Montanari [1979], Schmidt [1976], Meijering [1987], Schmit-Neuerburg [1999], Schlunk [1974], and Rengakos [1993] and [1994].

8.2 *Hesiod*

The scholia to Hesiod are voluminous, useful, and of impressive antiquity. Ancient scholarship on Hesiod began early, for lost interpretive works appear to date at least as early as Aristotle, and the first critical text was produced by Zenodotus. Zenodotus, Apollonius Rhodius, Aristophanes of Byzantium, Aristarchus, Crates, Aristonicus, and Didymus all left textual or interpretive comments on Hesiod that are still preserved under their names, though they did not all write full commentaries on the poems (cf. Montana in this volume).

The oldest portion of our surviving scholia comprises the remains of a composite commentary of uncertain authorship (Choeroboscus and Dionysius of Corinth have both been suggested, but the author could be completely unknown). This commentary was a compilation of earlier writings, including both grammatical and critical notes from Alexandrian and other scholars and paraphrases from school texts; an important source seems to be the commentaries of Seleucus (1st century AD). In general, the material seems mostly to come from before AD 100.

In addition to the direct transmission of this commentary as scholia attached to the text of Hesiod, there is an indirect transmission via several etymological works, particularly the *Etymologicum Genuinum*. The authors of these etymologica quoted extensively from the scholia to Hesiod, and the scholia to which they had access were better preserved than those in the manuscripts we possess, as well as being unmixed with any later commentaries.

In the fifth century AD the Neoplatonist Proclus wrote a philosophical commentary on the *Works and Days*. Proclus made extensive use of the earlier

composite commentary, of which he had a fuller version than that now preserved in the scholia, and he also drew heavily on a commentary by Plutarch on the *Works and Days*. Plutarch's commentary is now lost in its original form, but Proclus' survives largely intact in the scholia and preserves significant portions of Plutarch's work. In our manuscript scholia to the *Works and Days* Proclus' commentary has been mixed with the scholia derived from the earlier composite commentary, but a few manuscripts mark the notes from Proclus' commentary with special symbols, so they are relatively easy to separate. There is also a substantial amount of Byzantine commentary on Hesiod.

The most important editions of Hesiod scholia are Di Gregorio's [1975] for the *Theogony* and Pertusi's [1955] for the *Works and Days*. For an overview of discussion see M. L. West [1978] 63–75, with bibliography p. 91, and Montanari [2009a].

8.3 *Pindar*

The voluminous scholia to Pindar offer abundant ancient material remarkably unmixed with later additions and are useful for a number of different purposes. Because of the extent to which these purposes diverge, discussions and even editions of Pindar scholia often cover only one type of material. The main divisions are between metrical and non-metrical and between old and Byzantine scholia.

There is a large body of old metrical scholia, compiled probably in the fifth century AD and based on a metrical analysis of the *Odes* written in the second century AD. This analysis incorporated a commentary by Didymus that transmitted the work of Alexandrian scholars and was based on the text and metrical divisions established by Aristophanes of Byzantium (cf. Montana in this volume); its medieval transmission was in part separate from that of the text of the *Odes* and their non-metrical scholia. Scholars now generally agree that Aristophanes' colometry and the Alexandrian metrical analysis do not go back to Pindar himself and that in consequence the metrical scholia are of little use for understanding Pindar's own metrical intentions. They are however very important for our understanding of ancient metrical theory, since their detailed, line-by-line analysis (with continuous texts often resembling a treatise rather than traditional scholia) offers one of the few surviving examples of the practical application of the theories preserved in Hephaestion's manual (see § 6.1 above).

The exegetical scholia to Pindar are more numerous than the metrical scholia and have an equally impressive pedigree, since they preserve the remains of commentaries by Aristarchus and several of his successors, incorporated into a comprehensive work by Didymus and then epitomized in the second

century AD. Like the old metrical scholia, they are virtually free of late interpolations, so that almost any piece of information found in them can be assumed to come from the Alexandrians (though not necessarily without abridgement and alteration). These scholia attempt to explain the difficulties of the odes and offer an interpretation of the poet's meaning. In doing so they invoke historical, biographical, and mythological data, some of which appear to derive from accurate transmission of information going back to Pindar's own time, though parts seem to be simply Alexandrian conjecture based on the poems themselves. The proportions in which these two types of material occur, and therefore the extent to which one can rely on information provided by the scholia but not otherwise verifiable, are the subject of debate. It is however clear that the interpretations found in the scholia were widely accepted in antiquity, for they are reflected in later poetry influenced by Pindar, such as that of Theocritus, Callimachus, and Horace.

The scholia to Pindar are frequently cited by modern scholars, most often in discussions of Pindaric interpretation, for which they remain crucial, but also for historical and mythological information that can be used for other purposes; they are of course also very useful for work on ancient metrical theory and on the evolution of scholia. Their value for establishing the text of Pindar is high, as they sometimes preserve the correct reading for passages that have been corrupted in all extant manuscripts of the text.

The best text of the Pindar scholia is that of Drachmann [1903–1927], but for the metrical scholia it is better to use Tessier [1989]; Arrighetti et al. [1991] provide a concordance. Discussions include those of Irigoin [1958a], Deas [1931], and Lefkowitz [1991].

8.4 *Tragedy*

Scholia to Euripides, Sophocles, and Aeschylus generally seem to have similar origins and history, but as work on Euripides is better preserved than that on the other two tragedians extrapolations need to be made from Euripides scholia to those on Sophocles and especially Aeschylus.

Only nine of the nineteen surviving plays of Euripides have preserved scholia: a large amount of annotation exists for the Byzantine triad (the texts usually read in the later Byzantine period) of *Orestes*, *Hecuba*, and *Phoenissae*, and less extensive but still substantial notes survive on the *Medea*, *Hippolytus*, *Alcestis*, *Andromache*, *Rhesus*, and *Troades*. For most plays the scholia are easily divisible into old and Byzantine scholia, though in the case of *Rhesus* and *Troades* the two types are more difficult to separate.

The oldest Euripides scholia go back to the work of Aristophanes of Byzantium, who established the Alexandrian text and colometry of Euripides'

plays, wrote introductions to them, and passed on a number of additional pieces of scholarly information (probably via notes or lectures rather than a complete commentary). Aristophanes' textual resources included the official Athenian copy of the tragedies, established less than a century after Euripides' death and purloined by the library at Alexandria, and he also had detailed historical information going back to Euripides' own time, since he provided information on the original productions of the plays. Other Alexandrians subsequently wrote commentaries on the plays, and these were combined into a composite commentary by Didymus around the end of the first century BC. The scholia have a note stating that they were taken from the commentaries of Didymus and Dionysius, but we have no idea who or when Dionysius was. However, there do not seem to have been significant additions to the old scholia after the mid-third century AD.

The old scholia to Euripides are very important for establishing the text of the plays, not only because their evidence for textual transmission makes it possible to sort out the intricate manuscript tradition of the plays, but also because their lemmata and commentary often preserve correct readings that have been lost from the text itself in all branches of the tradition. They also contain much valuable information from the Alexandrian commentators, on the productions, the staging, the poet's sources, textual variants, etc.; this is mixed with lexicographical and mythological information dating to the early Roman period, and with paraphrases from school editions. There are also Byzantine scholia to Euripides; these are most numerous for the Byzantine triad but also found with other plays.

Most of the plays, including a number for which there are no surviving scholia, are accompanied by hypotheses. There are three types of hypotheses: one group descends from the introductions written by Aristophanes of Byzantium (though the degree to which the surviving versions resemble his originals is a matter of dispute), a second set was composed by Byzantine scholars using earlier material, and a third group descends from plot summaries originally intended as substitutes for the plays rather than introductions to them. None of the sets is extant for all the plays; for some plays only one type of hypothesis is preserved, but for others multiple surviving hypotheses allow direct comparison between the different groups. The ancestor of the third group of hypotheses was a complete set of epitomes of Euripides' plays, arranged in alphabetical order. This work, now known as the 'Tales from Euripides', circulated widely in the Roman period, quite independently of the tragedies themselves, and we have substantial fragments of it on a number of papyri from the first to third centuries AD, including the epitomes of many lost plays. The 'Tales from Euripides' are often attributed to Aristotle's pupil Dicaearchus of Messene, though many scholars consider the attribution spurious or sus-

pect that only some material from Dicaearchus' epitomes survived as part of a collection compiled in the first century BC or AD; cf. now the edition by Meccariello [2014].

Scholia to Sophocles are less numerous than those to Euripides but more evenly distributed among the different surviving plays. The old scholia are based on a composite commentary by Didymus (drawing on Alexandrian sources), along with material from the Roman-period scholars Pius, Sal(l)ustius, Herodian, Diogenianus, and others. For reasons that are not quite clear, the *Oedipus at Colonus* has the most useful and informative old scholia. The most important manuscript of Sophocles, the tenth-century L, has only old scholia and is our primary source for the ancient material. However, some other manuscripts also contain old scholia, which they sometimes report more fully than does L, and the *Suda* and the *Etymologicum Genuinum* contain remnants of more old scholia in a fuller form than that found in L. The old scholia are frequently used for historical, textual, lexical, and interpretive information. There is also a large body of Byzantine scholia, attached primarily to the Byzantine Triad of *Ajax*, *Electra*, and *Oedipus Rex*.

The hypotheses to Sophocles' plays show many similarities to those of Euripides. As in the case of Euripides, multiple hypotheses to individual plays have been preserved via the manuscript tradition, and it is clear that several different types of hypothesis existed already in antiquity, with the oldest being based on the introductions written by Aristophanes of Byzantium. Papyri of non-Aristophanic hypotheses without the plays themselves exist, indicating a phenomenon like that of the 'Tales from Euripides', but because these papyri are fewer and differ in some important respects from the 'Tales from Euripides' papyri, the nature and purpose of these hypotheses is less well understood than that of their Euripidean equivalents.

The old scholia to Aeschylus are found primarily in the tenth-century manuscript M. They contain material from the Hellenistic and Roman periods, including some that is almost certainly Alexandrian; it is sometimes argued that these scholia derive from a commentary by Didymus, but this theory remains unproven. Also of considerable antiquity, but more altered in transmission, is the material in the A or F scholia, which derive from a commentary ascribed (probably falsely) to John Tzetzes. These scholia are sometimes nearly valueless, but at other times they provide ancient material omitted or abridged in M; it is clear that their author was using a manuscript with ancient scholia very similar to those in M but without some of M's errors and omissions. The F scholia are much longer and more numerous than the other classes of scholia but exist only for the Byzantine triad (*Prometheus*, *Persae*, and *Septem*, the plays normally read in the later Byzantine period). In addition, there are many Byzantine scholia to Aeschylus.

Texts of the scholia to the tragedians are scattered and in some areas incomplete. The most important editions are Schwartz's text [1887–1891] of the old scholia to Euripides; texts by Christodoulou [1977], De Marco [1952], Longo [1971], Papageorgius [1888], Xenis [2010a] and [2010b] of scholia to Sophocles; and texts by O. L. Smith [1976b] and [1982] and Herington [1972] of scholia to Aeschylus. On editions of scholia not covered by these texts see Dickey [2007] 31–38. Hypotheses are normally printed with editions of the plays rather than with the scholia. The hypothesiseis on papyri are now edited in *CLGP* I 1.1. Important discussions include Günther [1995] on Euripides and O. L. Smith [1975] on Aeschylus.

8.5 *Aristophanes*

The scholia to Aristophanes are among the most important sets of scholia, in part because they provide background information without which many of the jokes and allusions in the comedies would be incomprehensible. They are relatively well preserved, and most of them can be found in a sound and reliable modern edition, making them easier to use than many scholia.

The old scholia to Aristophanes are derived from a variety of sources going back to the beginning of Alexandrian scholarship. Callimachus, Eratosthenes, and Lycophron (a contemporary of Zenodotus) all worked on Aristophanes to some extent, and the first continuous commentary on his plays was produced by Euphronius, the teacher of Aristophanes of Byzantium. Aristophanes of Byzantium himself produced an edition of the plays, providing an introduction to each (the extant verse hypotheses of the plays are thought to be distant descendants of these introductions) and may also have written a commentary; Callistratus and Aristarchus probably wrote commentaries on the plays, and Timachidas of Rhodes wrote one on the *Frogs* (for Alexandrian works on Aristophanes' plays see Montana in this volume).

The work of these and other scholars was combined into a single commentary by Didymus in the late first century BC or early first century AD, and sometime in the first two centuries AD Symmachus compiled another commentary, using Didymus as his main source but also consulting other works. At a later date Symmachus' commentary or one of its descendants, along with some other material, was copied into the generous margins of a book of the plays of Aristophanes and formed the archetype of our extant scholia.

Perhaps the most important of the additional sources of our scholia is the metrical commentary on Aristophanes written by Heliodorus around AD 100. This commentary is often studied apart from the other scholia, for it is crucial for our understanding of ancient metrical theory but of limited use in understanding Aristophanes. Heliodorus' work has been preserved to varying extents

for the different plays; one can reconstruct from the scholia nearly all of it for the *Peace*, as well as substantial sections of it for the *Acharnians* and *Knights* and some fragments for the *Clouds* and *Wasps*, but little else.

In addition to the direct tradition of the scholia, which is well attested in several manuscripts, there is an indirect tradition via the *Suda*, whose writer had access to the same body of material when it was more complete and therefore often preserves scholia that did not survive in the direct tradition. There are also a number of papyri and ancient parchment fragments with commentaries or scholia on Aristophanes; on the whole, those of the fourth century and later seem to reflect a body of material very similar to the ancestor of our scholia (though in some places more complete), while the earlier ones, which are much rarer, apparently belong to different traditions. There are also Byzantine scholia to Aristophanes, especially on the triad of plays made up of the *Plutus*, *Clouds*, and *Frogs*.

The best edition of the scholia is a multivolume work edited first by Koster and later by Holwerda [Koster-Holwerda 1960–], which includes both old and Byzantine scholia, usually in separate volumes. Rutherford [1896–1905] provides translation and commentary for many scholia (cf. also Chantry [2009]), and White [1912] 384–421 extracts the Heliodorus fragments from the scholia and groups them together with a good discussion. For further discussion see Montana [2006a].

8.6 *Prose Writers*

The most important scholia to prose authors are those to the orators, particularly Demosthenes and Aeschines. The Demosthenes scholia, which are voluminous, survive in two versions: the majority come from manuscripts of Demosthenes' orations, as is usual for scholia, but a second group of scholia has been found without the text in a tenth-century manuscript from Patmos. Both sets of scholia are important for establishing the text of Demosthenes, but the Patmos ones are particularly useful in this regard because they were separately transmitted from an early date. The scholia to Demosthenes are also helpful in terms of the historical details they transmit and the evidence they give for the practical application of ancient rhetorical theory. Unfortunately, they rarely identify the sources of their information, and so although it is known that many important figures worked on Demosthenes, it is not always clear what these scholars contributed to our extant scholia.

The primary basis of the scholia is a detailed commentary by Didymus (Augustan age), which in turn drew on earlier scholarly works, including a lexicon of Demosthenic words and a commentary from the second century BC. Didymus' work was primarily historical, biographical, and lexicographical

in nature, but rhetorical and stylistic commentary on Demothenes was also practiced from an early period, beginning with Peripatetics who wrote soon after Demosthenes' own time. In the early Roman period this type of material was merged with Didymus' commentary, and as time went on the elements of rhetorical exegesis and elementary grammatical explanation seem to have increased at the expense of the historical material, which forms a relatively small part of the manuscript scholia. Dilts [1983–1986] gives a good text of the main body of the scholia, and the Patmos material can be found in Sakkelion [1877].

The scholia to Aeschines are of unusually high quality; it is thought that this feature is due at least in part to the short length of the preserved works of Aeschines, which did not tempt later copyists to shorten the speeches or commentary by epitomizing. The scholia clearly derive from a commentary by an ancient scholar, probably Didymus, who had access to a considerable amount of information now lost to us. They are particularly useful for explanations of the orator's allusions to contemporary events, but they also provide quotations from lost works of literature and valuable information on language and Athenian history. Dilts [1992] provides a text.

The surviving scholia to Isocrates are meager, but they too appear to derive in part from a commentary by Didymus; it seems that ancient scholars devoted considerable efforts to the elucidation of Isocrates, but almost all their work has perished. An inadequate text can be found in W. Dindorf [1852a].

Of scholia to the historians by far the most important are the Thucydides scholia; these are substantial and based in part on ancient sources, but generally neglected today. Scholia to Herodotus are few and mostly late, but they contain some remnants of early work. The scholia to Xenophon are very meager but contain some scraps of ancient material; they have not all been published. For texts see Hude [1927] for Thucydides, Rosén [1987–1997] for Herodotus, and L. A. Dindorf [1855] 381–396 and Lundström [1913] for Xenophon; for discussion Luschnat [1954] on Thucydides.

Scholia to philosophical texts are also of some importance, particularly the scholia to Plato. There are two sets of Platonic scholia, the *scholia vetera* and the *scholia Arethae*. The latter are so called because they were added to manuscript B, in which they first appear, by Arethas of Caesarea in his own hand around 900 AD. The *scholia Arethae* are primarily exegetical and seem to be derived from lost Neoplatonic commentaries.

The *scholia vetera* also have a large exegetical component derived from Neoplatonic commentaries (though apparently not the same commentaries), but they also preserve some earlier material. This consists of lexicographical notes that because of their similarity to Hesychius' entries probably come from the second-century lexicon of Diogenianus, Hesychius' main source; notes on

Atticisms that probably derive from second-century lexica by Aelius Dionysius and Pausanias; and notes on proverbs that appear to come directly from the collection of Lucillus Tarrhaeus (first century AD and thus the earliest significant source for the scholia). The scholia have no transmitted lemmata (those now found with the scholia are modern additions) and so are of little use for establishing the text of Plato, and their exegetical components are less interesting than they would be if we did not have so many intact Neoplatonic commentaries. The lexical material, however, is valuable, and the scholia are useful for their preservation of quotations from lost works of literature and for information on Greek religion and culture, the history of Greek literature, biography, and mythology. It is notable that the scholia contain no certain remains of Alexandrian or other Hellenistic scholarship; it is debated whether there was an Alexandrian edition of Plato at all, and we have very little surviving material on textual or linguistic questions. Both groups of scholia can be found in Greene [1938]; see also Cufalo [2007].

As Aristotle was one of the most widely-read Greek authors in the medieval period, there are more than a thousand extant manuscripts of his works, many of which contain scholia. Because of the sheer bulk of these scholia they have never been systematically studied, and most remain unpublished. The scholia consist primarily of extracts from the extant commentaries, usually transmitted in poorer condition than in the self-standing versions of those commentaries, and this duplication is one of the reasons for the lack of attention to the scholia. But there is also some Byzantine material, largely unexplored and perhaps interesting for the history of Byzantine thought, as well as a few old manuscripts whose scholia contain fragments of lost Neoplatonic or Aristotelian commentaries; a number of collections of newly-discovered fragments have been published in the past several decades on the basis of these scholia. The scholia can also give us hints as to how Aristotle was read and understood at different periods. For guidance on editions see Dickey [2007] 49–51.

Scholia to mathematical writers are often derived from late antique commentaries, but as the commentaries themselves do not always survive these scholia receive some attention. There is an extensive body of scholia to Euclid; their oldest sources seem to be Pappus' commentary from the fourth century AD. Heiberg and Menge [1883–1916: vols V–VII] provide a text, and Heiberg [1888] and Knorr [1989] discussion. Some scholia to Archimedes (those that appear to go back to the archetype of the Greek manuscripts) have been published by Heiberg [1915] 321–329, but others, probably of more recent origin, remain unpublished.

There are also scholia to many later prose writers, though these are usually less important; for more information see Dickey [2007] 69–71.

8.7 *Hellenistic Poetry*

Since the major Hellenistic poets were contemporaries of the Alexandrian scholars (or, in the case of Callimachus and Apollonius Rhodius, were Alexandrian scholars themselves), one might expect that their work would have attracted less ancient scholarly attention than the works that were already archaic and corrupt in the Alexandrians' day (cf. Montana in this volume). But this is hardly the case, and some of the scholia to Hellenistic poets, particularly Apollonius Rhodius and Theocritus, are of high quality and impressive antiquity.

There is a large body of scholia on Apollonius' *Argonautica*, including much ancient material and going back at least to the first century BC. While not as useful to us as the scholia on Aristophanes or Euripides, the Apollonius scholia contain much information that is still valuable, particularly when they shed light on how Apollonius used Homer, on how ancient authors who imitated Apollonius understood his text, and on the details of Greek mythology; they are of course also of use for establishing the text of the *Argonautica*. The scholia state (at the end of book IV) that they are derived from the commentaries of Theon (first century BC), Lucillus Tarrhaeus (mid-first century AD), and Sophocles (second century AD). The last of these commentaries was also used (perhaps indirectly) by Stephanus of Byzantium, and the scholia themselves, in a state of preservation better than that of the present day, were used extensively by the compilers of the *Etymologicum Genuinum* and more sparingly by Eustathius and John Tzetzes. The transmission is thus double, 'direct' in manuscripts of Apollonius and 'indirect' in the other sources, and quotations from the *Etymologicum* and other indirect sources are considered to be (and in editions printed as) part of the corpus of scholia to Apollonius. The direct transmission of the scholia has several distinct branches, L, P, and A (this last being closely related to, but not directly descended from, L); these are reproduced to varying degrees in different publications. Wendel [1935] provides an unsatisfactory text.

The scholia to Theocritus are useful and relatively unproblematic. The old scholia, which fill a volume much thicker than that of Theocritus' own work, derive from a massive composite commentary assembled from at least two earlier works. One was a scholarly commentary dating to the Augustan period, composed primarily by Theon but also incorporating the work of Asclepiades of Myrlea (1st century BC); in addition to many of the scholia, the surviving prolegomena and hypotheses have their bases in this commentary. The second major source of the composite commentary appears to be a work independently composed by Munatius of Tralles in the second century AD and containing a number of gross errors. It is thought that Munatius, who clearly had little interest in achieving high standards of scholarship, produced primar-

ily paraphrases of the poems and identifications of the people mentioned in them. These two commentaries were later combined, along with the work of the second-century commentators Theaetetus and Amarantus; it is likely but not certain that the compilation was done by Theaetetus in the second century.

From the fourth to sixth centuries a revival of Theocritan studies resulted in some further alterations to the commentaries, but since no scholars later than the second century are named in the old scholia it is likely that no significant additions were made at that period. The scholia as they have come down to us represent a severely abridged version of the original commentaries, which were used by a number of early scholars in their fuller forms. There is thus a significant indirect tradition for the Theocritus scholia, involving Eustathius, Hesychius, various etymological works, and especially the scholia to Virgil. The scholia are useful particularly for the interpretation of Theocritus, but also for establishing the text. They can also aid in the interpretation of other ancient poetry, for later poets, particularly Virgil, made use of Theocritus and understood his poems in the light of ancient commentaries. Ancient scholars' discussions of Theocritus' literary Doric dialect are also important for our understanding of the history of Greek dialectology. Wendel provides a text [1914] and discussion [1920] of the Theocritus scholia.

The scholia to Aratus also go back to the first century BC, when the definitive edition of the *Phaenomena* was produced; this edition included an introduction with a life of Aratus, extensive commentary, and a corrected text of the *Phaenomena*. The remains of this work form the core of our preserved scholia, though not all of it survives. Other important sources are a lost work by Plutarch, the Περὶ τοῦ παντός 'On the Universe' of the grammarian Achilles (third century AD), work of the astronomer Apollinarius (probably first or second century AD), a commentary written at an unknown date by one Sporus, and three anonymous commentaries.

The most interesting of these additional sources is the work known as 'Anonymus II'. This extensive body of explanatory material goes back to the second edition of the *Phaenomena*, known as Φ, and is witness to an intriguing development in the history of the text. In the second or third century AD, when the old scholarly edition had been widely accepted for centuries, another editor decided to create a new and more popular version of the poem. To do so he took the earlier edition's text and removed most of the commentary (which was often difficult and technical), keeping only the biography of Aratus and extracts from the preface and commentary. He then replaced the omitted notes with a new and more attractive body of explanatory material. This new material was drawn from a range of sources, including extracts from commentaries and works on Aratus and from other astronomical and mythological works that had not been intended as commentaries; in addition, an

appealing series of illustrations was provided. Most of the new material came from a work known as the *Catasterismi* of Eratosthenes, which appears to be the late epitome of a lost astronomical treatise probably written (by the third-century BC scholar and mathematician Eratosthenes) as an elementary and literary astronomy manual designed to complete and explain Aratus. The editor of Φ apparently took extracts from this original work and re-arranged them in the order of Aratus' poem to enhance the appeal of his new edition.

The Φ edition proved wildly popular and soon replaced the scholarly edition entirely in the West; in the Byzantine world both editions existed side by side, resulting in extensive cross-fertilization of the explanatory material. As a result, while some surviving manuscripts (most notably M) contain scholia largely derived from the earlier edition and others (notably S and Q) contain substantial amounts of explanatory material from the Φ edition, manuscripts of the earlier edition generally show at least some influence from Φ . Much of the Φ commentary has however been lost in Greek; the 'Anonymus II' consists primarily of a Latin translation of the Φ edition made in the seventh or eighth century and known as the *Aratus Latinus*. There is also a third-century Latin translation of Φ preserved as scholia to the first-century Latin translation of Aratus attributed to Germanicus Caesar. For texts and discussions see Jean Martin [1974] and [1998] and Maass [1892] and [1898].

There is a considerable body of scholia to the *Alexandra* of Lycophron, in fact much larger than the poem itself. It is divided into two groups: old scholia, which go back to Theon, and Tzetzes' scholia. The scholia are rich in mythographical information and also useful as evidence in the debate as to whether the author of the *Alexandra* can be identified with the Lycophron who was a tragedian of the third century BC or whether the poem was composed by another Lycophron in the second century BC. Scheer [1908] vol. II provides a text and discussion. There is a new edition by Leone [2002].

The *Theriaca* and *Alexipharmaca* of Nicander both have large bodies of scholia, with sources including Theon and Plutarch. They cover a wide variety of topics; while much of this material is late, some of it preserves valuable ancient commentary. The scholia are used particularly for the information they provide on the history of the poems and Nicander's other writings. Crugnola [1971] and Geymonat [1974] provide texts.

The scholia to the *Batrachomyomachia* are mostly Byzantine and have attracted little attention in recent years; for text and discussion see Ludwig [1896] 117–135 and 198–318.

Definitions of Grammar

1 Introduction

Grammar as a discipline in the Western world is the result of a long process of autonomisation and specialisation: grammatical topics were discussed by philosophers, rhetoricians and literary scholars long before 'technical' grammar received its institutional foundation by the Alexandrian philologists.¹ As is the case with most disciplines, the study of grammar started well before the field received its name and was recognised as an autonomous domain of study.

As a consequence, explicit definitions of the object, function and status of grammar date only from the period when grammar had already received its institutionalized disciplinary form; in addition, most of these definitions are attested only indirectly, *i.e.* in reports of authors who synthesize or criticize doctrines held by their predecessors. The ancient definitions of grammar that are attested thus require a detailed critical-historiographical analysis.

2 Eratosthenes of Cyrene's Definition of Grammar

The first definition of 'grammar' in Greek antiquity transmitted to us is the one attributed to Eratosthenes of Cyrene, head of the Alexandrian library under

1 See for more details Swiggers-Wouters [1995a], [1995b], and [2004], and Montana in this volume.

Ptolemy III Euergetes (cf. Fraser [1970]; Geus [2002]; Matthaios [2008] 556–569 and Montana in this volume). This definition, which would reach back to the 3rd century BC, has been transmitted, indirectly, in the scholia (*Sch.* Dion. T. 160.10–12) to Dionysius Thrax' grammar manual. The definition, also briefly explicated by the scholiast, runs as follows: Γραμματική ἐστὶν ἕξις παντελῆς ἐν γράμμασι. The immediately subsequent explication concerns the last word (γράμμασι) of the definition: γράμματα καλῶν τὰ συγγράμματα, “by ‘letters’ (Eratosthenes was) intending ‘written texts’ / ‘writings’”.

Taken on itself the definition looks straightforward, given its limpid structure: it consists of the *definiendum* followed by the copula introducing the *definiens*. However, the definition raises various problems of different nature. Matthaios [2011a], in a foundation-laying study, analysed Eratosthenes' definition from a threefold point of view: historical, theoretical and ‘ideological’. We will focus here on the linguistic-historiographical aspects, but two preliminary remarks are in order:

(a) Eratosthenes uses *γραμματική* as a *definiendum*, and its use as a substantive term calling for a definition seems to suggest that *γραμματική* served to designate ‘a thing’ (discipline / science / technique / art [...]); it should, however, be recalled that *γραμματική* is, in origin, a substantivation of the adjective *γραμματικός*, -ή, -όν, and that its use as the designation of the discipline ‘grammar’ precisely goes back to the substantival use of the adjective. Also, one cannot exclude the possibility that in the transmitted definition of Eratosthenes the term *γραμματική* can be read as proleptically referring to *ἕξις*, so that we could possibly deal with a definition of grammatical *ἕξις*.

(b) The other remark is of a more fundamental nature: it concerns our ‘cultural distance’ with respect to the Classical world. Many of the terms we now consider to be ‘technical’ and ‘univocal’, were terms with a rather indeterminate grammatical and semantic value: grammatically indeterminate because they at times vacillate between substantival and adjectival status (e.g. *γραμματικός* or *φιλόσοφος*), semantically indeterminate, not only because of differences in semantic-referential classification and cultural embedding, but also because of inherent polysemy (a very illustrative case being the term *λόγος*). This situation entails that translating a term such as *γραμματική* with *grammar* is valid as a single-term approximation with respect to a complex historical reality, which in fact would need a very nuanced circumscription.²

As a matter of fact, we are faced with this problem not only on the definitional (intensional) level, but also on the encyclopedic-extensional level:

² Cf. Swiggers-Wouters [1996b].

the extant testimonies on Eratosthenes' scholarly activity (cf. Pfeiffer [1968] 152–170; Geus [2002]) record a number of lexicographical works, a study on the *Iliad* and two books titled Γραμματικά. The existence of the latter work (in which the adjective is used as a collective neuter plural) seems to have been the reason for which Clement of Alexandria (2nd cent. AD)—in retrospect—mentions Eratosthenes in relation with the replacement of the term κριτικός with the term γραμματικός as a designation for a 'scholar'. But on this ground we have to assume that the *adjective* (and substantive?) included, in Eratosthenes' view, the full range of 'text study / analysis', and thus involved much more than a grammatical study.

This is the passage from Clemens, *Strom.*, 1.16.79.3:

Ἀπολλόδωρος (l. Ἀντίδωρος)³ δὲ ὁ Κυμαῖος πρῶτος < τοῦ γραμματικοῦ ἀντί > τοῦ κριτικοῦ εἰσηγήσατο τοῦνομα καὶ γραμματικός προσηγορεύθη, ἔνιοι δὲ Ἐρατοσθένη τὸν Κυρηναῖόν φασιν, ἐπειδὴ Γραμματικά ἐπιγράψας. ὠνομάσθη δὲ γραμματικός, ὡς νῦν ὀνομάζομεν, πρῶτος Πραξιφάνης Διονυσοφάνους Μιτυληναῖος.

Antidorus of Cyme was the first to introduce the term *grammatikós* instead of *kritikós* and he was called *grammatikós*. Some, however, pretend that Eratosthenes of Cyrene was the first (to introduce the term *grammatikós*), as he gave the title *Grammatiká* to one of his works. But the first to be called *grammatikós* as we use the term today, was Praxiphanes,⁴ the son of Dionysophanes, from Mytilene.

The passage raises many textual, and even more exegetical problems, not only for the identification of the exact source responsible for the change κριτικός⁵ → γραμματικός, but also for the identification of the subsequent defenders of the views involved. A text-external complication comes from the fact that in Suetonius' *De grammaticis* 10.4 Eratosthenes is said to have claimed the title *philologus* for himself:

-
- 3 As it appears from *Sch. Dion. T.* 3.24–26; 7. 24–25 (cf. *infra*) and 448.6, Ἀπολλόδωρος must be a mistake for Ἀντίδωρος. The grammarian Antidorus is otherwise unknown, but lived very probably in the first half of the 3rd cent. BC. Cf. Pfeiffer [1968] 157–158.
 - 4 See Pfeiffer [1968] 158: "The literary work of Praxiphanes (the Peripatetic scholar of the 4th–3rd cent. BC) is here regarded as foreshadowing the work of the Alexandrian γραμματικοί".
 - 5 The Alexandrian poet and philologist Philetas of Cos (4th–3rd cent. BC) appears to be the first who adopted this title. Cf. Strabo XIV 657: ποιητῆς ἅμα καὶ κριτικός.

philologi appellationem adsumpsisse videtur (sc. L. Ateius) quia—sic ut Eratosthenes, qui primus hoc cognomen sibi vindicavit—multiplici variaeque doctrina censebatur.

He took on the name *Philologus* apparently because—just like Eratosthenes, who first claimed the sobriquet for himself—he was judged to be a man of manifold and wide-ranging erudition (transl. Kaster [1995] 15).

Suetonius' testimony is not in full contradiction with Clemens' passage (cf. Matthaios [2011a] 63), but rather suggests that Clemens made an unwarranted inference from the title Γραμματικά attributed to one of Eratosthenes' works; we can reconcile the two testimonies if we admit that Eratosthenes considered himself a φιλόλογος, and that within his philological activity he assigned a crucial role to γραμματική (or to 'grammatical ἔξις'), in the sense he gave to the latter.⁶ This 'reconciling' interpretation yields further support from the fact

(a) that Suetonius speaks of *multiplex variaeque doctrina*, a formulation which can be linked with the epithet παντελής attributed to grammatical ἔξις in the definition attributed to Eratosthenes;

(b) that in other testimonies⁷ Eratosthenes is labelled a γραμματικός on the basis of his philological works;

(c) that the term γραμματικός is attested in the third century BC with the meaning 'specialist in textual analysis / criticism', i.e. a meaning almost identical with that of φιλόλογος.⁸

We can therefore conclude that in Eratosthenes' times the terms γραμματικός and γραμματική had received, maybe first through the efforts of Antidorus of Cyme, a 'text-oriented' meaning, in close relationship with the activity of the φιλόλογος: γραμματική was no longer the mastery of writing and reading taught in the elementary school, but was a field of specialisation related to the study of (literary) texts. As such, γραμματική refers to a scholarly activity (and competence), while the elementary teaching was indicated as γραμματιστική (cf. Kaster [1983]).

6 See also Dihle [1998] 89: "Eratosthenes' Anspruch auf die Bezeichnung φιλόλογος könnte [...] bedeuten, dass er es ablehnte, auf Dichterexegese festgelegt und eingeschränkt zu werden, und dass er auf die Vielseitigkeit seiner wissenschaftlichen Tätigkeit verweisen wollte".

7 See the references in Matthaios [2011a] 64, n. 34.

8 Cf. Matthaios [2011a] 65, who cites a fragment of Philicus of Corcyra (dated to 275/4 BC).

The genesis of the name for this activity—and the institutional achievement of establishing such a field of scholarly study—can be traced back to the early stages of Alexandrian philological activity. Our sources on this, viz. Sextus Empiricus (cf. *infra*) and the *scholia* on Dionysius Thrax, seem to have derived their information from Asclepiades of Myrlea's work *Περὶ γραμματικῆς* (2nd–1st cent. BC; cf. Pagani [2007a] 31–34). It was probably through Asclepiades' report on the evolution of the discipline and of its name, that in the *scholia* on Dionysius Thrax we read that it was Antidorus who gave the name *γραμματικῆ* to the discipline 'consisting in (having / producing / showing) knowledge about written texts': Ἀντίδωρος δὲ τις γραμματικὸς γραμματικὴν αὐτὴν ὠνόμασε παρὰ τὴν γνῶσιν τῶν γραμμάτων (*Sch. Dion. T.* 7.24–25).

In Antidorus' view 'grammar' was thus defined in relation to a (further unspecified) knowledge / knowing of writings. Although we cannot be sure whether this was indeed Antidorus' authentic wording, the account of the *scholia* conforms to what we may reasonably expect: an initially broad and 'open' conception of a field constituting itself, and primarily defined by its material object (viz. texts). Eratosthenes was to provide a further specification of the discipline with his (more) explicit definition, which we will now comment upon.

Eratosthenes' definition, as transmitted by the *scholia* on Dionysius, contains three components calling for an analysis: the substantive *ἔξις*, the qualifying adjective *παντελής* and the adverbial syntagm *ἐν γράμμασι*. As we have seen, the *scholia* explicate *ἐν γράμμασι* as referring to writings (*συγγράμματα*), an equation which is attributed to Eratosthenes himself (although we have no further textual evidence for such an equation).

The two other components require a close analysis. The term *ἔξις*, which is used as the *definiens* (at least if we read the passage as a definition of the form 'x is (a) y of such and such nature'), should be interpreted as designating the *genus* under which the *γραμματικῆ* falls. This interpretation also holds when we read the passage as 'the *γραμματικῆ* (*ἔξις*) is the *ἔξις* that ...'. The term *ἔξις* has a wide range of meanings, which can be reduced to two major semantic fields: (a) 'experience, habit, customized behavior', (b) 'skill, faculty, capacity'. It is especially the latter semantic field that occurs in the syntactic combination *ἔξις* + *ἐν* followed by the complement of the preposition. The matter has, however, to be considered in the context of ancient theory of knowledge and philosophy of science. The term *ἔξις* has a long-standing history in philosophical discussions concerning the nature and the various types of knowing. The following chronological sequence may serve as an illustration (for a more detailed analysis, see Matthaïos [2011a] 70–76):

(1) Plato used *ἕξις* in his *Cratylus* 414b6–c3 in order to explain (‘etymologically’) the word *τέχνη* (< **ἐχονόη* < *ἕξις νοῦ*); while the ‘etymological’ connection posited here is hardly interesting, the fact that *τέχνη* and *ἕξις* are linked (as cognitive properties / faculties / capacities) is of high importance, since

(2) in his *Nicomachean Ethics* (VI 4, 1140a9–10) Aristotle defines *τέχνη* as *ἕξις μετὰ λόγου ἀληθοῦς ποιητική*, ‘a productive, on reason based possessing of the truth’ / ‘the through reason guided experience of the true that brings about something’. Aristotle’s use of *ἕξις* as a *definiens* should be seen in the light of his distinction between *ἐπιστήμη* and *τέχνη* (cf. Prencipe [2002] 37–40); both are species of the genus *ἕξις*, but whereas *ἐπιστήμη*, ‘knowledge’ is a *ἕξις ἀποδεικτική* (‘demonstrative / cognitive property or state’), *τέχνη* is defined as a *ἕξις ποιητική* (‘productive, creative, effective’) cognitive property or state (see *Eth. Nic.* VI 3, 1139b31–32).

(3) The third stage is represented by the Stoics who also used the term *ἕξις* in their theory of knowledge:

(3a) Cleanthes (331–232 BC) is said to have defined *τέχνη* as ‘a property / capacity that establishes everything with (a) method’ (‘through a followed track’): Κλεάνθης τοῖνον λέγει ὅτι τέχνη ἐστὶν ἕξις ὁδῶ πάντα ἀνούουσα (Olympiod., *In Plat. Gorg.* 12.1 (= 42A Long—Sedley).

(3b) Zeno of Citium (335–263 BC) seems to have formulated the core definition of *τέχνη*, as ‘a track-making capacity / experience, following a way and a method’ (the latter explicative part may be a later addition): ὡς δηλοῖ καὶ ὁ Ζήνων, λέγων ‘τέχνη ἐστὶν ἕξις ὁδοποιητική’, τουτέστιν δι’ ὁδοῦ καὶ μεθόδου ποιούσά τι (*Sch. Dion. T.* 118. 14–16 = *SVF* I 72).

(4) The term *ἕξις*, used to define *τέχνη* or used in relation with *τέχνη*, can still be found in the context of epistemologically based discussions on the status of grammar, as we find them in the works of Sextus Empiricus (cf. *infra*) and in the scholia on Dionysius Thrax. The scholia provide us with the following definitions, the first of which may be more or less contemporary of Sextus’ times (or simply a rewording of Sextus’ definition), the latter two being distinctly later:

(4a) γραμματική ἐστὶν ἕξις ἀπὸ τέχνης καὶ ἱστορίας διαγνωστικὴ τῶν παρ’ Ἑλλησι λεκτῶν (*Sch. Dion. T.* 118. 10–12).

Grammar is a skill which on the base of expertise and research diagnoses the things said by the Greeks.

(4b) γραμματική ἐστὶν τέχνη ἕξις θεωρητικὴ καὶ πρακτικὴ τῶν παρὰ ποιηταῖς καὶ συγγραφεύσι, δι' ἧς ἐκάστω τὸ οἰκείον ἀποδιδόντες ἐξ ἀπείρου καταληπτέον ποιούμεθα (*ibid.* 3. 11–13).

Grammar is a contemplative and practical skill in the things said by poets and prose writers, by means of which we make each (word / expression) from indefinite to understandable by indicating its specific meaning.

(4c) γραμματικὴ ἐστὶν τέχνη ἕξις θεωρητικὴ καὶ καταληπτικὴ τῶν κατὰ πλείστον παρὰ ποιηταῖς τε καὶ συγγραφεύσι λεγομένων, δι' ἧς ἐκάστην λέξιν τῷ οἰκείῳ κόσμῳ ἀποδιδόντες εὐκατάληπτον ἐξ ἀπείρου κατασκευάζουσιν. (*ibid.* 164.5–8).

Grammar is a contemplative and comprehensive skill in the things said by poets and prose writers, by means of which one makes each word / expression from indefinite to easily understandable by assigning it to its specific category.

While the definitions under (4) postdate the one attributed to Eratosthenes, it is clear from the preceding list that there was, specifically since Aristotle,⁹ a tradition of defining cognitive aptitudes and habits in terms of ἕξις, and that the latter term occurred in relation with an appraisal of the status of γραμματικὴ. Eratosthenes' use of the term ἕξις was thus a deliberate epistemological choice, and a clear indication of the recognition of γραμματικὴ (or of the γραμματικὴ ἕξις) as belonging to the realm of sciences. Eratosthenes seems to have understood γραμματικὴ as that property (or skilled experience) of the one who possesses it, which deals with writings. Now, this property / skilled experience / habitual capacity is said to be παντελής. This qualifying adjective is not functioning as a *differentia specifica* here, and for this reason we cannot take the phrase attributed to Eratosthenes as a definition that would be fully in line with the ordering of concepts in a Porphyrean hierarchical structure. The term παντελής is not a subspecifying term, but rather a laudatory epithet, highlighting the value or importance of the ἕξις in question. The problem then is to properly understand what Eratosthenes may have meant with παντελής. Since later definitions of grammar (cf. *infra*) do not contain the word παντελής,

9 As noted by Matthaios [2011a] 75, in his *De partibus animalium*, Aristotle distinguishes two types of ἕξις: one that exists in the knowledge (ἐπιστήμη) of an object, the other being acquired through education.

and are more explicit on the material object of the grammarian's knowledge or capacity, we may infer that the evolutionary line in the definitions of grammar was one of narrowing down the scope of the grammarian's field of knowledge / experience / capacity. Since Eratosthenes, following shortly after Antidorus, stands at the beginning of a process in which the general knowledge and know-how of the φιλόσοφος was first narrowed down to skillful knowledge and handling of writings, and was later reduced to literary writings (and to what is mostly found in the writings of poets and prose-writers; cf. *infra*), we may read into Eratosthenes' phrase a global and holistic valuation of the ἔξις of the grammarian: the latter is credited—in an absolute¹⁰ way—with a full-fledged skill / property, with respect to the object of his study, viz. writings. The object itself is left in its full generality: ἐν γράμμασι, without further determination or specification.

In his definition of γραμματική (or of ἔξις γραμματική), Eratosthenes thus propounded a very large view of the field of 'grammar', invested with encompassing cognitive aims. As Matthaïos [2011a] 79 judiciously points out, "Eratosthenes connected the potential of the philological discipline with a demand for universal knowledge [...]. His 'grammar' definition goes along with the universality of knowledge that Eratosthenes claimed for himself with the title φιλόλογος. The phrase ἐν γράμμασι merely serves to specialise the field of universal knowledge, which 'grammar' covers".

3 Dionysius Thrax' Definition of Grammar

The *Technê Grammatikê*¹¹ of Dionysius Thrax (see Montana in this volume) provides us with the most explicit definition of 'grammar' (defined as a field of study, and not simply as a product), specifying its parts and indicating the relevant objects of study.

10 Matthaïos [2011a] 78 speaks of the "intensification of the term ἔξις with the attribute παντελής".

11 Dionysius Thrax' *Technê* has been transmitted to us in medieval and Renaissance manuscripts dated between the 10th and 18th century. The text was translated, somewhere in the fifth century, into Syriac and Armenian. The manuscript tradition of the Syriac and Armenian translations extends between the 7th and 9th century (for the Syriac manuscripts), and between the 14th and the 17th century (for the Armenian manuscripts).

Starting with the oldest manuscript testimonies the transmitted text of the *Technê* is accompanied by four supplements (cf. *G. G.* I 1, 105–132): (1) on diacritic signs for accents, quantity, aspiration; (2) on the definition of *technê*; (3) on metrical feet; (4) a paradigm list of verb forms for *tuptô* 'to beat/hit' (see Dickey in this volume).

Although the authenticity of the *Techné* has been questioned—an issue which would deserve a separate treatment¹²—, two facts of crucial importance for the present contribution stand out:

(a) the main gist of Dionysius' *Techné* reflects the state of grammatical knowledge attained in the first centuries BC

(b) whatever the relationships that can be established between Dionysius' *Techné* and the grammatical contents of later Greek and Latin manuals, the initial sections of the *Techné*—which include the definition of 'grammar'—should be considered authentic, *i.e.* dating back to the 2nd–1st century BC.

It is at the beginning of the *Techné*, in the first section, that we find a definition of grammar. The Greek text reads as follows:

Γραμματική ἐστὶν ἐμπειρία τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσιν ὡς ἐπὶ τὸ πολὺ λεγομένων.

Μέρη δὲ αὐτῆς ἐστὶν ἕξ· πρῶτον ἀνάγνωσις ἐντριβῆς κατὰ προσωδίαν, δεύτερον ἐξήγησις κατὰ τοὺς ἐνυπάρχοντας ποιητικοὺς τρόπους, τρίτον γλωσσῶν τε καὶ ἱστοριῶν πρόχειρος ἀπόδοσις, τέταρτον ἐτυμολογίας εὔρεσις, πέμπτον ἀναλογίας ἐκλογισμὸς, ἕκτον κρίσις ποιημάτων, ὃ δὴ κάλλιστόν ἐστι πάντων τῶν ἐν τῇ τέχνῃ (G.G. I 1, 5–6.3).

Grammar is the empirical knowledge of the expressions commonly used among poets and prose-writers. Its parts are six [in number]: first, the skillful reading in conformity with the prosody; second, the exegesis of the occurring poetic phrases; third, the straightforward account of rare words and realia; fourth, the discovery of the etymology; fifth, the establishing of analogical patterning; and sixth, the judgement on poems, which is the finest part of all those [contained] in the art [of grammar].

This passage contains (a) the *definition* of grammar, properly speaking; (b) a *division* of grammar into six parts, which are successively enumerated. The definition is philologically oriented, and refers to the didactic practice of transmitting philological expertise and the relevant theoretical and terminological foundations. The components of the “art of grammar” are defined with reference to the classroom-situation of text reading and explanation. In the description of the parts of grammar almost nothing is said about language structure,

12 See the most recent surveys of the discussion by Matthaios [2009a], Callipo [2011] 28–34, and Pagani [2010b] 393–409; [2011] 30–37.

except for the subdivision dealing with analogy; an important role is attributed to the reading (aloud) of texts, and to the appreciation of poems.

The definition of grammar given in the *Technê* reflects the activity of the γραμματικός or teacher of literature which included the following parts (cf. *Sch. Dion. T.* 453. 19–23): the reading of the text, the indication of the poetical figures of expression, the explanation of problematic words and historical references, the analysis of the origin of lexical items, the indication of (certain) grammatical regularities and finally a judgement of the literary work.

These components are said to constitute the *empeiria* of the grammarian. As noted above, the notion *empeiria* refers to a particular skill, based on acquaintance or familiarity (in this case, without theoretical knowledge). Through its occurrence in the title of the treatise *technê* has a twofold meaning: it refers to (the) ‘art’ (of grammar), but it also designates a treatise in which the principles of the art in question are expounded.¹³ The sixth part of the grammarian’s *empeiria*, viz. the judgement on poems, is called “the finest part of all those [contained] in the *technê*”. Although one might be tempted to consider this a slight inconsistency in the (original?) text, one could also view this passage as reflecting an attempt on Dionysius’ part to overcome the tension between the concepts *empeiria* and *technê* in the definition of grammar, by interpreting *technê* as the systematization (also for didactic reasons) of the practical expertise (*i.e. empeiria*).¹⁴

In Dionysius Thrax’ view, this *empeiria* concerns τὰ παρὰ ποιηταῖς τε καὶ συγγραφεῦσιν ὡς ἐπὶ τὸ πολὺ λεγόμενα. Traditionally the passage is understood as ‘the expressions used for the most part among poets and prose-writers’: the

13 Cf. Fuhrmann [1960]. See *e.g.* the end-title (Τρύφωνος τέχνη γραμματική) of the manual (partially) preserved in *P. Lit. Lond.* 182 (= Wouters 1979, n. 2) (ca. 300 AD).

14 The concept of *technê* is frequently dealt with in the scholia on Dionysius’ *Technê*; the most elaborate discussion is the one offered in the second supplement (cf. *supra*, n. 11). The scholiasts base themselves on the (Stoic) definition of “*technê*” as a ‘system’ of conceptions put to the test of experience, and oriented towards a fruitful goal in life (τέχνη ἐστὶ σύστημα ἐκ καταλήψεων ἐγγεγυμνασμένων πρὸς τι τέλος εὐχρηστον τῶν ἐν τῷ βίῳ). In the opinion of the scholiasts the principal characteristics of a *technê* are (a) its organic, ‘systemic’ composition (it involves various skills), (b) its experience-based evolution over generations of skill-developers; (c) the fact that it is oriented towards a specific goal in function of which it is ‘useful’.

Given that the term ‘grammar’ refers to either the object (= the grammatical structure of a language, or ‘grammaticality’) or the description/teaching of it (= grammatical analysis), there is a finality on the object level, viz. clarity and correctness of the expression (cf. *Sch. Dion. T.* 113.25) and a finality on the methodological level, viz. to teach the nature, function and organization of the *logos* (cf. *Sch. Dion. T.* 115.5).

phrase *ὡς ἐπὶ τὸ πολὺ* is thus interpreted as a restriction of the domain of grammar, which would have as its object only the current, normal usage of Greek authors. The definition was understood in that sense by ancient scholiasts on the *Technê*, e.g., *Sch. Dion. T.* 301. 10–15: τῶν γὰρ πολιτευομένων λέξεων ἐπιστήμων ἔσται ὁ γραμματικός, οὐ μὴν τῶν καθάπαξ καὶ κατὰ μίαν χρῆσιν εἰρημένων. “The grammarian has to be acquainted with the usual words, not with expressions that have been used only once and in a pregnant meaning”. This interpretation is also generally accepted by modern authors as is clear from their translations.¹⁵ But according to Patillon [1990] 694, who proposes the translation ‘la grammaire est une science des textes, ceux des poètes et des prosateurs le plus souvent’, the phrase *ὡς ἐπὶ τὸ πολὺ* has to be related to *ἐμπειρία*. He adduces two arguments (cf. already Di Benedetto [1958] 196–199). First, he refers to Sextus Empiricus (*Math.* 1, § 57), who quotes Dionysius’ definition in a different way, viz. γραμματικὴ ἔστιν ἐμπειρία ὡς ἐπὶ τὸ πλεῖστον τῶν παρὰ ποιηταῖς τε καὶ συγγραφεῦσι λεγομένων. “Grammar is an experience for the most part / as far as possible of what is said in poets and prosewriters.” The syntagm *ὡς ἐπὶ τὸ πλεῖστον*—instead of *ὡς ἐπὶ τὸ πολὺ*¹⁶—is here related to *ἐμπειρία* instead of to the object of grammar. But, as Uhlig (*G.G.* 1 1, 5, *annot.*) already observed, Sextus’ quotation seems an inaccurate rendering of the text of the *Technê*, a fact which ties up with the basic intent of Sextus, viz. to show that *γραμματικὴ* taking as its object *all* texts is impossible as a science.¹⁷ Patillon’s second

15 See for example the following translations: Steinthal [1890–1891] 11, 174: “Grammatik ist die Kunde der bei Dichtern und Prosaikern durchschnittlich vorkommenden Redeformen”; Kemp [1987] 169: “grammar is the practical study of the normal usage of poets and prose writers”; Lallot [1989] 41: “La grammaire est la connaissance empirique de ce qui se dit couramment chez les poètes et les prosateurs”; Robins [1996] 10: “γραμματικὴ is the ἐμπειρία of the general usage of poets and prose writers”; Bécares Botas [2002] 35: “La gramática es el conocimiento de lo dicho sobre todo por poetas y prosistas”; Callipo [2011] 57: “La grammatica è la conoscenza empirica delle cose dette per lo più da poeti e prosatori”.

16 Whereas some modern commentators have made a strong case of the difference between the two adverbial phrases *ὡς ἐπὶ τὸ πολὺ* and *ὡς ἐπὶ τὸ πλεῖστον*, others (e.g. Lallot [1989] = [1998²] 69 and Sluiter [2001] 310 n. 46, with some reservation) are inclined to consider the two formulations as equivalent. In fact, the scholiasts on the *Technê* tend to treat the two formulations as equivalent. The long and complex transmission history of the *Technê*, and of commentaries on the text, may also have led to the non-distinctive use of the two formulations.

17 A strong additional argument for relating *ὡς ἐπὶ τὸ πολὺ* in the text of the *Technê* to τῶν παρὰ ποιηταῖς τε καὶ συγγραφεῦσι λεγομένων, is offered by the definition of the *ars grammatica* given by Varro (fr. 234 Funaioli), viz. “ars grammatica [...] scientia est <eorum> quae a poetis historicis oratoribusque dicuntur ex parte maiore” (“grammar is the knowledge

argument is that the translation (as given by Lallot) “*ce qui se dit couramment chez les poètes*” would be contradicted by the third of the ‘parts’ of grammar (cf. *infra*) that are listed immediately after the definition, viz. the ἀπόδοσις γλωσσῶν or “Élucidation des mots rares” (Lallot [1989] = [1998²] 69). But this argument does not seem valid. Lallot [1989] = [1998²] 77–78 has convincingly demonstrated that for the ancient grammarians the term γλώσσαι indicates those words that were unusual in the grammarian’s own language, *i.e.* obsolete words or words from the various Greek dialects, which over centuries were used in poetry and prose. The term γλώσσαι therefore should not be taken to imply that the words in question were unusual in the language of the authors explained by the grammarian.

In short, as we have already argued elsewhere in more detail (cf. Swiggers – Wouters [1994] 532–534), Patillon’s counterarguments to the traditional interpretation and translation of Dionysius’ definition are not acceptable. It is furthermore unclear what other texts than those of poets and prose-writers would constitute an object of study for the grammarian. However, the debate clearly is not finished. Ventrella [2004] 110 prefers for the *Techné* the text reading ὡς ἐπὶ τὸ πλεῖστον (cf. the passage in Sextus) instead of ὡς ἐπὶ τὸ πολὺ and considers it a qualification (‘che venga più volte ripetuta, spesso esercitata’) of ἐμπειρία, which explains his translation: “la grammatica è pratica ripetuta / esercitata di ciò che si dice presso poeti e prosatori”.

We will now briefly comment upon the division of grammar as specified in Dionysius Thrax’ definition.

(a) The ἀνάγνωσις is the reading aloud by the grammarian to his students of the text he will be explaining. This reading has to conform with the προσῳδία, a term that covers not only accent¹⁸ and intonation, but all the features that were not indicated by the letters of the alphabet (στοιχεῖα), such as text-critical marks, aspiration, vowel length and possibly even some phenomena of syntactic phonetics (*i.e.* for all suprasegmental features). According to Allen [1973] 3,

of what is said by poets, historians and orators for the most part’). This definition is generally considered to be a literal translation of Dionysius’ definition, although prose-writers have been divided into historians and orators. There can be no doubt that in Varro’s text too the qualification “ex parte maiore”, which is the counterpart of Dionysius’ ὡς ἐπὶ τὸ πολὺ, has to be understood as a restriction of the empirical domain of grammar.

18 According to Di Benedetto [2000] 396, on the contrary, the ἀνάγνωσις has nothing to do with the reading of the text, but refers only to the determination of the correct accent of a word.

this extension, well established by the time of the grammarian Herodian in the second century AD, may have been the achievement of Dionysius Thrax.

(b) The second part of grammar is the exegesis of the ποιητικοὶ τρόποι or ‘poetical phrases’ which may ‘obscure’ the meaning of the text (cf. Schenkeveld [1991] 153–156). In case of a hyperbaton for example, the grammarian will indicate the ‘normal’ word order (*Sch. Dion. T.* 455. 24–30); he will also explain metaphors in the text (*ibid.* 457. 22–29), allegories (*ibid.* 456. 8–14) etc.

(c) The third part of grammar deals with γλῶσσαι, *i.e.* foreign or obsolete words, and with ἱστορίαι, a term covering the domain of realia (persons, geographical data, myths etc.), as commonly assumed by most ancient scholiasts (cf. *Sch. Dion. T.* 303. 4: “*Historía* is the narration of ancient facts”). As to the term πρόχειρος which qualifies ἀπόδοσις [‘rendering’], according to the scholiasts (*Sch. Dion. T.* 14. 19; 169. 15; 567. 41) it has the meaning here of ἔτοιμος [‘ready’], an interpretation which inspired the translations of Kemp ([1987] 172: ‘ready explanation’) and Lallot ([1989] 41 = [1998²] 43: ‘la prompte élucidation’). To this, however, Patillon [1990] 694 objected: “La promptitude n’a rien à faire ici; il s’agit de l’explication *claire*”. The term πρόχειρος can indeed also mean “obvious, readily accessible, easy” (see LSJ 1541), and within a didactic context a ‘readily understandable rendering’¹⁹ probably makes more sense than a ‘prompt explanation’.

(d) The inclusion of *etymologia* (in its ancient conception and practice; cf. Lallot [1991a] and Sluiter in this volume) within the grammatical expertise of the philologist should be seen in the light of establishing, by means of ‘etymological’ reasoning, the correct *meaning* and/or *form* of rare and unusual words occurring in older poetry. But *etymologia* also served as a tool for establishing the correct pronunciation of words (cf. *Sch. Dion. T.* 454. 21–29).

(e) The fifth part of *grammatikê* is what we, from our modern point of view, would consider the properly ‘structural’ one. The key term here is “analogy”, a term which in a grammatical context refers to a patterning recurrent throughout series within the language system. The concept seems to have been already extensively used by Dionysius’ teacher Aristarchus (cf. Ax [1982] and Matthaios [1999] 400 sqq.), and maybe also by Aristophanes of Byzantium before him (cf. Callanan [1987] 107–122). It is probable that already at a rather early stage lists of rules of nominal and verbal inflection (*kanónes*; cf. *Sch. Dion. T.* 309.9) had been set up; it is also likely that, in order to determine or explain unknown or uncertain inflectional forms, grammarians and grammar teachers referred to words displaying a similar inflectional pattern (cf. Lallot [1989] = [1998²] 80). This assumption is supported by ancient scholiasts like *Sch. Dion. T.* 15. 14–23:

19 Callipo [2011] 57 translates: “la spiegazione accessibile delle parole rare e dei contenuti”.

“The comparison of similar things is called analogy, the accuracy *eklogismós*. The fifth part is therefore the accurate comparison of similar things, through which the rules of the grammarians are composed, *e.g.*, when we examine why we have ὁ Ὅμηρος, τοῦ Ὁμήρου and ὁ φίλος τοῦ φίλου, but τὸ βέλος, τοῦ βέλους. When I had examined this accurately, I discovered the following rule, that all masculine and feminine nouns in *-o* have their genitive in *-ου*, such as Ἀλέξανδρος, Ἀλεξάνδρου, καλός, καλοῦ [...], and that the neuter nouns ending in *-os* have the genitive in *-ους*, such as μέρος, μέροςους [...]. and likewise βέλος, βέλους. When, therefore, we examine in this way accurately all nouns and verbs and other parts of speech, and when we put similar nouns next to similar ones, then we formulate the rules (and paradigms) in an impeccable way”.

(f) As the final (and finest) part of grammar Dionysius mentions the judgement on *poems*. This is somewhat strange, since in his definitions he had stated that grammar studies the expressions used among *poets and prose-writers*. A likely explanation for this incongruity is that poetry, and especially the Homeric poems, always remained the main concern of grammatical teaching. The key problem of this passage is the fact that it is not immediately clear what precisely he means by “judgement on poems”. Some scholiasts take the passage to refer to a literary-aesthetic evaluation (cf. *Sch. Dion. T.* 15. 26–29). But others object that a grammarian can only make such aesthetic judgements if he is a poet himself (cf. *Sch. Dion. T.* 471. 26–472. 34). Accordingly, the investigation into the grammatical correctness and stylistic adequacy of literary works in order to determine their authenticity would be meant here (cf. *Sch. Dion. T.* 304. 3–4).

Modern commentators are uncertain about this sixth part of the *grammatikê* as much as their ancient predecessors have been. While Pfeiffer [1968] 269 thought of ‘literary criticism’, Di Benedetto [1958] 179, who translated the expression *krísis poiêmatôn* by “giudizio critico delle opere poetiche”, believed that this *krísis* as philological-exegetical activity also included textual criticism (*dióρθôsis*). This was, however, rejected by Pfeiffer (*l.c.*) and Lallot ([1989] 73–75 = [1998²] 74–75) for the simple reason that there is no reference at all in the manual to the constitution of a reliable text edition by the grammarian. Also the scholiast’s idea of authenticity criticism has been taken up again (cf. Wilson [2007] 63–65). And, finally, Callipo [2011] 98 proves with many references that in the later Latin grammarians the *iudicium*, which corresponds to the Greek *κρίσις*, was clearly a literary evaluation of the texts studied by the grammarian, suggesting implicitly that aesthetic appreciation can have been a task of the Alexandrian grammarian.²⁰

20 See also Morocho Gayo [1999] 356. Morgan [1995] 88–89 on the other hand believes that the judgement could bear on the educational or moral value of the literary works. For

4 From Dionysius Thrax to Sextus Empiricus: Ptolemy the Peripatetic, Asclepiades of Myrlea, Chaeris and Demetrius Chlorus

Subsequently to Dionysius Thrax' definition, a number of authors tried to rephrase or refine the concept of γραμματική. We find their attempts summarized in Sextus Empiricus' *Against the grammarians* (2nd cent. AD). The sequence in which he relates these attempts is as follows:

(I) He first mentions Ptolemy the Peripatetic's objection against the *definiens* ἐμπειρία in Dionysius Thrax' definition of grammar, without quoting Ptolemy's own definition (provided he gave one); anyhow, it is clear that Ptolemy favored a definition of grammar as a τέχνη. On this point, he is immediately corrected by Sextus:

Διὰ γὰρ τὰ τοιαῦτα εἶρηται ἡ γραμματικὴ ἐμπειρία τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσι λεγομένων.

Οὗτος μὲν οὖν οὕτως, ἐγκαλεῖ δὲ αὐτῷ Πτολεμαῖος ὁ Περιπατητικὸς ὅτι οὐκ ἐχρῆν ἐμπειρίαν εἰρηκέναι τὴν γραμματικὴν (αὐτὴ μὲν γὰρ ἡ ἐμπειρία τριβὴ τίς ἐστι καὶ ἐργάτις ἄτεχνός τε καὶ ἄλογος, ἐν ψιλῇ παρατηρήσει καὶ συγγυμνασίᾳ κειμένη, ἡ δὲ γραμματικὴ τέχνη καθέστηκεν), οὐ συνορῶν ὅτι τάττεται μὲν καὶ ἐπὶ τέχνης τοῦνομα, καθὼς ἐν τοῖς ἐμπειρικοῖς ὑπομνήμασιν ἐδιδάξαμεν, ἀδιαφόρως τοῦ βίου τοὺς αὐτοὺς ἐμπείρους τε καὶ τεχνίτας καλοῦντος [...] (*Math.* I 60–61).

[For these reasons grammar is called 'experience of what is said in poets and writers.'] That is Dionysius' definition, but Ptolemy the Peripatetic objects to him that it was not right to call grammar an 'experience', since experience itself is a kind of knack and is a non-expert, irrational worker which consists in mere observation and joint exercise, while grammar is an expertise. Thereby Ptolemy overlooked the fact that 'experience' is a name also applied to expertise, as we showed in our *Empirical Commentaries*, since life calls the same people both 'experienced' and 'experts' (transl. Blank [1998] 14–15).

(II) After an attack on Dionysius' conception of grammar as the "experience for the most part of the things said in poets and writers", Sextus mentions

Irvine [1994] 45 the *krísis* embraced all the aspects mentioned: "Criticism involved textual criticism and judgment on the authenticity of works as well as literary, esthetic, and ideological criticism".

Asclepiades of Myrlea's attack on Dionysius' definition.²¹ In this passage Asclepiades' own definition of grammar is mentioned, and this definition is also rejected by Sextus.

Εἰ μή τι δέδοικε, φησί, τὴν ὀλιγότητα τοῦ βίου ὡς οὐκ οὔσαν ἱκανὴν πρὸς τὸ πάντα περιλαβεῖν, ὅπερ ἐστὶν ἄτοπον, <ὡς> γραμματικοῦ ἀλλ' οὐ γραμματικῆς ποιήσεται τὸν ὄρον, ἐπεὶπερ οὗτος μὲν τυχὸν ἴσως ἐπιστήμων ἐστὶ τῶν <πλείστων τῶν> παρὰ ποιηταῖς τε καὶ συγγραφεύσι λεγομένων, ὀλιγόβιον καθεστῶς ζῶν, ἡ δὲ γραμματικὴ πάντων εἴδησις. ὅθεν τὸ μὲν ἀλλάξας τοῦ ὄρου τούτου τὸ δ' ἀνελὼν, οὕτως ἀποδίδωσι τῆς γραμματικῆς τὴν ἔννοιαν "γραμματικὴ ἐστὶ τέχνη τῶν παρὰ ποιηταῖς καὶ συγγραφεύσι λεγομένων". Οὐκ ἀνεῖλε δὲ ὁ ἀνὴρ τὰς ἀπορίας ἀλλ' ἐπέτεινε. Καὶ ἐν οἷς θέλει τὴν γραμματικὴν αὐξῆν, ἐν τούτοις ἀφείλεν [...]. (*Math.* I 73–74).

Asclepiades says: 'Unless he was afraid of the brevity of life—that it is not long enough for the comprehension of everything—which is absurd, he will produce the definition not of grammar but of a grammarian, since in fact he is the one who may happen to be knowledgeable of most of the things said in poets and writers, being a short-lived creature, while grammar is the knowledge of all such things'. Hence he changes part of this definition, removes part of it, and renders the conception of grammar thus: 'grammar is an expertise of what is said in poets and writers'. However, the man did not remove the difficulties, but increased them; and by the very words with which he wanted to glorify grammar he destroyed it (transl. Blank [1998] 17).

(III) Immediately after his discussion of Asclepiades' definition, Sextus mentions the definition of grammar by 'Chaeris',²² author of a commentary on grammar; Sextus' quotation of Chaeris' definition is then followed, first, by a positive remark (noting that this definition has the merit of separating grammar from objects that are irrelevant for the grammarian), but, subsequently, by a skeptical dismissal of its possibility.

21 For Asclepiades of Myrlea see Montana in this volume.

22 As *Sch. Dion. T.* 118.9–11 assigns the same definition to the first century BC grammarian Chaeris, already Blau [1883] 56–57 assumed a mistake in the spelling of the name by Sextus, which is now generally accepted. Cf. Blank [1998] 137–138. Only Slater [1972] 318, n. 7 still expresses some doubts.

Χάρης δὲ ἐν τῷ πρώτῳ περὶ γραμματικῆς τὴν τελείαν φησὶ γραμματικὴν ἕξιν εἶναι ἀπὸ τέχνης < καὶ ἱστορίας > διαγνωστικὴν τῶν παρ' Ἑλλησι λεκτῶν καὶ νοητῶν ἐπὶ τὸ ἀκριβέστατον, πλὴν τῶν ὑπ' ἄλλαις τέχναις, τὸ τελευταῖον προσθεὶς οὐ παρέργως. ἐπεὶ γὰρ τῶν παρ' Ἑλλησι λεκτῶν καὶ νοητῶν τὰ μὲν ἐστὶν ὑπὸ τέχναις τὰ δ' οὐ, τῶν μὲν ὑπὸ τέχναις οὐκ οἶεται τέχνην εἶναι καὶ ἕξιν τὴν γραμματικὴν [...]

ὅτι μὲν γὰρ τῆς σωρικῆς ἀπορίας ἐξέλυσε τὴν γραμματικὴν καὶ τῶν ἀλλοτριῶν κειώρικε θεωρημάτων, μουσικῆς τε καὶ μαθηματικῆς, ὡς μὴ προσηκόντων, αὐτόθεν συμφανές. Τοῦ δὲ μὴ ἀνυπόστατον ὑπάρχειν οὐδαμῶς αὐτὴν ἐρρύσατο, ἀλλὰ καὶ εἰς τὸ εἶναι τοιαύτην μᾶλλον συνηγωνίσαστο. (*Math.* I 77–80)

In the first book of his *On Grammar* Chaeris says that complete grammar “is a skill which diagnoses from expertise <and research> the things said and thought by the Greeks as accurately as possible, except those things which come under other kinds of expertise”. This last he did not add idly, since of the things said and thought by the Greeks some come under various kinds of expertise and others do not, and he does not think that grammar is the expertise or skill of those which come under other kinds of expertise [...]. For it is immediately obvious that he freed grammar from the sorites puzzle and separated it from alien precepts, those of music and mathematics, inasmuch as they are not relevant. However, he by no means saved it from being non-existent, but rather he actually helped to establish that it was just so (transl. Blank [1998] 17–18).

(iv) Finally, Sextus Empiricus mentions Demetrius Chlorus and “certain other grammarians”, who offered a different definition of grammar—one which Sextus also attacks—and this rebuttal rounds off his discussion of the concept(ions) of grammar.

Δημήτριος δὲ ὁ ἐπικαλούμενος Χλωρός καὶ ἄλλοι τινὲς τῶν γραμματικῶν οὕτως ὠρίσαντο “γραμματικὴ ἐστὶ τέχνη τῶν παρὰ ποιηταῖς τε καὶ τῶν κατὰ τὴν κοινὴν λέξεων εἰδησις”.²³ μένουσι δὲ καὶ τούτους αἱ αὐταὶ ἀπορίαι. οὐτε γὰρ πάντων τῶν παρὰ ποιηταῖς λεγομένων δύναται εἶναι τέχνη γραμματικὴ οὔτε τινῶν (*Math.* I 84).

23 Di Benedetto [1966] 32 suspected that the original definition was: γραμματικὴ ἐστὶ τέχνη τῶν παρὰ ποιηταῖς τε καὶ < συγγραφεῦσι καὶ > τῶν κατὰ τὴν κοινὴν λέξεων εἰδησις. “Grammar is an expertise of what is in poets < and prose writers > and a knowledge of the words in common usage”. He is followed by Lallot [1995b] 79, but not by Blank [1994] 156, n. 23.

Demetrius, who is known as Chlorus, and certain other grammarians defined grammar as follows: ‘grammar is an expertise of what is in poets and a knowledge of the words in common usage’. The same problems remain for them too. For grammar can be an expertise neither of all the things in poets nor of some of them (transl. Blank [1998] 19).

Sextus’ account calls for a synthetic commentary (for analytical comments on separate sections, see the highly valuable study of Blank [1998]).²⁴

(1) First, concerning matters of chronology:

At the outset it can be noted that, *pace* a number of readings of Sextus’ text (such as that of Di Benedetto [1966]), we should not take Sextus’ overview as a chronologically ordered digest of grammar definitions. As a matter of fact, while Ptolemy the Peripatetic’s activity can most probably be dated²⁵ to the second century BC, and thus is anterior to, *e.g.* Asclepiades, the chronological placing of the definitions of the three first century BC Alexandrian philologists—Asclepiades, Demetrius Chlorus, and Chaeris—is a matter of dispute. Whereas Barwick [1922] 219, 284–285 claims that Chaeris’ definition would be more recent than Asclepiades’, basing himself on the argument that Chaeris’ exclusion of “those things which come under other kinds of expertise [than grammatical expertise]” has to be interpreted as a correction to Asclepiades’ definition, Chaeris’ correction (or restriction) can also be explained as a direct reaction to Dionysius Thrax’ definition. And, regarding the relationship between Asclepiades and Demetrius Chlorus, Blank [1998] 144, n. 112 convincingly argues against Di Benedetto’s [1966] 392 assumption that Demetrius’ definition would be a response to Asclepiades’, and thus would be more recent. Again, Demetrius’ definition can be interpreted as a refinement of Dionysius’ definition.

(2) Second, on Sextus’ documentation, in its relationship to distinct phases in the general approach of grammar. It is important to recognize that Sextus Empiricus was not writing his attack on the grammarians on the basis of first-hand materials gathered by himself. For his overview of definitions of grammar and of the subdivision of grammar, Sextus based himself upon extant syntheses and criticisms. As shown by Gigante [1981a], Rispoli [1992] and Blank [1998] XLIV–L Sextus heavily relied on Epicurean sources, and we know that the Epicureans attacked grammar and, in general, the liberal arts (cf. *Math.*, I 41: “grammar . . . the boldest of the sciences, practically promising the Sirens’ promise”). Given the Epicureans’ disdain for grammar, and in

24 See also Dalimier [2006], according to whom Sextus was attacking a type of (school) grammar that was no longer in use at his time.

25 Siebenborn [1976] 105, n. 1 dates him immediately after Dionysius Thrax (c. 170–90 BC).

view of Sextus' frequent use of Epicurean *reductiones ad absurdum* in the face of principles, education and technical expertise, one can surmise that Sextus made use of an Epicurean critical work on a grammatical synthesis. The latter may have been the synthesis on grammar compiled by Asclepiades of Myrlea, who may thus have been the last link in the chain of definitions listed by Sextus. This would point to Asclepiades as a key figure in the history of definitions of grammar, and maybe as the author of a doxographical corpus of such definitions. Asclepiades of Myrlea (Blank [1998] XLV–XLVI; Pagani [2007a] 12–16) seems to have studied in Alexandria, before going to Rome, and later to Southern Spain as a grammarian and teacher. Next to astronomical and geographical works, he wrote literary commentaries, and works on grammar, among which a book on the lives of grammarians (cf. *FGHist* 697 F9–11), and a work *On Grammar*. The latter is cited by Sextus (1, 252) and was probably used by Dionysius of Halicarnassus and Quintilian.

Given (a) the density of information in Sextus' sections on definitions of grammar and on the parts of grammar, and given (b) the fact that doxographical information is generally followed by a destructive criticism framed in a typically Epicurean fashion, viz. showing the uselessness or superfluity of principles and rationalized procedures, Sextus' information has to be properly contextualized. According to Blank [1998] XLVII, Sextus took as his primary source "an Epicurean treatise in which Asclepiades' work *On Grammar* was demolished. On each topic in turn it will have contained more or less extensive excerpts from Asclepiades followed, either immediately or after the exposition of Asclepiades' whole system has been completed, by a refutation aimed at showing that grammar is not a *technê* and is not useful. The technique of excerpt and criticism is familiar from Philodemus of Gadara's works on *Poems*, *Music*, and *Rhetoric*. We know of no such work by Philodemus (c. 110–30 BC) on grammar, but it is clear that Sextus' source was someone like Philodemus or his teacher Zenon of Sidon (c. 160–79 BC), who is known to have used a similar format in some of his works".

The following line of evolution might be suggested for definitions of 'grammar' in Greek antiquity.

INITIAL PHASE (Antidorus) – Eratosthenes : grammar as ἔξις

SECOND PHASE (Aristarchus) – Dionysius Thrax : grammar as ἐμπειρία

THIRD PHASE refinements / criticisms of the Alexandrian definition(s) of grammar

Ptolemy the Peripatetic → correction to Dionysius' definition; Chaeris → refinement / explicitation based on Eratosthenes' and (to a lesser extent) Dionysius' definition; Demetrius Chlorus → refinement of Dionysius' definition

FOURTH PHASE critical synthesis

Asclepiades of Myrlea → overview of, and corrections to the definitions of Dionysius, Ptolemy, Chaeris, Demetrius

FIFTH PHASE Epicurean attacks on the claimed scientific nature of grammar:

unattested definitions: (Zeno of Sidon) + (Philodemus) → attack based on Asclepiades' synthesis

SIXTH PHASE sceptical reduction of the status and existential grounds of grammar: Sextus Empiricus, basing himself on the Epicurean attacks.

(3) In the third place, we should consider the doctrinal content of Sextus' documentation.

The definitions commented upon by Sextus Empiricus are those of Dionysius and subsequent scholars. Dionysius' definition has already been analysed (cf. *supra*) and we can now take a closer look at those of his successors.²⁶ From Sextus' text it does not appear whether Ptolemy the Peripatetic proposed a definition of his own: if he did, it seems that his definition of γραμματική did not contain the term ἐμπειρία as a *definiens*, but rather the term τέχνη. We cannot exclude the possibility that Ptolemy defined γραμματική as a "knowledge" dealing with writings (γράμματα), or something similar (e.g., writings in poetry and prose), but it is also possible that he merely replaced ἐμπειρία in Dionysius' definition with τέχνη. Anyhow, the crucial element in Ptolemy's deviation from Dionysius was the insistence on the nature of grammar / grammatical knowledge as being an art, a practical skill, acquired by *study and training*, the latter combined aspect being the distinctive feature with respect to παρατήρησις ('observation'), on the one hand, and συγγυμνασία ('joint exercise') on the other. Clearly, Ptolemy also wanted to define the status of grammar with reference to Plato's and, especially, Aristotle's theory of knowledge and philosophy of science.

The two remaining authors in what we have labeled the 'third phase' (cf. *supra*), viz. Chaeris and Demetrius, clearly follow in the steps of Dionysius, while correcting his definition. Interestingly, Chaeris takes up again (deliberately?) the term ἔξις which we encountered in Eratosthenes' definition of 'grammar', although he links ἔξις to τέχνη: as a matter of fact, he defines grammar as a skill / aptitude / condition (ἔξις) derived from art / expertise (τέχνη) or making use of τέχνη. The syntagm ἀπὸ τέχνης (which Barwick, followed by Blank [1998] 18, n. 23, restores as ἀπὸ τέχνης καὶ ἱστορίας, on the basis of *Sch. Dion. T.* 118.11) can be read as indicating an absolute origin or as indicating an

26 Blank [1994] 155–157 and [1998], Lallot [1995b] 78–81, and Prencipe [2002] 56–59.

‘intermediate’ origin in the process of grammar’s specific activity, viz. that of distinguishing / diagnosing; these are the two possible readings of the sequence (φησι) γραμματικὴν ἕξιν εἶναι ἀπὸ τέχνης διαγνωστικὴν. Chaeris’ definition is also interesting because it speaks of τελεία γραμματική: while the term might be a reminder—and a narrowing down—of Eratosthenes’ term παντελής, we must ask whether Chaeris understood by τελεία γραμματική, either ‘complete grammar’ (cf. Blank) or ‘perfect grammar’ (cf. Bury) or, maybe, ‘goal-oriented / well-focused grammar’. The latter meaning would fit well with the adverbial restriction applying to the act of distinguishing / diagnosing and its object: viz. grammar as a skill which distinguishes / diagnoses Greek language and thought (or: the contents said and thought by the Greeks, τῶν παρ’ Ἑλλησι λεκτῶν καὶ νοητῶν) “in the most precise way / as accurately as possible (ἐπὶ τὸ ἀκριβέστατον)”. This would imply that in Chaeris’ view grammar indeed cannot be more than an art-based property or capacity, never attaining an absolute ending-point.

A further interesting feature—and one that lines up again Chaeris more with Eratosthenes than with Dionysius—is the explicit denial of grammar as being ‘universal’ in scope: the field of grammar extends as far as the τέχνη of grammar extends, and the grammarian’s domain is that of the λεκτά and νοητά of the Greeks about which he can speak with competence. Chaeris thus imposes limits on the grammarian’s ‘knowledgeability’: in other words, his ἕξις is *not* παντελής. By this final addition (πλὴν τῶν ὑπ’ ἄλλαις τέχναις), Chaeris seems to blur his initial distinction between ἕξις and τέχνη, since grammar is so defined, limitatively, with respect to other τέχναι.

In how far did Chaeris take into account the previous definition of grammar by Dionysius Thrax? This is not clear from Sextus’ account; as we have pointed out, Chaeris’ definition reported by Sextus is more reminiscent of Eratosthenes’, although the fact that to Dionysius Thrax a τέχνη γραμματική was attributed, may have been (partly) responsible for Chaeris’ use of the term τέχνη and for his concern in delimiting the τέχνη γραμματική of other τέχναι. It is also possible that Chaeris’ adverbial syntagm ἐπὶ τὸ ἀκριβέστατον was, to some extent, inspired by Dionysius’ ἐπὶ τὸ πολὺ (although the latter adverbial phrase does not qualify a specific procedure of distinguishing / diagnosing).

With Demetrius Chlorus we find ourselves much closer to Dionysius’ definition. As a matter of fact, Demetrius’ definition reported by Sextus follows the definitional structure of the one given at the beginning of Dionysius’ *Techné Grammatiké*, but there are a number of differences:

(a) The *definiens* of γραμματική in Demetrius’ definition is τέχνη, not ἐμπειρία, but there is a second *definiens* in the latter part of the definition: εἰδησις.

(b) The definition of γραμματικὴ is not a simple proposition, but a combination of two propositions introduced by the copula ἐστι.²⁷

(c) Demetrius' text does not contain an adverbial phrase of the type ἐπὶ τὸ πολὺ / ἐπὶ τὸ πλεῖστον.

(d) Demetrius does not use a general term such as γράμματα or λεγόμενα (or λεκτά), but speaks of λέξεις 'words / word forms / expressions', a term favored by Aristotle in his *Poetics*,²⁸ but occurring also—in the singular—in the transmitted text of Dionysius' *Technê Grammatikê*,²⁹ clearly as an equivalent for μέρος τοῦ λόγου ('part of speech').

(e) Possibly the most innovating feature of Demetrius' definition is the reference to, and the use of the terms, κοινὴ συνήθεια, 'common usage'.

The wording of Demetrius' definition seems to suggest that he saw grammar as a unitary, though twofold domain (and competence): on the one hand, as the 'technically' acquired expertise in dealing with poetic texts, and, on the other hand, as the knowledge-by-acquaintance (or customarily developed mastery) of the language as commonly used.

While Demetrius' definition of grammar comes close to Dionysius', it contains a number of interesting deviations, most of which can be read as refinements.

With Asclepiades we reach the stage of critical synthesis: on the one hand, Asclepiades seems to have had at his disposal the alternative definitions (or refinements) proposed with respect to Dionysius' definition, and, on the other hand, he seems to have received his education when Dionysius' *Technê* (in the form it had in the first century BC) had already obtained the status of a reference text (a fact that should not be interpreted as if the *Technê* were an absolutely authoritative text: Asclepiades' criticism precisely demonstrates that such was not the case). Asclepiades' lost work *Peri grammatikês* seems to have been concerned with a theoretical evaluation, and criticism, of Dionysius' *Technê*. The work probably derived its inspiration from Stoic reflections on grammar, and on fields of study in general, and its principal sources then may have been Diogenes of Babylon (3rd–2nd cent. BC) and Crates of Mallos (2nd cent. BC). According to Sextus Empiricus (I, 79) it was Crates who, taking up the terminological discussion concerning the qualities of *kritikos*

27 This is the interpretation of Blank, which we follow: "grammar is an expertise (τέχνη) of what is in poets and a knowledge (εἰδησις) of the words in common usage". However, Bury [1949] 51 reads the sentence in a different way, taking γραμματικὴ τέχνη as the *definiendum*, and εἰδησις as the *definiens*, with a coordinated genitival complement: "The Art of Grammar is knowledge of the forms of speech in the poets and also in common usage".

28 Cf. Swiggers-Wouters [2002b] 102–105.

29 *E.g.* G.G. I 1, 46.3: ῥήμά ἐστι λέξις [...], "a verb is a part of speech [...]."

and *grammatikos* (cf. *supra*), distinguished between their respective roles, and who placed the grammarian on an inferior level: for Crates, the grammarian dealt with linguistic forms (*i.e.* their phonetic, prosodic, and morphological aspects), whereas the ‘critic’ was required to possess an overall knowledge. Of course, philological activity, when viewed in its most extensive conception, had to go beyond the competence of the grammarian. Sextus (I, 248–249) also reports that a pupil of Crates, Tauriscus, proposed a tripartition of the field of *kritikê*, dividing it into a rational (*logikon*), empirical (*tribikon*) and historical (*historikon*) part. In this tripartition³⁰ the subject matters dealt with by the grammarian are redistributed over the three parts of the *kritikê*, and are thus not assigned to a single subdivision. As pointed out by Blank [2000] 406, Tauriscus’ division of *kritikê* parallels ancient debates concerning levels of knowledge and types of approaches in medical practice:

The salient feature of Tauriscus’ catalogue of the ‘parts’ subservient to *kritikê* is their division according to epistemological factors: each ‘part’ must have included or comprised rules belonging to one of these three modes of understanding or inquiry, ‘rational, empirical, historical’, which the critic must apply in order to ‘judge’ literary works. Each of the three labels, ‘rational’, ‘empirical’, ‘historical’, is familiar from the debates surrounding medical empiricism. In empiricist medicine *logikos* is of course the name given to the opposition ‘rationalists’, while ‘practice’ (*tribe*) is the practical exercise of experience” (Gal. *Subf.* 48.25). ‘Practiced’ (*tribikê*) experience is that which results from the use of ‘transition to the similar’ or analogy; it is so called because it takes much practice and cannot be used by just anybody (Gal. *Sect.* I, 69.1; cf. *Subf.* 45.20; 49.17). Finally, ‘history’ (*historia*) was the second pillar of empirical medicine, comprising the detailed record of the personal experience (*autopsia*) of other physicians (cf. Gal. *Subf.* 67.4).

Asclepiades’ division of grammar, with reference to Dionysius Thrax’ work, should also be related to (Stoic) attempts at dividing scholarly activities into distinct ‘parts’ or ‘tasks’. According to Sextus’ account, Asclepiades’ contribution on this issue consisted in (a) subdividing grammar (*grammatikê*) into three parts (Sext. *Emp.* I, 252: “Asclepiades in his *On Grammar* said the first parts of grammar were three: the expert, the historical, and the grammatical”), and (b) in arguing that Dionysius’ partition into six parts (cf. *supra*)

30 The *logikon* part covers phonetics, orthography, morphology, and syntax; the *tribikon* part the analysis of dialects and styles/registers; the *historikon* part deals with glosses, rare words and realia.

was philosophically flawed, because it involved a confusion between parts of a field, subparts and results (Sext. Emp. I, 250–251). Asclepiades' three parts corresponded to the following division: the expert (*technikon*) dealt with the systematization of grammatical knowledge, the grammatical part (*grammatikon*) with the interpretation of literary texts, including reading, explanation of figures, discussion of styles and dialects, and literary judgement; and the historical part (*historikon*) was concerned with glosses and 'histories' (explanation of realia). It thus seems that Asclepiades reorganized Dionysius' sextuple division as follows:

Dionysius		Asclepiades
reading aloud	→	<i>grammatikon</i> part
interpretation according to figures	→	<i>grammatikon</i> part
explanation of glosses/histories	→	<i>historikon</i> part
etymologies	→	<i>technikon</i> part
analogy	→	<i>technikon</i> part
literary judgement	→	<i>grammatikon</i> part

The division of grammar into parts was to become a prominent topic in the scholia on Dionysius Thrax (cf. *infra*).

It is clear that Asclepiades in some sense aspired to be 'master above master', improving upon a text and an author commonly used in philological circles: his emendation of Dionysius' definition of grammar is based on a very subtle argument, making a distinction between grammar and the grammarian. The latter distinction could hardly have been acceptable to authors like Eratosthenes (and maybe also Dionysius), but it allows Asclepiades to show his acquaintance with Plato's theory of knowledge (cf. *Grg.* 464c–465a and *Phlb.* 55e–56d), through the distinction between 'firm' or 'fixed' (πάγια) τέχναι, i.e. the non-mathematical kinds of expertise, and the 'conjunctural' (στοχαστικά) τέχναι, which are subject to chance, such as navigation and medicine. Asclepiades assigns grammar (not the short-lived activity of the grammarian) to the domain of firm arts, just like 'music and philosophy'. He then qualifies grammar, just like Demetrius, as an εἰδησις, but a knowledge embracing *all* the things said in poets and writers: while the grammarian, in view of his short-livedness, will be acquainted only with most of the speech of the poets and writers, grammar is the knowledge of all that (ἐπεὶπερ οὗτος [sc. γραμματικός] μὲν τυχὸν ἴσως ἐπιστήμων ἐστὶ τῶν <πλείστων τῶν> παρὰ ποιηταῖς τε καὶ συγγραφεύσι λεγομένων, ὀλιγόβιον καθεστῶς ζῶον, ἢ δὲ γραμματικὴ πάντων εἰδησις) (*Math.* I 73). From this argumentation two facts follow, which appear in Asclepiades' definition:

(a) grammar cannot be defined as an ἐμπειρία, since it extends beyond the ‘empirically’ acquired knowledge of individuals; hence, it must be defined as a τέχνη, and more particularly as a ‘firm’ art.

(b) grammar cannot be said to be a limited or limitative knowledge; hence it cannot be defined with a restrictive clause (ἐπὶ τὸ πολὺ / πλείστον), but should be circumscribed in absolute terms: “grammar is (the) expertise of what is said in poets and prose writers” (γραμματική ἐστι τέχνη τῶν παρὰ ποιηταῖς καὶ συγγραφεύσι λεγομένων). Evidently, such a definition lent itself to skeptical attacks.

5 Sextus Empiricus: The Deconstruction of (the Definitions of) Grammar

As will be clear from the preceding analyses, our main source for the ancient Greek definitions of grammar is Sextus Empiricus. As a matter of fact, in his *Against the grammarians* Sextus deals explicitly with the status of grammar as a discipline. His examination is especially interesting for two reasons:

(a) on the one hand, Sextus wants to document his *critical* examination through a scrutiny of definitions of grammar available to him;

(b) on the other hand, since his aim is to assess the status of grammar, he specifically pays attention to the way in which the authors *define the nature and function of grammar*.

At the beginning of the third section of his treatise Sextus explicates his approach, with reference to Epicurus’ methodological principle:

Ἐπεὶ οὐτε ζητεῖν οὐτε ἀπορεῖν ἔστι κατὰ τὸν σοφὸν Ἐπίκουρον ἄνευ προλήψεως, εὖ ἂν ἔχοι πρὸ τῶν ὄλων σκέψασθαι τί δ’ ἔστι ἡ γραμματική, καὶ εἰ κατὰ τὴν ἀποδεδομένην ὑπὸ τῶν γραμματικῶν ἔννοιαν δύναται συστατὸν τι καὶ ὑπαρκτὸν νοεῖσθαι μάθημα (*Math.* I 57).

Since according to the wise Epicurus it is neither possible to investigate nor to come to an impasse without a preconception,³¹ we would do well first of all to examine what grammar is and whether a coherent and real study can be conceived according to the idea of it handed down by the grammarians. (transl. Blank [1998] 14).

31 Sextus’ term *prolepsis* is generally translated as ‘preconception’, but this term should not be taken in its present-day acception: it refers to a basic, first-hand idea that we have of a particular (type of) object. It is therefore not a preconceived idea, but an empirically based apprehension.

The key terms here are (a) μάθημα, and (b) συστατόν / ύπαρκτόν. The term μάθημα refers to a rational, principle-based study (which can be either an art or a science) of an object (or, rather, a domain of objects). The two qualifying adjectives συστατόν and ύπαρκτόν more precisely define the nature of the μάθημα aimed at: it should be systematic / coherent (συστατόν) and real(istic) (ύπαρκτόν).

Now, Sextus' examination will consist in showing that the definitions of 'grammar' given by grammarians are incoherent and that they entail that their object cannot be real. Let us have a look at how Sextus proceeds.

(1) He first deals with Dionysius Thrax' definition, as expertness regarding most of the speech of poets and prose writers. Sextus applies to it a *reductio ad absurdum*: Dionysius and his followers must mean an expertness in either 'all' of speech, or some of it. But if it is 'all', then the object of grammar is endless (speech being endless). But of the endless, there is no έμπειρία. If it is 'some' of the speech, either this amount is too insignificant in order to speak of 'expertise', or it refers to a large amount of factual knowledge, but then we are confronted with the problem of defining a critical threshold (Sextus appeals to the sorites argument or argument of the 'heap': if we diminish a heap, say of straw, by taking out, successively, pieces of straw, at what time is the heap still a 'heap', and at what time is it no longer a heap?).

(2) Asclepiades' definition of grammar as 'all embracing' is then critically examined by Sextus, who concludes that such a definition entails the non-reality of grammar: either because the possessor of such a general, universal knowledge cannot exist (as commonly recognised), either because grammar as a 'system' of the conceptions concerning grammar cannot exist, since it would be a system of necessarily incomplete cognitions (held by individuals).

(3) Chaeris' definition of grammar as a diagnostic skill, while being more coherent than Dionysius' definition, precisely leads to the non-existence of grammar, in Sextus' view. As a matter of fact, in assigning to grammar the task of accounting for all the things said and thought by the Greeks, Chaeris posited an unlimited domain of study (for human beings). In addition, Sextus criticises Chaeris' attempt at demarcating grammar from other arts, since this leaves us with a dilemma, lending itself to a *reductio ad absurdum*:

άλλως τε ήτοι τεχνικήν οίεται είναι την έξιν ή άτεχνον και ει μέν τεχνικήν, πώς ούκ αύτην ειπε τέχνην αλλά τó άφ' ού έστιν; ει δέ άτεχνον, έπει ού δυνατόν δια του άτέχνου τó τεχνικόν όράσθαι, ούδδ συστήσεται τις γραμματική έξις τεχνικώς διαγινώσκουσα τά παρ' Έλλησι σημαίνοντά τε και σημαίνόμενα. (*Math.* I 83).

And furthermore, Chaeris either thinks the skill is expert or non-expert. If it is expert, why did he not call it itself an expertise, instead of that form which it arises? But if it is non-expert, since it is not possible to observe the expert by means of the non-expert, neither will any grammar exist as a skill expertly diagnosing the signifiers and signifieds of Greeks (transl. Blank [1998] 19).

(4) Finally, there is Demetrius Chlorus' definition of grammar as the expertise of what is in poets and knowledge of the words in common usage. The first part entails a non-realistic object: the grammarian cannot have the expertise of all that is spoken about by poets, and if the extension of his competence is lowered, it becomes impossible to distinguish it definitely from the expertise of philosophers, physicians etc. The second part of the definition shows similar difficulties: common usage is unlimited, and of unlimited things there is no knowledge. And, once again, if the extension of knowledge of common usage is diminished, the 'expert knowledge' falls short of generality.

Sextus' critical examination of the definitions of grammar provided by these authors thus leads to the conclusion that grammar, defined in these ways, lacks any realistic foundation:

Δείγματα μὲν οὖν χάριν ταῦτ' εἰρήσθω εἰς τὸ ἀνυπόστατον εἶναι τὴν γραμματικὴν ὅσον ἐπὶ τῇ παρὰ τοῖς γραμματικοῖς αὐτῆς ἐπινοία (*Math.* I 90).

So let this stand to show the non-existence of grammar, at least on the grammarians' conception of it (transl. Blank [1998] 20).

The poignancy of Sextus' conclusion of course lies in the suggestion that precisely the definitions of grammar given by grammarians show that there cannot be a domain of study that corresponds to the defining characteristics mentioned by these authors. In a further stage Sextus then shows the lack of method and coherence of the parts of grammar as distinguished by the grammarians.

6 Dionysius Thrax' Definition of Grammar and Its Afterlife

Of all the definitions of grammar that are attested before Sextus Empiricus only one seems to have enjoyed lasting continuity. Whatever may be the reasons for the 'eclipse' of other definitions, the one proposed by Dionysius was perpetuated in the training of philologists and in school room practice.

It is likely that in its original form Dionysius Thrax' *Technê* covered the six parts of grammar specified at the beginning of the work; subsequently, the work may have undergone a condensation, with a focus on the 'technical' part of grammar, a part for which specialized terminology as well as basic distinctions were already in place in the 2nd/1st c. BC (cf. Matthaios [1999]). We lack precise information about the evolution of the organization and doctrinal refinement of Dionysius' *Technê*, but one cannot dispute the fact (a) that the work was already an important reference for Asclepiades and, later, Sextus Empiricus, and (b) that in the course of time, the work developed into a manual for the instruction of grammar, as is clear from the papyrological tradition (cf. Swiggers–Wouters [1995a] 96–97) and from the Byzantine scholia on the *Technê*.

In the papyrological documentation (published by Wouters [1979]) we find confirmation of the process of doctrinal uniformization—allowing for some fluctuation and variation (cf. Swiggers–Wouters [1995a])—, but the papyri contain little information on the definition of grammar and on the status of grammar as a discipline. Only in *P.S.I.* 1.18 (5th c. AD; Wouters [1979] n. 5), which contains the opening paragraph of the *Technê* and Supplement 3 (cf. *supra*, note 11) on metrical feet, do we find the almost literal reproduction of the definition and division of grammar as found in the transmitted text of the *Technê*. In the definition of grammar given in *P.S.I.* 1.18, ll. 9–14 there is only a slight variation with respect to that of the *Technê* as transmitted by the medieval manuscripts (cf. *supra*, § 3): γραμματική ἐστὶν ἐμπειρία τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσιν ὡς ἐπὶ τὸ πολὺ λεγομένων (Wouters [1979] 122 and 124), whereas the medieval manuscripts read ὡς ἐπὶ τὸ πολὺ. Together with *P. Hal* 55A (5th c. AD; Wouters [1979] n. 4)—a fragmentarily preserved parchment text, with parts of §§ 12 and 20 of Dionysius' manual—*P.S.I.* 1.18 should be considered the first direct copy of the *Technê*.

As to definitions of grammar, the Byzantine commentaries precisely focus on the one given by Dionysius, and only offer scant information on other definitions, which seem to have been marginalized by the focal interest on the *Technê*. A divergent definition³² mentioned in the scholia is the one attributed to Tyrannio of Amisos (2nd/1st c. BC), a pupil of Dionysius Thrax: his definition

32 Another definition of a first century BC author is preserved only in a Latin source (and in a Latin translation), viz. Aristo of Alexandria's definition quoted by Marius Victorinus: *Grammatica est scientia poetarum et historicorum intellegere, formam loquendi ad rationem et consuetudinem dirigens* (*G.L.* VI, 4.7–8). This definition reflects the view of grammar as dealing with poetry and prose writings, but in addition it seems to apply a larger formative, ethical role of the grammarian (*ad rationem et consuetudinem dirigens*).

(γραμματική ἐστὶ θεωρία μιμήσεως, ‘grammar is the theoretical/philosophical knowledge of *mimesis*’), is remarkable in view of the use of the terms θεωρία and, especially, μίμησις. Since Tyrannio’s definition is quoted in isolation from its original context, it is hard to interpret it. Clearly, it involves a more extensive conception of grammar, in relation to the analysis of literary works: the term *mimesis* may be a reference to Aristotle’s view of (literary) language as a representation (or ‘simulation’) of reality. ‘Grammar’ would then be the knowledge required to explain the process and product of literary expression and ‘representation’.

In the scholia much more attention is given to the division of grammar. It is, however, extremely difficult to obtain a clear evolutionary picture of the discussion, since the internal chronology of the scholia is unclear and, in addition, we cannot determine precisely on which stage of the textual transmission of the *Technê* the scholiasts’ commentaries are based. In general, the scholiasts³³ seem to assume (1) a distinction between parts (*merê*), subparts (*moria*) and tools (*organa*) of grammar—often Dionysius Thrax is criticized by his scholiasts for not having made such a distinction—, and (2) a quadripartite³⁴ distinction for both the parts and the tools: the four parts are *diorthôtikon* (establishing the correct text wording; this part is lacking in the *Technê* of Dionysius), *anagnôstikon* (reading aloud), *exêgêtikon* (interpretation of the text), and *kritikon* (literary and text-historical judgement), and the four tools are *glôssêmatikon*, *historikon*, *metrikon* and *technikon*. Of course, in practice, the tools cannot be uniquely correlated with distinct parts, but nor can they be strictly separated from each other: e.g., the *glôssêmatikon* tool occurs in the *diorthôtikon* and *exêgêtikon* parts, and it overlaps with the *historikon* tool.

7 Conclusion

The above survey and analysis of definitions of grammar in ancient Greece has shown:

(a) that, following a period of philosophical interest in the study of language, grammar became an autonomous field of study, which received its definition as a discipline on its own;

33 For a very useful tabulation of the contents of the scholia dealing with the division of grammar (*Sch. Dion. T.* 10.8ff, 12.3ff, 13.7ff, 115.8ff, 168.19ff, 170.17ff, 452.34ff, 471.8ff), see Blank [2000] 412–413.

34 See Usener [1892], who attributes the quadripartition of grammar to Tyrannio.

(b) that the definitions given of grammar testify to an explicit concern with assessing the epistemological status of grammar, in its relation to the various degrees of knowledge; as such, the definitions of grammar transmitted to us should be contextualized in the larger frame of ancient philosophy of science;

(c) that all the extant definitions reflect a conception, and a practice, of grammar as a (literary) text-based discipline, with only a sporadic integration of the study of 'common speech';

(d) that, through the tradition of philosophical training and of grammar teaching in schools, the definition of grammar as the (propaedeutic) discipline preparing students for dealing with literary texts seems to have imposed itself in ancient Greek culture and in Byzantine times. This evolution cannot be separated from a 'factual' development: the creation of didactic tools for the teaching of grammar—manuals, paradigm tables, lists of exercises—, a process in which grammar became an object, and a primordial condition of education in general and thus a cornerstone of 'cultural capital'. In the course of this process grammar became, next to an object of study, an instrument of knowledge.

Typology of Philological Writings

1 Introduction

A categorical warning was given in a recently edited volume that we should “resist a single definition” of the term philology,¹ and the evidence and reflections presented in that volume’s contributions makes this advice compelling. However, a typology of philological writings, as will be undertaken here, has to be based at least on a working definition of what we mean by ‘philology’ and, by extension, what we mean by ‘philological writings’.

Three main conceptualizations of philology—all have found proponents from the nineteenth century until today—can be distinguished. In its narrowest sense, philology is roughly synonymous with textual criticism and refers to everything that goes into producing critical editions. The broadest understanding, on the other hand, takes philology to comprise every kind of literary

1 Gurd [2010] 8. See also Ziolkowski [1990]; Schwindt [2002].

or text-based scholarship, extending the term's range to include also studies of linguistic, historical, or cultural nature. Finally, there is a middle position between these two extremes. It represents what seems to be to most common understanding, sometimes made explicit, sometimes only implied, and it will be adopted in this contribution: according to this understanding, philology has two main purposes: first, to restore, preserve, and transmit important texts from the past; and, second, to understand and interpret these texts adequately.² The two core areas of philology are therefore textual criticism, which aims at establishing a sound text, and textual exegesis or interpretation, which aspires to arrive at and adequately bring out a text's meaning. In its dual nature, philology is scholarly *Textpflege*, the competent, considerate, and caring reception, cultivation, and appropriation of texts that are considered important and valuable enough to deserve, and difficult enough to require, such privileged treatment. Whenever scholarly *Textpflege* manifests itself in the production of new writings,³ we can speak of philological writings. For additional terminological clarity, the original important texts that have become objects of philological work may be referred to as 'primary texts', to be distinguished here from the philological writings that they elicit.⁴

The extent to which and the state in which ancient philological writings have survived is dishearteningly poor.⁵ It may be for this reason that specifically typological studies of ancient philological writings are rare. Pfeiffer's and Pöhlmann's accounts of ancient philological scholarship and its development are fundamentally historical.⁶ Dickey, on the other hand, has largely structured the longest and most substantial chapter⁷ of her rich guide to ancient Greek scholarship by individual primary authors, in the order of their relative importance within ancient literary and philological scholarship (*i.e.*, a section on ancient Homeric scholarship, followed by a section on ancient scholarship on the comic poet Aristophanes, followed by a section on Euripides, and so forth).

2 Cf., *e.g.*, Pfeiffer [1968] 3 and 134; Bühler [1977] 44; Wilson [1997a] 87; Dickey [2007] 3.

3 Cf. Montanari [2011a] 15 with a general definition of philological-scholarly works as "text on a text" or 'text about a text'.

4 For 'primary texts' in a related context (and for the term's origin in Michel Foucault's *L'ordre du discours*, 1970), see Dubischar [2010] 41–42.

5 The philological works of the discipline's truly foundational figures (Zenodotus, Callimachus, Aristophanes of Byzantium, or Aristarchus) are all lost. The survey by Wilson [1997a] 94–95 of what little has survived intact lists only five titles.

6 Cf. Pfeiffer [1968] on beginnings to the end of the Hellenistic period; Pöhlmann [1994] on beginnings to the time of Septimius Severus. Other concise historical overviews include Montanari [1993b] 259–281; Wilson [1997a]; [1997b]; Kaster [1997]; Dickey [2007] 3–17.

7 'Scholia, Commentaries, and Lexica on Specific Literary Works' in Dickey [2007] 18–71.

So far only Montanari has given classificatory overviews of ancient philological writings. In the more comprehensive of the two publications, the large field of Greek erudite literature is divided thematically and typologically. With regard to theme (and function), Montanari distinguishes 1) philology, 2) grammar, and 3) tradition and interpretation of texts,⁸ of which the first and the third groups fall into the realm of this contribution. Even more important for the purposes of this study are Montanari's typological distinctions, which are the following:⁹

- Editions, commentaries, scholiography: within this section, in addition, commentaries (*hypomnemata*) are set apart from monographs (*syggrammata*).
- Lexicography, with the further distinction between *glossai* and *lexeis*
- Grammar
- Paremiography

Montanari's earlier typological study concentrates on the narrower field of Homeric philology preserved on papyri. But due to Homer's central position in ancient scholarship and ancient education, the distinctions that Montanari establishes here also have general relevance:¹⁰

- *Hypomnemata* (commentaries)
- Alphabetical lexica
- Anthologies
- Mythographical *historiai*
- *Hypotheseis*, with further distinctions between reworkings and summaries on the one hand and real *hypotheseis*, which come in two subtypes, on the other
- The so called *Scholia minora*, with further distinctions between the *Scholia minora* proper and two variants, namely, paraphrases and lexica

Montanari's helpful and admirably documented overviews represent the current state of research in this area, and it already gives a good indication of the formal variety of ancient writings of literary scholarship. There are points, however, that call for closer investigation. As will be seen in the course of this contribution, some types mentioned by Montanari may be differentiated further to bring out more fully the typological variance of ancient philological

8 Cf. Montanari [1993b] 235–240.

9 Cf. Montanari [1993b] 240–259.

10 Cf. Montanari [1984].

writings. In addition, Montanari's synopses are mainly descriptive and enumerative. While this is the best approach for his heuristic goals, it leaves only limited room for the pursuit of analytical or theoretical questions that might lead to a more systemically developed typology.¹¹ For this reason, the overall guiding questions for this contribution will be not only "which types of philological writings did exist?" But also: "why these types?" And: "how are they related to one another?"¹²

This study's goals and aspirations, however, come with some limitations that should also be addressed at this point. The main focus will be on charting and to some extent explaining typological diversity. This has consequences. First, a synchronistic rather than diachronistic perspective will dominate. The history of philological writings and their types will not be explored systematically. Only select developments will be addressed when and in so far as they reveal characteristic underlying systemic processes. Second, the Hellenistic period, and the Library and Mouseion in Ptolemaic Alexandria in particular, will receive the most attention in the course of the following explorations. This Alexandrocentrism is owed to the fact that, by leading ancient scholarship to its height, this historical period and these institutions also brought about the greatest and most richly developed typological diversity of philological writings. Other periods or contexts of scholarship, about which we are also less well informed than about Alexandria, will be brought into play only on certain occasions. In particular, scholia and scholiography will be considered as phenomena of reception and transmission, not as original philological production. They will therefore be briefly mentioned on two occasions but not closely studied in this contribution.

Third, and finally, systematizations or categorizations of complex fields and processes are always imperfect and tentative.¹³ Whatever order they provide comes at the price of reducing certain empirical complexities when, for instance, categorizations seem to suggest clear-cut internal or external

11 Cf. Asper [2007] 46 on the difference between mere '*Textklassenbenennungen*' and more developed '*Gattungssysteme*.'

12 Gansel [2011] 13–14 emphatically suggests that text-linguistic studies move from 'what-questions' ('*Was-Fragen*') to 'how-questions' ('*Wie-Fragen*'). Examples of comparable approaches in neighboring ancient intellectual or literary areas include Ax [2005] on Roman grammar; Asper [2007] on ancient scientific literature texts; Dubischar [2010] on mostly popularizing auxiliary texts. Ancient philological writings with their own, specific functions remain yet to be more fully explored.

13 This *caveat*, commonly made by scholars who propose new classifications, has perhaps never been expressed more directly than by Genette [1997a] 1: "At the time of writing (13 October 1981), I am inclined to recognize five types of transtextual relationships".

divisions and boundaries where there are really gradual transitions.¹⁴ In addition, classifications are always contingent on the choice of the distinguishing criterion. Any one classification or system will highlight certain differences and establish certain relations among the studied objects but *eo ipso* eclipse others. Different distinguishing criteria produce different results.¹⁵ Therefore, what will be presented here, in spite of its at times systematized appearance, makes no claim to being definitive. If the following typology of philological writings serves as a preliminary base for further discussion and exploration of this overall not yet sufficiently studied topic, it will have served its purpose.

2 Typology

The following typology will observe both the various formal structures and the functions of philological writings. This essentially text-pragmatic approach acknowledges that philological writings, in this respect like other scientific or technical texts, are essentially functional writings. They are each composed for a specific purpose, and their function largely determines their formal structure.¹⁶

The most fundamental distinction for the following typology of philological writings is that between broad-band and special-purpose types of writings.

2.1 *Broad-Band Types: Annotations, Commentaries, Monographs*

Philological scholarship, as conceived of in this study as *Textpflege*, is concerned with textual criticism and exegesis, that is, with a text's words in its meaning. Several types of writings have a functional range that is broad enough, and come in a formal structure that is open enough, to encompass both of these aspects. They may therefore be characterized as broad-band types of writings. These are marginal and interlinear annotations, commentaries, and monographs. Taking into account their different degrees of textual independence and autonomy, these types can be seen as forming a sequence, from textually least to most independent and autonomous.

At this point, however, we should remind ourselves that while philology relies on primary texts as its objects, it does not always take on the form of writing itself. Matters related to the constitution of a text or its meaning can also be

14 See also Montanari [2011a] 17.

15 Instructively demonstrated by Ax [2005].

16 For technical-scientific literature, cf. Asper [2007] 13–14, 371, and elsewhere; Göpferich [1995] 4, 66, and elsewhere. For relevant text-linguistic background see, *e.g.*, Heinemann [2008] 123–125, 136–138, and elsewhere; Gansel [2011] 67–68 and elsewhere.

discussed and taught orally. Typologically, this would constitute the zero-level, so to speak, at which no textualization of philological efforts takes place. Our testimonies for such oral philological instruction and discussion are naturally scarce. But even in the absence of any reliable information, we would have to assume the existence of oral venues of philological activity wherever philology was practiced.¹⁷ In fact, however, there is some evidence for oral (ἀπὸ φωνῆς) teaching and discussion at Alexandria's Museion.¹⁸ Timon of Phlius' satirizing image of the Museion as a cage of squabbling birds points to a strong oral (and of course contentious and competitive) element in the discourse cultivated at this famous institution.¹⁹ More specifically, Pfeiffer plausibly assumes that Zenodotus' interpretations were transmitted orally because the written commentary had not yet been 'invented'.²⁰ In addition, *Suda* (s.v. Ἀριστοφάνης Βυζάντιος) tells us that in his early years Aristophanes of Byzantium heard (ἤκουσε) Zenodotus and Callimachus.²¹ And Aristophanes himself, as Pfeiffer again assumes, "may have talked more fully to his pupils" about lexical issues that would have come up as he was compiling material for the various sections of his Λέξεις.²²

2.1.1 Annotations

With brief annotations, placed in the interlinear or marginal spaces directly on a given copy of the primary text, we enter the realm of writing. Annotations can address issues of textual constitution as well basic aspects of understanding. Before the advent of the codex, marginal or interlinear annotations had to be short. They were thus most suitable for commenting on specific points concerning individual lines or even individual words in a line of the primary text. But since annotations are written, they share the characteristic advantage of all writing: the addresser and the addressee no longer have to be in the same place at the same time because the acts of writing and reading, that is, of sending and receiving, can be, and usually are, temporally and/or spatially separated.²³ Marginal or interlinear annotations thus give the philo-

17 On the predominance of oral teaching and training in other technical areas see Meißner [1999] 139–141; Meißner [2003]; also van der Eijk [1997] 96.

logical scholar the opportunity to add his own comments to an existing primary text, by fixating them permanently onto the very same scroll that already contains the primary text. The range of potential reception, that is, of the number of people who can be reached at present or in the future, is thus at once greatly expanded.

From this point on, the original *Textträger* ('text carrier') holds two kinds of texts: the primary text that elicited the scholar's annotations as well as the added philological paratext.²⁴ Even so, paratextual annotations are a rather elementary, if not rudimentary, form of writing. They are still far cry from exploring more fully the formal, dispositional, intellectual, and stylistic features or strategies that characterize more developed technical or scientific written discourse.²⁵ Instead, the annotations' contents are, by necessity, not only directly tied to specific points of the primary text; what is more, they also lack physical autonomy since they are written on an already existing text copy.

Annotations are nevertheless philological-scholarly tools of great practical value and—as the first manifestation of serious philological efforts in writing—even of historical importance. Two main types can be distinguished: signs and explicit notes. The first philological sign (σημείον), famously 'invented' already by the first head of the Alexandrian Library, Zenodotus of Ephesus, in his edition of Homer, is the ὀβελός, a short horizontal dash ('-'), which Zenodotus used to mark spurious lines.²⁶ Considering the obvious practicality and efficiency of the *obelos*, its 'invention' may have been only a small and obvious step to take for Zenodotus. But it was a giant leap for the history of philology. Inaugurating a method of "non-destructive criticism";²⁷ Zenodotus marked the lines that he believed to be not genuine, but he did not delete them. For the first time, "an editor had provided the serious reader and scholar with an opportunity of appraising his critical judgment".²⁸

It was not until several generations later that Aristophanes of Byzantium, fourth head of the Library,²⁹ seems to have added other critical signs to the *obelos*, such as the ἀστερίσκος (asterisk: *), to mark lines that are duplicated from another place, as well as the σίγμα (*sigma*: ⊃) and the ἀντίσιγμα

24 Cf. Genette [1997b] in particular 319–343 on "notes" and 337–339 on "allographic notes". See also Moennighoff [2008]; on related topics also Barney [1991] and Grafton [1999].

28 Cf. Pfeiffer [1968] 115; also, e.g., Pöhlmann [1994] 27–28.

29 See Montana in this volume.

(inverted *sigma*: \supset) for two consecutive and interchangeable lines of the same content.³⁰ The number of philological signs and in some cases their meanings were modified and further developed by Aristarchus of Samothrace, sixth head of the Library. While there is uncertainty about some details, it seems that he used both critical and exegetical marginal signs in his editions of the Homeric poems. Critical signs were the *obelos* (–) as used by Zenodotus and Aristophanes; the διπλή περιεστειγμένη (dotted *diple*, \supset) to point to a verse in which Aristarchus' text differs from that of Zenodotus;³¹ the asterisk (*) for lines that are wrongly repeated elsewhere in the text; the *obelos* added to the asterisk (*–) where the repeated line is out of place; the *στιγμή* (·) indicating suspected spuriousness; the *antisigma* (\supset) to indicate lines in disturbed order, with the *stigma* (·) denoting the line that should immediately follow the line marked with the *antisigma*. The famous *diple* (>), widely applicable and frequently used,³² was of a different nature. It marked lines whose language or content was perhaps also exegetically noteworthy (not only with regard to textual criticism) and pointed to a corresponding explanation in a commentary (see below § 2.1.2).³³

Aristarchus' *semeia* became the standard philological signs for centuries to follow, also adopted early on by scholars in Rome,³⁴ even if a certain diversity and flexibility in the signs' uses must be accounted for.³⁵ Some papyrus fragments in fact contain un-Aristarchan signs whose use was fairly consistent nevertheless. For instance, the so-called *ancora*, an anchor-shaped diagonal upward or downward pointer often marks places where text had been omitted or draws attention to text-critical restoration in the top or bottom margin; and there were other lunate signs whose roughly moon-shaped form and meaning are related to the *antisigma*.³⁶ The meanings of other signs surviving on papyrus are less clear or vary more strongly, as those of the

30 Cf. Nauck [1848a] 15–18; Pfeiffer [1968] 178, also Slater [1986] 210.

33 Examples of Homeric lines to which Aristarchus applied his symbols in Ludwich [1884–1885] I 22; cf. also McNamee [1992] 28 (Table 1); Pfeiffer [1968] 218.

34 Cf. Pöhlmann [1994] 47.

35 Cf. Ludwich [1884–1885] I 20–21 and elsewhere; Gudeman [1922b] 1916–1917; McNamee [1992] 11. Cf. Hephaestion's dictum in *Περὶ σημείων* (*On Signs*): Τὰ σημεία τὰ παρὰ τοῖς ποιηταῖς ἄλλως παρ' ἄλλοις κέεται ('The signs for the poets are used differently for different poets', p. 73 ed. Conbruch [1904]).

36 Cf. McNamee [1992] 11–5.

diple (>) in non-Homeric texts, the simple diagonal stroke, the dotted *obelos*, or the letter X (*chi*).³⁷

Other kinds of signs facilitate a text's reading or understanding. Even though they are generally thought of as less 'philological' than especially the critical σημεῖα, they too deserve to be mentioned. They include diacritical signs (accents and breathings), metrical or colometrical signs, lectional signs (indicating, for instance, speaker change or word separation), and various kinds of punctuation.³⁸ Some papyri also bear marginal signs that give practical rather than critical or exegetical aid, as they indicate how certain texts were used, for instance, again the letter X (*chi*) or the monogram *chi-rho*, likely symbols for the words χρῆσις ('passage') or χρηστόν ('useful').³⁹

Philological signs are one kind of paratextual annotation. Marginal or inter-linear notes, written not as symbols but as explicit words, are the second type. To be sure, these are not the scholia, that is, not the Late Antique or Byzantine excerpts from earlier, usually Alexandrian scholarly writings (commentaries, but also monographs or lexica) that the 'scholiast' adds in the margins or inter-linear spaces of a papyrus or later, more typically and with more space, in the wider margins of a page of a codex. Instead, the marginal or interlinear notes to be discussed here are direct manifestations of productive philological work and are in this regard not all that different from philological signs. They, too, can be associated with the ancient practice of producing a 'critical edition', an obviously important process about which, however, we have less reliable information than we would like.⁴⁰ The uncertainties result from the scantiness of our evidence as well as from the fact that text-editing is itself a complex process that means partly different things in different times and contexts.⁴¹ The meanings of two key terms, διόρθωσις and ἔκδοσις,⁴² however, seem to be relatively stable. The former comprises the steps of manuscript collation and text emendation (with or without conjectures); the latter refers to the releasing of a text which could then be read or copied by others.

37 Cf. McNamee [1992] 15–21; also McNamee [1992] 29–48 (Tables 2 and 3); Montanari [201b] 11 and elsewhere.

39 Cf. McNamee [1992] 20–22.

40 Cf. van Groningen [1963]; Irigoin [1994]; Montanari [201b]. Galen's *œuvre* is a storehouse of relevant information that still awaits full exploitation; cf. Hanson [1998].

41 Cf. Most [1998] x.

42 See Montana and Montanari in this volume.

In this context it is important to note that the famous Alexandrian ‘critical editions’ of the classical Greek authors were probably not always, if ever, entirely newly-written texts that would resemble the scholar’s preferred constitution of the text, with only *semeia* added in the margins as appropriate. More likely, an Alexandrian philologist would work with an already existing good copy—determined through *παράνάλγησις*, *i.e.*, manuscript collation and evaluation—⁴³ of the text to be ‘edited’. Onto this very *Textträger* that contained the primary text, Zenodotus, as his successors in their ‘editions’, would then likely add not only philological *semeia* but also short marginal notes that were in effect marginal commentaries (‘Randkommentar[e]’) or interlinear notes when this was more practical.⁴⁴ In this way, textual variants, parallels, and even very short explanations or arguments could be provided. This procedure can plausibly be assumed not only for Zenodotus and Aristophanes of Byzantium but even for Aristarchus, whose case is more complicated because he is said to have produced more than one Homeric ‘edition’ and because he also wrote commentaries in which fuller and more systematic elucidations could be given (see below § 2.1.2, Montana, and Montanari in this volume). The simple practice of adding helpful, explicitly spelled-out interlinear or marginal notes—in its essence it certainly predates Alexandrian scholarship—⁴⁵ is so obviously practical that it would be surprising had the Alexandrian ‘editors’ not adopted it for their philological purposes.⁴⁶

2.1.2 Commentaries

The commentary (*ὑπόμνημα*)⁴⁷ is typologically situated on the next higher level of textual autonomy. But there are functional similarities to the manifestations of philology mentioned thus far. Like oral explanations and marginal or interlinear annotations, philological commentaries can aim at elucidating a primary text with regards to textual criticism and exegesis. The new and defining feature of the commentary is that it is a physically independent, “self-standing”⁴⁸ text. Written on a separate *Textträger*, the commentary still has a primary text as its object but is no longer physically attached to it.

43 Cf. Jones [1999] 171.

44 For the following cf. van Thiel [1992], quotation on p. 4, 14, and 25; van Thiel [1997] in response to criticism by Schmidt [1997]; Montanari [1998d]; Montanari [201b] 2–3.

45 Montanari [201b] 3 *et passim*.

46 On the other hand, if ‘edited’ texts were released for reading or copying, there is no reason why in fact there could not soon thereafter be an entirely newly written text—or rather, text copy—resembling the scholar’s preferred textual constitution of a given text.

47 On the terminological developments of *ὑπόμνημα* and ‘*commentarius*’ see Bömer [1953].

48 A well-chosen attribute consistently used in this context by Dickey [2007]; for “text and commentary [...] written on separate rolls” see also Pfeiffer [1968] 218.

The communicative advantages of this mode of philological explanation are obvious. First and foremost, the strengths of the medium of writing for the sake of dissemination of information,⁴⁹ in this case of philological information, are now more fully exploited. A paratext written onto a primary *Textträger* allowed for the separation between the philologist and his potential readers; a self-standing commentary, in addition, physically separates and thus emancipates the philological explanations from any particular copy of the primary text. The range of potential reception is thus vastly expanded as the commentary can be used in connection with any copy of the primary text (as long as it reasonably resembles the commentator's primary copy). Second, a physically independent commentary provides more space for the individual comments and elucidations. Paratextual annotations must be brief enough to fit in the primary *Textträger's* interlinear or marginal spaces, which are especially narrow on a papyrus. By contrast, the commentary provides more room for both text-critical and exegetical explanations and arguments concerning any number of individual words, lines, or passages. This increase in available space has qualitative rather than simply quantitative effects because self-standing *hypomnemata* allow not only for extensiveness but also greater depth in the primary text's treatment. The form of the commentary may thus be said to have a truly liberating effect on philological writing.

The commentary's main purpose determines its typical structure. Primary texts chosen for treatment usually require continual passage-after-passage explanations, possibly down to the level of individual words in the primary text. Writers of *hypomnemata* thus typically proceed from one *explicandum* to the next, even if in practice the degrees of evenness and comprehensiveness in coverage and depth may vary.⁵⁰ The result of this procedure is the commentary's markedly segmented and almost 'discrete' text structure.⁵¹ But while for several other 'discrete' text types, presenting their material in a self-evident and immediately transparent order requires additional structuring measures (*e.g.*, alphabetization or section headings), the commentary rather conveniently treats the individual *explicanda* in the order in which they occur in the primary text.⁵²

49 Cf., *e.g.*, Ehlich [1983]; Luhmann [1997] 249–290.

50 Cf. Lunden [2011a] 166–168.

51 For the distinction between 'discrete' ("*diskrete*") and 'continuous' ("*kontinuierliche*") texts see Asper [2007] 57. The discrete texts treated by Asper are sentence collections, which are obviously even more rigidly discrete than lemmatized commentaries.

52 Cf. Montanari [1993b] 240, 243; Gibson [2002] 14. This solves the question of how best to arrange the material, which typically arises with more discrete texts; cf. Asper [2007] 58–61.

However, the commentary's physical independence, while beneficial in important ways, also creates a new problem. Its solution also partly shapes the typical presentation of the commentary's material. The problem is that with the self-standing *hypomnemata* the link between the *explicandum* and its explanation, which was immediately clear in the case of paratextual annotations, is severely weakened and less obvious (despite the predictable relative order in which the commentary proceeds). Once the elucidations are relegated to a *Textträger* separate from that of the primary text, it is no longer instantly clear whether a particular lemma of the primary text has received treatment in the commentary or not, or also to which word or passage in the primary text an individual explanation refers. This link must therefore be reestablished through other measures. This additional effort is the cost, so to speak, of wanting to enjoy the benefits of the commentary's physical emancipation from the primary text.

The most practical and most common solution to this problem, not only in antiquity, is the primary text's lemmatized (re)appearance in the commentary. The word, line, or passage to be explained is replicated in the commentary either fully or, if a longer section receives a comment, in part and oftentimes visually marked so that the primary text's lemmata are easily distinguished from the commentator's explanations.⁵³ But not only must the comment be linked back to the relevant passage of the primary text; the primary text's reader may also appreciate hints in the primary text to see which passages have received a philological comment. This adds an important new function to the marginal signs. They can now also be used in a primary text to direct the reader to the commentary for relevant critical or exegetical information.⁵⁴ While various *semeia* can be used in this way, the most common and likely the earliest example is the already mentioned marginal *diple* (>), famously introduced in this function by Aristarchus, the 'inventor' of the commentary.⁵⁵ The sign could be repeated in the commentary to guide its users even more easily to the beginning of an explanation.

The self-standing commentary, once established, became an extremely successful, that is, widely used philological genre. Nevertheless, the physical separation of the explanation from the *explicandum* seems to have remained potentially problematic and in some situations inconvenient, despite the mentioned textual counter-strategies and despite the genre's overall benefits. For not only must we assume that for their own use readers of a commentary—

53 Cf. Luppe [2002] 57–58; Gibson [2002] 14–15; Ludson [2011a] 162–163 and 171.

54 Cf. Pfeiffer [1968] 218; McNamee [1992] 11; Montanari [1993b] 242.

55 For Aristarchus as 'inventor' of the commentary cf. Montana in this volume.

most of us do it on occasion—will jot down information taken from the commentary onto their copy of the primary text. More importantly, this tendency is also largely responsible for the later production of scholia, which spectacularly reverse the earlier separation of primary text and commentary—aided, of course, by the transition from scroll to codex (the latter providing larger margins on its pages). It should be noted, however, that both practices, private excerpting from a commentary and scholiography, are actually encouraged by the inherently segmented organization of commentary's material.⁵⁶

Already the poet-grammarians Euphronius (3rd century BC), a teacher of Aristophanes of Byzantium, is said to have written explanatory *hypomnemata*, that is, independent commentaries on comedies by Aristophanes.⁵⁷ But the regular production of self-standing philological commentaries, and thus their full establishment as an important type of philological writing, sets in surprisingly late in Alexandrian scholarship. Aristarchus of Samothrace (ca. 216–144 BC), born more than a century after Zenodotus and, as was already mentioned, sixth head of the Library, was the first scholar to compose, systematically and in large numbers, lemmatized commentaries that proceed from one *explicandum* to the next.⁵⁸

On account of its mentioned strengths, this philological genre soon became widely used.⁵⁹ Not only the preeminent classical poets and the Attic prose writers from the 5th and 4th centuries BC are among the 'treated' authors (the *πραττόμενοι*).⁶⁰ Lemma-by-lemma commentaries have been identified as a common type of scholarly writing in many other literary and intellectual areas as well. What is more, while the Alexandrian philological *hypomnemata* have not survived, several ancient commentaries in other disciplines have. Their acquired (whether intended or not) authoritative status and their continued use secured their direct transmissions. Still extant, for instance, are numerous

56 The occasional affinity between commentary and lexicon, pointed out by Gibson [2002] 17–18, 20, and 172–174, has the same reason. With some typological irony, the production of scholia recreates the paratextual problem of annotations that are tied *materialiter* to a specific primary-text copy, now a codex. In response, modern scholia editions again separate these annotations from their particular copies of the primary text.

57 Cf. Pfeiffer [1968] 160–161; Dickey [2007] 29.

58 Pfeiffer [1968] 212–3.

59 Cf. Dickey [2007] 18–71 and in this volume for an impressive and instructive parade of Greek primary authors who became subjects of ancient commentaries.

60 Pfeiffer [1968] 208. Cf., e.g., Luppe [1978]; [2002] 58–63; Montanari [1993b] 243–281; London [2011a]. For ancient commentaries on Demosthenes (on papyrus) see Gibson [2002]; Harding [2006]; Montana and Dickey in this volume.

lemmatized medical commentaries,⁶¹ philosophical commentaries,⁶² patristic biblical commentaries,⁶³ or Hebrew commentaries on Hebrew liturgical poetry.⁶⁴

A comprehensive study of the ancient commentary, as it was eight decades ago,⁶⁵ is still a *desideratum*. In the past ten years, however, important publications have improved the situation for such an undertaking.⁶⁶ Based on these advances (and true to this contribution's aim), some possible criteria for the classification of commentaries will be considered. They are intended to be no more than possible leads for further investigation.

The easiest criterion for a distinction among commentaries would be the intellectual discipline to which they belong along with their primary texts. There is then, first (and already mentioned), the large group of commentaries on literary texts, that is, on the works of the preeminent classical poets and prose writers. Other primary texts elicited commentaries because they were regarded as authoritative and fundamental to particular scholarly, philosophical, scientific, or technical fields, such as medicine (commentaries on Hippocrates or Galen), philosophy (commentaries on Plato, Aristotle, or Epicurus), mathematics (commentaries on Euclid, Archimedes, or Apollonius of Perga), astronomy (commentaries on Ptolemy), rhetoric (commentaries on Hermogenes or Aelius Theon), or grammar (commentaries on Dionysius Thrax).⁶⁷ This distinction, however, is only of limited heuristic value because it does little more than map the already existing divisions between disciplines onto the body of *hypomnema*-literature.

61 Cf. Ihm [2002b] 316, 318, 321–322, 326, 329.

62 Cf. Hadot [2002] 184–185.

63 Cf. Geerlings [2002] 2–6; Müller [2002] 16–18 and 18–31, with good observations on Augustine's attempts to work against the inherently fragmentizing tendencies of the genre.

64 Cf. Hollender [2002] 164.

65 “Eine wirkliche Geschichte des antiken Kommentars scheint auch mir unbedingt notwendig” Geffcken [1932] 412.

66 Of general relevance is Dickey [2007] 18–71. Important branches of the commentary tradition have been investigated, *e.g.*, by Manetti-Roselli [1994]; Ihm [2001]; [2002a]; [2002b]; and Trojahn [2002]; see also the works cited shortly above. Edited volumes on the genre of the commentary include Most [1999]; Gibson-Shuttleworth [2002]; and Geerlings-Schulze [2002]; [2004].

67 For ancient, and occasionally Byzantine, commentaries on the mentioned primary authors, with ample references, see the appropriate sections in Dickey [2007] 18–71 and 77–80, and in this volume. On Epicurus as a primary author, see also Erler [1993].

Other criteria may allow for more instructive typological observations. For this purpose it will be helpful to postulate the lemmatized commentary described above as the commentary's 'normal' type. Proceeding from one lemma to the next, it offers explanations on a broad range of issues concerning textual criticism and various areas and levels of understanding. Against this background, we can first identify some theme-specific commentaries.⁶⁸ The explanations they provide concern relatively narrow and clearly delineated aspects. For instance, the work written by an unknown author commonly referred to as the *Mythographus Homericus* (likely 1st century AD) represents a kind of mythological commentary on the Homeric poems;⁶⁹ metrics are the focal point of a commentary by Heliodorus (1st century AD) on Aristophanes;⁷⁰ a Byzantine example that continues a tradition that goes back at least to the Imperial period are the *Epimerismi Homerici*, giving basic grammatical or linguistic classifications, explanations, or definitions of Homeric words or phrases, in their original form in the order in which the lemmata appear in the primary text.⁷¹

Another possible criterion on which a typology of commentaries can be based is the degree of the commentator's intellectual closeness to or independence from the primary text. This produces a wide spectrum of commentary types, whose extremes at both ends stretch the very definition of the term 'commentary'.⁷² Particularly dependent are texts that can be characterized as paraphrastic commentaries. Presenting little factual or interpretive substance of their own, they elucidate philosophical, scientific, and occasionally even poetical texts by extensively paraphrasing and thus simplifying them⁷³ for less knowledgeable audiences of non-specialists or students.⁷⁴ Apollonius of Citium's (1st century BC) commentary on the Hippocratic treatise *On Joints* has come down to us as an early extant example of a paraphrastic commentary.⁷⁵

68 Cf. also Sluiter [1999] 188 in the context of commentaries on Hermogenes and Aphthonius.

69 Cf. Montanari [1984] 130–132; Haslam [1990]; Montanari [1995c]; Dickey [2007] 26 and in this volume; Rossum-Steenbeek [1998] 85–118.

70 Cf. Holwerda [1964]; [1967]; Dickey [2007] 29.

71 Cf. Dyck [1983–1995]; Dickey [2007] 27–28; Pontani in this volume.

72 The distinctions made here and in the following paragraphs have similarities but are not congruent with the tension between "charity" and "criticism", discussed by Sluiter [2000a] 187 and 189–190 as one of four "dialectics" characteristic of commentaries.

73 Paraphrastic commentaries may thus be the fullest embodiments of some commentators' tendency to focus on content more than on form; cf. Sluiter [2000a] 190.

74 On the inherently close ties between written commentaries and teaching see Sluiter [1999]; [2000a] 190–192.

75 Cf. Ihm [2002a] 64–65; Dickey [2007] 44.

Later paraphrasing commentators are Themistius (4th century AD) on Aristotle, Proclus (or, more likely, Ps.-Proclus) on Ptolemy's *Tetrabiblos*, Munatius of Tralles (2nd century AD) on Theocritus, and Eutecnius (perhaps 4th century AD) on the poems of Nicander and Oppian, whose didactic and quasi-technical nature invites such treatment.⁷⁶

At the other end of the spectrum are commentaries of substantial independence if not originality. Many of these works are apparently written for the sake of the advancement of the commentator's own ideas or arguments rather than in the service of the towering authority of the primary author. The drastic attribute "non-submissive"⁷⁷ thus appropriately characterizes these commentaries, of which there exist at least two subtypes. For lack of other established expressions, they may be called the 'creative' commentary and the 'agonistic' commentary. Example of the former can be found in philosophical school traditions, for instance in the truly original works by Neoplatonic commentators of Plato, such as Proclus (5th century AD), Hermeias of Alexandria (5th century AD), or Olympiodorus (6th century AD), but also in commentators of Aristotle, such as Alexander of Aphrodisias (2nd/3rd centuries AD). Even though these philosopher-commentators present their thoughts (even when influenced considerably by their more immediate teachers) as results of an exegesis of Plato's or Aristotle's works, they are studied today as philosophers in their own right rather than merely as commentators.⁷⁸

Even less submissive are the agonistic commentaries. Their authors openly challenge the primary text's validity (often also that of other commentaries that may have been written in the meantime) and the primary writer's authority.⁷⁹ Such contentious interpretation is today perhaps not readily associated with the seemingly conservative and positivistic genre of the commentary.⁸⁰ It is exemplified by the early (extant!)⁸¹ commentary by Hipparchus of Nicaea (2nd century BC) on Aratus' *Phaenomena*. Hipparchus here attempts to correct astronomical information given both by the authoritative primary author

76 For Themistius see Dickey [2007] 49–50; for (Ps.-)Proclus see Dickey [2007] 68; for Munatius see Dickey [2007] 63–65; for Eutecnius see Dickey [2007] 65–66 and 70.

77 Cf. Vallance [1999] 223–228.

78 Cf. Dickey [2007] 48–50; also Vallance [1999] 228–242 and 242–244 on "non-submissive" medical and mathematical commentaries by Galen and Proclus.

79 Cf. also Sluiter [2000a] 189–190; Asper [2007] 35–42. More generally, Lloyd [1996] 20–46; [1987] 101–108.

80 Cf. Fowler [1999] 427, but see also 430; Shuttleworth Krauss [2002] 2; Montanari [2011a] 16.

81 Cf. Manitius [1894].

Aratus and by the more ‘submissive’ commentator Attalus of Rhodes (earlier 2nd century BC).⁸²

Finally, a special type of commentary can be singled out based on the criterion of their possible dependence on other, earlier commentaries. This constitutes what can be called the ‘secondary commentary’, with its two subtypes, namely, the “composite commentary”⁸³ and the meta-commentary. Composite commentaries are of mainly compilatory nature. In ancient philological scholarship, its prime representative is Didymus (1st centuries BC and AD). In a time when the intellectual productivity in scholarship and science shifted from Alexandria to Rome, a new and very different center of learning, the Alexandrian scholar Didymus is reported to have composed 3,500 or even 4,000 books. Among them were extensive commentaries on more than twenty primary authors, the majority of whom were poets.⁸⁴ To a great extent—just how great precisely is difficult for us to assess—Didymus’ commentaries consisted of compiled (and then discussed) excerpts from commentaries as well as from other scholarly works from the golden age of Alexandrian philology from Zenodotus to Aristarchus. The value of Didymus’ commentaries—or rather, what has survived of them mostly through scholia transmission—⁸⁵ lies less in this scholar’s own intellectual contributions and more in the fact that his works contain much invaluable information about earlier literary scholarship at Alexandria.⁸⁶

The meta-commentary’s relationship to earlier commentaries is different: it is a commentary written on an already existing earlier commentary. In these cases then, the earlier commentary has itself become an authoritative primary text that, typically due to its subject matter’s difficulty, invites additional scholarly elucidation. For instance, Ptolemy’s (2nd century AD) handbook, the *Πρόχειροι κανόνες* (*Handy Tables*), was commented on by Theon of Alexandria (4th century AD) in two commentaries. The shorter of these, the so called *Little Commentary*, then became itself a primary text for Marinus of Neapolis

82 Cf. Dickey [2007] 56.

83 Another term well chosen by Dickey [2007] 7 *et passim*.

84 Cf. Schmidt [1854] 11–14; Pfeiffer [1968] 274–279; Harding [2006] 1–4.

85 Apart from the famous Didymus papyrus on Demosthenes (Harding [2006]), scholia are our main source for this scholar’s commentaries.

86 Cf. Braswell [2011] 197, in agreement with the long-held *communis opinio*; Harding [2006] 31–39 argues for a greater original component in Didymus’ work. The importance of Didymus for our knowledge about earlier Alexandrian scholarship becomes quickly apparent from Dickey [2007] 342 s.v. Didymus.

(5th/6th centuries AD), who wrote a commentary, that is, a meta-commentary, on Theon's commentary.⁸⁷

2.1.3 Monographs

Possessing the greatest degree of textual autonomy, monographs (συγγράμματα) conclude this sequence of broad-band types of philological writings.⁸⁸ Like the *hypomnema*, the monograph is a self-standing text. Unlike the *hypomnema*, however, it can be independent from any particular primary text not only physically but also in terms of its contents. While commentaries are devoted to specific primary texts that they set out to explain, monographs—even philological monographs—are freer in their choice of subject and contents. If commentaries were said to have a liberating effect on philological efforts in writing, monographs provide an even greater freedom as they are convenient vessels for any topic's discursive, extensive, and fully in-depth treatment.⁸⁹

Scholarship on ancient *syggrammata*, whether philological or other, is still in its early stages. The largest surviving distinct corpora of ancient *Fachtexte* (technical literature in the broadest sense) are those of Hippocrates, Aristotle, Galen, and, to a certain extent, Plutarch. Each of them has its own character and typological profile, so that the results achieved about any one of them cannot easily be generalized or applied to the study of monographs in another thematic field, such as philological scholarship.⁹⁰ In their surveys of the discipline—each valuable and still essential for certain aspects of ancient scholarship—Pfeiffer, Montanari, and Dickey do not systematically differentiate further between subtypes of philological monographs. And while Markus Asper's typological study of Greek scientific texts (*Wissenschaftstexte* in a narrower sense, excluding philological scholarship) is rich in important insights, the classification established there does not fit the realm of philological *syggrammata* well.⁹¹

The following observations will thus propose some more finely-tuned typological distinctions within the field of philological monographs. Based on

87 Cf. Jones [1999] 167–168 on the different intended audiences for Theon's *Little Commentary* and the *Great Commentary*; Dickey [2007] 67–68.

88 Historically, of course, monographs existed long before *hypomnemata*. The sequence presented here is typological, not chronological.

89 Cf. Shuttleworth Kraus [2002] 2–3; Asper [2007] 213 and 57 with n. 1.

90 See also van der Eijk [1997] 89–91.

91 This text-typological incompatibility points to traits that set philology apart from other intellectual-scientific disciplines; see below, *Outlook: Philology, Philological Writings, Systems Theory*.

criteria of both form and content, it is possible to identify and differentiate between four philological monograph types, namely, commentary-like monographs, Ζητήματα-type studies, Περί-writings, and Ἀντιγραφαί.

The first two of these forms of monographic writings, the commentary-like monographs and the studies of the *Zetemata*-type, do not fully exploit the thematic and presentational freedom that comes with the text form of the monograph. Commentary-like *syggrammata* still focus on a specific primary text. They are thus similar to and in certain cases indistinguishable from commentaries. In this context, it is not surprising then to read of Galen's explicit indecisiveness about the nature of his work *Περὶ τῆς κατὰ τὸν Ἱπποκράτην διαίτης ἐπὶ τῶν ὀξέων νοσημάτων* (i.e., *De diaeta in morbis acutis secundum Hippocratem*). In his autobiographical *De libris propriis*, Galen lists this work among his therapeutic monographs, but he notes that it could also be regarded as a Hippocratic commentary (cf. *Libr. Propr.* 4 on Galen's monographs and *Libr. Propr.* 6 on his commentaries).⁹² The same question of genre attribution has arisen concerning both the Didymus papyrus on Demosthenes (or *On Demosthenes?*)⁹³ and a philological-exegetical papyrus on the *Iliad* from Milan (*P.Med.* inv. 71.82).⁹⁴ The fact that the papyri are of course fragments that do not show us the entire outline of the work makes the question even more difficult.

The second monograph form, studies of the *Zetemata* ('Inquiries')-type,⁹⁵ is similar in that these texts, too, usually deal with one specific primary text only. Moreover, since these writings are by nature segmented, as they proceed from one *zetema* to the next, their appearance can in some aspects resemble a passage-by-passage commentary. However, it is justified to follow the common terminological tradition that assigns *Zetemata*, along with their almost indistinguishable siblings, *Aporemata*, *Problemata*, *Quaestiones*, and *Lyseis* ('Solutions'), to a category of their own. First, while *hypomnemata* in their fullest form elucidate as densely composed running commentaries primary texts in their entirety, *Zetemata*-type studies are more selective but also more effective in targeting specific questions with great precision. This method and its corresponding textual genre can of course be applied and used in many fields

92 Cf. Ihm [2002b] 316–317, with more examples. The situation is complicated even further by the fact that Galen also wrote unmistakable passage-by-passage commentaries on some of the Hippocratic primary texts in question; see Ihm [2002a] 88–89. On Galen as commentator see Flemming [2008].

93 Cf. Harding [2006] 13–20.

94 Cf. Lundon [2011a] 163–166.

95 Cf. Novokhatko in this volume.

of intellectual inquiry, including technical and scientific disciplines.⁹⁶ But it can serve exegetical *Textpflege* as well. In this case, the writer of a *Zetemata*-work may conveniently choose for his discussion only those aspects and those passages of the primary text that immediately pertain to his interest or his agenda. Second, writings of the *Zetemata* type show a remarkable combination of rugged segmentation, reminiscent of commentaries, and extended discursiveness, a general characteristic of monographic text types. The segmentation obviously results from the successive treatment of individual points of inquiry. This treatment, however, is usually also markedly discursive because in this type of study the investigated passages tend to be the ones that are particularly difficult or problematic, which makes more elaborate argumentation or interpretation necessary.

Thus, *Zetemata* works treat a primary text more freely and less evenly than a running philological commentary. This is probably why we find many philosophers among the writers of *Zetemata*-type studies, who are less philologically obliged, so to speak, to the primary text in its entirety as a document of literary merits. Aristotle wrote several literary-exegetical studies of this type, such as the *Ἀπορήματα Ἡσιόδου* or *Ἀπορήματα Ἀρχιλόχου Εὐριπίδου Χοιρίλου* and his influential *Ἀπορήματα Ὀμηρικά* in six-books, with their explicit problem-solution pattern of “διὰ τί . . . ἔστι δὲ λύσις . . .” (“Why . . . The solution is . . .”); the *Ὀμηρικά ζητήματα* by the Neoplatonist Porphyry (3rd century AD) incorporate a substantial amount of material from this Aristotelian work.⁹⁷

Since the *Zetemata* form of investigation isolates and targets passages that are particularly troublesome, this approach lends itself well to apologetic purposes, when certain features of the primary text must be not merely explained but in fact justified against substantial criticism. This was already the tendency in Aristotle's *Ἀπορήματα Ὀμηρικά*, in which Homer was defended against detractors such as Zoilos. The *Λύσεις Ὀμηρικαί* by Heraclides Ponticus (also 4th century BC),⁹⁸ a prominent member of Plato's Academy, are of apologetic character as well, and it fits this picture that Plutarch, propagator and defender of Platonism, is the author of *Πλατωνικά ζητήματα*. Heraclitus (probably late 1st century AD), in his *Ὀμηρικά προβλήματα*, adheres to an even more radical apologetic strategy, that of allegorical interpretation. This conscious approach allows him to explain, or rather, justify Homeric passages that, if they were understood literally and taken at face-value, would render a philosophically

96 Cf. Asper [2007] 71–75 with n. 102; see also Gudeman [1927c].

97 Cf. MacPhail [2011].

98 Cf. Wehrli [1953] 51–54.

questionable if not unacceptable meaning.⁹⁹ This particular type of exegesis, organized as pointed questions and answers, was also adopted by Jewish scholars of Alexandria and applied to biblical writings.¹⁰⁰

A third form of ancient philological *syggrammata*—this subtype, however, is also widespread in other branches of technical literature—is commonly referred to as *Περί*-literature.¹⁰¹ Unlike the monographic forms discussed so far, there is no restriction for *Peri*-writings regarding theme, topic, scope, or approach. This freedom makes them the quintessential *syggrammata*-type. Already their name (*Peri*...), derived from the characteristic form of their titles, links this mode of writing to the most characteristic communicative strength of monographs in general: their open form lends itself to an extensive treatment of any topic; they can be written ‘about’ or ‘on’ just about anything.

However, this considerable conceptual overlap between *syggrammata* in general and their widespread subtype of *Peri*-writings may cause some typological difficulties. Making the explicit preposition ‘Περί’ a main typological criterion eclipses in some cases other relevant aspects. The distinction of *syggrammata* whose titles begin with this preposition from those whose titles do not—and in the domain of philological monographs, an attested title is usually all the information we have—seems not always to correlate with a deeper difference in the nature of the works. For instance, Callimachus’ erudite and oftentimes *Realien*-oriented literary scholarship¹⁰² comprises works titled *Νόμιμα βαρβαρικά* (*Non-Greek Customs*) but also *Περί ἀγώνων* (*On Contests*), or *Περί ἀνέμων* (*On Winds*) and *Περί ὀρνέων* (*On Birds*) but also *Μηνῶν προσηγορίαι κατὰ ἔθνος καὶ πόλεις* (*Names of Months among Different Peoples and Cities*). Other works were apparently referred to in either variant, with or without *Περί*.¹⁰³ Thus the treatise by Apollodorus of Athens (2nd century BC) on the Iliadic Catalog of Ships carried the original title *Περί τοῦ τῶν νεῶν καταλόγου*, but Stephanus of Byzantium (6th century AD), perhaps reflecting common practice, refers to it simply in the form “ἐν τῷ Νεῶν καταλόγῳ”.¹⁰⁴ This suggests that in the area particularly of *Realien*-oriented research (e.g., antiquarian or ethnographic studies), where the productive scholarly achievements consist of gathering, presenting, and perhaps commenting on largely factual information,

99 Cf. Konstan-Russell [2005] XIII–XXIX and 8–13.

100 Cf. Niehoff [2011] 38–74 and 152–168.

101 Thus Pfeiffer [1968] 218 (or 264 “Περί-style”); also Dickey [2007] 129–130.

102 Cf. Pfeiffer [1968] 134–135.

103 On ancient monograph titles see also Dickey [2007] 129–130.

104 Cf. Pfeiffer [1968] 257–259 with 259 n. 3.

there is a strong affinity between monographs with and monographs without the preposition *Peri* in their titles.

In addition, a closer inspection even of only the attested titles of philological *Peri*-monographs invites further typological distinctions. It appears that *syggrammata* of this type were written about three kinds of subjects: texts, authors, or other topics. Texts as subjects of monographs can vary in length, ranging from primary-text corpora representing entire literary genres down to a select passage from a specific primary text. Thus two Alexandrian scholars of the 3rd century BC wrote *syggrammata* on Old Comedy.¹⁰⁵ Lycophron, a tragedian in his poetical work but a specialist of comedy in his scholarship, composed *Περὶ κωμωδίας* in at least nine books, which seems to have dealt mainly with issues of language and the meanings of rare words.¹⁰⁶ The philological *opus magnum* of the universally learned Eratosthenes was the monograph *Περὶ τῆς ἀρχαίας κωμωδίας* in twelve or more books addressing, as Lycophron, questions of language but also other topics.¹⁰⁷ On the other end of the spectrum are specialized studies like Aristophanes of Byzantium's monograph *Περὶ τῆς ἀχνυμένης σκυτάλης*, a monograph devoted solely to this difficult and at the time heavily discussed phrase in Archilochus.¹⁰⁸ Between these extremes one can situate works like Aristarchus' *Περὶ Ἰλιάδος καὶ Ὀδυσσείας* or, by the same scholar, a monograph of even smaller textual scope, *Περὶ τοῦ ναυστάθμου* (*On the Camp of the Ships*), a reconstruction of the order in which the Greek ships camped at Troy that was based on an interpretation of the relevant Iliadic passages,¹⁰⁹ and Apollodorus' already mentioned *Περὶ τοῦ τῶν νεῶν καταλόγου* (*On the Catalog of Ships*), a work more interested in antiquities and geography.¹¹⁰

Peri-literature focusing on particular primary authors was identified as a distinct group by Friedrich Leo, who coined the term *Περὶ τοῦ δεῖνα* ("About Such and Such") to characterize these works.¹¹¹ This type of literary-scholarly writings may have been developed already in the Peripatetic school,¹¹² as exemplified by Chamaeleo's "*Dichtermonographien*,"¹¹³ that is, monographs on individual poets, such as *Περὶ Σαπφούς*, *Περὶ Στησιχόρου*, *Περὶ Πινδάρου*,

113 Term used by Wehrli [1957] 52.

and others.¹¹⁴ Information in Athenaeus (10, 451 D) leads us to Alexandria, testifying that Apollonius Rhodius wrote a monograph *Περὶ Ἀρχιλόχου*,¹¹⁵ the *hypomnema*'s inventor Aristarchus seems also to have written *Peri tou deina* monographs on various poets,¹¹⁶ Apollodorus produced among other works author-centered studies like *Περὶ Ἐπιχάρμου* in at least six and *Περὶ Σώφρονος* in at least four books.¹¹⁷

Leo's concept of *Περὶ τοῦ δεῖνα* literature should be extended to include monographs dealing with several authors as well. Already Plato's and Aristotle's student Heraclides Ponticus wrote a two-book *syggramma* *Περὶ Ἀρχιλόχου καὶ Ὁμήρου*.¹¹⁸ Other works deal with writers representing particular poetical genres. While Aristotle composed a dialogue with the general title *Περὶ ποιητῶν*,¹¹⁹ later scholars devoted monographs to more narrowly defined groups of writers: the Hellenistic poet-scholar Istros, a student of Callimachus, and Euphorion of Chalcis (both 3rd century BC)¹²⁰ wrote works titled *Περὶ μελοποιῶν*,¹²¹ Didymus composed *Περὶ λυρικῶν ποιητῶν*,¹²² the Cyrenean grammarian Lysianas (date unknown) is the author of a monograph *Περὶ ἰαμβοποιῶν*.¹²³ Primary authors of a different kind are treated by Asclepiades of Myrleia (1st century BC), who belongs to a small group of scholars that for us represent the transition from the era of Hellenistic to Augustan scholarship.¹²⁴ His biographical work *Περὶ γραμματικῶν* is devoted not to the great poets but instead to the great scholars of the past. Thus, not only *hypomnemata* but also *Peri tou deina* monographs have brought forth meta-scholarship, that is, scholarly writing about earlier scholarly writing.

Finally, the group of *syggrammata* on specific topics other than authors or works is diverse in itself. There are first distinctly literary topics, in the following examples related again to comedy: the Alexandrian poet-scholar Dionysiades of Mallos (3rd century BC) tried to distinguish the styles of individual Athenian comic poets in his monograph *Χαρακτῆρες ἢ Φιλοκώμωδοι*,¹²⁵

114 Cf. Wehrli [1957] 52–63 and 75–88.

122 Cf. Pfeiffer [1968] 182.

123 Cf. Pfeiffer [1968] 146 n. 1.

124 Cf. Pfeiffer [1968] 272–273 and Montana in this volume.

125 Cf. Pfeiffer [1968] 160.

these efforts were to be continued much later by Platonius (date unknown) in his works *Περὶ διαφορᾶς κωμωδιῶν* and *Περὶ διαφορᾶς χαρακτῆρων*.¹²⁶ Second, some *syggrammata* are devoted to antiquities and *Realien* that form the background to important primary texts: thus, the impressively broad philological output of Aristophanes of Byzantium includes, among his studies of Athenian comedy, monographs on comic masks (*Περὶ προσώπων*) and on Athenian courtesans (*Περὶ τῶν Ἀθήνησιν ἑταιρίδων*),¹²⁷ the latter topic of which was later also treated in a *syggramma* by Apollodorus.¹²⁸

Third, there is yet again an area of meta-philological writing, as certain *Peri*-works concern topics related to earlier phases of philology. Ammonius (2nd century BC), Aristarchus' student and successor, is the author of a *syggramma* devoted to the question of how many 'editions' of Homeric texts Aristarchus produced: *Περὶ τοῦ μὴ γεγενῆσθαι πλείονας ἐκδόσεις τῆς Ἀρισταρχείου διορθώσεως* ('On that there are not more editions of Aristarchus' recension').¹²⁹ Two scholars from the Augustan period also wrote about the work of Aristarchus: Didymus composed a *syggramma* about the Aristarchean recension of Homer, titled *Περὶ τῆς Ἀρισταρχείου διορθώσεως*,¹³⁰ and Aristonicus is the author of treatises dealing with Aristarchus' text-critical signs, *Περὶ σημείων* (*Ἰλιάδος καὶ Ὀδυσσεΐας*) and *Περὶ τῶν σημείων τῶν ἐν τῇ Θεογονίᾳ Ἡσιόδου*.¹³¹

The fourth and final group of philological *syggrammata* has aptly been called *ἀντιγραφαί*¹³² or 'polemics'.¹³³ They are writings 'against' someone, in this context, against an earlier scholar.¹³⁴ In light of what was written earlier about the agonistic commentaries, these monographs too can be characterized as 'agonistic'; in analogy to the well established category 'Περὶ-literature', they might also be subsumed under the name 'Πρὸς-literature', as this preposition, followed by the targeted scholar's name, frequently appears in the titles of these works. Like *Peri*-monographs, *antigraphai* are not limited to the realm of literary scholarship. They also emerged in other intellectual disciplines,

126 Cf. Pfeiffer [1968] 160; Nesselrath [1990] 30–34.

127 Cf. Pfeiffer [1968] 208.

128 Cf. Pfeiffer [1968] 264.

129 Cf. Pfeiffer [1968] 216–217.

130 Cf. Pfeiffer [1968] 275, also 214 and 216–217; see Ludwich [1884–1885] I 175–631; also Lehrs [1882³] 16–32.

131 Cf. Pfeiffer [1968] 214, 218 and 220 with n. 3; Erbse [1960] 174–183.

132 For the term *ἀντιγραφαί* see Preller [1838] 69; also, e.g., Didymus' work titled *Περὶ τῶν ἀξόνων τῶν Σόλωνος ἀντιγραφῆ πρὸς Ἀσκληπιάδην*, cf. Schmidt [1854] 399.

133 Cf. Pfeiffer [1968] 213 and elsewhere.

134 In this sense, they are meta-scholarship as well. But their distinctly polemical character makes it appropriate to regard them as a separate group.

such as philosophy, medicine, and astronomy. Even so, there is no shortage of testimonies—many of them mentioned in Pfeiffer’s *History of Classical Scholarship*—for specifically philological polemical works. They too confirm that “[t]he venerable members of the Museum were, from the beginning, not a very peaceful community”.¹³⁵ The very men that would later be looked upon as revered figures of philological authority were engaged during their lifetimes in fierce debates and competition, reflecting once more the Greek ‘agonistic’ spirit. Parallels can be drawn to Galen who, an unquestioned authority for later centuries, occupied a determinedly contentious position among his contemporary colleagues or, rather, competitors,¹³⁶ or—to cite but one modern example—to the elevated German *Dichterfürsten* Schiller and Goethe, who in 1797 felt compelled jointly to compose the aggressive *Xenien* in order to strike back at their many critics and detractors. In Bourdieuan terminology, fields of high social relevance and (therefore) prestige tend to be highly competitive, as the potential rewards attract many aspiring contenders. Future authoritative or even ‘canonical’ status is not gained or awarded easily; it must be fiercely negotiated. Our evidence suggests that these processes of competition and selection were also taking place during the most formative period of Greek philological scholarship at Alexandria and beyond.

Thus Callimachus wrote *Πρὸς Πραξιφάνην*, a polemic against the Peripatetic Praxiphanes (4th/3rd centuries BC) and his (Peripatetic) approach to literary theory and criticism;¹³⁷ Apollonius Rhodius is the author of *Πρὸς Ζηνόδοτον*, criticizing Zenodotus’ (also his predecessor as head of the Library) edition of Homer;¹³⁸ even among the monographs of the towering figure of Aristarchus we find several polemics:¹³⁹ *Πρὸς Φιλίταν*, against the then still authoritative glossographical studies of the poet-scholar Philitas from the Mouseion’s founding generation;¹⁴⁰ *Πρὸς Κομανόν*, against the grammarian Comanus of Naucratis,¹⁴¹ and *Πρὸς τὸ Ξένωνος παράδοξον*, against the belief held by the grammarian Xenon—his contemporary and a prominent representative of the *χωρίζοντες*, i.e. ‘separators’—that *Iliad* and *Odyssey* were composed by

135 Pfeiffer [1968] 143; specimens also in Slater [1976] e.g. 241. See also above § 2.1, and Montana in this volume, on Timon of Phlius’ bird-cage fragment.

136 Cf. Bowersock [1969] 59–75 and 89–100; von Staden [1997b] 33–37. Fichtner [1985] 170 lists titles of nine polemical works by (or attributed to) Galen, and even his ‘non-polemical’ writings contain frequent attacks against poorly trained or poorly performing colleagues.

137 Pfeiffer [1949] 351–352 (fr. 460); cf. Pfeiffer [1968] 95 with n. 4, 125 n. 1, 135–136.

138 Cf. Pfeiffer [1968] 141, 146–147.

139 For the following titles see Pfeiffer [1968] 213.

140 Cf. also Pfeiffer [1968] 91.

141 Cf. also Pfeiffer [1968] 289; Dyck [1988b] 221–265.

different poets.¹⁴² The works of Aristarchus' pupil Dionysius Thrax (2nd/early 1st cent. BC) include the *antigraphē* Πρὸς Κράτητα, against the Homeric interpretations of the Pergamene scholar Crates of Mallos.¹⁴³

While this evidence justifies it to conceive of *antigraphai*, that is, of polemical *Pros*-writings as a distinct type of *syggramma*, it should not be overlooked that, as usually in literary practice and reality, the typological delineations are not always perfectly clear. For instance, of the two polemics by Polemon (3rd/2nd centuries BC) against Eratosthenes and Timaeus—they were written in Alexandria but are based on his earlier extensive travels and pursue autonomous antiquarian rather than philological interests—¹⁴⁴ the one against Timaeus (in 12 books) has the expected title, Πρὸς Τιμαίον, but the title of the other polemic is Περὶ τῆς Ἀθήνησιν Ἐρατοσθένους ἐπιδημίας. The more characteristic preposition πρὸς, however, appears in outside references to this work, "... ἐν τοῖς πρὸς Ἐρατοσθένην",¹⁴⁵ suggesting that the work was also known simply as Τὰ πρὸς Ἐρατοσθένην. On the other hand, Aristophanes of Byzantium's monograph Πρὸς τοὺς Καλλιμάχου Πίνακας, even if it did contain corrections,¹⁴⁶ was probably less 'against' Callimachus than a supplement to the considerably earlier Callimachean *Pinakes*.¹⁴⁷ It may be worth noting in this context that the title of Aristophanes' monograph, unlike those of the agonistic writings mentioned above, is not phrased *ad personam* (not Πρὸς Καλλιμάχον).¹⁴⁸

2.2 *Special-Purpose Types: Catalogs and Lists, Scholarly Introductions to Literary Works, Dictionaries*

Besides the broad-band types discussed so far, a second class of philological writings can be characterized as special-purpose writings. They represent effective responses to distinct and well-definable philological needs. As such, the special-purpose writings do not align themselves in a continual typological sequence. Instead, as their functions and, correspondingly, their textual forms are highly specialized, they are best treated separately from one another.

Surprisingly perhaps, at first sight, these texts' functional specialization goes hand in hand with a broad range of applicability. The reason behind this

142 Cf. also F. Montanari [1988] 119–121.

143 Cf. Pfeiffer [1968] 267.

144 Cf. Pfeiffer [1968] 248–249; for more polemical writings see Preller [1838] 19 (listing additional polemical writings by Polemon).

145 Cf. Preller [1838] 87 (*fr.* 48.2) and 91 (*fr.* 49.4); Pfeiffer [1968] 248.

146 Cf. Slater [1976].

147 Cf. Pfeiffer [1968] 133.

148 Cf. Nickau [1967] 346 with n. 3; Pfeiffer [1968] 133; Slater [1986] 134–136 (*fr.* 368 and 369).

paradox seems to be that the special-purpose writings meet very basic philological needs. They arise in many situations, in connection with many texts, and they concern, first, identification and classification of texts, second, overview and contextualization, and, third, semantic understanding. To be sure, such issues can also be addressed, along with many others, in the broad-band types of philological writings. Special-purpose genres, however, are devoted solely to one select aspect, to which they are perfectly tailored. This single-purpose orientation gives each of these text types its unique character, function, and form.

2.2.1 Catalogs and Lists

Catalogs and lists serve purposes of identification and classification of texts. Literary scholars are surrounded by and regularly work with a great number of texts. Therefore, identification and classification of important primary texts are basic and widespread philological needs. The types of writing that have emerged to meet this demand are, first, library catalogs that reflect the holdings of actual collections of texts and, second, bibliographical lists (*Werkverzeichnisse*) that give titles of works of a particular author or of a corpus conceived of in another way. Both catalogs and lists may or may not be annotated. Even though they are basic philological tools that typically come at the beginning of a serious engagement with a primary text, their production too can be a demanding philological process itself as it may include dealing with questions of authorship and authenticity (*Echtheitskritik*) or of genre classification and attribution (*eidographia*).

Library catalogs and bibliographical lists share basic functions with other kinds of list- and catalog-writing, functions that are reflected in the highly ‘discrete’¹⁴⁹ manner and in the order in which the material is presented.¹⁵⁰ For catalogs and lists in general serve as inventories of either physically existing objects, of which texts are but one (if common) example,¹⁵¹ or, more abstractly, of elements of knowledge, for instance in mathematical or philosophical sentence collections (*Satzsammlungen*).¹⁵² If the quantity of what is collected exceeds a certain minimal level—below which the demand for catalogs or lists tends to be less pressing anyway—lists and catalogs must also present their items or information in a reasonably transparent and self-explanatory order, perhaps even hierarchical systematization.

149 See above, § 2.1.2 with n. 51.

150 Cf. Asper [2007] 57–61.

151 Cf. Regenbogen [1950] 1412–1418.

152 But see Asper [2007] 62–63 on unordered and unhierarchized lists.

In the realm of ancient philology, the most ambitious and most influential philological catalog is Callimachus' *Tablets* or *Tables*, the famous Πίνακες that comprised more than 120 books (*i.e.*, papyrus scrolls).¹⁵³ They served as an annotated library catalog representing and classifying the Alexandrian library's astounding holdings of Greek literature. Only the first generation of philologists in Alexandria worked without the aid of the *Pinakes*.¹⁵⁴ But in the longer run, it is clear that "to amass hundreds of thousands of rolls in the library would have been of little use without a sensible classification that enabled the prospective reader to find the books he needed".¹⁵⁵ Once again, in theory the 'invention' of a new type of philological writing, in this case the systematized annotated library catalog, appears as a necessary and quite obvious practical step to be taken; however, in light of this undertaking's huge dimensions at Alexandria, it undoubtedly qualifies as yet another giant leap for ancient literary scholarship.

In producing his *Pinakes*, Callimachus seems to have adhered to certain principles of method and systematization: Authors and their works were grouped according to genres of poetry (epic, lyric, tragic, comic) and prose writing (rhetoric, laws, philosophy, historiography, medicine, miscellaneous). Within each group, individual authors were presented in alphabetical order, which was likely also the case, wherever feasible, for titles of works by one author. The opening words of a work also seem to have been part of the standard *Pinax* entry because they were a means of identifying texts that had no explicit titles or multiple texts that had the same title. To add to the *Pinakes*' philological practicality and usefulness, short author biographies were included as additional basic contextual information.¹⁵⁶

Considering the very basic nature of the need for identification, classification, and orientation, it is not surprising that we also know of several other ancient book catalogs or lists, even if—this, too, is no surprise—none of them matched the monumental Callimachean *Pinakes* in scope or in philological rigor. Callimachus himself also wrote two special lists. One of them contained the names of dramatic poets (διδάσκαλοι) "in chronological order and from the beginning" (Πίναξ καὶ ἀναγραφή τῶν κατὰ χρόνους καὶ ἀπ' ἀρχῆς γενομένων διδασκάλων).¹⁵⁷ The nature of the other special *Pinax* cannot be determined

153 Cf. Pfeiffer [1949] *fr.* 429–453; cf. Pfeiffer [1968] 127–133; Regenbogen [1950] 1419–1424; Blum [1977] 223–243; Montana, this volume.

154 Cf. Pfeiffer [1968] 128.

155 Pfeiffer [1968] 133.

156 Cf. Blum [1977] 11–12 on "Bibliographien".

157 Cf. Pfeiffer [1949] 349–350 (*fr.* 454–6); Blum [1977] 198–207.

with certainty, but it may have been a bibliographical list as well.¹⁵⁸ Alexandria's rival institution, the library of Pergamon, had its own *Pinakes*, known as the Περγαμηνοί πίνακες.¹⁵⁹ Furthermore, fragments of book lists of various kinds and relatively simple organization have survived on papyri. They reflect the holdings of libraries or of private collections of differing sizes, and their character ranges from the expected lists of prominent and well-known classical authors to lists that reflect highly specialized or professional interests and collections.¹⁶⁰ Finally, genre-specific or discipline-specific *Werkverzeichnisse* (e.g., of orators or of medical writings) have even come down to us through direct transmission,¹⁶¹ of which Diogenes Laertius' extensive lists of philosophers' works are the richest surviving specimen. Also preserved, on account of their obvious practicality, are Galen's two annotated auto-bibliographies, *De libris propriis* and *De ordine librorum suorum*.¹⁶²

2.2.2 Scholarly Introductions to Literary Works

Scholarly introductions provide overviews and contextualizing information for specific works of literature. The Greek term most readily associated with such introductions is ὑπόθεσις, a word that presents some difficulties. No single lexicon entry or study gives a comprehensive account of the various meanings of 'hypothesis' and their development.¹⁶³ The term's origins, as far as it is relevant in the present context, lie in the realms of rhetoric and, even earlier, philosophy, where *hypothesis* means 'topic' or 'theme' to be treated or discussed.¹⁶⁴ From there, it seems to have developed and acquired its more prominent and more specific meanings as a literary technical term, meaning either 'summary' of plot or content or 'scholarly introduction' to a work of literature. The differences between these two types of *hypothesis* are obvious. Only one of them, the scholarly introduction, may truly deserve the attribute 'philological', whereas plot or content summaries are more adequately characterized as popularizing efforts. However, the following discussion will have to consider *hypotheseis* of both kinds.

There are both genealogical and practical reasons for this terminological blurriness. Genealogically the term seems to connect the 4th- and 3rd-century

158 Cf. Blum [1977] 208–223; but also Pfeiffer [1968] 132.

159 Cf. Pfeiffer [1968] 133 and 236; Regenbogen [1950] 1423; Blum [1977] 246.

160 Cf. Otranto [2000]; Houston [2009] 234–247.

164 Cf. Mossmann [2010] 249 with notes 10 through 13.

BC Peripatos in Athens, specifically Aristotle's widely learned and prolific student Dicaearchus, to the Museion in Alexandria roughly of the late 3rd century BC, specifically Aristophanes of Byzantium.¹⁶⁵ Among Dicaearchus' many writings were also mythologically focused content summaries of plays by Sophocles and Euripides that were called *hypotheseis*.¹⁶⁶ Several generations later, as Alexandrian philology had already entered its most developed phase, this work became but one of the sources for Aristophanes of Byzantium's *hypotheseis*, this time truly sophisticated and scholarly introductions to works by the Athenian playwrights. Practically, there is common ground as well between the two types of *hypotheseis*. On the one hand, even a scholarly introduction may—and in the case of Aristophanes of Byzantium did—contain short plot summaries.¹⁶⁷ On the other hand, short summaries—whether by Dicaearchus or another writer, whether of Greek drama or other literature, and whether originally intended to or not—can be easily prefixed each to its primary text as an introduction, or it can at least be read as such.¹⁶⁸ Things are made even more complicated by two additional facts. Not only does Greek also offer other technical terms for short summaries of content or plot, *διήγησις* and *περιοχή*, which add synonymity (different terms meaning 'summary') to the already existing homonymity ('introduction' and 'summary' both called *hypothesis*), but some summaries that are customarily referred to as *hypotheseis* today also seem to owe this name to the medieval manuscript tradition rather than to ancient terminological practice.¹⁶⁹

These complications notwithstanding, a simple summary of plot or content is essentially different from a serious scholarly introduction. The latter's 'invention' is ascribed to Aristophanes of Byzantium, who already seems to have perfected this type of philological writing and established an influential model that in the future would be copied, excerpted, imitated (including pseudepigraphs), modified for other purposes and contexts, and even parodied.¹⁷⁰ While textual criticism, *hypomnemata*, and dictionaries were to a considerable extent concerned with Homeric epic initially, the stimulus for scholarly *hypotheseis*

165 See Montana in this volume.

166 Cf. Wehrli [1967²] 30–31; Pfeiffer [1968] 193; Budé [1977] 25.

167 Brown [1987] 427 with n. 3 fittingly refers to them as "synopses" in order to distinguish them from the *hypotheseis*' other elements.

168 Cf. Bing [2011] 202–206.

169 Cf. Rossum-Steenbeek [1998] 52 about the so-called Homeric *hypotheseis*.

170 See Montana in this volume; cf. Mastronarde [2002] 168 n. 2 on expansions; Budé [1977] 40–44; Brown [1987] 427–8 on false attributions; Mossman [2010] 263–265 on the parody in Ps.-Lucian's *Swift-foot*.

came from another genre: 5th-century Athenian drama, that is, tragedy and to a lesser extent comedy.

Aristophanes' learned introductions were intended "to be a necessary help for the scholarly reader",¹⁷¹ of these plays. Their function is to provide—in concise and systematic form and based on thorough erudition—contextualizing and other orienting information concerning a given play. No scholarly *hypothesis* by Aristophanes has survived intact, but several preserved introductions clearly originate from Aristophanic *hypotheses*,¹⁷² whose organization has thus been reconstructed, of course with some uncertainty, as consisting of the following elements:¹⁷³

- (1) A concise summary of the play's plot, in one or two sentences, often beginning with the main character's name.
- (2) The so-called *μυθοποιία*, *i.e.*, brief information whether the same mythological subject was treated by the other two famous tragedians: ἡ μυθοποιία κείται παρὰ... [name of the playwright] ἐν... [title of the tragedy], possibly followed by καὶ παρὰ... ἐν... or instead, when appropriate, παρ' οὐδετέρῳ κείται ἢ μυθοποιία.
- (3) Brief information about the place of the action and the identities of the chorus and the prolog speaker: ἡ μὲν σκηνή (τοῦ δράματος) (ὑπόκειται) ἐν (or ἐπί or παρὰ)... [name of the place], ὁ δὲ χορὸς (συνέστηκεν) ἐκ... [identity of the chorus], προλογίζει δὲ... [name or identity of the prolog speaker].
- (4) The *κεφάλαιον*,¹⁷⁴ *i.e.*, an enumeration of the play's main events: τὸ δὲ κεφάλαιόν ἐστι, followed by a string of nouns; *e.g.*, Soph. *Ant.* (hypoth. 1): τὸ δὲ κεφάλαιόν ἐστι τάφος Πολυνείκους, Ἀντιγόνης ἀναίρεσις, θάνατος Αἴμονος καὶ μόρος Εὐρυδίκης τῆς Αἴμονος μητρὸς.
- (5) The *διδασκαλικά*, including the year of the original performance: ἐδιδάχθη ἐπί... [name of the eponymous *archon*] ἄρχοντος;¹⁷⁵ the result of that year's tragic contest: πρῶτος... [name of the winning poet], δεύτερος...

171 Cf. Pfeiffer [1968] 194.

172 Cf. Budé [1977] 37; Brown [1987] 428 and *passim*; for the 'best' and the best-preserved specimens see Zuntz [1955] 131 and 139–140.

173 Cf. Budé [1977] 33–9; Rossum-Steenbeek [1998] 32–34.

174 On the related term *σκοπός*, used in connection with comedies, and on the similarities between the *κεφάλαιον* and element (1), see Rossum-Steenbeek [1998] 33–4; also Budé [1977] 34.

175 For possible additional information in this section see Budé [1977] 34.

- τρίτος . . .; the title and the number of the play in the Alexandrian library or the remark οὐ σώζεται.
- (6) A judgment concerning the quality of the play as a whole, as first-rate or only second-rate: τὸ δὲ δράμα τῶν πρώτων, or: . . . τῶν δευτέρων), as well as of individual parts of the play.

Aristophanes' *hypotheses* are rich and dense in information. As can be observed for professionally and serially produced functional writings of any kind,¹⁷⁶ they adhere to an effective standardized pattern, down to the level of certain fixed phrases.¹⁷⁷ The μυθοποιία (2) and the διδασκαλικά (5) provide basic mythological, literary, and institutional context; the concise plot summary (1), the specifications concerning the place of the action and the chorus' and prolog speaker's identities (3), the κεφάλαιον (4), and the aesthetic evaluation (6), on the other hand, give information that orients the reader about the play itself.

Interestingly, Athenian drama did not only provide the first occasion for the emergence of scholarly *hypotheses*, it just about monopolized, as it were, this sector of philological writings. Aristophanes' learned *hypotheses* concern only Athenian dramatic production while surviving *hypotheses* to other authors are mostly mere content summaries. The glaring dominance of drama in this particular area thus calls for an explanation.

The predominantly systemical and functional approach pursued in this contribution suggests seeking this explanation in the nature of Athenian drama. It will be argued here that this literary genre poses a combination of problems for the later philologist (as for any serious reader) that other Greek literature does not, and that these problems are best remedied through Aristophanes' erudite *hypotheses*. To be sure, individually the obstacles that will be mentioned in a moment may also arise in connection with other kinds of literature. In Greek drama, however, they are combined in a way most harmful to informed and competent reception. The first problem is decontextualization: preserved or archived texts are inevitably stripped of their original contexts of production and reception. The resulting loss of information is particularly detrimental when a genre, such as Athenian drama, is originally tied firmly to specific local, historical, institutional, and literary circumstances and traditions. The second difficulty is formal uniformity: the institutional and generic rules and conventions that influence or even regulate the composition of trag-

176 Cf. Asper [2007] 29–30, 116–125, and elsewhere.

177 Zuntz [1955] praises Aristophanes' "style [...] of unsurpassable condensation" (131) and the "concentrated Alexandrian erudition" (134).

edies and comedies in classical Athens are remarkably stable; in addition, that very institutional framework also required that new plays be produced at a continuously high rate. This leads to oppressively large corpora of plays that are thematically and structurally relatively uniform—the individual poets’ theatrical and poetical innovations notwithstanding—and whose differences and individual characteristics become visible only after closer inspection. The third problem is the plays’ lengths: Dramatic texts—each play usually taking up one papyrus scroll—are too long to allow for quick and convenient overview and orientation. Thus, to summarize the difficulties: the textual corpora of the great Athenian playwrights are, in and for themselves, far from user-friendly. Each consists of an unwieldily large number of decontextualized dramatic texts (papyrus scrolls) that to the hasty beholder look very much alike and whose individual lengths make quick identification and grasping of other essential information impossible.

Aristophanes’ *hypotheses* are a straightforward means by which this extraordinarily difficult situation for these extraordinarily valuable texts is improved. The urgency of the outlined problems and, correspondingly, the importance of the service rendered by scholarly *hypotheses* are confirmed by the fact that Aristophanes seems to have produced his *hypotheses* right along with his first philological edition of dramatic texts. Aristophanes’ introductions are in fact seen as “the most substantial remains of Aristophanes’ editions of tragedies and in a lesser degree of the comedies”.¹⁷⁸ This means that the competent edition and reception of Athenian drama is practically impossible without immediately supplementing it with additional orienting and contextualizing information for each play. Aristophanes’ introductions do precisely that.¹⁷⁹

Hypotheses, now also including simple summaries, have emerged in many fields of Greek literature. However, a coherent comprehensive typology has not yet been achieved. At this point, no more is possible than to present some typologies that cover different sectors of Greek literature: first, Greek tragedy, second, Greek drama including comedies, third, Greek poetical works in general, and finally, other Greek literature.

The most fundamental classification of tragic *hypotheses* was formulated around the middle of the last century by Zuntz, who distinguished the following three types:

178 Pfeiffer [1968] 192.

179 The first scholarly Homeric dictionary by Zenodotus seems to be owed to similar circumstances; see below, § 2.2.3.

- (1) *Hypotheseis* that can be “traced back to Aristophanes of Byzantium”¹⁸⁰
- (2) The “elaborations of Byzantine grammarians” (characterized also as “verbose Byzantine pedantry”) that sometimes merely summarize, sometimes offer additional information, but do not presuppose much mythological knowledge¹⁸¹
- (3) An “intermediate type of hypothesis, peculiar to the Euripidean manuscripts”, which Zuntz on account of their narrative nature famously calls “the ‘Tales from Euripides’ ”.¹⁸² Unlike the erudite *hypotheseis* by Aristophanes, these summaries seem to have been intended originally not to serve as introductions to the individual plays but rather to replace them, that is, to make reading them unnecessary or at least optional (but no longer necessary). Originally composed as one work, the unity of the ‘Tales’ was later dissolved, and they were individually prefixed each to ‘its’ play. Other questions concerning this work are still debated: for instance, what the origins of the ‘Tales’ may be and whether or to what extent they go back to Dicaearchus’ *hypotheseis*,¹⁸³ as well as their relationship to the later mythological compendia composed by Ps.-Apollodorus and Hyginus.¹⁸⁴

Zuntz’ important classification has generally been adopted,¹⁸⁵ but it was also partly refined some twenty years later by Budé. Basing his analyses on both external and internal textual criteria, Budé suggests that there is a second type of learned *hypothesis*, which does not go back to Aristophanes of Byzantium and which he calls ‘*saga-hypothesis*’.¹⁸⁶ This result has been accepted by Rossum-Steenbeek and, earlier, Holwerda (while Budé’s further conclusion, that the *saga-hypotheseis* resemble Dicaearchus’ *hypotheseis*, is generally rejected).¹⁸⁷ Rossum-Steenbeek herself, on the other hand, replaces Zuntz’

180 Zuntz [1955] 131.

181 Zuntz [1955] 131–134 and 141–143, quotations 131 and 134.

182 Zuntz [1955] 134–139 and 143–146, quotations 134, 135, also 143; cf. also Dickey in this volume. ‘Tales from Euripides’ coined after Charles and Mary Lamb’s famous *Tales from Shakespeare* (orig. 1807).

183 Cf. the opposing views of Luppe [2001] and Diggle [2005]. For the earlier discussion see Rossum-Steenbeek [1998] 3 nn. 11 and 13.

184 Cf. Rossum-Steenbeek [1998] 25–30 with more references.

185 Cf., e.g., Allan [2008] 142; Dickey [2007] 32; Mossman [2010] 247; Bing [2011] 201.

186 Budé [1977] 175–187 (“*sage-hypotheseis*” in the Dutch origina).

187 Cf. Holwerda [1983]; Rossum-Steenbeek [1998] 32 with nn. 77 and 78. On the other hand, Rusten [1982a] 364 with n. 35, rejects the new type of *saga-hypothesis* altogether.

expression ‘Tales from Euripides’, because it is somewhat misleading, with “narrative hypotheses”.¹⁸⁸

Second, dramatic *hypotheses*, including those to Old and New Comedy, have been investigated by Budé. Already Zuntz’ ‘Tales’ and Byzantine *hypotheses* show less scholarly rigor and ambition than Aristophanes’ introductions. This tendency becomes even more prominent among the additional *hypotheses* that Budé has studied and among which plot summaries dominate: in addition to the obvious type (1), only types (4) and (6) bear signs of erudition in so far as they apply external information to the primary texts in question. The classification of *hypotheses* proposed by Budé is as follows:¹⁸⁹

- (1) *Hypotheses* by Aristophanes of Byzantium (cf. Zuntz)
- (2) Metrical *hypotheses* transmitted under the name of Aristophanes of Byzantium: they are plot summaries, preserved for ten comedies by Aristophanes,¹⁹⁰ three Sophoclean tragedies (*OT, Phil., OC*), and two plays by Menander (*Her., Dys.*); these introductions, comprising between ten and sixteen iambic lines, contain—as has long been noticed—some inaccuracies, but also reveal an interesting narrative profile that may reflect a deliberate narrative strategy on their author’s part.¹⁹¹
- (3) ‘Tales from Euripides’ (cf. Zuntz)
- (4) Περιοχὰὶ τῶν Μενάνδρου δραμάτων: these summaries of Menander’s plays, preserved on papyrus, can be situated in terms of their contents and character between the ‘Tales’ and Aristophanes of Byzantium’s *hypotheses* and may have been written by the grammarian Homerus Sellius (probably 1st century AD)
- (5) Narrative *hypotheses* to comedies: these texts, preserved for plays by Aristophanes and (on papyrus) Cratinus, are similar to but longer than the ‘Tales’; written no later than the 2nd century BC, their author may be the grammarian Symmachus (around 100 AD)
- (6) Historical *hypotheses* to comedies: these introductions provide historical background to Aristophanic comedies
- (7) Byzantine recensions of ancient hypotheses: they are occasionally closer to the ancient original than what has been preserved through the manuscript tradition
- (8) Byzantine *hypotheses* (cf. Zuntz).

188 Cf. Rossum-Steenbeek [1998] 1–2 with n. 4; Mossman [2010] 251; Bing [2011] 205 with n. 19.

189 Cf. Budé [1977] 29–84.

190 Cf. Möllendorff [2010].

191 Cf. Möllendorff [2010] 275–277.

There are, third, also ancient *hypotheses* to non-dramatic texts, an area carefully charted by Rossum-Steenbeek, whose results are of general relevance even though—and partly because—she focuses on fragments of *hypotheses* preserved on papyri. Rossum-Steenbeek's classification, which of course also includes dramatic *hypotheses*, is the following:

- (1) *Hypotheses* to tragedies and comedies:¹⁹²
 - (a) Narrative *hypotheses*: cf. Zuntz' (and Budé's) 'Tales of Euripides' type
 - (b) Learned *hypotheses*: *hypotheses* of Aristophanes of Byzantium (cf. Zuntz and Budé), Budé's saga-*hypotheses*
 - (c) Descriptive *hypotheses* (cf. Budé's narrative *hypotheses* to comedies)
 - (d) Menandrian *hypotheses*: prose *hypotheses* (cf. Budé's Περιοχαὶ τῶν Μενάνδρου δραμάτων), metrical *hypotheses* (cf. Budé).
- (2) Homeric hypotheses of which Rossum-Steenbeek distinguishes three subtypes:¹⁹³
 - (a) Discourse *hypotheses*
 - (b) Nominal *hypotheses*
 - (c) Hybrid *hypotheses*
 - (d) Other Homeric summaries are to be found in Ps.-Dositheus (in *Interpretamenta*), Ps.-Ausonius *Periochae Homeri Iliadis et Odysssiae*, Ps.-Apollodorus (*Epit.* 4), *Tabula Iliaca Capitolina*, and Hyginus (*Fab.* 106).¹⁹⁴
- (3) Callimachean *diegeseis*¹⁹⁵
- (4) The *Mythographus Homericus*¹⁹⁶
- (5) Catalogs.

Finally, further *hypotheses*—they are, again, mostly summaries but occasionally also provide learned contextual information—survive to works of other ancient primary authors, including another Hellenistic poet, Theocritus, but

192 Cf. Rossum-Steenbeek [1998] 1–52.

193 Cf. Rossum-Steenbeek [1998] 53–74; Dickey [2007] 26; Reitz [2010] 296–300.

194 Cf. Rossum-Steenbeek [1998] 69–72; Reitz [2010] 301–304 with brief references also to Aelian (*VH* 13, 14, which lists title-like headings to particular Homeric episodes) and Procopius of Gaza with other paraphrases linked to rhetorical training.

195 Cf. Rossum-Steenbeek [1998] 74–84; Cameron [1995] 124–127 and elsewhere; Dickey [2007] 66.

196 Cf. Rossum-Steenbeek [1998] 86–118; see above, § 2.1.2.

also prose writers such as the Attic orators Demosthenes and Isocrates.¹⁹⁷ Not to be confused with these introductory or quasi-introductory *hypotheses* are the self-standing summaries and abridgments that were widely produced and used in antiquity from the Hellenistic period onward. Usually referred to, individually, as an ἐπιτομή (or, in Latin, *epitoma*),¹⁹⁸ these texts differ fundamentally from the *hypotheses* discussed here in that they are long enough to have been written and transmitted as independent texts. As such self-standing abridgments and summaries, however, they already lie outside of what can still be conceived of as philological writings and will therefore not be investigated further at this point.¹⁹⁹

2.2.3 Dictionaries: Glossaries, Lexica, Thematic Dictionaries²⁰⁰

Finally, an area where a philologist's need for quick and effective help can be particularly pressing is semantics, that is, the meanings of words. This issue does not only concern novices or amateurs. It is in the nature of their profession that literary scholars are likely to engage with old or difficult primary texts. Inevitably, the language of those texts will pose not only occasional but systematic difficulties down to the level of the meanings of individual words. These semantic problems usually result from the primary text's poetical language, or from the (Greek) dialect in which it is written, or from the technical nature of its topic that requires specialized vocabulary. It is thus not an exception but rather the rule that, in their endeavors to secure a well-informed and adequate transmission and understanding of important primary texts, philologists must confront a text's semantics.

To be sure, semantic aid can also be provided through marginal or inter-linear annotations or through commentaries.²⁰¹ However, as was seen earlier, these two types of philological writings come with serious communicative limitations; in addition, as broad-band types of writings they usually also address issues other than just semantics. The recurrence of identical semantic difficulties, within longer texts as well as across texts, has therefore led to an efficient type of philological writing, the dictionary, more specifically, dictionaries of the Γλῶσσαι-type, named after Zenodotus' Homeric glossary titled Γλῶσσαι

197 References in Dickey [2007] 63–65, 52, and 55, respectively. For the somewhat special case of Libanius' *hypotheses* to Demosthenes, see Gibson [1999]; [2003].

198 Other similarly used terms are σύνοψις or *breviarium*; cf. Opelt [1962] 944–946.

199 On *epitomai* see Opelt [1962]; Dubischar [2010]; Mülke [2010].

200 See Tosi in this volume.

201 Cf. Tosi [1994b] 172–174; also Pfeiffer [1968] 197; Gibson [2002] 20.

(roughly meaning: *Difficult Words*).²⁰² Serving as a semantic toolbox, glossaries make essential semantic information readily available in condensed form and in a predictable order. It could be the order in which the individual *glossai* appear in the primary text or, more strongly abstracting from the primary text or texts, and therefore more widely applicable, the alphabetical order ('alphabetical' in the ancient sense).²⁰³ To name but a few examples: the preserved Λέξεις Ἡροδότου (date unknown) and the original version of Erotian's Hippocratic lexicon (1st century BC) are of the first kind, as both dictionaries present their *glossai* in the order of the words' appearances in the relevant primary texts.²⁰⁴ Preserved examples, on the other hand, of later alphabetical arrangements—but one should keep in mind that the Homeric glossary of Zenodotus was already arranged alphabetically—²⁰⁵ are the Λεξικὸν τῶν Ἡροδοτείων λέξεων, which is based largely on the mentioned Λέξεις Ἡροδότου, a later abridgement of Erotian's mentioned glossary, and Galen's Hippocratic glossary Τῶν Ἱπποκράτους γλωσσῶν ἐξήγησις.²⁰⁶

The practical importance of *glossai* and of the help they provide is attested by their continuous and widespread production and use. Glossography for exegetical purposes, that is, to help understand and interpret a text, is the earliest Greek dictionary type. Its beginnings date back to the 6th century BC,²⁰⁷ and its roots may reach back even farther.²⁰⁸ In addition, the first philological editor of Homer, Zenodotus, already saw fit to produce also a scholarly Homeric dictionary (the mentioned *Glossai*), apparently convinced that Homer could not be edited or understood adequately without such assistance.²⁰⁹ Finally, like a *basso continuo*, glossaries are the one dictionary type that, ever since

202 Cf. Pfeiffer [1968] 115. On the term γλῶσσαί for rare, difficult, or obsolete words, especially in Homeric poetry, see Pfeiffer [1968] 78–79; cf. also Montana in this volume.

203 On alphabetization see Tosi [1994b] 151–155, and in this volume.

204 Cf. Dickey [2007] 53–54 and 45–46.

205 Pfeiffer [1968] 115 for this reason calls it “a model for the future”.

206 Cf. again Dickey [2007] 45–46 and 53–54.

207 Cf. Degani [1988] 1169–1170; Matthaios [2010a] 166 with n. 3. See also the similar later publication Degani [1995] here 505–507.

208 Pfeiffer [1968] 3–6.

209 There is an analogy to the first scholarly *hypothesis* produced by Aristophanes of Byzantium in connection with his first edition of dramatic texts (see above, § 2.2.2). Zenodotus and Aristarchus are responding to different but in both cases fundamental philological needs that arise immediately from their primary texts.

it had emerged in the archaic period, was continually used and produced for more than one thousand years, into late antiquity and beyond.²¹⁰

While Greek glossography's initial—and never ceasing—concern was Homeric language (cf. Ps.-Apion), beginning in Hellenistic times glossaries were also devoted to other individual authors such as Herodotus (cf. the mentioned Λέξεις Ἡροδότου and Λεξικὸν τῶν Ἡροδοτείων λέξεων), Plato (cf. Timaeus the Sophist), or Hippocrates (cf. Erotian or Galen)²¹¹ as well as to other literary genres such as tragedy, comedy, or oratory.²¹² Thus, glossaries have passed many tests of time and have proved to be functionally optimized text types that provide indispensable semantic aid regarding specific primary texts, authors, or text corpora. The ancient glossaries' efficiency is owed also to the fact that their entries were limited to rare and difficult words but did not include, as is common practice today for the sake of completeness, basic everyday words that no one would have trouble understanding.²¹³

In the Hellenistic period, the focus of scholarly dictionaries also expanded beyond mainly glossographical interest. To be sure, to a considerable extent Hellenistic grammarians and scholars still collected their lexicographical material from the primary texts themselves.²¹⁴ But the purposes for which words were collected by scholars became more manifold. Correspondingly, two new types of dictionaries emerged. One of them can be called the Λέξεις-type, after Aristophanes of Byzantium's famous Λέξεις (roughly meaning: *Interesting Words*).²¹⁵ *Lexeis* reflect the emergence of the study of words as a component of grammar understood as an autonomous discipline that no longer needs to serve the ends of exegetical philological *Textpflege*. This type of dictionary is dominated by a linguistic (including stylistic) interest in words, word meanings, and word usage. Their various specific points of focus lead to

210 Cf. Degani [1988] 1170–1172, 1174–1175, 1177–1179, 1185, 1187–1188; Gibson [2002] 19 notes that certain lexicographical branches underwent no “evolution”. In other words, their stable function resulted in a stable form.

211 In addition to Degani [1988], cf. Dickey [2007] 24–25 on Homer, 53–54 on Herodotus, 47 on Plato, 45 on Hippocrates; also Dickey [2010] 13–15, and in this volume.

212 Cf. Degani [1988] 1174–1175 on tragedy, 1175 on comedy, 1178–1179 on orators; on Demosthenes see Gibson [2002] 18–19, 157–171, and 190–199.

213 Cf. Dickey [2010] 21–23.

214 Cf. Matthaios [2010a] 169–170 *et passim*; but see also Pfeiffer [1968] 197.

215 Cf. Pfeiffer [1968] 197–203; Dickey [2007] 93. Against the common opinion, however, Slater believes that what most take to be individual thematic sections of the Λέξεις were in fact independent lexicographical works and that the Λέξεις never existed as one big work; cf. Slater [1976] 237 n. 11; [1986].

further typological distinctions. There are lexica devoted to particular dialects, to synonyms, to etymology,²¹⁶ or to rare Greek words in general (hence, not restricted to a specific primary text).²¹⁷ Atticistic lexica form a special group among the *lexeis*. Produced mostly in the 2nd and even 3rd centuries AD, many of them were intended as normative and prescriptive dictionaries. Their purpose was to aid their users in their own literary production, more specifically, in the writing of prose in the Attic dialect of the classical period.²¹⁸

The other new kind of dictionary is the theme-specific *Sachwörterbuch*, that is, dictionaries of the *ὀνομαστικόν*-type (after Pollux' *Ὀνομαστικόν*, 2nd century AD).²¹⁹ *Onomastika* have a thematic focus and may be concerned, for instance, with particular historical, antiquarian, or geographical topics. Their essential purpose is to provide their users with the meanings of certain technical or other theme-related vocabulary.²²⁰

It must be noted, however, that in practice these three main lexicon types—*glossai*, *lexeis*, and *onomastikon*—cannot always be cleanly separated. This is already evident from the dictionary titles mentioned above. Existing lexicographical works can be, and were, used for more than just one (their originally intended) purpose. This became especially prevalent in post-Hellenistic lexicography, when dictionaries were no longer compiled by extracting words directly from the actual primary texts themselves (e.g. Homer or Hippocrates). Instead, lexicography had formed into a more autonomous philological sub-discipline as the material for new dictionaries was taken—selected, compiled, and possibly refunctionalized—primarily from other, earlier dictionaries.²²¹ In this process, works of one lexicographical branch often fed into new works

216 E.g., Aristophanes of Byzantium, Ammonius/Herrenius Philo, Orus, Photius (cf. Dickey [2007] 92–94, 94–95, 99, 101–102 respectively, and in this volume).

217 E.g., Pamphilus (cf. Matthaios [2010a] 175 with n. 24).

218 Cf. Degani [1995] 519–521; [1988] 1179–1181. Examples are Phrynichus, the *Antiatticista*, Moeris, Philemon, Aelius Dionysius and Pausanias, Orus and Orion (Dickey [2007] 96–100, and in this volume). However, behind the lexicographical work already conducted by Alexandrian *poetae docti* on Homer and other early poets there is a double purpose of both semantic-exegetical help and aid for their own literary production; cf. Tosi [1994b] 145 and Matthaios [2010a] 168 with n. 10. On the transmission and appropriation of atticistic lexicographical material in the late antique and Byzantine periods see Matthaios [2010a] 186–197.

219 See also Matthaios [2010a] 167 n. 4.

220 E.g. Pollux and Stephanus of Byzantium (cf. Dickey [2007] 99 and 101 respectively, and in this volume).

221 Cf. again cf. Matthaios [2010a] 169–170 *et passim*, with Pfeiffer [1968] 197.

of another branch. However, these practical affinities between *glossai*-, *lexeis*-, and *onomastikon*-dictionaries should not detract from the fact that, in their pure forms, the functions of these three variants of dictionaries do differ substantially.²²²

A final, and special, group of dictionaries that can in fact be clearly delineated is bilingual dictionaries.²²³ The main Greek dictionary types mentioned so far are all monolingual in that they explain Greek words in terms of other Greek words. The small and poorly preserved group of bilingual dictionaries (Greek-Latin or Latin-Greek), for historical reasons, appeared relatively late in the history of ancient lexicography and was generally not part of the late antique and medieval manuscript tradition. It is, however, typologically interesting that even the meager papyrus evidence indicates that the same lexicographical subtypes emerged among bilingual dictionaries as had been the case for their monolingual counterparts.²²⁴

3 Typological Synopsis

A synopsis of the typology of philological writings will summarize what has been laid out so far. It will be followed by a separate outlook concluding the contribution. At this point, the introduction's *caveat* regarding all categorizations and systematizations must be emphasized again. The abstract and hierarchic nature of the following synopsis may seem to suggest definitiveness, order, and completeness, but as was frequently seen above, conceptualizations of specific types of writings and the delineations between them are less clear in reality than our notion of 'typology' might tempt us to expect. Therefore, this synopsis should be taken *cum grano salis*. The literary space's dynamics and complexities cannot be captured in any single classificatory system. The aim here is simply to provide greater differentiation than had been achieved previously.

222 For the distinction between *glossai* and *lexeis* see Degani [1988] 1169; [1995] 505–506 and 508; also Pfeiffer [1968] 198; Montanari [1993b] 250–251. For Tosi [1994b] 144, however, the main conceptual distinction is between "*lessicografia*" (which includes, however, what is commonly, and here, referred to as glossography) and "*onomastica*".

223 Cf. Dickey [2010] 19–21.

224 Cf. Dickey [2010] 20.

Broad-Band Types

1. Marginal or interlinear annotations
 - Signs (*semeia*)
 - Written notes
2. Commentaries (*hypomnemata*)

Various categorizations are possible, according to

 - The intellectual discipline (literary, philosophical, astronomical, and so forth)
 - The commentary's form: lemmatized commentaries vs. other types
 - The thematic range: broad-band vs. theme-specific commentaries
 - The commentator's intellectual independence: paraphrastic vs. non-submissive commentaries, the latter divided further into creative and agonistic commentaries
 - Possible strong dependence on earlier commentaries: secondary commentaries, divided further into compilatory commentaries and meta-commentaries
3. Monographs (*syggrammata*)
 - Commentary-like monographs
 - *Zetemata*-type monographs, including *Aporemata*, *Problemata*, *Quaestiones*, *Lyseis*
 - *Περί*-literature: (1) about earlier primary texts or entire literary genres, (2) about earlier authors: *Περί τοῦ δεῖνα* ("About Such and Such"), (3) About other topics: literary topics, antiquities and *Realien*, earlier Alexandrian philology (meta-philology)
 - *Ἀντιγραφαί* (*i.e.*, polemics, *Πρός*-literature, agonistic monographs)

Special-purpose types

1. Catalogs and lists: library catalogs or lists of works, with or without annotations
2. Scholarly introductions to literary works (*hypotheseis*)
 - Distinction: scholarly *hypotheseis* vs. content/plot summaries (occasionally also called *diegeseis* or *periochai*)
 - Classification of tragic *hypotheseis* by Zuntz [1955]: (1) *hypotheseis* that go back to Aristophanes of Byzantium, (2) Byzantine introductions, (3) 'Tales from Euripides'
 - Classification of dramatic *hypotheseis* by Budé [1977]: (1) *hypotheseis* by Aristophanes of Byzantium (cf. Zuntz), (2) metrical *hypotheseis* transmitted under the name of Aristophanes of Byzantium, (3) 'Tales

- from Euripides', (4) Περιοχαὶ τῶν Μενάνδρου δραμάτων, (5) narrative *hypotheses* to comedies, (6) historical *hypotheses* to comedies, (7) Byzantine recensions of ancient hypotheses, (8) Byzantine *hypotheses*
- Classification of *hypotheses* on papyri by Rossum-Steenbeek [1998]: (1) *Hypotheses* to tragedies and comedies: narrative *hypotheses*, learned *hypotheses* (*hypotheses* of Aristophanes of Byzantium and Budé's saga-*hypotheses*), descriptive *hypotheses*, Menandrian *hypotheses* (prose *hypotheses* and metrical *hypotheses*), (2) Homeric *hypotheses*: discourse *hypotheses*, nominal *hypotheses*, hybrid *hypotheses*, other Homeric summaries, (3) Callimachean *diegeseis*, (4) *Mythographus Homericus*, (5) Catalogs
 - Other *hypotheses*, e.g. to Theocritus or to Demosthenes and Isocrates.
3. Dictionaries
- *Glossai*-type: glossaries for individual authors or genres
 - *Lexeis*-type: lexica with a linguistic interest, e.g., in dialects, synonyms, etymology, or rare words; prescriptive-normative atticistic lexica
 - *Onomastikon*-type: theme-specific dictionaries (*Sachwörterbücher*), e.g., on historical, antiquarian, or geographic topics.

4 Outlook: Philology, Philological Writings, Systems Theory

The view of the large field of philological writings in its typological diversity invites some farther-reaching observations and reflections of more theoretical nature. It was already noticeable that philological writings do not come in a random or arbitrary variety of text types. Instead, an underlying nexus ties them together, which will now be studied more closely. How are philological writings different from other kinds of writing? Why have philological writings assumed their particular forms? How are the various types of philological writings related to one another? Which dynamics influence the creation of philological writings and their types? These and other questions will be addressed in this outlook. For this purpose, it will be helpful to view the field of philological writings through the lens of systems theory. This means that philology and philological writings will be studied essentially as manifestations and processes of communication.²²⁵

²²⁵ The relationship between a 'system' and 'communication' cannot be explicated here in detail. In short: systems 'operate'; this is how they exist. The operation that constitutes social systems (*soziale Systeme*) is communication. See Luhmann [1984] e.g., 66–67, 79,

4.1 *External and Internal Differentiation of Philological Writings*

In so far as philological communication is an autonomous system, it follows its own laws and principles. The system thereby creates its own forms, channels, and venues of communication. The previously used expression ‘typological relation’ that exists between various kinds of philological writings can now more adequately be characterized as a ‘systemic relation’. What connects philological writings is that they are elements of the same communicative system. The observable typological differences, on the other hand, result from the fact that different types of writings occupy different positions within the system.

However, systems theory allows us to be more specific. The system of philological communication, in which writings play a dominating part,²²⁶ is a result of processes of both external and internal typological differentiation (“*Ausdifferenzierung*” and “*Innendifferenzierung*”).²²⁷ First, external differentiation: all scientific and scholarly communication and the thereby constituted disciplines form around specific interests or objects of study and, more immediately, around the questions and problems that come with them.²²⁸ If the latter, the questions and problems, are perceived to be pressing enough (sufficient number of people committed, sufficient resources devoted), they spark, maintain, and thus constitute the discipline’s processes of communication (“*disziplin konstituierende Problemstellungen*”).²²⁹ Philology’s constituting problem—it sets this discipline apart from others, and sets philological writings apart from other kinds of scholarly or scientific writings—is the fact that the transmission and understanding of important texts are not guaranteed, over time even highly unlikely, without additional philological-scholarly labor. Therefore, the specific and ultimate *telos* of all philological scholarship is *Textpflege*.²³⁰

and elsewhere; Stichweh [1994] 62 and elsewhere; Gansel [2008a]; [2008b]; Dubischar [2010] 60–63.

226 Cf. Stichweh [1994] 64–68 on publications as the most basic elements of scientific communication.

227 Cf. Stichweh [1994] 15.

228 Cf. Stichweh [1994] 18: “Disziplinen bilden sich um Gegenstandsbereiche und Problemstellungen herum”.

229 Cf. Stichweh [1994] 21.

230 On *Textpflege*, see above, § 1. The Aristotelian notion of a *telos* in this context is not an erratic import; cf., e.g., Stichweh [1994] 67 on the “*telos*” of modern science. Disciples of pure systems theory may prefer the term ‘*Sinn*’ (as a system’s ultimate meaning or purpose); cf. Luhmann [1984] 93–147.

Internal differentiation is similar to external differentiation in that it repeats within the system the same processes that have led also to the system's external differentiation.²³¹ Again, specific constituting problems—in the case of internal differentiation they may be thought of as sub-problems to the discipline's main constituting problem—are the cause for differentiation. However, internal is different from external differentiation most notably in that it gives the system within which it takes place its distinct structure and determines the specific nature of its elements. Processes of internal differentiation are therefore particularly instructive as to how a given system really works, that is, how it operates.

If scientific or scholarly communication that makes up a discipline evolves autonomously, the internal differentiation that takes place will be based on function. Thus, internal differentiation in these cases is functional differentiation.²³² While a discipline's defining object of interest is always external, belonging to the system's environment ("*systemexterne Gegenstandsbereiche*"),²³³ the specific operational problems that a discipline intends to solve are generated internally, that is, by the system itself ("*systeminterne Problemvorgaben*").²³⁴ In our case (and somewhat simplified), the primary texts were not created by philologists and are a part of philology's environment. It is for their sake that the discipline emerged as a distinct field of communication (external differentiation). Philologists themselves, however, determine what specifically needs to be done, creating, executing, revising, and updating their own philological agendas (internal problem generation).

These processes lead to a functional system's internal differentiation. In our case: philological scholarship and its manifestations in philological writings are internally differentiated according to specific difficulties that typically threaten the adequate (by the system's own standards) transmission and understanding of primary texts.²³⁵ Therefore, the basic constituting *telos* of philological scholarship plays out in practice in a variety of different text forms, each of which addresses specific problems or obstacles. Thus, the break-down into a kaleidoscope of typical and, therefore, recurring philological problems,

231 Stichweh [1994] 15.

232 Cf. Asper [2007] 13, 19, and elsewhere.

233 Cf. Stichweh [1994] 21–22 describes areas of study as 'segments' ("*Ausschnitte*") of a science's social, physical, or personal environment.

234 Cf. Stichweh [1994] 21.

235 Asper [2007] 15–16 characterizes the history of the scientific text in general as a history of differentiation.

questions, and needs is matched by a corresponding kaleidoscope of specialized types of philological writings, produced by the system itself as efficient responses to these challenges.²³⁶

To be sure, the basic principle that functionality generates and shapes writings is by no means unique to philological scholarship. It governs all autonomously operating scientific and scholarly communication. The specific nature of philological scholarship, however, gives this discipline's writings their characteristic forms. In some cases, they are even unique forms.²³⁷ Monographs or lists, for instance, were seen to occur in other fields of ancient intellectual inquiry as well. But other types of philological writings, such as text-critical *semeia*, the lemmatized *hypomnema*, or *glossai*-type dictionaries are genuinely philological, because the obstacles to which they respond are genuinely philological as well. These types of writings remain essentially philological even when they are transferred to other scientific or intellectual domains, such as medicine (cf. Galen's philological treatment of medical writings),²³⁸ philosophy (cf. Epicurean 'philology'),²³⁹ or theology (cf. Jewish Bible interpretation in Alexandria).²⁴⁰

Therefore, the various types of philological writings all result from the system's internal and functional differentiation and are thus systemically interconnected. They are results and manifestations of the autonomously operating system of philological communication, which produces these writings and is at the same time produced by them.

The various types of philological writings as presented above can now be reconceptualized in terms of systems theory. A look at only the main types must suffice at this point, but the same principle applies to every type and sub-type. Brief and precise marginal critical *semeia* emerged in response to questions concerning textual constitution; marginal or interlinear notes provide succinct critical, semantic, or exegetical information; self-standing lemmatized *hypomnemata* are the system's effective way of targeting difficulties that demand even, passage-by-passage elucidation; in-depth discussion of select topics, however, is relegated to *syggrammata* (especially the Περὶ-type); various types of *pinakes* have emerged to alleviate inevitable difficulties related

236 On text types as routinely sought solutions for recurring communicative needs see Asper [2007] 20, 24, and elsewhere.

237 Cf. Asper [2007] 12, who recognizes the close link between textual conventions of scientific writings and the character of the particular field of knowledge which they cover.

238 Cf. Hanson [1998].

239 Cf. Erler [1993].

240 Cf. Niehoff [2011].

to the identification, authenticity, classification, or retrievability of primary texts; scholarly *hypotheses* are the system's functionally optimized form of providing important contextual and orienting information; the function assigned to *glossai*-type dictionaries is to reduce efficiently unavoidable semantic difficulties.

But the system is more complex. First, the continued production of philological writings—in other words: the system's sustained autonomous operation (here, as in all social systems, through communication)—inevitably leads to secondary problems. They are related to establishing, confirming, explicating, or challenging philological authority on various levels. Following the logic of the system, these secondary problems, too, spark the production of functionally differentiated writings. These are the various agonistic or meta-philological text types found especially among commentaries and monographs. Second, the levels of interest or expertise of some readers, as well as writers, may be too low to prompt the production of rigorous philological writings. To meet their needs, less demanding and perhaps popular(izing) variants evolved that favor brevity over extensiveness, description over analysis, narration over argument, and practical applicability over detached intellectual discourse. The clearest manifestations of this strand of writings are the paraphrastic commentaries and the summary-type *hypotheses*.

In this systemic view of philological scholarship, the original primary texts appear as powerful crystallization points. A multitude of functionally differentiated types of philological writings agglomerate around them, from different sides and angles and in several typological and chronological layers. In its entirety, this typological assemblage of philological writings arguably covers every relevant problem that professional *Textpflege* may face in its endeavor to secure the transmission and understanding of important primary texts.

4.2 Further System Characteristics

Internal and external differentiation is not the only aspect where we find ancient philological scholarship operating as an autonomous system of communication. Other systemic processes or elements are relevant in our context as well. They include exogenous and endogenous growth, internal evolution of problems, innovation frequency, concept transfer, and reversibility of differentiations. As a matter of fact, much of the history of ancient scholarship could be analyzed and reinterpreted in these and other related terms and categories.²⁴¹ Only a few brief and sketchy remarks are possible in this outlook.

241 Even Pfeiffer's account, despite its unmistakable humanist-idealist coloring, invites such an approach. Throughout his thoughtful and richly documented narrative, Pfeiffer shows

Systems theory distinguishes between exogenous and endogenous growth.²⁴² A system's growth is exogenous if the growth impulses do not originate in the system itself but in its environment. The analogies with Alexandrian philology are obvious. Its emergence and sustained activities are owed, initially, to a deliberate act of resource allocation by Ptolemy I. Providing an infrastructure impressive even by today's standards, guaranteeing resources, attracting capable scholars to Alexandria, and with a political agenda that assigned Greek literary studies an important role, this ruler is obviously largely responsible for the birth of scholarship in Alexandria.²⁴³ To the extent that his successors continued these favorable politics, the Egyptian ruling dynasty may be said to have been main source of impulses for sustained external growth for several generations.²⁴⁴

However, sciences also grow endogenously. In this case, growth processes are stimulated by the system's own, internal operations. As scientific questions and problems lead to answers and solutions, they create new questions and problems that again call for new answers and solutions, and so forth.²⁴⁵ This internal evolution of problems secures connecting communication (*Anschlusskommunikation*) within the system and thus keeps the discipline active and growing for considerable time. The scholarly activities themselves—including their most visible manifestations, that is, writings—spark new, further activities that again include the production of writings and even the emergence of entire new types of writings.²⁴⁶

that in many of its phases the development of ancient, in particular Alexandrian scholarship follows a certain internal logic that causally links later scholarly projects and writings to previous ones. Some terms used programmatically by Pfeiffer are strikingly compatible with systems theory: *e.g.*, the origination of scholarship “as a separate intellectual discipline” (cf. ‘external differentiation’ in systems theory), the notions that scholarship “arose” (cf. ‘emergence’ in systems theory) and became “one selfconscious discipline” (cf. ‘self-referentiality’ in systems theory)—to name examples just from the book's opening page; cf. Pfeiffer [1968] 3.

242 Cf. Stichweh [1994] 44.

243 Cf. Pfeiffer [1968] 92–93, 95–99.

244 See Montana in this volume.

245 Stichweh [1994] 42 and 44. This is an example of the general pattern in the evolution of social systems that Luhmann [1984] 219 characterizes as a quasi-hydraulic repression and redistribution (but never elimination!) of problem pressure in social systems through the evolution of media of communication.

246 Montanari [1998d] 18–19 reconstructs this kind of causal chain even within an individual scholar's philological career (Aristarchus). The same principle, however, also shapes the development of the discipline at large.

Examples of an internal evolution of problems that leads to a corresponding internal evolution of types of philological writings abound. The massive collection of texts in the Alexandrian Library, the truly foundational first philological achievement, solves the problem of text availability but creates new pressing demands: for order, systematization, identification, and easy retrievability; in response, *Pinakes* (and *eidographia*) are created. The simultaneous availability of multiple texts of Homer brings their differences to the fore; this unsatisfactory situation marks the beginning of systematic textual criticism and invites the ‘invention’ of new, text-critical *semeia*. Textual criticism allows for authoritative editions, but in some cases (cf. Athenian dramatic texts) this progress immediately creates a new demand for orienting and contextualizing information for individual pieces of literature; learned dramatic *hypotheses* resemble a functionally efficient typological response. Once texts are reasonably well constituted and edited, their exegetical difficulties become more pressing; therefore, with characteristic delay during which more immediately urgent tasks are completed and exegetical pressure builds up, the *hypomnema* emerges, allowing for systematic, concise, and even treatment of primary texts. Already earlier, however, select issues called for more rapid responses; these are the thematically open form of the philological *syggramma*, especially of the *Peri*-type.

In addition to these quasi-evolutionary, quiet, and collaborative processes of internal growth, there is also antagonistic and competitive growth. It is in the nature of autonomous science and scholarship that individual contributions may evoke direct reactions, at times even open challenges, from peers, that is, again, from within the system. Not surprisingly, therefore, especially in light of the considerably ‘agonistic’ character of Greek philological-scholarship, some writings invite alternative solutions or polemical reactions by colleagues or successors.²⁴⁷ Manifestations of this kind of competitive growth are competing editions of the same primary authors (most notably, of Homer) as well as the agonistic commentaries and monographs (*antigraphai*).

Finally, after several generations of intense and prolific philological work on many fronts with the corresponding continual increase of internal differentiation, eventually new needs inevitably arise:²⁴⁸ first, for consolidation and valorization (Whose writings should be regarded as good, valid, authoritative?). This leads to a process of internal selection. Second, there will be a need for transmission and clarification of the established philological authorities (Are their writings still sufficiently known, available, clear?). The text types that

247 Cf. Asper [2007] 35–42.

248 Cf. Stichweh [1994] 48.

emerge to meet this demand are mainly the composite commentaries and various types of meta-philological writings.

However, infinite growth is impossible for any system. In regard to scientific-scholarly communication, the reason is obvious. The reservoir of potential problems in any given field or discipline is not inexhaustible. Therefore, the characteristically high frequency of innovations (*"Innovationshäufigkeit"*) during a discipline's formative period will at some point begin to decline, and gradually a period of saturation (*"Sättigungsphase"*) sets in.²⁴⁹ The rates at which additional internal differentiations or even just connecting communication (*Anschlusskommunikation*) take place goes down. The discipline can, however, even then maintain its communicative momentum if its concepts are successfully transferred from the original areas to new and thus far unexplored fields of study (*"Konzepttransfer"*).²⁵⁰ Here of course the same trajectory toward at some point exhausting the reservoir of potential problems is still inherent in the system.

Realistically, however, concept transfer to new areas within a discipline is not perpetually possible. If the discipline's pool of worthwhile questions, which alone secures the continuation of scientific communication, has been substantially drained, the system's prior differentiations will, after a period of stagnation, eventually be reversed. In other words, the discipline will decline and perhaps disappear, especially since professional scientific or scholarly disciplines tend to depend on extracting resources from their environment, which may at this point decide to reduce the allocation of resources necessary to sustain the system's capability of producing connecting communication (*Anschlusskommunikation*).²⁵¹ Its prior growth, accompanied by increasing internal differentiations of communication and, thus, of types of writings, will then be reversed gradually or drastically.

These processes too are observable during different phases in the history of Alexandrian philological scholarship. Suffice it to recall that many philological practices, methods, and their corresponding types of writings were initially developed for the study of the Homeric texts. Their use, however, was subsequently expanded also to other text corpora, such as the lyrical poets, dramatists, prose writers, and the Hellenistic poets themselves. Overall, the formative period between Zenodotus and Aristarchus was one of high innovation frequency. It produced not only a myriad of individual philological contributions on many primary authors but, even more significant in the present context, a

249 Cf. Stichweh [1994] 44.

250 Cf. Stichweh [1994] 33.

251 Cf. Stichweh [1994] 28.

wide array of types of philological writings. Didymus, on the other hand, the author of innumerable works of largely compilatory nature, represents—after a preceding period of crisis owed considerably to external factors—a period of renewal but also of saturation, if not over-saturation. Shortly thereafter, Alexandrian philology experiences its final decline. Or in systemic terms: the many text-typological and thematic differentiations that have taken place in the system during its formative periods are now largely reversed. Later, scholiography will take this process of reversal even further by largely abandoning all typological differentiations and turning the radically fragmented and selected primary material—taken, for instance, from *hypomnemata*, *syggrammata*, or *glossai*—into a relatively uniform mass of scholia.

4.3 *System, Discipline, Profession, and the Scholar*

The fact that analytical models provided by systems theory adequately describe processes that take place within ancient philology makes it clear that philology in fact constitutes a distinct system of communication, which also manifests itself in characteristic types of writings. Two other concepts that have been used here repeatedly in connection with ancient philology are ‘discipline’ and ‘profession’. One may ask whether these terms can still legitimately be used, now that philological scholarship has been conceived of as a ‘system’.

The answer is, yes. With regard to the modern sciences, Stichweh points out that when a science emerges as a system of autonomous and autopoietic communication, two other things usually emerge as well: a corresponding discipline and a corresponding profession. First, Stichweh’s detailed characterization of ‘autonomous’ and ‘autopoietic’ makes it clear that these characterizations also fit ancient, certainly Alexandrian philological scholarship. Autonomous systems are characterized by:²⁵² 1) independence in the system’s self-regulation; 2) an increase in its independences as well as dependences in the course of its external differentiation; 3) greater interdependence within the system than between the system and its environment. Autopoiesis of systems is then characterized by autonomy and four additional traits: 4) operational closure in that the system’s operations immediately relate to other operations of the same system; 5) self-specifications of a system’s elements through the system itself; 6) not only designation but also generation of the system’s elements; 7) autonomy in the demarcation of the system’s boundaries.

Second, when systems theory speaks of a scientific ‘discipline’, it attributes to it the following traits—all of which can also be observed in philological

²⁵² Stichweh [1994] 52–55.

communication at Alexandria:²⁵³ 1) a sufficiently homogeneous context of communication, that is, a scientific community; 2) a body of generally accepted and codified knowledge; 3) a plurality of questions that are pursued at any given time; 4) a set of methods and paradigmatic solutions to problems; 5) a specifically structured career path and institutionalized processes of socialization for the purposes of selection and training of future scientists.

Finally, systems theory does recognize 'academic professions' as something clearly distinct from most other occupations. Characteristics of academic professions in this sense are manifest in Alexandrian scholarship as well or must at least be plausibly assumed. They are:²⁵⁴ 1) a certain autonomy from and privileges granted by the state or government; 2) the professional member's strong commitment to its subject and a corresponding social role; 3) authority as to how and under which conditions novices are to be admitted and introduced to the discipline; 4) corporate organization with processes of internal control (making up for reduced external control). The dispositions behind these characteristics are that: 5) the field represented by the discipline enjoys special social importance; 6) the profession compares and relates itself ultimately not to 'ordinary' occupations but to the stratified structure of the nobility (which is internally differentiated by differences in honor) so that consequently the nobility's honor system has an equivalent in the profession's system of awarding honor (according to professional competence).

This goes to show that ancient philological scholarship, which most conspicuously and most characteristically manifests itself in the form of philological writings, is more than just a system of communication or social system (*soziales System*). It does in fact constitute a 'discipline' with a corresponding 'profession', not only in the intuitive and everyday sense of these terms but also in the stricter and more objectifiable meaning they have in systems theory. Philological writings with their characteristic typological differentiation are therefore appropriately thought of as professional writings largely constituting an intellectual discipline.

Understanding philology and its types of writings in systemic terms raises a final question. What is the role of the individual scholar? More specifically, in this contribution, what are we to think of the important typological 'inventions' by the preeminent Alexandrian philological scholars? How much room for individual achievement is there when philological scholarship seems to be reduced to a depersonalized, almost automatized system in which problems are systemically generated, differentiation follows the system's invisible logic,

253 Stichweh [1994] 17.

254 Stichweh [1994] 362–364.

and philological problems as well as entire types of writings are said simply to ‘emerge’?

While no social system consisting of communication can ever emerge without the presence of and contributions by individuals,²⁵⁵ for a more nuanced insight, the concept of ‘system rationality’ (“*Systemrationalität*”) will be helpful.²⁵⁶ In functional systems, *Systemrationalität* reflects the system’s ‘expectations’ at any given point. And the system ‘expects’, to phrase it abstractly, that true to the system’s *telos* those operations will be chosen that secure or at least enable the most and most effective connecting communication (*Anschlusskommunikation*).²⁵⁷ To phrase it colloquially, the system favors what ‘makes the most sense’, given the nature of the system and the specific situation at hand.

This concept may cast a new light on the famous Alexandrian ‘inventions’ of types of philological writings. The quotation marks here and elsewhere already indicate that the notion of an ‘invention’ should not to be taken too literally in this context. It is true that critical *semeia* (Zenodotus and Aristarchus), philological *glossai* (Zenodotus), *Pinakes* (Callimachus), learned *hypotheseis* (Aristophanes), lemmatized *hypomnemata* (Aristarchus), to name only the most prominent types, are specialized and highly efficient functional types of writings.²⁵⁸ But it was remarked repeatedly that their ‘inventions’, in the situations in which they occurred, were to a certain extent obvious steps to take. We can now say that these typological developments reflect the discipline’s *Systemrationalität*. The “pull” of the system’s inherent rationality made the ‘inventions’ of these functional types of writings just about inevitable. Within the exceptionally favorable framework that existed for some generations in Ptolemaic Alexandria—this is the real miracle, so to speak, more so than the specific successive stages in the development of philological scholarship once the discipline had been set on its path—²⁵⁹ these types of writings, arguably,

255 In pure systems theory, however, ‘people’ are not considered part of the system, only communication is; even the concept of a ‘person’ and his or her ‘actions’ undergoes considerable revision; cf. Luhmann [1984] 155 and elsewhere.

256 Cf. Gansel [2011] 49–51, 86–94 with other scenarios that show *Systemrationalität* at work.

257 Cf. Luhmann [1984] 62, 122, and elsewhere; also, *e.g.*, Gätje [2008] 205–209. Continued connecting communication is necessary for the existence of any social system. Where there is no *Anschlusskommunikation*, the system immediately ceases to exist.

258 In this sense, even the writings characterized above as “broad-band” are specialized. In the larger systemic context, their distinct specialization is precisely that they (and only they) can serve a broad range of purposes.

259 The emergence and subsequent further development of philology in Alexandria confirms Luhmann’s theory that communication is, on the one hand, fundamentally unlikely

simply had to emerge, that is, had to be ‘invented’ at some point, even more or less in the very chronological order in which they in fact did emerge. In addition, we should keep in mind that these types of writings were not created *ex nihilo*. Rather, they represent professionalized, systematized, and perfected variants of practices that had been or could be cultivated in less systematic and sophisticated fashion in pre- or sub-philological contexts.²⁶⁰ Therefore, to put it bluntly, it does not require breathtaking ingenuity to develop the idea of using marginal signs or interlinear annotations for philological purposes, or to produce scholarly dictionaries, a catalog for the Library’s holdings, or introductions or commentaries to works of literature. The room for real individual achievement on part of the formative figures of Alexandrian philology, as typological inventors, seems thus to become even smaller.

However, there is still something arguably breathtaking about the development of types of philological writings in Hellenistic Alexandria, and the distinguished literary scholars’ fame for having established them is deserved. By introducing important new types of writings, Zenodotus, Callimachus, Aristophanes, Aristarchus, and others were effective agents if not embodiments of philology’s *Systemrationalität*. At crucial points in the discipline’s development they seem to have recognized what needed to be done, they had the capacity (intellectual, organizational, infrastructural) to do it, and they did it so well (systematically, thoroughly, comprehensively) that their solutions lasted, even serving as tools and models for others.²⁶¹ If this interpretation is correct, the Alexandrian typological ‘inventors’ may be praised for having exercised a quasi-Hegelian freedom (*“Freiheit ist Einsicht in Notwendigkeit”*) in recognizing and internalizing philology’s necessities as they arose in certain situations.

Moreover, the fact that in Hellenistic Alexandria philology rose for the first time to the level of a distinct and self-conscious professional discipline makes the famous scholars of Alexandria (in addition to their other accomplishments) truly formative *protoi heuretai* (‘first inventors’) of the main types

to occur (*“prinzipiell unwahrscheinlich”*; for where communication does not exist, it is more likely that there will continue to be no communication than that it sets in), but that communication itself, on the other hand, has the power to transform improbability into probability: once communication has begun, it is more likely that it will in fact continue; cf. Luhmann [1984] 148–190, 217–219.

260 Cf. Pfeiffer [1968] 1–84; Montanari [1998d], especially 6–7; McNamee [2010]; Montanari [2011b], especially 3; Novokhatko in this volume.

261 The basic trias of systemic evolution, summarized, *e.g.*, by Gansel [2011] 111, which consists of variation, selection, and (re)stabilization, is thus successfully completed.

of philological writings. As solutions to the defining problems and questions around *Textpflege* these types are timeless, not because they cannot disappear (we have seen that they can) but because they have been continued or revived wherever autonomous, professional, and erudite concern for the transmission and understanding of important and demanding texts is perceived as a worthwhile goal.

Typology of Grammatical Treatises*

Stefano Valente

- 1 *The τέχνη-type and Related Monographs*
 - 1.1 *The τέχνη-type and Its Evolution*
 - 1.2 *Monographs on Elements and Parts of Speech*
 - 1.3 *Grammatical Treatises on Prosody, Metrics, and Punctuation*
- 2 *Monographs on Hellenismos*
 - 2.1 *Monographs on Declension and Inflection, as well as on Single Criteria of Correction*
 - 2.2 *Treatises on Orthography*
 - 2.3 *Treatises on Syntax*

A typological description of ancient grammatical treatises must first and foremost rely on the few works preserved in Byzantine manuscripts, on the fragmentary surviving monographs on papyri, and on the testimonia concerning them.¹ On this basis, however, a general outline can still be drawn.² On a theoretical perspective, which could be nonetheless in some aspects alien to

* My gratitude to Klaus Alpers, Ian Cunningham, Marco Ercoles, Barbara Fero, and Stephanos Matthaios for their helpful remarks on first drafts of this paper; I am also thankful to Ian Cunningham for kindly revising my English.

- 1 For the sources of knowledge see Dickey in this volume. The following typology should be mostly considered as a theoretical abstraction depending on the surviving work-titles and fragments. A rigorous and exhaustive analysis of ancient grammatical theories and their relation with the remainder of ancient treatises goes beyond the purposes of a typological approach, which I have intentionally adopted. About the definitions and tasks of grammar as well as its partitions (viz. the tripartite system of Asclepiades and the quadripartite one), see e.g. Pagani [2011] zof. nn. 16–21 with rich bibliographical references. For the sake of brevity, I will mainly refer to the *LGGA*-articles (www.aristarchus.unige.it/lgga/) on the single grammarians, where detailed and updated bibliography can be easily collected.
- 2 One must keep in mind that in ancient Greek grammar has never been an autonomous discipline, being linked to rhetorical, philosophical and scholarly studies (see e.g. Blank [2000] 400).

ancient conceptions, Greek grammatical treatises might be divided into two groups:³

1. the *τέχνη*-type, viz. monographs being a sort of (school-)companion of grammatical doctrines along with a definition and description of grammar and of its tasks, with a particular focus on the parts of speech;⁴ a 'reduction'-type might be represented by monographs dealing with single elements (letters, syllables, words) and/or parts of speech;
2. 'Ἑλληνισμός'-type⁵—especially in the form of *τέχνη* *περὶ Ἑλληνισμοῦ*⁶—discussing doubtful grammatical problems and irregularities, using the criteria of analogy, etymology, dialect, usage, and literary tradition; treatises on orthography, prosody, declension and conjugation fall into this typology; on a higher level, monographs on syntax represent a sort of final stage of grammatical studies on *Hellenismos*.

1 The *τέχνη*-type and Related Monographs

1.1 *The τέχνη-type and Its Evolution*

The appearance of the *τέχνη*-type—viz. a comprehensive and systematic account of grammar and its tasks, along with the definition and description of the elements and parts of speech—dates to the 1st c. BC, after Greek grammatical doctrines (and grammarians as well) met the Roman world, building up a discipline codified and progressively independent from strictly philological

3 I follow here Ax [1982] 97 (= Id. [2000] 128f.) and Matthaïos [1999] 15f. with bibl. (see Id. [2007] 13f.), with required adaptations due to the typological approach (see n. 1). For the Latin world see the useful model sketched by Ax [2005] (in part. 259), which will here be taken into due account. Obviously, there are many overlaps within the groups and a rigorous distinction between them according to the modern conception of grammar is impossible (see e.g. Barwick [1922] 227 n. 2: "Auch die ars grammatica [*scil.* *τέχνη γραμματική*], soweit sie die Flexionslehre behandelte, kann hier [*scil.* among works *περὶ Ἑλληνισμοῦ/de latinitate*] genannt werden").

4 Fehling [1956] 247 n. 1 suggested that the *τέχνη*-type could have been created on the basis of the *τέχνη* *περὶ Ἑλληνισμοῦ* (see below, § 2), particularly on the introductory part dealing with the doctrine of parts of speech and of inflection (see also Pinborg [1975] 112). For the reflection on the 'parts of speech' in ancient Greek scholarship see also Swiggers-Wouters in this volume (section III.2).

5 On Ἑλληνισμός and its criteria, see Pagani in this volume with an exhaustive discussion and further bibliographical references.

6 See e.g. Fehling [1956] 258ff.; Pinborg [1975] 112.

studies.⁷ It must be remembered that “grammar’ in its full and complete sense was understood to be knowledge of literary compositions, accompanied only in some cases by knowledge of what is said and thought in Greek according to the common usage” (Pagani [2011] 17).

Early definitions of grammar and its purposes were at first formulated in Hellenistic philological works. The theoretical framework of grammar was namely philology, as it is attested by the first definition of grammar as a “complete mastering in written literary works” (παντελής ἔξις ἐν γράμμασι)⁸ formulated by Eratosthenes.⁹ The philologically oriented perspective of Alexandrian grammar,¹⁰ defined by Dionysius Thrax’s *Παραγγέλματα* as “the maximally extensive experience of what is said by poets and prose writers”,¹¹ would be later questioned, among others, by Asclepiades, who stressed that grammar is “a *techne* of thing said by poets and prose authors”.¹² As Di Benedetto [2007] 417ff. rightly points out, Asclepiades’ definition suggests the evolution and renewal of grammar during the 1st c. BC.

-
- 7 See Di Benedetto [2007] 417f.; Pinborg [1975] 110ff.; Criboire [2001] 210; Matthaios [2009a]. See also Ax [2006c] 250: “Der *ars*-Typ ist eine didaktisch motivierte Darstellung der Sprachkonstituenten, die der Identifikation der Sprachelemente bei der Lektüre und weniger normativen Richtigstellungen dient”. Influences of Stoic treatises *Περὶ φωνῆς* (see below, § 1.2) dealing with the smallest elements of speech, λέξεις, λόγος, parts of speech, as well as ἀρεταὶ and κακίαι λόγου must be acknowledged (see e.g. Barwick [1922] 91f., 229f.).
- 8 See Pagani [2011] 17f. with n. 3; Matthaios [2011a]. For the translation of ἔξις see L. Pagani, *PAWAG* (<http://www.aristarchus.unige.it/pawag/>) s.v.; see also Swiggers-Wouters in this volume (section II.2).
- 9 It could have been located in his *Γραμματικά*: however, very little can be inferred about the structure and the contents of this work in two books (see Geus [2002] 52 n. 38, 291 nn. 11f., 304f., and Matthaios [2011a] 62f. with rich bibliography). See also Schenkeveld [1994] 263. Pfeiffer [1968] 162 cautiously suggested its possible influence on Asclepiades’ *Γραμματικά*: see below.
- 10 Alexandrian scholars used to call themselves γραμματικοί (on the Cratetean polemics against the term in favour of κριτικός see Sext. Emp. (*Math.* 1.79, 248) with Blank [1998] 140f., 259; Eratosthenes was the first to call himself φιλόλογος (Suet. *Gram.* 10): see Pfeiffer [1968] 158f., 238; Schenkeveld [1994] 265; Blank [2000] 404f.
- 11 Sext. Emp. *Math.* 1.57: Διονύσιος μὲν οὖν ὁ Θραξ ἐν τοῖς παραγγέλμασι φησι ‘γραμματικὴ ἐστὶν ἐμπειρία ὡς ἐπὶ τὸ πλεῖστον τῶν παρὰ ποιηταῖς τε καὶ συγγραφεύσι λεγομένων’ κτλ., transl. Di Benedetto [2000] 395 (= Id. [2007] 522). See Di Benedetto [2007] 392ff.; Schenkeveld [1994] 263f.
- 12 Sext. Emp. *Math.* 1.74, transl. Pagani [2011] 19. On the polemics against Dionysius and on the following definitions of grammar formulated by Ptolemy the Peripatetic, Chares/Chairis, Demetrius Chlorus, and Tyrannion, see Blank [1998] 124–146 and Pagani [2011] 19f.

Establishing the exact typology of Dionysius' *Παραγγέλματα* is quite difficult; beside the definition of grammar, they certainly contained the identification of its six parts, which belonged to Alexandrian scholarly activity: "expert 'reading' concerning the accents, interpretation according to the poetical 'tropes', explanation of 'glosses' and 'stories', finding of etymology, setting out of analogy, judgement of poems (χρίσις ποιημάτων)".¹³ It remains uncertain whether Dionysius dealt theoretically with the parts of speech in his *Παραγγέλματα* or in other grammatical works.¹⁴

A decisive step toward a technicalisation of grammar was undertaken by Asclepiades of Myrlea.¹⁵ In his *Περὶ γραμματικῆς*¹⁶ he defined grammar and its origins (Sext. Emp. *Math.* 1.44–47, 72–74), as well as its tasks. Of the tripartition into technical, historical, and grammatical parts which he suggested (Sext. Emp. *Math.* 1.252: τεχνικόν, ἱστορικόν, and γραμματικόν μέρος), only the technical section falls into grammar *stricto sensu*, as it deals with letters, syllables, λέξεις, parts of speech, orthography, Ἑλληνισμός with its criteria (especially analogy and etymology), as well as virtues and vices of speech.¹⁷

During the Hellenistic period, grammar (γραμματική) was never an independent field of research;¹⁸ on the other hand, there is some evidence of a well-defined elementary grammar suited to the first stages of the educational process (the so-called 'grammaticistic', γραμματιστική).¹⁹ Although it seems possible to infer that a sort of continuum in school practice existed, evidence for a systematisation of grammatical doctrines is attested during the 1st c. AD, when the learning of grammar entered the school curricula as a separate

13 Sext. Emp. *Math.* 1.250f. (~ Dion. T. *GG* 1.1.5,2–6.3), transl. Di Benedetto [2000] 395 (= Id. [2007] 523). See Blank [2000] 410f., 413 tab. 58.4. See also Quint. *Inst.* 1.8.13–21 and Ax [2011] 384–404 with bibl.

14 See Matthaios [1999] 22 with nn. 46f. with bibl.

15 See Di Benedetto [2007] 419; Blank [1998] XLVf.; L. Pagani [2009a]; Montana in this volume.

16 The *Περὶ γραμματικῆς* and the *Περὶ γραμματικῶν* might have been part of a complete work *Γραμματικά* in eleven books at least: see Usener [1913] 309 n. 125; Pfeiffer [1968] 158, 162 n. 8.

17 See Schenkeveld [1994] 264f.; Blank [2000] 412 tab. 58.1, especially on the basis of Sext. Emp. *Math.* 1.91–96, 252f.; see also above n. 7; Swiggers-Wouters (section 11.2) in this volume. On the later quadripartite system, counting a τεχνικόν among its ὄργανα, Blank [2000] 412 tab. 58.3; Pagani [2011] 21 with nn. 19–21 for bibl.

18 On this topic cf. Montana in this volume.

19 See e.g. Asclep. Myrl. ap. Sext. Emp. *Math.* 1.44 with Blank [1998] 113 and n. 64. This bipartition (elementary grammar vs. higher grammar aiming at the interpretation of classical texts) is also attested by Phil. *Congr.* 148–150 (3.102f. C.-W.); Blank [2000] 402.

subject.²⁰ For this purpose, different handbooks and schoolbooks were composed,²¹ as some papyri attest, stressing the absence of a standardised school practice.²² In addition, this practice seems to have received a certain influence from the higher grammatical studies,²³ displaying different combinations of various doctrines. At least until the 5th c. AD, there was no standard text at all.²⁴ At that time, the *Τέχνη γραμματική* ascribed to Dionysius Thrax (= *Τέχνη*)²⁵ seems to have prevailed against other systematic outlines of grammar preserved by various *τέχνη γραμματικά*.²⁶ Other treatises—with

-
- 20 Cribiore [2001] 210. She also points out that “a limited systematisation of grammatical tools already existed in the work of the Alexandrian scholars, where it served their philological pursuits, and it is conceivable that some aspects of embryonic normative grammar were already part of school practice in Hellenistic times. Only later, however, did grammar arrive at a distinct methodology and a systematic articulation of a definite body of knowledge”; see also *ibid.* n. 121: “the absence of grammatical exercises and text in Hellenistic times is highly significant and cannot be explained, in my opinion, solely on the basis of the limited number of literary and semi-literary papyri preserved from this period”. On a possible existence of some *ars*-type in the Roman world already in the 1st c. BC, see Ax [2011] 13–15 (his hypothesis cannot however be automatically transposed to the Greek world because of the lack of any certain proof).
- 21 School exercises are also good witnesses to this ongoing practice: Cribiore [1996] 38ff.
- 22 See Wouters [1979] 43; Schenkeveld [1994] 267f.
- 23 See Wouters [1979] 44f.
- 24 “Grammar, and grammatical teaching, was not a process of uniform transmission of a set of codified doctrines. Taken together with the other *τέχνη*-papyri, our text [*P.Berol.* 9917] shows that grammarians proceeded through adoption, adaptation and transformation, and through ‘retouching’ definitions, technical terms, and lists of examples. This approach ‘*par bricolage*’ explains the differences in formulation, in exemplification, and in organisation of the textual testimonies for the *τέχνη*-genre” (Wouters-Swiggers [2011] 329). Differences concern, for instance, the number and sequence of the parts of speech, their definitions and accidents (*παρεπόμενα*, viz. consequential attributes): see Wouters [1979] 38f., 60 n. 49.
- 25 The attribution of this booklet to Dionysius Thrax has been strongly questioned since antiquity: see Di Benedetto [2000] 397–399; Id. [2007] 381ff.; Matthaios [2009a] (with further bibl.); Pagani [2010b]; [2011] with further bibl.; Montana in this volume. For the papyri carrying the text of the *Τέχνη*, not without modifications and adaptations, see *P.Hal.* 55A (Wouters [1979] 109–119, no. 4, 5th c. AD). The *incipit* of the *Τέχνη* is also preserved by *PSI* 1.18 under the title *Περὶ γραμματικῆς* (5th c. AD: Wouters [1979] 120–124, no. 5), after the treatise *Περὶ ποδῶν* (~ *GG* 1.1.119.6–9), one of the ancient supplements to the *Τέχνη* in the Mediaeval mss. (suppl. III: Uhlig [1883] LII f.), which the scholiasts to the *Τέχνη* still found in that order (see *sch.* [Vat.] Dion. T. *GG* 1.3.128.28ff. with Di Benedetto [2007] 459f.).
- 26 Works with the title *Τέχνη γραμματική* have been also written by Lupercus (3rd c. AD: see Ucciardello [2008] with bibl.) and by Astyages (see Ucciardello [2006a]), but no fragment

different degrees of doctrinal (dis)similarity—survive in some papyri dating from the 1st c. AD onwards,²⁷ testifying to the existence of a common theoretical background with little originality.²⁸

The surviving grammatical papyri belong to different typologies,²⁹ and many of them were copied or produced by teachers or pupils for school practice;³⁰ a school milieu is also suggested by the question-and-answer structure.³¹ They may have consisted of the following subsections:³² definition and structure of grammar, of the elements of speech from the smallest ones (letters, *στοιχεία*, and syllables, *συλλαβαί*) to the word and sentence (*λέξις* and *λόγος*), and of the parts of speech (*μέρη λόγου*);³³ collateral topics could also have been treated (e.g. §§ 2–5 of the *Τέχνη*, on *ἀνάγνωσις*, *τόνος*, *στιγμή*, and *ῥαψωδία*: *GG* 1.1.6.4–8.6). These parts might have been combined and dealt with in different ways and to different extents, as the papyri clearly show.³⁴

Some few examples. *P.Yale* 1.25 (1st c. AD; Wouters [1979] 47–60, no. 1) preserves a definition of *λόγος* (c. 1 ll. 1f.) close to that of the *Τέχνη* (*GG* 1.1.22.5) followed by a list of its nine parts (ll. 2–5), instead of the canonical eight of the *Τέχνη* (*GG* 1.1.23.1–3), and by the definition of these parts with some examples.³⁵ Striking coincidences and significant differences with the text of the *Τέχνη* are by no means surprising.³⁶ *P. Osl.* 2.13 (100–150 AD; Wouters [1979] 141–155, no. 9;

survives. On possible fragments from the *Τέχνη γραμματική* by Eudaemon (4th c. AD), see Cohn [1907c]; Meliaddò [2005b].

- 27 They display some significant differences in the presentation of the materials and doctrines, thus showing that the surviving booklet attributed to Dionysius was just one of the possible texts, presenting a combination of doctrines and materials coming from different sources (e.g. Alexandrian scholars, Stoics, Apollonius Dyscolus): Matthaios [2009a] with bibl.
- 28 See Wouters [1979] 43f.
- 29 A survey in Wouters [1979] and Crihiore [1996] 263–269 ('Grammar'-type).
- 30 Crihiore [1996] 52f.; Wouters [1997] 1021.
- 31 On the *ἑρωτήματα*-structure, see e.g. Wouters [1979] 41–43, 88f.; Crihiore [2001] 212; Ax [2005] 253; Lndon-Matthaios [2007] 100 n. 22 with further bibl.
- 32 See Fuhrmann [1960] 29–34 (with the review by Fehling [1962]); Wouters [1979] 38–43.
- 33 On the parts of speech, see Schenkeveld [1994] 269–273; Matthaios [1999] *passim* with rich bibl.; Jonge-Ophuijsen [2010] 495f. The origins of this part are to be found in the grammatical *μερισμός*: see above, § 1.2.
- 34 To this end, Wouters [1979] 38f. remarks differences in number, sequence, and definition of parts of speech and their *παρεπόμενα*.
- 35 Wouters [1979] 52ff.
- 36 See Di Benedetto [2007] 398–410, 494f.; Swiggers-Wouters [1996a] 47–60; Crihiore [1996] 263, no. 358. Similarly, § 6 of the *Τέχνη* (*περὶ στοιχείου*, *GG* 1.19) exhibits interesting coincidences (as well as differences) with the surviving part of *P.Osl.* 2.13 (100–150 CE; Wouters

Criamore [1996] 264, no. 362) contains “a genuine τέχνη influenced by predecessors (Dionysius Thrax [*i.e.* Τέχνη]) and contemporaries (Apollonius Dyscolus, Sextus Empiricus)” (Wouters [1979] 155). Agreements with the Τέχνη are also present in *P.Harr.* 59 (end 2nd c. AD: Wouters [1979] 163–174, no. 11). *P.Amh.* 2.21 (3rd/4th c. AD: Wouters [1979] 188–197, no. 14; Criamore [1996] 266, no. 368) is a “grammatical manual treating the προσφῶδια, the parts of speech and the noun”,³⁷ *PSI* 7.761 (5th/6th c. AD: Wouters [1979] 204–215, no. 16; Criamore [1996] 267, no. 373) contains “definition of noun, verb, participle, article, pronoun, and preposition” (Criamore [1996] 267) with influence from Apollonius Dyscolus and coincidences with the Τέχνη. A question-and-answer structure is used, for instance, in *PSI* inv. 505 (late 1st/early 2nd c. AD: Wouters [1979] 135–138, no. 7; London-Matthaios [2007]), a τέχνη-fragment on the accidents (παρεπόμενα) of the noun, and in the Τέχνη γραμματική by Pseudo-Trypho preserved in *P.Lit. Lond.* 182 (ca. 300 AD; Wouters [1979] 61–92, no. 1),³⁸ “a good example of the grammatical ‘systematisches Lehrbuch’ of Antiquity” (Wouters [1979] 91).

The absence of any systematic investigation on syntax in the τέχνη is quite remarkable:³⁹ apart from some occasional observations on the construction of prepositions in *P.Lit.Lond.* 182 c. 2, 75–80,⁴⁰ syntax received an independent treatment only by Apollonius Dyscolus.⁴¹

1.2 Monographs on Elements and Parts of Speech

A reduction-type can be identified in monographs dealing with single topics, such as those about the smallest elements of speech, that is sound, letters, and syllables (φωνή, στοιχεῖα, and συλλαβαί),⁴² and those on the parts of speech.

Treatises *Περὶ φωνῆς* come into consideration. This topic was initially investigated from a philosophical perspective by the Stoics,⁴³ such as Diogenes of Babylon in his *Τέχνη περὶ φωνῆς* (fr. 17, 21 Arnim).⁴⁴ A Stoic inspiration can be also supposed for the *Περὶ τῶν ἐν φωναῖς ζητουμένων* in three books by Theodorus

[1979] 141–155, no. 8) dealing with στοιχεῖα and γράμματα (here there are coincidences with other grammatical doctrines such as Apollonius’). See also *P.Köln* 4.177 (4th c. AD) on vowels and consonants (see Criamore [1996] 267, no. 371).

37 Wouters [1979] 196 with bibl.; see also Criamore [1996] 266; Di Benedetto [2007] 459f.

38 On the false ascription, see Di Benedetto [2007] 405–410; Wouters [1979] 90–92 with rich bibl.

39 See Criamore [2001] 212 with n. 127; Swiggers-Wouters [2003a].

40 See Wouters [1979] 61–92, no. 2, in part. 81f. (see also 40 with nn. 37f. with bibl.); Criamore [2001] 212.

41 See below, § 2.3.

42 See *e.g.* Sext. Emp. *Math.* 99–130 with Blank [1998] 153–170.

43 See *e.g.* Pohlenz [1939]; above, n. 7.

44 See Di Benedetto [2007] 416, 479; Schenkeveld [1994] 272f.

of Gadara⁴⁵ and for the *Περὶ φωνῆς* by Apollonius Dyscolus.⁴⁶ Beside the orthographical discussions on combination of words,⁴⁷ letters and syllables as well as their properties were, for instance, treated by Epaphroditus (*Περὶ στοιχείων*, fr. 1–13 Braswell-Billerbeck)⁴⁸ and the same Apollonius (*Περὶ στοιχείων* and *Περὶ συλλαβῶν*).⁴⁹

Describing and defining the parts of speech (μέρη λόγου), and assigning words to them (the so-called μερισμός)⁵⁰ primarily belonged to the higher grammar, becoming later a core feature of the τέχνη γραμματικαί.⁵¹

The first grammatical works on μερισμός are attested from the 1st c. BC on with Tyrannion, whose *Περὶ μερισμοῦ* or *Περὶ τῶν μερῶν τοῦ λόγου* (fr. 56–58 Haas)⁵² received an almost instant commentary by his pupil Diocles (*Ἐξήγησις τοῦ Τυραννίωνος μερισμοῦ*).⁵³ Later, Apollonius Dyscolus' *Περὶ μερισμοῦ τῶν τοῦ λόγου μερῶν* in four books⁵⁴ had considerable influence.⁵⁵

45 See Kowalski [1928] 168; Pagani [2005c].

46 Schneider [1910] 1f., underlining that Apollonius' definition of φωνή relies upon the one given by Diogenes of Babylon. If Priscian reflects here Apollonius' work, the treatise was *de voce et eius speciebus* (Prisc. *Inst.* 2.3.5).

47 Falling into the μερισμός/σύνταξις field: see below § 2.2 and Valente (section III.2) in this volume.

48 According to Braswell-Billerbeck [2008] 84, Epaphroditus' work was “a treatise on elements or roots, *i.e.* an etymological work”.

49 Respectively Schneider [1910] 2–6 and 8f. The content of Apollonius' lost works can be partially recovered through Priscian's *Ars* and the scholia to the *Τέχνη* (as well as through other witnesses: see also Luscher [1912] 2–23, 188–200). A *Περὶ στοιχείων* is possibly attested also for Diogenianus (2nd c. AD) in *Suda* δ 1146 Adler (*s.v.* Διογένησις ἢ Διογενειανός): see Diog. *FGrHist* 474 T 1 with commentary.

50 See Lehrs [1848] 423f.; Dyck [1983] 3; Blank [1998] 189–191. The word μερισμός in grammatical literature could also be used in orthography to indicate the syllabification (see below, § 2.2), the “analysis of a sentence into its component parts, parsing” and the “division into feet, scansion [...] ; division of a line into words” (LSJ 1104 *s.v.* 3.b, 4): see Lehrs [1848] 424–426; Glück [1967] 35f.; Dyck [1983] 3–5 and below, p. 608. Μερισμός was initially a task of philosophy (see Blank [2000] 401f.), being later treated by Alexandrian philologists in a scholarly perspective (for instance, Aristarchus certainly knew and used the canonical eight parts-system: see Matthaios [1999]).

51 See above, § 1.1.

52 See Haas [1977] 167f. Di Benedetto [2007] 414–416. According to *Suda* τ 1185 Adler, Tyrannion distinguished here proper name, common name and participle (*Περὶ τῶν μερῶν τοῦ λόγου*, ἐν ᾧ λέγει, ἄτομα μὲν εἶναι τὰ κύρια ὀνόματα, θεματικά δὲ τὰ προσηγορικά, ἀθέματα δὲ τὰ μετοχικά): see Lehrs [1848] 416 n. *; Haas [1977] 168.

53 See Haas [1977] 98, 167.

54 See Lehrs [1848] 416f.; Schneider [1910] 30–37.

55 Lehrs [1848] 417 inclines to attribute *sch.* (Vat.) Dion. T. *GG* 1.3.214.17–215.3 (~ *sch.* [Marc.] Dion. T. *GG* 1.3.356.7–357.26, see *sch.* [Lond.] Dion. T. *GG* 1.3.514.31–521.37) to Apollonius.

Besides, in Sextus' account of the technical part of grammar the analysis of the *μέρη λόγου* is followed by the (polemical) discussion on the practice of *μερισμός* (or *ἐπιμερισμός*, lat. *partitio*: Sext. *Emp. Math.* 1.159–161).⁵⁶ In this context, it is the partition of a sentence (mostly of a verse) “into its metrical and verbal components, viz. into feet and words (*λόγου μέρη*)”, being thus a division “of a verse into its parts (verbal or metrical), not the classification of words among the parts of speech”.⁵⁷ The origins of this grammatical genre are probably to be traced back to school teaching, common to the Greek and Latin world:⁵⁸ the practice of parsing a verse or a sentence would later lead to the compilation of grammatical works, which often maintained the structure of the oral teaching (question-and-answer form),⁵⁹ with a progressive shifting during the Byzantine period to the form of a schoolbook and/or reference book.⁶⁰ Among the grammatical works, Herodian's two books of *Ἐπιμερισμοί*, probably dealing with the Homeric text (with etymological explanations), could have had such a structure; the exact content and structure is however impossible to reconstruct.⁶¹ According to Lucian (*Hes.* 5), Hesiod's works were treated in the same way.⁶²

The only complete monographs of this reduction-type which still survive are the so-called *scripta minora* by Apollonius Dyscolus (*Περὶ ἀντωνυμίας*, *On adverbs* [GG 2.1.3–116], *Περὶ ἐπιρρημάτων*, *On adverbs* [GG 2.1.119–210],⁶³ and *Περὶ συνδέσμων*, *On conjunctions*, GG 2.1.213–258, Dalimier [2001]).⁶⁴ These works are generally divided into two parts: *ἔννοια* ('sense') and *σχῆμα τῆς φωνῆς* ('word-

56 See Glück [1967] 33ff.; Blank [1998] 189–191. See also Apoll. Dysc. 491.13; see Lehrs [1848] 424; Dyck [1983] 3 n. 3.

57 Dyck [1983] 3; see above, n. 47.

58 See Glück [1967] 31f.; Blank [1998] 189; the best known example are Priscian's *Partitions of the first twelve verses of the Aeneid* (*Partitiones duodecim versuum Aeneidos principalium*, *GL* 3.457–515).

59 See above, n. 31.

60 See Lehrs [1848] 426; Glück [1967] 32f.; Dyck [1983] 4f. Typical cases are the epimerisms to Homer (originally in the form of scholia-epimerisms, which will be later alphabetized in a lexicographic structure: see Dyck [1983–1995]). On the Byzantine practice see also Robins [1993] 125–148.

61 Fragments are collected by Lentz [1867] xvii–xxxiii and supplemented by Dyck [1981] and [1993a] 793. On Herodian's work and its relationship with the pseudoepigraph *Epimerisms* (Boissonade [1819]), see Dyck [1981] and [1993a] 792f. with bibl.

62 See Criboire [2001] 197.

63 See Brandenburg [2005] with the review by Schmidhauser [2007].

64 See Blank [2000] 414.

form').⁶⁵ The *ἔννοια* deals first with the name of a part of speech (*κλήσις*), then its definition (*ἕρως*), its *γένη* (kinds), syntax and *μερισμός* (viz. assigning words to the discussed part of speech); the *σχῆμα τῆς φωνῆς* handles forms and prosody of those words, their dialectal forms and affections (*πάθη*).⁶⁶ Nonetheless, each part of speech (noun, verb, participle, article, pronoun, preposition, adverb, conjunction) was treated separately by various grammarians from the 1st c. BC onwards: the most influential works in this field of research were those by Trypho, Apollonius Dyscolus and Herodian.⁶⁷

Treatises on nouns were written by Apollonius Dyscolus (*Περὶ ὀνομάτων* or *Ὀνοματικόν*)⁶⁸ and Herodian (*Περὶ ὀνομάτων* or *Ὀνοματικόν* or *Ὀνοματικά*).⁶⁹ Subsections or separate monographs were also devoted to single topics, such as Philoxenus' *Περὶ συγκριτικῶν* (*On comparatives and superlatives*, fr. 331–353 Theodoridis),⁷⁰ Trypho's *Περὶ παρωνύμων* (fr. 83–93 von Velsen), *Περὶ ὀνομάτων συγκριτικῶν* in one book and *Περὶ ὀνομάτων χαρακτήρων* in one book (in *Suda* τ 115 Adler), Habro's *Περὶ παρωνύμων* (fr. 11–18 Berndt) and *Περὶ κτητικῶν* (fr. 9f. Berndt), Apollonius Dyscolus' *Περὶ παρωνύμων*,⁷¹ Herodian's *Περὶ παρωνύμων* (*GG* 3.2.849f.)⁷² and *Περὶ ῥηματικῶν ὀνομάτων* (*GG* 3.2.897–903).⁷³

Among the monographs on verbs, Apollonius Dyscolus' *Περὶ τοῦ ῥήματος* or *Ῥηματικόν*⁷⁴ was one of the most important works, receiving a commentary by Zenobius (Schoemann [1881] 8f., fr. 5 ap. *Etym. Gen.* α 124 Lasserre-Livadaras)⁷⁵ and being extensively used by Herodian and later grammarians (such as Priscian and Choeroboscus).⁷⁶ The same general approach was seemingly

65 See Blank [2000] 414.

66 See Blank [1993] 719; Id. [2000] 414.

67 Some of the following monographs could as well fall into (or be listed under) the 'Ελληνισμός'-type, particularly those on declension, inflection, and derivation, as some fragments dealing with correct word-forms show: see below, § 2.

68 See Schneider [1910] 38–68. Schneider [1910] 54 also suggests that the *Περὶ παρωνύμων*, as well as the treatise *Περὶ τοῦ τίς*, might have been part of it.

69 See Lentz [1867] CV–CVIII.

70 See Theodoridis [1976] 12.

71 See above, n. 68.

72 See Lentz [1867] CXIVf.

73 See Lentz [1867] CXV.

74 See Schneider [1910] 69–121.

75 On the lifetime of the grammarian, see Schoemann [1881] 29: "coniciam eum non ita multo post Herodiani tempora vixisse".

76 See Reitzenstein [1897] 361; Schneider [1910] 70. Besides, *PSI* 7.849 (Wouters [1979] 260–262, no. 22) seems to represent a work similar to—without however being recognisable as—Apollonius' *Ῥηματικόν*.

shared also by Herodian in his *Περὶ ῥήματος* or *Περὶ ῥημάτων* (GG 3.2.787–824).⁷⁷ The athematic conjugation was dealt with in separate monographs, such as the *Περὶ τῶν εἰς μι ληγόντων ῥημάτων* (*Suda* δ 430 Adler) by Aristarchus' pupil Demetrius Ixion.⁷⁸ Later, Philoxenus (*Περὶ τῶν εἰς μι ληγόντων ῥημάτων*, fr. 218 Theodoridis), Apollonius Dyscolus (*Περὶ τῶν εἰς μι ληγόντων ῥημάτων παραγωγῶν*, in one book)⁷⁹ and Herodian (*Περὶ τῶν εἰς μι*, GG 3.2.825–844)⁸⁰ wrote on the same topic. Specific problems were also taken into account, as some titles suggest: Philoxenus wrote a *Περὶ μονοσυλλάβων ῥημάτων* (fr. 1–215 Theodoridis),⁸¹ at least in two books, dealing with the etymological derivation of Greek verbs from monosyllabic roots,⁸² while in his *Ῥηματικόν* (*On verbal derivatives*, fr. 354–400 Theodoridis)⁸³ he also discussed the *nomina verbalia* (as well as quasi-verbal names).⁸⁴ Trypho was the author of various monographs on the verb, whose titles are merged in the account given by *Suda* τ 1115 Adler: *Περὶ ῥημάτων ἐγκλιτικῶν καὶ ἀπαρεμφάτων καὶ προστακτικῶν καὶ εὐκτικῶν καὶ ἀπλῶς πάντων* (fr. 78–80 von Velsen);⁸⁵ he also wrote a *Περὶ ῥημάτων ἀναλογίας βαρυτόνων* in one book (fr. 81 von Velsen).⁸⁶ A monograph about the imperatives in the Homeric poems was compiled by Heracleon (*Περὶ τῶν παρ' Ὀμήρῳ προστακτικῶν ῥημάτων*).⁸⁷ Herodian's *Περὶ συζυγιῶν* (GG 3.2.779), *Μονόβιβλον περὶ τοῦ μὴ πάντα τὰ ῥήματα κλίνεσθαι εἰς πάντας τοὺς χρόνους* (GG 3.2.779–784), *Μονόβιβλον περὶ τοῦ ἦν* (GG 3.2.785f.), and *Περὶ ῥηματικῶν ὀνομάτων* (GG 3.2.897) also fall into this typology.⁸⁸

As far as the other parts of speech are concerned, treatises on the participle were written by Trypho (*Περὶ μετοχῆς*, fr. 39 von Velsen), Apollonius Dyscolus

77 See Lentz [1867] CX–CXII.

78 See Ascheri [2009²] with rich bibl.

79 See Schneider [1910] 112–119.

80 See Lentz [1867] CXII f.

81 See Theodoridis [1976] 8f.

82 On a possible relation of this work with Trypho's *Περὶ τῆς ἐν μονοσυλλάβοις ἀναλογίας*, see below, § 2.1.

83 This work was not part of the previous one (see Theodoridis [1976] 8f.). Some fragments are wrongly assigned to Φίλων in some mss. of the testimonia (see Theodoridis *ad ll.*), but there is no evidence for attributing them to Herennius Philo (as Palmieri [1988] 43f. wrongly argues, without considering Theodoridis' fundamental study).

84 See Kleist [1865] 11; Theodoridis [1976] 9 with n. 6, 12.

85 See von Velsen [1853] 54; Ippolito [2008] 5 with bibl.

86 See below, § 2.1.

87 See Ippolito [2005] with bibl.

88 On Herodian's treatises, see Lentz [1867] CX, CXV. Grammatical papyri dealing with verb are for instance *PSI* 7.849 (2nd c. AD: Wouters [1979] 253–262, no. 22), *POxy.* 3.469 (3rd c. AD: Wouters [1979] 263–267, no. 23), *PLand.* 1.5 (6th/7th c. AD: Wouters [1979] 268–273, no. 24).

(*Περὶ μετοχῶν*),⁸⁹ and Herodian (*Περὶ μετοχῶν*, *GG* 3.2.784f.); articles were treated by Trypho (*Περὶ ἄρθρων*, fr. 22–27 von Velsen) and Apollonius Dyscolus (*Περὶ ἄρθρων*).⁹⁰ Demetrios Ixion (*Suda* δ 430 Adler),⁹¹ Trypho (fr. 28–37 von Velsen), Habro (fr. 1–8 Berndt), and Apollonius Dyscolus (*GG* 2.1.3–116)⁹² wrote treatises on pronouns (*Περὶ ἀντωνυμιῶν*).⁹³ *Περὶ προθέσεων* is the title of works by Trypho (fr. 40 von Velsen) and Apollonius;⁹⁴ a *Περὶ ἐπιρρημάτων*⁹⁵ was composed by Trypho (fr. 62–77 von Velsen), Apollonius (*GG* 2.1.119–210)⁹⁶ and Herodian (*GG* 3.2.846).⁹⁷ Conjunctions (*Περὶ συνδέσμων*) were treated in monographs by Trypho (fr. 41–61 von Velsen) and Apollonius (*GG* 2.1.213–258).⁹⁸

1.3 Grammatical Treatises on Prosody, Metrics, and Punctuation

Grammatical treatises on prosody,⁹⁹ metrics and punctuation might be considered here as well, some of their instances being included in the *τέχνη*-type.

The scholarly activity on Homeric poetry also led to the compilation of treatises on prosody,¹⁰⁰ which would influence the later general works on the topic, reaching final canonisation with Herodian. These monographs fall into the category of *ἀνάγνωσις*: defined by Dionysius Thrax in his *Παραγγέλματα* as “the expert reading according to prosody”, it “refers to the procedure of establishing the correct accentuation of the words in a text”.¹⁰¹ A strict philological attitude

89 See Schneider [1910] 122–129.

90 See Schneider [1910] 130–132.

91 See Ascheri [2009²].

92 See above, p. 608.

93 However, it must be remembered that the title of Trypho’s work is conjectural: see Di Benedetto [2007] 410.

94 See Schneider [1910] 132–138.

95 On the (philosophical and grammatical) history of this part of speech, see Matthaios [2007]; Wouters-Swiggers [2011].

96 See above, p. 608.

97 See Lentz [1867] CXIII.

98 According to *Suda* λ 691 Adler, Lupercus wrote on a single particle, *ἄν* (*Περὶ τοῦ ἄν* in three books): see Ucciardello [2008] (also suggesting that it could have been part of his *Τέχνη*, see below, § 1.3). A treatise *Περὶ συνδέσμων* was written by Posidonius (more likely the Stoic philosopher instead of Aristarchus’ pupil) and discussed by Apollonius (see Pagani [2007d]).

99 See Probert [2006], in part. 16–21 on the philosophical roots and 21–45 on the ancient grammatical studies. See also Probert in this volume.

100 Aristophanes of Byzantium is credited with the invention of prosodical marks (viz. for quantities, accents and breathings: [Arcad.] 211.8ff.): see Probert [2006] 21 with bibl.

101 Di Benedetto [2000] 397 (= Id. [2007] 526; see also [2000] 395–397 = [2007] 523–526 for a detailed discussion). Di Benedetto rightly cites Sext. Emp. *Math.* 1.59 (see also Blank

is distinctly reflected in the extant fragments of Tyrannion's *Περὶ τῆς Ὀμηρικῆς προσωδίας* (fr. 1–58 Haas), whilst a more theoretical approach might be supposed for his *Περὶ προσωδιῶν* (fr. 59 Haas).¹⁰² On the same topic, Philoxenus wrote a *Περὶ προσωδιῶν* (fr. 407–411 Theodoridis).¹⁰³ An important step toward the systematisation of the prosodic doctrines was accomplished by Trypho, who wrote a *Περὶ πνευμάτων* (fr. 1–6 von Velsen), a *Περὶ Ἀττικῆς προσωδίας* (fr. 7–19 von Velsen, in at least three books),¹⁰⁴ as well as a *Περὶ ἀρχαίας ἀναγνώσεως* (in at least two books, fr. 94–104 von Velsen) on prosodical problems concerning breathing and accent. Later, Ptolemy of Ascalon wrote a *Περὶ τῶν ἐν Ἰλιάδι προσωδιῶν* and *Περὶ τῶν ἐν Ὀδυσσεΐα προσωδιῶν*, each of them in two books at least (pp. 9–11, 39–64 Baege).¹⁰⁵ A first input to a comprehensive systematisation may have been given by Heraclides of Miletus between the 1st and 2nd c. AD, his *Περὶ καθολικῆς προσωδίας* probably being the first general treatise on the topic.¹⁰⁶ His approach may have been later imitated by Apollonius Dyscolus in his *Περὶ προσωδιῶν* (in 5 books)¹⁰⁷ and probably by Herodian,¹⁰⁸ whose *Καθολικὴ προσωδία*¹⁰⁹ constituted the final canonisation on the topic.¹¹⁰ The work dealt with 60,000 Greek words,¹¹¹ fixing rules (viz. canons) to set the correct accents and breathings, with a detailed account of literary examples.¹¹² Herodian had already dealt with Homeric and Attic prosody in

[1998] 129f. and the testimonia to [Did.] 1 Valente).

- 102 See Haas [1977] 98–172; Pagani [2009c]. Given that the title of the work is not attested, but has been conjectured by Wendel [1948] 1815f., I would not exclude that the theoretical part could have been placed in the introduction of his *Περὶ τῆς Ὀμηρικῆς προσωδίας*.
- 103 See Theodoridis [1976] 13.
- 104 See also Pasquali [1910] and Hunger [1967a] 13f. (fr. 53).
- 105 *Προσωδία Ὀμηρικὴ* in *Suda* π 3038 Adler is probably a common title: see Matthaios [2001c]; Razzetti [2003e].
- 106 The work could have had more than one book: see Ammon. Gram. 336 Nickau (= Heracl. Mil. fr. 4 Cohn). The main grammatical criterion he used was analogy: see Cohn [1884a] 6.
- 107 Schneider [1910] 10–18 groups Apollonius' *Περὶ τόνων* and *Περὶ πνευμάτων* or *Περὶ δασείας καὶ ψιλῆς* as subsections or part of the five books of *Περὶ προσωδιῶν*.
- 108 See Cohn [1884a] 21.
- 109 Beside the (not unproblematic) text reconstructed by Lentz (*GG* 3.1.3–547), valuable fragments contained in the *scriptio inferior* of ms. *Vindob. Hist. gr.* 10 have been published by Hunger [1967a]; a compendium of the work is preserved in *P.Ant.* 2.67 (4th c. AD: Wouters [1979] 216–224, no. 17).
- 110 Lentz [1867] xxxv–LXXI, Egenolff [1900], Id. [1902], Id. [1903], and especially Dyck [1993a] 776–783 with bibl.
- 111 According to Io. Al. 4.9: see Dyck [1993a] 776, 782.
- 112 See Hunger [1967a]; Probert [2006] 22–25, 97f.; Dickey [2007] 75 with further bibl.

separate monographs (*Ἰλιακὴ προσωδία*, *Ὀδυσσειακὴ προσωδία*, *Ἀττικὴ προσωδία*).¹¹³ There were also monographs on single prosodical problems, such as Lupercus' *Περὶ τοῦ ταῶς*.¹¹⁴ Grammatical papyri also offer some evidence on such monographs (see *P.Oxy.* 49.3453 and 3454),¹¹⁵ which belong to the *τέχνη*-type too, such as *P.Amh.* 2.21 (3rd/4th c. AD).¹¹⁶

As regard the grammatical investigations on metrics,¹¹⁷ the most important surviving treatise is Hephaestion's *Encheiridion* (*Ἐγγχειρίδιον περὶ μέτρων*).¹¹⁸ The original 48 books were already epitomised by the author himself into the form of an *ἐγγχειρίδιον* (handbook) in one book,¹¹⁹ which would later be used as a textbook.¹²⁰ Hephaestion's treatise represents a theoretical systematisation of metrical doctrines developed through the philological and editorial activity of the Alexandrian scholars (in particular of Aristophanes of Byzantium), as well as the first theoretical elaborations by Philoxenus and Heliodorus. Philoxenus, in his *Περὶ μέτρων* (*Suda* φ 394 Adler), began the study of metres starting with the letters, Heliodorus with the definitions of metres,¹²¹ and Hephaestion with the syllables (Longin. *Proleg. ad Heph.* p. 81.12 C.). *Περὶ μέτρων* is also the title of works by Trypho (fr. 135 von Velsen), by Ptolemy of Ascalon (pp. 12f., 64 Baege), by Soteridas,¹²² and by Astyages.¹²³ Among the grammatical papyri,¹²⁴ *P.Berol.* 13278 seemingly represents one of the first examples of mixed metrics and grammar.¹²⁵

Specific monographs were also devoted to punctuation.¹²⁶ Punctuation marks can already be found in the first surviving Greek texts, and Aristoteles

113 See Lentz [1867] LXXIII–XCVI; Hunger [1967a] 29; Dyck [1993a] 783–786; Dickey [2007] 75.

114 See Ucciardello [2008].

115 See Bülow-Jacobsen [1982] and Parsons [1982] respectively.

116 Wouters [1979] 188–197, no. 14; Criboire [1996] 266, no. 368.

117 On the origins of metrical studies and on ancient metrical doctrines, see now Ercoles [2014] with bibl. The discipline was fully investigated by Aristoxenus of Tarentum in the *Elementa Harmonica*: see Rocconi [2008²].

118 See Ippolito [2006b].

119 Intermediate steps are represented by the epitomes in eleven and three books respectively (Choerob. *Proleg. Heph.* p. 181.11–16 Consbruch).

120 See Dickey [2007] 104f. *Suda* η 659 Adler adds a generic *μετρικὰ διάφορα* among the works of the grammarian.

121 On Heliodorus see Rocconi [2004] with bibl.

122 See Ippolito [2006c].

123 See Ucciardello [2006a].

124 A survey in Reiter [2012] 155 n. 1.

125 See Reiter [2012].

126 See Tsantsanoglou [2010²].

was aware of such problems (*Rh.* 1407b18).¹²⁷ Aristophanes of Byzantium is credited with having introduced some sort of systematisation in this matter, using a two-point system (στιγμή, ὑποστιγμή).¹²⁸ A more refined (and complex) system was later created by Nicanor, a grammarian who lived under the emperor Hadrian.¹²⁹ His works (see *Suda* ν 375 Adler) were devoted both to texts by specific authors (Homer: *Περὶ στιγμῆς τῆς παρ' Ὀμήρω καὶ τῆς ἐξ αὐτῶν διαφορᾶς ἐν τῇ διανοίᾳ*, Callimachus: *Περὶ στιγμῆς τῆς παρὰ Καλλιμάχου*), and to general cases (*Περὶ στιγμῆς τῆς καθόλου βιβλία ζ'*, and its epitome in one book). Nicanor's punctuation system, based on eight στιγμαί,¹³⁰ was closely linked to textual criticism and served the understanding of the text (as well as reading aloud).¹³¹ However, a three-point system is known through the *Τέχνη* (τελεία, μέση, ὑποστιγμή)¹³² and *P.Oxy.* 49:3454 (2nd c. AD?: στιγμή, ὑποστιγμή, μέση), and was possibly introduced around the 2nd c. AD, improving the previous two-point system (στιγμή, ὑποστιγμή).¹³³

A monographic treatment was also devoted to scholarly signs and marks placed in the margins of literary texts, especially Homer. Beside Philoxenus' *Περὶ σημείων τῶν ἐν τῇ Ἰλιάδι* (*Suda* φ 394 Adler), Aristonicus¹³⁴ wrote on critical signs in Homer and Hesiod (*Suda* α 3924 Adler *Περὶ τῶν σημείων τῶν ἐν τῇ Θεογονίᾳ Ἡσιόδου καὶ τῶν τῆς Ἰλιάδος καὶ Ὀδυσσεΐας*).¹³⁵ The short anonymous treatise *Περὶ σημείων* transmitted as an appendix to Hephaestion's *Encheiridion*

127 See Pfeiffer [1968] 179.

128 See Pfeiffer [1968] 179f. He also suggested that Aristophanes used a three-point system as testified in the *Τέχνη* (see below).

129 See Friedländer [1850]; Blank [1983]; Pontani [2005b] 74f.; Montana [2009b] with further bibliography; see also Matthaios in this volume.

130 Τελεία, ὑποτελεία, πρώτη ἄνω, δευτέρα ἄνω, τρίτη ἄνω, ὑποστιγμή ἐνυπόκριτος, ὑποστιγμή ἀνυπόκριτος, ὑποδιαστολή; see *Comm.* (Melamp. seu Diom.) Dion. T. *GG* 1.3.24.15–18, 26.4–28.8 (see Friedländer [1850] 2–4, Blank [1983] 49–51). On the *Περὶ στιγμῶν* in ms. *Par. suppl. gr.* 122 (Bachmann [1828] 316) see Friedländer [1850] 102–104.

131 See Friedländer [1850] 8: “Nicanoris igitur in carminibus Homericis distinguendis id consilium fuit primum, ut cuiusque loci sententiam quoad fieri posset interpunctionis notis aperiret itaque lectorum iuvaret intelligentiam [...]. Nam quae non recte distinguuntur non possunt recte intellegi, et retro”.

132 Dion. T. *GG* 1.1.7.6–10, cf. *e.g. Comm.* (Melamp. seu Diom.) Dion. T. *GG* 1.3.24.9–26.3 with app. See Blank [1983] 51ff.

133 See Parsons [1982] 97.

134 See Friedländer [1853]; Carnuth [1869]; Valk [1963] 553–592; Razzetti [2003a].

135 See Gudeman [1922b].

(pp. 73.11–76.16 C.) testifies to the usage of the critical signs introduced by the Alexandrian scholars.¹³⁶

2 Monographs on *Hellenismos*

Monographs on Ἑλληνισμός¹³⁷ (or τέχνηαι περὶ Ἑλληνισμοῦ) dealing with doubtful cases and irregularities were based on the criteria of analogy (which had the leading role), linguistic usage, literary tradition, as well as etymology and dialect;¹³⁸ *virtutes* and *vitia orationis*—that is solecism (σολοικισμός) and barbarism (βαρβαρισμός) were also discussed.¹³⁹ Although none of them survives, their structure and contents can be recovered through some external evidence (in particular the account of Sext. Emp. *Math.* 1.176–247)¹⁴⁰ and through comparison with monographs *De latinitate*.¹⁴¹

Philoxenus wrote a *Περὶ Ἑλληνισμοῦ* in six books (fr. 288f. Theodoridis),¹⁴² using etymology and analogy as main criteria.¹⁴³ Monographs *Περὶ Ἑλληνισμοῦ* are also attested for Trypho (fr. 105–108 von Velsen),¹⁴⁴ Ptolemy of Ascalon (*Περὶ Ἑλληνισμοῦ ἧτοι ὀρθοεπείας* in 15 books, p. 11 Baege),¹⁴⁵ and Seleucus (fr. 69f. Mette).¹⁴⁶ On the same topic, Irenaeus wrote *Κανόνες Ἑλληνισμοῦ* in one book (*Suda* ε 190 Adler).¹⁴⁷

136 *Περὶ τῶν ἐν τοῖς βιβλίοις σημείων* could have been the title of a work by Diogenianus (2nd c. AD): see above n. 49.

137 See above, n. 5.

138 See e.g. Fehling [1956], and Ax [2005] 250 on Latin grammar: “Der Typ *De latinitate* [...] ist eine Zusammenstellung sprachlicher Zweifelsfälle, die mit Hilfe der Sprachnormen Analogie, Sprachgebrauch und literarischer Tradition einer Klärung zugeführt werden sollen. Sie ordnet das Material meist systematisch nach Wortarten mit dem Schwerpunkt auf den Irregularien des Nomen”.

139 See e.g. Ax [2011] 148ff. with bibl. Some Byzantine treatises on solecism and barbarism survive, which made use of older grammatical sources: see e.g. Nauck [1867] 283–312 and Pontani [2011c] 102f. with further bibl.

140 See also Strab. 14.2.28 with Radt’s commentary: see Fehling [1956] 222.

141 See Ax [2005] 248f. with further references.

142 See Kleist [1865] 13 n. 15; Theodoridis [1976] 10.

143 See Reitzenstein [1897] 382; Theodoridis [1976] 10.

144 To be possibly identified with his *Περὶ τῆς Ἑλλήνων διαλέκτου* (*Suda* τ 1115 Adler): see Ippolito [2008].

145 See Razzetti [2003e].

146 See Razzetti [2002b].

147 His seven books *Περὶ τῆς Ἀλεξανδρέων διαλέκτου* or *Περὶ Ἑλληνισμοῦ* probably were a lexicon according to *Suda* π 29 Adler (ἔστι δὲ κατὰ στοιχείον): see Reitzenstein [1897] 383ff.

2.1 *Monographs on Declension and Inflection, as well as on Single Criteria of Correction*

A sub-typology of more general treatises on *Hellenismos* is represented by monographs dealing with problems of declension and inflection, as well as with single criteria of correction;¹⁴⁸ some fragments of the above mentioned treatises on single parts of speech (§ 1.1) show traces of Ἑλληνισμός-topics, such as the correct form of words, thus falling into this typology as well.

For instance, Herodian's *Περὶ κλίσεως ὀνομάτων* (GG 3.2.634–777)¹⁴⁹ dealt with declension, while gender¹⁵⁰ was treated in his commentary on Apollonius' work (*Εἰς τὸ περὶ γενῶν Ἀπολλωνίου ὑπόμνημα*, GG 3.2.777).¹⁵¹ In the 3rd c. AD, Lupercus wrote a treatise in 13 books on the same topic (*Περὶ γενῶν ἀρρενικῶν καὶ θηλυκῶν καὶ οὐδετέρων*):¹⁵² its relationship with Herodian's work is however unclear.¹⁵³

Exceptions have always been a principal problem for grammarians, and monographs on such topics can be placed into the *Hellenismos*-type: Heraclides of Miletus' *Περὶ δυσκλίτων ῥημάτων* (fr. 16–55 C. and *P.Rain.* 3.33A: Wouters [1979] 241–252, no. 21)¹⁵⁴ as well as Herodian's *Προτάσεις*¹⁵⁵ (*Grammatical problems*) and *Περὶ μονήρους λέξεως* (*On lexical singularity*, GG 3.2.908–952; Papazeti [2008] 1–66)¹⁵⁶ fall into this category, as they deal with exceptions.

General discussions on some grammatical phenomena such as exceptions and pathology might be grouped into this typology. For instance, Philoxenus

148 See Fehling [1956] 259, who groups under this category treatises on κλίσις and analogy; Schenkeveld [1994] 283–292. Some of the following works could be inserted within the grammatical works on single parts of speech as well (see above, § 1.1 and n. 4).

149 See Lentz [1867] CVIII; Dyck [1993a] 789. *P.Flor.* inv. 3005 = *P.PisaLit.* 26 (4th c. AD: Carlini [1978]; Wouters [1979] 216–224, no. 17) preserves fragment of an epitome of the work.

150 The origins of such grammatical investigations date back to the Sophistic movement: see e.g. Pfeiffer [1968] 38 (on Protagoras).

151 See Schneider [1910] 58–68.

152 See Ucciardello [2008].

153 *Suda* λ 691 Adler reports that in these books πολλά κατευδοκίμει Ἡρωδιανοῦ: see Ucciardello [2008] for a survey of critical remarks and suggested corrections to the text, as well as a general interpretation.

154 See Cohn [1884a] 7: “ea verba tractavit, quorum formatio vel declinatio a vulgari usu recedere et ab analogiae ratione abhorrere videbatur”.

155 Orus wrote a *Λύσεις προτάσεων τῶν Ἡρωδιανοῦ* (*Suda* ω 201 Adler); the title *Προταχτικόν* for this work of Herodian is also attested (GG 3.2.907, see Lentz [1867] CXVI). Models for this work could have been Seleucus' *Προταχτικόν πρὸς Πολύβιον* and *Προταχτικόν πρὸς Ζήνωνα* (fr. 71f. M.): see Razzetti [2002b]; Ucciardello [2006c].

156 Lentz [1867] CXVII–CXXII. See also Dyck [1993a] 790f.; Sluiter [2011].

dealt with reduplication (*Περὶ ἀναδιπλασιασμοῦ*, fr. 219–284 Theodoridis);¹⁵⁷ Trypho wrote a *Περὶ προσώπων* (fr. 38 von Velsen)¹⁵⁸ and a *Περὶ σχημάτων* (fr. 122 von Velsen) on nominal formation, Apollonius Dyscolus a *Περὶ χρόνων* (on long, short and anceps syllables),¹⁵⁹ and Herodian a *Περὶ σχημάτων* (GG 3.2.847–849) on the word (or just nominal) forms,¹⁶⁰ as well as a *Περὶ μονοσυλλάβων* (GG 3.2.903f.). An important role was played by monographs on pathology (*Περὶ παθῶν*, *On modifications of word forms*):¹⁶¹ they “detailed the changes (πάθη) by which original [...] forms became corrupted to yield the forms encountered in the language and its dialects”,¹⁶² thus dealing with irregularities as corruptions or deviations from standard forms. After Didymus’ work (pp. 343–345 Schmidt),¹⁶³ which would later receive a commentary by Herodian (*ὑπόμνημα τῶν περὶ παθῶν Διδύμου*),¹⁶⁴ Apollonius Dyscolus wrote on the topic.¹⁶⁵ In particular, according to Apollonius, “pathology was the basic method used not only in the study of word-forms, but also in the explanation of syntactical phenomena”.¹⁶⁶ His investigation aimed at finding out the origin of irregularities as deviations from the regular forms.¹⁶⁷

A school origin is probably to be assumed for morphological tables of declension and conjugation: attested in papyri dating from the first centuries AD in school exercises and probably composed for the sake of teaching,¹⁶⁸ they

157 See Kleist [1865] 12; Theodoridis [1976] 10.

158 See von Velsen [1853] 31: “Cum in verborum solum pronominumque formis personarum distinctio expressa sit, haec procul dubio Tryphoni disputandi materiam praebuerunt. Reliqua incerta”.

159 See Schneider [1910] 9f.

160 See Lentz [1867] CXIII f.

161 I borrow the translation from Braswell [2013] 89.

162 Blank [1993] 715, who rightly underlines the philosophical roots (Plato, Stoics) of this method (n. 44 with references). On origins and evolution of pathology, see Wackernagel [1876].

163 See Braswell [2013] 89.

164 See Reitzenstein [1891–1892] 17–24; Dyck [1993a] 786–788. See also Nifadopoulos [2005].

165 See Schneider [1910] 19–30. Whether Trypho wrote a *Περὶ παθῶν*, as transmitted by some Byzantine treatises, remains uncertain: see Ippolito [2008].

166 Blank [1993] 715, on the basis of Wackernagel [1876] 20–22.

167 See Blank [1993] 716 (with n. 51 for bibliographical references).

168 See the paradigms of τύπτω in *P.Vindob.* inv. G 29815 B (2nd c. AD; Wouters [1979] 242f., no. 10; Cribiore [1996] 264, no. 361), of γράφω in *PSI* inv. 204 (3rd c. AD) and in *P.Vindob.* G 2318 (6th c. AD; Cribiore [1996] 268, no. 375), of ποιέω in *P.Ryl.* 3.533 (3rd/4th c. AD; Cribiore [1996] 265, no. 366), *PHamb.* 2.166 (6th c. AD; Cribiore [1996] 268, no. 376), and in *P.Col.* 8.206 (3rd/4th c. AD; Cribiore [1996] 265, no. 367), of νικάω in *P.Br.Libr. Add. MS* 37516 (3rd c. AD; Cribiore [1996] 264f., no. 364), of φαίνω in *P.Strassb.* 364+16 (2nd c. AD), of χρυσόω in

were later included in scholarly activity. The codification of such texts was brought about during the 4th/5th c. AD by Theodosius of Alexandria¹⁶⁹ in his *Κανόνες εισαγωγικοί περί κλίσεως ὀνομάτων καὶ ῥημάτων*,¹⁷⁰ containing rules and tables on the declensions of nouns (GG 4.1.4.1–36.13), on the position of the accent in nominal declension (36.14–42.8), and on the conjugation of verbs, with the paradigms of the verbs τύπτω and τίθημι (43–99). This work also provided a suitable supplement for the *Τέχνη*.¹⁷¹

Some treatises on analogy dealt specifically with some parts of speech, such as Trypho's *Περὶ τῆς ἐν μονοσυλλάβοις ἀναλογίας* (fr. 20 von Velsen)—with some possible overlap in content and/or inspiration with Philoxenus' *Περὶ μονοσυλλάβων ῥημάτων*¹⁷²—, his *Περὶ τῆς ἐν κλίσει ἀναλογίας* (fr. 21 von Velsen)¹⁷³ and his *Περὶ ῥημάτων ἀναλογίας βαρυτόνων* in one book (fr. 81 von Velsen).¹⁷⁴

As regards dialectal issues, it is not always easy to tell, on the basis of the preserved titles and fragments, whether some works had a lexicographic or rather a grammatical structure: this is the case of Demetrius Ixion's *Περὶ Ἀλεξανδρέων διαλέκτου* (fr. 40 Staesche).¹⁷⁵ According to the two surviving fragments, the *Περὶ διαλέκτων* by Aristocles contained some prosodic remarks

-
- P.Berol.* inv. 22141 (7th c. AD: Criore [1996] 268, no. 377). See Criore [2001] 214: “some of the verbs used in exercises, such as *didaskein*, *graphein*, and *typtein*—“to teach”, to write”, and “to thrash”—seem to allude to a school practice”. For declension tables see *P.Berol.* sine num. (2nd/3rd c. AD: Criore [1996] 272, no. 384), *PSI* inv. 479 (5th/6th c. AD: Criore [1996] 267, no. 372: declensions of ὁ Πρίαμος, ἡ Ἥκλβη and of the adjective σοφός), *PSI* inv. 2052 (5th/6th c. AD: Criore [1996] 267, no. 374: declensions of ὁ παῖς and of ὁ καλός).
- 169 See Robins [1993] 111–123; Criore [1996] 52f.; Pagani [2006b]; Dickey [2007] 83f.
- 170 On the term *εἰσαγωγή* and its derivatives, see Norden [1905] 508–528.
- 171 Criore [2001] 214. Theodosius' work would enjoy an enormous fortune in the Byzantine age (as it was transmitted together with the *Τέχνη* as its supplement: Uhlig [1883] XLVII) and in the Renaissance, being also the model for modern Greek grammars: see Pagani [2006b] with further bibl. On the presence of the athematic declension see Criore [2001] 214f. On the later and no longer extant *Κανόνες ὀνομαστικοί* by the grammarian Astyages (*Suda* α 4259 Adler), see Ucciardello [2006a].
- 172 See von Velsen [1853] 22.
- 173 “De argumento nihil traditur; non ambigendum tamen, quin Trypho in iis quoque substantivis, quae fere anomala vocitantur, analogiam quandam valere demonstravit” (von Velsen [1853] 23). Ippolito [2008] suggests that these two works could be subsections of the same.
- 174 See above, § 1.2.
- 175 The title of the work *Περὶ διαλέκτων* by Demetrius Pyktes has also been questioned (see Pagani [2007b] with bibl.), and the surviving fragment refers to the etymology of μῶλωψ/βῶλωψ. The content of the *Περὶ διαλέκτων* by the grammarian Astyages is obscure as well: see Ucciardello [2006a].

related to words in single dialects.¹⁷⁶ The two books of *Περὶ διαλέκτων ὁμοίτητος καὶ ἀποδείξεως* by Theodorus of Gadara were possibly used by Varro and reveal a Stoic inspiration.¹⁷⁷ Philoxenus is the author of several treatises on some dialects: *Περὶ τῆς τῶν Συρακουσίων διαλέκτου* (*Suda* φ 394 Adler), *Περὶ τῆς Λακῶνων διαλέκτου* (*Suda* φ 394 Adler), *Περὶ τῆς Ἰάδος διαλέκτου* (*Suda* φ 394 Adler, fr. 290–310 Theodoridis), where he focused on the origin of words on etymological grounds, and *Περὶ τῆς τῶν Ῥωμαίων διαλέκτου* (fr. 311–329 Theodoridis),¹⁷⁸ treating Latin as a Greek dialect.¹⁷⁹ The same ‘comparative’ perspective was apparently shared by Tyrannion or Diocles in the *Περὶ τῆς τῶν Ῥωμαίων διαλέκτου* (fr. 63 Haas).¹⁸⁰ Whether the *Περὶ Ῥωμαίων διαλέκτου* by Apion (see Athen. 15.680d) was a grammatical treatise or a lexicon remains uncertain.¹⁸¹ Several monographs dealing with dialects were written by Trypho (*Suda* τ 1115 Adler): *Περὶ πλεονασμοῦ τοῦ ἐν τῇ Αἰολίδι διαλέκτῳ βιβλία ζ*, *Περὶ τῶν παρ’ Ὀμήρῳ διαλέκτων καὶ Σιμωνίδῃ καὶ Πινδάρῳ καὶ Ἀλκμᾶνι καὶ τοῖς ἄλλοις λυρικοῖς*, *Περὶ τῆς Ἑλλήνων διαλέκτου καὶ Ἀργείων καὶ Ἱμεραίων καὶ Ῥηγίνων καὶ Δωριέων καὶ Συρακουσίων* (the two latter ones are likely to represent separate monographs, whose titles were combined together). A grammatical perspective was probably adopted by Apollonius Dyscolus in his *Περὶ διαλέκτων, Δωρίδος, Ἰάδος, Αἰολίδος, Ἀτθίδος* (*Suda* α 3422 Adler).¹⁸² Besides, *P.Bour.* 8 (2nd c. AD: Wouters [1979] 274–297, no. 25) preserves a scholarly treatise *Περὶ Αἰολίδος*.¹⁸³

176 Hdn. GG 3.2.18.16 (*An. Ox.* 3.298.25–299.1 Cramer, Lehrs [1848] 370.26f.; cf. Hdn. GG 3.1526.1f.) on the Attic termination -ίς of non-oxytone nouns in -ίς; *Etym. Gud.* 353.39f. (s.v. κύμα) = *Etym. Magn.* 545.8 on the Attic ὄ in θύμα. See Corradi [2007] with bibl.

177 See Kowalski [1928] 167; Pagani [2005c].

178 See Kleist [1865] 13f., 52ff.; Theodoridis [1976] 10–12. The attribution of a *Περὶ τῆς τῶν Ῥωμαίων διαλέκτου* to Herennius Philo, still asserted by Palmieri [1988] 44–46, is wrong (see Theodoridis in apparatus to fr. 311 and 321, and above, n. 83).

179 Reitzenstein [1901] 87: “Die Fragmente lassen uns erkennen, daß Philoxenos wirklich versucht, mittelst seiner Abhandlungstheorie das Latein lediglich als Abart des Griechischen zu erweisen. Im einzelnen ist der Einfluß der Stoa unbestreitbar”. However, the treatment of Latin as a dialectal variety of (or a derivation from) Greek seems to have been suggested by (Claudius?) Didymus in his *Περὶ τῆς παρὰ Ῥωμαίους ἀναλογίας* (fr. 447–450 Funaioli): see now Braswell [2013] 90–92.

180 See Haas [1977] 98, 176f. See also Pagani [2009c] with bibl.

181 See Cohn [1894b] 2805.

182 See Schndneider [1910] 138f.

183 “It can by no means be established whether this treatment of Aeolic belonged to a more extensive work *Περὶ διαλέκτων*” (Wouters [1979] 294).

2.2 *Treatises on Orthography*

Another well-represented sub-typology is made up of treatises on orthography.¹⁸⁴ The orthographical investigations by Alexandrian scholars never received the form of a specific monograph. Asclepiades of Myrlea plausibly dealt with such matters in his treatise on grammar (see Sext. Emp. *Math.* 1.169–175), having possibly defined (or commented upon) the canonical tripartition of orthographical inquiries (ζητήματα) as quantity (ποσότης, on vowels), quality (ποιότης, on consonants), and division (μερισμός, on syllabification). However, the first known monograph on this topic seems to have been the *Περὶ ὀρθογραφίας καὶ τῶν αὐτῆς ζήτουμένων* by Trypho. It is likely to have contained a definition of orthography, the description of its three fields of investigation (perhaps changing the denomination of μερισμός in σύνταξις), and the adaptation of the *Hellenismos*-criteria in such researches. Monographs on orthography were later written by Didymus, Alexion, Soteridas, Draco of Stratonikeia, and Apollonius Dyscolus, but only meagre fragments survive. The most influential work—now lost but known through many quotations and later Byzantine reworkings—was composed by Herodian.¹⁸⁵ In his *Orthography*, he collected previous studies on the subject and gave them the organisation which would become canonical in later centuries. This work was probably not arranged alphabetically, but divided into the three parts (syntax, quality, quantity) and organised in a systematic way, *i.e.* in a list of well-defined rules (or canons) followed by appropriate examples and occasional exceptions. The criteria (κανόνες) used by grammarians to correct and/or establish the right spelling of a word are the same of *Hellenismos*-monographs.

2.3 *Treatises on Syntax*

Finally, syntax¹⁸⁶ is closely connected to the doctrine of *Hellenismos*, as Apollonius Dyscolus stresses in the attempt to establish the parameters of this branch of grammar.¹⁸⁷ In fact, his four books *Περὶ συντάξεως* (*On syntax*, GG 2.2)¹⁸⁸ must be considered the first grammatical monograph on the topic, thus representing his most important achievement. In his work, Apollonius deals only with “selected problems regarding disputed syntactical construction” (Blank

184 See Valente in this volume (section III.2) with further details and bibl., and Id. [2014a].

185 See Dyck [1993a] with bibl.; Alpers [2004] *iff.* with bibl.; Dickey [2007] 75–77 with bibl.

186 See Lallot in this volume.

187 *Synt.* 51.1–52.5 (with Blank [1982] 15), where orthography is also mentioned. The same parallelism with orthography also appears in 7.6–14, see Blank [1982] 9, 18, [1998] 195, and Valente in this volume (section III.2).

188 See Blank [1993] 711f.; Lallot [1997].

[1993] 720),¹⁸⁹ putting at the centre of his system the idea of *καταλληλότης* ('correct construction', 'analogical, regular construction').¹⁹⁰ According to it, language is determined by regularity and general rules; therefore, "all apparent violations of these rules can be explained as the result of regular and codifiable corruptions" (Blank [1993] 715).¹⁹¹ The criteria of *Hellenismos*, especially analogy, are accordingly transferred to syntactical investigations.¹⁹²

Studies on the syntax of the parts of speech were first undertaken by the Stoics, in particular by Chrysippus, who wrote a *Περὶ τῆς συντάξεως τῶν λεγομένων* in four books (D. L. 7.192) and a *Περὶ τῆς συντάξεως καὶ στοιχείων τῶν λεγομένων πρὸς Φίλιππον* (D. L. 7.193) in three. However, both works had a philosophical (logical and dialectical) perspective.¹⁹³ Alexandrian scholars dealt with problems of syntax strictly in relation to textual criticism.¹⁹⁴ Furthermore, title of works on syntax are also attested for Telephus (*Suda* τ 495 Adler: *Περὶ συντάξεως λόγου Ἀττικοῦ* in five books), Pausanias of Caesarea (*Suda* π 819 Adler, *Περὶ συντάξεως*, in one book), Gaianus (*Suda* γ 9 Adler, *Περὶ συντάξεως*, in five books), and Theon (*Suda* θ 206 Adler, *Ζητήματα περὶ συντάξεως λόγου*).¹⁹⁵

189 See also Blank [1982] 9f.; [1993] 721–727; [2000] 411–415 with rich bibl.; Schenkeveld [1994] 293.

190 See Blank [1982] 27f.; [1993] 724f.; [2000] 415; Schenkeveld [1994] 293–298.

191 On the absence of any systematic treatment of syntax in the *τέχναι*, see above, § 1.1.

192 See Schenkeveld [1994] 298.

193 See Dion. Hal. *Comp.* 4 (3.22.8–23.2); Pinborg [1975] 102; Schenkeveld [1994] 273; Blank [2000] 403.

194 Trypho started to develop syntactical remarks pursuant to a more grammaticalised framework, without elaborating any comprehensive theory on syntax: see Matthaïos [2003].

195 Remarks on Attic syntax can also be discovered in Atticist lexica, but the sources of such remarks are not easily traceable: see Valente [2014b] with bibl.

Typology of Lexicographical Works

 - 5.1 *Geographic Lexica*
 - 5.2 *Biographical Lexica*

As a preamble, it is necessary to point out that the typology I hereby present is, like any typology, a simplification for two essential reasons. First, the arguments put forward by Montanari [2006a] concerning exegetical works also apply to lexica, namely, that we actually face a variegated ποικιλία that cannot easily be constrained into a rigid scheme. Second, a typology implies an analysis and selection of materials which, despite the attempt to be objective, cannot but present elements of subjectivity.

1 Structural Distinction

The first distinction to be made is structural. It is thus necessary to distinguish between ‘horizontal’ onomastic and ‘vertical’ lexicographic structure. This distinction will be addressed in the two sections below.

1.1 ‘Horizontal’ Onomastic Structure

The term ‘onomastics’ designates the scholarly works organized by a list of synonyms or of terms referring to the same semantic field. This structure, which in the context under study here has its foremost exemplification in Pollux’s works, dates back to extremely ancient times (perhaps it was already characteristic of middle-eastern culture of the second millennium) and undoubtedly it is the structure most widely employed until the Augustan Age.

It was used as early as Democritus, who composed a work bearing the title Ὀνομαστικά dealing with linguistic issues (perhaps concerning the exact value of certain glosses). An onomasticon employed by Pollux was attributed to Gorgias (see *FGrHist* 351 T3, F2, as well as Regali [2007]) but—at least in the form we are aware of—it cannot be a work of the sophist from Leontini, despite the fact that the sophists (and above all Gorgias) dealt extensively with linguistic and lexical problems (see Novokhatko in this volume).

Among the Stoics, onomastic lexica were compiled, endowed on the one hand with a particular etymological function, and aiming on the other hand to act as a repository of universal knowledge (notable are the lexicon by Aelio Stilo Praeconinus [2nd c. BC] as well as one that became the source for the *Etymologicum* by Johannes Mauropos [11th c.]).

Even in the age of the great Alexandrian philology, the onomastic structure was the most widespread among scholarly works. It can in fact be argued that there were only timid attempts to apply an alphabetical structure. The oldest lexicographic work that has come down to us (which according to some scholars is closely linked to Philita’s Ἀτακτοὶ γλῶσσαι, see Montana in this volume) is in *PHibeh* II 172 (270–230 BC), and is constituted by a poetic onomasticon (as Turner [1955]1–3 defined it). Here we have a series of composite adjectives, divided into groups characterized by the identity of one of the two components (in the majority of cases the first), without further explanations. It is essentially a list of words.

Indeed, the majority of Alexandrian lexica had an onomastic structure designed not to collect and align synonyms, but rather to generate lists working according to semantic fields, which could be easily employed by authors (in my judgment instruments of this kind are implied by passages such as

Herond. 7,57–61, where one finds a long list of shoe names, similar to the list of Poll. *Onom.* 7,94). Callimachus' Ἐθνικαὶ ὀνομασίαι must have been particularly important (however, it is not possible to concur with Schoenemann's assertion that the poet from Cyrene was the first to adopt the onomastic system) and the Λέξεις by Aristophanes of Byzantium was undoubtedly also important. In Callimachus' work numerous lists of animals, objects and phenomena with frequent ethnic-dialectal indications were present. Pfeiffer [1968] 135, building on the conjectures of several scholars, puts forward some suggestions—in the light of *Suda* κ 227 A.—concerning the possible titles of some sections. However, the only certain one (fr. 406 Pf.), attested by Athenaeus (7,329a) and Eustathius (1936,14), is the title of the section about fish (see also Montana in this volume).

Even in Aristophanes, while the introductory section adopted an embryonic form of lexicon, the later sections—organized by semantic fields—were onomastic (the titles are Περὶ ὀνομασίας ἡλικιῶν, Περὶ συγγενικῶν ὀνομάτων and Περὶ προσφωνήσεων). In fact, Wendel [1939a] 508 regarded them as closely related to Callimachus' Ἐθνικαὶ ὀνομασίαι because the clarification of the geographic area in which a given term is used often appears here (but Aristophanes was thereby simply responding to a generalized interest of the whole of Hellenistic culture).

Other authors dealt with technical language: Eratosthenes compiled onomastics entitled *Σκευογραφικόν* and *Ἀρχιτεκτονικόν*, which dealt with the terms of artisans' work and with those regarding domestic utensils, in a strong relation to studies on comedy. These works became one of the main sources of Pollux, especially in the tenth book. Apollonius wrote a *Ναυτικά* whilst Nicander of Colophon and Philemon of Aixone (3rd c. AD) collected the names of objects useful in daily life, and Suetonius and Telephus from Pergamon (2nd c. AD) the names of items of clothing.

Particularly relevant, in this context, were the medical works: Amerias compiled a *Ῥιζοτομικόν*, a collection of the names of medicinal herbs, Xenophon of Cos, Apollonius of Memphis and, in the Traian age, Rufus of Efesus and Soranus composed lexica collecting the names of body parts, while Soranus also wrote the *Ἱατρικὰ ὀνόματα*. Similarly, in the culinary field it is worth recalling Artemidorus' *Ὀψαρτυτικαὶ γλῶσσαι* (1st c. BC), which probably included explanations for terms and references to passages of comedy. Another figure engaged in a vast range of activity was Tryphon (1st c. BC), who, among other works, also compiled the *Φυτικά* (concerning the names of edible plants), a *Περὶ ζῳῶν* and collected the names of musical instruments.

Other works concentrated on the terms peculiar to a local parlance. Among the most notable, mention should be made of the *Ἀττικά ὀνόματα* by the above

cited Philemon of Aixone, as well as the Πολιτικά ὀνόματα by Galen, regarding the everyday language terms inferred from Attic Comedy.

Thus the period up to the first imperial age must have been rich in instruments compiled with onomastic structure, but of these we have, in most cases, only the name and meager fragments. A still unresolved issue regards the structure of Pamphilus' monumental collection (1st c. AD): the *Suda* (π 142 A.) testifies to its alphabetical order, but this clearly contrasts with numerous other clues. A compromise solution has been sought to this problem, suggesting a combination of onomastic and lexicographic structures—a collection of glosses intermingled with a collection of names—divided by semantic fields, and, within these, arranged in alphabetical order. Yet none of these hypotheses appear fully convincing.

1.2 'Vertical' Lexicographic Structure

This is the ordinary structure from the present-day perspective, with entries organized alphabetically in more or less rigorous ways, and one or more *interpretamenta*.

On most occasions, the *interpretamenta* respond to 'metaphractical' considerations, being therefore the most common synonyms of the entry. However, it is not infrequent for the relationship between entry and *interpretamentum* to be different (see Bossi-Tosi [1979–1980]; Tosi [1988] 115–137). Here I attempt to provide an essential typology:

1. sometimes there are numerous *interpretamenta*, which constitute synonymic series, whose structure is related to the onomastic framework (see § 1.1);
2. there may be cases where glosses derive from a reduction at the synonymic level of the elements of more complex glosses, and in particular of the synonym-differential structure (see § 3.5);
3. entry and *interpretamentum* may sometimes be components of a traditional hendiadys, or composed of two terms usually combined in classical texts (see Degani [1977–1978] 141);
4. on some occasions they were simply combined in a particular context. In this case the explanation is exegetical: the *interpretamenta* respond to the attempt to explain a difficult term in the light of context, according to a mechanism already common among the first interpreters of Homer, the so called 'glossographers' (see Dyck [1987], Tosi [1997a]), namely a mechanism that can be defined as 'autoschediasm'. It is however necessary to clarify that this is not the only type of autoschediastic exegesis, as such exegesis can for example employ collateral elements, elements drawn

from a logically connected passage, elements only conceptually linked to the context, or it can even give rise to a pseudo-etymology. For a further discussion on this issue, see Marzullo [1968], Degani [1977–1978];

5. at times the *interpretamentum* is related to the category (lineage, city, first name etc.) to which the entry belongs;
6. in some cases there is no proper *interpretamentum*, but a simple reference to the previous gloss (with forms such as ὁμοιον, ὁμοίως, τὰ αὐτά, τὸ αὐτό);
7. in some other cases there is a simple morphological indication or a morphological equivalent;
8. on occasion there may be a syntactic specification, such as the case of the noun that completes the entry (this type includes many marginal glosses in the *Suda*, see Adler [1928] xv1);
9. it is not unknown to find an *interpretamentum* of an etymological nature;
10. sometimes there is a term to which the entry refers in a particular context (the glosses that Bossi-Tosi [1979–1980] called syntactic-contextual). Particularly frequent is the case of an adjective glossed by a noun. It should also be recalled that where the adjective-noun connection is not limited to a single or just a few contexts, but is customary, the former tends to replace the latter by metonymy;
11. finally, the entry-*interpretamentum* relation can at times mirror a *varia lectio antiqua* or a philological-textual discussion (see Tosi [1988] 142–146).

These lexica are also classifiable according to how strictly the criterion of alphabetical order is followed. In this respect, particularly lucid and useful is the study by Esposito [2009] 259–265, who also highlights the possibility—concerning above all the late lexica of an encyclopedic type—that bodies of glosses deriving from various sources were maintained compact, thereby interfering with the alphabetical order. She also hypothesizes that, at least originally, the dimensions of the lexicon would be responsible for the order (few glosses could be distributed alphabetically only according to the first letter): exemplary in this regard is the case of Orion (cf. Wendel [1939b]). Esposito [2009] also presents (p. 263) a table of papyrus lexica, classified according to whether the alphabetical order:

1. is limited to the first letter (P.Yale II 136 [2nd c. AD], P.Oxy. xv 1804 [3rd c. AD], Bodl.Ms.Gr.Class. f. 100 [P] fr. 1 [4th–5th c. AD], P.Oxy. xv 1803 [6th c. AD], P.Ness. II 8 [7th c. AD])
2. concerns the first two letters (this is the most numerous group and includes the most ancient findings: P.Hib. II 175 [3rd c. BC], P.Berol. inv.

- 9965 [3rd–2nd c. BC], P.Heid. I 200 [3rd–2nd c. BC], P.Heid. inv. 3069v. [2nd c. AD], P.Oxy. XVII 2087 [2nd c. AD], P.Oxy XV 1801 [2nd–3rd c. AD], P.Sorb I 7 [2nd–3rd c. AD], P.Münch. II 22 [3rd c. AD], P.Oxy III 416r. [3rd c. AD])
3. concerns the first three letters (P.Ryl. III 532 [2nd–3rd c. AD], MPER N.S. XV 142 [6th–7th c. AD])
 4. is rigorous (P.Oxy. XV 1802 + LXXI 4812 [2nd–3rd c. AD, on which see Schironi [2009a], Esposito [2011], P.Oxy XLVII 3329 [4th c. AD], PSI VIII 892 [4th c. AD]).

A classification proposed by Esposito [2009] 264, limited to the papyrus lexica, is also established on the basis of the ways in which entry and *interpretamentum* are separated:

1. on different columns;
2. divided by an empty space;
3. separated by a dot on the top;
4. no marker of separation.

2 Scope Distinction

Another distinction concerns the scope of the lexicon. In this respect, four types of lexica are found:

2.1 *General Lexica*

A radical difference between ancient and modern lexica needs to be clarified. The lexicon, in our modern view, needs to be exhaustive, implying that it needs to explain all the terms belonging to a language. In contrast, ancient lexica are essentially collections of ‘glosses’, meaning—according to the Aristotelian theorization (*Top.* 140a 5, *Rh.* 1404b 28; 1406a 7-b2; 1410b 12, *Pol.* 1457b 4–11; 1459a 9-b 35; 1460b 21–25, see also Tosi [1994b] 144 f.)—collections of difficult terms that need to be explained, either because they are from a remote era (belonging therefore to the poetic-literary language and no longer in use) or a remote location (and therefore peculiar to local parlances). This accounts for the close connection between lexicography and exegetical works (see Dubischar in this volume); it also explains why I do not subscribe to the distinction between lexica and glossaries proposed by Schironi [2009a] 3 n. 3, namely that the term glossaries should be reserved to works aiming to examine only a portion of the semantic field of a language, while the term lexica should be used to designate

those which aim to be exhaustive. Indeed, if—in theory—there is a need for this differentiation, it is not functional for the ancient world, where all works should be classified as glossaries and none as lexica (see Esposito [2011] 526).

The recovery of fragments of the lexicon of Oros made by Alpers [1981], and an attentive analysis of the fragments of Phrynichus' works, compared to lexica such as that of Photius and of the *Suda*, allows a distinction between a critical lexicography, which sets itself the aim of linguistic improvement, seeking to create a high and 'pure' literary language distinct from the spoken form, and a lexicography that aims instead to recover a great quantity of material and incorporate it into increasingly encyclopedic instruments. The most evident moment of change between these two types appears in the age of iconoclasm (in which fruition of the classics did not disappear but was reduced to minimal utilization, of an instrumental type, see Irigoien [1962]). There also exists a prior 'encyclopedic' tradition, starting in particular from Pamphilus' works (§ 1.1), which is best represented by Hesychius who—at least in the compilation that has come down to us—combines glosses from a wide variety of sources (dialectological, erudite, exegetic, Attic, etc.).

2.2 *Lexica Concerning a Single Author*

This is a very ancient type of lexicon, given that one of the first needs to which lexicography responded was that of explaining Homer (see Novokhatko and Dickey in this volume). Homer had always been considered the foundation of the *paideia*, yet as early as the pre-Hellenistic age his works presented a number of terms that proved difficult to understand. Among the Homeric lexica, only the one by Apollonius the Sophist (1st c. AD), drawing extensive material from a Homeric lexicon compiled by Apion, Didymus' pupil, has come down to us. The first of such works was most probably the *Περὶ τῆς Ὀμήρου συνηθείας* by Zenodotus (significant is the term *συνήθεια*, which addressed not the use of speakers, but rather that of an author, with a meaning well highlighted by Montanari [1981]). We also know of an earlier work compiled by Neoptolemus of Parion, as well as another by a certain Basilides, otherwise unknown, and one by the rhetorician Cassius Longinus (3rd c. AD).

This type of lexicon was not limited to Homer's works: for instance, Callimachus (p. 350 Pf.) wrote a *Πίναξ τῶν Δημοκρίτου γλωσσῶν καὶ συνταγμάτων*. Particularly important are, also, the medical lexica (§ 2.3) which actually appear as Hippocratic lexica. Those by Erotianus and Galen have come down to us, but Erotianus (p. 4,24 N.) states that the first medical lexicon was compiled by Xenocritus of Cos. In addition, we have information on other Hippocratic lexica, by Philinus of Cos and Bacchius Tanagraeus in the 3rd c. BC (the latter

was then epitomized by Epicles of Crete and Apollonius Ophis), by Glaucias Empiricus in the 2nd c. BC, by Dioscorides known as Phakas, Heracleides of Tarent and Apollonius of Citium in the first century BC.

As far as Plato is concerned, the lexicon by Timaeus the Sophist (see Dickey in this volume) and one discovered in a manuscript on Mount Athos and falsely attributed to Didymus (for further analysis of these, see Valente [2011]) have come down to us, but we also know of lexica compiled by Harpocration of Argos (2nd c. AD), by an otherwise unknown Clemens and by a certain Boethus. Further, it is known that a lexicon based on Nicander's works was compiled, with material apparently deriving from Pamphilus: for the problems related to this work, see Degani [1995] 514–515. A lexicon for works by Antimachus and Heracleon was perfected by Cassius Longinus, and considerable information exists on the lexica of Herodotus (by a certain Apollonius) and of Thucydides, but it is not certain that the scope of such works was limited to these two authors only.

Regarding the method of compilation of these lexica, particularly important is the dedicatory epistle in Timaeus' Platonic lexicon (see Esposito [2009] 261, Valente [2011]). The main selection criterion is still that of 'glosses', which implies focus on terms difficult to understand not only for the Romans, but also for the majority of Greeks. They are then arranged *κατὰ στοιχείον*, i.e. in alphabetical order (as regards the conscious choice of this method, see also Perilli [1999]).

2.3 *Lexica Concerning One Genre*

For the most part, this kind is represented by papyrus lexica, such as the one regarding comedy of the Ptolemaic age preserved in *P.Berol. inv.* 9965, carefully studied by Ucciardello [2006b] 36–53, and those—also concerning the comic genre—in *P.Oxy.* XV 1801 (2nd–3rd c. AD) and *P.Sorb.* I 7 (2nd–3rd c. AD). We also know of several lexica on comedy and tragedy compiled by Didymus, Theon (a contemporary of Tiberius), Epitherses of Nicaea, still in the first century, and Palamedes of Elea, a couple of centuries later. The medical lexica, in contrast, came to coincide with the Hippocratic lexica (§ 2.2).

Porphyrius of Tyre, Cassius Longinus' pupil, reportedly compiled a poetic lexicon, while a historiographic lexicon was compiled by Parthenius, a contemporary of Nero and Traianus. *P.Oxy.* XVII 2087 (2nd c. AD) most probably preserves remains from a lexicon of historians and philosophers. *P.Yale* II 136, again from the 2nd c. AD, concerns the epic genre.

The lexica of oratory are known as “of the ten orators” in reference to the ten orators of the canon. Photius informs us of the lexica by Iulianus (in this

regard, see Alpers [1981] 121–123) and Philostratus of Tyre. P.Oxy. XV 1804 (3rd c. AD) preserves a fragment of a lexicon of this type whose author is Diodorus. The lexicon by Harpocration, who lived in the 2nd c. AD, has come down to us in two compilations, one quite extensive and perhaps close to the original, the other being Byzantine and highly epitomized. Harpocration's lexicon is of crucial importance because it was the source for various Byzantine lexica.

2.4 *Lexica on Particular Themes*

The onomastic structure was clearly most appropriate to this type of instrument (1). Caius Suetonius Tranquillus (75–160 AD) compiled a lexicon of insults and one of games. We also know of a Περὶ βοτανῶν, a lexicon of plant names, whose material is said to derive from Pamphilus. The ethno-mythological lexicon in P.Oxy. XV 1802 + LXXI 4812 (2nd c. AD) should also be placed in this field, as should the lexicon of military terms of P.Oxy. III 416r. (3rd c. AD: but in her new edition currently in print, E. Esposito wonders whether this is a lexicon at all).

3 Content Distinction among General Lexica

In the field of general lexica, various types can be distinguished according to their content, as itemized in the following five sections.

3.1 *Lexica with Various Contents*

Almost all the lexica that have come down to us are of this type. Their material may be organized randomly (such as the lexicon of Hesychius, which suffers from the numerous summaries and interpolations), or with a more orderly, encyclopedic presentation (such as in the *Suda*).

These lexica collect heterogeneous material as they are based on a plurality of different sources. Hesychius himself, for example, in the introductory *Epistula ad Eulogium*, stated that he enriched his main source—Diogenianus' lexicon (which, having been derived from Pamphilus' encyclopedia, must have been heterogeneous in itself)—with other material, drawn for example from Aristarchus, Apion and Heliodorus. These instruments, at every transcription, were subject to integrations and optimizations: Hesychius, for example, was interpolated with the tradition of the so-called lexicon of the Patriarch Cyrillus probably compiled in the 5th c. AD, from whom sprang the most fertile Byzantine lexicographic tradition (the Σ, embodied in the Συναγωγῆ λεξικῶν χρησίμων, in Photius' lexicon and in the *Suda*, see Dickey in this volume).

This type of lexicon is undoubtedly the most common and best documented, also because it aptly responded to the needs of Byzantine encyclopedism. Clear examples are the *Suda* (on its plural sources, see Adler [1928] XVI–XXII), the Pseudo-Zonaras (whose value was underestimated for too long, until its revaluation by Alpers [1972]) and the *Lexicon Vindobonense* by Andreas Lopadiotes (with regard to the latter work, see in particular Guida [1982]).

3.2 *Grammatical Lexica*

In this realm, a distinction should be drawn among different kinds of glosses and thus, as a consequence, among works:

1. Particular attention is often placed on the different forms and expressions employed in dialects. This type of instrument was already common and very important in the Hellenistic age (the first is apparently the one by Dionysius Iambus, teacher of Aristophanes of Byzantium, the only fragment of whom is preserved by Athenaeus, 7,184b; Neoptolemus of Parion compiled a lexicon on Phrygian terms, Hermonax on Cretian, Moschus on Rhodian, in the first century Demetrius Ixion on the dialect of Alexandria, Diodorus on Italic glosses, Artemidorus of Tarsus on Doric dialect; as for the Attic dialect see § 3.3). In this sphere, prominent works in the 1st c. BC include the lexicon of Parmenion, that of Philoxenus (who also considered Latin as a dialect, related to Aeolic; for this view, it would be decisive to have the *Περὶ Ῥωμαίων διαλέκτου* by Herennius Philo of Biblos) and that of Tryphon. It is appropriate to note that for the most part (even if not exclusively) these lexica did not derive from ‘field investigations’, but were drawn from authors who wrote in different dialects. Ucciardello [2006b] 49 recalls in this regard the glosses *κατὰ πόλεις* of the Hellenistic age, and hypothesizes that originally the name of the city was more common than the name of the region, and, for example, that οἱ Ἀθηναῖοι was often replaced by a more banal οἱ Ἀττικοί.
2. Other lexica (such as that of Choeroboscus and the lexicon of Theognostus) have a more properly morphological and orthographic content (for orthography, see Valente [2010a] and, in this volume). The works of Herodian (2nd c. AD) are traditionally considered the main source of Byzantine lexica of this type: however, their reconstruction, carried out by Lentz [1867–1870], often appears controversial.
3. Finally, we have lexica of a syntactic type, such as the *Περὶ συντάξεως* edited in *An.Gr.* 1 177–180 Bekker and re-edited by Petrova [2006] (see also

Alpers [2004]) or the Laur. 59,16, of which Adler [1928] XVI noted the relationship with the *Suda*, edited by Massa Positano-Arco Magri [1966].

3.3 *Lexica Whose Content is More Properly Morphological and Orthographic*

Atticistic (see also Dickey in this volume): these, as their name suggests, aimed first and foremost to distinguish between the forms belonging to 'good' Greek, which authors could employ, and those not deemed as such.

Already in the Hellenistic age, several lexica on the Attic dialect were compiled (by Philemon of Aixone, a contemporary of Callimachus; around the end of the 3rd c. BC by Istros of Paphos and Nicander of Thyateira; in the 1st c. BC by Heracleon of Ephesus, Theodorus, Demetrius Ixion, Crates of Athens). Even though information about these works is scanty, it can be deduced that from the typological point of view they were not strictly 'Atticistic' lexica, but rather grammatical lexica of a dialectological type (§ 3.2), because the interest in the Attic dialect was descriptive rather than purist. The first Atticist was apparently Irenaeus of Alexandria (who would latinize his name into Minucius Pacatus); Valerius Pollio and Iulius Vestinus were active in the era of Hadrian. Further important 2nd c. AD names are Helius Dionysius and Pausanias the Atticist, whose many fragments are conserved in the Homeric commentary of Eustathius. (Erbse [1950]—often referring to Wentzel [1895d]—reconstructed his works, attributing to them various glosses of the tradition of the *Συναγωγὴ*, but this operation can be questioned on many grounds).

Turning now to Phrynichus—one of the most notable lexicographers of the ancient world—a highly epitomized version of his main work, the *Praeparatio Sophistica*, has come down to us (the editor, I. de Borries, inserts as a secondary note several glosses that must have belonged to it, which, however, are known to us only through later lexica) but we have a lexicon perhaps dating from his early years, the *Ἐκλογὴ*, characterized by an uncompromising purism. The pseudo-Herodian *Philetairos* is an Atticist *vade mecum* (see Alpers [1998]), while we have only indirect knowledge of the Atticist lexica of Philemon of Athens (who lived around the year 200), of a certain Lupercus, of the rhetorician Cassius Longinus in the 3rd c. AD and of Helladius of Antinopolis in the 4th c. AD. In contrast, the school opposing the rigorous Atticist vision has left us a brief anonymous lexicon, known as *Antiatticist*. A lexicon inspired by a moderate Atticism, not lacking anomalous influences, is that of Oros (5th c. AD), the fragments of which—conserved mainly thanks to Pseudo-Zonaras—have been edited by Alpers [1981], in an edition that is a genuine masterpiece. A late papyrus (P.Oxy. XV 1803 [6th c. AD]) probably conserves a fragment of an

Atticist lexicon. This typology was also employed in the Byzantine age: between the 13th c. and the beginning of the 14th we have the works of Moschopulus and Thomas Magister (on the persistence of Atticism in Byzantium, see the enlightening pages of Wilson [1983] 4–8).

3.4 *Etymological Lexica*

Between the 5th century and the Hellenistic age, Greek interest in etymology was on the one hand linked to philosophical speculation on the origins of language (culminating in the Platonic *Cratylus*), and on the other hand, coupled to research on the origins of particular poetic ‘glosses’ (especially Homeric), aiming to identify their true (ἔτυμος) meaning, and conducted above all by the Sophists. The first title in this field is the *Περὶ ἔτυμολογίας* by Heraclides Ponticus, but particularly relevant were the Stoics (Chrysippus wrote seven books *Περὶ τῶν ἔτυμολογικῶν πρὸς Διοκλέα*, which—applying an anomalistic conception of language—formulated a complex system of derivation, based on the ‘first’ nouns and verbs). A different approach was adopted by the Alexandrian analogists (see Montana in this volume): Apollodorus and Demetrius of Ixion both dealt with etymology but the most mature representative was Philo: the focus was no longer placed on the original words, but rather on the monosyllabic roots, from which evolution proceeded through precise analogical norms.

Apart from sparse papyrus findings that tell us little about the evolution of this type of lexicon (P.Mert. II 55 [2nd c. AD]), a later phase was represented by the creation, in the 5th c. AD, of the first proper etymological lexica. The main personalities were Orion and Oros, of whose works only some *excerpta* and fragments have come down to us. From such fragments it can be deduced that the former collected all material available, etymological or otherwise, without highlighting differences in the design and school (but he made reference above all to the material of the grammarian Herodian of the 2nd c. AD). Oros, in contrast, based his work first and foremost on Philo. However, their collections were modest in terms of the quantity of material included; moreover, similar works also flourished between the 6th and 8th c. AD, such as the Lexicon αἰμωδεῖν (which was originally a lexicon of Byzantine historians, but whose structure is etymological), that of Methodius and also the lexicon by Anastasius Sinaita, the *Eclouges* of the Cod. Barocc. 50 and—in the 9th c.—the *Etymologicum Parvum*.

The fourth phase is that of the Etymologists who composed lexica having an encyclopedic character, compiled from the era of Photius onwards. The first work—attributed by tradition to the patriarch himself and known to have been completed on May 13th, 856 or 882—is the one commonly referred to,

after Reitzenstein [1897], as *Etymologicum Genuinum* (although the name used by Lasserre—Livadaras is *Etymologicum Magnum Genuinum*). Two different redactions of this work have come down to us. Redaction A, preserved in Vat. Gr. 1818, was extensively damaged (and precisely to repair this initial shortcoming, at 13th c. the *Etymologicum Casulanum* was produced); redaction B, handed down through Laur. S.Marc. 304, was much more complete (only the first page is missing), but badly damaged and at times illegible. This etymological lexicon comprised material from the most various sources (Choeroboscus, Oros, Herodian, Theognostus, Orion, Methodius, the *Epimerismi Homerici*, the *Epimerismi in Psalmos*, the exegetic traditions of all the most important authors, as well as the problematic *Ῥητορικόν*, a lexicon closely related to that of Photius, but probably distinct from it, Ch. Theodoridis hypothesizing their identification).

In the following centuries several other etymological lexica were derived from this one. As regards the relationship between them and their redactions, it should be recalled that such works were copied for instrumental purposes, and that they were therefore subject, according to the needs and knowledge of their users, to optimizations and interpolations, to the point that the line between different works and different redactions of the same work is blurred. To this tradition belongs first and foremost the *Etymologicum Magnum* (mid-12th c.; mentioned with this title already in Eust. 834, 46 and 1443,65, and renamed *Etymologicum Magnum auctum* by Lasserre-Livadaras); it is the most imposing etymological lexicon, integrated with numerous materials drawn from several sources (including the *Etymologicum Gudianum*). The *Etymologicum Symeonis* was composed in the 12th c., perhaps slightly preceding the *Magnum*. Three different redactions of this work are known. The Laur.S.Marc. 303 (a. 1291) and the Voss.Gr. 20 (13th c.) constitute the so-called *Μεγάλη γραμματική* and the Vat.Gr. 1276—the so-called *Etymologicum Casulanum* (after the monastery of S. Nicola in Casole)—assumes a singular position. Another important work is the lexicon of Pseudo-Zonaras (13th c.), referring both to the *Genuinum* (in a better redaction than our codices) and to the *Symeonianum*. The *Genuinum* was also repeatedly used by Eustathius in his *Commentary on the Iliad and the Odyssey*, compiled before 1175. It is also one of the many sources for the *Etymologicum Gudianum* (named after the Danish humanist M. Gude), of which we are fortunate enough to know the codex (Vat. Barb. Gr. 70 of the 11th c., originally from Otranto), from which all the others derive through four main redactions (for Byzantine Etymologica see also Dickey in this volume).

3.5 *Synonymic-Differential Lexica*

Synonymic-differential lexica highlight semantic differences between synonyms and between formally similar terms which, for example, differ only in their accent (such as *πονηρός* and *πόνηρος*).

For this type of lexicon I endorse the terminology adopted by Bossi-Tosi. The identification of different meanings among synonyms is already an important element of the Platonic *Cratylus*. As early as in the Hellenistic age we find lexica of this type, with Hermon and a certain Simaristus, but the most important were those by Seleucus and Herennius Philon of Byblos. Some Byzantine lexica of this type have come down to us (one attributed to a certain Eranius Philon which, as already observed by Cohn [1884a], is certainly a corruption of the name Herennius Philon; one by a certain Tolemeus; one attributed pseudoepigraphically to Ammonius, one of Aristarchus' pupils), whose materials are very similar (their characteristics are in line with those of all the Byzantine instrumental literature, according to the well formulated denomination of Garzya [1983]). Kopp [1883] and Nickau [1966] thus drew the conclusion—correctly, in my opinion—that they all derived from the same collection (a different hypothesis was advanced by Palmieri [1988]44–50). Another lexicon of this type was compiled at the beginning of the 6th c. AD by Johannes Philoponos of Caesarea. In general lexica, moreover, one finds numerous glosses deriving from this tradition, often with many elements reduced to synonyms.

4 *Distinction among Lexica Concerning a Single Author*

Within lexica referring to single authors, it is important to distinguish between the following two types:

4.1 *Real and Proper Lexica, Whose Entries are Ordered Alphabetically*

Here we should include the lexicon by Apollonius the Sophist on Homer and those on Plato compiled by Timaeus and the Pseudo-Didymus (effectively only in its first part: the second part is completely chaotic), but there are also papyrus findings that belong to this category, such as *P.Oxy.* XXIV 2393, reproducing fragments of a lexicon on Alcman.

4.2 *Glossaries, Whose Entries Follow the Order in Which They are Found in the Text*

Obviously, such instruments require a consultation strictly linked to the corresponding text (see Dubischar in this volume): appropriately, Montanari

[2006a] identifies them as distinct from lexica because of their syntagmic emphasis in contrast to the generally paradigmatic lexica. They should also be distinguished from paraphrases, which—as Montanari points out—tend to appear as a “continuous and independently legible discourse”.

Works of this kind have come down to us mainly thanks to papyrus findings: beyond the many versions of Homeric glossaries, related to the so-called *scholia Didymi*, a lexicon on Callimachus’ *Hymn to Diana*, found in *P.Oxy.* XLVII 3328, col. II (2nd c. AD) is important. The same distinction between glossaries and lexica (the only one truly functional for ancient lexicography) is adopted by Esposito [2009] 257.

5 Distinction among Lexica on Particular Themes

Within lexica on particular themes, attention should focus above all on two types:

5.1 *Geographic Lexica*

Particularly important is the lexicon by Stephanus of Byzantium (6th c. AD), of whose original edition only a short fragment has come down to us through the cod. Paris. Coisl. 228 (11th c., see Billerbeck [2006] 5 f.), but its epitomization has come down to us (edited by Billerbeck [2006], Billerbeck-Zubler [2011] and Billerbeck [2014]: Meineke’s previous edition is already outdated, see also Neri [2008]). This lexicon, which circulated and was referred to in erudite Byzantine texts (see Billerbeck [2006] 29–35), was compiled by making direct use of various classical authors, such as Callimachus, Rhianus and Pausanias (for a full discussion of the issue, see Billerbeck [2008], who also examines in detail the relationship between Stephanus, the geographer Artemidorus and Marcianus, who epitomized Artemidorus).

5.2 *Biographical Lexica*

Among these, the most important is the one by Hesychius Milesius, which has not come down to us but was a source (probably in epitomized form) of the *Suda* (see Adler [1928] XXI, and especially Alpers [2009b] 151–158).

Ekdosis. A Product of the Ancient Scholarship

Franco Montanari

- 1 *The Form of the Alexandrian Ekdosis*
- 2 *Conjectures and/or Variae Lectiones*
- 3 *Conclusions*

1 The Form of the Alexandrian *Ekdomosis*

The Hellenistic age has rightly been seen as a civilization based on books, that is to say, a society in which the spread of written copies of poetic-literary works gradually intensified and became customary. Possession of books and personal reading became considerably more significant than in the past, even though use of written books had already begun to play an increasing role in the preceding two centuries.¹ As stated by R. Pfeiffer: “It is obvious that we have reached the age that we called – hesitatingly – a ‘bookish’ one; the book is one of the characteristic signs of the new, the Hellenistic, world. The whole literary past, the heritage of centuries, was in danger of slipping away in spite of the learned labours of Aristotle’s pupils; the imaginative enthusiasm of the generation living towards the end of the fourth and the beginning of the third century did everything to keep it alive. The first task was to collect and to store the literary treasures in order to save them for ever”.² The idea that scholars should be concerned with preserving the magnificent culture and education (*paideia*) of previous centuries was certainly not restricted to the material aspect of book production and the collection of exemplars. The decisive

1 For a survey of the history of classical scholarship see Pfeiffer [1968], Montanari [1993b], Montanari [1994a], Matthaios-Montanari-Rengakos [2011], Montana [2012c], Montanari [*forthcoming*], and Montana in this volume; LGGA is a specific lexicon of the figures of the ancient scholars; Dickey [2007] provides an overview of the materials of ancient scholarship (see also Dickey in this volume); for an outline of the ideas and concepts of literary criticism present in these materials, see Meijering [1987], Nünlist [2009a] (with the rev. by L. Pagani [2009b]).

2 Pfeiffer [1968] 102.

cultural impetus came from Aristotelian and Peripatetic circles:³ intellectuals and men of culture realized that preserving the cultural heritage of a priceless and incomparable past could not be achieved without an understanding of its true worth and proper interpretation of its content, and that such a task called for the creation of appropriate and effective tools. In a logical order, which however was also a chronological development, the first problem concerned the actual text of the great writers of the past, and the place of honour could not fail to be assigned to Homer, who had constituted the basis of the Greek *paideia* since the very beginning.

In the period from Zenodotus to Aristarchus and his direct pupils (*i.e.* roughly in the 3rd–2nd c. BC), the Alexandrian *ekdosis* confirmed its place within ancient culture as a typical product of Hellenistic philology along with the *hypomnema*, the *syngamma*, the collection of *lexeis* and other exegetical-erudite products.⁴ Zenodotus was chosen by King Ptolemy as the first head of the Library of Alexandria and in the source of this piece of information he is defined as the first *diorthotes* of Homer.⁵ The term is highly significant and is also confirmed in another source, which states that during the reign of Ptolemy II Philadelphus (285–246 BC) two philologist-poets, Alexander Aetolus and Lycophron, *dealt with* plays (the former with tragedy, the latter with comedy),⁶ while Zenodotus *dealt with* Homer and the other poets. I have deliberately paraphrased the Greek verb with a neutral and imprecise term, *dealt with*, although in actual fact it is a precise and specific term, *diorthoo*, namely *straightening up*, *revising*, more precisely *correcting*; it is the verb from which is derived the designation *diorthotes*, used to characterize Zenodotus, literally *corrector*. The term that indicated the operation of correcting a text was, naturally, *diorthosis*, which is indeed used here in connection both with Zenodotus and Aristarchus. As Pfeiffer pointed out, in this regard: “It is not improbable that Zenodotus, examining manuscripts in the library, selected *one* text of Homer, which seemed to him to be superior to any other one, as his main guide; its deficiencies he may have corrected from better readings in

3 On the role of Aristotle and of the Peripatos, see Montanari [2012d] with the bibliography (in particular Montanari [1994a], Montanari [2000a]); see also Montana, Hunter, and Nünlist in this volume.

4 On the typology of philological writings, see Dubischar and Tosi in this volume.

5 Suidas, *Zηνόδοτος Ἐφέσιος* (ζ 74 Adler).

6 Tzetzes, *Prolegomena de comoedia, Prooem. I* 1–12, *Prooem. II* 1–4, 22–39 Koster; Alexander Aet. *TrGF* 1, 100 T 6 = T 7 Magnelli; Lycophron *TrGF* 1, 101 T 7; cf. Pfeiffer [1968] 101, 105–106; and Montana in this volume.

other manuscripts as well as by his own conjectures. *Diorthosis* can be the term for either kind of correction. It is hard to imagine any other way”.⁷

So the first *diorthotes* of Homer selected a copy he considered to be suitable and worked on it in various ways. On this important point Pfeiffer and K. Nickau, who has produced fundamental studies on Zenodotus,⁸ are in agreement. H. van Thiel likewise believes the Alexandrian *ekdosis* consisted of the copy chosen by the grammarian from among those available, and provided with a series of annotations.⁹ M. West suggests that the particular eccentricity of Zenodotus’ text could not have been due merely to his judgment and opinions, but must in part have reflected an eccentricity of the tradition on which he based himself: he may have worked on a rhapsodic exemplar produced in an Ionian context, which thus reflected a line of tradition differing from that which subsequently became widely accepted and which was predominantly of Attic origin. Thus it may have been an exemplar he had perhaps brought with him to Alexandria from Ephesus, his native city. According to this hypothesis, Zenodotus worked on a Homeric text characterized by idiosyncratic aspects: consequently *his* Homeric text, resulting from the combination of the base-text plus the annotations in the margins, was necessarily influenced by this circumstance.¹⁰ Of course, this is no more than a mere hypothesis, which, however, is based on the same vision with regard to the manner of working of the pioneer of Hellenistic philology: namely, choosing a copy and performing a *diorthosis*, *i.e.* carrying out *corrections* on the copy in question, in order to produce his own *ekdosis* of Homer.

By pondering on these themes over the years, I have come to the conclusion that the problem of the characteristics of the Alexandrian *ekdosis* can be profitably addressed by starting from its concrete form in terms of its production as a book, on the basis of the following presupposition: in order to understand

7 Pfeiffer [1968] 110.

8 Nickau [1972a] 30–31: “Dann ist zu fragen, ob Z(enodotos) nicht einen durch Recensio ermittelten Homertext zugrundelegte (der jedoch nicht seinen Vorstellungen von der genuinen Form der Epen entsprach), diesen mit Obeloi versah und zu ihm Textvorschläge sowie deren Begründung mitteilte. Z(enodotos) selbst wie auch seine Hörer machten sich entsprechende Notizen, die, wären sie von Z(enodotos) schriftlich veröffentlicht worden, ‘Hypomnemata’ hätten heißen können. Aber die Zeit der schriftlich publizierten Homer-Kommentare begann erst mit Aristarchos. So würden sich auch die späteren Unsicherheiten in der Berichterstattung über Z(enodotos)s Ausgabe erklären”; see also Nickau [1977].

9 Van Thiel [1991] IX–XIII; van Thiel [1996], [2010²] v–vi; van Thiel [1992], discussed by Martin Schmidt [1997], with a reply in van Thiel [1997]: see below and n. 68.

10 M. L. West [2001a] 39, cf. Montanari [2002a] 123.

the nature of what we call a grammarian's *ekdosis* of a text and what it contained, it is crucial to examine the way in which it was materially constructed. I have therefore tried to emphasize the importance of the relationship between the bookshop artefact on one hand and the text as an object of 'philological' editing, with its various paratextual elements such as annotations and *semeia* (critical signs), on the other.¹¹ We must take into account and award suitable prominence to what we know regarding the creation of new copies of texts, in the *scriptoria* by professional scribes or also privately by individuals, along with insights that can be gleaned from surviving examples. To look at the problem in this perspective, the papyri are an essential source of information that cannot be disregarded; we will thus start from the papyri to search for data helpful to illuminate these issues.

It is an accepted and well documented fact that new examples of literary works were normally re-read and corrected through additional further comparison with the antigraph, at times even on the basis of a collation with other copies. Numerous types of evidence for this can be adduced on the basis of papyrus fragments of literary texts, and papyrologists are fully aware of the phenomenon of corrections introduced in order to improve an exemplar in the framework of book production. Naturally we are particularly interested in the most ancient evidence, although we are hampered by the fact that the papyri datable to the period between the last decades of the 4th and the 3rd century BC (the era of Zenodotus) are very limited in number. This notwithstanding, some small corrections of material errors can already be observed in the two most ancient surviving literary papyri, the *Persians* of Timotheus (*PBerol.* inv. 9875) and the renowned *Derveni Papyrus*,¹² dated to the last decades of the 4th century BC (recall the dates of Zenodotus: ca 325–ca 260). Such examples suggest that these corrections were not the result of a systematic revision, but were made by the scribe, perhaps *in scribendo*. Though not classifiable as a highly striking phenomenon, these occasional corrections of small errors certainly represent the most ancient and visible evidence of a concern for a correct text, or better, of the intention to correct a text in which an error could be perceived.¹³ A few decades later we already find some considerably richer and more significant witnesses, which I will now briefly summarize.

One noteworthy witness is the Homeric roll *P.Illias 12*, of which substantial parts are preserved, pertaining to books XXI, XXII and XXIII of the *Ilias*, dated between 280 and 240 BC, thus still in the Zenodotean era or shortly

11 Montanari [1998d], [2000b], [2002a], [2004], [2009b], [2009d], [2011b], and [*forthcoming*], with extensive bibliography.

12 Turner – Parsons [1987] 92; text in Kouremenos – Parássoglou – Tsantsanoglou [2006].

13 See Montanari [2009b] 146–147; Montanari [2011b] 3–4.

thereafter, and in any case decidedly pre-Aristarchean.¹⁴ This exemplar shows a particularly abundant quantity of corrections performed on the base text, written in a “neat, legible and attractive hand . . . A second, rather cursive, hand (m. 2) has in many places corrected mistakes and inserted variants. It is not clear whether the latter all come from a single text, or are a selection from various texts, a kind of primitive *apparatus criticus* . . . A third hand, which it is convenient to refer to as m. 3, although it may be earlier than m. 2, has inserted the reading of the Vulgate, ὠρτο, at Ψ 214, and was probably responsible for part of the double attempt to correct Βορεαι at Ψ 195 . . . In several places there are marginal signs. Points are prefixed to . . . The remaining marginal signs are even more puzzling . . .”¹⁵ Given its chronological position, the fact of having at least 21 plus-verses in the preserved parts¹⁶ is not particularly strange, but what interests us here is above all the conspicuous quantity of variants and marginal signs. According to the analysis of S. West, the range of signs in the text is extremely varied. Sometimes the second hand inserts readings of the *vulgata*¹⁷ in passages where the base text is different, whereas on other occasions it inserts readings that differ from the *vulgata*, although the latter is actually in agreement with the base text; in yet other places neither the base text nor the readings inserted by the second hand agree with the *vulgata*; the third hand has inserted a reading taken from the *vulgata* in a passage where the base text differs from the latter.¹⁸ The marginal signs are numerous, if one takes into account that the left-hand margin of the columns is often lost, and are considerably problematic. In five or six places the line is marked by a dot, a sign that always gives rise to problems of interpretation with regard to whether it should be considered as having stichometric value or as a critical sign, and even in the latter case its meaning is doubtful.¹⁹

14 *P.Heid.Lit.* 2 (inv. 1262–1266) + *P.Hib.* 1.22 (*Bodl.Libr. inv. Ms.Gr.Class.b3(P)/2*) + *P.Grenf.* 2.4 (*Bodl.Libr. inv. Ms.Gr.Class.b.3(P)*) = M^P 3 979; cf. S. West [1967] 136–191; Sforza [2000].

15 S. West [1967] 136–137.

16 It is well known that the witnesses (both direct and indirect) of the Homeric text which date from the early Hellenistic age (roughly up to the 2nd c. BC) show the presence of additional lines as compared to the *numerus versuum* fixed at a later stage, which corresponds to that of the modern editions: cf. further on and Haslam [1997] for an effective overview.

17 The so-called *vulgata* can be defined as the Homeric text that prevailed in the transmission, cf. shortly below.

18 S. West [1967] 137.

19 S. West [1967] 133, 137; cfr. Pfeiffer [1968] 218; Nickau [1977] 261; McNamee [1992] 9 nn. 5–6, 15 n. 31, Table 1 p. 28, Table 2 p. 38, Table 3 p. 43; Montanari [1998d] 16, and Montanari [2012c] 28–29, with additional bibliography.

At the side of l. 23.157 “there are traces of a sign rather like a *diple*”:²⁰ if it were genuinely a *diple*, then one would have to raise the question of when the sign was marked on the papyrus. That is to say, one would have to endeavor to ascertain whether or to what extent it dates from a time later than the base text, given that it is normally believed that the *diple* was introduced by Aristarchus²¹ (born around 215 BC), and in effect a sch. of Aristonicus to this line provides information on an Aristarchean observation (and draws a parallel with 2.278).²² This papyrus is a witness that should certainly be the object of an in-depth re-examination from all points of view, including from the perspective of paleography, above all to determine the time gap between the base text and the subsequent interventions.

Of a slightly more recent date, but equally significant, is *P.Odyssey 37*, dated to between 250 and 200 BC, which contains parts of books IX and X of the *Odyssey*.²³ This too has been examined by S. West: “The text had undergone a double process of correction and collation. The original scribe appears to have had two MSS. at his disposal, and in several places he has cancelled readings correct in themselves in favour of readings which are no better and are sometimes obviously worse. Presumably he had more faith in the MS. which he used in order to correct than in that from which he originally copied it . . . Corrections have also been inserted by a second hand, which can usually be distinguished without difficulty from that of the original scribe. The readings inserted by m. 2 agree with the Vulgate, but in several places where the text diverges considerably from the Vulgate there is no trace of a correction. There are no marked affinities between this text and that of any of the Alexandrian critics”. There are plus-verses (they are quantitatively fewer as compared to the previous exemplar) and marginal signs, most of which are probably of a stichometric character (but the left-hand margin is often lost). The most important fact is that the roll underwent a twofold process of collation and correction: the first scribe would seem to have had two exemplars available, and he often corrected his text on the basis of another manuscript, after which a second hand inserted readings that are in agreement with the *vulgata*.

These are witnesses of great importance for the question we are examining here: we have two Homeric exemplars from the mid-3rd century BC, therefore definitely and decidedly pre-Aristarchean, which in addition to various kinds of – often somewhat problematic – critical signs and the expected plus-

21 Pfeiffer [1968] 218.

22 The observation concerns the use of the verb in the plural with a singular but collective subject (σχῆμα πρὸς τὸ νοητόν), as is also found in *Il.* 2.278: cf. Matthaios [1999], p. 384.

23 *P.Sorbonne* inv. 2245 A = MP³ 1081: cf. S. West [1967] 223–224.

verses, also show rather clear evidence of collation with other copies and a conspicuous number of interventions performed on the base-text at various times and in various different ways.²⁴ M. Haslam says: “Our earliest Homeric manuscripts, those of the 3rd cent. B.C., are characterized by their startling degree of difference from the text that prevailed later, sometimes known as the ‘vulgate’ . . . We now have fragments of about forty Homer manuscripts written c. 150 B.C. or earlier . . . Several of these early manuscripts give evidence of having been collated with another exemplar²⁵ (so ‘wild’ is hardly the word for them) and sometimes reveal that ‘vulgate’ readings coexisted alongside ‘eccentric’ ones . . . Of the variants entered from a second exemplar in the most extensive of the early *Iliad* papyri (P 12 [*scil. P.Heid.Lit. 2 + P.Hib. 1.22 + P.Grenf. 2.4*]) four coincide with the vulgate . . . A similar picture is presented by the most extensive of the early *Odyssey* texts, P 31 [*scil. P.Sorbonne inv. 2245 A*] . . . The Homer of readers in the 3rd and early 2nd century . . . was appreciably more flaccid than the Homer of subsequent readers”.²⁶ This was the situation that Zenodotus and his earliest successors found themselves facing.²⁷

From the 3rd century BC we have the Milan papyrus with epigrams by Posidippus, *P.Univ.Milan. 309*, another important piece of evidence in view of the quantity of corrections and annotations the text presents.²⁸ The majority of the corrections were made by the same scribe, clearly *in scribendo* (in general amounting to one and never more than three letters and all aimed at correcting minor slips in the drafting stage), but subsequently, after the copyist's corrections, two other hands intervened with further emendations and the differences in approach should be recognised.²⁹ The third person to make changes to the text in col. XI recorded a variant on the reading of l. 30, noting it in the upper margin: at col. XI 30 we can read *κεντρακαιεξω* [and in the upper margin it is written *καικεντρα* (the last three letters are not visible in the photograph but can be seen in the original document).³⁰ It is extremely likely that this is a correction or a variant, probably for the *κέντρα* *καί* of the text, an

24 Cf. Haslam [1997] 64–66; Rengakos [2012] 241–242.

25 And consequently they present interventions consisting of corrections and annotations of variants.

26 Haslam [1997] 64–66.

30 Bastianini – Gallazzi [2001] 76–77.

inversion – καὶ κέντρα – has been proposed, but it is not clear, owing also to the fact that the rest of the verse has not been preserved.³¹

The papyrus fragments of the following centuries, and in particular of the three centuries of our era (the era with regard to which the papyrus findings are most abundant) provide us with rich and valuable documentation of exemplars with interventions of deletion, addition and corrections of all types. The following significant examples will suffice for our purposes;³² they could be easily increased with fragments from various periods.

POxy. 2161, of the 2nd century AD, contains Aeschylus' *Diktyoulokoí*. The scribe has occasionally corrected some of his own errors: for instance, in l. 831 he wrote ηδη, but then crossed this out with an oblique line through each letter, writing *supra lineam* the correct reading ο]ιον.

PBerol. inv. 9872 (BKT II), of the 2nd century AD, is a long papyrus roll (75 columns plus various fragments) that contains a commentary on Plato's *Theaetetus* with a substantial number of corrections. The most recent editors of the roll, G. Bastianini and D. N. Sedley, write: "The *volumen* has been proof read and corrected in many places: letters or words omitted in the original drafting stage have been restored, superfluous letters or words have been cancelled, letters judged to be mistakes have been replaced by those considered correct. All these changes do not appear *necessarily* to presuppose a collation with an exemplar different from that of the copy . . . The variety of ways the corrections have been made may lead one to suspect that the roll had been corrected on various occasions: the first hand (a *diorthotès* in the *scriptorium*) added the missing words, which are marked in the upper margin . . . or lower . . . or are placed after the line directly in the *intercolumnium* . . . A later hand or hands, appears to have gone through the whole text, cancelling with a line in ink all the letters judged to be wrong".³³ For example, at col. LXIII, l. 6 the scribe had written προσαλλαουτεσχη, omitting some words. In the *intercolumnium* to the left, the corrector has put the sign of an upwards-pointing *ancora* (something similar to an arrow) and in the space between αλλα and ουτε has written ἄνω; in the upper margin, one can read the words θεωρεῖται ουτε γαρ χρω|μα κα(τω), which were probably preceded by a downwards-pointing *ancora* now lost in *lacuna*. The corrected text is therefore πρὸς ἄλλα θεωρεῖται οὔτε γὰρ χρωμα οὔτε σχή|μα.

POxy. 2256, of the 2nd–3rd centuries AD, contains *hypotheses* of various tragedies by Aeschylus. The fragmentary *hypothesis* of fr. 3 recalls the vic-

33 Bastianini – Sedley [1995] 243–244.

tory, with the trilogy of which the *Danaids* was a part, against Sophocles and another author, probably Mesatos (l. 5). After the name of the latter and at the beginning of the following l. 6, round brackets can be clearly seen, which are generally used as a sign to indicate expunction in literary texts and non-literary documents. It is clear here that the round brackets were placed *in scribendo*, which can be explained solely by imagining that the scribe copied from an exemplar where the expunctions were already present to indicate that the plays placed between brackets had been mistakenly placed after the name of Mesatos.³⁴

The copy of the Gospel according to St. John contained in *PBodmer 2* dates to the 3rd century AD. The scribe has corrected the text in a variety of ways. There are *supra lineam* additions (ll. 2 and 12) and words rewritten above parts of the text cancelled with a sponge: in ll. 9–10 $\epsilon\tau\alpha\rho\alpha\chi\theta\eta$ has been written over a word that has been scrubbed out and which continued in the following line, where the letters $\sigma\alpha\tau\omicron$ can be made out in the remaining space; the second part of l. 10 has been rewritten; at the beginning of l. 11 $\tau\omicron\nu$ is the remains of an eliminated reading, subsequently punctuated with dots as well as small round brackets *supra lineam*.

I turn now to a manuscript which, I believe, provides us with what can be termed an anthology of the techniques and methods available for correcting and improving a text: *POxy. 2404* + *PLaur. inv. 111/278*, a fragment of a papyrus roll (late 2nd–early 3rd century AD) containing a part of 51–53 (*POxy. 2404*) and of 162–163 (*PLaur. 111/278*) of Aeschines' oration *Against Ctesiphon*.³⁵ It seems quite evident that this copy of the oration of Aeschines has been collated with a second exemplar and has been the object of detailed and systematic correction seeking to identify the textual structure by distinguishing *cola* and periods and to correct copying errors for the benefit of the reader, and to emend the text in places judged unsatisfactory, by means of various different methods of deletion and by writing the alternative readings above or beside the wrong interpretations.³⁶ We can see that the work of proof reading was not limited solely to correcting minor errors as discretely as possible in order to reduce the possibly negative impact of emendations on the appearance of the text. In fact, more evident corrections, albeit written with care and precision, have

35 *Editio princeps* of *POxy. 2404*: Turner [1957]; cf. Turner [1980²], Pl. viii and 212; *editio princeps* of *PLaur. inv. 111/278*: Messeri Savorelli – Pintaudi [1997] 172–174; see also Neri [2003] 511–514; Esposito [2004] 3–4; Colomo [2008] *passim*.

36 Detailed analysis in Montanari [2009d] with bibliography; on related problems see above all Turner [1980²] 92–93.

been made, with the apparent aim of improving the text and enabling it to be read according to the intention of the corrector or correctors. The methods of corrections and cancellation used in this papyrus are: the use of dots above a letter, an oblique (single or double) line through a letter in question and, for longer sequences, a line above or through the letters to be deleted, or by a combination of these methods. We have also seen the widespread practice of simply writing the correct letters above those judged incorrect as way of indicating a deletion, as it were, ‘automatically’ without the need for other material indications. Another form of correction is the addition of words between the lines or in the margins. As regards punctuation, the scribe provided the text only with *paragraphoi*, whilst copious punctuation was added (at least, so it is thought) by a later hand.³⁷ Most of these are dots, placed slightly higher than the letters, which had already been written, making sure that the dots were not above a letter but in the narrow space between the end of the preceding word and the beginning of the next. A lower dot can also be seen at col. 1, l. 17. The system can be described as follows: the upper dot combined with the *paragraphos* marks the end of a sentence; the upper dot on its own distinguishes the *cola* of the sentence; the lower dot indicates a weaker pause.³⁸ This constitutes proof of a serious attempt to highlight the syntactic and rhetorical structure of the text, leading us to consider the role of punctuation in Alexandrian philological exegesis (rather than the complex and idiosyncratic system created by Nicanor, one can mention the simpler and more widely-used system of the three *stigmai* of Dionysius Thrax).³⁹

I wish to emphasize at this stage why I have drawn attention to these manuscripts and their characteristics, with a choice of significant examples, to which others could easily be added.⁴⁰ The point is not that they may be considered as exemplars of a grammarian’s *ekdosis*: there is absolutely no evidence for such a suggestion. Rather, in my view they are of value because they highlight the importance of the techniques adopted in the workshop for book production and the effect such craftsmanship had on the development of a philological practice that sought to ameliorate and emend texts regarded as unsatisfac-

37 Turner [1957] 130: “The second hand not only revised the text for errors but collated its readings with an exemplar different from that from which it was copied”; cf. Turner [1980²] 212; Colomo [2008] 15–16, 24. On punctuation marks in papyri, see Turner [1980²] 92–93; Turner-Parsons [1987] 9–10.

40 Other useful material can be found in S. West [1967] *passim* and Haslam [1997] 63–69.

tory due to the (real or supposed?) errors they contained. The papyri provide ample evidence of the different methods used to ‘improve’ an exemplar of a book, in other words to correct the (new) copy of a text. It was considered appropriate to add, remove or modify letters or words that had been omitted or written erroneously, or cancel what was regarded as erroneous and replace it with what was judged to be correct by writing the correction above the line, in the margins and in the intercolumnia, at times with specific markings to indicate the position referred to. Sometimes the forms presumed to be correct were introduced in replacement of the previous words once these had been materially eliminated, or at times by simply writing the correct letters or words between the lines or in the interlinear space above the form judged to be incorrect, as a way of indicating, as it were, an ‘automatic’ deletion without the need for other material indications. On occasion, a horizontal or oblique line could be drawn through the letters or words to be deleted; another method was to mark these letters or words by dots or lines above or below or enclosed within round brackets, or even to erase them with a sponge.⁴¹ Thus there was a veritable ‘tool kit’ for *diorthosis*. Often the interventions were carried out by the *diorthotes* of the *scriptorium*, whose task within the atelier was to re-read and correct the text, if necessary also by comparing the copy with the model, in other words through a practice of collation.

E. G. Turner and P. J. Parsons write: “One of the questions the palaeographer should ask about any literary manuscript is whether it has been adequately compared against its antigraph (the exemplar from which it was copied), a task which, in a publishing house, was the duty of the *diorthotes*, *corrector*, or whether it has been collated with a second exemplar (a procedure often carried out by private individuals to secure a reliable text) . . . But several of our surviving papyrus manuscripts, and especially those which are beautifully written, contain such serious unnoted errors that it is clear their ‘proof-reading’ was of a summary, superficial kind, if done at all . . . Those ancients themselves who set store by having a dependable copy (persons like Strabo and Galen) were aware of this weakness and adopted a routine to counter it: they themselves (or their secretaries) checked the copy to be used against another exemplar. If, therefore, the text had been checked against its first exemplar, and was later collated with a second, it may well bear the marks of this double checking”⁴²

Best practice in the book production consisted in a comparison between copies and corrections of mistakes, carried out by a professional or occasional

41 Turner-Parsons [1987] 15–16, with reference to examples in plates; see also Turner [1980²] 93 and Pl. VIII; Bastianini [2001].

42 Turner-Parsons [1987] 15–16; Turner [1980²] 93 and Pl. VIII.

diorthotes, who had adequate resources for deleting, adding, replacing and marking various aspects and features of the text in order to improve it and increase its reliability. Even a private copy could be subjected to the same kind of treatment, with the use of the same tools and procedures, for personal reasons springing from the cultural or research interests of the owner. Analogies with what we understand by philological practice are evident and need to be stressed, as the methods and techniques adopted in handicraft book production honed the skills that would gradually be developed and applied by grammarians. Little by little, a procedure that probably did not appear particularly strange or extravagant among those for whom use of books was an everyday practice developed into an extraordinarily innovative principle: the *diorthosis* of the *diorthotes* of the *scriptorium* became the *diorthosis* of the philologist, *diorthotes* not of an individual copy of Homer but *diorthotes* of Homer. Effectively, concerns and emendments of a specifically book production and commercial nature became those of a critical and philological-grammatical nature.⁴³

The aim pursued by the corrector of a publishing house was to produce an exemplar that would represent the best possible workmanship, a good copy suitable for sale on the book market or to a client, perhaps intended to be the personal copy of a scholar or an educated man, who did his own corrections and annotations (we will note the case of Galen). In contrast, the grammarian's underlying objective in correcting the text of his personal copy was more ambitious, because he sought to find the true and proper form of the work he was dealing with. He worked on a copy with the aim and intention of achieving, as it were, the model exemplar, which would display what in his view was the genuine form of the literary work in question. This conception led to the possibility of indicating doubts or a textual aporia, a perspective that certainly did not belong to the mental system and operational horizon of the craftsmen of the *scriptorium*.

Thus with Zenodotus, drastic and univocal deletion (a typical action of the craftsman in book production, meaning "don't write these words in the new copy") for the first time was accompanied by the sign of philological uncertainty, namely the *obelos*, a simple horizontal stroke on the left of the line. This marked a decisive intellectual change: attention began to focus on the work in its own right rather than merely on perfecting the individual copy. It is vital not to underestimate or downplay the invention of this critical sign, which had a momentous impact because it could also be applied systematically to poems of the great length and cultural importance of the *Iliad* and the *Odyssey*. By

43 Cf. Nickau [1977] 10–11.

means of his simple *semeion* Zenodotus was able to indicate his suspicion that a given line might not be a genuine line of Homer, but that he was not sufficiently sure of his judgment to be able to proceed with clear-cut and definitive deletion of the element in question. Later, the progress of the discipline gradually increased, with further development of the system of critical signs and the markings of exegetic reflection and erudite comment. By the time of Aristarchus the system of *semeia* had become complex and refined, but it had all begun with Zenodotus' small *obelos* and its radically new meaning for a reader of his texts.⁴⁴

I believe that the philological work of the Alexandrian grammarians, starting from the first generation, represented something new in cultural history and marked significant intellectual progress. The reality and significance of this 'revolution' becomes more evident and tangible if we succeed in grasping a fundamental chain of circumstances: namely, the aspects and procedures of book production had moulded a material and, in a sense, 'craft-oriented' base of tools and working procedures that were subsequently adopted and utilized by grammarians for quite different purposes and in a different perspective. Thus the tools and methods of book production became the tools and methods of scholarship by virtue of an innovative and decisive intellectual change, which signalled a transition from the aims of pure craftsmanship, *i.e.* from correcting an individual copy in the *scriptorium* and thereby creating a good product, to an intellectual aim of a 'philological' nature, namely producing the exemplar that would contain what was held to be the correct text of the work. Thus no longer would the copy be *an* exemplar of the work: rather, it would be *the* text of the work in itself, and this implied a sharp difference between "correcting a (single) copy" and "editing a text itself".⁴⁵

Let us recapitulate. Zenodotus worked on an exemplar of Homer that was available to him and which he deliberately chose for the specific purpose of producing his *ekdosis*. However, he had more than a few reservations about it, concerning both the *numerus versuum* and also a certain quantity of readings. He had doubts about the authenticity of some lines, and adopted a sign indicating his suggestion that the line should be expunged, the *obelos*, which he marked in besides the lines: this was *athetein*, the *athetesis*. But it has always been more difficult to determine how he proceeded with lines he believed should most certainly be deleted from the text as definitely spurious and really to be rejected. Normally, such lines would have been present in his base-text (as were those for which he proposed the *athetesis* by means of the *obelos*).

44 For the evolution of the system of *semeia* see also Montana in this volume.

45 Montanari [201b].

For such cases of deletion, in the scholia one finds the expressions *ou graphain* (do not write: the most frequent), *ouk einai* (is not there), *ou pheresthai* (is not handed down) and a few others.⁴⁶ The task of reconstructing exactly and concretely what was the difference between the operations indicated by this terminology has always been problematic. A good idea of what was meant can be gained by examining more specifically the practices used in literary papyri for different modes of deleting something that is present in a text. Thus Zenodotus, as we have seen, marked some lines with the *obelos* on his copy, but he also used one or other of the graphic methods mentioned above for lines that were clearly intended to be deleted from the base-text. But the grammarian could equally well jot down another similar or equivalent term for line deletion;⁴⁷ alternatively, he could rely purely on a deletion sign without verbal annotations, in which case the terminology for line deletion may have been noted down by those who followed his teachings at the Museum, or it may have been created, modified or extended by the subsequent tradition (this is conceivable above all for *ouk einai* and *ou pheresthai*).⁴⁸ I would argue this is the most plausible explanation for the different terminology used in the scholia for Zenodotus' text alterations of *athetesis* and line omission, including the problem of the material difference in the copies between athetised and deleted lines.⁴⁹

A somewhat skeptical attitude towards this vision has recently been expressed by A. Rengakos, who puts forward some objections. 1) The expressions in the scholia in reference to the lines deleted by Zenodotus more clearly describe the situation of lines genuinely not included and therefore absent; 2) it is strange that Zenodotus invented a critical sign for *athetesis*, namely the *obelos*, whereas there is no trace of a sign of the same type for deletion, even though it has a more radical impact on the text; 3) with regard to passages where Zenodotus eliminates some lines but information concerning his interventions on the deleted lines is preserved, Rengakos believes there is nothing to confute the idea that those lines were effectively absent in his text. Thus the Zenodotean *ekdosis* may have been a veritable continuous text, with the *obeloi*

46 Cf. Ludwich [1884–1885] II 132–135; Nickau [1977] 1–30.

47 The verbs *perigrapho* and *diagrapho* are technical terms for 'deleting' using the material means mentioned: cf. Turner – Parsons [1987] 16; some examples have remained in the scholia: for *perigrapho* cf. Nickau [1977] 10–12 and 29.

48 One may mention in this regard the *diadoche* of 'Zenodotean' grammarians testified by Suidas (π 3035 Adler); their last representative was Ptolemaios Epithetes, who worked on the text of Zenodotus and entered into a polemical argument with Aristarchus: see F. Montanari [1988].

49 In Montanari [1998d], [2000b], [2002a], [2002c] I discussed some possible objections to this reconstruction, which I will not repeat here.

and the variants and without the deleted lines.⁵⁰ My opinion is that the variability of expressions used in the scholia to indicate line deletion suggests that, at least in part, these were devices developed (perhaps much) later within the tradition to put into written form what were predominantly (with the possible exception of *ou graphein*) the material modes of deletion used in book production, as described above. These devices were the signs for line deletion: there was no need to invent any *ex novo*, because they were well known and available in the practice. But the real innovation was the *athetesis*, which did indeed call for a special sign. I still find it difficult to imagine that Zenodotus began his task of *diorthosis* by writing a continuous and definitive text: to do so, he would have had to begin once he had already made all the decisions, with poor opportunity for second thoughts and new corrections, and the definition of *diorthosis* / *diorthotes* does not point in this direction.

However, it is not unlikely that the paratextual apparatus on the working copy may have given rise to problems of comprehension and readability, especially with the accumulation of interventions over time, and in places where the multiple interventions on the text became interlaced with one another. The copy bearing the work of *diorthosis* resulted materially in the philologist's own *ekdosis*, and we can imagine this as a product of years of study that led over time to a series of interventions on the same exemplar. Together with critical *semeia*, explanatory annotations must have been present in the working copy starting from Zenodotus onwards, and are likely to have continued to be used by grammarians in their editorial and exegetic work. I therefore feel it is far more plausible to assume that the *ekdosis* became *ekdotheisa*, i.e. 'published' and therefore available for consultation by scholars, poets and intellectuals, as soon as the grammarian himself, or someone working on his behalf, had had a copy made that followed the indications in the base-text on which *diorthosis* had been performed, so as to create an exemplar that was a correct and 'fair copy' of the work,⁵¹ but still bearing the name of the grammarian who was the author of the copied *diorthosis*, with the marginal

50 Two cases that have given rise to particularly extensive discussion are *Il.* 2.111–118 and *Il.* 2.156–169: the scholia (Aristonicus and Didymus) say that Zenodotus deleted the lines for a shortened version of the passage, but on the other hand they preserve text interventions by Zenodotus himself on these very lines (in actual fact, the intervention on the first passage strikes me as debatable, and calls for further clarification): cf. Rengakos [2012] 250–252. I see no difficulty in thinking that with regard to the lines in question Zenodotus' copy had one of the well-known deletion signs and that a possible variant for one of the deleted lines was indicated in the margin. See below and n. 85.

51 Perhaps *ou graphein*, which is the most frequent expression for line elimination, may go back to Zenodotus himself and may have been an indication to whoever transcribed his *ekdosis* that the element in question was not to be copied.

annotations which would still be necessary once the text had been properly prepared. In short, first there was a working copy belonging to the *diorthotes*, with all his interventions and annotations, after which it was possible to proceed to reproducing it as a ‘fair copy’ of his *ekdosis*. Thus it was a step-wise production, which we should obviously imagine to have been done not only for Zenodotus but also for all his successors. This can also explain the conservation and transmission of the interventions and textual choices made by the grammarians.⁵²

The material form of the *ekdosis* after Zenodotus must have remained very similar: a grammarian chose, according to his own preferences, an exemplar that he considered suitable as a basis of his work. But Zenodotus’ choice of the base-text of Homer seemed highly debatable and was open to criticism, which is why Aristophanes and Aristarchus chose exemplars with noticeably different characteristics.⁵³ Consequently, a line of tradition predominantly of Attic origin gradually spread, partly by virtue of the base-text of working copies used by grammarians active in a later period than Zenodotus. The latter base-text proved decisive above all as regards the *numerus versuum*, whereas the readings suggested by individual grammarians generally did not become standard in the *vulgata*. The plus-verses present in the Zenodotean text (as well as in several pre-aristarchean copies) were not his own interpolations but were instead typical of exemplars that were current in his day:⁵⁴ they disappeared because the work of Aristarchus led to general recognition of a text that had a very similar number of lines to our *vulgata*. The Aristarchean *numerus versuum*, which became the standard of the *vulgata*, was essentially the outcome of the particular working copy selected by Aristophanes and, finally, by Aristarchus. It is significant that Aristophanes did not go so far as to carry out the drastic act of line deletion: in other words, it is significant that he abandoned the use of performing material cancellations on his own copy with the graphic techniques mentioned above. The *obelos* became the prime tool for expressing a cautious doubt concerning parts of the text; *ou graphein* disappeared, leaving only *athetein*.⁵⁵ Aristarchus followed exactly the same procedure. This explains why many of the lines Zenodotus had decided to eliminate

52 Helpful confirmation comes from a testimony by Galen, quoted a little further on.

53 Montanari [2002a] 123–125; M. L. West [2001a] 36: “Clearly Aristophanes and Aristarchus were not dependent on Zenodotus’ text but followed another source or sources more similar to the vulgate”; cf. M. L. West [2002] 138.

54 Haslam [1997]; M. L. West [2001a] 40; cf. above.

55 Or else, if genuine deletions were still carried out, they were of such minor relevance that all knowledge of them was lost: this is possible, but not demonstrated.

from the Homeric text once and for all – but which were present in the copies chosen by later grammarians – were preserved in the *numerus versuum* that became the generally accepted tradition after the Aristarchean age and thus remained in our *vulgata*.⁵⁶ The abandonment of the drastic practice of material deletion highlights the increasing sense of caution that had developed in the meantime, and accounts for the fact that many of the lines ‘deleted’ by Zenodotus were in effect no longer deleted⁵⁷ and thus were not obliterated from the tradition.

The work of Aristarchus marked the period in which Alexandrian philological production included the drafting of extensive *hypomnemata*. The great continuous commentary, which followed the text step by step, notably facilitated and enriched the communication and preservation of the arguments and motivations put forward by the grammarians, so that the material which has come down to us from this tradition is much more substantial.⁵⁸ Yet the *ekdosis* as an annotated working copy by no means went out of use, as clearly testified by the information on the Aristarchean edition(s). On the other hand, the possibility of dwelling at length in the *hypomnema* on arguments pertaining to text criticism and exegesis constituted an important resource. In practice, the need to write on the copy chosen as the base-text was no longer so strongly felt, especially as regards philological-exegetic arguments. Previously, before the rise of separate *hypomnemata*, there had been a greater need to write on the actual text of the working exemplar, but with Aristarchus the particularly elaborate system of critical signs placed next to the lines⁵⁹ as well as the variants and the readings to be adopted must have been present in the margins and interlinear spaces, while the philological-exegetic treatment was mostly developed in the commentary, although marginal annotations continued to be utilized whenever they were felt to be of practical use, *e.g.* for short notes and textual proposals.

The number of Aristarchus’ *ekdoseis* of Homer and their philological and chronological relation to the commentary or commentaries is still a subject of dispute. I will not go over the entire background here, nor report the treatment already given elsewhere: I will restrict myself to summarising the results, in order to set them within the framework that is being delineated. On the one

56 Haslam [1997] 85; M. L. West [1998–2000] vol. I, p. VII; Führer-Schmidt [2001] 7.

57 It is sometimes stated, instead, that they were ‘recovered’ or ‘reintroduced’: this would have involved far more complicated operations.

58 For *hypomnema* features see Montana and Dubischar in this volume.

59 They could also be repeated in the *hypomnema* beside the lemmas, as was the case for instance in *P.Oxy.* 1086 (pap. II Erbse).

hand we have the frequent unequivocal references to the plural for Aristarchus' editorial work on Homer: αἱ Ἀριστάρχου (*scil. ἐκδόσεις* or *διορθώσεις*), ἡ ἑτέρα τῶν Ἀριστάρχου and similar. On the other, the titles of two works by the grammarian Ammonius, the direct successor of Aristarchus: Περὶ τοῦ μὴ γεγονέναι πλείονας ἐκδόσεις τῆς Ἀρισταρχείου διορθώσεως and Περὶ τῆς ἐπεκδοθείσης διορθώσεως, the former in apparent contradiction with the latter and with the scholiastic citations that indicate two editions. Nevertheless, the solutions proposed go as far as to hypothesize a ἐπεκδοθεῖσα διόρθωσις carried out by Aristarchus' immediate pupils, probably by his successor Ammonius, who in any case was familiar with it.⁶⁰

As regards the *hypomnemata*, I think it is difficult to deny that Aristarchus made two successive versions: a first commentary based on the *ekdosis* by Aristophanes of Byzantium is explicitly cited in sch. *Il.* 2.133 *a*: ἐν τοῖς κατ' Ἀριστοφάνην ὑπομνήμασιν Ἀριστάρχου. In contrast to this stands the citation of perfected (ἡκριβωμένα) *hypomnemata* in sch. *Il.* 2.111 *b*: it is perfectly plausible to assume that Aristarchus produced a second version of the *hypomnemata* in which he took into account the progress achieved over time by his work as a Homeric philologist.⁶¹

We have two Homeric passages on which Aristarchus is known to have changed his mind in comparison to his first text choice, as reported in the scholia to *Il.* 10.397–399 and 19.365–368. Such a situation has many parallels in the scholiographic documentation, describing Aristarchean second thoughts and changes of heart.⁶² However, in the case of these two Homeric passages, it can confidently be stated (despite uncertainties about details) that later philologists were searching for information on the reasons and circumstances for his change of mind and on the text situation that had ensued, and since they were far from certain, they consulted the cited works by Ammonius. In the attempt to explain this situation and reconcile the apparent contradiction between the two titles of the successor in the school, it has been suggested that Aristarchus himself personally composed only one *ekdosis*, as suggested by the first title, and that the ἐπεκδοθεῖσα διόρθωσις mentioned in the second one was actually composed later, after the master's death, in the circle of his first and most senior pupils, possibly even by Ammonius or else by other followers. However, I believe that a slightly different hypothesis can lead to a better understanding of what really happened.

60 On this topic cf. Montana in this volume.

61 Allow me to take this opportunity to refer to Montanari [19970] 285–286, on the question of the famous Ὀμηρον ἔξ Ὀμήρου σαφηνίζειν.

62 Another two examples are examined in Montanari [2000b].

The paradox that there were no more editions of the Aristarchean διόρθωσις and that this work itself was issued again (ἐπεκδοθείσα) can only be resolved, in my view, by supposing that the ἐκδοθείσα διόρθωσις and the ἐπεκδοθείσα διόρθωσις were in a sense truly (physically) the same thing, but modified, revised, corrected and further worked on. So let us briefly trace out the entire story. Aristarchus began by writing *hypomnemata* based on Aristophanes' text; then he devoted himself to his διόρθωσις and produced his own *ekdosis*; at this point he then wrote new *hypomnemata*, based on his own *ekdosis*, presenting what he felt was a more careful and refined analysis. But the research and reflection of a philologist like Aristarchus on a text like Homer was unlikely to come to a definitive conclusion, for not only did Aristarchus continue to meditate and study, but he also continued to teach, and Homer was constantly in his hands. And so he would resume work on his διόρθωσις, pick up his *ekdosis* again and jot down his second thoughts and new ideas on the text: thus the very copy that had been the ἐκδοθείσα διόρθωσις, then became the ἐπεκδοθείσα διόρθωσις. And since he wrote no further new *hypomnemata*, he could not write at length on the reasons for changing his mind and explain what stage his thought had reached, and so on some points there was and there is considerable uncertainty as to the final stage of his thought.⁶³

Thus the assumption that there existed a single exemplar of Homer, bearing successive layers of alterations and jottings, provides a perfect explanation for the fact that the tradition commonly spoke of αἱ Ἀριστάρχου, ἢ ἑτέρα τῶν Ἀριστάρχου, διχῶς Ἀρίσταρχος (cf. particularly Didymus in sch. *Il.* 2.517 a) and so forth. In a certain sense, one could indeed speak of two editions, *i.e.* one and the same exemplar displayed a dual set-up: in the majority of cases the first and second version must both have been legible and distinguishable, thereby permitting the subsequent philological tradition to be familiar with them and discuss them both. But if new alterations were made on an already densely annotated copy, it is hardly surprising that uncertainties may have arisen, where for some reason (at times possibly due to material conditions) it may not have been clear which of the two types of text set-up represented the master's final position, which was his ultimate decision and whether indeed he had actually come to any definitive conclusion. Ammonius certainly had perfectly valid reasons for explaining that there was effectively one and only one *ekdosis*, and that at a certain point it had been 're-issued' with changes: in fact it is quite likely that the titles Περὶ τοῦ μὴ γεγονέναι πλείονας ἐκδόσεις τῆς

63 See Montanari [1998d], [2000b] and [2002a]; this solution of the problem *ekdosis* / *ekdosis* of Aristarchus is approved by Slings [1999]; Nagy [2003] and [2009] 21–37; Rengakos [2012] 252; I am unsure whether it was perceived by M. L. West [2001a] 61–67.

Ἀρισταρχείου διορθώσεως and Περί τῆς ἐπεκδοθείσης διορθώσεως referred either to two parts of one and the same work or to two very closely linked works, which were designed to explain what had really happened and above all to clarify the doubtful points. In some passages the master's final decision was not clear: perhaps because it had not been annotated properly, or because there was physical damage at that particular point, or perhaps because his reflections had been interrupted by unforeseen circumstances. In any case, Didymus evidently felt that not everything was perfectly clear, because he consulted Ammonius on doubtful points.⁶⁴

2 Conjectures and/or *Variae Lectiones*

Our reconstruction of the manner of carrying out the Alexandrian *ekdosis*, based on observation of well documented technical facts, helps to clarify, on a more solid basis than usual, the problem of the real nature of the readings attributed by the erudite tradition to the Alexandrian grammarians such as Zenodotus, Aristophanes of Byzantium and Aristarchus: were they conjectures *ope ingenii* based solely on subjective criteria, deliberate choice among variants attested by documentary sources and deriving from the collation of copies, or a combination of both? Was there a practice of comparing a variety of exemplars of the Homeric text to spot the differences and thereby offer an opportunity for choice? This is a problem of fundamental importance – indeed, it is one of the most disputed issues in the history of ancient philology (not only for the history of the Homeric text in antiquity) – inasmuch as these questions are crucial in an evaluation of the work of the Alexandrian philologists and their role in intellectual and cultural history (see also Montana in this volume).

Let us now take another look at the passage by Pfeiffer cited at the beginning: “It is not improbable that Zenodotus, examining manuscripts in the library, selected *one* text of Homer, which seemed to him to be superior to any other at hand, as his main guide; its deficiencies he may have corrected from better readings in other manuscripts as well as by his own conjectures. *Diorthosis* can be the term for either kind of correction. It is hard to imagine any other way”.⁶⁵ It is indeed almost impossible to imagine any other way, which means

64 Pfeiffer [1968] 217: “Whether Didymus was able to work on copies of these *originals* διορθώσεις and ὑπομνήματα of Aristarchus and of his monographs, the συγγράμματα, is an insoluble problem”; cf. M. L. West [2001a] 61–67.

65 Pfeiffer [1968] 110.

that the Alexandrian philologists' production of an *ekdosis* must have involved both conjectural emendations and choice among variants detected through the collation of copies: "Zenodotus' text is shown to be based on documentary evidence".⁶⁶

My own position, already expressed and argued several times elsewhere, can be summarized in the conviction that the Alexandrian philologists' production of an *ekdosis*, with the work of interpretation this implied, involved both conjectural emendations on the text that had come down to them and choice among text variants they had discovered through the collation of different copies. This overall work on the text was referred to by the term διόρθωσις and this was the procedure to which they adhered from Zenodotus onward. The two aspects have received differing emphasis, with some suggesting that the idea and practice of comparing different copies and choosing from variants generated by collated texts was alien to the Alexandrian critical-philological mindset. Some maintain that the Alexandrians solely or mostly conjectured with the aim of correcting without too many scruples a text judged to be corrupted and unacceptable on the basis of a raft of subjective criteria, such as supposed inconsistency, inappropriateness, material repetitions, preference for greater textual concision, standardisation and uniformity. I do not feel it is appropriate to use absolute and exclusive categories – that is, either to assert that *all* the readings espoused by the Alexandrian grammarians were merely arbitrary conjectures devoid of a documentary source, or alternatively to claim that they were *all* readings deriving from exemplars that had been collated and thus resulted from a choice among variants. I think it is far more likely that their work involved both conjectural criticism and also choice among variants deriving from collation. Naturally, with the evidence available to us today it will be difficult to distinguish case by case whether a reading represented a personal and subjective conjecture or whether it rested on a documentary source, unless we resort to hypotheses and deductions that may not always be reliable. But this is our own problem in interpreting individual cases: it is not a problem regarding the *modus operandi* and the method of the Alexandrian philologists. The two levels must not be superimposed, and the fact that we lack definitive criteria to consistently distinguish what is a conjecture and what is a variant by no means implies that one of the two categories is in abeyance.

The idea that the Alexandrian philologists from Zenodotus to Aristarchus known as authors of *ekdoseis* of Homer did not carry out any collation of copies, but offered only conjectures without any documentary basis, and practised only a completely arbitrary 'Konjunkturalkritik' without comparison among

66 Pfeiffer [1968] 114.

copies, has had a number of supporters, starting above all from the positions of M. van der Valk,⁶⁷ whose line of interpretation was also adopted (of course with individually differentiated stances) by H. van Thiel⁶⁸ and most recently by M. L. West, to whom we will return later.⁶⁹ This tendency leads *recta via* to a (quite unfair) underestimation of the importance and the value of the work performed by the Alexandrians. Arguments against it have been put forward by M. Haslam, Martin Schmidt, G. Nagy, J.-F. Nardelli, A. Rengakos and myself.⁷⁰

On the question of the *'Konjekturalkritik'* often and abundantly attributed to the Alexandrians, Rengakos observes that it is a theory based on the false presupposition that we have general criteria for distinguishing between conjectures and genuine variants when we are faced with the overall set of readings contained in the erudite sources, whereas such criteria do not exist at all. Furthermore, in the sources there is no explicit testimony referring to conjectural interventions, and it is impossible to demonstrate that a given reading is the fruit of a conjecture by the philologist to whom the textual choice is attributed. Rengakos has very clearly recapitulated that, on the contrary, there is actually a considerable amount of plausible evidence of the Alexandrian philologists' knowledge of variants deriving from a comparison among copies.⁷¹

In addition to the arguments already illustrated above, based on the papyri and on the general practice of book production, Rengakos has dwelt on this problem, presenting very precise and cogent arguments concerning the testimony offered by the poets of early Hellenism, *i.e.* of the Zenodotean age, who

67 Sharp criticism of van der Valk's ideas (van der Valk [1949] and [1963–1964]) has been made in a number of papers: for ex. Rengakos [1993] 38–48; Rengakos [2002a] 146–148; Haslam [1997] 70 n. 31: "... he does not concern himself with the transmission. In categorizing readings he operates with an opposition between 'original, old readings' and 'only subjective conjectures' ... a schematization that is surely too simple to cope successfully with the complex vicissitudes of the Homeric text".

68 H. van Thiel [1992] and [1997] (see also [1991], *Einleit.*, and [1996], [2010²], *Einleit.*) has argued that the readings which the tradition attributes to the Alexandrian grammarians were actually exegetic glosses or mere indirect references or reminiscences of parallel passages, written in a "Rand- und Interlinearapparat," which Didymus, Aristonicus and others then wrongly interpreted as textual variants; I discuss this rather idiosyncratic vision in Montanari [1998d] 4–6; van Thiel [1992] is discussed by Martin Schmidt [1997], with a reply in van Thiel [1997]: see above and n. 9.

69 M. L. West [2001a], [2001b] and [2002]: discussion in Montanari [2002a], [2004], [2009b], [2011b] and [*forthcoming*]; see further on.

70 Haslam [1997]; Martin Schmidt [1997]; Führer – Schmidt [2001] 6–7; Nardelli [2001] (partic. 52–70, in direct opposition to West's theories); Nagy [2000b], [2003], [2004], [2009]; Rengakos [2002a], [2002b], [2012].

71 Rengakos [2012].

reveal knowledge of different pre-existing Homeric readings: “Do Hellenistic poets offer cases which prove beyond doubt that they made use of different Homeric manuscripts? In other words, do their works display *Bindefehler* which point to the older Homeric tradition? The answer is clearly ‘yes’.”⁷² Indeed we may confidently maintain that some of the Homeric variants testified in the lines of the philologist-poets of the Zenodotean age derived from the consultation of manuscripts and collation of copies.

To this should be added cases in which it can be demonstrated, by finding veritable conjunctive errors, that the variants chosen by the Alexandrians already existed in a more ancient Homeric tradition.⁷³ Indeed, Pfeiffer himself had explicitly supported this argument, reaching the following conclusion: “These three examples from the fifth to the third centuries, in which Zenodotus’ text is shown to be based on documentary evidence, show how unjustly he was charged by ancient critics, and by those modern scholars who followed them, with making arbitrary changes for wrong internal reasons.”⁷⁴

Besides this indirect evidence, direct evidence can be found and I believe that it is decisive. Explicit testimony is supplied by the scholia, where one finds several undeniable references to the fact that Aristarchus consulted a number of different *ekdoseis* and found them to contain divergent readings: in other words, he certainly availed himself of the direct tradition of the copies he had at hand. The most evident and irrefutable case is that of sch. *Il.* 9.222 *b*, where Didymus reports that Aristarchus accepted a reading (*graphie*) because he found that it appeared in this form in some *ekdoseis*. Equally significant is sch. *Il.* 6.4 *b*, where Didymus states that Aristarchus at first accepted a certain reading, but later changed his mind because he had found another reading which he deemed to be preferable.⁷⁵

72 Rengakos [2002a] 149; cf. Rengakos [1993], [2001], [2002b], [2012]; an interesting case pertaining to Zenodotus is highlighted by Fantuzzi [2005].

73 Lately Rengakos [2012].

74 Pfeiffer [1968] 110–114: the citation is on p. 114; the three examples adduced by Pfeiffer concern *Il.* 1.5, *Il.* 1.225–233 and *Il.* 16.432–458, *Il.* 4.88. Pfeiffer normally attributed the collation of copies to the great philologists who succeeded Zenodotus: cf. for example p. 173. Pfeiffer’s arguments should have been awarded greater consideration.

75 Cf. Rengakos [2012] 244–248, with bibliography. The above mentioned evidence of Didymus in sch. *Il.* 9.222 *b* is rightly underlined by various scholars (Nagy, Janko, Rengakos and myself) and cannot be dismissed out of hand, as does M. L. West ([2001a] 37 n. 19): I will examine closely meaning and importance of this sch. in a paper forthcoming in *Lemmata. Beiträge zum Gedenken an Christos Theodoridis*. On Aristarchus’ second thoughts see Montanari [1998d] and [2000b].

All this evidence indicates that when engaging in text criticism, the Alexandrians – starting with Zenodotus and reaching the most refined method with Aristarchus – based themselves not only on text-internal conjectural proposals but also on external and diplomatic resources, consisting in choice among variants they found or noticed in a non-univocal tradition composed of the copies they had available and were thus able to consult. It would seem, therefore, that the burden of proof is on whoever seeks to strip the Alexandrian grammarians of any knowledge of variants deriving from collation of copies, attributing to them only arbitrary conjectures, rather than the opposite: the fact is that we have, at the very least, convergent evidence in favor of knowledge of variants – and I would go so far as to say that we have real proof.

An interesting testimony concerning these problems can be found in the recently discovered *De indolentia* by Galen, an author of major importance in the history of ancient philology, not only on account of his activity and his thought, but also by virtue of the information Galen's text provides. It has begun to be studied and appreciated from this point of view, but certainly much fruitful investigation remains to be done.⁷⁶ The new text is preserved in a copy which, overall, has many incorrect forms and results in considerable uncertainty of interpretation, also affecting the points of interest here, but it is worth commenting on the material and singling out several pieces of information.⁷⁷ In the 192 fire of Rome, Galen lost, among other things, all the books he possessed, and in this work (composed in epistolary form as an answer to a Pergamene friend) he talks extensively about his activity as a scholar and about his books. Those that had been lost included texts “corrected in my own hand” (§ 6); there were also rare books that were not available elsewhere, and books which, while not rare, constituted unrepeatable exemplars due to the particularly accurate and carefully written text, such as the Plato by Panaetius and two Homers by Aristarchus, and others of this kind (§ 13). There follows a rather tortuous passage, which may perhaps contain a reference to copies with marginal annotations and bearing the name of the person who had made the marginal jottings.⁷⁸ A little further on Galen relates that he had also lost books he himself had worked on, in which he had corrected various errors in order to compose an *ekdosis* of his own. The task he had set himself, he says,

76 Manetti – Roselli [1994]; Manetti [2006], [2012a] and [2012b]; Roselli [2010] and [2012a]; see Manetti in this volume.

77 Editions: Boudon-Millot – Jouanna [2010], Kotzia – Sotiroudis [2010], Garofalo – Lami [2012].

78 Cf. Roselli [2010] and [2012a], Stramaglia [2011], Manetti [2012b].

had involved careful attention to textual readings, so as to ensure nothing was added or was missed out, and to make sure that all the appropriate signs were present to distinguish the structural parts of the text (*paragraphoi* and *coronides*), as well as the punctuation, the latter being so important, especially in obscure works, that it could even substitute for the exegete himself (§ 14). It has been rightly emphasized that here a new aspect of the personality of Galen emerges: already known as an exegete and commentator, he can now also be seen as a text editor (not only of medical works but also of the works of numerous philosophers). Thus he was the author of editions designed for his own personal use, and in preparing such editions he worked on the text in order to identify lacunae and interpolations, and to highlight the structural framework of the work with appropriate critical signs, and to indicate the punctuation as an aid to text comprehension.⁷⁹ Elsewhere Galen cites a number of *ekdoseis*, including that of Hippocrates by Bacchius, dating from the 3rd century BC (a partial contemporary of Zenodotus), and by Dioscorides and by Artemidorus (from the age of Hadrian, one generation earlier than Galen). With regard above all to the *ekdosis* of Dioscorides, Galen offers important insight into its material form: it presented critical signs and punctuation, the *obelos* was used to indicate doubtful authenticity, and variants were marked in the blank spaces (lower and upper margins and the intercolumnae).⁸⁰

The information Galen provides on the *ekdoseis* of medical texts, which he himself had performed or had been carried out by his predecessors, is in agreement with the arguments we have put forward so far. The philologist selected a copy on which to work and thus produced his own *ekdosis*; he then personalized this copy, on which all his markings were visible, by writing his own name on it, after which the copy was allowed to circulate for essentially private use, or for school and teaching purposes (like the Homer of Zenodotus or of Aristarchus). Upon request or for various reasons, the copy itself could then be copied, *i.e.* reproduced as complete exemplars of the work, corrected and presented as 'fair copies'. This could be done either by the editor himself or by someone entrusted with the task. In § 14 Galen mentions precisely the case of books transcribed as fair copies after undergoing correction (*diorthosis*).⁸¹

79 Cf. Boudon-Millot – Jouanna [2010] xxxiii–xxxiv, Manetti [2012a], Roselli [2012a]; on lectional signs, punctuation and accentuation cf. Pfeiffer [1968] 178–179.

80 Cf. Manetti – Roselli [1994] 1625–1633; Manetti [2012a]; Roselli [2012a]; see Manetti in this volume.

81 Roselli [2012a] 64–67.

Over the past few years, the arguments put forward mainly by myself and by A. Rengakos⁸² have prompted a debate above all with the positions of M. West, the most radical advocate of the theory that the Alexandrian philologists from Zenodotus to Aristarchus known as authors of *ekdoseis* of Homer did not carry out any collation of copies: “In fact, the first scholars known to have cited manuscript authority for variant readings are Aristarchus’ contemporaries Callistratus and Crates. Didymus is the first author known to have compiled anything in the nature of a ‘critical apparatus’. It is entirely unjustified to project his methods back onto Aristarchus or Zenodotus, or to assume that all the various copies available to Didymus in the time of Augustus were already part of the library’s holdings in the early third century.”⁸³ I feel I must express some misgivings upon reading that “it is entirely unjustified to project his methods *back onto Aristarchus*” immediately after the statement that “the first scholars known to have cited manuscript authority for variant readings are *Aristarchus’ contemporaries*”. It is simply begging the question to claim that Didymus’ method is projected back onto Aristarchus or Zenodotus, for in actual fact there is absolutely no evidence that Didymus was the first to apply this method rather than having inherited it from his predecessors, unless it be the preconception that Zenodotus, Aristophanes and Aristarchus did not apply it at all.⁸⁴

In M. West’s view, Zenodotus’ readings are to be regarded either as conjectural emendations or as peculiarities of his base-text, but do not result from any form of comparison among copies. Zenodotus is claimed to have lacked the concept of variants, his only critical concern being the existence and identification of spurious lines. It is West’s contention that “*The one kind of textual criticism we know Zenodotus practised* (my italics) was not concerned with choices between variant readings but with the identification of spurious lines and passages. The one feature of his text that marked it out as a critical *diorthosis* was the presence of *obeloi* in the margins (and perhaps brackets enclosing longer passages) to signal the critic’s suspicion that certain verses were un-Homeric”.⁸⁵ This, however, obviously means that Zenodotus felt he had to tackle the prob-

82 But see also above and n. 69.

83 M. L. West [2001a] 36; M. L. West [2002] 140.

84 West’s ‘Didymean’ hypothesis is rejected by Nagy [2000b], Nardelli [2001] 61–64, Janko [2002], Rengakos [2012], and myself (see above n. 68). The already mentioned evidence of Didymus in sch. *Il.* 9.222 *b* (see above and n. 75; below nn. 88 and 89) is rightly underlined by various scholars (Nagy, Janko, Rengakos and myself): in that scholium Didymus does indeed state that Aristarchus found a reading in some exemplars.

85 M. L. West [2001a] 38; M. L. West [2002] 140. The idea of the possible use of signs for material and graphic deletion placed on the base-copy was clearly put forward already in Montanari [1998d] 6, but West does not seem to be concerned with the distinction

lem of how to discriminate the authentic from the spurious: for whereas an entire line held to be spurious could be eliminated from the text, a part of the line (a word or an expression) cannot be removed without replacing it with something else. Sometimes, by eliminating or accepting a line, the meaning and syntax called for the alteration of some word or words before or after the line itself; at times, the alteration of a word called for or allowed the elimination or addition of a line. But Zenodotus' "one kind of textual criticism" and "the critic's suspicion that certain verses were un-Homeric" do suffice, for once a critical approach towards the way in which the text presents itself has been acquired, it is inconceivable for there to be a theoretical and essential separation which would discriminate between line *athetesis* and single word alteration and would thereby justify the assumption that the philologist's concern focused only on *athetesis* of whole lines and not on shorter text alterations.⁸⁶ In either case, the problem at hand for the philologist resides in the opposition between authentic/correct *vs.* spurious/damaged and in seeking to identify the proper text. By addressing the issue of the authentic text and how to devise the critical-methodological tools to obtain it, Zenodotus achieved a major breakthrough: it was a crucial intellectual step, which we identified above as residing in the difference between "correcting a single copy" and "editing a text".

M. West warns against a travesty of the situation: "The misapprehension, which goes back at least at the time of Wolf, is that Zenodotus, Aristophanes and Aristarchus were all editors in the modern sense, who wanted to establish a good text of Homer and who approached the task as a modern editor does, by collecting manuscripts and comparing their readings".⁸⁷ Now, if Zenodotus had at least "one kind of textual criticism", what is likely to have been his aim in carrying out emendations on the Homeric text? Are we thus to believe that Zenodotus had a conscious premeditated idea of 'modelling' Homer according to his own taste, *i.e.* "I'm going to set about reworking Homer and I'm going to make it the way I think it ought to be"? This possibility is by no means easy to accept, but actually this is the only alternative to the view that "he wanted to establish a good text", which is the natural goal of anyone who starts working on and correcting a text. In effect the aim of the Alexandrian philologists cannot but have been "to establish a good text", whatever the value of the result according to modern scholars.

between *athetein* and *ou graphein* in the terminology on the textual interventions of Zenodotus: see above.

86 All the more so since expunction at times involves variants in the part which remains in the text: cf. Montanari [1998d] 7 n. 17, on the subject of *Il.* 2.156–168 (sch. 2.156–169); cf. Rengakos [2012] 250–252; see above and n. 50.

87 M. L. West [2001a] 34; M. L. West [2002] 138.

I fear that the misunderstandings arise from the fact that there is no clear definition of the guidelines for our judgment on the work of the Alexandrian philologists. By adopting our own point of view concerning the ‘competence’ on which they base their opinions and arguments, so that it can be ascertained whether and when they are right or wrong in comparison with the ‘truth’ according to scientific philology, we risk producing unfounded and pointless judgments. Naturally, evaluation of the quality of their choices is the proper perspective for the interpreter and editor of Homer as a modern philologist; on the other hand, maintaining conscious awareness of historical distance and taking care not to overlay our criteria on their behavior is the proper perspective for the historian of philology as a cultural and intellectual phenomenon and for the ‘reading’ of Homer in ancient civilization. Perhaps it is hard to conceive that Zenodotus’ aim (however incoherent and unsophisticated) was precisely “to establish a good text of Homer” because the testimony that has come down to us indicates that his text was far from good – in fact it was dreadful, and incoherent seen through the filter of the requirements and knowledge of modern classical philology. And even as regards the successors of Zenodotus, or even the great Aristarchus, we can hardly claim always to agree with their text choices. The viewpoint from which a modern Homeric scholar approaches his task is the need to decide whether the text Zenodotus, Aristophanes or Aristarchus judged to be the best is indeed the one to print in a present-day critical edition, and whether their interpretations should be espoused as valid in a scientific commentary. In contrast, the viewpoint from which a historian of ancient philology starts out is that of seeking to understand their methods, arguments, principles, knowledge – in a word, their historical and intellectual position. The tendency to scoff at the opinions of the Alexandrian philologists in terms of modern Homeric studies should by no means translate into the tendency to discredit their historical significance, which needs to be correctly positioned and contextualized. It is mistaken to blur the distinction between the two planes.⁸⁸ It is impossible to escape the fact that by inventing the *obelos*

88 Janko [2002] seems to render this concept explicit rather more clearly. His position on the methods of the Alexandrian philologists is not an extremist unilateral stance: he believes that the majority of their readings are indeed arbitrary conjectures (by the Alexandrians themselves or possibly of more ancient origin), but he does not go so far as to deny the recourse to manuscripts and comparison among copies as part of their *ekdosis* work (for Zenodotus, Janko [1992] 23: “His caution was salutary, given the abundance of interpolated texts; he certainly had MS authority for some omissions”; for Aristarchus, Janko [1992] 27, and Janko [2002]: “This [*i.e.* sch. *Il.* 9.222, cf. above n. 75 and 84] certainly implies that Aristarchus did check manuscripts for variant readings”). On the one hand, Janko argues, there stands the problem of the origin of their proposed text choices (subjec-

and setting himself the task of emending and restoring the text he had at hand, Zenodotus had lit upon an idea which, however embryonic and crude it may appear, would undergo further development among his successors, eventually becoming the germ of the discipline we call classical philology. But even if one were to suppose that he acted purely on the basis of conjectures, could it be denied that conjecture is one of the emblematic and representative tools of philology aimed at restoring the correct text?

A further comment by M. West is surprising. “Consider what we know of Aristarchus’ methods, for which we have plenty of material in the scholia. Of course he had the text of his teacher Aristophanes before him. He also *kept an eye on* [my italics] that of Zenodotus, and took up critical positions against it. But the arguments he used, as reported by Aristonicus and Didymus, were always based on the internal evidence of contextual coherence or general Homeric usage. Not once does he appeal to the authority of manuscripts”.⁸⁹ So Aristarchus compared his working copy with that of Aristophanes and that of Zenodotus; but the phrase “kept an eye on” is insidiously reductive, given that the number of cases preserved by the tradition runs into the hundreds – and the tradition itself is patchy and incomplete. Be that as it may, the picture delineated above implies he made a certain small comparison among copies, but that he took great care *not* to let his eye stray onto any further copies: in other words he did study and interpret Homer, but he painstakingly avoided consulting any other exemplar than his own, together with that of Zenodotus and that of Aristophanes, although these alone already presented him with not

tive emendation, comparison among copies) and therefore of their working procedures; on the other, he points out, “my own concern, as a Homerist, has always been whether such readings are authentic”. Perfectly clear: modern philologists can to some extent be severe regarding the opinions of the Alexandrians, considering them to be fairly acceptable or fairly unacceptable from their own point of view (Janko is very negative), but they cannot downplay the fact that the ancient Alexandrians emended and compared exemplars to correct the Homeric text, a method that combined interpretation of the text with awareness of the history of the tradition. An extremely apt remark, perfectly applicable to Alexandrian philology as well, is offered by Cassio [2002] 132, on the issue of pre-Alexandrian criticism: “The earliest scholarly approach to the Homeric text is totally foreign to us . . . we do right to think along very different lines, but we should never forget that it was the commonest approach to the Homeric text in the times of Socrates, Plato and Aristotle. As a consequence, we ought to be wary of looking at it with a superior smile, and ought to try to understand its motives in more depth instead”.

89 M. L. West [2001a] 37: at least the mentioned case of sch. *Il.* 9.222 clearly contradicts this, cf. above and nn. 75, 84, 88.

inconsiderable divergences. Frankly, this seems to me like yet another paradoxical portrayal.

Certainly, what is clear is that Zenodotus used a copy of Homer as the base-text to work on: but are we to believe that Zenodotus' copy was the only existing exemplar of Homer among the circles of those frequenting the Museum and the Library of Alexandria, or is it quite likely that there were others around, with different text characteristics? Should we conceive of a paradoxical Zenodotus who, despite his taste and his concern for the Homeric text, made every effort *not* to look at other copies he may have come across, *not* to make a note of the points where they departed from his own copy and *not* to ask himself any questions about those differences?⁹⁰ It seems to me far more likely that he noticed the differences, both as regards the number of lines and certain individual readings, and that he decided to write them down and express his opinions. However, a subtle ambiguity needs to be eliminated: when speaking of 'other' or 'various' copies of Homer that were actually available and utilisable, one should not be misled into thinking that hundreds and hundreds of exemplars were concretely at hand and ready for consultation, thereby transforming the idea of a comparison into an exaggerated undertaking that immediately becomes totally implausible.

Obviously, it would be a pure anachronism (and not very intelligent) to assume that the Alexandrian philologists had conceived the idea of a collatio of the entire known manuscript tradition, a recensio after the style of the so-called Lachmann method: but who would dare advance such a ludicrously naive proposal? In actual fact the problem should be considered in a rather different fashion, embracing a perspective that is perfectly reliable in historical terms. More specifically: can one begin to speak of comparison among copies only when a certain number (how many?) is reached, or was it sufficient to compare a few, to detect variants when the textual tradition was not univocal and then address the problem of which text was correct and which ones were wrong?

Overall, we must recognize that we owe to the Alexandrian grammarians an idea of text philology aiming to restore the correct text, freeing it from errors and imperfections. From the age of Zenodotus onwards, progress was gradually made in refining the method, which achieved its highest accomplishment with Aristarchus. The grammarians realized that a text had its own history of transmission, during the course of which it deteriorated in various ways; it

90 M. L. West [2001a] 38: "No doubt it would have been easy for him [*scil.* Zenodotus] to collect several copies if he had taken the trouble". Are we to assume that Zenodotus was a somewhat lazy philologist?

could be restored to its correct form either via conjecture or by choosing the correct reading from among those offered by a non univocal tradition.⁹¹ The recognition of transmission-induced damage that had affected the authentic text, along with steps and procedures to restore it, is proof of how the mutual dependency of textual criticism and textual interpretation became established and operational.⁹²

3 Conclusions

To bring to a conclusion the various points outlined in the preceding pages, it is worth pointing out, first and foremost, that the material form of the Alexandrian *ekdosis* is a question closely linked to debate on the textual criticism performed by the Alexandrian philologists, but also to enquiry into the provenance of their readings (variants *and* conjectures); in short, it constitutes the core issue in the historical-cultural assessment of Alexandrian scholarship. This is the basic point and we must make it clear once and for all that we are dealing with a problem of principles and methods, not of the quantity of the data (number of collated copies or of variants discussed) or of the quality of the results (right or wrong from our point of view). We are not concerned with establishing the minimum number of copies to be subjected to comparison or of variants to be taken into consideration before one can even begin to speak of philology, nor with determining how many ‘correct’ readings or ‘good’ interpretations are needed before it makes sense to speak of philology. Rather, in a historical perspective, all that was needed in order for there to be a decisive step forward in intellectual achievement was the very fact of understanding and addressing the problem, even if only partially, erratically and incoherently: a literary text had a multifaceted history of transmission, during which it could become distorted at various points; the correct text (*i.e.* what is authentic *versus* what is spurious and what was the original wording) could then be restored by conjecture or by choosing the best reading among those offered by a divergent tradition.⁹³

91 Naturally the works of Homer come to mind, but also of the tragic and comic poets.

92 See Pasquali [1920] (citation from the reprint of [1998] 26): “a costituire un testo . . . occorre la stessa preparazione che a interpretare . . . ; costituire un testo e interpretarlo sono, in fondo, tutt’uno” (“constituting a text . . . requires the same learning and knowledge as interpreting . . . ; constituting a text and interpreting it are, ultimately, one and the same thing”).

93 See now Conte [2013] 44–50.

The idea of the recognition of damage and of finding a way to repair it reveals that the organic unity between interpretation and textual criticism had become established. Although much progress still remained to be made, and Wolfian scientific philology, the modern critical edition and the scientific commentary were still in the distant future, our viewpoint – far from being an anachronism – is the historical evaluation that a nodal step had been taken in the period from Zenodotus to Aristarchus.

The Rhetorical Criticism of Homer

Richard Hunter

1 Homer and Homeric Criticism

Homer's grip on Greek literate culture gave him a dominant role in education, scholarship and criticism of all kinds, and this predominance is reflected in the centrality of the Homeric texts to the growth of critical practice and terminology, particularly as we can trace these from Aristotle onwards. This chapter will be largely concerned with critical practices and ideas which flourished, and in some cases arose, in the Hellenistic period, but it is important always to bear in mind the classical, and in some cases, archaic roots of these phenomena. The modern study of 'ancient literary criticism' has always suffered from uncertainty as to what actually is being studied and where and how early the relevant material is first found. Does one start, for example, with Odysseus' praise of the Phaeacian bard Demodocus (*Od.* 8.487–491) and Alcinous' praise for the manner in which Odysseus himself tells his tale (*Od.* 11.363–368),¹ with Pindar's rich 'metatextual commentary' on his own and others' poetry,² with tragedy and satyr-play, where some of the richest reactions to Homer and the Homeric ethos are to be found, even though the explicit dramatisation of scenes from Homer is very uncommon in our surviving texts (Euripides' *Cyclops*, [Euripides] *Rhesos*),³ with Attic Old Comedy—and, most notably, the *Frogs* of Aristophanes, or with Plato?⁴ The concerns and critical practices of the *Frogs* were certainly influential for centuries, texts such as the famous discussion of an ode of Simonides in Plato's *Protagoras* and of the expertise of the

- 1 The bibliography on Homeric 'poetics' is of course daunting; Halliwell [2011] Chapter 2 offers a thought-provoking guide through the maze.
 - 2 For foreshadowings in Pindar of later critical ideas cf., e.g., Richardson [1985].
 - 3 For the *Cyclops* as a 'reading' of Homer cf. Hunter [2009a] Chapter 2.
 - 4 Ford [2002] is an excellent guide to these issues and their bibliography. For origins and beginnings of ancient scholarship see also Novokhatko in this volume.

rhapsode in the *Ion* foreshadow important concerns of Alexandrian scholarship,⁵ and—above all—the criticisms (in both senses) of Homer in the *Republic* set an agenda for the discussion of poetry which was to last throughout antiquity.

Some histories of the ancient reception and criticism of Homer would choose in fact to begin with the *Odyssey*, a poem which is widely held to acknowledge and react to the *Iliad*, not only in the general spirit and values of the (almost certainly) later poem, but also in specific passages (such as the *Nekuia*)⁶ and by the device of largely ignoring the ground covered by the more martial poem. It may indeed be argued that the *Odyssey* is the first ‘post-classical text’, if by that is meant a text which consciously exploits its sense of otherness and distance from (to put it simply) a more heroic past. The first four books of the poem show Telemachus growing up and learning about the past, searching, if you like, for ‘the classical’ before it was lost, and in that search, no less than in Odysseus’ confrontation with the past in the *Nekuia*, the ‘critical’ spirit which explains that earlier world (and its poetry) is being formed before our eyes. As for Telemachus’ father, Odysseus is *πολύτροπος*, the man ‘of many turns’; however that epithet is to be interpreted (cf. further below), the repeated stress in the opening verses on multiplicity and hence complexity and change, “the man of *many* turns wandered a *very great deal* . . . he saw the cities of *many* men . . . and suffered *many* griefs. . .”, was to take its place within a long discourse in which the world gets ever more ‘complex’ and the past looks ever more ‘simple’. When in the Platonic *Hippias Minor* (cf. below) Hippias contrasts a ‘very straightforward’ (*ἀπλοῦστατος*) Achilles with a ‘very twisting’ (*πολυτροπώτατος*) Odysseus (364c4–365b6), we are already on the way to what was to be an influential contrast between the ethical values of their respective poems.

The broad concerns of ancient discussions of Homer, and of literature more generally, may be roughly divided into the stylistic, the didactic (*i.e.* what did Homer know and what can we learn from him), the rhetorical and the ethical, though little weight is to be given to the boundaries between these four categories.⁷ Thus, for example, style was always regarded as an expression of *êthos* and very closely tied to rhetorical analysis, just as a principal aim of rhetorical analysis was establishing the *êthos* of the speaker; whether the subject be ethics or rhetoric, moreover, ‘Homer as (our) teacher’ was a theme never far away, and dominates one of the most important ancient texts about Homer

5 On this aspect of the *Ion* cf. Hunter [2011] and [2012] 89–108.

6 Cf. Usener [1990].

7 See Nünlist in this volume.

to have survived, namely Strabo's defence of Homer's technical knowledge against Eratosthenes' claim that the only concern of poetry was ψυχαγωγία, not διδασκαλία (Strab. 1.2.3–8).⁸ As Aristophanes' *Frogs* shows very clearly, the idea that our behaviour is influenced by what we hear recited or read or see in the theatre took hold very early, and the language of 'teaching' covers both what, as we would say, the poet sets out to impart and also what we take away from our exposure to literary art, regardless of what the poet 'intended'; poets were to be held responsible for the effects they (and their characters) produced, an assumption which is central to Plato's censure of poetry in *Republic* 2–3 and 10.⁹

Much of the earliest critical discussion of which we know may be classed as broadly allegorical, in the sense that it seeks to uncover meanings in the text which are not patent from what the text appears to say 'on the surface'; the allegorical interpretations of an 'Orphic' cosmogonical poem in the 'Derveni papyrus' have greatly increased our knowledge of some (perhaps rather extreme) allegorical modes practised as early as the fifth century BC.¹⁰ Allegorical readings (of various kinds) have indeed some claim to be the longest-lived of all ancient ways of reading Homer; in the Hellenistic period such readings are particularly associated with Crates of Mallos and the Pergamene school,¹¹ they flourished in the early empire (Cornutus,¹² 'Heraclitus', *Homeric Problems*), and dominated the later Platonist and neo-Platonist tradition of Homeric criticism.¹³ As for their beginnings, a scholium on *Iliad* 20.67 which derives from Porphyry, notes that the Homeric Battle of the Gods was entirely 'inappropriate', ἀπρεπές, and that some explained this (away) by taking these scenes as allegories of how the world is made up of opposed natural forces, the wet and the dry, the hot and the cold and so forth, here called by the names of appropriate gods; the scholium also notes that states (διαθέσεις) are sometimes given the names of gods—φρόνησις is Athena, folly is Ares, desire Aphrodite, and so forth. This kind of defence (ἀπολογία) of Homer was, according to the scholium, 'very ancient' and started with the rhapsode Theagenes of Rhegium

(late sixth century), ‘who was the first to write about Homer’.¹⁴ It seems likely enough that, by the end of the fifth century at least, complex moral and physical or cosmogonical interpretations of Homer circulated widely, though it is not always easy to identify their authors or to form a clear sense of the outlines of these interpretations.

The majority of our evidence for moralising and allegorical interpretations comes, of course, from the post-classical period, and only very rarely are we able to pick apart the various layers of interpretation which often survive in summary form in later texts, notably in the scholia. Nevertheless, it is also likely that some relatively simple kinds of interpretation persisted over centuries. The explanation of Athena as φρόνησις, for example, recurs persistently throughout antiquity, very often in connection with the φρόνιμος hero *par excellence*, Odysseus.¹⁵ A particularly interesting manifestation of this concerns Odysseus indirectly, namely Homer’s representation of the development of the hero’s son Telemachus in the early books of the *Odyssey*; this example also neatly illustrates how ancient arguments and interpretations very often foreshadow modern readings.

In one of the extant *hypotheses* to *Odyssey* 1 (*hypothesis* c Pontani) we read that Athena, in the guise of Mentès, advises Telemachus to visit Pylos and Sparta, and then, “This business of Athena going to Ithaca to encourage Telemachus to make enquiries about his father hints at (αίνιττεται) nothing but the fact that *phronêsis* is called Athena, and Telemachus, who is a child (παῖς) but then grows up and comes into wisdom (γνώσις), is roused by Athena, that is by his own *phronêsis*, to make enquiries about his father”.¹⁶ Heraclitus offers a much extended version of this interpretation:

Right at the very beginning we find Athena despatched by Zeus to Telemachus—reasonably (εὐλόγως) so, since he is no longer extremely young and is coming into his twentieth year and the passage to manhood. Reasoning (λογισμός) about what was happening had come into him, and he realised that he should not put up any longer with the wantonness of the suitors which had lasted for four years. Homer has allegorised (ἡλληγόρησεν) this gathering power of reasoning in Telemachus as the appearance of Athena. She comes in the likeness of an old man, for

14 Theagenes fr. 2 D-K, cf. MacPhail [2011] 240–243.

15 For some discussion and bibliography cf. Hunter [2014].

16 Almost identical is the scholium on 1.270a Pontani, except that there the object is getting rid of the suitors, rather than enquiring about Odysseus. For a full and illuminating study of ancient traditions about Telemachus’ ‘education’ cf. Wissmann [2009].

Mentes is said to be an aged friend of Odysseus. Grey hair and age are the sacred harbours of our final years, a safe anchorage for men, and as the strength of the body wanes, so the force of the intellect (διάνοια) increases.

HERACLITUS, *Homeric Problems* 61

Heraclitus then pursues this interpretation in some detail. The maturing Telemachus considers where it would be best to enquire about his father and realises that the old and wise Nestor and Menelaus, who himself had recently returned “from eight years wandering”, were obvious sources of advice and information. Athena-Mentes’ mild rebuke to Telemachus,

οὐδέ τί σε χρῆ
νηπιάας ὀχέειν, ἐπεὶ οὐκέτι τηλικὸς ἐσσί

you should not continue in childish ways, for you are no longer a child

HOMER, *Odyssey* 1.296–297

becomes a kind of ‘pull yourself together’ reflection by Telemachus himself (63.1). So too, the claim that “Reason, acting like a *paidagōgos* and a father, roused in him a readiness to undertake responsibility” (63.2) draws on Telemachus’ own words to Athena-Mentes at 1.307 “you say these things with kindly intention, like a father advising his son . . .”.

The textual facts with which this interpretation of Book 1 are grappling are familiar to any reader of the *Odyssey*; even if one does not agree that “[Telemachus] is the only Homeric character who develops in the course of the story”,¹⁷ it is plain that Book 1 dramatises the issue of growing up with very unusual insistence. As she leaves, Athena puts μένος και θάρσος, ‘spirit and courage’, into Telemachus’ spirit (vv. 320–321), and he returns to the suitors as an ἰσόθεος ἀνὴρ, ‘a godlike man’ (v. 324). In his next speech he corrects his mother who has tried to stop Phemios from singing of the return of the Greeks, tells her to go back to her ‘woman’s work’, and emphatically declares himself both an ἀνὴρ (‘a man’) and the holder of κράτος (‘power’) in the house (vv. 358–359). Penelope obeys ‘in amazement’ (θαμβήσασα), just as the suitors are amazed (382) at the boldness of Telemachus’ next speech to them; Telemachus’ response to Eurymachus, who has asked for information about the stranger who has just visited, would do an Odysseus proud in its caution and economy

17 De Jong [2001] 20; De Jong there gives helpful bibliography on the character of Telemachus.

with the truth (vv. 412–420).¹⁸ When we first saw Telemachus he was deep in depressed thoughts as he wondered “whether his father would ever return to scatter the suitors” (vv. 114–116); the book closes with Telemachus again deep in thought (427), but now it is about what *he* must do, and he spends the night “thinking over in his heart the journey which Athena had marked out” (444).

The various different interpretative traditions which we glimpse through the surviving scholia show how thin is the line between some types of ‘allegorical’ reading¹⁹ and the ‘non-allegorical’: was Telemachus merely instructed by Athena (cf., *e.g.*, the scholia on 354) so that he becomes φρόνιμος, or is Athena actually herself φρόνησις? φρόνιμος is of course one of the standard scholiastic glosses for πεπνυμένος, the ‘formulaic’ epithet for Telemachus, which makes its first appearance (v. 213) in the poem immediately after Athena’s first address to the young man, where it comes almost as confirmation of Athena’s concluding assertion of how like Odysseus Telemachus is. Another sign of how such interpretative modes run together is the concern in the scholia, which seem in this case to go back to Porphyry, with why Athena sends Telemachus away from Ithaca at what looks like a moment fraught with danger and on a mission which is essentially fruitless; this ζήτημα has of course also much exercised modern scholars.²⁰ Porphyry’s long discussion²¹ adduces the fact that, brought up ‘by a woman’ on Ithaca and surrounded by hostile men, Telemachus could never have learned the appropriate skills or had the appropriate experiences to become like his father; he would therefore have either remained in this impossible situation or launched an inevitably doomed attack upon the suitors by himself. Enquiries about his father are therefore the πρόφασις of the trip, but the real σκοπός is ‘education’, παιδείυσις, which involves learning about his father, and it is from this that Telemachus will acquire the κλέος which the

18 The exegetical scholia on v. 413 rightly note Telemachus’ strategy of ‘keeping the suitors relaxed’.

19 I am aware that for the purposes of this discussion I have simply ignored some aspects of some ‘allegorical’ readings of Athena in *Odyssey* 1 which are less easily taken over. Thus, for example, the allegorising scholia on v. 96 explain that Athena’s ‘lovely sandals’ denote the powerful effects in action of *phronésis* and her spear its ‘striking power’ (τὸ πληκτικόν), ‘for through his own reason the *phronimos* strikes the unruly’. There is, of course, a range of allegorical, as of non-allegorical, views and gradations of detail within any one such reading.

20 Cf., *e.g.*, West [1988] 53–55.

21 Scholia to 1.94 and 1.284. Some of the earlier history of Porphyry’s arguments may be visible at Philodemus, *On the Good King according to Homer* col. xxxiii Dorandi if, as (*e.g.*) Asmis [1991] 38 suggests, καὶ ἀθέατον ἀνάγκη καὶ ἀνιστόρητον εἶναι πολλῶν καὶ παρρησίας ἄπειρον ἰσηγόρου πολλὰκις ἐξεπαιδευσευ refers not to Odysseus, but to Telemachus.

Homeric Athena holds out for him (v. 95, cf. 13.422). Such an aim, as Porphyry points out, is ‘appropriate to Athena’, in part (we should infer) because Athena is associated with intelligence, education and μῆτις. Part at least of this reading of the Telemachy, which has of course considerable overlap with the standard modern reading, will go a very long way back in antiquity;²² it seems first to surface for us in Philodemus, *On the Good King according to Homer*, where, in a recently restored, if still broken, column, the philosopher precisely discusses Telemachus’ journey:²³

... to be one who has constantly lived among guests not living according to his will, since in addition it is necessary for him to be one who has neither seen nor heard of many things and has had no experience of free speech with equals (παρρησίας ἄπειρον ἰσηγόρου), and for the most part even uneducated, for which reason ... the poet ... brings Telemachus to Pylos and Sparta where he was to have dealings with such great men, for he was certainly not going to achieve anything (more) concerning his father, who was by then already on Ithaca ...

PHILODEMUS, *On the Good King according to Homer* col. 23, trans. J. Fish

Just as Odysseus learned on his travels, so did his son.

Finally, we may note that the ‘allegorical’ conception of Athena as φρόνησις or σύνεσις or νοῦς is capacious enough to embrace both Achilles’ inner struggle in *Iliad* 1, where violence and restraint compete in a moment of extraordinary passion,²⁴ and the more gradual intellectual and moral assertiveness which develops in Telemachus in Book 1, as Athena tells him to ‘give thought’ (φράζεσθαι) to the future (v. 295); the interventions of Athena in *Iliad* 1 and *Odyssey* 1 are in fact exemplary for their respective poems—the poem of violence and passion, and the poem of caution and forethought, of bidding one’s time and seizing the opportunity.

The standard language in which to describe allegorical interpretations is ‘finding the ὑπόνοιαι’²⁵ or allegations that the poet ‘hints at’ (αἰνίττεσθαι) particular meanings. At *Republic* 2.378d6–7 Plato makes Socrates observe that blasphemous episodes in Homer must not be part of education, whether

22 Herter, *RE* V/A 351 suggested that it might have figured in Antisthenes’ ‘Athena or Concerning Telemachus’.

23 Cf. Fish [2002] 193–194, with discussion in Fish [1999], [2002] 213–215, and [2004] 113–114.

24 Cf. Hunter [2012] 60–67.

25 Plutarch (*Mor.* 19e) notes that ὑπόνοιαι was the old term for “what are now called ἀλληγορίαι”.

composed with or without ὑπόνοιαι, because the young cannot recognise a ὑπόνοιαι and are therefore affected by ‘the literal truth’ of what they read. The motives for such readings will have been various. In part they will indeed have been designed to save Homer from apparently disgraceful representations, such as the adultery of Ares and Aphrodite in Demodocus’ second song in *Odyssey* 8 (cf. Xenophan. fr. 11–12 D-K), and in part they may have been an attempt to reserve true understanding of the great poet to a particular élite, as Homer’s status as universal pan-Hellenic poet grew, and in part they may have arisen from a desire to demonstrate that one’s own views of how the world worked had Homeric authority; we can hardly doubt that the element of ‘display’ (ἐπίδειξις), of showing off one’s cleverness, also played its part. The extraordinary continuity of the tradition is well seen in the fact that the Battle of the Gods, the subject of Porphyry’s note on the history of allegorical interpretation (cf. above), is the one passage of Homer which ‘Longinus’, one of the most perceptive ancient critics of Homer to have survived, also claims must be interpreted allegorically, ‘because it is completely blasphemous (ἄθεα) and does not preserve propriety (τὸ πρέπον)’ (*Subl.* 9.7).

One text which may, with all proper caution, be used to catch some of the flavour of the classical discussion of Homer is Plato’s *Hippias Minor*. Here Socrates engages with the great sophist just after the latter has given a public ἐπίδειξις on the subject of Homer. Socrates asks him what may well have been a very frequently asked question—one asked of or by schoolboys, perhaps: ‘Which of Achilles and Odysseus do you consider the better man and in what respect?’ (364b4–5). Hippias replies that Homer made Achilles best (ἄριστος), Nestor wisest (σοφώτατος) and Odysseus ‘most πολύτροπος’, and he explains that πολύτροπος means ‘lying, false’ (ψευδής), which is everywhere the characteristic of Odysseus; Achilles’ famous words to Odysseus at *Iliad* 9.308–314 (“Hateful to me as the gates of Hades is the man who conceals one thing in his heart and says another . . .”) are adduced to demonstrate that Achilles is indeed ἀληθής τε καὶ ἀπλοῦς, ‘truthful and straightforward’, whereas Odysseus is πολύτροπός τε καὶ ψευδής (365a–b). In the subsequent questioning, Socrates has little trouble in demonstrating that Achilles in Book 9 contradicts himself, in other words ‘lies’, by saying that he will sail home but never making the slightest attempt to do so; Hippias’ attempted distinction between ‘deliberate’ and ‘unwilling’ falsehood does not survive Socrates’ onslaught for very long. Certain aspects of this (very amusing) exchange may be highlighted in the present context. We know that πολύτροπος in the opening verse of the *Odyssey* had indeed attracted considerable discussion; the scholia preserve a long notice from Antisthenes in which the word is understood to characterise Odysseus as the master of τρόποι, i.e. of all manner of speech appropriate to different circumstances and

interlocutors. Secondly, the terms in which the scholia adduce Antisthenes' discussion are almost identical to those of the *Hippias Minor*, including an allusion to the same verses of *Iliad* 9, so that we can trace both a relationship between Plato and Antisthenes and the striking continuity of the critical tradition over several centuries.²⁶ Moreover, the scholia frame their citation of Antisthenes as a 'problem' (ἀπορία or ζήτημα) and its 'solution' (λύσις): we would expect πολύτροπος to be a term of approbation, as it is applied to the hero in the opening verse of his poem, but its 'natural' meaning seems rather disparaging, and this is the 'difficulty' which Antisthenes solved. So too, the other problem to which Socrates points in the *Hippias Minor*, namely an apparent inconsistency in what Achilles says and does in Book 9, is exactly the kind of 'difficulty' to which subsequent critics turned their minds, and we know that Achilles' contradictory assertions in Book 9 were indeed the subject of scholarly head-scratching and 'solutions'.²⁷ The present case will have played its part in a lively ancient discussion, descending at least from Aristotle, about Achilles' inconsistent (ἀνώμαλος) character.²⁸

The Homeric texts remained in fact throughout antiquity an irresistible impulse towards display and paradox. Unsurprisingly, it is precisely Odysseus ὁ πολύτροπος who is often at the centre of such display, for it was this character more than any other which prompted rhetorical and philosophical elaboration.²⁹ From one perspective, for example, Plutarch's essay *That animals have reason*, often referred to as *Gryllus* after one of the characters, may be seen as standing in this line descending from the Platonic *Hippias Minor*. This work is cast as a dialogue between Odysseus, Circe and a Greek whom Circe has transformed into a pig, Gryllus 'Grunter';³⁰ the pig demonstrates to Odysseus

26 For the bibliography and interpretation of the scholium cf. Luzzatto [1996], Pontani's notes in Pontani [2007] 7–9, and Montiglio [2011] 20–47.

27 Cf. Erbse's note on schol. 9.682–683, citing Porphyry.

28 Cf. Nünlist [2009a] 250 with n. 42.

29 Cf. Montiglio [2011].

30 Odysseus and his crew were, therefore, not Circe's first Greek visitors—another blow to Odysseus' list of achievements. A different view, adopted *e.g.* by Kidd in Waterfield-Kidd [1992] 375 and Indelli [1995], is that Gryllus was in fact one of Odysseus' companions; this would necessitate a setting in the tenth, rather than the twelfth, book. Much might seem to hang on the clearly disturbed text at 985e where the word ἐταίρους or ἐτέρους is transmitted (Hubert adopts von Wilamowitz's deletion of the word), but this alternative view seems to make nonsense of the opening exchanges with Circe and certainly destroys any close link with the Odyssean narrative; so too Circe's comment at 986a that if the animals win the argument, Odysseus will be shown "to have determined badly concerning himself and his friends" seems to support the view taken here. At 989e Gryllus claims

that animals are actually more virtuous and live happier lives than men. The dialogue is perhaps to be imagined as taking place immediately after Circe has told Odysseus about his voyage home and warned him of the consequences of interfering with the cattle of the Sun (12.137–141); “I think I understand and will remember these things, Circe, but I would gladly hear from you . . .”, begins Plutarch’s Odysseus, in one of what might have been a not uncommon ancient game of writing new and often unusual ‘scenes’ for the *Odyssey*.³¹ Odysseus’ request is to know whether there are any Greeks among the metamorphosed animals under Circe’s control so that, with Circe’s permission, he can restore them to human shape from the ‘pitiable and dishonourable existence’ they now lead and take them back to Greece; this, says, Odysseus would bring him καλή φιλοτιμία with the Greeks. Circe’s response is very sharp:

οὔτος ὁ ἀνὴρ οὐχ αὐτῶι μόνον οὐδὲ τοῖς ἐταίροις, ἀλλὰ τοῖς μηδὲν προσήκουσιν οἷεται δεῖν ὑπ’ ἀβελτερίας συμφορὰν γενέσθαι τὴν αὐτοῦ φιλοτιμίαν.

This man thinks that his desire for glory (φιλοτιμία) should, through his stupidity, prove a disaster not just for himself and his companions, but for complete strangers.

PLUTARCH, *Gryllus* 985d

Circe here produces a re-writing of the opening of the *Odyssey*, which is very much not to Odysseus’ credit. “This man”, the famous ἀνὴρ, will be the undoing not just of himself and his ἐταῖροι (contrast *Od.* 1.5), but of many other Greeks as well; his companions will not perish “by their own reckless foolishness” (*Od.* 1.6),³² as in Homer, but through Odysseus’ stupidity and desire for glory, a force which drives him to pursue “an empty form of goodness and a phantom in place of the truth” (986a). Such a reading takes its initial impetus

to have once seen Odysseus on Crete; the expression certainly does not suggest that he was actually one of Odysseus’ companions (so, rightly, e.g. Russell [1993] 337), and in any case Gryllus here turns Odysseus’ Cretan tale (!) to Penelope (*Od.* 19.221ff) back against the hero himself. There is a useful account of the philosophical background of Plutarch’s essay by Ziegler in *RE* XXI (1951) 739–743.

31 One thinks of the letter which Ovid’s Penelope writes to Odysseus (*Her.* 1).

32 Among the scholiastic glosses for ἀτασθαλίαι are ἄνοιαι (D schol. on *Iliad* 4.409) and μωρία (D schol. on *Od.* 1.7); Circe’s ἀβελτερία is a variant of this.

from Odysseus's assertion of his own κλέος at *Odyssey* 9.19–20, but behind it lies (again) a long tradition of interpretation and re-writing.³³

Like πολύτροπος, φιλοτιμία may have positive or negative connotations, and (again) these differences may then bring differences of narrative with them. φιλοτιμία, as the principal motivating force of Odysseus “most φιλότιμος of men” (986b), seems, for example, to have played a significant role in Euripides' *Philoctetes*, as this can be reconstructed from Dio 52 and 59.³⁴ Odysseus seems to have begun the prologue of that play by expressing his worries that his reputation for cleverness may be undeserved, given the trouble he voluntarily gives himself; that fear in fact comes true in the *Gryllus* when, in his opening remarks, Gryllus observes that Odysseus' reputation for cleverness and surpassing wisdom will all have been for nothing (μάτην), if he will not accept improvement, just because he has not given the matter proper thought (986c–d). The Euripidean Odysseus then proceeded to explain that good leaders such as himself are driven by φιλοτιμία and the desire for δόξα and κλέος to undertake very difficult tasks; when Odysseus stated that ‘nothing is as keen for acclamation (γαῦρος) as a man’ (fr. 788.1 Kannicht), it is hard not to remember Gryllus' criticisms of human folly. So too, the thesis that the life of a pig, a life of “all good things” (986d), including “deep, soft mud” (989e), is much to be preferred to the life of a man, particularly an Odysseus, overturns the very rich mainstream tradition of interpretation of the Circe-scene and of the *Odyssey* as a whole. This is particularly true of the insistent argument that pigs and animals generally are not victim to the lustful desires of the flesh, unlike human beings, whereas the normal interpretative view (cf., e.g., Hor. *Epist.* 1.2.24–26) is that men are precisely turned into pigs by their slothful lusts and the pursuit of pleasure. The *Gryllus* is of course full of witty reworkings of the *Odyssey* and its critical tradition:³⁵ throughout antiquity, the critical interpretation and creative *mimesis* of the Homeric text travelled hand-in-hand.

33 For Odysseus' φιλοτιμία in the scholastic tradition cf. the scholia on *Odyssey* 5.401 (a remarkable text) and 9.229.

34 Cf. fr. 787–9 Kannicht, Stanford (1954) 115–116.

35 No full account is possible here. At 986f Gryllus tells Odysseus that he once heard him describing the land of the Cyclopes to Circe in the terms which Odysseus in fact had used in his narration to the Phaeacians (9.108–111); we are presumably to understand that the conversation took place during the year's stay with Circe (10.467–468), but the apparent misrepresentation of the *Odyssey* serves at least two purposes. Plutarch is shown to be as wittily concerned as Homer with the ‘How do you know?’ question which can always be posed to a narrator (cf. *Od.* 12.389–390), and there is a suggestion that the braggard Odysseus used to bore Circe (presumably in bed) with the same tales which he told the

The tradition of critical ‘problems’ and their ‘solutions’ which was illustrated above from Plato’s *Hippias Minor* is one of the longest-lived ancient critical practices:³⁶ we can see it already in full (if satirical) swing in Aristophanes’ *Frogs*,³⁷ significant excerpts from Aristotle’s *Homeric Problems* are preserved (and cf. also *Poet.* chap. 25), and the tradition is very much alive and well in Alexandrian scholarship and, as we have seen, in the Homeric scholia.³⁸ This critical framework allowed scholars to appeal, *inter alia*, to change over time in cultural practice, to both diachronic change and synchronic difference, for example between dialects or in language usage more generally, and to the need to pay close attention to shifting contexts, particularly rhetorical contexts, in the course of a long poem. Aristotle is the crucial figure in establishing that poetry had its own standards of ‘correctness’ (ὀρθότης), and that what matters is not the existence of factual errors or inconsistencies *per se*, but rather the quality and nature of those phenomena;³⁹ such a realisation focused attention again on the need for scholarly judgement as shown in decision-making, *krisis* in both its senses. The challenge to Socrates which Plato puts in Protagoras’ mouth was to foreshadow the principal thrust of Alexandrian criticism:

I consider, Socrates, that the greatest part of *paideia* for a man is to be clever about verses (περὶ ἐπῶν δεινόν),⁴⁰ this means to be able to understand (συνιέναι) what the poets say and what has been composed well (ὀρθῶς) and what not, and to know how to make distinctions and, when questioned, to give an account.

PLATO, *Protagoras* 338e6–339a3

Protagoras’ test to see whether Socrates fits the bill then precisely concerns an alleged inconsistency in a poem of Simonides. According to Aristotle in the

Phaeacians (and subsequently Penelope) and which she of course knew already anyway (cf. 10.457–459). For recent views of the literary form of the *Gryllus* cf. Fernández Delgado [2000] and Herchenroeder [2008].

36 See Novokhatko, Dubischar, and Nünlist in this volume.

37 Cf. Hunter [2009a] 21–25.

38 Cf. Pfeiffer [1968] 69–71, Nünlist [2009a] 11–12, Slater [1982]. Some of Slater’s conclusions need modification in view of Blank-Dyck [1984], but the continued importance of ‘problem-solving’ criticism is not in doubt.

39 Cf., e.g., Hunter [2012] 100–103.

40 The pointed ambivalence of this phrase is marked by Socrates’ later observation of the multivalency of δεινός (341a7–b5). I have discussed some features of this passage of the *Protagoras* in Hunter [2011] 36, and for a fuller account and bibliography of the discussion of Simonides’ poem cf. Hunter [forthcoming].

Poetics, there are five standard grounds for identifying a problem requiring a solution: that something is impossible, or irrational, or harmful, or contradictory, or contrary to artistic correctness (1461b23–24). These categories recur constantly in the critical traditions which came after Aristotle, but their roots are deep and early.

The history and characteristics of textual and interpretative ‘scholarship’, given perhaps their most authoritative expression in Rudolf Pfeiffer’s *History of Classical Scholarship* of 1968, are relatively well understood (as are the many areas of doubt and uncertainty) and offer a reasonably clearly defined area of study.⁴¹ ‘Literary criticism’, under any definition, plays a major role in such scholarship, and it is the scholia to Homer which offer probably our richest sources for this.⁴² Any attempt, however, to separate ‘readings’ and ‘interpretations’ of Homer from the history of reworkings of Homer within Greek literature is bound to tie itself in unnecessary definitional knots, as well as almost inevitably presenting a misleading view of the pervasive ancient engagement with the epic texts.⁴³ The matter is particularly acute when we reach the rich prose literature of the Second Sophistic, in which revisions of Homer are a very major presence, and into which a now long tradition of Homeric scholarship is absorbed and re-used in new, often epideictic and/or paradoxical contexts.⁴⁴ In the discussion which follows I focus (largely) on explicit indications, in scholia and in rhetorical and critical treatises, of how Homer should be understood, rather than the implicit interpretations which Homeric reworkings in creative literature, at both macro- and micro-level, bring with them. The forms of expression in which reflection upon the epic heritage was couched were, however, as varied as approaches to the texts themselves, and even the limited case-study which follows can make no claim to do other than scratch the surface.

42 Cf. Richardson [1980], Schmidt [2002], Nünlist [2009a] and this volume.

43 For a sketch of some approaches to Homeric reception in Greek literature cf. Hunter [2004].

44 I borrow the term ‘revisions’ from Zeitlin [2001]. For guidance to the Homeric presence in the Second Sophistic cf. Kindstrand [1973], Zeitlin [2001], Hunter [2009b], Kim [2010], Porter [2011].

2 Homer and Rhetorical Criticism

Rhetorical criticism, that is the study of the strategies of both language and substance which lead to the effective presentation of arguments and characters, played a very prominent, perhaps indeed the dominant, role in the ancient criticism of literature; ‘literary criticism’, as we might understand it, fell—at least in post-classical antiquity—within the province of *rhêtorikê*.⁴⁵ The basis of much of the educational system, once the earliest preliminary studies were completed, was the study of how speakers in the past, above all in epic, drama and oratory, achieved particular aims, and how those achievements could be replicated in the present;⁴⁶ as with so much of ancient educated culture, the seeds (and in some cases the full flowering) of virtually all rhetorical forms was to be found—or so it was believed—in Homer.⁴⁷ The rhetorical turn was, as has often been observed, also an important reason why, on the whole, ancient critics seem less concerned with the meaning and interpretation of whole works than with the study of parts, often detached from the context, a feature of ancient criticism which has often puzzled their modern successors.

From the Hellenistic period on, an elaborate systematisation of rhetoric and rhetorical education was developed, about which we are relatively well informed from a large corpus of surviving rhetorical treatises and handbooks. At the heart of this system lies the study of the texts of the past, what we would call ‘classical literature’, and it is within the parameters of this system that the foundations of a set of critical rules, amounting to no less than a body of ancient ‘literary theory’, were established. If Aristotle’s *Rhetoric* represents a sophisticated level of intellectual analysis never really reached again, the subsequent tradition is also at pains to explain the need for system and agreed modes of analysis. Thus, for example, a treatise of perhaps the late second or third century AD, wrongly ascribed to Dionysius of Halicarnassus and entitled ‘On the examination of *logoi*’ (*i.e.* literary works in general, though the focus

45 Cf., *e.g.*, Classen [1994], Nünlist [2009a] 6.

46 For the connection between literary criticism and rhetoric see also Nünlist in this volume.

47 Valuable guidance on the place of rhetoric in ancient education in Morgan [1998] Chapter 6. For Homer as the font of rhetorical forms and teaching cf. above all Quintilian’s encomium at 10.1.46–51, and see also [Plutarch], *De Homero* 172 (with Hillgruber ad loc.), Radermacher [1951] 6–9; Karp [1977] is an attempt to reconstruct a rhetorical ‘system’ from the Homeric texts. Among lost works may be mentioned the ‘On the rhetorical figures found in Homer’ and the ‘On rhetoric in Homer’ of the second-century AD grammarian Telephos of Pergamon (cf. *RE* V/A. 369–371).

of the treatise is on declamation),⁴⁸ begins by noting that positive and negative judgements about *logoi* are usually offered without any system or ‘knowledge’, with the result that there is no uniformity of judgement about particular works; in a claim that can appear extraordinarily modern, the author observes that we tend to be swayed by the reputation of those making the critical judgements, rather than by the judgements themselves or by our own judgement. Therefore, what is required, according to the author, are agreed standards of composition and criteria of judgement with regard to the four principal areas of character, thought, art and diction (II 374.7–375.9 U-R). Where, however, ancient students and their teachers principally differed from their modern counterparts, though having important aims in common with, say, English classical education of the nineteenth century, was that the former were not, in the first place, concerned with classical literature ‘for its own sake’, but for what it offered to their own development as speakers, writers and theorists of speech: ‘reading nourishes speech’ had long been the watchword (Ael. Theon 61.30–31 Sp.). Study must be turned into daily practice, and very frequently it was the Homeric poems which provided the material through which teachers displayed their skills and students learned to spread their wings.

The works of Libanius of Antioch (fourth century AD) offer some of the most instructive examples of this ‘Homeric’ material;⁴⁹ Homeric characters make their famous speeches all over again, but in different words (*e.g.*, Achilles’ reply to Odysseus’ embassy, Libanius 5.303–360 Foerster), or write speeches to which Homer, the ‘common ancestor of Greek wisdom’ as Libanius calls him (8.144.6–7), merely alluded. During the *teichoskopia* in *Iliad* 3, for example, the Trojan Antenor recalls the embassy of Menelaos and Odysseus to Troy to negotiate Helen’s return:

ἀλλ' ὅτε δὴ Τρῶεσσιν ἐν ἀγρομένοισιν ἔμιχθεν, στάντων μὲν Μενέλαος ὑπείρεχεν εὐρέας ὤμους,	210
ἄμφω δ' ἐζομένω, γεραρώτερος ἦεν Ὀδυσσεύς· ἀλλ' ὅτε δὴ μύθους καὶ μῆδεα πᾶσιν ὕφαινον, ἦτοι μὲν Μενέλαος ἐπιτροχάδην ἀγόρευεν, παῦρα μὲν, ἀλλὰ μάλα λιγέως, ἐπεὶ οὐ πολὺμυθος οὐδ' ἀφαμαρτοεπής· ἦ καὶ γένει ὕστερος ἦεν.	215
ἀλλ' ὅτε δὴ πολύμητις ἀναΐξειεν Ὀδυσσεὺς	

48 The treatise is pp. 374.7–387.14 of Vol. II of the edition of Dionysius of Halicarnassus by Usener and Radermacher; for discussion of this treatise cf. Russell [1979].

49 Most of the relevant texts are found in vols. 5 and 8 of Foerster’s Teubner edition of Libanius; cf. further Webb [2010].

στάσκειν, ὑπαὶ δὲ ἴδεσκε κατὰ χθονὸς ὄμματα πῆξας,
 σκήπτρον δ' οὔτ' ὀπίσω οὔτε προπρηγνὲς ἐνώμα,
 ἀλλ' ἀστεμφὲς ἔχεσκειν αἰδρεῖ φωτὶ εἰκώς·
 φαίης κε ζάκοτόν τέ τιν' ἔμμεναι ἄφρονά τ' αὐτως. 220
 ἀλλ' ὅτε δὴ ὅπα τε μεγάλην ἐκ στήθεος εἶη
 καὶ ἔπεα νιφάδεσσιν εἰοικότα χειμερίησιν,
 οὐκ ἂν ἔπειτ' Ὀδυσῆϊ γ' ἐρίσσειε βροτὸς ἄλλος·
 οὐ τότε γ' ᾧδ' Ὀδυσῆος ἀγασσάμεθ' εἶδος ἰδόντες.
 HOMER, *Iliad* 3.209–224

When they mingled with the assembled Trojans, Menelaos with his broad shoulders rose above him as they stood, but when they were sitting, Odysseus was the more distinguished. When they were weaving their words and devices to all assembled, Menelaos indeed spoke fluently; his words were few, but very clearly spoken, since he is not a man of many words nor a rambler, and also younger by birth. When Odysseus of many guiles leaped up, he stood looking down with his eyes fixed on the ground, and he moved his staff neither back nor forwards, but he held it unmoving and seemed like an ignorant man. You would have said that he was sullen and merely a fool. When, however, he sent forth his great voice from his chest and words flowed like snowflakes in winter, then no other mortal could compete with Odysseus, and then we were not so struck by his appearance.

This passage was to become perhaps the most important foundational passage for the later analysis of different styles of speaking and writing;⁵⁰ Libanius takes off explicitly from this passage to write the speeches which Menelaos and Odysseus were supposed to have delivered on this occasion (5.199–221, 228–286 Foerster). For Libanius, this is a chance to show the different techniques of compression and extension of the same material (5.200.3–7 Foerster), and the result is that the speech of Menelaos, “not a man of many words”, takes twenty-two pages in Foerster’s edition, and Odysseus’ fifty-eight. Such exercises were a real test of the powers of εὔρεσις (*inuentio*) for the orator, as there was no Homeric text from which to work, and Libanius is not slow to point out to

50 The only other claimant to such an honour is *Il.* 1.247–249 (Nestor); the scholia on *Il.* 3.212 match Menelaos–Odysseus–Nestor with Lysias–Demosthenes–Isocrates as the prime representatives of the three styles. For further discussion and bibliography cf. Hillgruber [1999] 370–372.

his pupils just how successful he has been (5.228.5 Foerster).⁵¹ A related but different challenge was the exercise of seeking to affirm (*κατασκευή*) or disprove (*ἀνασκευή*) the events of which poets, most notably Homer, had told. Perhaps the most famous exercise of this kind, though it is in fact much more than that, is Dio Chrysostom's *Trojan Oration* (11), in which Dio sets out reasons for wholesale rejection, not just of Homer's account of the Trojan War, but for much of the generally received story of Paris and Helen.⁵² A very powerful weapon in such arguments was the appeal to 'probability' (*εἰκός*), and so it is that the first in our collection of Libanian *ἀνασκευαί* is "That it is not probable (*εἰκός*) that Chryses went to the Greek ships" (8.123–128 Foerster), and that one of the *κατασκευαί* is "That the story of Achilles' anger is probable" (8.143–150 Foerster); this latter speech contains much which functions as a rebuttal of the *ἀνασκευή* about Chryses.⁵³ One of the things which is most striking about these exercises is the psychological depth and the level of calculation ascribed to Homeric characters; this may be the fruit of rhetorical invention, but it is also very instructive about how poetical texts were read and the sort of 'characters' that one expected to find there. In many ways, Libanius' modes of argument foreshadow some modern debates about 'character' in literature, notably in Greek drama, and what sort of intelligibility and motivation we are to ascribe to poetic characters. Thus, for example, we learn that Agamemnon would not have opposed the wishes of the majority, as Homer (*Il.* 1.22–25) says he did, because he knew that the security of his rule depended upon the goodwill of those under him (8.126–127), whereas on the other side it can be said both that Agamemnon acted as a careful commander by throwing a potential Trojan spy out of the Greek camp (8.146.6–9) and that the nature of Chryses' subsequent prayer (*Il.* 1.37–42) makes perfect sense:

51 Despite this, Russell [1983] 110 claims that the speeches of the Libanian Menelaos and Odysseus are "not at all clearly differentiated"; Libanius "seems . . . to have been content to give a very general impression".

52 Cf. Hunter [2009b], Kim [2010] Chap. 4, Minon [2012] (esp. pp. xli–xlvi on the links to rhetorical exercises).

53 Libanius' two exercises have more than a little in common with the *εὔρεσις* on show in Dio's account of Chryseis' own motivation and calculations in *Oration* 61, cf. Drules [1998] 77–79, Kim [2008] 617–620. That the opening scene of the *Iliad* should figure so prominently in rhetorical texts is hardly surprising, given that this was probably the most familiar piece of Homer, one known to every schoolboy. Kim [2010] 613–617 rightly associates the reading practice which "fills in the gaps" in Homer's account of his characters' psychology and motivation with the grammarians' interpretative principle of *κατὰ τὸ σιωπώμενον*, although that is usually used to explain apparent problems and omissions in Homer's presentation of 'facts', rather than of motivation.

Chryses knew that he would cause Agamemnon the greatest distress if he destroyed his position, caused his power to crumble and put an end to his rule. For it is not the same for a man to meet once and for all with disaster as to remain alive and in despair; the dead have no sensation of anything, whereas the man who lives in pain is truly punished. Moreover, Chryses also knew that if Agamemnon died and the war ended, then his daughter would go off with the Greeks, whereas if the Greek army was oppressed by plague and was being destroyed, there would be an enquiry into this misfortune, the reason would emerge, and he would recover his child.

LIBANIUS, *Progymnasmata* 8.147.9–148.1 Foerster

Libanius here elaborates on one of the ‘solutions’ offered in the exegetical scholia on v. 42 to the ‘problem’ of “why Chryses curses the Greeks who urged (*Il.* 1.22–23) that his daughter should be returned to him and not rather (just) Agamemnon”: “If Agamemnon died, the cause of the plague would remain uninvestigated, and if the Greeks sailed back to their country, Chryseis would not be given back to him”.⁵⁴ It would be easy to dismiss such ‘filling in the story’ as simply fertile display, without any real connection to, or warrant in, the Homeric text, and yet the persistent questioning of action and motivation reveals a kind of ‘close reading’ and active supplementation which has not always been applied to ancient texts in more recent times, and, more importantly, which the opening books of the *Iliad* (at least) might be thought to invite. It was just such close reading and pondering on motivation which contributed significantly to the development, precisely in rhetorical schools, of what we label *plasma* or fiction and which distinguished itself from *mythos*, where such chains of both physical and psychological plausibility no longer held; that is why, perhaps (or perhaps not), μῦθος so often required the sideways interpretative move of allegorisation, to match that similarly sideways narrative jump, well captured by the term παράδοξον, which so often travels with the idea of μῦθος.

54 Cf. also ‘Heracl.’, *Quaest. Hom.* 6.3–4, where it is claimed that the view that Apollo killed the Greeks who had in fact urged respect for Chryses and spared Agamemnon is the result of spiteful malice, Eust., *Il.* 37.6–10. The other reasons given by the exegetical scholia are also predominantly ‘psychological’: “Because the Greeks had given Chryseis to Agamemnon after sacking Thebes [*Il.* 1.366–369], because Agamemnon himself is included in the Danaans, and because Chryses, being a barbarian, regards all Greeks as enemies”.

The treatise of Aelius Theon of (probably) the early imperial period,⁵⁵ one of the principal witnesses for the ‘preliminary exercises’ (*progymnasmata*) which, as we have seen in Libanius, prepared students for the formal study of rhetoric, offers a further helpful guide to the mindset which determined the rhetorical approach. One kind of exercise which attracts particular notice in the current context is ‘paraphrase’, the exercise of rewriting passages from classical texts ‘in your own words’. Theon points out that, just as the same event or material affects us in more than one way, so any *φαντασία* which presents itself to our minds can be expressed in a variety of linguistic modes, *i.e.* as questions, prayers etc, according to the system of variations which pupils of the rhetorical schools followed. He evidences this claim by citing the fact that all classical writers, poets and prose-writers alike, “made excellent use of paraphrase, by refashioning both their own work and that of each other” (62.23–25 Sp.), and he then cites passages in which first Archilochus and then Demosthenes and Aeschines might be thought to have paraphrased Homer, a passage where Theopompus has paraphrased Thucydides, and several examples where one Attic orator has used the words of a predecessor; finally he observes that “Demosthenes often paraphrases himself, not only by transferring what he has said in another speech to elsewhere, but also by clearly saying the same thing myriad times (*μυριάκις*) in the one speech, although the audience do not notice because of the variety of expression” (63.29–64.4 Sp.). The theory of paraphrase, at the heart of which lies a distinction between what we say and how we say it, the distinction expressed elsewhere as that between *διάνοια* and *λέξις*, is one first step along the road to a theory of what modern scholars would call allusion, echo, even intertextuality, and that step is framed within rhetorical education.

Theon is entirely typical in seeing the same rhetorical system governing the writing of the ancients as is practised in his own day; the teacher of rhetoric must first “collect excellent examples of each exercise (*γύμνασμα*) from ancient writings and instruct his pupils to learn them off by heart” (65.30–66.2 Sp.). Thus the ancients supply the material for the rhetorical system, not merely the *προγυμνάσματα*, but are also themselves the principal examples of, and hence authorities for, that system. In particular, as has already been noted, the foundations of all rhetoric and rhetorical analysis were to be found in Homer. Rhetorical criticism of, and illustration from, Homer shares with an approach to literature through ‘problems’ and their ‘solutions’ an assumption that the characters of literature have a familiar psychological depth which allows us to

55 For discussion of the author and date of the treatise cf. Patillon-Bolognesi [1997] vii–xvi; Heath [2002–2003] proposes a radical re-dating to the fifth century AD.

draw in our analysis of their strategies upon motivations and calculations not made explicit in the text;⁵⁶ when confronted by apparent anomalies, the best interpretative strategy will usually be to give these characters the benefit of the doubt. Working together with this fundamental assumption is the overriding importance assigned to the notion of appropriateness (τὸ πρέπον) and to the shifting demands imposed by the particularities of any situation (ὁ καιρός). Both are neatly seen together in an observation of Theon, in the context of the rhetorical exercise of *προσωποποιία*:

We praise Homer because he gave appropriate (οἰκεῖοι) words to each of the characters he introduces, and we criticise Euripides because his Hecuba philosophises when the situation does not require it (παρὰ καιρόν).

AELIUS THEON, *Progymnasmata* 60.28–31 Sp.

This analytical framework gave ancient critics a powerful tool for the analysis of the speeches, and of the motives behind the speeches, in (particularly) epic and drama. ‘Rhetorical criticism’ is fundamentally the examination of why the characters of literature act and speak as they do; it is not limited merely to the formal analysis of speeches into their constituent parts. For a specific, though not necessarily typical, example let us consider Agamemnon’s famous ‘testing’ of the troops in *Iliad* 2.

Zeus honours his promise to Thetis by sending a dream to Agamemnon which (deceptively) leads him to think that the time for the capture of Troy is at hand; Agamemnon calls a council of the Greek leaders,⁵⁷ tells them of his dream and then concludes:

ἀλλ’ ἄγετ’, αἴ κέν πως θωρήξομεν υἱας Ἀχαιῶν.
 πρῶτα δ’ ἐγὼν ἔπεσιν πειρήσομαι, ἢ θέμις ἐστίν,
 καὶ φεύγειν σὺν νηυσὶ πολυκλήϊσι κελεύσω.
 ὑμεῖς δ’ ἄλλοθεν ἄλλος ἐρητύειν ἐπέεσσιν.

But come, let us see whether we can arm the sons of the Achaeans. I shall first test them with words, as is appropriate (*themis*), and I shall urge them to retreat in their many-benched ships; you however must use words to restrain them, each in your various positions.

HOMER, *Iliad* 2. 72–75

56 On ‘problems’ as a critical form cf. above, and Nünlist in this volume.

57 Dio 56.10 praises Agamemnon for wisely consulting the Greek elders before following the advice of the dream.

After a rather curiously inconsequential speech from Nestor, which Aristarchus athetised and which does not even mention Agamemnon's proposal of a test,⁵⁸ the Greek army is assembled and Agamemnon urges departure, as there is now no chance of the mission being successful (for his arguments, see below); the army (and perhaps also all the leaders except Odysseus) rush for the ships,⁵⁹ as Agamemnon indeed seems to have expected (cf. v. 75 above),⁶⁰ and that would indeed have been the end of the expedition, had not Hera dispatched Athena to intervene, which she does by stirring Odysseus to action. This sequence of events was much discussed in antiquity, and has attracted a very large modern bibliography;⁶¹ the most cursory glimpse at that bibliography will, however, show just how many 'modern' arguments are essentially refinements of what was already said in antiquity.

Why does Agamemnon 'test' the troops, or—to put it in language that we have found in Libanius—was Agamemnon's test 'probable' (εἰκόσ)? Aristotle discussed the matter in his *Homeric Problems*, and Porphyry's report of his discussion, even if it does not all go back to Aristotle, is worth citing at some length, as much ancient and modern discussion may in fact be traced back to it:

The army was worn out from the plague and unmotivated because of the length of time [of the war]; Achilles and his forces had withdrawn; Agamemnon himself, when taking Briseis away in the assembly, had said in order to frighten the others: "anyone else should shrink from the idea

-
- 58 The various reasons for the athetesis given in the scholia on 2.76 do not necessarily (all) go back to Aristarchus (cf., however, Lührs [1992] 260–261), though all are instructive about ancient criticism: the poet should not have said that Agamemnon sat down after his speech, because he did not stand to deliver it; Nestor has really nothing to say (οὐδὲν περισσόν); it was silly to have Nestor say that they would only have believed such a dream from "the best of the Achaeans", because the powerful do not dream any differently from the rest of us, and (finally), if the verses are deleted, then ποιμένοι λαῶν in v.85 will refer to Agamemnon, as it should do, rather than to Nestor. Nestor's speech has recently been discussed by Nünlist [2012d]; the kinds of argument that Nünlist adduces to explain the speech are in fact interestingly reminiscent of the kinds of 'rhetorical' explanation that we find in the scholia and in Libanius (cf. above). Schofield [1986] 29 calls Nestor's observation about the dream not being a deception because of who dreamt it "ingenious as well as tactful".
- 59 The apparent unclarity about the actions and knowledge of the commanders who had heard Agamemnon's speech has long been highlighted by those seeking to reconstruct the creation of the text; cf., most recently, West [2011] 103–105 (notes on vv. 73–75, 192–197).
- 60 The bT-scholia try to get around this interpretation of v. 75, but it seems inevitable.
- 61 Cf. McGlew [1989], Latacz [2003] 29–30, 41, Cook [2003]; helpful guidance to older discussions in Katzung [1960].

of speaking on equal terms or placing themselves on an equal footing with me" (*Il.* 1.186–187); there had been disturbance at Achilles' withdrawal. In these circumstances, it was reasonable for Agamemnon not immediately to exhort them to go out [against the Trojans], but to think that he should test their mood. If without a test he had ordered men in this condition to make war and some men had opposed him, the whole expedition would have been ruined and everyone would have rebelled... Therefore the test was necessary, together with his instruction to the leaders to oppose him...

ARISTOTLE fr. 366 Gigon = 142 Rose⁶²

That Agamemnon did not really have any option but to test whether the war-weary men were ready to go out against the Trojans is the conclusion of most ancient discussion of the matter; the test, together with the precaution of telling his colleagues how they are to act, is not, therefore, a sign of Agamemnon's weakness and mistaken leadership, but rather of his strategic good sense (cf. also Eust., *Il.* 173.24–33). In seeking to understand the text we must consider the position which the character finds himself in and think out how he might best handle that, even if these calculations are not made explicit in the text; here modern critics of the *peira* have followed the ancient.⁶³

Much ancient discussion of Agamemnon's subsequent speech to the troops, like much modern criticism, is focused upon the fact that a good part of what he says seems designed to lead the troops to stay, rather than to go home, which is the professed purpose of the speech. Later rhetoricians took very great interest in this speech, for it seemed to be overtly arguing for an outcome which the speaker did not in fact want.⁶⁴ The treatise *On the method of forcefulness*, which is transmitted with the Hermogean corpus, thus makes Agamemnon's speech the Homeric paradigm of "accomplishing something by arguing the opposite". In this figure the speaker will use arguments which are "easily refuted and contradictory and can be turned around":

62 Much of this has found its way into the scholia on *Iliad* 2.73; cf. also Dio 2.22, where, however, Alexander (Aristotle's pupil) misrepresents the events in *Iliad* 22, by omitting Agamemnon's *peira* speech entirely.

63 This was the basis of the discussion in Kullmann [1955], who saw the *peira* as a motif dependent upon a situation of the Greek army known to the audience from the *Kypria*. For a more recent attempt to explain the origin both of the *peira* and of the opening of Book 9 (see below) cf. West [2011] 100–105, 214–215.

64 Cf. further Hillgruber [1999] 357–359.

Homer did this. Agamemnon is testing the Greek army and wants them to remain, while saying that they should not remain but should flee. Through his whole speech he says things which are easy to refute and turn around, thus giving openings to his opponents, and at the end he says contradictory things. For to say

“The timbers of the ships have rotted and the ropes are loose” (2.135)

is very obviously opposed to “Let us flee”. How could they flee without ships? This is the argument of someone who wants to prevent them from sailing away, not an argument for doing what he is saying.

[HERMOGENES] 437.14–438.4 Rabe

Pseudo-Hermogenes' example is perhaps not the strongest which could have been chosen, but it may serve to remind us of how ancient critics tended carefully to think through the implications of what the poet and his characters said; as we have already seen, ‘close reading’ was at the heart of the rhetorical interpretation of texts. The rhetorical *technê* ascribed to Dionysius of Halicarnassus offers a more extended analysis of Agamemnon's speeches along the same lines (II 327.19–330.25 U-R),⁶⁵ and modern commentators have added further examples of arguments which seem to cut both ways, but [Dionysius] also argues that the army's reaction to the speech, which could be (and no doubt had been) argued to show how mistaken Agamemnon was, is in fact also part of his strategy: in this way Agamemnon draws the hostile but concealed feelings of the army out into the open, where they can be controlled by Odysseus and Nestor (II 328.13–25 U-R). Less radically, perhaps, Eustathius argues that Agamemnon's excellent stratagem is not to be judged by its near-disastrous outcome; ‘events’ can overturn even the best-laid plans (Eust., *Il.* 185.38–186.10). Moreover, for [Dionysius], Agamemnon's greatest rhetorical achievement—and one from which we should learn—is the manner in which he conceals his stratagem, for it will be no use at all if one's opponents perceive what one is up to (II 329.19–24 U-R). This Agamemnon does by the emotional beginning of his speech (*Il.* 2.110–118); by criticising Zeus in this way, he suggests that his speech is prompted by grief rather than by a cunning stratagem (II 330.15–24).

65 Cf. Russell [2001a] 160–163. Dentice di Accadia [2010b] is a recent and helpful attempt to take the arguments of [Dionysius] seriously; the present chapter was drafted before the appearance of that article, and I have not signalled the various places where our two accounts agree or differ. Dentice di Accadia [2010a] is now the standard edition of the treatises, and cf. also Schöpsdau [1975], Hillgruber [1999] 357–359, Heath [2003].

Much ancient rhetorical training of course would have shown that the implicit argument that “emotion is a guarantee of sincerity” was a very unsafe assumption in oratory. Nevertheless, in his ‘testing’ speech in reply to optimistic words from the steersman Tiphys in Book 2 of Apollonius’ *Argonautica*, which clearly reflects not just the Homeric *peira* but also scholarly discussion of that episode, Jason also begins in a distraught and highly emotional way which would seem likely to assure anyone that it was grief, not design, which prompted his words:

αὐτὰρ ὁ τόνγε

μειλιχίοις ἐπέεσσι παραβλήδην προσέειπεν·
 Τίφω, τί μοι ταῦτα παρηγορέεις ἀχέοντι;
 ἤμβροτον, ἀσάμην τε κακὴν καὶ ἀμήχανον ἄτην·
 χρῆν γὰρ ἐφιεμένοιο καταντικρὺ Πελίαο
 αὐτίκ’ ἀνήνασθαι τόνδε στόλον, εἰ καὶ ἔμελλον 625
 νηλειῶς μελειῶστί κεδαιόμενος θανέεσθαι.
 νῦν δὲ περισσὸν δεῖμα καὶ ἀτλήτους μελεδῶνας
 ἄγκειμαι, στυγέων μὲν ἄλδος κρυόεντα κέλευθα
 νηὶ διαπλώειν, στυγέων δ’ ὄτ’ ἐπ’ ἠπείροιο
 βαίνωμεν, πάντη γὰρ ἀνάρσιοι ἄνδρες ἕασιν. 630
 αἰεὶ δὲ στονόεσσαν ἐπ’ ἤματι νύκτα φυλάσσω,
 ἐξότε τὸ πρῶτιστον ἐμὴν χάριν ἠγερέθεσθε,
 φραζόμενος τὰ ἕκαστα. σὺ δ’ εὐμαρέως ἀγορεύεις,
 οἷον ἐῆς ψυχῆς ἀλέγων ὑπερ’ αὐτὰρ ἔγωγε
 εἶο μὲν οὐδ’ ἠβαιὸν ἀτύζομαι, ἀμφὶ δὲ τοῖο 635
 καὶ τοῦ ὁμῶς καὶ σείο καὶ ἄλλων δείδι’ ἑταίρων,
 εἰ μὴ ἐς Ἑλλάδα γαίαν ἀπήμονας ὕμμε κομίσσω.
 ὦς φάτ’, ἀριστήων πειρώμενος· οἱ δ’ ὁμάδησαν
 θαρσαλέοις ἐπέεσσιν.

But Jason answered him in return with soft words: “Tiphys, why do you offer me these consolations in my grief? I have erred; my wretched folly offers no remedy. When Pelias gave me his instructions, I should have immediately refused this expedition outright, even if it meant a cruel death, torn apart limb from limb. As it is I am in constant terror and my burdens are unendurable; I loathe sailing in our ship over the chill paths of the sea, and I loathe our stops on dry land, for all around are our enemies. Ever since you first assembled for my sake, I have endured a ceaseless round of painful nights and days, for I must give thought to every detail. You can speak lightly, as your worries are only for yourself. I have

no anxiety at all for myself, but I must fear for this man and that, for you no less than for all our other companions, that I shall be unable to bring you back unharmed to Greece". So he spoke, testing the heroes, and they all shouted words of encouragement.

APOLLONIUS, *Argonautica* 2.620–639

Jason's speech too has divided modern critics, particularly over its purpose (if it is not simply an anguished retort to Tiphys' optimism) and over whether or not his attitudes are here in any way feigned;⁶⁶ unlike Agamemnon, whose opening appeal to *atê* Jason echoes, Jason does not apparently have a specific plan in mind (he does not propose that they now turn around), though the two choices facing the crew are obviously, as in Homer, pressing forward or abandoning the expedition. Like Agamemnon, Jason focuses on his own situation and, like the Agamemnon of the later rhetoricians, some of his arguments would be very easy to refute; the rebuke to Tiphys of vv. 633–634 had in fact already been shown to be false by the narrative of Tiphys' role in the passage through the Clashing Rocks (2.581–585), and it is patently absurd to charge the steersman with concern only for himself. Over Jason's speech in fact hovers the ubiquitous ancient parallel between the ruler and the steersman, each responsible for the safety of the 'vessel' under his command and the people in it;⁶⁷ Tiphys, no less than Jason, could claim that it is his duty to bring the Argonauts safe back to Greece. From the perspective of ancient rhetorical criticism (best attested for us, of course, in texts considerably later than the *Argonautica*), Jason's speech would indeed be understood as a clear example where the speaker 'says one thing and conceals another in his heart', as Achilles rebuked Odysseus and Agamemnon for so doing (*Il.* 9. 313), in verses which were indeed to become associated with *λόγοι ἐσχηματισμένοι*.⁶⁸ Whether or not we receive Jason's speech as unprepared and unguided as his crew does depends importantly upon the disputed meaning of the introductory *μειλιχίους ἐπέεσσι παραβλήδην* (2.621), but two observations are relevant here. Apollonius has sought to make the effect of his *peira* more dramatic than Homer's by

66 Fränkel [1968] 214–221, arguing that *πειρώμενος* in 2.638 means 'seeking to provoke', not 'testing', has been an influential discussion; further observations and bibliography in Hunter [1993] 20–22.

67 Particularly striking when set against Jason's speech is Dio 3.62–67 in which the good ruler is first compared to the steersman battling a storm while all the other passengers are idle and then to a general on campaign who must look after every soldier, whereas each ordinary soldier only looks after himself.

68 Cf. Philostratus, fr. 542 Wright on Polemo.

omitting any clear indication of what Jason is actually up to, so that, whatever the meaning of 2.621, the external audience is placed more in the position of the audience in the text than is the case in Homer, where we have been very explicitly warned about Agamemnon's real intentions; secondly, we may perhaps use this passage of the *Argonautica* to trace ancient discussion and rhetorical analysis of Agamemnon's speech in the *Iliad* back to a much earlier date than that of the scholia and the rhetorical texts I have been considering.

The scholia on Agamemnon's *peira* largely follow the interpretative patterns already outlined: Agamemnon knows that the men are weary and depressed at Achilles' withdrawal and that his standing with them is fragile (Schol.AbT 2.73). A close engagement with the text again lies at the heart of interpretation: Agamemnon calls the troops ἥρωες Δαναοί because such praise works against any desire for flight (Schol. bT 2.110b); he says φεύγωμεν (v. 140), when he might have said στείχωμεν, so that the dishonourable word will have a negative effect,⁶⁹ and so forth. A further argument in the same scholium about Agamemnon's implicit calculations may be expanded along the following lines: Agamemnon's stratagem will help recover some of his standing, because the ordinary troops do not like generals who are recklessly 'gung-ho' about fighting, and so he has nothing to lose—if the men want to abandon the expedition, then the other leaders will dissuade them, and if not, then well and good, and no one will be any the wiser about the stratagem, but the men will know that he at least does not gamble recklessly with their lives. So too, the pseudo-Plutarchan treatise *On Homer*, which absorbs and reflects a great deal of the mainstream of ancient criticism, makes a rather similar point:

Does not Agamemnon . . . use rhetorical art, when he says to the mass the opposite of what he wants, so that he can test their spirit and not become hateful to them by forcing them to fight on his behalf? He himself speaks in a way which will please them (πρὸς χάριν), but one of those others with the power to persuade them will turn them back and make them stay, as this in truth is what the king wanted.

[PLUTARCH], *On Homer* 2.166

69 Some modern commentators (cf., e.g., the Basel-commentary on 1.173 and 2.74) observe that φεύγειν does not necessarily have a negative connotation; it may suggest 'withdraw from a position' rather than 'flee'. This may be true, but we must also recognise that, even in formulaic epic style, the same words can resonate differently with different audiences.

Great men do not make ‘mistakes’; one merely has to try to understand their stratagems. This portrait of a cunningly calculating Agamemnon, who prepares the ground for the hostility of the troops to be displaced on to other leaders rather than himself, is deeply rooted both in the analysis and debates of rhetorical education and in the agonistic realities of ancient political and oratorical struggle; modes of interpretation, then as now, unsurprisingly reflect the culture that gave rise to them.

The final part of Agamemnon’s speech is particularly worthy of note:

ἐννέα δὴ βεβάασι Διὸς μεγάλου ἐνιαυτοί,
καὶ δὴ δοῦρα σέσηπε νεῶν, καὶ σπάρτα λέλυνται,
αἶ δέ που ἡμέτερά τ’ ἄλοχοι καὶ νήπια τέκνα
εἶατ’ ἐνὶ μεγάροις ποτιδέγμεναι· ἄμμι δὲ ἔργον
αὐτῶς ἀκράαντον, οὐ εἴνεκα δεῦρ’ ἰκόμεσθα.
ἀλλ’ ἄγεθ’, ὡς ἂν ἐγὼ εἶπω, πειθώμεθα πάντες·
φεύγωμεν σὺν νηυσὶ φίλῃν ἐς πατρίδα γαίαν,
οὐ γὰρ ἔτι Τροίην αἰρήσομεν εὐρυάγυιαν.

Nine of great Zeus’ years have gone past, and the timbers of the ships have rotted and the rigging hangs loose. Our wives and young children sit waiting for us at home, while the task which brought us here is utterly unaccomplished. Come, let all of us do as I say: let us retreat in our ships to our beloved native lands, for we shall never take Troy with its broad streets,

HOMER, *Iliad* 2.134–141

The influence of the rhetorical approach to literary speeches is very obvious in a scholium on the final verse of the speech, which reports that this verse was not transmitted in some copies because it ‘removes the ambiguity’; although we do not, of course, have to accept that this was indeed the reason for the omission of the verse, the argument is instructive. For a rhetorical critic, Agamemnon here speaks too straightforwardly in a speech which depends upon ambiguity; this closing appeal to the troops contains no ‘sub-text’ which urges the opposite course of action than the one apparently being proposed, and a modern critic might add that φίλῃν ἐς πατρίδα γαίαν in the previous verse carries a powerful emotional weight which is not offset by any other resonance. By contrast, the equally emotive reference to the men’s wives and children is offset by the unfinished job which the army came to do (137–138), and the bT-scholium gloss the doubleness of ποτιδέγμεναι in v. 137: “Therefore let us depart because

our wives long for us (ποθούμενοι), or [we should not depart] because we have accomplished nothing to match their expectations (προσδοκία).⁷⁰ A modern critic might observe that the juxtaposition of an explicit reference to the decay of the ships over nine years to the “waiting wives” carries with it the powerful implication that the wives too are not getting any younger. Some version of this reasoning may in fact be reflected in the A-scholium on vv. 136–137 which warns against punctuating after ἄλοχοι, because that would make the meaning ἀπρεπές; the point is presumably not merely the disrupted syntax which would result, but also the ‘low’ implication that the wives too, like the ships and the ropes, are “rotting and loose”.⁷¹ This clearly is not what Agamemnon wants to say, but the verses are indeed held together by the idea of the long passage of time—the children will be νήπια τέκνα no longer—and behind the scholastic worry about punctuation lies a recognition of this resonance.

For many modern critics, the principal literary effect at work here is ‘tragic irony’: Agamemnon’s (deceptive) claim to have been deceived by Zeus (vv. 111–114) is more true than he knows, and when Agamemnon repeats some of the verses, though without the ones which might seem most ambiguous in their effect, in very different circumstances at the council (or assembly) which opens Book 9, the full force of that irony hits home.⁷² It is an obvious question why (as far as we know) ancient critics too did not elaborate such an approach to this passage. In fact, however, critical positions may indeed have embraced something very like this, and ancient critics seem in fact to have been divided as to whether or not Agamemnon’s speech in Book 9 (vv. 17–28), which—after a different opening address (cf. further below)—repeats verbatim vv. 111–118 and vv. 139–141 from Book 2, was another ‘test’, parallel to that of Book 2, just as some at least seem to have entertained the idea that his third

70 Cf. also Eust., *Il.* 187.43–47.

71 In later literature there are some graphic examples of ageing women compared to ships (cf. esp. Meleager, *AP* 5.204 (= *HE* 4298–4307)), and these Homeric verses may in fact have been influential in that scoptic tradition.

72 As representatives of this standard reading cf., e.g., Katzung [1960] 55, Reinhardt [1961] 113–114, Lohmann [1970] 217, Taplin [1992] 92; cf. also De Jong [2004] 190, who finds the scholastic hesitations “curious” (284 n.94). Hainsworth’s note on 9.18–28, which expresses reservations about irony here, would offer excellent material for a study of the assumptions behind much modern (though now out-dated?) Homeric criticism; cf. also Griffin on vv. 17–27, “It is inept to argue that the repetition is in some way ‘ironical’: it is just a repetition . . .”. The very length of Hainsworth’s note, however, suggests a worry that it is actually hard to keep at bay here what he sees as the dangerous tide of ‘over-interpretation’. For some of the ways in which the opening scene of Book 9 foreshadows the exchanges with Achilles to come later in the book cf. Lynn-George [1988] 83–84.

plea for withdrawal (14.75–81) was also a test (bT-scholium ad loc). Pseudo-Dionysius appears to take for granted that the speech in Book 9 is such a test (II 325.14–16 U-R), but the absence of vv. 23–25, which could be taken to suggest that Troy might still be taken, from Zenodotus' shortened version of the speech and the *athetêsis* of those verses by Aristarchus point to the other view; thus the A-scholia on vv. 23–25 observe that “[Agamemnon] is not making a test, but he is speaking sincerely about withdrawal as Zeus has inflicted setbacks upon them”, and the bT-scholia consider it ὑπόψυχρον to hesitate on this subject when in Agamemnon's situation.⁷³ This second view is not an expression of ‘tragic irony’ as such, but it draws upon the same contrasts as that modern critical approach. In this difference of critical effort—seeking to account for the text as it confronts us or removing verses to produce the ‘coherent’ text we want—lies foreshadowed, of course, much of the history of Homeric criticism.

The bT-scholia on v. 17 produce interesting reasons for believing that the speech of Book 9 is indeed another ‘test’:

He now makes this second test of the Argive leaders (*i.e.* not of the whole army), because he fears lest the defeat and the rout inflicted by Zeus has destroyed even their resolve. That Agamemnon is testing in this council too is clear from the way in which he puts up with Diomedes' rebuke, when he did not put up with the speeches of Achilles who was a better man, and from the fact that Nestor, a man who understands the king's thought, praises Diomedes, though he had previously rebuked Achilles.

bT-scholium on *Iliad* 9.17b

The comparison with *Iliad* 1 reflects a proper critical sense, much echoed (though not always with proper acknowledgement of ancient criticism) by modern scholars,⁷⁴ of how Book 9 acts as a kind of reprise of Book 1 and a reaffirmation of Achilles' withdrawal, here at another time of great crisis. In Book 1 Agamemnon is known to have spoken without any *σχῆμα* of concealment; whereas Achilles' speeches there simply made Agamemnon angrier and more determined, his (unrecorded) reaction, here taken for silent acquiescence, to Diomedes' speech in Book 9 professing enthusiasm for the fray shows that Diomedes' reaction, apparently the reverse of what Agamemnon was arguing for, was in fact just the reaction the king wanted. Agamemnon's speech was therefore a *λόγος ἐσχηματισμένος*, a ‘figured speech’. As for Diomedes

73 Cf. also Eust., *Il.* 732.68–733.2, where the contrast is between speaking ἐσχηματισμένως and speaking ἀληθῶς.

74 Cf., *e.g.*, Lohmann [1970] 217–218.

himself, the standard critical position was that, whereas in Book 4 he had not responded when rebuked by Agamemnon, he now feels free to attack because of the authority given to him by his great martial deeds described in the intervening books.⁷⁵ Ancient rhetorical critics start with the assumption that great men know what they are doing and rise above circumstances. For both ancient and modern critics, Agamemnon's apparent silence after Diomedes' speech speaks volumes (cf. further below), but what it says may differ according to critical idiom. Eustathius, for whom Agamemnon's speech in Book 9 is 'sincere', perhaps has in mind arguments such as that of the bT-scholiast on v. 17 (above) when he observes that "the king puts up with the rebuke both because of the rule (θέμις) of the assembly [cf. v. 33] and because the rebuke is not false, but in this matter the hero speaks the truth . . ." (Eust., *Il.* 733.22).

After Agamemnon's first speech in *Iliad* 9 there is an awkward silence:⁷⁶

ὦς ἔφαθ'· οἱ δ' ἄρα πάντες ἀκὴν ἐγένοντο σιωπῆι,
 δὴν δ' ἄνευ ἦσαν τετιηότες υἱεὺς Ἀχαιῶν.
 ὀψὲ δὲ δὴ μετέειπε βροῦν ἀγαθὸς Διομήδης·

So he spoke. They all remained silent and for a long time the sons of the Achaeans were quiet and downcast. At length Diomedes, powerful in the war-cry, addressed them . . .

HOMER, *Iliad* 9.29–31

- 75 Cf. bT-Schol. on 4.402, 9.31, [Plut.] *Hom.* 2.168, Plut. *Mor.* 29b. For a different view cf. [Dion. Hal.] II 314.19–316.14 U-R. Reeve [1972] 2–3 argues that vv. 32–39 belong to a later stage of the tradition than vv. 40–49. It is interesting to compare the ancient accounts of Diomedes' speech with a modern account of its rhetoric, namely Martin [1989] 24–25, and cf. also 125. Without reference to ancient views, Martin sees Diomedes' speech as that of a novice speaker who imitates, sometimes with inelegant repetition, phrases that he has heard in the mouths of others; he made no reply in Book 4 because "he needs time to compose his reply" (contrast, however, Martin [1989] 71–72 on Diomedes' 'cunning silence'). Both the ancient scholiasts and Martin account for the difference between Book 4 and Book 9 in terms of Diomedes' development, but do so in rather different ways; on the other hand, there is more than a little in common between [Dionysius of Halicarnassus'] account of major Homeric speeches as λόγοι ἐσχηματισμένοι and Martin's account of Homeric 'flyting' in which the participants know the rules of the game. Cf. further Scodel [2008] 60–61.
- 76 West [2011] 215 rightly notes that this pattern of silence after a speech which takes the plot in a new direction is itself 'typical'. This, however, is a particularly marked example: v. 30 occurs elsewhere in the corpus only as v. 695 of the same book, when vv. 29–31 are (pointedly) repeated as the reaction to Odysseus' report of the failure of the embassy to Achilles.

The bT-scholium on v. 30 explains the silence as follows: “They neither had good prospects if they remained nor did they think flight was something which would redound to their credit. Moreover, having seen the former test, they were suspicious about the speaker’s intention. The poet himself seems to be uncertain whom he should put in opposition to Agamemnon’s speech which was well done and showed concern for his men”.⁷⁷ The first reason given there for the silence will help explain τετιηότες, and the second interprets the length of the silence as uncertainty brought on by a recognition (nowhere made explicit in the text, of course) that they have heard these words before. Uncertainty in the audience as to how to react does not, of course, mean that the speech is another *peira*; it might, however, mean that the audience are (*inter alia*) using their recent experience to interpret what they hear. Should we too be in doubt? Most modern critics do not even mention the possibility that this speech might be a further test,⁷⁸ in part (I suppose) because this would go against the ‘natural’ sense of the text and, as Hainsworth (note on *Il.* 9.18–28) puts it, there is no “hint in the text” that Agamemnon is here less than sincere. Moreover, Homer—as ancient critics recognised (cf., e.g., Plut., *Quomodo adul.* 19a–e)—sometimes gave the audience a steer (to the credit or otherwise of the speaker) as to how a speech is to be interpreted before (and sometimes after) the speech is delivered.⁷⁹ Here there is no explicit ‘steer’, except that Agamemnon is very upset (v. 9) and weeps as he speaks (vv. 14–16); ‘feigned’ emotion as a guarantee of ‘sincerity’ was, as we have noted, seen in his *peira* speech of Book 1, but forced tears might be hard to believe, however often Attic comic poets saw this as a regular ploy of orators. It is noteworthy, however, that, to judge by the bT-scholia on v. 14, the view that the tears were part of Agamemnon’s performance does indeed seem to have been held by some ancient readers.

The further scholiastic interpretation of the silence—it is also a marker of the poet’s hesitation—seems in some ways remarkably modern: a textual gesture reflects upon the nature of the poem itself. If the scholia do not quite put it in these terms, it is clear that the whole thrust of their interpretation is built upon the many correspondences and reversals between the scenes

77 Cf. also Eust., *Il.* 733.2: “The others are silent, fearing lest this speech of the king also is a test of the Achaeans”.

78 An exception is the discussion by Scodel [2008] 68–69.

79 Cf. Edwards [1970], Hunter [1993] 141–142, Nünlist [2009a] 316–317, Hunter-Russell [2011] 106. The verbs which Plutarch uses are προδιαβάλλειν and προσυνιστάναι; the former is not used in the scholia, whereas the latter is commonly used of the poet ‘introducing/paving the way’ for a character or later narration, but is also found in the narrower sense in which Plutarch uses it (bT-scholium to *Iliad* 1.247–248).

of Book 2 and Book 9, and the silence, expressed in conventional ‘formulaic’ terms, is one of these; the first *peira* speech in Book 2 was greeted by frenzied activity and noise. Modern critics, with their focus on the text rather than the author (particularly where Homer is concerned), might see this silence more in terms of the uncertainty of *both* audiences, *i.e.* not just the Achaeans in the text, but also the audience, *i.e.* ourselves, outside the text, rather than as a marker of authorial uncertainty. How *should* we react to Agamemnon’s speech? Is it in fact a straight choice between ‘test’ or ‘no-test’? The scholiastic view that the audience in the text thought it might be a test is far from obviously absurd, and modern discussion has too often run together the questions of Agamemnon’s ‘intention’ and of how the speech is received. If we ask what more we know than the audience in the text knows, then the poet has stressed the grief of the ἄριστοι (v. 3) and the fact that Agamemnon is ‘knocked over by great grief in his heart’ (v. 9), but this amounts to little more than confirmation of the very visible manifestations of distress all around. Here at least there is little distance between the levels of knowledge of the two audiences, particularly if we take the view, held by many ancient (and some modern) readers,⁸⁰ that only the Greek leaders, young and old, are present to hear the second *peira* speech, not the entire army; given that, apart from the omission of verses, the only change from Book 2 to Book 9 is that Agamemnon now addresses ὦ φίλοι, Ἀργείων ἡγήτορες ἢ δὲ μέδοντες rather than ὦ φίλοι, ἦρωες Δαναοί, θεράποντες Ἄρηος, the ancient views, which certainly take account of what are, by any criteria, mixed signals in the text, deserve our respect.⁸¹ Should we too not be

80 Ancient critics, unlike for the most part their modern successors (but see von Wilamowitz-Moellendorff [1920] 33–34), were divided on whether the first gathering of Book 9 was of the leaders only (*e.g.* bT-scholia on 9.11, 17, D-scholia on 9.12) or of the whole army (*cf.*, *e.g.*, Plut. *Mor.* 29c). Aristotle discussed the problem posed by 9.17 if one held that the whole army was present and explained (*fr.* 382 Gigon) that “the ordinary soldiers are entitled to listen, but the leaders can also act”.

81 The matter certainly deserves more discussion than it receives in Hainsworth’s note on v. 17; Lohmann [1970] 216 merely observes that the ‘stolz und kriegerisch’ address of Book 2 is “characteristically altered”, without asking what the address in Book 9 actually means; Griffin’s note on v. 17 acknowledges that that verse “suggests that Agamemnon is talking to the chiefs”, but can only conclude that there is “a lack of exact focus on the facts”; West [2011] 214 sees in this unclarity (“11 and 17 suggest a meeting of leaders . . . the present gathering, however, soon appears as an assembly of the whole army (30, 50)”) another argument for his view that the opening of Book 9 was composed before, and was the model for, the parallel scene in Book 2. De Jong [2004] 190 mistakenly makes 2.110 identical to 9.17, thus blurring the question of addressee.

forced into puzzled silence by a repetition across a large body of intervening text which, by any standards, calls attention to itself?

Explicit silence in the text invites, indeed all but demands, interpretation. Irene de Jong notes that “the addressees do not (nor, as a matter of fact, [does] Agamemnon himself) comment upon the repetitious character of [*Iliad* 9] 17–28. It is left to the [external audience] to detect the significance of the repetition, ‘the complete reversal of meaning’”.⁸² For the scholiasts, as we have seen, silence *was* in fact an eloquent comment. Perhaps there is more. In a text from a later age, at least, modern critics would have no doubt but that Diomedes’ ἦ θέμις ἐστίν (v. 33) is a sarcastic allusion back to the former occasion when Agamemnon was ἀφραδέων (v. 32) and had claimed—in what has become a famous problem of modern Homeric criticism—that his proposed testing of the troops was also ἦ θέμις ἐστίν (2.73).⁸³ Diomedes would be showing that he at least knew where he had heard Agamemnon’s words before; moreover, his reference to the availability of ‘very many’ ships to take Agamemnon home (9.43–44) could be a pointed reversal of Agamemnon’s (misleading) lament about the state of the ships in the first *peira* speech (2.135). Some moderns might even be tempted to associate Diomedes’ reference to how Zeus has honoured Agamemnon ‘with the sceptre’ (9.38) with the poet’s famous account of Agamemnon’s sceptre immediately before the first *peira* speech (2. 100–108); Diomedes did not, of course, ‘hear’ that description, though he will have seen Agamemnon leaning on the sceptre as he delivered the *peira* (cf. 2.109).

Ancient rhetorical criticism, then, picks away to open up the significance of the correspondences and differences between the analogous scenes in Books 2 and 9, whereas modern criticism has, on the whole, sought to close interpretation down, to seek *the* explanation (and textual history) of these really very remarkable scenes; that difference is a fact of intellectual and scholarly history which is worth pondering.

82 De Jong [2004] 190.

83 So Martin [1989] 24; the standard commentaries are silent. Why the ancient scholiasts apparently did not note the repetition is also a question worth asking.

Poetics and Literary Criticism in the Framework of Ancient Greek Scholarship

René Nünlist

Introduction

Following the influential definition of ‘scholarship’ by Pfeiffer, this chapter will largely focus on the Hellenistic period.¹ His own account, however, shows that both scholarship and literary criticism have their ‘prehistory’.² Occasional reference will therefore be made to pre-Hellenistic sources,³ in order to put the present subject in perspective. This exception applies in particular to the texts and concepts that have had a more than superficial influence on the period under consideration, the most prominent case being Aristotle and his *Poetics*. Likewise, in spite of its focus on Hellenistic scholarship, the chapter will not categorically exclude texts of the Roman period.⁴ The reason is twofold. The bulk of the relevant treatises that are still extant postdate the Hellenistic period, but may well have incorporated Hellenistic ideas. The same holds true *mutatis mutandis* for the texts that are difficult or impossible to date with any confidence.⁵

The source problem just mentioned is a serious one. Comparatively little relevant material has been preserved that is of a demonstrably Hellenistic age. The assumption that post-Hellenistic treatises (see also below on *monograph), which regularly dominate modern accounts of ancient literary criticism, incorporated Hellenistic concepts is often no more than a (plausible)

1 ‘Scholarship is the art of understanding, explaining, and restoring the literary tradition. It originated as a separate intellectual discipline in the third century before Christ’ (Pfeiffer [1968] 3). For the history of Hellenistic scholarship see also Montana in this volume.

2 Cf. *e.g.* Ford ([2002] with bibl., esp. 2 nn. 4–5).

3 See Novokhatko in this volume.

4 See Matthaïos in this volume.

5 This second reason applies in particular to the large mass of scholia that cannot be attributed to a particular critic. Such ‘anonymous’ scholia are an important source of my book [2009a], to which reference will repeatedly be made for practical examples in the notes on the individual entries below. The entries themselves, however, are generally based on material whose Hellenistic provenance is certain or very likely.

guess. Truly Hellenistic material normally reached posterity indirectly via other sources,⁶ with the usual problems that accompany this type of transmission: fragmentation, loss of context, misunderstanding, deliberate distortion. The latter, in particular, looms large in the corpus of texts that, due to the recent publication of much improved editions, has become a fundamental source of literary criticism in Hellenistic times: the works of Philodemus.⁷ Leaving aside the problems that an editor of these exceedingly difficult fragments faces, the patent polemics of Philodemus' arguments raises additional questions. How reliable a witness is he? Can his selection of topics and critics be taken to be representative of the Hellenistic period in general? And what was his aim?⁸

Antiquity did not recognise literary criticism as a field of its own, nor did it attempt to define what a literary critic is or does. Consequently, the subject of this chapter can be described as an essentially undefined grey zone that overlaps with the domain of grammar, rhetoric, philosophy and education. In spite of being in essence a modern construct, 'ancient literary criticism' is not a phantom. But the fact that it is a construct has a number of implications that are worth repeating at the outset. An attempt to scrutinise the ancient material for criteria that help identify what is literary criticism (and what is not) is unlikely to produce meaningful results.⁹ For this kind of 'demarcation' the modern reader is fated to start from modern concepts of literary criticism.¹⁰ This necessity obviously entails the risk of anachronistic distortion, which can be reduced, if not eliminated, by making every effort to see things through the eyes of the ancient critic. Moreover, in the absence of a well-defined field it is even less to be expected that ancient critics have something like a common

6 See Dickey in this volume.

7 For an up-to-date list of editions see Janko [2011] 542.

8 Even Janko, who knows *On Poems* better than most, writes 'the principles underlying its overall organization remain hard to discern' [2011] 227, and believes Philodemus' intent to be in accordance with the Epicurean rejection of literary criticism: 'He simply aimed to demolish the range of different theories of poetry *that were known to him*, in an attempt to show that the cultured person needed none of this nonsense in order to enjoy poetry' (*ibid.*, emphasis added). If this was Philodemus' goal, an alternative scenario might be worth considering: he selected the theories that he felt were most easy to demolish and left others untouched.

9 See nevertheless the useful précis of Kallendorf [1994b] 1124–1134.

10 The common alternative is to examine the ancient terminology of literary criticism. In its more rigid form (*i.e.* strict semasiology), this approach is bound to miss relevant material because the terminology need not be consistent and, more importantly, critics regularly refer to the phenomenon under discussion without using a specific term (Nünlist [2009a] 3 with n. 10).

denominator (except, perhaps, for the very general observation that they all deal in some form or the other with the understanding of texts). Consequently, few, if any, of the approx. ninety concepts that will be discussed below can safely be said to be characteristic or typical of the entire field of ancient literary criticism. Most of the time, it could actually be shown that a particular concept is either ignored or even openly contradicted by other critics. The selection of topics was determined by the criterion whether the individual concept is either frequent or remarkable enough to be worth treating here. The presentation in the form of alphabetically listed catchwords with cross-references attempts to combine several goals: to balance the selectivity imposed by the limited space, to give an impression of the wide variety of the relevant concepts and to enable easy reference.¹¹

The fact that there is a considerable overlap specifically between literary criticism and rhetoric has another consequence for the wording in this chapter. The descriptions below will generally make no distinction between, on the one hand, poet, prose writer and orator, and, on the other, reader, spectator and listener. Instead the terms 'author' and 'reader' will often be used to represent each side. To a certain extent, this *is* an anachronistic distortion but it has the advantage both of saving space and avoiding potentially cumbersome phrases. More importantly, insights that were gained and thus described on the basis of rhetorical texts recur in literary criticism and *vice versa* (see also below on *rhetoric).

Several texts to which reference is made below had a strong pragmatic component in that they provided an arsenal of interpretative tools. The purpose was at least twofold. First, these texts aimed to instruct how to read and understand literature, but they, second, also intended to teach how the various features found in 'classical' texts could be put to use. The idea perhaps was not so much to instruct how to write poetry specifically, but how to use the various features found in poetry and other literature for, mostly, rhetorical purposes. At any rate, several texts that can be subsumed under the rubric 'poetics' (see on theory of *poetics below) or 'literary criticism' were written as if they were intended for an audience that planned to produce literature, write speeches, etc.¹²

The preceding paragraph will also have made it clear that preference will be given to texts that expressly and unambiguously address questions related to literary criticism. Conversely, the immanent poetics of Hellenistic literature,

11 Even if there is enough space for the alternative, the writing of a coherent historical narrative, it is not without problems, see Hunter [2009a] 8.

12 A striking exception is Aristotle's *Poetics* (Halliwell [1986] 37–39).

that is, the implementation, modification, reflection, supplementation, etc. of these questions in Hellenistic literature is taken into account in exceptional cases only.¹³

Aesthetics

Greek poetry itself is rife with references to its own aesthetic qualities. It was thus only natural that critics took their cue from the authors. They described and judged literature by means also of aesthetic concepts such as beauty, elegance or grace (and their respective opposites). This, however, is not to say that they also developed a theory of aesthetics in the full sense. Even though Aristotle held against Plato that art must be measured by its own standards (poetic *licence) and recognised that the creation of aesthetic *pleasure was fundamental to art in general and literature in particular, the theory expounded in the *Poetics* had better not be called 'aestheticist' (Halliwell [1986] esp. chs. 2 and 3). Moreover, neither Aristotle nor any of his successors went so far as to postulate the full autonomy of art or the artist (see also **L'art pour l'art*, *educative function). In this sense ancient critics did not develop a theory of aesthetics, while they often applied aesthetic criteria in their interpretations. The same holds true *mutatis mutandis* for the concept of 'taste', which was not theorised as such by critics, but can be inherent in their aesthetic comments.¹⁴

Allegorical Interpretation

See *multiple meanings.

Allusion

The careful *analysis and *comparison of texts led critics, among other things, to detect allusions. Their point of reference was in principle open. A particular passage could allude to historical events or persons, *mythological stories, specific texts, etc. The latter are of particular interest because critics often identified or even quoted the relevant text, which otherwise might be lost to posterity. An altogether different question is whether 'allusion' was actually a separate category (distinct from quotation, parody, etc.). Terminological considerations

13 Regular inclusion of the immanent poetics, though recommended by Classen [1995] 535 and attempted *e.g.* by Gutzwiller [2010], would have imposed an even sharper limitation on the number of topics that could be dealt with.

14 On the history of aesthetics as a critical concept see Wiegmann [1992] 1134–1154, with bibl., Halliwell [2002], for a professedly revisionist account Porter [2010]; on the history of taste as a critical concept see Fick [1996] 870–901, with bibl.; for practical examples see *e.g.* Ps.-Demetr. *Eloc.* 67, 287.

induce caution. The most common term seems to be *ainittomai* ('to allude, hint at') with cognates, which, however, cannot be restricted to allusions in the narrow sense. It can equally designate quotations, imitations, intertexts, parodies, ridicule, etc. The term can also be used in connection with *multiple meanings. Essentially the same holds true for the 'false friend' *emphasis* (with cognates), which normally does not mean 'emphasis' in the modern sense but 'allusion, insinuation, hint, adumbration', etc. Occasionally, its exact meaning remains elusive. The terminological situation is, in a way, representative for the entire subject; for it is difficult to identify general trends and the like.¹⁵

Alphabetical Order

Since it has become such a common feature of reference books, it is easy to forget that the alphabetical order needed to be 'invented'. Whether or not Zenodotus can take credit for the introduction, his glossary was in any case arranged alphabetically.¹⁶ And so were the individual subsections of Callimachus' **Pinakes* (organised by *genre). The extant evidence strongly suggests that it was the Hellenistic critics who introduced this groundbreaking method.

Ambiguity (amphibolia)

In a very short section of *Poetics* chapter 25 (on *problems and solutions), Aristotle deals with the problem of ambiguity (1461a25–26). Context and example (*Il.* 10.252) demonstrate that semantic ambiguity is meant, that is, words and expressions that are open to more than one possible explanation. Aristarchus regularly drew the reader's attention to instances of ambiguity. He would list the possibilities and offer arguments for his preferred solution (*e.g.* sch. *A Il.* 2.629a *Ariston.*, on reverse order, also known as ABBA pattern). On the proviso that Aristonicus' excerpts (*commentary) can be trusted in this matter, some cases were actually left open, presumably because Aristarchus thought there was not sufficient ground for a decision (*e.g.* sch. *A Il.* 16.561a¹ *Ariston.*; *sense of proportion). Conversely, the concept of deliberate ambiguity, popular among many modern critics, is unlikely to have appealed to their ancient predecessors (cf. the warning in *Arist. Rh.* 1407a32). Likewise, discussions of ambiguity normally circled around smaller linguistic units, words or

15 On the history of allusion as a critical concept see Hughes [1992] 652–655, with bibl., also Conte-Most [2012^{4b}], for practical examples Nünlist [2009a] 225–237.

16 Pfeiffer [1968] 115, Alpers [1975] 116, cf. also Montana and Tosi in this volume.

sentences, not whole texts. This is not to deny that critics also detected *multiple meanings, which, however, was not felt to be a problem of ambiguity.¹⁷

Anachronism

When critics detected a problem in a text, one of the attempted solutions (*problems and solutions) was to see whether the passage perhaps reflected a habit that was no longer current (cf. Arist. fr. 166 Rose, *Poet.* 1461a2–3, later called *lūsis ek tou ethous*, ‘solution from the <earlier> habit’). This interpretative principle was generalised by Aristarchus in such a way that readers of a historical text must beware of possible anachronisms. The age of the Trojan heroes (represented by Homer’s characters) was different from Homer’s own, which again was different from subsequent periods (including that of Aristarchus and his readers). For instance, the heroes did not ride on horseback, but a simile showed that Homer himself was aware of this technique (*narrative voice).¹⁸ Conversely, Homer did not know yet the use of the crown or the mixing of wine with water.¹⁹ Aristarchus probably had two reasons to warn against possible anachronism. He took exception to the treatment of the heroic age in post-Homeric literature such as tragedy, where characters showed familiarity, for instance, with the concept of writing.²⁰ More importantly, he saw that other scholars uncritically imposed the standards of their own age onto the text and thus failed to do justice to it. He therefore advocated the view that a text must be understood from the perspective of its own time (see also *textimmanente* *interpretation).²¹ His basic argument is not so very different from the one made by F. A. Wolf [1795], who laid the foundation for modern Homeric studies.

Analysis, Systematic and Comprehensive

A distinctive feature of the period under consideration are the attempts to analyse the literary *heritage in a systematic and comprehensive way.²² More than once it can be shown that the central question as such was not entirely new, but it was now being investigated with unprecedented scholarly rigour, which

17 On the history of ambiguity as a critical concept see Bernecker-Steinfeld [1992] 436–444, with bibl.

18 The most comprehensive collection of these examples is Schmidt [1976], on riding specifically [1976] 229; see also Nünlist [2009a] index s.v. anachronism.

19 Schmidt [1976] 215–218 (crown), 261 (mixing of wine).

20 Schmidt [1976] 213.

21 This also means that Aristarchus did have a sense of (linguistic) history (Nünlist [2012a]).

22 Pfeiffer [1968] *passim*.

put the results on a much better footing. This improved method is particularly easy to document with semantic studies. The entire text must be scrutinised in order to determine, for example, that a word is attested only once, twice or not at all.²³ But the same thoroughness can be gathered from the comprehensive discussion, for instance, of all the attestations of Mt. Olympus in the *Iliad* or the systematic collection and marking of homonymous characters.²⁴ More generally, this approach allowed critics to determine how a particular author normally dealt with a specific problem (*custom), for example, in *comparison with other authors. It is clear that the new institution of the *Museum, together with the enormous library, provided unprecedented resources.²⁵ It thus made the task of systematic analysis easier or, in some cases, even possible. This (in the full sense) exhaustive analysis probably required critics to work long hours. Though better attested in poetry, it is not improbable that the lamp and long nights became symbols of the age in general.²⁶

Appropriateness (or Propriety)

One of Aristotle's four criteria of persuasive *characterisation is appropriateness (*Poet.* 1454a22–24). He and subsequent critics meant to say by this that each character should speak and act in a way that is appropriate to his age, gender, social class, etc. A young girl ought not to speak or act like an old man. Otherwise the literary text defied the principles of *plausibility and fell through. It is important to note that such elementary concerns too belonged to the domain of appropriate depiction, which was therefore not *a priori* a moral category. The alternative term 'propriety', in particular, is apt to create the impression that Hellenistic critics had an exceptionally strong concern for moral issues, which is not the case. Moral issues could of course come into play. Was it, for example, appropriate for a goddess to carry a chair for a mortal?²⁷ But the category as such was not, to repeat, automatically linked to questions of morality. The question rather was whether a particular point 'fitted' or not.²⁸

23 Once (*hapax legomenon*, for a collection see Lehrs [1882³] 12, twice (*e.g.* sch. *A Il.* 14.463a *Ariston.*), not at all (*e.g.* sch. *A Il.* 10.226 *Ariston.*).

24 Mt. Olympus: Nünlist [2011] III, with bibl. in n. 17; homonymous characters: Nünlist [2009a] 240–242, with bibl. in n. 8; for more examples see index *s.v.* treatment, systematic.

25 See Montana in this volume.

26 Callim. *Epigr.* 27 Pfeiffer, cf. *e.g.* Horace *Ars P.* 267–268. The critic's long nights may have a precursor in Aristoph. *Ran.* 931–932 (Hunter [2009a] 24).

27 Zenodotus thought it was not appropriate, but Aristarchus replied that Aphrodite was in the guise of an old servant, for whom it was (sch. *A Il.* 3.423a *Ariston.*).

28 On the history of appropriateness as a critical concept see Asmuth [1992] 579–604, with bibl., esp. Pohlenz [1965b], Rutherford (*et al.*) [1994] 423–451, with bibl., for practical examples see Nünlist [2009a] index *s.v.* appropriateness.

L'art pour l'art

It used to be a popular view that the Hellenistic *scholar-poets were sitting in an 'Ivory Tower' and engaging in an early form of *l'art pour l'art*. Since the scope of the present overview is not an assessment of Hellenistic poetry, it can be left to others to discuss the justification of a position that has seriously been challenged in recent years.²⁹ Suffice it to say the following. The extant sources on literary criticism contain competing opinions on virtually every single question. Underlying all these disagreements, however, is a general agreement that literature achieved something, had a function and could thus be 'used'.³⁰ The specific 'uses' of course varied a great deal depending on the views and goals of the individual critic. But it is unlikely that any of them could have subscribed to the notion that there was such a thing as *l'art pour l'art* (see also *aesthetics).

Authenticity, Questions of

From a modern point of view, questions of authenticity are an aspect of textual, not literary, criticism. It is, however, important to realise, especially when reading *commentaries, that textual criticism was never far from an ancient critic's mind (literary *heritage). Questions of literary criticism regularly extended into textual criticism because, for example, a particular literary device was (not) common with the relevant author (*custom) and could therefore help decide whether the passage was genuine or not. The same method applied of course to topics other than literary criticism (linguistics, lexicography, etc.). Even in the case of doubtful authenticity the relevant lines remained in the text and were marked with a *critical sign (= to athetise in the ancient sense of the word). Actual excision was rare (*sense of proportion).³¹

*Biographical Criticism*³²

Starting probably as early as the sixth century BC, the author's biography became a matter of keen interest.³³ It can be found, for example, in Aristotle's dialogue *On Poets*, which throws an even sharper light on the fact that the

29 *E.g.* Cameron [1995] 24–70, and Montana in this volume.

30 Hunter [2009a] 8.

31 The bibliography on ancient textual criticism is extensive, *e.g.* La Roche [1866], Ludwich [1884–1885], von Wilamowitz-Moellendorff [1895²], [1954], Pfeiffer [1968], Nickau [1977], Lührs [1992], Irigoin [1994], West [2001a].

32 On biographical writings in ancient scholarship see section 1 and Tosi in this volume.

33 Pfeiffer [1968] 11. On the subject in general see Blum [1977], the English translation [1991] abridges the footnotes and is marred by numerous typographical errors, Lefkowitz [2012²], Arrighetti [1987], [1994], Momigliano [1993²], Schorn [2004], Pelling [2012⁴] with bibl.
